in no less need of his Friendship to establish themselves in that Country. The Treaty being concluded, *Massasoiet* returned to his Capital, leaving *Squanto* with the Colony, who was extremely serviceable to them, not only as an Interpreter, but by instructing them how to plant and manage their *Indian* Corn, in piloting them along the Coast, and supplying them with Fish, Fowl, and Venison. The *English* still remained sickly, and many of them dyed; among whom was Mr. *Carver*, their Governor, in the Month of *April*, 1621. The Seamen also had their Share of Illness, insomuch that they were not in a Condition to sail till *May*, when the Ships returned to *England* to give their Friends an Account of the Circumstances of the Colony.

While these Ships were gone to, or remained in, the *British* Dominions, the Colony made choice of Mr. *Bradford* for their Governor, who enjoyed that Post for many Years, and saw the Plantation thoroughly established; notwithstanding that, in his Time, there arose such Differences about Religion as actually occasioned great Feuds and Jealousies, and seemed to threaten worse Consequences. It may be expected, that I should give some competent Reason for the quick Progress of this Colony beyond that of *Virginia*, which met with no such Success; and this seems to be the rather necessary, because at first Sight one might be inclined to think that it ought to be attributed to the superior Diligence and Application of the Western Company, in Comparison of that of *London*; which is, however, so far from being true, as in reality this Company had no Share at all in the sending over, or establishing this flourishing Plantation. On the contrary, it was raised by the Spirit, Vigilance, and Ardour of the Malcontents in the Reign of King *Charles I.* who, before the breaking out of the civil War, and when they had little Hopes of getting the Government into their own Hands, projected the securing to themselves a safe Retreat in *New England*, which induced them to send thither such regular Supplies, and those too under the Direction of Men very capable of answering the Ends for which they were sent thither. We have seen with what wonderful Success their first Attempts were attended, and how soon their new Colony was in a Condition to defend and support itself, not only without any Assistance, but almost without any Notice, from the Crown, which in the beginning they did not desire; but afterwards, foreseeing many Inconveniencies that were like to attend this Manner of Proceeding, they very prudently resolved to alter it, and to procure to themselves such farther Security as appeared to them requisite towards attaining those Ends of which they were in Pursuit.

This therefore being the Case, and the Colony of *Plymouth* still remaining without a Patent, or any Title to the Lands they possessed from the *North Virginia* (or *New England*) Company, sent over Mr. *Winslow*, one of their Number, to solicit for both in the Year 1624; and this Gentleman succeeded beyond their Expectation; for the Charter he procured, enabled the Planters to elect a Governor, a Council, and Magistrates, and to make Laws, provided they were not opposite to ours, or encroached on the Prerogatives of the Crown. After conducting the History thus low, and shewing how, where, and when, the first regular *English* Settlement was founded and fixed in this Country, now the largest, best improved, and most populous of our Plantations upon the Continent, I must excuse myself from going farther in this way, because it would extend this Section to an unproportionable Length; and because the History of *New England* has been already written by several able Men, much better informed thereof than I can possibly be; and therefore I shall be very well content with endeavouring, in as small a Compass as I can, to do as much towards explaining the State of this Colony, as I have already done for that of *Virginia*.

7. In order to this, it will be necessary to explain what is meant by *New England*, since it differs thus far from all our Colonies, that, in reality, it is a general Name for several of them, though there is no particular Plantation, or even Province, properly so called. We are therefore to observe, that under this Denomination was originally

comprehended that part of the Continent of *North America*, which had been formerly stiled *North Virginia* and *Norembegua*, and the way it acquired this Name, was thus: When Captain *Smith* made his Voyage thither, which has been before mentioned, he went ashore, with no more than eight Persons; and at that time drew a Plan of as much of the Country as he had seen. This, as I apprehend, was in the Year 1614; and upon his return he shewed the Prince of *Wales* his Account of the Country, and the Map he had drawn of it. His then Royal Highness, afterwards King *Charles I.* read the one, and examined the other, giving several *English* Names to Places, distinguished by *Indian* Appellations in the Book; and from Captain *Smith's* Information of the Soil and Climate of the Country, called it *New England*, which Name it has ever since borne. This Work, thus seen, perused, and approved by the Prince, Captain *Smith* published to the World, under the Title of *A Description of New England*, in which he gave a very fair and true Account of it, as well as of the Advantages that might be hoped from a Settlement there; in attempting of which, however, he had the Misfortune to be taken Prisoner by the *French*; but notwithstanding this, his Treatise produced the intended Effect, and actually brought about that Establishment, of which we have already given the History. He likewise wrote and published another Book, which he called *New England's Trials*, which was very well received, insomuch that we may safely aver, that all the Advantages derived since to *Great Britain*, from the several Settlements made in this large and fruitful Country, are originally due to the Virtue and Industry of this indefatigable Man.

The Name and Bounds of this Country being thus settled, it is necessary next to take notice of the several Plantations made in *New England* in the proper Order of Time, and then we shall shew, in what Situation they now stand. We have already given an Account of *New Plymouth*, which was the first of them; and we are next to speak of that which, tho' later in Point of Time, is now become the most considerable in every Respect, and which had its Beginning and Progress much in the same manner with it. For in the Year 1625 (as the *New England* Historian relates) Mr. *White*, Minister of *Dorchester*, observing the Success of the *Plymouth* Colony, projected a new Settlement in the *Massachusetts Bay* in *New England*, and prevailing with Mr. *Conant*, and some others, to go over, and make choice of a proper Settlement, he and his Friends purchased, or procured, a Grant from the *North Virginia*, or *New England*, Company, in the Year 1622, to Sir *Henry Roswell*, Sir *John Young*, Knights; *Thomas Southcot*, *John Humphreys* and *Simon Newcomb*, Esquires; their Heirs, Assigns and Associates, of all that Part of *New England* which lies between the great River *Merimack* and *Charles River*, at the Bottom of the *Massachusetts Bay*, and all Lands, &c. three Miles North of *Merimack River*, and three Miles South of *Charles River*, and in Length, or in Longitude, between those Rivers, from the *Atlantic* to the *South Sea*; and obtained a Patent from King *Charles I.* to hold the same as of his Manor of *East Greenwich* in common Soccage, yielding and paying to his Majesty a fifth Part of such Gold and Silver Ore as should be from time to time found within these Limits. These Gentlemen, having taken in Sir *Richard Saltonstall*, Mr. *Isaac Johnston*, *Samuel Addeley*, *John Van*, *Matthew Cradock*, *Thomas Goff*, *George Harwood*, *Samuel Moor*, and several more, the following Year, 1628, procured a new Patent with the Names of the last-mentioned Gentlemen inserted, as the Proprietors; by which Patent they, and all others who should join with them, were incorporated by the Name of, *The Governor and Company of the Massachusetts Bay in New England*; and were empowered to elect a Governor, Deputy-Governor, and Magistrates, and make Laws for the Good of the Plantation, not repugnant to the Laws of *England*; and Liberty of Conscience was granted to all that should settle there. The Adventurers, by Virtue of this Patent, elected Mr. *Cradock* their Governor, and Mr. *Endicot* their Deputy-Governor, and sent over the latter immediately to reinforce Mr. *Conant*, who was settled at *Neumkeak*, now *Salem*, situated on the

Coast of *New England*, between the Promontories of *Marblehead* and *Cape Anne*.

This new Colony was supported with the same Spirit and Vigour as the former, and such mighty Embarkations made for its Service, as shewed plainly enough of how great Consequence it appeared to those who were its Protectors in *England*; and so much they were set upon having some Man of Distinction on the Spot, that in the Year 1630 they chose *John Winthrop*, Esquire, Governor, in the Room of Mr. *Cradock*, who declined going over, and he appointed Mr. *Thomas Dudley* his Deputy-Governor; both of them embarked the same Year, with Sir *Richard Saltonstall*, *Isaac Johnson*, Esquire, and the Lady *Arabella*, his Wife, Mr. *Eaton*, and several other Patentees, on board a Fleet of ten Sail of large Ships, with about two hundred Planters every way completely furnished: So that soon after their Arrival they erected two new Settlements; the one stiled *Charles-Town*, on the North-side of *Charles River*; and the other *Dorchester*, at the Bottom of *Massachusetts Bay*; and in a short time part of the Inhabitants of *Charles-Town*, passing over to the opposite Shore, erected *Boston*, which is now the Capital of *New England*. As new Planters arrived every Year, the Colony quickly became over-stocked; and Divisions breaking out amongst them, one Mr. *Roger Williams*, who was Pastor of a Church of *Brownists*, went and settled without this Government; and called his new Plantation *Providence*, which afterwards was united to the Government of *Rhode Island*; of which we shall speak in its proper Place.

In 1635, arrived a larger Fleet from *England* than at any time before, and amongst other Persons of Distinction, who came over in it, was *Henry Vane*, Esquire, Son to Sir *Henry Vane*, Secretary of State to King *Charles I.* with whom the People were so taken, that they elected him Governor, in the Room of Mr. *Winthrop*; but as he had the Misfortune to have a very roving and extravagant Genius, he quickly lost his Credit with them, and saw his Predecessor restored: Upon which he formed a Project of erecting a new Plantation to the North-west of the *Massachusetts*; which, however, he did not carry into Execution; but returning into *England*, was knighted, and made an extraordinary Figure under the Name of Sir *Henry Vane* the younger, as every body knows that is acquainted at all with our History. But the Project for a Plantation on *Connecticut River* was not dropped, though Sir *Henry Vane* did not proceed in it. This Settlement was become the more necessary, because the *Pequet Indians* began to grow very troublesome; and as the building a Town and Fort on that River, would make a good Frontier on that Side, Agents were sent to view the Country, who made such an advantageous Report of the Fruitfulness of the Soil, and Largeness of the River, as made many of the Planters of *Newton*, *Dorchester*, *Weatherton*, and *Roxbury*, entertain Thoughts of transplanting themselves thither, being already streightened for Room where they were.

Mr. *Hooker*, Minister of *Newton*, put himself at the Head of these new Adventurers, about a hundred in Number, who set out in the Month of *July*, and travelling on Foot with their Children and Baggage, about nine or ten Miles a Day, came in ten or eleven Days to the Banks of the River, where they began a Town, which they called *Hartford*; after these came another Draught from *Dorchester*, who built a little Town, which they called *Windsor*; a third Detachment from *Waterton*, built *Weathersfield*; and a fourth from *Roxbury*, built *Springfield*. The Towns the Planters built on this River were fifty and sixty Miles from its Mouth, so that the Ship freighted with Provisions for these Planters at the *Massachusetts*, came so late in the Year that it was frozen up at the Mouth of it, sixty Miles from the Plantation; upon which, many of the new Adventurers travelled back in the Depth of Winter, and others who attempted it were frozen to Death. The Calamities which attended them, are such as all new Settlements are liable to; but, however, those that had Courage to stay till the Spring, carried on their Settlements with such Success, that they were not only in a Capacity of subsisting, but making head against their Enemies. They

They had a sort of Commission from the Government of the *Massachusetts Bay*; but finding they had extended their Plantations beyond the Limits of that Colony, they entered into a voluntary Association to obey the Laws that should be made by proper Persons, for the common Good, and chose *Edward Hopkins*, Esq; their Governor; and in this Situation they remained as to Constitution, till *John Winthrop Junior*, Esq; obtained an ample Charter for them from King *Charles II.* authorizing them to elect their own Governor, Council, and Magistrates; and enact such Laws as they thought most advantageous to the Colony, not opposite to the Laws of *England*; the Benefit whereof they enjoy to this Day.

8. By that Time this Settlement was brought into tolerable Order, *George Fenwick*, Esq; was sent to *New-England*, in order to make choice of the most commodious Spot he could find, for the Heads of that Party, which had hitherto supported all these Colonies; and it was conceived he would execute his Commission the more readily, since the Lord Viscount *Say* and *Seal*, and the Lord *Brook*, two Heads of the Party, held Lands on *Connecticut*, by Virtue of a Grant from the Earl of *Warwick*, another Puritan, who held a Patent for all that Part of the Country, extending from the River *Naraganset* forty Leagues, in a strait Line near the Sea-shore, towards *Virginia*, as all the Continent South of *New-England* was then called, as far as *Florida*. The Earl of *Warwick* assigned his Grant to these two Lords, *Brook* and *Say*, *Charles Fiennes*, Esq; Brother to the Lord *Say*, Sir *Nathaniel Rich* of the *Warwick* Family, Sir *Richard Saltonstall*, *Richard Knightly*, Esq; *John Pym*, Esq; *John Hampden*, Esq; and *Herbet Pelham*, Esq; Mr. *Fenwick* seated himself at the Mouth of the River, and built a Town which he called *Saybrook*, in which he was assisted by Mr. *Winthrop Junior*, Son of the Governor of the *Massachusetts*; but the Gentlemen, for whom Mr. *Fenwick* acted, finding Matters grow more to a Head at home, and foreseeing they should be more useful there for their Country and their Cause, gave over the Thoughts of removing to *New-England*, and authorized Mr. *Fenwick* to dispose of their Lands to the Colony of *Connecticut*, who were the more willing to buy them because they had no Title to their Plantation without the Limits of the *Massachusetts* Patent, than what Possession gave them. The very next Year there came over such Numbers of People to settle in *New England*, that the old Colonies were over-stocked, and there was an absolute Necessity of looking out for new Plantations.

Amongst those who put themselves at the Head of such as were inclined to remove in the Summer of the Year 1637, were *Theophilus Eaton*, Esq; a noted Merchant of *London*, and the Reverend Mr. *Davenport*. These Gentlemen finding there was not room at the *Massachusetts*, and being informed of a large Bay to the South-west of *Connecticut River*, commodious for Trade, purchased of the Natives all the Land that lies between that River and *New York*, or *Hudson's River*; thither they removed, seated themselves in the Bay over against *Long Island*, and built *New Haven*; from whence that Colony, Province, and Government, were so denominated, as also *Guilford*, *Milford*, *Stamford*, and *Brainford*; they also went over to *Long Island*, and made there several Settlements, erecting Churches in all Places where they settled; but being without the Limits of the *Massachusetts* Jurisdiction, they had no Charter, and no other Title to the Lands than what they had from the Natives; the Men who settled in this Colony were generally *Londoners* and Merchants, who applied themselves first to Trade, after the Example of Governor *Eaton*, who had been an East Country Merchant, and, travelling into *Denmark*, was employed by the King as his Agent at that Court. But the new Comers met with so many Losses, either as Novices in the *American* Trade, or some unfortunate Accidents, that they were discouraged in their Trade, and were going to transport themselves to *Maryland* or *Ireland*, until at last turning to Husbandry, they thrived wonderfully, and thought no more of removing.

While the South-west Parts of *New England* were thus filling with Inhabitants, the North-east were not neglect-

ed: The *English* very much frequented the Coast for the Benefit of fishing and the Fur Trade, for which that Part of the Country lay convenient. This put some of them on attempting a Settlement between the Rivers *Merimack* and *Sagadahock*, and it succeeded so well in a few Years, that there were two Counties laid out, *New Hampshire* and *Main*, and several Towns built, as *Dover*, *Hamp-ton*, *Wells*, *Kittery*, &c. These Planters and Traders being settled without the Limits of the *Massachusetts* Colony, entered into a voluntary Combination, and formed themselves into a Body Politic, after the Example of *Connecticut* Colony; thus they continued, till being wearied out with Feuds and Divisions, they petitioned the General Court of the *Massachusetts* to be brought within their Jurisdiction, which was done: Yet, in 1684, they made an absolute Resignation of their Charter, and the Government has remained in the Hands of the Crown ever since. Thus the Reader has seen, in few Words, the Rise and Progress of the several Plantations raised in *New England*, which had a quicker Growth than any that were ever attempted from hence, or perhaps from any other Country; for, in the Space of about twenty Years, they had above twice as many good Towns, well settled, and the People in a very happy and thriving Condition; and, indeed, it must be allowed, the Inhabitants were the most laborious and industrious, that were any where settled in *America*; for though they had scarce any staple Commodity, yet they made every thing turn to Account, and that chiefly, as I have been informed, by pursuing steadily these two Maxims; first, to fix themselves well, and to raise one or more good Towns in convenient Places, and next to build and freight Ships with such Commodities as they had, and to send them any where to find a proper Market.

9. The Country of *New England* comprehends, at present, four considerable Colonies, or Governments, viz. the *Massachusetts*, which with *New Plymouth* and the *Main* are now included in one Charter; *New Hampshire*, which remains a separate Government; *Connecticut*, which likewise comprehends *New Haven*; and *Rhode Island*, with *Providence Plantation*. The whole Country extends from 41 to 45 Degrees North Latitude, and lies betwixt 67 and 73 Degrees of Western Longitude; bounded on the North-west by *Canada*; on the North-east by *Nova Scotia*; on the East and South by the *Atlantic Ocean*, and on the West by *New York*; stretching in Length somewhat more than three hundred Miles, and in some Places it is near two hundred in Breadth. The Air of this Country is sharper than ours, though it lies so much farther to the South, and the Winters are longer and severer than they are here; but then their Summers are warmer, though shorter than ours; and, at the same Time, the Inhabitants have the Advantage of a clear Sky, which renders the Country very wholesome; so that none of our Plantations agree better with an *English* Constitution. Their longest Day at *Boston* is about fifteen Hours, and their shortest about nine; the Land, next the Sea, is generally low, and in some Places marshy; but farther up, the Land rises into Hills; along the North-east the Country is rocky and mountainous.

As it is washed by the Ocean on the East and South, it has many good Harbours, some of them so capacious as to be able to receive large Fleets. There are few Countries better watered; for, besides several small Lakes and Rivulets, there are no less than seven navigable Rivers. The most Western of these is *Connecticut*; which, rising in the North of *New England*, runs almost directly South, till it falls into the Sea, and runs, at least, two hundred Miles, and navigable to a great Height, having at its Mouth two large Towns, called *Saybrook* and *Lime*: To the East of this lies the *River of Thames*, though less considerable than the former; it likewise runs South, and falls into the Sea a little below *New London*: The River *Patuxet* rises in the North-west of the Country of *Massachusetts*, and, running South-east, falls into a noble Bay near *Swansey*: The River *Merimack* rises in the North of *New England*, and runs directly South for near one hundred Miles, and then, turning East, falls into the Sea between *Salisbury* and *Newbury*: The River *Piscataway*

way runs from West to East, and falls into the Sea at *Portsmouth*, where the Opening is so large, that it affords a Port capable of receiving the largest Ships: The River *Saco* rises in the North of *New England*, and, running South, falls into the Sea between the Capes *Porpus* and *Elizabeth*: The River *Casco* runs parallel thereto, till it falls into a Bay of its own Name.

It is owing to the Conveniency of so many fine Rivers that this Country is so full of large and populous Towns; and in the Country between the Rivers there is such plenty of small Brooks and Springs, that there is scarce any Place where Water may not be had, by sinking a Well to the Depth of ten Foot; and, which is another singular Advantage, the Water is almost every where good and fit for all kinds of Uses.

As to Quadrupeds, or four-footed Animals, they are here in great Plenty, both tame and wild; among the former are Cows, Sheep, Goats, Hogs, and Horses, all originally brought from *England*, but now very numerous here; the latter are, generally speaking, of a much smaller Breed than ours, but they are somewhat larger than the *Welsh*: They are, notwithstanding the Inferiority of their Size, extremely serviceable; and, though they have but one Pace, and that too not very agreeable, being a kind of a Shuffle, yet they go at a very great Rate; some say, not less than twenty Miles an Hour, which would be a little incredible, if some *New England* Horses had not been brought over to *Britain*, which are said to have put the Matter beyond Dispute; but though there are plenty of these Horses, yet they sell at a good Rate, twenty Pound being looked upon to be a very low Price for a sound Horse, at the Prime of his Age. As for Beasts of the Forests, they have almost all Sorts, such as Deer, Elks, Raccoons, Bears, Wolves, which seem to be only a kind of wild Dogs; which, when they are taken very young, may be made tame; Foxes, Hares, Rabbits, Squirrels, Beavers, Martins, Opossums, which are small Beasts about the Size of a Fox, and grey as a Badger; remarkable for having a false Belly, in which they hide their Young, and from whence they may be taken without any Prejudice either to them or to the Beast itself. They have also a great many Cur-Dogs, but these I suppose were originally from *Europe*. When the *English* first settled here, they made a great Profit of Furs, but they are since much fallen in their Value. I have been the shorter in the Accounts of these Creatures, which are common enough in other Countries of *America*, that I might have the more Leisure to describe a Creature which is peculiar, almost, to *New England*; and which seems therefore to deserve a more particular Description.

The Moose is found no where but in North *America*, and is one of the noblest Creatures in the Forest: There are two Sorts, the common grey Moose, by the *Indians* called Wampoose, (these are more like the ordinary Deer, and like them herd sometimes thirty in a Company) and the large and black Moose, of which we have the following Account: He is the Head of the Deer Kind, has many things in common with other Deer, in many differs, but in all very superior. The Moose is made much like a Deer, parts the Hoof, chews the Cud, has no Gall, and his Ears large and erect; the Hair of the black Moose is a dark grey, upon the Ridge of his Back ten or twelve Inches long, of which the *Indians* make Belts; he has a very short Tail. The *New England* Hunters have found a Stag Moose of fourteen Spans in Height, from the Withers, reckoning nine Inches to the Span, that is ten Feet and an half; a Quarter of this Venison weighed more than two hundred Pounds. A few Years ago a Gentleman surprized one of the black Moose in his Grounds, within two Miles of *Boston*: It proved a Doe or Hind of the fourth Year; after she was dead, they measured her upon the Ground, from the Nose to the Tail between ten and eleven Feet; she wanted an Inch of seven Feet in Height. The Horns of the Moose, when full grown, are about four or five Feet from the Head to the Tip, and have Shoots and Branches to each Horn, and generally spread about six Feet; when the Horns come out of the Head they are round, like the

Horns of an Ox, about a Foot from the Head they begin to grow a Palm broad, and further up still wider, of which the *Indians* make good Ladles, that will hold a Pint. When a Moose goes through a Thicket, or under the Boughs of Trees, he lays his Horns back on his Neck, not only that he may make his way the easier, but to cover the Body from the Browse or Scratch of the Woods. These prodigious Horns are shed every Year.

A Moose does not spring or rise in going as Deer, but shoves along sideways, throwing out the Feet like a Horse, in a raking Pace. One of these large black Moose, in his common Walk, has been seen to step over a large Gate, five Feet high: After you unharbour a Moose, he will run a Course of twenty or thirty Miles before he turns about, or comes to a Bay; when they are chased they generally take to the Water. The common Deer, for a short Space, are swifter than a Moose; but then a Moose soon out-winds a Deer, and runs much farther. The Meat of a Moose is excellent Food; and though it is not so delicate as the common Venison, yet it is more substantial, and will bear salting; the Nose is looked upon as a great Dainty. The black Moose are rarely found above four or five together; the young Ones keep with the Dam a full Year. A Moose calves every Year, and generally brings two; they bring forth their young Ones standing, and the Young fall from their Dam upon their Feet. The time of their bringing forth is generally in the Month of *April*.

The Moose being very tall, and having very short Necks, do not graze, as the common Deer, other Cattle, &c. do, and if at any time they eat Grass, it is the Top of that which grows very high, or on steep rising Ground; in the Summer they feed upon Plants, Herbs, and young Shrubs, that grow upon the Land, but mostly, and with the greatest Delight, on Water Plants, especially a Sort of wild Colt's-foot and Lilly, that abound in their Ponds, and near the Banks of Rivers, and for which the Moose will wade far and deep; and by the Noise they make in the Water, the Hunters often discover them. In the Winter they live upon Browse, or the Tops of Bushes, and young Trees, and being very tall and strong, they will bend down a Tree as big as a Man's Leg; and where the Browse fail them they will eat off the Bark of some Sort of Trees as high as they can reach; they generally feed in the Night, and lie still in the Day. The Skin of the Moose, when well dressed, makes excellent Buff; the *Indians* make their Snow-Shoes of them. Their way of dressing it, which is very good, is thus: After they have haired and grained the Hide, they make a Lather of the Mooses Brains in warm Water, and after they have soaked the Hide for some Time, they stretch and supple it.

There is hardly greater Variety and Plenty of Fowl any where, such as Turkeys, Geese, Partridges, Ducks, Herons, Storks, Heath-Cocks, Swans, Wigeons, Dapers, Black-Birds; all Sorts of Barn-door Fowl, Crows, Ravens, Cormorants, &c. Vast Flights of Pigeons come and go at certain Seasons of the Year.

The Fish in the Sea and Rivers here are excellent, and in vast Abundance, as Cod, Thornback, Sturgeon, Salmon, Haddocks, Herrings, Mackrel, Smelts, Eels, Lampreys, Sharks, Seals, Porpusses, Grampusses, Whales, and other Fish, great and small. The best Months for fishing are *March*, *April*, *May*, and *June*. Six or seven Star-Fish were formerly taken off the Shore near *Nantucket*, of which Governor *Winthrop* gave the Royal Society an Account, having observed that this Fish divides itself into no less than 81920 small Parts by Branchings, and is one of the most wonderful Works of the Creation. Some Years since there stranded on the Coast of *New England* a dead Whale, of the Sort which in Fisher's Language is called Trumpo, having Teeth like those of a Mill, its Mouth at a good Distance from and under the Nose, and several Partitions in the Nose, out of which run a thin oily Substance, they candied; the remainder, which proved a thick fat Substance, being scraped out, was said to be the *Sperma Ceti*. We have some very curious Accounts, not only of this, but of other kinds of Whales, by the ingenious Mr. *Dudley*, which for want of Room I omit; and also, because, I shall

I shall be obliged to mention this Subject again more largely in another Place.

We will now proceed from the Animal to the Vegetable Kingdom, which is in full as flourishing a Condition, and yields very little to any Country in *America*. There is Plenty of good Timber in the Woods and Swamps of *New England*; but that Plenty is so much lessened within ten or twelve Miles from the Sea, that, we are told, there is a Necessity of a Law, to prevent the Waste of Woods, which three or fourscore Years ago the Planters would have been glad to have seen wasted. Oak, Elm, Firr, Ash, Cypress, fine Chesnut, Walnut, Cedar, Beech, Aspin, Sassafras, and Shumack, are common here; their Firr is of an extraordinary Growth for Mafts, Yards and Planks. The Shumack is of use for Dyers and Tanners; and, as there is no want of Hides or Skins, nor Bark, there must be much Leather in *New England*, if those Advantages are improved; the Oak has supplied the Shipwrights for Building; the Firr produces Pitch, Tar, Rosin, and Turpentine. All Sorts of Garden and Orchard Trees grow in Perfection, so that it is no hard Thing for one Planter to make a hundred Hogsheads of Cyder in a Season, and the Export of Apples to the Sugar Islands is one of the constant Articles in the Trade of the Province.

It is affirmed, their Apples are larger and sweeter than ours in *England*; and the same Observation extends to their Plumbs, Cherries, Peaches, Pears, &c. All Sorts of Roots for the Table are in great Plenty here, as Turnips, Parsnips, Carrots, Radishes, much larger and richer than in *England*, though originally their Seeds came from hence. There are also Pompions and Onions, good store of Water-Melons; and Squashes grow here, perhaps, from Seeds that were first brought from *Portugal*; whither the Traders here have long sent, and still send, their Fish in great Quantities. Flax and Hemp grow as naturally here as in any Country on the *Baltic*, and in as great Perfection; Oats, Barley, Peas, Beans, and indeed every thing of this Kind, succeed as well as can be wished; but amongst them all, there is nothing so much planted as *Indian Corn*, of which Mr. *Winthorp* having given a large Account to the Royal Society, we shall take as much as is necessary for ours, or the Reader's Purpose, from thence, and insert it here.

The Natives called it Weachin, and in some southern Parts of *America*, it is known by the Name of Maïs or Maize; the Ear is a Span long, composed of eight Rows of Grain, or more, according to the Goodness of the Ground, about thirty Grains in a Row; 'tis of various Colours, as red, white, yellow, blue, olive, greenish, black, speckled, striped, and sometimes in the same Field, and in the same Ear; but the white and yellow is the most common; the Ear is defended from the Cold and Storms by strong thick Husks, the Stalks grow six or eight Feet high; that of *New England* is not quite so tall as that of *Virginia*, and at *Canada* it is shorter than at *New England*; 'tis jointed like a Cane, and full of sweet Juice, like the Sugar Cane, and a Syrup as sweet as Sugar may be made of it, as has been often tried; at every Joint there are long Flags, and at the Top a Branch of Flowers like Rye Blossoms.

It is generally planted from the Middle of *April* to the Middle of *May*. In the northern Parts the *Mohawk* Corn is not planted till the Middle of *June*, and yet is ripe in Season. The Stalks of this Sort are short, and the Ears near the Bottom, and are of several Colours. The manner of planting Maize is in Rows, at equal Distance every way, about five or six Feet; the Earth is opened with a Hoe four Inches deep, and four or five Grains are thrown into it, at a little Distance from one another in the Breadth of a Hoe, then they are covered with Earth; if they grow the Crop will answer. The Corn is weeded at a Hand's length, and the Earth is loosened about it with a Hoe. This Labour must be repeated as the Weeds come up; when the Stalk begins to grow high, a little Earth should be drawn about it, and on putting forth the Ear so much as to make a little Hill, like a Hop-Hill. 'Tis ripe about the Middle of *September*; it must be stripped as soon as gathered, unless 'tis laid thin, to prevent its growing mouldy, or

sprouting. The common way is to move the Ear together, in long Traces, by some Part of the Husks left thereon, which is called tracing. These Traces they hang upon Bearers, without Doors, and will keep so all Winter good and sweet. The *Indians* thrash it as they gather it. They dry it well on Matts in the Sun, and bury it in Holes in the Ground, lined with Moss or Matts, which are their Barns. The *English* of late plant it with the Help of the Plow; they turn up single Furrows, six Feet distance; then plow a-cross, at the same Distance, throw in the Corn, where these meet, and cover it with a Hoe, or run another Furrow over it with the Plow.

The *Indians* boil it till it becomes tender, and eat it with Fish or Venison, instead of Bread; sometimes they bruise it in Mortars, and so boil it. The most usual way is to parch it in Ashes, stirring it so artificially as to be very tender, without burning; this they sift and beat in Mortars into fine Meal, which they eat dry, or mixed with Water. The *English* mix it into a stiff Paste, make Bread of it, which they bake all Day or all Night. The best Sort of Food which is made of it is called Samp; to make it, the Corn is watered half an Hour, beaten in a Mortar to the Bigness of Rice, sifted, boiled, and eaten with Milk, or Butter and Sugar, like Rice; and this seems to be so good and wholesome a Diet, that 'tis a strange Sort of Folly in some that despise it, because 'tis *Indian Corn*; and the *Indians* have no other Corn to eat. The *English* have also made good Beer of it, by malting it, or making it of Bread; when they malt it, it must chit both ways, Root and Blade; to do which, they heap it up at a convenient Time, then take away the Top of the Earth of a Garden-Field, two or three Inches deep; after which they cover the Ground with the Corn and the Corn with the Earth; when the Plat is green all over with the Corn-Sprouts, which it will be in about ten Days, it must be taken up, the Earth shaken from it and dried, and then washed and dried again on a Kiln; this makes the Malt and that the Beer, which will be pleasant, wholesome, and of a brown Colour. The Beer made of Bread is more durable, and altogether as pleasant; to make this, they cut the Bread into great Lumps, as big as a Man's Fist, mash and manage it as they do Malt; adding or omitting Hops, of which they have enough, and as good a Sort of their own as is desired. No *Indian Corn* grows wild now; but both that and Kidney Beans were found among the Natives. The *Indians* have a Tradition, that the first Grain of Corn was brought thither by a Black-Bird, and the first Bean by a Crow.

We are now to proceed from the Description of the Country, and an Account of its Produce, in which we ought, by all Means, to include Iron Ore, of which there is in this Country great Plenty; I say, our Method leads us to go on to the Political State and Condition of this Colony, that the Situation of the *English* therein may be rendered more obvious, and be the better apprehended. In order to do this as succinctly as possible, we shall observe there are very few Countries, in which so many different Forms of Government have prevailed within so narrow a Space of Time as in *New England*. At the first going over of the People thither they framed a Government of their own, and afterwards procured, as themselves boast, or some of their Writers have boasted for them, the Establishment of a Republic, by Virtue of a Patent from King *James I.* which, however, they managed so indifferently, and were guilty of such flagrant Oppressions, on account of Differences in Religion, that their Charter was in the Reign of King *Charles II.* declared forfeited; and though it was renewed under the Reign of King *William*, yet it was under various Restrictions, and with several material Alterations; so that we may safely affirm, that there are at present three kinds of Governments established by Law in those four Colonies; which, as we before observed, are established within the Limits of *New England*. The first kind of Government I shall mention is, that old Form of Charter Government, which allows the People to chuse annually their own Governors, Deputy-Governors, Council and Assembly, with all their Officers, Civil and Military, and to make such Laws as to them

shall seem expedient, provided they are not repugnant to the Laws of *Great Britain*. This kind of Government, which, I believe, is more independent than that of any Colony belonging to any other Nation in the World, is enjoyed in its full Extent by the People who inhabit the Plantations of *Conneticut* and *Rhode Island*; but they make a very different Use of it; for those of the first-mentioned Colony are very strict in Point of Religion, whereas those in *Rhode Island* are the freest in that Respect of any in the World; for there are among them People of all Religions, or rather, of all those Sects into which Protestants are divided, but without the least Prejudice to their temporal Concerns, every Man being alike capable of Magistracy; and with respect to an Established Church there is none, but each Body of Christians live according to their own System, and chuse and pay their Ministers as they think fit. The great Colony of *Massachusetts*, is likewise a Charter-Government, but the Appointment of the Governor, Lieutenant-Governor, Secretary, and all the Officers of the Admiralty, is vested in the Crown. The People have not only the Choice of the Assembly, but of the Council; upon which, however, the Governor in his Turn has a Negative; and, by virtue of his Commission as Captain-General, has the Power of the Militia; so that here the supreme Authority rests neither in the Governor nor the People, but in them both, whenever they can agree to exert it. The Government of *New Hampshire* is entirely in the Hands of the Crown, in the same Manner as that of *Virginia*, and other Colonies.

The Capital of this Country is *Boston*, in the County of *Suffolk*, and within the Province of *Massachusetts proper*: It is situated in the Latitude of 42 Degrees 20 Minutes North, and in 71 Degrees of Longitude West from *London*; it stands on a Peninsula about four Miles in Circumference, at the Bottom of a fine Bay of the Sea, at the Entrance whereof are several Rocks which appear above Water, and above a Dozen small Islands, some of which are inhabited. There is but one safe Channel to approach the Harbour, and that so narrow that two Ships can scarce sail through a-breast; but within the Harbour there is room enough for five hundred Sail to lie at Anchor. The Entrance is defended by the Castle of *Fort-William*, on which are one hundred Guns mounted, twenty of which lie in a Platform, level with the Water, so that it is scarce possible for an Enemy to pass the Castle; and, to prevent Surprise, they have a Guard placed on one of the Rocks about two Leagues distant, on which also there stands a little House, from whence they make Signals to the Castle when any Ships come near it: There is also a Battery of great Guns at each End of the Town, which commands the Harbour, to the Fire whereof any Enemy would be exposed if he should be so fortunate as to pass the Castle.

At the Bottom of the Bay there is a Pier near two thousand Feet in Length, with Warehouses for the Merchants on the North side of it; and Ships of the greatest Burden may come up close to the Pier and unload, without the Help of Boats. The greatest Part of the Town of *Boston* lies in the Form of a Crescent about the Harbour, the Country beyond rising gradually, and affording a most delightful Prospect from the Sea: There are in it several Streets, not much inferior to the best in *London*, the chief of which runs from the Pier up to their Town-house, or *Guild-hall*, a handsome Building, where are Walks for the Merchants, as on the *Exchange*; and there also are the Council-Chamber, the House of Representatives, and their Courts of Justice, the *Exchange*, being surrounded with Booksellers-shops, who have Trade enough to employ five Printing-presses. There are ten Churches of all Denominations, of which six are Independents, the most prevailing Party in *New England*. And the Number of Souls in the Town of that Persuasion may be about fourteen or fifteen thousand. The Episcopal Church is handsomely built and adorned, and the Congregation said to be about a thousand in Number. Their Church Furniture, and some Pieces of Plate, were given them by *K. William* and *Q. Mary*, and their Organ by *Thomas Brattley, Esq*; There is also in this Church a magnificent Seat for the Governor,

who comes thither when he happens to be of the Church of *England*. *Boston* is the most flourishing Town for Trade in *English America*, and there are several hundred Sail of Ships, Brigantines, and other Vessels, annually loaded here with Timber, Beef, Pork, Fish, and other Commodities, for *Europe*, or the *American Islands*: Their Merchants and Tradefmen are a polite sort of People, many of them having travelled into *Europe*, or conversed with Foreigners of several Nations at home: Their Houses are elegantly furnished, and their Tables as well served as those of the Merchants and Tradefmen of *London*; all manner of Provisions being as plentiful as in any Town in *Old England*.

A late Writer tells us in relation to the Fortrefs before-mentioned, that it is a beautiful Castle, by far the finest Piece of Military Architecture in *British America*; being a Quarry surrounded by a Covered-way, and joined with two Lines of Communication to the Main Battery, as also a Line of Communication from the Main Gate to a Redoubt, to prevent any Enemies landing; and the Battery is situated so near to the Channel, as to hinder Ships coming up to the Town, which must all come within Pistol-shot of it. In time of Peace there is but one Company on Duty in the Castle; but in time of War, there are five hundred able bodied Men, exempted from all other Military Duty, to attend the Service of the Castle at an Hour's Warning, when the Signal is given from the Night-house of the Approach of an Enemy. The Castle thereupon makes a Signal to the Town, and if five Ships or more appear in time of War, the neighbouring Country is alarmed, by firing a Beacon. In this City commonly the Governor resides; here the General Court and Assembly meet, and almost all the public Business of the Province is here transacted. The Number of Houses is computed at four thousand four hundred; the Number of People, at about twenty-four thousand; and the Shipping of this Port is computed at between six and seven hundred. There are, besides this, several great Towns and good Ports and a Multitude of small ones, in *New England*; but I have not Room to enter into more particular Accounts.

As to the Number of People Writers differ extremely, and it is not easy to know which is in the right; but the following, about twenty Years ago, was said to be the best Authority, *viz.* that in the *Massachusetts* Colony there were eighty thousand Souls; in that of *Conneticut*, thirty thousand; and in *Rhode Island*, ten thousand; in the whole, one hundred and twenty thousand: But I am persuaded that, at present, they amount to one hundred and sixty thousand at least.

The Commerce of these Colonies is very considerable, and extends itself over all *America*, and into some Parts of *Europe*; they furnish our Sugar Colonies with Fish, Cattle, Boards, Hoops, Pipe-staves, Bark, Skins, Butter, Cheese, Oil, Tallow, Corn, Apples, Turpentine, &c. and this in such vast Abundance, that it is computed the Island of *Barbadoes* alone, takes off to the Value of two hundred thousand Pounds every Year; they deal besides with the other Sugar Colonies, sometimes with the *French*, largely with the *Spaniards*, and they ship off prodigious Quantities of Fish, to *Italy*, *Spain*, and *Portugal*. They take from us all kinds of Mercery Goods; Linnen, Stockings, Shoes, Sail-cloth, Cordage, Haberdashery Ware, and a vast many other Things; in Return they build a prodigious Number of Ships, and export a vast Quantity of Masts, Plank, and Yards, for the Royal Navy; Pitch, Tar, Turpentine, Skins, Furs, Oil, Whale-Fins, Logwood and other Commodities.

The Observations made by the famous Sir *Josiah Child*, in reference to this Colony, are very well worthy our Notice, as they will lead us to form the truest Judgment possible as to that important Point, what the Profit is which results to this Kingdom, from our Plantations in *New England*; upon which he reasons in the following Manner: "1st, All our *American* Plantations, except "the *New England*, produce Commodities of different "Natures, as Sugar, Tobacco, Cocoa, Wool, Ginger, "fundry Sorts of dying Woods, &c. Whereas *New "England* produces generally the same we have here, *viz.*

"Corn

“ Corn and Cattle ; some quantity of Fish they do like-
“ wise kill, but that is taken and cured altogether by
“ their own Inhabitants, which prejudices our *New-*
“ *foundland* Trade ; where, as has been said, very few
“ are, or ought, according to Prudence, to be employ-
“ ed in these Fisheries, but the Inhabitants of *Old Eng-*
“ *land*. The other Commodities we have from them are
“ some few great Mafts, Furs, and Train Oil, of which
“ the yearly Value amounts to very little ; the much
“ greater Value of Returns from thence being made in
“ Sugar, Cotton, Wool, Tobacco, and such like Com-
“ modities, which they first receive from some other
“ of his Majesty’s Plantations, in barter for dry Cod-fish,
“ Salt, Mackrel, Beef, Pork, Bread, Beans, Flower,
“ Pease, &c. which they supply *Barbadoes*, *Jamaica*, &c.
“ with, to the Diminution of the Vent of those Com-
“ modities from this Kingdom ; the great Experience of
“ which, in our own *West India* Plantations, would soon
“ be found in the Advantage of the Value of our Lands
“ in *England*, were it not for the vast and almost in-
“ credible Supplies those Colonies have from *New Eng-*
“ *land*.

“ 2dly, The People of *New England*, by virtue of
“ their primitive Charters, being not so strictly tied to the
“ Observation of the Laws of this Kingdom, do some-
“ times assume the Liberty of trading, contrary to the
“ Act of Navigation, by reason of which many of our
“ *American* Commodities, especially Tobacco and Sugar,
“ are transported in *New English* Shipping, directly into
“ *Spain*, and other foreign Countries, without being landed
“ in *England*, or paying any Duty to his Majesty ; which
“ is not only a Loss to the King, and Prejudice to the
“ Navigation of *Old England*, but also a total Exclusion
“ of the *Old English* Merchant, from the Vent of those
“ Commodities in those Ports where the *New English*
“ Vessels trade ; because there being no Custom on those
“ Commodities in *New England*, and a great Custom
“ paid on them in *Old England* ; it must necessarily fol-
“ low that the *New English* Merchant will be able to
“ afford his Commodity much cheaper than the *Old En-*
“ *glish* Merchant ; and those that can sell cheapest, will
“ infallibly engross the whole Trade sooner or later.

“ 3dly, Of all the *American* Plantations, His Majesty
“ has none so apt for the Building of Shipping as *New*
“ *England*, nor none comparably so qualified for the
“ breeding of Seamen, not only by reason of the natu-
“ ral Industry of that People, but principally by reason
“ of their Cod and Mackrel Fisheries ; and, in my poor
“ Opinion, there is nothing more prejudicial, and, in
“ Prospect, more dangerous to any Mother Kingdom,
“ than the Increase of Shipping in her Colonies, Plan-
“ tations, and Provinces.

“ 4thly, The People that evacuate from us to *Bar-*
“ *badoes*, and the other *West India* Plantations, as was
“ before hinted, do commonly work one *English* to ten
“ or eight Blacks ; and if we kept the Trade of our said
“ Plantations entirely to *England*, *England* would have
“ no less Inhabitants, but rather an Increase of People,
“ by such Evacuation, because that one *Englishman*, with
“ ten Blacks that work with him, accounting what they
“ eat, use, and wear, would make Employment for four
“ Men in *England*, as was said before ; whereas, perad-
“ venture, of ten Men that issue from us to *New Eng-*
“ *land* or *Ireland*, what we send to, or receive from,
“ them, does not employ one Man in *England*.”

But with great Submission to so knowing a Man and
so able a Judge as he was in these Matters, what he has
delivered upon this Subject, though hitherto received with
general Approbation, is liable to many Objections, which,
being duly considered, will give the State and Utility of
this Colony another Aspect. For, with respect to his first
Head of Objections, it is not the Fault of *New Eng-*
land that they have not a staple Commodity, as well
as the Sugar and Tobacco Plantations, but it is our
own ; since we might be furnished from thence with as
great Plenty, and in as great Perfection, as from any
Part of the *Baltic*, with all the naval Stores, which are so
necessary, and for which we actually pay, yearly, a vast
Sum of ready Money. It is therefore very unjust to call

New England a useless Province, because we will not make
use of her Commodities, which we might command for
our own Manufactures, at our own Time, and on our
own Terms, but rather pay our Money for them to
Foreigners ; who, whenever an Opportunity offers, ne-
ver fail to force their own Terms upon us. As to the
Provisions furnished to our Sugar Colonies by the Peo-
ple of *New England*, it is so far from being a Disadvan-
tage to the Nation, that it is a very great Convenience ;
for without it they could not possibly subsist. This, at
first Sight, may seem a very bold Assertion, but I am
very confident that it is true ; for in Time of Peace, if
the Sugar Colonies were to draw all their Provisions from
hence, it would make their Commodity much dearer,
and consequently enable Foreigners to beat us out of that
Trade entirely, and in Time of War the People in those
Colonies would be in Danger of starving, as the Inhabit-
ants of the *French* Sugar Islands generally are ; to avoid
which Inconveniency they are now labouring to render *Lou-*
visiana as useful to their Sugar Colonies, as *New England*
is to ours ; and after all, what the *New England* People
get by this Trade comes hither. To this we may add,
that if we had not settled *New England*, the *French* cer-
tainly would, the Consequences of which may be more
easily conceived than described.

The second Objection admits of the same Answer. We
have the Benefit of all the Trade the People in this Co-
lony carry on in *Europe*, as well as *America* ; and while
we have this certain Advantage, there seems to be no just
Cause for our disturbing ourselves with the Thoughts of
the Advantages that might be gained if this Trade ran
in another Channel ; since these are Incertainties, as to
which, however, our Government has already taken all
the Precautions that are possible, or at least that are prac-
ticable, without running into greater Inconveniencies, than
those they are calculated to guard against. The breed-
ing of Seamen, and the building of Ships, are not found
by Experience, to be attended with the Inconveniencies
that were feared from them ; but on the contrary, have
had many advantageous Consequences, both in time of
War and of Peace. The fourth Objection, which seems
to have the greatest Weight of any, we know now by Ex-
perience has in reality no Weight at all ; for, without
having Colonies composed entirely of white People, it
would be impossible for us to defend our other Colonies
against our Enemies in *America* ; and, as we shall shew
hereafter in speaking of *Georgia*, instead of repining at the
Want of Negroes in *New England*, we ought rather to
wish that there were fewer Negroes elsewhere. The Read-
er will easily perceive that I do not affect to contradict
this great Author, I only express the Reasons why his
Arguments do not convince me, and, from the Lights
of Experience, shew that it is not impossible even for the
greatest Men to be mistaken.

Sir *Josiah Child* saw this himself, as appears by
the Manner in which he finishes his Remarks, which I
look upon to be one of the finest Passages in his whole
Work. “ To conclude, says he, and to do right to
“ that most industrious *English* Colony, I must confess,
“ that though we lose by their unlimited Trade with
“ our foreign Plantations, yet we are very great Gainers
“ by their direct Trade, to and from *Old England*. Our
“ yearly Exportations of *English* Manufactures, Malt,
“ and other Goods from hence, thither, amounting, in
“ my Opinion, to ten times the Value of what is im-
“ ported from thence ; which Calculation I do not make
“ at Random, but upon mature Consideration ; and,
“ peradventure, upon as much Experience of this very
“ Trade, as any other Person will pretend to do ; and
“ therefore, whenever a Reformation of our Correspon-
“ dency in Trade with that People shall be thought on,
“ it will, in my poor Judgment, require great Tender-
“ ness, and very serious Circumspection.”

I shall not dwell much longer upon this Subject, or
pretend to give the Reader any Calculation of the Value
of those Advantages which from this Colony are deriv-
ed to *Great Britain*, because I am sensible that though
the Thing may be practicable in itself, yet sufficient In-
formations are not hitherto fallen into my Power ; I desire
there-

therefore to leave only these three Remarks with the ingenious and impartial Reader: The first is, that we have it in our Power to bring from this Colony all the naval Stores that we now bring from the *Baltic*; which, whenever it is thoroughly considered by our Parliament, will produce some Law, which cannot fail of rendering this Colony twice as beneficial to the Nation as it has hitherto been, or could be, till enabled by such a Law. In the second Place I must observe, that as we derive a great Part of our Sugars from the Assistance given to the Colonies which produce them by *New England*, so this Part of their Produce ought to be placed to the *New England* Account. I am to remark lastly, that the Complaints which have been made of the Inhabitants of this Colony dealing in Goods, and employing themselves in Manufactures, which interfere with those of *Great Britain*, is a Complaint, which, though well founded, is ill applied; for though it be true that this may be an Injury to us, yet the Fault lies in ourselves, and not in the People of *New England*, who only raise and manufacture for themselves what they cannot purchase from us; so that not content with having their All (for, as we have shewn, the whole Ballance of their Trade comes hither) we seem to be angry that they endeavour to supply themselves with what we could sell, and they want where-withall to purchase; which Want, however, might be removed, by taking their naval Stores. But it is now fit that we should give a short View of the Plantation of our next Colony, which though we cannot call it one of the most profitable, yet it must be allowed one of the most pleasant of our Plantations.

10. The Islands of *Bermudas* were discovered by one *John Bermudas* a *Spaniard*, after which they were frequently touched at by his Countrymen in their Passage to the *West Indies*, but were quite unknown to us till the Year 1593, when one *Henry May* was shipwrecked upon them in a *French* Vessel, whose Report made them very famous; but they became more so by the like Misfortune of *Sir George Summers*, and *Sir Thomas Gates*, in their Passage to *Virginia* in 1609, of which we have before given a particular Account, as well as of his being sent thither a second Time to fetch Hogs, when it was with great Difficulty he found these Islands, and not long after he breathed his last in them, being upwards of threescore, and much fatigued for many Months before. It was from him their Name was changed to *Summers's Islands*, which our Mariners call the *Summer Islands*; a Name they very well deserve for their Pleasantness and Fertility. *Sir George* directed his Men to return to *Virginia* with black Hogs, for the Relief of that Colony, but they resolved otherwise after his Death; and storing their Cedar Ship with such Provisions as they had, they set sail for *England*, where they arrived at *Whitchurch* in *Dorsetshire*, having *Sir George Summers's* Corps on board, only the Heart and Bowels they left at *Bermudas*, where Captain *Butler*, twelve Years afterwards, built a handsome Monument over them.

These Men, at their Return, gave such an Account of the Country to the *Virginia* Company, that they thought it worth their while to establish a Correspondence between *England* and *Bermudas*; accordingly they sold these Islands to one hundred and twenty Persons of the same Society, who obtained a Charter from King *James*, and became the Proprietors of them. When *Sir George Summers* was first here, two of his Men staid behind, having committed some Crime, for which they would have been put to Death. They were still there when *Sir George* returned, and had, ever since his Departure, supported themselves on the Productions of the Place, and built them a Hut, and took Possession of *St. George's Island*. These two Men, whose Names were *Christopher Carter*, and *Edward Waters*, staid also behind *Sir George's* second Company, of whom they persuaded one *Edward Chard* to remain with them; and now *Carter*, *Waters*, and *Chard*, were sole Lords of the Country, but soon fell out among themselves; *Chard* and *Waters* were coming to a pitched Battle; but *Carter*, though he hated them both, yet not liking to be left alone, prevented it, by threatening to declare against the Man who struck first. At last Necessity

made them good Friends, and they joined together in making Discoveries, in one of which Expeditions they found the largest Piece of *Ambergrease*, among the Rocks, that ever was seen, weighing eighty Pounds, besides other smaller Pieces. This Treasure made them almost mad; they grew giddy with the Thoughts of it, and, that they might have an Opportunity to make use of it, resolved, on the most desperate Attempt that Men could run upon, which was to build a Boat after the best Manner they could, to sail to *Virginia* or *Newfoundland*, according as Wind and Weather should present.

But before they could put their Project in Execution, a Ship arrived from *England*; for Captain *Mathew Summers*, *Sir George's* Brother, had promised to come to them, or send a Vessel to their Relief. The Ship they discovered standing in with the Shore was the *Plough*, which had sixty Persons aboard, sent by the new *Bermudas* Company to make a Settlement, of which Mr. *Richard Moor* was Governor, who was an honest industrious Person. He pitched upon a Plain in *St. George's Island* to settle on, and there first built himself a House, or rather Cabin, for the Building was only of *Palmeto* Leaves; yet he made it large enough for him, his Wife and Family; and the rest of the Adventurers following his Example, it became a sort of a Town, which in Time grew to a considerable Bigness, and is now *St. George's* Town, one of the strongest and best built in our *American* Colonies; for all the Houses are of Cedar, and all the Forts of hewn Stone. This Man proved an excellent Governor in every Respect; and, in the Year 1614, disappointed the *Spaniards* in a Design they had formed of landing upon, and conquering, these Islands.

He was succeeded by Captain *Daniel Tucker*, who was a Person of better Education, and more Experience in the World, who took upon him to establish a regular Form of Government; to distinguish and trace out Plantations; to oblige every Man to build uniformly in the Town, and to plant regularly in the Country; by which Method the Islands were very much improved, and the Exportations for *England* increased; he likewise established a tolerable Militia, and put the Islands in such a posture of Defence, as, together with their Situation, put it out of the Power of any of their Enemies to disembark such a Force as might hurt them. But the Severity of his Government was so grievous to some licentious Persons, that five of them executed as desperate a Design to escape him, as *Waters* and his Companions had projected to get away from the Island. They knew the Governor would not give them leave to go off, and therefore invented this Contrivance to effect it: Hearing Captain *Tucker* had a great Desire to go a fishing out at Sea, but was afraid to do it, because several Fisher-boats had been driven off by the Weather and the Men perished, they proposed to him to build a Boat of two or three Tons, with a Deck, and so fitted that she should live in all Weathers. The Governor consenting to it, they fell to building in a private Place, pretending it was convenient for getting Timber and launching the Boat. They finished it sooner than was expected; and the Governor sent Hands to fetch it, intending to go in it aboard a Ship which he was then dispatching for *England*. When his Men came to the Place, neither the Boat nor the Builders were to be found; all that they could hear of them was, that the Boat being finished the Night before, those that built it went off to Sea in it, to try how it would sail. At last they found by some Letters they left behind them, that they were gone for *England*; and the Story of their Adventure is told us in this Manner:

They borrowed a Compass-dial of a Neighbour, on some Pretence or other, and went on board the Ship bound for *England*, where they trucked with the Seamen such Things as they had, for Provisions. One of them, at parting, told the Mariners, that though they were forbidden to go with them, yet they hoped to be in *England* before them. At which the Master of the Ship laughed, and away these fearless Adventurers sailed, with a fair Wind and Weather for one and twenty Days; they then met with a Storm, which reduced them to Extremity for eight and forty Hours, and obliging them to bear

bear up afore it drove them a little out of their Course to the Westward ; but the Wind coming fair again, and continuing so ten Days, they went on chearfully. In that Time they met with a *French* Privateer, where they went aboard to beg some Relief ; but instead of helping they plundered them of the little they had, took away even their Instrument of Navigation, and turned them a-drift. In this miserable Condition they sailed on, growing every Day weaker and weaker ; their Provisions were almost spent, their Fire-wood quite gone, not a Drop of fresh Water left, nor Food for above a Day, when at last, in the very Hour they expected to perish, they made Land to their unspeakable Joy. This Land was *Ireland*, where they went ashore in the County of *Cork*, and were nobly entertained by the Earl of *Thomond*, to whom they related their Voyage, which had then lasted forty-two Days.

There were but five Persons concerned, of whom there was one Mr. *James Barker*, a Gentleman, *Richard Saunders*, who contrived the Design, *William Goodwin*, a Ship-Carpenter, who built the Boat, and *Henry Puet*, a common Sailor, who undertook to navigate this Vessel. Both these Stories may seem a little beside our present Purpose, but I have inserted them as belonging more immediately to a *Collection of Voyages*, and because I look upon both these Incidents to be very well worth preserving. Capt. *Tucker* resigned, in the Year 1619, to Capt. *Butler*, who arrived at that time with four good Ships, in which he brought five hundred Passengers, and there being as many *English* on the Island, the Colony began to make a considerable Figure. This Governor raised a noble Monument over the Remains of Sir *George Summers* that were left in the Island, depositing them in the Church in *St. George's Town*. He divided the Islands into Districts ; and now the Government, by Governor, Council, and Assembly, was established, which before had been only the Governor and Council. The Laws of the Country were also settled, as near as the Circumstances and Conveniencies of the Place would admit, to the Laws of *England* ; as is done in all the Colonies in *America*. After bringing down the History of these Islands to their becoming a regular and settled Colony, I am next to give an Account of the Islands themselves, in order to shew the Value of them.

II. There are some who would persuade us, that these Islands have received their Name from the vast Quantity of Black Hogs found upon them : *Bermudas*, in the old *Spanish* Tongue, signifying a *Black Hog* ; but though this Derivation be plausible, yet the Fact upon which it is founded, is most certainly false ; for when the *Spaniards* first discovered them there was not a single Hog upon these, or perhaps upon any other Island whatever ; neither is it well known upon what Part the *Spaniards* landed. These Islands lie very contiguous to each other ; but Authors differ so much as to the Number of them, that it is very difficult to speak of them with Certainty ; for some say there are but three hundred, others affirm there are more than five hundred. They lie in the Latitude of 32 Degrees 30 Minutes North, and in 35 Degrees of Western Longitude, at a vast Distance from the Continent, since the nearest Land, which is *Cape Hatteras* in *Carolina*, lies at least two hundred and fifty Leagues to the West of them, and they are above sixteen hundred Leagues from *England*. The Air here has been always thought extremely wholesome, and the Country wonderfully pleasant, inso-much that People were wont to remove hither from the other Colonies, in order to recover their broken Constitution. The Heat in Summer is very supportable, and with respect to Winter, they have really none ; nay, some go so far as to affirm, that there is but one Season in the Island of *Bermudas*, and this a perpetual Spring ; which, however, may be in some measure ascribed to the Soil, which though it be thin is very rich and very fruitful, though remarkably stoney. The Earth is of several Colours, brown, white, and red ; the first is the best and the last the worst. Two or three Feet under the Mould they find a white hard Body, which the Inhabitants call the Rock, but which seems more to resemble Chalk, or a Pumice-stone, through which the Roots of their Trees force a Passage ; and a kind of Clay is generally found under it.

Maize, or *Indian* Corn, which is the main Support

VOL. II. NUMB. LXXXVI.

of the People here, is twice reaped ; for what they sow in *March*, they cut in *July* ; in a Fortnight after they sow again, and reap in *December*. They have all the Plants peculiar to the *West Indies*, and all Kinds of Herbs, Roots, Flowers, and Trees, brought from *Europe*, thrive to Perfection. They have some Tobacco, but it is of an indifferent sort, and therefore does not yield them any great Profit ; but certainly, with a little Care, they might be able to produce any kind of Tobacco, or other Vegetable that turns to Account almost in any Climate. They have *Palmeto's*, a kind of Wild Palm, that is extremely useful, the Leaves being eight or ten Feet long, and near as broad, with which they cover or thatch their Houses ; it produces a very luscious Fruit, which in Shape, Size, and Colour resembles a Damson. Laurel, Olive, Mulberry, and Date Trees, are very common ; and their Forests abound with Variety of odoriferous Woods, some black, some of a yellow, and some of a red Colour : The Berries of these Trees have the Stiptic Quality of a Sloe, and are much used by the *English* to cure the Flux, which they frequently get by eating the luscious Palm-berries too greedily. But amongst a Multitude of Shrubs and Trees peculiar to these Islands, and equally valuable for their Timber and Fruit, there are two which, though found in other Parts of the World, have a peculiar Excellence here ; the first is their Orange, which in point of Size, Scent, and Flavour, far exceeds any either in the *West* or *East Indies* : The second is their Cedar, which from the Nature of the Soil wherein it grows is firmer and more durable than any of its Kind that we are acquainted with ; answers in every respect to Oak-Timber, and is found of extraordinary Use in Ship-building, so that the best Sloops, Brigantines, and other small Vessels, both for Service and Sailing, which are in Use throughout the *West Indies*, are built at *Bermudas*.

They have likewise two very singular Plants, one useful and the other noxious, but both so remarkable as to deserve particular Notice ; the first is called, the *Summer-Island Redwood*, the Berry of which is as red as the Prickle-Pear, giving also such a Tincture ; out of which Berry come first Worms, which afterwards turn into Flies, sometimes bigger than the *Cochineel* Fly, and a medicinal Virtue much exceeding it. The Poison-Weed is the other strange Plant, which grows much in the same manner as our Ivy, and if we may depend upon a Gentleman, who lived long in these Islands, and sent an Account of what was remarkable in them, to the Royal Society, there is not a more surprising Production than this in Nature : He says he had seen a Man so infected by it, as to have all the Skin of his Face peel off though he passed by without touching it, and yet he affirms that he had chewed it in his Mouth without feeling any Inconvenience, whence he infers, that it is not hurtful alike to all Constitutions. In this all who have been upon these Islands agree, that this Weed is very prejudicial, but then they agree likewise, that there is nothing venomous besides, in any of these Islands.

As for Animals, there were none in *Bermudas* but Hogs, Insects, and Birds, when Sir *George Summers* was shipwrecked there : He found out that there were some Hogs in the Island, by sending out two or three of his own to feed, and when they rambled home, a huge wild Boar followed them, and being killed was found to be excellent Meat : The Hogs they killed afterwards were found to be all black, and from thence it is concluded that the *Spaniards* had left them there to breed, because they were of the same Kind with them they carried to the Continent of *America* : They now fat them at *Bermudas*, with Palm and Cedar Berries ; but their Number is very much decreased. These Islands abound in more and greater Variety of Fowl than any in *America*. There are Hawks of all sorts, Hens, Bitterns, Offspreys, Cormorants, Baldcoots, Moorhens, Swans, Teal, Snipe, Duck, and Wigeons ; Bats and Owls are also very common here, with Multitudes of small Birds ; as Wood-peckers, Sparrows, &c. The *English*, at their first coming, found a sort of Fowl here they called *Cowkoes*, which bred in the Holes of the Rocks, and in Burrows, like Rabbits, and were so numerous and gentle, that they were taken by Hand. They are now almost destroyed, being very easy to be caught. This Bird is of the Bigness of

Q q q

a Sea-

a Sea-mew. There are also the Tropic-Bird, and the Pemlico, seldom seen by Day, and when it is, held to be the unwelcome Fore-teller of a Storm.

Fish there is as plenty as Fowl, of which there are so many sorts that Authors have not yet found out Names for them: They have of the scaly and the shelly Kind; the Whale and Sword-fish, and the Thresher; but particularly the Tortoise abounds to a Wonder, and is as good and great, of the Sort, as any in the World. Whale-fishing has been attempted, but without Success. The Whales about *Bermudas* are found only in the Months of *February*, *March*, and *April*; the Female Whales have abundance of Milk, which the young ones suck out of the Teats that grow by her Navel; they have no Teeth, but feed on Grass growing on the Rocks at the Bottom during these three Months, and at no other Season of the Year; when this is consumed and gone, the Whales go. There have been Sperma-ceti Whales driven upon the Shore, which Sperma (as they call it) lies all over the Bodies of these Whales: These have divers Teeth, which may be about as big as a Man's Wrist. Ambergrease and Sperma-ceti, have been found here in great Quantities, and Pearl. All which are almost as rare here now, as elsewhere; which is a little wonderful.

The Insects in these Islands are, generally speaking, the same before mentioned in other Plantations, except it be the Spider, which is thought to be larger here than in any other Country in the World, and so adorned with beautiful Colours, that it takes off very much, if it does not entirely remove, that Distaste, which otherwise the Sight of Creatures of this Kind and of so enormous a Size would naturally occasion. One of these Spiders, with its Legs extended, would take up a Space equal to the Breadth of a Man's Hand. Their Bodies are composed of two Parts, one flat and the other round, not unlike, either in Shape or Size, to a Pigeons Egg. On their Backs they have an Orifice, which serves as well as in some kinds of Hogs for a Navel; their Mouths are covered with a kind of grey Hairs, intermixed sometimes with bright red, and on each Side of their Mouths they have a kind of crooked Tooth, of a fine polished Substance, extremely hard, and of a bright shining black, and therefore they are often set in Silver or Gold for Tooth-picks. When these Creatures grow old, they are covered all over with a kind of dark brown or black Down, smooth, soft, and shining like Velvet; on the flat Part they have their ten Legs, five on each Side, each of which has four Joints, and two small Claws at the Ends. They cast their Skins every Year, together with those hard Teeth-like Substances before mentioned; they live upon Flies and Gnats, in catching of which they shew great Cunning and no less Agility. Their Webs, which are very large, they spirt into the Air, by which means they are lodged upon Trees at some Distance, and then run along the Threads, and weave them so strong, that Birds of the Size of a Thrush are sometimes caught in them.

There is scarce an eighth Part of these Islands inhabited, and all but *St. George's*, *St. Davids*, and *Coopers Isles*, have only a few Houses scattered up and down; they all together make the Figure of a Sheep-hook, and are within the Circuit of six or seven Leagues at most. There are none of them of any considerable Bigness, yet some much bigger than others; as Time and the Sea continually washing upon them, have worn them away in different Proportions. The main or great Island of all is called *St. George's*, and is about sixteen Miles in Length, from East-north-east to West-south-west; 'tis not a League over in the broadest Place, but is fortified by Nature all round, the Rocks every way extending themselves a great Way into the Sea. To natural Strength, especially towards the Eastward, where it is most exposed, the Inhabitants have added that of Forts, Batteries, Parapets, and Lines; the Cannon of the Forts and Batteries being so well disposed as to command the several Channels and Inlets into the Sea. There are no more than two Places where Shipping may safely come in, and it is not easy for a Man to find those Places out; the Rocks lie so thick in such a Manner, and some so undiscovered,

that without a good Pilot from the Shore, a Vessel of ten Tons could not find the Way into those Harbours, which being once known the biggest Ships in the World may enter. These two Havens are so fortified, that if an Enemy should attempt either, he might easily be kept out. The Rocks, at most Places, appear at low-water; it ebbs and flows there not above five Feet; the very Shore itself is, for the most Part, a Rock, and it is impossible to find out any Islands better guarded by Rocks than these; indeed they are all of them so invironed with them, that they seem to threaten all Ships who venture on that Coast with present Destruction, and so many have been shipwrecked upon them, that the Spaniards gave them the Name of *Los Diabolos*, the Devil's Islands; this Place having been fatal to them and all Nations.

The Town of *St. George* stands at the Bottom of the Haven of the same Name, covered by no less than six or seven Forts and Batteries, as *Kings Castle*, *Charles Fort*, *Pembrook Fort*, *Cavendish Fort*, *Davie's Fort*, *Warwick Fort*, and *Sandy's Fort*, mounted with above seventy Pieces of Cannon; and they are so disposed, that they can be all brought to bear upon any Ship before she can make her Entrance. In this Town there is a fair Church with a fine Library, for which the Inhabitants are indebted to *Dr. Thomas Bray*. There are near a thousand Houses in it handsomely built, and a State-House for the meeting of the Governor, Council, and Assembly. Besides the Town and Division of *St. George*, there are eight Tribes, *Hamilton's Tribe*, *Smith's Tribe*, *Devonshire's Tribe*, *Pembrook's Tribe*, *Paget's Tribe*, *Warwick's Tribe*, *Southampton's Tribe*, and *Sandy's Tribe*, of which, *Devonshire* in the North, and *Southampton* in the South, are Parishes, have each a Church, and a particular Library. In the whole Island there are Plantations of Oranges, Mulberries, and other Productions of the Country, which render it a very delightful Prospect. There is a Haven in *Southampton* Tribe or District, which is also called *Southampton*, and other Harbours, as the *Great Sound*, *Harrington's Inlet* in *Hamilton's Tribe*, *Paget's Port* in *Paget's Tribe*, and others. There are no Parish Churches in any of the lesser Islands, and all the Inhabitants are ranged under one or the other of the eight Tribes. The Number of People in the whole, who inhabit these Islands, has been computed to be nine thousand, and it is thought they do not much increase, many of the younger Sort removing, for the Sake of making their Fortunes, into other Colonies.

The Government is like that of *Virginia*; the Crown appointing both a Governor and Council, but the People, by their Representatives, compose the Assembly; they have fewer By-Laws than any of our other Settlements, which we impute to the Smallness of their Trade; for this Colony produces no considerable Commodity by which the Inhabitants may be enriched; and their Commerce consists chiefly in Timber and Provisions, which they send to the other Parts of *America* that stand in need of them, and some Tobacco imported to *England*; several Families retired thither formerly, on account of their Religion, or Health, from *England*, and carried considerable Effects with them. The building of Ships and Sloops is the most advantageous Branch of their Trade; and the People of *Bermudas* seem to content themselves with the Pleasure and Plenty of their Country, with a safe and quiet Retreat from the Troubles and Cares of the other Part of the World, without any Ambition to enrich themselves; and, if they had any such Desire, it is to be questioned whether they have any Opportunity of gratifying it: Be that as it will, the Inhabitants have constantly maintained a most excellent Reputation; inso-much that I knew a very ingenious Gentleman as well acquainted with this, and our other Plantations, as thirty Years trading to them all could render him, who was wont to say that *Bermudas* was the finest Country, and inhabited by the best People he ever knew.

It was this Report of the Place and People that induced the Reverend Dean *Berkley*, who is since become, very worthily, a Bishop of our Church, to think of erecting an Academy there, for promoting useful Learning and true Religion in the *West Indies*; and the Society for Propagation of the Gospel had so good an Opinion of the

Proposal made them by the Bishop of erecting a College or Seminary at *Bermudas*, that they assisted him in procuring a Patent for it from King *George I.* and contributed to the Expence of the Undertaking. And the Doctor, with three Fellows of *Trinity College* in *Dublin*, viz. The Reverend Mr. *William Thompson*, *Jonathan Rogers*, and *James King*, Masters of Art, with several of the Doctor's Relations, who were People of Fortune, embarked for *Bermudas*, in order to lay the Foundation of the intended College; but they were unfortunately driven, by a Storm, to *Long Island*, in the Province of *New York*; from whence the Doctor, with his Companions, visited *Boston*, and several other great Towns in *New England*, where they preached, and performed other Parts of their Function. But the Design of erecting a College was laid aside, the Expence appearing larger than it had been first calculated, and many of those who had promised Subscriptions failing in their Performance; so that Dr. *Berkley* found himself obliged to return home, and was not long after promoted to the See of *Cloyne*, in the Kingdom of *Ireland*, which he still enjoys.

There remains nothing farther to be said of this Plantation, which, though it has flourished exceedingly, and is still in a very good Condition, yet has no great Trade with *Great Britain*, at least that we can obtain any Account of, though undoubtedly we receive very considerable Advantages from thence annually, as the People make use of a considerable Quantity of our Goods, are clothed with our Manufactures, and employ Tools sent from thence in all kinds of Work. There might, perhaps, if due Encouragement was given, be a Possibility of raising several rich Commodities in this Country, but more particularly two, for which it seems fitter than any of our Plantations, viz. *Cochineel* and *Silk*; and with this View, as I have been informed, a very worthy Merchant of this City has collected, digested, and printed, the best Accounts that are to be met with on these Heads, and also with respect to *Indigo*, and has sent them to be distributed at his own Expence in *Carolina* and the *Bermudas* Islands, which is an Instance of public Spirit that deserves to be mentioned with Honour, and it is hoped may be likewise thought worthy of Imitation. A very few Attempts of this kind, supported with Subscriptions inferior to those made for some Diversions, might produce immense public Advantages to this Nation, and prove the Means of making multitudes of People happy.

12. All the Misadventures that had happened in attempting Discoveries to the North-east and North-west for a new Passage to the *Indies*, could not so far discourage the Merchants of *England*, as to oblige them to lay aside their Designs of that Sort; and therefore when any Opportunity offered they never failed to lay hold of it, in Hopes that some Time or other they might accomplish one or both of these great Projects. It was with this View that they fitted out Captain *Henry Hudson* in 1607, who undertook to sail directly North, which he did to the Height of 81 Degrees 30 Minutes, on the Coast of *Groenland*, where he was on the 16th of *July*, the Weather being pretty warm. His Scheme, it seems, was to have passed round that great Tract of Country, which the *Danes* call *Groenland*, and falling into *Davis's Straights*, have returned that way home. After being disappointed in this, he undertook two Voyages for the Discovery of a North-east Passage, in which his Conduct was very good, though his Success no better than that of those who went before him; upon which he resolved to make an Attempt towards the North-west. He sailed on this Voyage *April* the 17th, 1610; and thus Mr. *Pricket* describes the principal Events in that Undertaking:

" We continued steering North-west; on the 8th of *July* we raised Land to the South-west, covered with Snow, which our Master named *Desire Provokes*; lying in the Latitude of 60 Degrees. Here we heard the Noise of a great Overfall of a Tide that came out of the Land, and were now sensible that we had been embayed before; and we were now so well acquainted with the Ice, that in foggy or foul Weather we sought out the broadest Island of Ice, and there anchoring,

" we went out and sported upon the Ice, and filled Water that stood in Ponds upon the Ice very sweet and good, being now in the Tides-way, the Ice opened, by being first carried one way and then another, whereas in Bays it is immoveable; and in that Bay where we had been so troubled with Ice, we saw many of those Mountains of Ice a-ground in sixty or seventy Fathom Water. We still plied to Westward as the Ice would give us leave, and fearing a Storm, we found an Harbour at the West-End of an Island, whereunto we went at a full Sea, over a Rock, which had then two Fathom and a half of Water upon it, and the next Morning was two Fathoms above Water. Our Master named it *The Island of God's Mercies*. The Water flows here better than four Fathoms, and the Floods come from the North, flowing eight the Change Day, Latitude 62° 9'. Then plying to South-west we were on the 16th in the Latitude of 58° 50', but found ourselves embayed and much pestered with Ice; whereupon we stood to the South-west until we saw the Land, which our Master named *Hold with Hope*; and being gotten again into a clear Sea, our Master stood to the West along the South Shore, and raised three Capes or Head-Lands, lying one beyond another, which he named *Cape Henry*, *Cape James*, and *Queen Anne's Foreland*; we also raised a high Hill, which he named *Mount Charles*. We passed on in Sight of the South Shore until we raised a fair Head-Land, (which our Master took to be part of the main North Land, but is an Island) and named it *Deep's Cape*, and the Land on the South Side now falling away to the South makes another Cape or Head-Land, which our Master called *Worsham's Cape*.

" The Master sent me, the Carpenter, and some others, ashore near *Deep's Cape*; we there saw some Deer, twelve or sixteen in a Herd, but could not come within Shot of them; we found Plenty of Sorrel and Scurvy-Grass, and saw some round Hills of Stones like to Grass-Cocks; and when we came to them I turned off the uppermost Stone, and found them hollow within, and full of Fowls hanged by their Necks; we turned back, and told the Master what we had seen, and what Refreshment might be had; intreating him to stay a Day or two in this Place, but he was not pleased with the Motion, nor could be persuaded to stay. Then standing Southward we lost Sight of the main Land that we had all this while followed, and came into shallow Water, broken Ground, and Rocks, and passed down so far Southward till we had Land on both Sides, and the Water shoaling a-pace, we came to an Anchor. From hence we stood back again towards the North; and one Day a Debate arising concerning our coming into this Bay, and how we should get out again, the Master took Occasion to revive old Matters, and to displace *Robert Ivet*, his Mate, and Boatswain, for Words spoken on the first great Bay of Ice, and made *Robert Bilet* his Mate, and *William Wilson* our Boatswain.

" We plied to and fro from the North to the South, and thence to the North again, till we came to the Shole-Water, where we anchored in seven Fathom, and there lay eight Days; in all which Time we could not get one Hour to weigh our Anchor; but the eighth Day the Wind beginning to cease, our Master would have the Anchors up again against the Minds of all that knew what belonged thereunto; so to it we went, and when we had brought it a Peak, a Sea took her, and cast us all off from the Capstern, and hurt many of us; here we lost our Anchor, and if the Carpenter had not been nimble we had lost our Cable too; but he fearing such a Matter, was ready with his Ax, and so cut it from thence. We stood to the South, and divers Courses, until we came to a Bay on the North Shore, where we anchored. While we lay here we saw a Ledge of Rocks to the Southward, about a League long, which were covered at full Sea; for a strong Tide set in here. At Midnight we weighed, and stood to go out as we came in, and had not gone long before the Carpenter told the Master

“ Master that if he kept that Course we should be upon
 “ the Rocks ; the Master conceived that he was past
 “ them, when presently we ran on them, and there
 “ stuck fast twelve Hours, but by the Mercy of God
 “ we got off unhurt. We stood to the East, and an-
 “ chored in a Bay ; here the Master sent me and the
 “ Carpenter, in a Boat, to seek a Place to winter in,
 “ and it was time, the Days being long and cold, and
 “ the Earth being covered with Snow, having spent
 “ three Months, to no Purpose, and it being now the
 “ last Day of *October*.

“ On the first of *November* we found a Place where-
 “ unto we brought our Ship, and haled her a-ground ;
 “ on the 10th we were frozen in, and now it concerned
 “ us to take care of what we had, and so to spend,
 “ that we might have wherewith to keep us alive, until
 “ we should come at the Capes where the Fowl breed ;
 “ for there were all the Hopes we had of finding Subsist-
 “ ence to bring us home. Our Master therefore ap-
 “ pointed a Reward to them that killed Boat-fish, or
 “ Fowl. We were victualled for six Months, in good
 “ Proportion, and of that which was good ; and if our
 “ Master would have had more he might have been
 “ supplied at Home and in other Places ; and it is
 “ strange he did not prevent the Hunger we endured,
 “ which occasioned the Overthrow of himself and many
 “ other honest Men.”

It appears very clearly from this Relation, which is indeed the only one we have of this famous Voyage ; concerning which it is not easy to determine if it was most for the Advantage of this Nation or ruinous to the brave Man who undertook it ; that he was resolved to strike out something new, and not to waste his time, in retracing other Peoples Footsteps ; and therefore when he came to the Mouth of *Davis's Streights*, he continued steering directly West, and then as the Coast directed him through those Streights, that since bear his Name, till he doubled *Cape Worsenham*, and then he sailed down the West Coast of *New Britain* to the very Bottom of the Bay, where he made Choice of a Place to winter in, that was very near as far South as any Part of the Island of *Great Britain*, and at the very Back of the *French Settlements* in *Canada*. Captain *Hudson* was a very good Judge of the Importance and Consequences of his Discovery, which induced him to winter there, in Hopes of performing something very considerable the next Season, which very probably he would have done if his Men had not mutinied, and consigned him over to the Savages to be murdered.

The Relation we have of his Voyage from *Pricket*, is chiefly calculated to give an Account of this Mutiny ; but as it is more to our Purpose to come at as good an Account as we can of the Voyage itself we shall endeavour to pick out of it what relates to that Matter, and then give a short Relation of that Accident which destroyed Captain *Hudson*, and all his Hopes. “ It would be tedious, says he, to relate the Hardships we endured whilst we wintered in this Place ; the Cold was so extreme that it lamed most of our Company, but I must not forget God's great Mercy to us in sending such Store of white Partridges, during the first three Months, that we killed above one hundred Dozen, besides other Fowl of fundry sorts.

“ The Spring approaching the Partridges left us, and were succeeded by other Fowl ; as Swans, Geese, Ducks, and Teal, but hard to come by ; they came from the South and flew to the North ; but if they be taken short by a northerly Wind, then they fall, and stay till the Wind serves them, and then fly to the Northward. As the Summer came on the Fowls were gone, and few or none to be seen. Then we searched the Woods, Hills, and Vallies, for any thing that might serve for Food, though never so vile ; the Frogs (in the time of their engendering, as loathsome as Toads) were not spared, nor the Moss that grew on the Ground ; but amongst divers sorts of Vegetables, *Thomas Woodhouse* brought home a Bud of a Tree full of a Turpentine Substance ; of this our Surgeon made a Decoction to drink, and applied the Buds hot to such

“ as were troubled with Aches in any Part of their Bodies ; and I must confess I received thereby present Ease of my Pain. As soon as the Ice began to break out of the Bays, a Savage came to our Ship, being the first we had seen in all this time ; our Master entertained him well, promising to himself great Matters by his Means, and therefore would have to his own Use all the Knives and Hatchets that every Man had, but received none except from *John King* the Carpenter, and myself. To this Savage our Master gave a Knife, a Looking-glass, and Buttons ; who received them thankfully, and made Signs that after he had slept he would come again ; as he did. When he came again, he drew after him a Sledge, and upon it two Deer-Skins and two Beaver-Skins ; he laid the Knife upon one of the Beaver-Skins, and his Glass and Buttons upon the other, and so gave them to the Master, who received them ; and the Savage took those Things the Master had given him, and put them into his Scrip ; then the Master shewed him an Hatchet, for which he would have given the Master one of his Deer Skins ; but the Master would have them both, and so he had ; but not willingly.

“ After many Signs of People to the South and to the North, and that, after so many Sleeps, he would come again, he went his way ; but never came more. The Sound being now clear of Ice, so that our Boat could go from one Place to another, *Wilson, Green*, and five more, were ordered to go a fishing with our Net. They caught the first Day, five hundred Fishes as big as large Herrings, which put us all in good Hopes to have our Wants supplied ; but those were the most that ever they caught in one Day, and many Days they got not a Quarter so many. In this Time of their fishing, *Green, Wilson*, and some others, plotted to take the Net, and the Shallop which the Carpenter had newly set up, and so to shift for themselves ; but the Shallop being ready, our Master would go in it himself to the South and South-west, to see if he could meet with People ; for that Way we could see the Woods burning : So taking with him as much Provision as would serve for eight or nine Days, he went towards the South, and set no Time for his Return ; because he was persuaded, if he could meet with People, he should have Flesh of them, and that good Store ; but he returned worse than he went forth ; for although he was so near them as to see them set the Woods on fire, yet could he not by any Means come to the Speech of them.

“ Being come on board, he fitted all Things for his Return ; and first delivered all the Bread out of the Bread-room, which came to a Pound apiece for every Man's Share ; and delivered also a Bill of Return, willing them to have that to shew, if it should please God they should come home, and wept when he gave it to them : But to help us to some Relief in this poor Estate, our Boat went to work on *Friday* Morning, and staid till *Sunday* Noon, and brought fourscore small Fishes ; a poor Relief for so many hungry Bellies. Then we weighed, and stood out of our Wintering-place, and anchored without at the Mouth of the Bay ; where, our Bread being gone, what Store of Cheese we had was to stop a Gap, whereof there were five, at which time the Company grudged, because by their Reckoning there should have been nine, but those that were left were equally divided by the Master, although he was advised to the contrary, because there were some who could not govern themselves.”

It was this Resolution of the Master's, to make all fare alike for the sake of prosecuting the Voyage with effect, than which no Man was more like to do it than himself, that drew upon him his Destruction ; for his old Mate, one *Green*, and some other People in the Ship, resolving to lessen the Number of Hands, and so get all the Provisions that were left to themselves, most barbarously contrived to turn Captain *Hudson*, the Carpenter, and all the sick Men, out of the Ship ; after which they determined to make the best of their Way for *England*. This they performed

formed the 19th of June, 1611, by forcing Capt. *Hudson* and eight more into the Shallop without Provisions, tho' most of them were taken sick out of Bed, who after that time were never heard of, but were either drowned, starved, or murdered by the Savages: Neither did the Leaders of this Mutiny escape much better; for being obliged to land frequently on the desert Coast, in order to obtain some Subsistence, they fell there into a Fray with the Savages, in which *Green* and some others were killed; so that very few, and those too in a miserable Condition, returned to *England*, where *Pricket* wrote that Account of the Voyage for his own Justification, from which we have made these Extracts.

At first there fell great Imputations upon this Man, because he administered the Oath to the Conspirators; but upon an Enquiry it appeared very clearly, that this Oath contained nothing in it contrary to the Duty of the Seamen; and that the true Reason why they preserved him was, because that being Servant to Sir *Dudley Diggs*, who was a Man of great Power and Reputation, they were in hopes he would interpose, and save their Lives, which they ought to have forfeited as Pirates. Upon this imperfect Account of *Hudson's Bay*, several Persons who had been engaged already in Expeditions for the Discovery of a North-west Passage, began to hope that now they had a fairer Prospect than ever of bringing this Project to bear, in case they could find any able Mariner who would undertake to prosecute the Discoveries made by *Hudson*.

His Royal Highness *Henry*, Prince of *Wales*, was the great Patron of Learning and Virtue at that time; and being applied to by the Persons concerned in this Project, he resolved to send one Capt. *Button*, his own Servant, a Man of great Abilities, Courage, and Experience, and having the Countenance of so great a Person, was most likely to maintain Discipline amongst his Seamen. Accordingly, in the Year 1611, he sailed on this Expedition, in which he passed *Hudson's Straights*, and leaving *Hudson's Bay* to the South sailed above two hundred Leagues to the North-west, through a Sea above eighty Fathom deep, and discovered a great Continent called by him *New Wales*; where, after much Misery and Sickness, wintering at *Port Nelson*, he carefully searched all the Bay, from him called *Button's Bay*, back again, almost to *Diggs's Island*. He discovered the great Island called *Cary's Swans-nest*. He lost many of his Men during his Stay in the River called *Port Nelson*, in fifty-seven Degrees ten Minutes North Latitude, though he kept three Fires in his Ship all Winter, and had great Store of white Partridges, and other Fowl, besides Deer, Bears, and Foxes. Upon his Return from this Voyage he received the Honour of Knighthood, and great Expectations were raised from his Discoveries, which had certainly been prosecuted with Effect, if Prince *Henry* had not died soon after.

It was a great Pity that Sir *Thomas Button*, who was certainly a very understanding Man, formed private Views of his own from the Knowledge he obtained in his Voyage; which were of such a Nature, that he affirmed he had convinced his Master, King *James*, that there was a Passage this Way into the *South Seas*. The Reasons upon which this Opinion was founded, as well as Notes of his Voyage, he promised to give to Mr. *Briggs*, the famous Mathematician, who had turned his Thoughts much upon this Subject, but never did; which was the Reason that all the Expeditions undertaken on that Side afterwards failed; but, however, we have sufficient Grounds to affirm, from the Knowledge derived to us from another Quarter, that the Discoveries of Sir *Thomas Button*, if prosecuted, might have proved highly advantageous to this Nation, notwithstanding the seeming Rigour of the Climate, and Barrenness of the Country.

The *French* were in possession of *Fort Bourbon*, which we call *New York Fort*, upon *St. Theresa*, the Eastern Branch of *Nelson River*, from the Year 1697 to 1714. Monsieur *Jeremie*, who was Lieutenant there from 1697 to 1708, and afterwards Governor till he gave it up, in 1714, to us, gives a very particular Account of that River and the adjoining Countries, great Part of which

VOL. II. NUMB. 86.

he affirms to be of his own Knowledge, having travelled a great way South-west into the Country, among the Rivers and Lakes. The *Danish*, or *Churchill's River*, upon which the *Hudson's Bay Company* have lately built a strong Stone Fort, he says is situated in 59 Degrees North Latitude, and is about five hundred Paces wide at the Entrance for about a quarter of a League, and very deep; but within, it is much broader, and navigable into the Country a hundred and fifty Leagues; there is but little Wood upon the River near the Bay, except in the Islands. At a hundred and fifty Leagues Distance is a Chain of high Mountains, with great Cataracts, and Falls of Water; but beyond these it is again navigable, and has a Communication with a River, called the *River of Stags*. Fifteen Leagues Northward of this River is the River of *Loup Marine*, or River of Seals. Betwixt these Rivers is found a kind of Ox, called the *Musk Ox*, which smells, at some time of the Year, so strong of Musk that it cannot be eat; they have very fine Wool, which is longer than that of the *Barbary Sheep*: They are smaller than *French Oxen*, with very crooked Horns which turn round like Rams-Horns, and are so long that they weigh sometimes sixty Pounds; they have short Legs, and their Wool trails upon the Ground: They are not numerous.

This River comes from a Nation he calls *Platfcoetz de Chiens*, who makes War against the *Savanna Indians*, who traded with the *French*. In that Country they have a large Copper Mine so fine, that without Smelting it they make Copper of it, by beating it betwixt two Stones: He saw a great deal of it, which their *Indians* got when they went to War against that Nation. This Nation has a sweet humane Aspect, but their Country is not good. They have no Beaver, but live by fishing, and a kind of Deer they call *Cariboux* (Rain Deer); the Hares grow white in Winter, and recover their Colour in Spring; they have very large Ears, and are always black; their Skins in Winter are very pretty of fine long Hair, which does not fall, so that they make very fine Muffs. He says he can say nothing positively in going farther Northward, but only, that their Savages reported that, in the Bottom of the Northern Bay there is a Streight, where they can easily discover Land on the other Side: They had never gone to the End of that Streight; they say there is Ice there all the Year, which is drove by the Wind, sometimes one Way sometimes another. According to all Appearance, this Arm of the Sea has a Communication with the Western Ocean; and what makes it more probable is, that when the Winds come from the Northern Quarter, the Sea is discharged by that Streight, in such Abundance, into *Hudson's Bay*, as to raise the Water ten Feet above the ordinary Tides; insomuch that when they find the Waters rise, Ships take Shelter against these Northerly Winds. The Savages say, that after travelling some Months to West-south-west, they came to the Sea, upon which they saw great Vessels with Men, who had Beards and Caps, who gather Gold on the Shore that is at the Mouths of Rivers. In passing to the Southward from the *Danish River*, at sixty Leagues Distance, is the River *Bourbon* or *Nelson*, in Latitude 57 Degrees.

There is nothing remarkable in the Country betwixt those two Rivers, but a great Number of the Deer, called *Cariboux*, which being drove from the Woods by a great Number of Muschetoos or Midges, come to the Shore to refresh themselves; they are in Herds of 10,000 together, and spread through a Country forty or fifty Leagues in extent. They might have as many of their Skins as they pleased, and some have been dressed, which have been very fine. They have there all Sorts of wild Fowl, as Swans, Bustards, Geese, Cranes, Ducks, and those of the smaller Kind in such great Numbers that when they rise they darken the Sky, and make so loud a Noise, that they can scarce hear each other speak. He says, that this may appear fabulous, but affirms, he says nothing but what he saw himself, for he would not trust to the Report of others, but went himself to almost every Place he mentions. The River *St. Theresa*, upon which they built *Fort Bourbon*, is a Branch of *Nelson River*, by which the Natives come down to trade. This

R r r

River

River is of so great Extent that it passes through many great Lakes: The first is 150 Leagues from the Entrance of the River, and is 100 Leagues in Circuit; the Natives call it the *Lake of Forts* (or rather *Forests*). On the North Side a River discharges itself, called the *Rapid River*; this takes its rise from a Lake 300 Leagues from the first, which they call *Michinipi*, or the *Great Waters*; because, in effect, it is the greatest and deepest Lake, being 600 Leagues in Circumference, and receives into it many Rivers, some of which have a Communication with the *Danish River*, and others with the *Plascotez de Chiens*, about this Lake and along these Rivers are many *Indians*, who call themselves the *Nation of the great Waters*, or of *Astinibowls*; it is to be remarked, that these are as humane and affable, as the *Esquimaux* are fierce and barbarous, as are also all other Nations along *Hudson's Bay*. At the Extremity of the *Lake of Forests* the *River Bourbon* continues its Course, and comes from another Lake, called the *junction of the two Seas*, because the Land almost meets in the Middle of the Lake; the East-side of this Lake is a Country full of thick Forests, in which are great Numbers of Beaver and Elks. Here begins the Country of the *Christinaux*.

This is in a much more temperate Climate. The West-side is full of fine Meadows, filled with wild Oxen. The *Astinibowls* live here; the Lake is 400 Leagues in Circumference, and 200 from the other Lake. 100 Leagues farther West-south-west along this River is another Lake, which they call *Ounipigouchib*, or the *Little Sea*; it is almost the same Country and Climate with the other, inhabited by the same *Indians*, the *Astinibowls*, the *Christinaux*, and *Souteurs*; it is 300 Leagues in Circumference; at the further End is a River, which comes from *Tacamiouen*, which is not so great as the other; it is into this Lake that the *River of Stags* is discharged, which is of such a Length that the Natives have not yet discovered its Source; from this River they can go to another, which runs Westward, but all the rest run either into the Bay or River of *Canada*. He endeavoured to send the Natives to discover if it went to the Westward Sea, but their Enemies lying in the way prevented them; however, they brought some of them Prisoners, who said they also were at War with another Nation farther West; these said they had Neighbours with Beards, who lived in Stone Houses and Forts, that they were not clothed like them; that they had white Kettles; and shewing them a Silver Cup, they said it was of that Metal; they said they tilled their Land with Tools of that Metal. According to their Description it was Maize they cultivated.

The Intendant of *Canada* was very desirous to discover these Countries from thence; but it is much easier from *Fort Bourbon*, as it is shorter; and though a fine Country full of Beasts and wild Fowl, besides Fruit, which grow wild, as Plumbs, Apples, and Grapes, and great Variety of smaller Fruit. On the South-west Side of this Lake *Tacamiouen* is a River which comes from another, called the *Lake of Dogs*, which is not far from the superior Lake. The River *St. Theresa* is but half a League wide where the Fort is built; two Leagues higher is *Fort Philipeaux*, built for a Retreat; there the River begins to be interspersed with Islands; twenty Leagues above the Fort the River divides into two Branches, one which comes from the North-west Side communicates with *Nelson* or *Bourbon River*, by which the Natives come down to trade, by the Means of a Land Carriage from the *Lake of Forests* to this River. Twenty Leagues above the first Fork there is another that comes from the South-east, which the Natives call *Guicomatouang*, or the *Great Fork*. This has a Communication with the River *St. Huiles*; the Western Branch, though still called *St. Theresa*, is but of a small Extent, coming from its Source by several small Brooks, in each of which are great Numbers of Lynx, Beavers, Martins, and others of smaller Furs. Betwixt the two Forts is a small River, called *Egaree*, from whence they get their Wood for firing, it being scarce at the Fort. Near the Mouth of the River is another small one they call *Gargouffe*; there comes in at high Water a great Num-

ber of Porpoisses. The River being narrow here, there might be a good Fishing, where they might make above six hundred Barrels of Oil annually.

From this River of *St. Huiles*, or *New Severn*, is 100 Leagues South-east. It is situated in Latitude 56 Degrees; the Entrance is but shallow, only capable of Vessels of 60 Tuns: Here might be made good Houses, for Wood is very plenty here; and there are great Numbers of Beavers higher up the River. As to the Climate of *Fort Bourbon*, it being in Latitude 57 Degrees, is very cold in Winter, which begins about Michaelmas, and ends in May. The Sun sets about three, and rises about nine in the Winter. When the Days grow a little longer, and the Cold is more temperate, the Sportsmen kill as many Partridges and Hares as they please. One Year, when they had eighty Men in Garrison, they had the Curiosity to reckon the Number, which amounted to ninety thousand Partridges, and twenty-five thousand Hares. At the End of April the Geese, Bustards, and Ducks, return in such Numbers, that they kill as many as they please; they also take great Numbers of Cariboux, or Rain-Deer; in March and April, they come from the North to the South, and extend then along the River 60 Leagues: They go again Northward in July and August; the Roads they make in the Snow are as well padded, and cross each other as often as the Streets at *Paris*. The Natives make Hedges with the Branches of Trees, and leave Openings, in which they fix Snares, and thus take Numbers of them: When they swim the Rivers, in returning Northwards, the Natives kill them in Canoes with Lances, as many as they please. In Summer they have the Pleasure of fishing, and with Nets take Pike, Trout, and Carp, and a white Fish something like a Herring, by much the best Fish in the World: They preserve those for their Winter Provision, by putting them in Snow, or freezing them, as also the Flesh they would preserve. They keep thus also Geese, Ducks, and Bustards, which they roast with the Hares and Partridges they kill in Winter. So that though it be a cold Climate, there is good living there, by getting Bread and Wine from Europe.

Though the Summer be short they had a Garden, and good Coleworts, with Sallads and small Herbs, which they put in their Soups in Winter. He had 120,000 Livres Profit out of 8000 sent him in Goods in one Season; they have also Bears, Elks, and all Sorts of Beasts, whose Skins and Furs are valued in *France*; and, according to him, it is one of the most profitable Posts in *North America*, considering the Expence. Thus far this French Writer, from whom we have borrowed a very clear and copious Account of the Advantages that might have accrued to us, if our original Discovery of *Hudson's Bay* had been properly considered.

But there were, and will be always, a Race of People decrying those Projects they want Courage to attempt; and who, by ridiculing the Pains taken to visit frozen Climates and barren Countries, hinder those Improvements which might otherwise follow from such kind of Expeditions. But they ought to consider before they run down such Attempts, that we have Numbers of poor People here who want Employment, and for whom Employments ought to be found; that if this be not done, they will either starve to our Shame, or strike out Ways of living at our Expence; whereas, if they were thus employed, they would both maintain themselves and benefit the Public: Besides, there is this Advantage that attends Northern Expeditions and Discoveries, that they breed a Race of hardy and useful Seamen, who are nearer at hand, and consequently more capable of serving their Country upon any Emergency than such as are employed in other Branches of Navigation. As to the supposed Difficulties that are to be in this way encountered, it is a Shame to hear them mentioned amongst People who pretend to maritime Power.

If Men are afraid of Ice, Cold, and Rocks, they must relinquish all Thoughts of being great at Sea, and leave it to those who can, not only endure, but even despise, such Hardships; the Dutch, the Danes, and the *Hamburghers*, sail every Year on the Whale Fishery, near

20 Degrees farther North than the Bottom of *Hudson's Bay*; and the *French* from *Canada*, travel through, and live in these very Countries of which we are speaking, with as much Ease as the Savages themselves; and, indeed, why should they not, or why should we imagine that one Man, or one Race of Men, can do more than another? Our Ancestors were of this Opinion, or at least they thought that if such a Race of Men there were, they might be found in this Island: And here, if properly encouraged and due Regard shewn to their Virtue, they will be always found, for it is not the People but their Governors that alter, and therefore we have a Right to blame those who took so little Notice of what *Sir Thomas Button* performed, and so little attended to what might be made of these Countries, as we certainly ought to commend such as contrived or promoted the Law lately passed for encouraging private Persons to attempt once more the Discovery of a North-west Passage, by securing to them a Reward from the Public, which, without doubt, they will justly deserve.

13. The next thing that occurs in order of Time, is the asserting our Right to that Part of the Continent of *America* which lies North from *New England*, and which is now called *Nova Scotia*, but was then looked upon as Part of *North Virginia*, and as such within the Charter of the Western Company, who gave strict Orders to those in their Service to prevent foreign Nations settling in their Limits; by which means this Country of *Acadia*, or *Nova Scotia*, which is of so great Consequence in itself, and for the Security of our other Plantations on the Main, was preserved. The Bounds of this Province are the Ocean to the North, *Cape Breton Island*, and the Bay of *St. Laurence* to the East, *Canada* to the West, and *New-England* to the South; it lies from 43 to 51 Degrees North Latitude, and from the River *St. Croix* the nearest to *New Hampshire*, to the great River of *St. Laurence*, has almost six hundred Miles of Coast, but most of it uninhabited and desert, the *Indians* themselves making little or no Use of it.

Sir Samuel Argall, then Governor of *Virginia*, made a Sort of cruizing Voyage round the Coast Northwards, as far as *Cape Cod* in *New England*, in the Year 1618, five or six Years before the *English*, who intended to settle, arrived in that Country. The *Indians* informed him that some white Men, like himself, were come to inhabit to the Northward of them. *Sir Samuel Argall*, who took all that Country, as far as it had been discovered by *Cabot*, to belong to the *Virginia* Company his Employers, sailed thither, found a Settlement and a Ship riding before it, which belonged to some *Frenchmen*; *Argall* drew so close to it, that, with his small Arms, he beat all the Men from the Deck, so that they could not use their Guns, their Ship having but one Deck; among others there were two *Jesuits* aboard, one of which endeavoured to fire off one of their Cannon, and was shot. *Argall* having taken the Ship, landed his Men, marched to, and summoned, the Fort to surrender: The *French* asked Time to consider of it, which was denied, upon which they got privately away and fled into the Woods. The *English* entered it, and lodged there that Night, and the next Day the *French* came and yielded to *Sir Samuel*, cancelling the Patents that had been granted them for their Settlement by the *French* King. *Sir Samuel* permitted such of the *French* as were so disposed to take Passage for *Europe* in the fishing Ships, and took the rest with him to *Virginia*, according to their Choice.

The *French* had another Settlement at a Place they called *Port Royal*, on a Bay on the South-west Coast of *Acadia*, which the two *Jesuits* had left out of Pique to their Governor *M. Biencourt*; and with these *Frenchmen* separated from the others. Father *Biard*, the surviving *Jesuit*, out of Malice to *Biencourt*, informed *Sir Samuel* of the Settlement at *Port Royal*, and the Ease with which he might reduce it, which he found to be true; and, on the Surrender of the *French*, he did no Damage to their Houses, their Barns, and Mills, but obliged them to quit the Country; they had sowed and reaped, and those of them that did not care to return home, re-

moved to the River of *St. Laurence*, where now is the Capital of *Canada* or *New France*.

When *Sir Ferdinand Gorges* was President of the *New England* Company, he proposed to *Sir William Alexander* to procure a particular Grant for the Land to the Northward of their Patent, which was easily obtained of King *James I.* and a Year after, 1622, *Sir William*, and some others whom he had got to be concerned with him, sent a Ship with Passengers to plant and settle there. *Newfoundland* was then very well known on account of the Fishery, and the Ship being late in her Voyage the Master put in and wintered there. The next Year they set sail, and made the Promontory at the North Shore of *Cape Breton Island*: They coasted it along till they came to *Cape Sable* in *Acadia*, where they found three good Harbours, and went ashore at one of them, which they called *Luke's Bay*; in which was a large River that had eight Fathom Water at ebb. This Ship failed up one of these, and, according to the Accounts that were published by those that were to be Sharers in the Patent, this Country is described as a kind of Paradise: With a View, no doubt, to have engaged People to go over thither to settle, to which End *Sir William Alexander* the original Proprietor, afterwards created Earl of *Sterling*, wrote and published a Book, and his Sovereign King *James* erected a new Order, called the Knights of *Nova Scotia*, to facilitate this Plantation.

But, notwithstanding all the Care that was taken of it, this Project proved abortive, and, which is very extraordinary, modern Authors have taught us to condemn and censure such as foresaw the Consequence and Importance of this Country to the *British* Nation, when unsettled and unimproved, and to treat as weak and pusillanimous the Conduct of those Times, when in full Peace the *French* were, by Force of Arms, compelled to quit a Country, which, though settled by them, was discovered by us; and from these Fugitives it was that the more Northern Settlement of the *French* took Birth. The Expedition of *Sir Samuel Argall* was certainly both a vigorous and a right Measure; and the Grant to *Sir William Alexander* was a very sensible thing, though the Design of it is now not well understood, or rather forgot; and therefore, though it may take up some Room, I shall endeavour to revive and to explain it. It was suggested to King *James* that the Tract of Country on the Continent of *North America*, belonging to his Crown, being very large and not likely to be planted in any reasonable Space of Time by the *English*, it would be a very wise and prudent Measure to grant under the Great Seal of *Scotland*, a Part of it to his Subjects of that Kingdom, upon a Supposition that it would be more beneficial for them, and more for the Interest of the united Kingdoms if they went over and settled there, than if, as to that Time they had frequently done, they transported themselves to *Poland*, *Sweden*, and *Russia*, in which Countries there were at that Time many thousand *Scotch* Families.

Such was the original Scheme of settling and planting *Nova Scotia*; and if the Courtiers of those Times made a Jobb of this, and thereby defeated the Scheme; however this may reflect on their Memories, it ought to draw no sort of Odium on the Project itself, which was very well and wisely laid, if it had been as honestly and wisely executed. There was afterwards another Grant made of the Northern Part of this Country, to *Sir David Kirk*, from whom the *French* King bought it, or at least contracted to give him 5000*l.* for it; a very plain Proof that even the *French* acknowledged the Right by which he held it; and a *French* Nobleman likewise bought, many Years after that, *Sir William Alexander's* Property. It may be enquired why the Crown of *England* did not interpose and prevent these Sales, as might, no doubt, have been done; and the plain Answer to this is, that the *French* Protestants being principally concerned in these Settlements, the Crown had a Tenderness for them.

But *Oliver Cromwell* sent Major *Sedgwick* to dislodge the *French* from *Port Royal*, which he did, and though the Protector afterwards consented that a *French* Proprietor should enjoy the Country, yet it was upon Condition

dition that he should make out this Right by Purchase from the Earl of *Sterling*; which he afterwards did, and then sold it to Sir *Thomas Temple*, who was both Proprietor and Governor at the Restoration: After which the *French* settled there again, and remained there in quiet Possession till the Year 1690, when they were dispossessed by Sir *William Phips*, then Governor of *New England*; but it was afterwards given up again to the *French*, by King *William's* Treaty of *Ryswick*. It is not, however, to be understood that either King *Charles II.* or King *William III.* by their respective Treaties with *France*, gave up the Claim of this Nation to that Country, nor did the *French* so understand it, but only permitted that Possession, because, as the Circumstances of things then stood, they were unwilling to contest it. In all these Changes, however, the Island of *Cape Breton* followed the Fate of *Nova Scotia*, and both continued in the Hands of the *French* till the Year 1710, when Governor *Nicholson* made himself Master of *Port Royal*, which was become a Place of very great Importance in many Respects, more especially in this, that it gave the *French* an Opportunity of disturbing and distressing our Trade to such a Degree, that it was very properly stiled the *Dunkirk of America*.

We need not wonder, therefore, that the taking this Place was looked upon as a very remarkable Service, or that the Queen should bestow her Name upon it to shew that she never meant to part with it. Upon the same Principle, Colonel *Nicholson*, upon his Return to *England*, had a Commission granted him to be Governor of *Nova Scotia*, and of *Annapolis Royal*, and Commander of all her Majesty's Forces there and in *Newfoundland*. While things were in this Situation, a Negotiation for Peace was set on foot, which afterwards produced one that has since made a great deal of Noise, more especially with regard to the Stipulations therein, in reference to this Province; and therefore it is requisite for us to see what relates to *Nova Scotia* in the *Utrecht* Treaty, the Words of which, in the twelfth Article, are, "All *Nova Scotia*, or *Acadia*, with all ancient Boundaries, as also "the City of *Port Royal*, now called *Annapolis*, and all "other things in these Parts which depend on Lands "and Islands, together with the Dominion, Property, "Possession of the said Islands, Lands, and all Rights "whatsoever, by Treaties or by any other way obtained, " &c." To which the *French* King added the Exclusion of the Subjects of *France* from fishing on the Coast of *Nova Scotia*, and within thirty Leagues, beginning from *Cape Sable*, and stretching along to the South-west; there is no doubt but this Article, as it is worded, contains the Restitution of *Cape Breton*, which ought to have gone along with *Nova Scotia*, as it had hitherto done; neither is this a bare Conjecture, or my particular Notion, but the general Sentiment of such as were best acquainted with this Affair, and with the Negotiation that concerned it; which induced the Queen, in her Instructions to the late Duke of *Shrewsbury*, when he went Ambassador to *France*, to declare that she looked upon *Cape Breton* to belong to her, and reckoned that Island a Part of the ancient Territory of *Nova Scotia*. But notwithstanding this Article in the Queen's Instructions, the *French* were suffered to keep *Cape Breton*, but, most undoubtedly, this gave them no Right to it.

I am very far from thinking that in this Case, I mean in the Case of Plantations, Possession is the only, or even the best Right, because such a Doctrine might confer Right upon Pirates. The best Claim of Civilized Nations, with respect to new Countries, was always allowed to be the first Discovery. This Right is that on which is founded our Title, and very justly; for we have certainly discovered all the Countries that border on *Davis's Streights*, *Hudson's Bay*, and so forwards to the Limits of *Georgia*; and this Right being in the Crown of *England*, and inherited with the Crown of *England*, could never be granted away, yielded to a foreign Power, or otherwise transferred, without the Consent of Parliament; though the temporary Possession might. For, in those Treaties by which *Acadia* was left to *France*, the Crown only stipulated not to deprive the *French* of their Possession, during the

Continuance of the Peace, but the Right still remained in us, and must always remain in us.

We have before shewn that the *French* acknowledged this, as appears by the King of *France's* purchasing under our Title; nor was it ever disputed till the Treaty of *Utrecht*, that the Island of *Cape Breton* belonged to *Nova Scotia*, nor could it be disputed, because the very Charter which established *Nova Scotia* as a distinct Province, included the Island of *Cape Breton* in express Words. We may add to this, that our Title to *Labrador* or *New Britain* is unquestionable, of which Country *Nova Scotia* was a Part, till separated by the Charter; and our Claim to *Newfoundland* has been always maintained, as we shewed in the former Section: So that on the whole it may be justly affirmed, that our Right to the Island of *Cape Breton* is as clear and as unquestionable as that of any *European* Nation to any of its Settlements in *America*, or elsewhere. But if it should be demanded of what Use this Reasoning is, I answer, that having now recovered the Possession of that Island to which we had always a Right, and out of which we were cheated at the Treaty of *Utrecht*, the *French* have no Colour to demand the Restitution of it; nor is the Case the same now, that it was when King *Charles II.* concluded his Treaty in 1666, when King *William* concluded the Treaty of *Ryswick*, in 1697, or when the Treaty of *Utrecht* was made by Queen *Anne*, in 1712.

14. We gave a large Account, in the former Section, of the Attempt made by that great Man, and good Patriot, Sir *Walter Raleigh*, to establish an *English* Plantation in *Guiana*; and of his sending, after his Return to *England*, a Ship to prosecute that Discovery: Of which second Voyage we have likewise a long Account, published by Captain *Keymish*: But this Design met with continual Interruptions; or otherwise, Sir *Walter* himself tells us in his *Apology*, there had been, before the Death of Queen *Elizabeth*, a sufficient Number of *English* settled in that Part of the World, to have secured the Possession of it for ever to this Crown and Nation. The very next Year after Sir *Walter's* Return, he was employed in the Expedition to *Cadiz*: The two following Years, his Time was taken up in that which was called the *Island Voyage*. Then the great Rebellion broke out in *Ireland*, which rendered Queen *Elizabeth* unwilling to encourage any private Expeditions that required a considerable Force; and this Rebellion lasted till the Queen's Death. Immediately after this, Sir *Walter* himself was imprisoned, and so continued for many Years. Which very fairly accounts for this noble Design remaining so long unpursued.

But Things delayed are not always lost; the Desire of settling *Guiana* revived in a few Years after Peace was restored; and, as I do not know it has ever yet been done, I shall give a succinct Account of the several Attempts made to carry this Design into Execution, to the Time they were wholly given over, and the small Interest we had in that Part of the World surrendered up to the *Dutch*. In the Year 1604, Capt. *Charles Leigh* undertook a Voyage to *Guiana*, at his own, and his Brother Sir *Olive Leigh's*, Charge: He had a Bark of about fifty Tons, called the *Olive-Plant*; and his Company, about forty-six Men and Boys. They sailed from *Woolwich* the 21st of *March*, with a Design to make a more complete Discovery of the Country of *Guiana* than had been yet done, and to fix an *English* Colony there. On the 22d of *May* they came into the River of *Wyapoco*, in the Latitude of 8 Degrees 30 Minutes to the North of the Line, and the Town of *Wyapoco*, which lies on the Coast of *Guiana*, was the Place in which they intended to take up their Abode. Here the Captain came to an Agreement with the Inhabitants, who received him very kindly, that they should allow him a good Space of Ground and some Houses, for the present; in Consideration of which he was to assist them against their inveterate Enemies the *Caribbees*, who greatly distressed them.

This Agreement was made by Means of two of the Natives of *Guiana* who had been in *England*, and could speak some *English*; and for the better Security of Performance on the Part of the Savages, they consented to give

five of their Body, among whom were two Persons of Note, as Pledges to be sent to *England*. Their first Settlement was on part of the Mountain that lies on the West-side of the Entrance of the River, to which they gave the Name of *Mount Howard*. The Captain might have lived here a very quiet Life, and been very useful to his Country too, had he not had a mutinous and discontented Company. The next Year after, he sent his Ship to *England*, in the Month of *June*, for fresh Supplies of such Things as he wanted, retaining thirty-five of his Men and Boys with him, to settle his small Village, and thereby set this Colony upon a better Footing than it had till then been. They had some Trade with the Natives, as well round about their Settlement, as farther up the River; and the chief Merchandizes they obtained were Wax, fine white Feathers, Tobacco, Parrots, Monkeys green and black, Cotton, Yarn and Wool, sweet Gums, red Pepper, Spleen and Masate Stones; with several sorts of Wood, Roots, and Berries, partly for Medicine, and partly for Dying; but the Flux, and other Distempers, carried off a good Number of the Company; and the Captain, being seized with it himself just as he was going on board for *England*, to fetch a complete Loading of such Things as were needful for his Colony, died of it. It was by this unhappy Stroke, the whole Undertaking was quashed, and every one shifted for himself; some returned to *England* in their own Vessel, others in a *French* Ship, and others in two *Dutch* Ships, very much to the Regret of the *Indians*, and to the no small Loss of Sir *Olive Leigh*, and Detriment of the *English* Nation.

Sir *Olive Leigh* resolving to support his Brother in the Establishment of his Colony at *Guiana*, before he had any Account of his Success, fitted out another Ship called the *Olive Blossom*, under Capt. *Catalin* and Capt. *St. John*, to carry him a fresh Supply of Men and Necessaries. The Ship set out from *Woolwich* for *Wyapoco*, the 14th of *April*, 1605; but, between contrary Winds and Currents, by the Unskilfulness of the Master, Mr. *Richard Chambers*, they were put so far to the Leeward, that they despaired of ever recovering their intended Port in any due time; and therefore they put in first at *Barbadoes*, and afterwards at the Island of *St. Lucia*, designing from thence to return to *England*: However, examining their Stores of Provisions, and finding not near enough to serve so large a Company as they were, for so long a Voyage, Capt. *St. John* himself, with several of the Passengers to the Number of sixty-seven, resolved rather to stay, and take their Lot upon that Island, than to run the Hazard of their being starved at Sea.

They soon made an Acquaintance with the *Indians*, who furnished them, in Exchange for Trifles, with Roots, Fruits, and some Fowls; and they every Night had an Opportunity, with very little Trouble, of taking delicate Tortoises upon the Sands; so that they were in no Want of Food. They lived five or six Weeks in little Huts, or Houses which they had built, without making any Excursions into the Country; but the Captain seeing one Day certain Plates of Metal upon the Arms of some of the *Indians*, and being informed by one *Brown* a Refiner in their Company, that they were at least three Parts Gold; and enquiring of the *Indians* from whence they had it, they pointed to a very high Mountain, in the North-west Part of the Island. Upon this, the Captain himself, with several of the chief of his Men, went in quest of this golden Mountain, the rest being appointed to keep Guard at home, and assured they would return in a Week's time. When this Part of the Company was gone, the other expected the *Indians* would have brought them Provision, as they used to do; but they heard nothing of them for three Days together. They had it seemed observed when the Captain went, followed him, and most barbarously cut him off with his whole Company.

They were now intent upon making the same Dispatch of their Companions, and to this End had got one *Augramart*, a desperate Savage, and Captain of the Island of *St. Vincent*, to head them in this Enterprize. To cover their Design, however, they carried it fair to them, and visited them frequently; till one Day *Augramart*, having

dined with them, would have the *English* go with him to his Quarters; where he promised to furnish them with whatever Provisions they wanted. Mr. *St. John*, with seventeen others, accepted of the Invitation; but instead of carrying them to their Quarters, they led them into an Ambush of five hundred Savages; where, being surrounded, and attacked on ever Side with Vollies of Arrows, after doing all that Men could do in their own Defence, they were over-powered, and all slain but one *John Nichols*, who made his Escape from this bloody Slaughter, and was forced to hide himself in a Wood, then swimming a Lake, and so with great Difficulty returned home, just time enough to give his Companions the Alarm; for it was not long before they appeared before their Houses; yet letting fly their small Pieces of Ordnance they quickly marched off again. In two or three Days time they returned, to the Number of thirteen or fourteen hundred Men; who, after having attacked their little Fort and Houses for seven Days together, with little Success, thought of throwing in Fire with their Arrows, which in a short time reduced the Habitations of the *English*, and all they had, to a Heap of Ashes. They continued, however, to defend themselves in so brave a manner, that the *Indians*, seeing they could not accomplish their Design against this Handful of Men, resolved at last to abandon the Enterprize.

After their Departure, some of the neighbouring Savages were prevailed upon, for a Reward of Hatchets, Knives, and Beads, to furnish them with an old pitiful Boat; this they fitted up as well as they could, and nineteen of them, the miserable Remains of sixty-eight, of which twelve were wounded, ventured out to Sea in her, without Chart or Compass, and having only four or five Gallons of Water, with a few Plantains and Potatoes, about twenty Biskets, and a little Rice; and, what was worse than all the rest, not one Mariner among them. In this little Boat they were so over-laden that her Gunnel lay almost even with the Water: They lived at Sea ten Days, four of them being obliged by Turns to keep scooping of the Water. The tenth Day, when all Hopes began to fail them, they discovered Land; but when they came upon it the Land proved to be an uninhabited Island, which afforded no manner of Sustenance. In this miserable State they had no Remedy, but to repair their Boat again as well as they could, and to send five of their Men to the Continent to seek Relief. After many Difficulties these Men came to an *Indian* Town on the Continent, called *Tocoyo*; from whence, after fifteen Days Absence, they carried Succour to their miserable Companions. They were now reduced to thirteen, who got together to a *Spanish* Town, called *Coro*, where they were treated with great Humanity; two more of them died; three of them went from thence to *Carthagena*, and were followed thither by two more; where they procured a Passage to *Spain*; but what became of the rest does not any where appear.

One would have imagined, that such a Series of Misfortunes as had attended the Attempts made for establishing this Settlement, would have worn out all Desire of running further Hazards; but such was the Credit of Sir *Walter Raleigh*, such the settled Opinion of the vast Riches to be found in this Part of *America*, and such the Remains of that Spirit which prevailed through the whole Nation in the Time of Queen *Elizabeth*, that in the Year 1609, a new Attempt was made, at a much greater Expence than the former, with the Participation, at least, if not under the Influence of Sir *Walter Raleigh*. This Voyage was performed under the Direction and Command of *Robert Harcourt* of *Stanton-Harcourt*, in the County of *Oxford*, Esq; and the Vessels employed in it were, the *Rose*, a Ship of eighty Tons; the *Patience*, a Ship of six-and-thirty Tons; and the *Lilly-Shallop*, of nine Tuns. They set sail from *Dartmouth* the 29th of *March*, and arrived the 17th of *May* in the Bay of *Wyapoco*. It was not long before several Canoes of *Indians* came to see what they were; and finding they were *English*, came on board them without any Fear or Ceremony: Such an advantageous Idea had Sir *Walter Raleigh* by his courteous Behaviour imprinted in them of the *English* Nation.

These People, who were very forward and ready to traffic with the *English*, were of the Town called *Caripo*, on the East Side of the Hill, at the Mouth of *Wyapoco*-River. Their King, or Chief, who had been many Years in *England*, was then with Mr. *Harcourt*, and another of his Countrymen came Passenger with him, though he had not discovered his Quality, till the Joy of his Subjects at the Sight of him made him known. Among the *Indians* who came first on board was one who spoke the *English* Tongue perfectly well, and was known to some of the Ships Companies, having served Sir *John Gilbert* in *England* many Years; and the *Indian* who accompanied the King or Chief, having been fourteen Years in *England*; these two were of singular Service to the Adventurers.

The first Ceremonies being past, Mr. *Harcourt* acquainted them that the Occasion of his coming among them was to settle a Colony there, and to take Possession of the Country for the King of *England*, by virtue of their Grant of it to Captain *Leigh*, and by some of their Countrymen before to Sir *Walter Raleigh*; assuring them at the same time, that his Majesty intended no unjust Usurpation over them, nor to treat them in any way like Slaves and Vassals; but only to be their Friend and Protector, and to deliver them from the Insolencies and Oppressions of the *Caribbees*. After some Debate the *Indians* gave their Consent that they might live among them, and promised to furnish them with Houses, and all other Necessaries, as far as they were able; but could not forbear expressing some Diffidence in their performing their Promises, since Sir *Walter Raleigh* had been so dilatory in his accomplishing those he made them.

This being done they all went ashore, where they met with the best Reception the *Indians* could give them; and were dispersed up and down the Town, on the Side of a Hill, while their Ships rode at Anchor at the Foot of it. The great Rains, which confined them near a Month, being over, the Captain set himself to discover the Golden Mountains, which had been the Spurs to this Undertaking; but their Guide, who had promised such great Things, failed in the Performance of them, and either had wilfully deceived them, or had been deceived himself; for when he came to the Spot he had built his Hopes upon, nothing was to be found: And yet they were convinced the Country afforded Gold, as well by the Assurances given them by the Natives, who shewed them certain Images, which upon an Essay appeared to contain at least one third Gold, as by ocular Demonstration of great Quantities of the white Spar in which the Gold is contained, and which they found to hold both Gold and Silver; but they had Reason to believe these Mines were too far up in the higher Parts of *Guiana*, and perhaps too strongly guarded for them to hope they should be able to reach them. And, besides, they had then neither Time nor Power to search in the Manner requisite for finding these Mines.

This Disappointment had like to have excited a Mutiny, among those who came out with no other View than to tumble at once into Riches; but the Captain, with great Prudence and with no less Conduct, prevented its running such a length; and to keep them employed, not only went himself up the River of *Wyapoco* upon Discovery, but sent his Brother with some others on the same Errand to the River *Arrawary*, and the Country bordering upon it, which adjoins to the River of *Amazons*. He went also and took Possession of the Mountain *Gomoribo*, which is the utmost Point of Land to the Northward in the *Wyapoco*. This he did, according to Custom, by the Ceremony of Twig and Turf, in the Presence both of his own People and the *Indians*. After Possession taken, the Mountain was delivered over to an *Indian*, to hold and possess the same for himself and his Heirs, of his Majesty *James* King of *England*, paying the yearly Duty of a tenth Part of the Tobacco, Cotton, Wood, Annotto, and all other Commodities growing within the Limits of the same. The Attempt of the Captain's Brother, and Captain *Harvey*, in Discovery of the River *Arrawary*, was attended with great Difficulties and Hazards; for the length they run by Sea to this

River was near one hundred Leagues, through terrible Breaks of Flats and Sholes. They went likewise fifty Leagues up the River, and all this only with flat-bottom'd Canoes, something longer than the common *Thames* Wherries, but not so broad.

The *Indians* they met with in this River plainly discovered they had never seen any *Europeans* before. It was long before they could be brought to any sort of Trade or Conversation with them, though they had other *Indians* in their Company: But at last the Sight of their Toys wrought upon them, and induced them to exchange for Provisions; a Want of which however at last obliged them to return to *Wyapoco*. They took Possession nevertheless of the Country in Form, as Mr. *Harcourt* had done of *Gomoribo*. Not long after this, Mr. *Harcourt* was obliged to return for *England*, purely for fear of wanting Casks to contain sufficient Beer and Water for the Voyage, the Master having neglected to have his Casks Iron-bound before their Departure, which occasioned many of them to burst their Hoops in that hot Country.

Mr. *Harcourt* left his Brother to command in chief in his Absence, to whom Captain *Harvey* was joined as Assistant, and Mr. *Gifford* as his Lieutenant, and with them he left fifty or sixty of his Men. He departed the 18th of *August*; and Mr. *Harcourt*, in his Way homewards, made several Discoveries upon the Coast, and in some of the Rivers; returned to *Ireland* the 29th of *November*; and came from thence to *England*. Being come to *London*, by the Favour of Prince *Henry*, he obtained a large Patent for all that Coast, called *Guiana*, together with the famous River of *Amazons*, to him and his Heirs: But he was involved in so many Troubles, that he was not able to supply his Colony, and only sent over some few People, with eighteen *Dutchmen*, but to little Purpose. Captain *Harcourt*, however, kept Possession of that Part of the Country in which he was settled for full three Years, in all which Time he lost but six of his People.

The Reader will observe, that we have now brought down the History of our Expeditions to *Guiana* from 1595 to 1612, which is within five Years of Sir *Walter Raleigh's* last Embarkation. It is however certain, that some other Voyages had been made to this Country: For Sir *Walter Raleigh*, in his Apology, says, that the *Spaniards* at *St. Thomas's* had, some Years before his last Attempt, murdered many *English*, under pretence of trading with them, and some of those who were thus murdered he mentions by Name. He had suffered a very long Imprisonment in the Tower of *London*, when, by the Help of many Friends, and perhaps by the laying out of a great deal of Money, he procured his Liberty, and therewith a Commission to execute his last Expedition to *Guiana*. In order to this, he turned into Money the best part of his own Fortune, which he employed in fitting out Ships for this Service. He engaged many of his best Friends to do the same; and embarked several of them, and his own eldest Son, on board the Fleet; and all this from a Persuasion that the Country he was going to was very rich in Gold, and if they could gain Possession of it, would make all their Fortunes.

The famous Count *Gondomar*, who was then the *Spanish* Ambassador here, and, as all the World knows, had a great Influence over King *James*, did all that lay in his Power to hinder this Expedition; and as he did not succeed therein, it very plainly proves that King *James* did not credit what he suggested to the Prejudice of Sir *Walter Raleigh*. And indeed what he gave out upon this Subject, of Sir *Walter's* having no Intention to make either Discovery or Settlement, but merely to engage in a piratical Attempt upon the *Spanish* Colonies in *America*, was absurd and ridiculous, since no Man had ever a meaner Opinion of such Exploits, or had so fully exposed the Folly of hoping for great Riches from the Plunder of *Spanish* Towns, than Sir *Walter* had done. But in all Probability the *Spanish* Minister had not so much in view the making these Suggestions of his pass for Truth, as obtaining, by this Means, under Colour

four of refuting this Charge, a distinct Account of Sir *Walter's* true Design, and of the Force with which he was to undertake it; in which he had but too great Success; for Sir *Walter* giving the King a short but true Scheme of what he intended, that very Paper was delivered to the *Spanish* Embassador, and found its Way to *Guiana* long before Sir *Walter Raleigh*.

The Commission granted to this excellent Man was very full, and free from Limitations, which has been generally understood to be designed to his Prejudice. But I must confess I see no Reason for that Opinion. On the contrary, I am persuaded that Sir *Walter* himself was well satisfied with his Commission; and that in respect to the Law of the Land, and the Law of Nations, it fully justified the Design he went upon, and all that followed in the Execution of it. Certain it is that the Contents of his Commission were no Secrets, since, by publishing them, he brought Numbers at home and abroad to subscribe large Sums towards the Support of his Undertaking; which he could never have done, if the Form or Words of that Commission had been liable to Exception. It was seven Months after his Commission was granted before his Fleet was in Condition to put to Sea.

As to the Strength of this Fleet, it is clear from a Survey taken by the Order of the Earl of *Nottingham*, then Lord High-Admiral, that it consisted of seven Sail, of several Sizes. It appears that the first of them, or Admiral, a fine Ship built by *Raleigh* himself, was named the *Destiny*, of four hundred and forty Tons, and thirty-six Pieces or more of Ordnance, Sir *Walter Raleigh* General, and his Son *Walter* Captain, besides two hundred Men, whereof fourscore were Gentlemen Volunteers and Adventurers, most of them Sir *Walter's* Relations; which Number was afterwards encreased. Second, the *Jason* of *London*, two hundred and forty Tons, and twenty-five Pieces of Ordnance, Captain *John Pennington* Vice-Admiral, eighty Men, one Gentleman, and no more. Third, the *Encounter*, one hundred and sixty Tons, seventeen Pieces of Ordnance, *Edward Hastings* Captain (no Men more except the Master mentioned); but he dying in the *Indies*, was succeeded in the Command by Captain *Whitney*. Fourth, the *Thunder*, one hundred and fifty Tons, twenty Pieces of Ordnance, Sir *Warham Sentlegor* Captain, six Gentlemen, sixty Soldiers, ten Landmen. Fifth, the *Flying-Joan*, one hundred and twenty Tons, fourteen Pieces of Ordnance, *John Chidley* Captain, twenty-five Men. Sixth, the *Southampton*, eighty Tons, and six Pieces of Ordnance, *John Bayley* Captain, twenty-five Mariners, two Gentlemen. Seventh, the *Page*, a Pinnace, twenty-five Tons, three Rabnets of Brals, *James Barker* Captain, and eight Sailors. But before *Raleigh* left the Coast of *England*, he was joined by as many Ships more; so that this whole Fleet consisted of thirteen Sail, besides his own Ship.

But for this remaining Part of his Fleet he waited long, and it had been better if he had left them behind, for they proved a Burden to him, and some of them deserted the Expedition. It was the beginning of *July* before he left the Coast of *England*, and meeting with a Storm, was obliged to put into *Cork*, from whence he sailed on the 19th of *August* following. He proceeded from thence to the *Canaries*, where, though insulted by the *Spaniards*, he committed no Hostilities; but, on the contrary, behaved so well that he obtained a Certificate thereof from the Governour. After this his Ships grew very sickly; and before he arrived at *Trinidad*, he had lost many of his Men, and was himself dangerously ill. In this weak and low Condition they arrived at the North Cape of *Wyapoco* on the 11th of *November*.

The first thing he did after his Arrival was, to endeavour to find out *Leonard* the *Indian*, who had been in *England* three or four Years with him, but was removed so far up into the Country there was no procuring him; therefore he stood away for *Caliana* on the Coast of *Guiana*, at the first Discovery called *Port-Howard*, where the *Cazique* was also his Servant, and had lived with him in the Tower of *London* two Years. There he arrived in

a Day or two, having passed the Island noted for its Multitude of Birds and Silk-bearing Trees; and from thence sent for his Servant, *Harry* the *Indian*, who with other *Caziques* came and brought him great store of *Cassavi-Bread*, and roasted Mulletts, with Plantains, Pines, and Pistachio's. But *Raleigh* ventured not to eat of the Pines, which tempted him exceedingly, till after a Day or two's airing on the Shore, in a Tent which was there pitched for him. Then he also eat some Armadillo and a little Pork, and begun to gather Strength. Here he also landed his sick Men, and recovered many; and here he buried Captain *Edward Hastings*, (the Lord *Huntington's* Brother) who died ten Days, or more, before; and with him his Serjeant-Major *Hart*, and Captain *Henry Snedale*, the Charge of whose Ship *Raleigh* gave to his Servant Captain *Robert Smith* of *Cornwall*. Here he also set up his Barges and Shallops, which they brought from *England* in Quarters, cleansed his Ship, trimmed up his Casks and supplied them with Water, fixed up a Forge, and made such Iron Works as they wanted. Thus on that Shore and this River they employed and refreshed themselves for about three Weeks, during which time *Raleigh* was very much caressed by the *Indians*, of his old Acquaintance aforesaid, and other Natives of this Place, who furnished him daily with the best Provisions that the Country yielded, and offered him all kind of Obedience, even to the making him their Sovereign Prince and Ruler, if he would abide and settle among them; so fresh continued his Memory, and such Impressions of Homage and Respect had his former Behaviour still left upon them; which offer, he mentions, with the greatest Modesty and Indifference, in the Dispatch he sent soon after this to *England*.

On the 4th of *December* they left this River, and on the 5th came to the Triangle Islands, where *Raleigh's* Ship ran on Shore; and was, with Difficulty, got off. Here they held a Council to consider what they should do next, and as Sir *Walter* was extremely ill, and it was found impossible to carry the larger Ships any higher, it was resolved that the five smaller Vessels, with as many Companies of Foot, of fifty Men each, should enter the River. According to this Determination the Fleet was divided; that is to say, Captain *Whitney*, in the *Encounter*; *Woolaston*, in the *Confidence*; *King*, in the *Supply*; *Smith*, in a *Prick*, and *Hall* in a *Caravel*. The Companies had for their Leaders Captain *Charles Parker* and Captain *North* (Brothers to the Lord *Mounteagle* and the Lord *North*) young *Raleigh*, Captain *Thornhurst* of *Kent*, Captain *Pennington's* Lieutenant, who seems to be another *Hall*, and Captain *Chidley's* Lieutenant *Prideaux*. Sir *Warham St. Legar*, *Raleigh's* Lieutenant, who had the Charge of these Companies, fell sick at *Caliana*, so it was conferred on *George Raleigh*, Sir *Walter's* Nephew, who had served with great Commendation in the *Low Countries*; and Captain *Keymish* had the chief Charge for their landing within the River: But *Keymish* having laid down the Plan of his intended Attempt upon the Mine, and undertaking to discover it with six or eight Persons in Sir *John Ferne's* Shallop; *Raleigh*, upon Consideration, disliked that Method of Proceedure, determined to alter it, and therefore gave him his Instructions to go to the Mine, bring him a Sample, and avoid fighting the *Spaniards* if possible.

With these Instructions those five Ships set forward, parting from *Raleigh* and the rest of the Fleet at the Islands aforesaid, with a Month's Provision, on the 10th of *December*. But when they found a new *Spanish* Town, called *St. Thomas*, consisting of about one hundred and forty Houses, though slightly built, with a Chapel, a Convent of *Franciscans*, and a Garrison, erected on the main Channel of *Oronoco*, about twenty Miles distant from the Place; where *Antonio Berreo*, the Governor, taken by *Raleigh* in his first Discovery and Conquest here, endeavoured to plant; *Keymish* and the rest, thought themselves obliged, through fear of leaving the Enemy between them and the Boats, to deviate from their Instructions, which enjoined them first to take a small Party to make trial of the Mine, under a Shelter of their own Camp; and then to deal with the Town as it should give cause; so they concluded to land in one Body, and encamp

encamp between the Mine and the Town, whereby they themselves were nothing stronger, their Boats were as much exposed, and the Mine left untried, contrary to *Raleigh's* Order.

For about three Weeks after their Departure, landing by Night nearer the Town, it seems, than they suspected, and meaning to rest themselves by the River-side till the Morning, they were, in the Night time, set upon by the *Spanish* Troops, apprized of their coming. This Charge was so unexpected, and struck the common Soldiers with such Amazement, that had not the Captains and some other valiant Gentlemen made a head, and animated the rest, they had all been cut to pieces: But the rest, by their Example, soon rallying, made such a vigorous Defence against the *Spaniards*, that they drove them to a Retreat; till, in the Warmth of their Pursuit, the *English* found themselves at the *Spanish* Town before they knew where they were. Here the Battle was renewed, being assaulted by the Governor himself, *Don Diego Palameca*, and four or five Captains at the Head of their Companies; against whom Captain *Walter Raleigh*, a brave and sprightly young Man, now twenty-three Years of Age, not waiting for the Musketeers, rushed foremost at the Head of a Company of Pikes, and, having killed one of the *Spanish* Captains, was mortally wounded by another; but pressing still on with his Sword upon *Erinetta*, probably the Captain who had shot him, this *Spaniard*, with the butt End of his Musket, felled him down to the Ground; and after these Words, *Lord have mercy upon me, and prosper your Enterprize*, young *Raleigh* spoke no more: Hereupon *John Plessington*, his Serjeant, thrust the *Spanish* Captain through with his Halbert. Two Commanders more of the *Spaniards* were slain, one by *John of Morocco*, another of young *Raleigh's* Company, and lastly the Governor himself also lost his Life in the Engagement; which happened, as *Cambden* informs us, upon the 2d of *January*.

The Leaders being all thus dispatched, and many of their Soldiers, the rest dispersed; some took Shelter about the Market Place, from whence they killed and wounded the *English* at Pleasure, so as they saw no Way left to be safe but by burning the Town down about their Ears, and driving them into the Woods and Mountains, whence they still kept the *English* waking in perpetual Alarms; others were more careful to defend their Passages to their Mines, of which they had three or four not far distant, than they had been to defend the Town. Captain *Keymish* found the Passages, leading to the Mine he had in his Eye, very difficult, and the Rivers so low, that he could not approach the Banks, in most Places near the Mine, by a Mile; and where he found an Ascent, a Volley of Muskets came from the Woods, and at one time slew two of the Rowers, hurt six others, and wounded Captain *Thornburst* in the Head. *Keymish* seeing so much hazard in attempting to find the Mine, the Passage to it being full of thick and unpassable Woods; and thinking the *English*, who were left at *St. Thomas's*, would not be able to defend it, especially if the Enemy should be recruited, the Country being all in alarm, he gave over the Enterprize and returned. Besides the Difficulty of finding the Mine, he pretended, that if he had found it, he had not a Man to work it; and, being a great Way up in the Land, Men would have been got thither with great Danger and Difficulty: But this should have been thought of before; and it was ill advised to take so much Pains, and run so much Hazard, to get and possess that, which when they had it they could not make Use of; so that which *Keymish* pleaded, when he returned, for an Excuse, reflected upon him as a great Mischance.

Sir Walter very much blamed him for it, and, among other things, told him if he had but brought one hundred Weight of the Ore, though with the Loss of one hundred Men, it would have given the King Satisfaction, and preserved his Reputation; and besides, would have given the Nation Encouragement to have returned the next Year with a greater Force, and have held the Country for his Majesty, to whom it belonged. As soon as they returned to *St. Thomas's*, the *English* pillaged the

Town, carried away the best and most portable things; and the Enemy not daring to appear for the Redemption of it, they set it on fire, leaving behind them an infinite Mass of Treasure, which, either for want of Knowledge or Power, they could not attain. *Sir Walter*, upon the News of his Son's Death, and *Keymish's* Return, finding himself disappointed thereby of his Hopes, was perplexed to the very Soul, and threatened *Keymish* with the King's Indignation, telling him he had undone him, and wounded his Credit with his Majesty past Recovery. This had such an Effect upon him, that it threw him into Despair, and a few Days after he made away with himself. Some say he retired immediately into his Cabin and shot himself, with a Pistol, into the Body; but that being too slow for his Fury, desperately thrust a large Knife into the same Wound up to the Hilt.

These Accounts may be said both to be true, for, after *Sir Walter's* first Reproof, he went away discontented, and continued so several Days. He came then a second Time with his Excuses, and shewed him a Letter which he had written to the Earl of *Arundel*, in his own Justification, praying *Sir Walter* to allow of his Reasons, which he refusing, and telling him he would not favour or colour his Folly; upon that he retired into his Cabin, and immediately committed the Fact. The Design being thus defeated, the Ships leaky, Victuals failing, and, above all, having missed those golden Showers they gaped after, some of the Men began to mutiny against their General, while others were for him; some would have him go home, others stay; the major Part forced him not to go home, but with their Consent, and yet his Ships slipped away one after another, till from ten they were reduced to four, and those on board would do just what they list: Some would go to *Italy*, some for *France*, and some few for *England*. When they arrived at *Kinsale* in *Ireland*, *Sir Walter*, it is pretended, would have persuaded them to go with him to *France*; but instead of listening to this Proposal, they carried him, against his Will, to *Plymouth*, where he was arrested by *Sir Lewis Stukeley* his Kinsman, by the King's Order, and conveyed to the Tower of *London*.

All the World knows what followed afterwards, when, under Colour of his former Judgment, *Sir Walter* was put to Death on the 29th of *October*, 1618; an Action so black and base, so mean, so unworthy of a Government, and so utterly inexcusable, that one really wants Words to express the Foulness of the Action; but with regard to the Cause of his Death, or rather with respect to the Manner of it, I differ somewhat in my Judgment from most of those who have written about it; and therefore I shall take the Liberty of explaining myself upon it, in as few Words as I can. It is very certain that King *James* was very well satisfied that the first Judgment against *Sir Walter Raleigh*, at *Winchester*, was very ill founded; and of this *Raleigh* himself was so sensible, that he neglected obtaining a Pardon before he left *England*, which he might have obtained for 700 *l.* When he came back it was resolved to sacrifice him to the *Spanish* Match, to the Fears of King *James*, and the Jealousies of his Ministers; and in order to this, without doubt, it was intended a new Prosecution should commence; and in that Case there is the greatest Reason in the World to believe no Jury would have found him guilty; but *Sir Walter Raleigh*, from an Eagerness to defend himself, wrote an Apology, in which he most clearly proved that *Guiana* belonged to the Crown of *England*; that his going thither was no Breach of Treaty; that the *Spaniards* in *America* always behaved towards the *English* as Enemies, and consequently ought not to be considered as Allies; that his whole Design was betrayed to them from the Beginning, which occasioned their sending Forces into those Parts, and all the Blood-shed that afterwards happened; that even in respect to this the *Spaniards* were Aggressors; and that, throughout the whole Expedition, he had done nothing but what he was warranted to do by his Commission. This it was that drove the Ministry from their first Purpose, and forced them upon that Measure, which they afterwards took, of calling him down to his former Judgment, contrary to Law,

Law, Reason, Justice, and the King's own Sense of the Thing, as he afterwards testified under his Hand.

But, however, though by this barbarous Measure our great Discoverer lost his Head, yet the Title of the Crown of *England*, to his Discovery, remained absolutely unimpeached, as appears clearly by King *James's* granting a new Commission to Captain *Roger North*, for settling in *Guiana* a Year after *Raleigh's* Death; which, however, he afterwards recalled by a Proclamation, and sent the Lord *North*, who was at the Expence of that Expedition, to the *Fleet*, for making too much Dispatch in it. Such a Fluctuation of Councils there must always be, where a foreign Interest is regarded, as the Case was then, when the Politics of *Britain* were dictated by *Spain*. Yet even this did not put an End to all Thoughts of maintaining the Rights of the Crown of *England* to this valuable Country, where the People still remembered, and enquired after, Sir *Walter*, when he had been many Years in his Grave.

The Accounts we have, however, of these Expeditions are so imperfect, that we can say very little with Certainty till after the Restoration; when the Lord *Willoughby*, who was Governor of *Barbadoes*, obtained a Grant from King *Charles II.* of this Country, and actually made a considerable Settlement on the River of *Surinam*, where they might have continued much longer than they did, if it had not been for their own Indiscretion. For when the first *Dutch* War broke out, in which the *French* took Part with the Republic against us, both these Nations would have consented to a Neutrality in those Parts; but our People were bent upon a War, which turned to their Ruin. For the Coast of *Guiana*, from *Cape Orange* to near the River *Oronoco*, was, about the Year 1666, possessed by three *European* Nations: The *Dutch* were about the River *Aproague*; the *French* had the Island of *Cayenne*, and the Rivers of *Ovia*, *Corrou*, and *Sinamary*; this last is about twenty-five Leagues North-west from *Cayenne*, and fifty-three East from *Surinam*; and the *English* had a small Colony and Redoubt on the River *Maromny*; their chief Settlement being then at *Surinam* River, which is so good and deep, that Ships of three hundred Tons run twenty Leagues up it. The *Zealanders* were possessed of the River *Berbiche*, and had repulsed the *English*, who attacked them there, with considerable Loss.

The same Year, 1666, the States of *Zealand* being provoked at the *English* having invaded and taken from them all the Lands they had been possessed of in *America*, except the River *Berbiche*, sent thither Commodore *Creiffen*, with four Men of War, and three hundred Men to attack *Surinam*. He sailed from *Zealand* at the latter End of *January*; arrived at *Cayenne* in *March*; went thence for *Surinam*; sailed up the River under *English* Colours, and came to the Fort of *Paramorbo*, three Leagues up the River, without being taken for an Enemy; but being discovered there for want of Signals, the Fort began to fire on his Ships, which he answered with Broadfides from all the Vessels, and immediately landed his Forces. The *English*, who had lived long in profound Security, found themselves too weak, and the Fort in no posture of Defence on the Land-side, and their Habitations being dispersed along the River for thirty Leagues up, the Fort could not be succoured but by Water, where the *Zealanders* were Masters: Upon which Consideration they surrendered it, capitulating for the Inhabitants of the River of *Surinam*, and those of *Kamomioque*; stipulating that all those who should take the Oath of Fidelity, to the States of *Zealand*, should enjoy their Estates peaceably; the Habitations of such as absented themselves, and those belonging to the Lord *Willoughby*, should be forfeited to the said States; all Foreigners who had no Estates there, should remain Prisoners of War; and all the *English* to be obliged to deliver up their Arms. When the Capitulation was executed, *Creiffen* put aboard a Fly-boat he had taken in the River, the most valuable Part of the Booty he found in the Places that were confiscated, and the Prisoners aboard a Man of War; and after causing the Fort to be repaired, and put into a posture of Defence, and leaving it in the

Hands of *Sieur de Rome* with one hundred and fifty Men, he sailed for the Islands.

Afterwards, when the Peace was made at *Breda*, it was agreed, That the *Dutch* should keep *Surinam*, and that in return we should keep *New York*, which was then called the *New Netherlands*. Thus we have traced this Point fairly, from beginning to ending; from the first Settlement, nay from the very first Thoughts of a Settlement, to the giving up of all the Settlements we then had, and which might be styled the Legacy of *Raleigh* to this Nation, into the Hands of the *Dutch*. It may not be amiss, however, before I quit the Subject, to observe that the *Dutch* have succeeded very happily in a Plantation that was not very beneficial to us; and that if ever we should be inclined to try our Fortunes again upon this Coast; for without question our Cession of *Surinam* does not preclude us from visiting the rest of *Guiana*; if this, I say, should ever be attempted, it must be either by the *South Sea* Company, or under their Licence, since all this great Country, as well as many other valuable Places, lye within their Charter, which covers them from all the rest of this Nation, and leaves them open only to all the World besides.

15. We are now to pass to the Mother-Colony of that which we mentioned last, the famous Island of *Barbadoes*, which may be justly esteemed the fairest, best peopled, and best cultivated Spot of Ground, not in *America* only, but in the whole known World: When, or by whom, it was first discovered is a Point not easily settled, and, in my Judgment, cannot be determined at all, farther than by Conjecture. The *Portuguese* were certainly the first Discoverers of *Brazil*, and it is not very probable that they should make many Voyages thither, or at least should establish a regular Commerce with that Country, without falling in with this Island, which lies so much in the Way. It is the more probable that they were the first Discoverers, from the Name by which this Country has been always known; *Barbadoes* having apparently a *Portuguese* Termination, but what it signifies is very doubtful. Some say the Island was so called from its barbarous Inhabitants; to prove which they should have shewn us that it was inhabited at all, which in those Times undoubtedly it was not; but however, it is not impossible that the Thing might be so, since the *Caribbees* certainly visited that Island from *St. Vincent*, which is within sight, and the *Portuguese* might possibly land when they were upon it, and fright them off this Island, whence they might from these People give it the Name of *Barbadoes*, which it has still retained, and is so called, without any Variation at least that I know of, in all the Languages of *Europe*.

The first *Englishmen* that landed here, it is said, were some of Sir *William Curteen's* Seamen, that were cruising in these Seas in the latter End of the Reign of King *James I.* who reporting, at their Return to *England*, that the Soil was fruitful, some Adventurers went thither with Intent to plant it; but finding the Island covered with Wood, and scarce any other Animals upon it than Hogs, it did not answer their Expectations a great while. The Property of this Island was afterwards granted by King *Charles I.* to *James Earl of Carlisle*, in the first Year of his Reign; of whom several Adventurers purchasing Shares, transported themselves thither, and first fell to planting Tobacco; which not thriving here as they expected, they proceeded to try Cotton and Indico, which yielded them a considerable Profit; but they made little Sugar till 1647; when Colonel *Modisford*, Col. *Drax*, Col. *Walrond*, and several other Cavaliers, finding there was no living with any Satisfaction in *England* under the Usurper, converted their Estates into Money, and transported themselves to *Barbadoes*, with such Machines and Implements as were proper to carry on Sugar-Works there. Colonel *Drax*, it is said, in a few Years acquired an Estate of seven or eight thousand Pounds per Annum, and married the Earl of *Carlisle's* Daughter, then Proprietor of the Island; and the Adventurers fixing their principal Settlement on the great Bay in the South-west Part of the Island, gave it the Name of *Carlisle Bay*, in honour of their Proprietor, which it still retains.

The Island was afterwards divided into four Circuits, and eleven Parishes, each Parish being allowed to send two Representatives to the General Assembly, and every Parish had its Church and an Incumbent, with a handsome Maintenance assigned him. In the Year 1650 the White Inhabitants of the Island are said to have increased to between thirty and forty thousand, besides Negroes, who were much more numerous, and frequently plotted the Destruction of their Masters; but their Plots were constantly discovered, and the most terrible Punishments inflicted on the Ring-leaders; which did but increase the Disaffection of the rest, and laid the Foundation of fresh Conspiracies. But notwithstanding the repeated Plots of their Slaves, never any Plantation of so small an Extent, arrived to that Riches and Grandeur as *Barbadoes* did, in the Space of twenty or thirty Years. The *Rump* apprehended this Island of such Consequence, during their Usurpation, that they sent a strong Squadron of Men of War thither, Anno 1651, under the Command of Sir George *Ascue*, who compelled the Lord *Willoughby*, (appointed Governor by King *Charles II.*) to surrender the Island upon Condition the Royalists should remain in the Possession of their Estates and Liberties, and Mr. *Searl* was appointed Governor by them.

The *Dutch* War succeeding soon after, the Colony was prohibited trading with the *Hollanders*, with whom they had principally trafficked hitherto; for the *Dutch* it seems constantly furnished the Island with Negroes till this time, and taught the *Barbadians* to plant, and manage their Sugars to the best Advantage, taking most of it off of their Hands, with which they supplied themselves, and the rest of *Europe*; but after the Usurper's Quarrel with the *Dutch*, the *Barbadians* were compelled, by an Ordinance of Parliament, to bring all their Sugars directly to *England*, which was imitated by the Ministry after the Restoration of King *Charles II.* and was the Foundation of the Act of Navigation, which requires all the *British* Colonies to bring their Sugars and Tobacco directly to *England*, and forbids their trading with Foreigners in these, and some other, styled *enumerated* Articles.

16. In the Year 1661 King *Charles II.* purchased the Property of this Island of the Lord *Kinowel*, Heir to the Earl of *Carlisle*, and appointed the Lord *Willoughby* of *Parham* Governor; ever since which, *Barbadoes* has been a regular Government; and the Colony granted a Duty of four and a half *per Cent.* for the Support of the Civil Government of that Island, and maintaining the Forces and Fortifications thereof; which Duty (according to my Information) amounts to ten thousand Pounds a Year: But instead of being applied to the Purposes for which it was given, it is disposed of in Pensions to Courtiers, to the irreparable Damage of that Colony; no other Island having laid so high a Duty on their Sugars. In the Year 1664 *de Ruyter*, the *Dutch* Admiral, with a great Fleet of Men of War, treacherously attempted to surprize the Island of *Barbadoes*, tho' *England* was then in full Peace with *Holland*; but he was bravely beat off by the *Barbadians*, and obliged to abandon that Enterprize.

In the Year 1674 Sir *Jonathan Atkins*, being made Governor, had Orders to seize all the Ships trading in *Africa* for Negroes, that Trade being granted to the Royal *African* Company about that Time, exclusive of all others. And several Ships belonging to the Merchants of *Barbadoes*, bringing over Negroes afterward, were condemned and forfeited, being denominated Interlopers; which that Colony complained of as a great Grievance, the *African* Company setting what Price they pleased upon their Negroes; but this was not redressed till after the Revolution, when that Trade was laid open to all the Subjects of *England*, paying ten *per Cent.* towards the Charge of their Forts. The *Barbadians* also suffered great Losses by a terrible Hurricane which happened there on the 10th of *August* 1674, when three hundred Houses were blown down, two hundred Persons killed, most of their Sugar-works and Plantations spoiled; and all their Wind-mills for grinding of Canes were blown down, except those that were built of Stone; eight Ships also suffered shipwreck in the Harbour; insomuch that the

Barbadians were disabled from making much Sugar the two succeeding Years. Another Calamity with which the *Barbadians* were afflicted, was an epidemical Distemper, that several Years raged in the Island, differing very little from the Plague. This began about the Year 1691, and occasioned a great Decrease amongst the white Inhabitants, which they have not recovered from that Day to this. It seems the Ministry of *England*, sending a Squadron of Men of War to *Barbadoes*, with a Body of Land Forces on board, to protect the Trade of the *Caribbee* Islands, which had suffered very much by the Depredations of the *French* Privateers; the *Barbadians*, on their Arrival, concerted an Enterprize with the Commanders against the *French* Islands of *Guadalupe*, *Martinico*, *St. Christophers*, &c. and joining the King's Forces with some of their own, formed a Body of four or five thousand Men; with which they made a Descent on *Guadalupe* and *St. Christophers*, and ruined many *French* Settlements, but did not make a Conquest of them, as was expected; and what was still more unfortunate, the Distemper above-mentioned broke out in the Army, which the Soldiers brought back to *Barbadoes*, and almost depopulated that Island of white Men. The King's Ships also lost so many of their Men, that there were not Hands enough to carry them home.

If we should pursue this History lower, it would not contribute very much to the Information, Entertainment, or Satisfaction of the Reader, because it would involve us in long and perplexed Relations of the Disputes between the Inhabitants of this Colony and their Governors, Appeals from both Parties to the Government at home, and other such-like tedious and disagreeable Subjects. We will therefore content ourselves with observing, that till some very different Method is taken from that which has been hitherto in use for appointing Governors in this and other Colonies, so that Men are not sent over with a View to repair their own Fortunes, instead of enquiring into, and redressing, those Grievances that affect the Properties of the Persons they are sent to govern, we can never hope to see the Plantations flourish, or this Country reap those Advantages from them which otherwise she might. What is the Nature of those Advantages, and what their Degree in respect to this noble Island, justly esteemed the most valuable Plantation, for its Size, that ever this Nation possessed, shall be our next Business to explain, by entering into a particular Description of this Island and its Product.

17. The Island of *Barbadoes* is situated in the *Atlantic Ocean*, in 13 Degrees North Latitude, and 59 Degrees of western Longitude, being of a triangular Form; about twenty-five Miles in length from South to North, and fifteen in Breadth from East to West, where broadest: It is a plain level Country for the most Part, with some small Hills of an easy Ascent, and scarce any Wood upon it at present; it was covered with Woods, indeed, when the *English* first sent Colonies there, but they are all cut down to make room for Plantations of Sugar Canes, which take up almost the whole Island at present, nothing else being cultivated in any great Quantities. Their very Corn, Flesh, and Fish, being imported, for the most Part, from the northern Colonies: There is scarce an Harbour in the Island, the best is that of *Bridge-Town* in *Carlisle-Bay*, on the South-west Part of the Island, and this lies open to the Westward; however it is secure from the North-east, which is the constant Trade Wind here, and blows from Morning to Evening, except their Tornadoes and Hurricanes, which happen usually about Midsummer, and in *July* and *August*, and blow from every Quarter. The Ships in the Bay, at such times, are in the utmost Danger of being wrecked on Shore, if they cannot get out to Sea, and therefore seldom attempt to ride out those Storms.

The Coast is defended on the East by Rocks and Sholes, from the Invasion of an Enemy; and on the West, where it is most exposed to a Descent, Breast-works and Redoubts are erected for its Security, but the Repair of them is too much neglected. There is scarce a Stream in the Island that deserves the Name of a River; however,

we find two on the East-side, to which they have given the Names of *Scotland River*, and *Joseph's River*: They have good Water in their Wells almost all over the Island, and do not dig very deep for it: They have also large Ponds and Reservoirs, where they preserve Rain-water. They have generally fine serene Weather; their Rains fall as in other Parts of the *Torrid Zone*, chiefly when the Sun is vertical; and after the Rains are the proper Seasons for planting; their Heats are not so excessive as in the same Latitude on the Continent, being constantly refreshed by the Sea Breezes in the Day-time, which increases as the Sun advances, and abates as the Sun declines. And they have this further Satisfaction, that their Days seldom exceed twelve Hours; but there being no Mountains on the Island, there are no Landwinds in the Night as in *Jamaica*.

The only Town of any Consequence in the Island, is that of *Bridge-Town* or *St. Michael's*, situate in *Carlisle-Bay*: It was formerly encompassed with a Morass which rendered it unhealthy, but this has been drained in a great Measure; however, the low Situation makes the Town still subject to Inundations: It is said to contain a thousand or twelve hundred Houses tolerably well built of brick or Stone. They have commodious Wharfs and Keys for loading and unloading of Goods, and three Forts or Castles of Defence, which, if kept in repair, would render them no easy Conquest. The chief Produce and Manufacture of the Island, as has been intimated already, is Sugar; of the Molasses, or Dross, whereof they make great Quantities of Rum. They have also some Cotton, Indico, Ginger, and Pimento, and formerly Tobacco was planted here in good Quantities, but very little at present. Forest Trees they have scarce any left. Their Fruits are Oranges, Limes, Citrons, Pomegranates, Pine-apples, Guavas, Plantains, Cocoa-Nutts, Indian-Figs, Prickle-Pears, Melons, and almost all manner of Roots and Garden-stuff, but very few Flowers.

Their Horses they import from *New England*, &c. and have a slight Breed of their own. They have also some Asses, Cows, and Sheep, but the last do not thrive here. They have a good Number of Hogs, the Flesh whereof is the best Meat that is eaten in those hot Climates. Here are also good Sea Fish and Poultry, but no Fresh-water Fish; and, in general, all manner of Provision is very dear. There is no dining at an Ordinary under a Crown a-head; fresh Meat is a Rarity, and chiefly the Food of People of Condition; the rest are glad of Salt-Beef, Pork, and Fish, imported from the northern Colonies; from whence also comes their Wheat, Flower, Indian-Corn, Pease, Beans, &c. They make Bread also of the Cassavi Root, and the Negroes feed on Yams, Potatoes, and other Roots and Fruits. The Liquor drank by the Gentry here, is chiefly *Madeira* Wine, or Wine and Water, and great Quantities of Punch are drank by the Vulgar. They have also strong Beer imported from *Old* and *New-England*, and Liquors made of their Maize and Fruits as in *Jamaica*. The Government here also resembles that of *Jamaica*, and the rest of our *American* Islands, having the Governor and Council appointed by the Crown, which, with the House of Representatives, are vested with a legislative Power, and make Laws for the Government of the Island.

The Numbers of white People are said to have been once forty thousand and upwards, and are computed to be near thirty thousand at present. The *Negroes*, *Mulattoes*, and *Mestive* Slaves, about an hundred thousand. Their Militia consists of fifteen hundred Horse, and three thousand Foot, or thereabouts.

After this general Representation of the present State of the Island, it is requisite that we should proceed to a more close Enquiry into the staple Commodity of this Island. We are to observe, that before the Year 1626, the *Portuguese* supplied all *Europe* with Sugar from their Colonies in *Brazil*, to their immense Profit: But the first Settlers finding the Soil to be fertile, and the producing of Sugar advantageous, they encouraged more People to come over and plant the same Commodity. This induced the Merchants, at home, to send over Ships with

Provisions and other Necessaries for those new Planters, which their Agents and Factors exchanged with them for the Produce of the Country, and from thence a reciprocal Trade and Correspondence was established between *Great Britain* and this *Island*.

The growing Success of this new Sugar Colony promoted the Settlement of the others; and as the Sugar Plantations encreased, more Hands were required to carry on the Works, than could, at that Time, be spared from home. This gave birth to the *Guinea* Trade, for supplying those Colonies with *Negro* Slaves; and as the Planters flourished and encreased, so did their Demands for all Sorts of *British* Manufactures, and such Necessaries of Life as they could not produce in those Climates; which opened another Scene of Trade to the *British* Merchants, to furnish these new Colonies with Wine from *Madeira*. These Branches of Trade were of the utmost Advantage to *Great Britain*, forasmuch as they took no Money out of the Kingdom, but yearly brought in large Sums for *British* Manufactures carried out. The Trade to this Island was commonly open and free; for we find, that before the civil War in *England*, the *Dutch* Ships came hither to purchase Sugars, as well as the *English*. This Freedom in Trade made the Country flourish, and made Money plenty among the Inhabitants. But since the Restoration, several Acts of Parliament have been made to confine the Trade of the Sugar Colonies to *Great Britain*, and *British* Ships only; which Restraints soon made *London* the chiefest Mart in *Europe* for Sugar; and as there was yearly more imported than was necessary for Home Consumption, the Merchants exported the Surplus to foreign Markets, and by underselling the *Portuguese*, they in Time beat them almost out of all their Sugar Trade to the Northward of *Cape Finisterre*.

This Trade of re-exporting Sugars was carried on for many Years with great Success. Mr. *Joshua Gee* says that by this Trade only such an Increase of Treasure and Wealth was brought into this Kingdom, as yearly added three or four hundred thousand Pounds to the Stock of the Nation, which in thirty Years Time amounted to upwards of ten Millions Sterling. And a late Author computes the clear Profits, accruing to *Great Britain* from the Sugar Trade, and those other Branches which chiefly depend upon those Islands, to amount to more than one Million a Year. He tells us farther, that it appears by the Custom-house in *London*, that the Value of the Exports from *Great Britain* to the Sugar Colonies, were a few Years ago upwards of five hundred thousand Pounds Sterling every Year; and their Importations from those Islands more than twelve hundred thousand Pounds *per Annum*. In these Computations the Author has taken no Notice of the vast Quantities of *British* Manufactures yearly exported to *Guinea* and *Madeira*: But if they were to be added to the Exportations of the Sugar Colonies, where the greatest Part of their Produce is taken off with an Advantage to the *British* Merchant, it would greatly augment the Sum, and consequently enlarge the Profits which our Mother Country receives from the Sugar Colonies, and the several Branches of Trade depending on them. I shall not take upon me to determine whether this Gentleman's Calculations are exact or not; but it is evident beyond Dispute, that while the Sugar Trade flourished, both Planters and Merchants grew immensely rich, and the Trade and Navigation of *Great Britain* was carried on to a much greater Height than it ever was before. And this great Source of Wealth and Treasure to their Mother Country, arose from so small a Beginning as a few Families seeking Shelter in a desolate Island.

This shews what may be done by Industry and Trade rightly applied. Now if the Trade and Navigation of *Great Britain* have received such an Addition from the Sugar Colonies, as added greatly to the Riches and Strength of the Kingdom; and if *Barbadoes* has the Honour to stand foremost in the Sugar Trade (as the first Founder of it) how well has she deserved of her Mother Country! When the Sugar Trade was at the Height which we described above, the flourishing State of *Great Britain* alarmed her Neighbours, and put them upon
Ways

Ways to circumvent her in Trade, as the only Means to put a Stop to the growing Strength of the Kingdom, which they feared might become too formidable, from the great Increase of Seamen and Shipping employed in the *West India* and *Guinea* Trades, both flourishing at the same time. Upon a Parliamentary Enquiry into the State of Trade to *Africa*, in the Year 1728, it appeared to the House, that in three Years Time only, the Number of Negroes imported at *Barbadoes*, *Jamaica*, and *Antigua*, amounted to forty-two thousand, besides what were carried to *St. Christopher's*, *Nevis*, and *Montserrat*.

But we are now to inquire into the Causes of the general Declension of this Trade. And here I beg Leave further to observe, that the *French* spared no Cost or Labour to rival *Great-Britain*, they well knowing, if that sunk, her *Guinea* and *Madeira* Trades must fall with it; for which Purpose they embraced every Opportunity to enlarge and improve their Sugar Plantations; and, if I am not misinformed, where the Planter was not able to complete his Works himself, proper Utenfils were sent over from *France* at the Public Charge, and the Crown trusted them for several Years without Interest: What such an Assistance will enable Men to do, we may gather from the flourishing State of the Linnen Manufactory in *Ireland*, since the Public allowed them a Fund to support it. Having by these Means established their Sugar Colonies, the next Thing they had in View was to beat the *British* Merchants out of the foreign Markets, for Sugar; and therefore destroy their Trade for Exportation; and this they have effected, by giving Liberty for their Ships to carry their Sugars directly to the foreign Markets, while ours were obliged to import all into *Great-Britain*, which enables them to sell so much cheaper than our Merchants can carry it from *London*, as has almost put an entire Stop to that valuable Branch of Trade to their Mother Country; and the utter Ruin of the *British* Sugar Colonies must necessarily follow, unless they are relieved some way or other.

The very first Declension of their Exportation Trade was attended with ill Consequences to the Sugar Colonies. It lowered the Price of Sugar so much at home, as discouraged the Merchants from sending to purchase Sugars here. This obliged the Sugar Planters to turn Merchant-Adventurers in a declining Trade, and to ship their Sugars upon their own Account and Risque: This put a Stop to the Currency of Cash, which was before brought over yearly to purchase Sugars, and laid the whole Burden of Freight, Duty, and Commission, upon the Plantation, that were formerly paid by the *British* Merchants. And suppose but fifteen thousand Hogheads of Sugars to be shipped in a Year from this Island, on Gentlemens own Accounts, these three Articles will amount to upwards of sixty thousand Pounds Sterling. Another great Evil that has likewise followed from the same Cause is, Combinations among the Buyers, by which the Price of Sugars is sunk so low as greatly to prejudice the Planters, and yet turning to the Benefit only of a few private Persons, who are the first Buyers, and not at all to that of the Consumers in general, by which that Island is hurt, and this receives no Benefit, or very little.

These are the Particulars which we have collected from Books; but we will now add some few Remarks, from the Informations we have received, which will serve to give Light to the present State and Importance of this Island; and these will come chiefly under the three following Heads. In the first Place, we shall shew that this Colony throve the fastest, became the best peopled, and by far the most wealthy in *America*. We shall next shew the Advantages formerly derived from thence to the *British* Nation, clearly, and in a very few Words. And lastly, we shall take Notice of the present Condition of this Island, and of the infinite Consequence thereof to this Government of *Great Britain*. In the first Place then, it is to be considered that the Island of *Barbadoes* is generally esteemed to be a very little bigger than the Isle of *Wight*, and to contain, according to a round Computation, one hundred thousand Acres. It has been shewn, that about the Year 1626 this Country was not only unsettled, but actually uninhabitable, as affording nothing for

the Support of Life, and over-run with a brushy kind of Shrub Wood, which gave a great deal of Trouble to the first Planters; yet in the Space of fifty Years, this Plantation came to its greatest Height, and by a Calculation that was made with much Exactness, there were in it fifty thousand white People of all Sorts, of whom twenty thousand were able to bear Arms, and eighty thousand Negroes: Nay we are told that in twenty Years after the Colony was settled they mustered eleven thousand Horse and Foot; which would be altogether incredible if we had not such Proofs of these Facts as put them beyond all Doubt or Question.

This sufficiently proves that never any Colony of ours, or any other Nation, was so populous as this Island. But to make this still clearer to an *English* Reader, we shall observe that *Barbadoes* is rather less than the County of *Rutland*, the smallest County in *England*; and that, according to the highest Computation, the Number of People in that County, in 1676, did not exceed twenty thousand: But this may be made still clearer, by comparing that whole Island with this, in Point of Extent; for if *England* and *Wales*, taken together, consist of near forty Millions of Acres, then if they were as populous as *Barbadoes* they ought to contain fifty Millions of People; whereas Sir *William Petty*, who was a very able Man in Computations, and is thought not to have undervalued this Country, but rather the contrary, never reckoned the People higher than eight Millions; which shews what a vast Disproportion there is between the peopling of the two Countries.

But to proceed farther still: The same great Man asserts, that in *Holland* and *Zealand*, which are looked upon to be the best peopled Countries in *Europe*, there are a Million of Souls inhabiting about as many Acres; and consequently it appears from hence, that even this Country was not so well peopled as *Barbadoes*. In Point of Wealth, the Comparison holds full as strong; for in the Year 1661 King *Charles II.* created on the same Day thirteen Baronets in *Barbadoes*, none of them having less than one thousand, and some of them ten thousand, Pounds a Year. At this time their Trade actually maintained four hundred Sail of Ships; and it was computed, that the Running Cash of the Island might be about two hundred thousand Pounds; and their annual Exportation to *Great-Britain*, in Sugar, Indico, Ginger, and other Commodities, at least three hundred and fifty thousand Pounds. These are Facts that may be depended upon, that deserve in every respect the greatest Consideration, and that plainly demonstrate at once the great Value of this Island, and the prodigious Consequence of our Plantations in general.

By the gradual Increase of the Colony upon this Island, it has, since we first possessed it, contributed beyond Conception and Belief to the Riches of its Mother Country; and, as I know not any Subject that either can or ought to give an *English* Reader more Pleasure than the Consideration of what has been obtained by the Blessing of God, upon the Virtue and Industry of his Countrymen; so, I think, an Endeavour to shew what has accrued in the whole to *Britain*, by establishing a Colony here, will be allowed to be equally instructive and pleasant, useful and entertaining.

What has been said before, gives us a sufficient general Notion of the Importance and Value of the Island; what we now aim at is, to come at a more particular Account of what it has yielded in the Whole. When this Colony was in its most flourishing Condition, which we fix to the Year 1676, there were four hundred Ships of one hundred and fifty Tons, one with another, employed annually in this Trade; and I believe it will be thought a very moderate Computation, if we reckon that the Seamen, Ship-Builders, and other Trades that live by these Vessels, amounted in the Whole to ten thousand Souls. The Sugars that came from *Barbadoes*, were either spent at home or sent abroad; and I reckon, that in the manufacturing the Sugars, and vending them at home and abroad, there might be twenty thousand People more employed. To these we must add, such as got their Bread by the Goods and Manufactures yearly exported from hence to *Barbadoes*; for almost all that the People eat, drink, and wear

there, are the Product of *England*; so that the Computation cannot be thought to rise too high, if we allow, that in this Way twenty thousand more got their Bread; which will make about fifty thousand in the Whole: All supported here by the Labour and Industry of the Whites and Negroes in that Country. We are next to compute the Money brought into this Nation by the Export of the Commodities imported from thence, which was that Year allowed to be above two hundred thousand Pounds, and it was also agreed, that as much or more had been gained every Year, between that Time and the Restoration.

I shall say nothing of the Money arising to the Exchequer from the Duties, though this might be computed at thirty five thousand Pounds *per Annum*; but upon these Principles shall proceed in my Computation thus: I will suppose, that from the Year 1636 to 1656, which is twenty Years, this Colony produced but half so much, and though it may be true, that before the Year 1640 it did not produce a Quarter so much, yet, in the remaining part of that Period, it certainly brought in a great deal more; and therefore we cannot be far from the Truth, in computing that this Nation acquired two Millions in Money, by *Barbadoes*, in that twenty Years. In the next twenty, that is, from 1656 to 1676, when it is allowed this Island was in its most flourishing Condition, there must have been gained four Millions of Money; and allowing for the gradual Falling off of this Trade, by a Multitude of unlucky Accidents, but more particularly by the settling the *French* Sugar Islands, we shall compute the last seventy Years, from 1676 to 1736, at the same Rate we did the first twenty Years, and the Gain will then amount to six Millions; so that in the Space of one hundred Years, the Inhabitants of *Great-Britain* have received twelve Millions in Silver, by the Means of this Plantation; and had fifty thousand of her Inhabitants maintained by the People in that Colony all the time. It is highly possible, that in some of these Articles we may be wrong one way, and it is more than probable, that in other Articles we may err the other way; which is so far from making against the Credit of our Computation in general, that it really makes for it, since we may very well suppose these Errors balance each other, and that the Sum total is very near right.

We are now come to the last Head, which is, assigning the comparative Excellence of this Colony with regard to our own and other Plantations in *America*; and this, at first Sight, may appear a thing very difficult, if not impossible to be done; however we may come sufficiently near it for our Purpose. It is thought that *Barbadoes* contains one hundred and forty square Miles, and if so it is in proportion, as 1 to 34,771 in respect to the *Spanish* Plantations; as 1 to 12,000 in regard to our own; as 1 to 11,000 in reference to the *French*; as 1 to 7,000 as to the *Portuguese*; and as 1 to 4 as to the *Dutch*. This I say, as to the Extent of Territory, is as just a Comparison as can be made; but with regard to the Value of these Colonies, it is very easy to perceive that there is hardly any Computation to be made at all, for we may truly affirm that the Produce of *Barbadoes* is very near equal to a twentieth Part of what *Spain* receives from her *Indies* annually, in time of Peace, and from thence we may easily judge of the rest.

I have insisted the longer upon this Topic, because it may enable us to form some Notion of what might be made of our Plantations, if we attended to them as much as they deserve; for though it may be, and perhaps is, impossible to improve any of them in proportion to what has been done in *Barbadoes*, yet we may well enough discern, from hence, that they might be made incontestably more profitable to us than they now are, or indeed, than the whole Trade that we now possess; and if, at the same time we reflect on this, we likewise consider that there is nothing so absolutely in our Power, as the Improvement of our Colonies; it will most certainly appear to be the Point, which, of all others, imports us most; and if I have done any thing towards proving this, I shall account all my Labour well bestowed.

18. We are next to speak of the Island of *St. Christopher*.

which was called *Liamuega* by the *Savages*, and was discovered by *Christopher Columbus*, in the first Voyage he made to *America*. He gave it the Name of *St. Christopher* from the Figure of its Mountains, there being in the upper Part of the Island a very high Mountain, which bears on its Summit another less Mountain, as *St. Christopher* is painted like a Giant, with our Saviour on his Back. It is situated in the Latitude of 17 Degrees 25 Minutes on this Side the Line, and is about 75 Miles in Circuit; the *Caribbeans* inhabited it when Sir *Thomas Warner*, an *English* Adventurer, went thither. Monsieur *Desnambue*, a *French* Gentleman of the ancient House of *Vauderop*, who commanded for the *French* in *America*, arrived at *St. Christopher's* the same Day with Sir *Thomas Warner*, and both took Possession of the Island in the Names of their respective Masters, that they might have a Place of safe Retreat, and a good Haven for the Receipt of such Ships, of both Nations, as should be bound for *America*, it being well provided with Harbours. The *Spaniards* used to put in there in their *West India* Voyage, to take in fresh Water; and they were on so good terms with the *Caribbeans*, that sometimes they left their Sick there, of whom the *Savages* took a great deal of Care.

The two Gentlemen before mentioned, left some of their Men upon the Place, and returned, Sir *Thomas Warner* to *England*, and Monsieur *Desnambue* to *France*, for Recruits. Their Masters approved of their Conduct, and sent them back with Supplies of Men and Provisions, and Commissions to be Governors of the new Settlements. This Company continued in *France* till the Year 1661, when they sold *St. Christopher's*, and the other Islands, to the Knights of *Malta*; but in the Year 1664, the *West India* Company, by the King's Orders, bought out the last Proprietors. Sir *Thomas Warner*, and Monsieur *Desnambue*, sailed in the Year 1626, and the latter arrived there about January 1627, having had a long sickly Voyage. The *French* were about three hundred in Number, the *English* Colony as many; Sir *Thomas* had proceeded a good way in his Settlement before Monsieur *Desnambue* arrived; and the two Governors, to prevent Differences among the People about the Limits of their Territories, signed Articles of Division on the 13th of May 1627: They then set Boundaries to their several Divisions, with this particular Proviso, that fishing and hunting should be equally free to the Inhabitants of both Nations; that the Salt-ponds, and most valuable Timber, should be in common, together with the Mines and Havens; also a League offensive and defensive was concluded between them, against all their Enemies; after which they set to work, each in his Station, to advance his Settlement, and went on very harmoniously.

The *English* received Supplies of Men and Provisions from *London*, by which means they throve better than the *French*, and not only became strong enough to keep what they had, but to be able to spare Men for new Plantations at *Nevis*; of which Sir *Thomas Warner* took Possession, and left People upon it for a Settlement, in the Year 1628. And in that which followed, Don *Frederick de Toledo* was sent with a Fleet of twenty-four Ships and fifteen Frigates, to dispossess the *English* and *French* of the Island of *St. Christopher's*. The *Spaniards* were alarmed at the Progress of the *English* in the *Caribbee* Islands, and thought it concerned the Safety of their own Plantations, to prevent those Nations from settling in the Neighbourhood. Don *Frederick* meeting some *English* Ships lying near the Isle of *Nevis*, seized them, and then came and anchored in the Road of *Marigot*, under the Cannon of the *Basse Terre*, where Monsieur *Rossey* commanded. Neither the *French* nor the *English* Forts were in a Condition to oppose such an Enemy; their Stores of Ammunition fell short, and their Numbers were not a Match for the *Spanish* Army, had they been ever so well provided with Powder and Shot. *Rossey*, after a small Opposition, abandoned the *Basse Terre*, and retreated to *Cabes Terre*, another Fort, where Monsieur *Desnambue* was in Person, who could not prevail with his Men, either to defend themselves there, or to retire to the Forests and Mountains, where a few Men might have resisted a thousand. He remonstrated to them

U u u

that

that Don *Frederick* could not afford much Time, being bound to the *Havannah* to bring home the *Flota*. Yet this was to no purpose, nothing would content them but embarking and leaving the Place, which he was forced to comply with, and so all the *French* deserted their Settlement, as did their Allies the *English*; who were in a great Consternation, and the Disorder encreased, upon the News of *Desnambue's* being gone with his Colony; some endeavoured to escape by Sea, others fled to the Mountains; and all who were left sent Deputies to treat with the *Spaniards*. The Don knowing he had them in his Power, commanded them to leave the Island immediately, or he would put them to the Sword; he sent them their own Ships, which he had taken at *Nevis*, to embark in, and was persuaded to give leave to those to stay that had not room in the Ships for themselves and their Families, till they could be transported; upon which Don *Frederick* weighed anchor, carried with him six hundred *English* who were fittest for his Service, and he was no sooner gone but the *English* rallied, and resolved to go on with their Settlement. The *French*, who were got no farther than *Antigua* and *Montserrat*, sent a Ship for Intelligence to *St. Christopher's*, and understanding the *Spaniards* were gone, and the *English* busy in rebuilding and planting, rejoiced at this happy and unexpected turn of Fortune, sailed back to *St. Christopher's*, and retook Possession of their former Habitations.

The *English* continued carrying on their Colony till they were in a Condition to spare more Men for Settlements, at *Barbuda*, *Montserrat*, and *Antigua*, which Sir *Thomas Warner* peopled and planted. And the same Year the *Dutch* made themselves Masters of *St. Eustace*, and the *French* took Possession of some other Islands. The *English* built themselves good Houses at *St. Christopher's*, and had Wives and Families; whereas the *French* contented themselves with Huts, after the *Caribbean* Manner; few of them were married, and consequently took little Pains to furnish themselves with all Things necessary and convenient for Life. Monsieur *Desnambue* died about the Year 1637, and Sir *Thomas Warner* did not long survive him. Before the *English* Governor's Death, the Colony was so increased, that there were between twelve and thirteen thousand Souls of his own Nation in the Island. He was succeeded in his Government by Col. *Rich*, who, by following his Predecessor's Steps in governing the Colony, invited more People to come and settle there. The chief Employment of the first Planters was cultivating Tobacco; by which they got a competent Livelihood; but afterwards, the Quantity that was made bringing down the Price, they set themselves in several Places to plant Sugar, Ginger, Indico, and Cotton, and in a little time became a rich and flourishing People, both *French* and *English* living cordially together till the last War broke out, when the *English* drove the *French* entirely from their Settlements; and the Country being yielded to the Crown of *Great-Britain* by the Peace of *Utrecht*, all the *French* Territory was sold for the Benefit of the Public, which must have produced a very large Sum, since out of it there were eighty thousand Pounds paid, for the Marriage Portion of her Royal Highness the Princess of *Orange*.

There were indeed some who pretended, that notwithstanding the *French* Part of the Island of *St. Christopher's* was by far the richest, we were no Gainers by obtaining it; but that, on the contrary, the *French* received Benefit thereby, because it enabled them to people the rest of their Islands more effectually; but whoever considers that the Sugars of this Island are the very best in all *America*; that the Plantations were in perfect Order; and that the *French* ventured a War, to prevent our settling *St. Lucia* and *St. Vincent*, will scarce be brought to believe, that they parted with a Country ready settled, and more valuable than both those Islands, with their Goodwill. The Treaty of *Utrecht* was so indifferent a Treaty that, I think, there is no sort of Necessity for making it appear worse than it really was. The same Persons who first settled *St. Christopher's* likewise settled *Nevis*, or *Mevis*, about the Year 1628; and notwithstanding the Mis-

fortune of being dispossessed by the *Spaniards* in the manner before-mentioned, in twenty Years time there were at least four thousand People upon the Island, and they continued increasing in the same manner, by a Succession of prudent Governors, for a considerable Space. After the Restoration, when Trade and Peace flourished, this Isle enjoyed its Share of the Benefit, and increased in Inhabitants and Riches; the only Enemy they had to struggle with was the Hurricane, which generally visited them, once a Year.

On the 19th of *August*, 1667, there was a terrible one in this Island; at which time Sir *John Berry*, Captain of the *Centurion* Man of War, was in the Harbour with that and several other Ships, of which one was commanded by Capt. *Langford*, who having learned some of the Prognostics of a Tornado, from a *Caribbean*, perceiving them, he told Sir *John* and the rest of the Commanders of it, who depending on his Intelligence, made their Ships ready, and in the Morning, about four o'Clock, the Wind coming very hard northerly, they put to Sea, and came all back within four or five Days time safe to the Road again: Captain *Langford* was ashore, and being confident of the Hurricane, took such care in securing his Sugars and Goods in the Store-house, that when the Hurricane had carried away the Roof of the House, all except one Hoghead of Sugar remained safe.

When Sir *William Stapleton* was Governor of these Islands he usually made this the Place of his Residence. Here Courts were kept, and the Governor living upon it, most of the Affairs of this Government were transacted here; for every one of these Islands hath a particular Lieutenant-Governor, Council, and Assembly; and the general Government centers only in the Authority of Captain-General. Sir *William Stapleton*, who was Governor in King *James's* Time, made Sir *James Russel* Lieutenant-Governor of this Island, and he enjoyed the Place till his Commission was superseded by that of Captain-General, granted to Sir *Nathaniel Johnson*, who also resided at *Nevis*; and at this Time none of the *Leeward Islands* flourished so much as this; it supplied the others with almost all their Wines and Negroes, and was computed to have contained at that Time near two thousand fighting Men, which will make the Number of Souls, by common Computation, to be above ten thousand besides Negroes, of which Number there were not less than twenty thousand. A prodigious Improvement of an Island scarce six Miles long, to maintain between thirty and forty thousand Men, Women, and Children!

We are to proceed next to the Island of *Montserrat*, which Name the *Spaniards* gave to this Island, from the Resemblance it has to a Mountain in *Catalonia*, not far from *Barcelona*; famous for a Chapel dedicated to the Blessed *Virgin*, in the greatest Reputation with the *Roman Catholics* of any, except that of *Lorretto*. The *English* have not thought fit to give it another Name since they were Masters of it. It lies in 17 Degrees North Latitude, is about three Leagues in Length, and almost as much in Breadth; so that it seems to be of a round Figure. It was discovered by the *Europeans* at the same time with *St. Christopher's*; but no Settlement was made upon it till the Year 1632, at which Time Sir *Thomas Warner*, first Governor of *St. Christopher's*, procured a small Colony to settle there, of the Subjects of *England*, for we cannot assure ourselves they were *English* Men, this Island being generally looked upon as an *Irish* Colony. This Island flourished at first more than *Antigua*; but since the Lord *Willoughby's* Time, the latter has got, and kept, the Start of it. There were seven hundred Men in *Montserrat*, sixteen Years after it was first inhabited; the Rolls of the Militia at this Time amounts to three hundred and sixty. We find but one Battery for the Defence of the Coast, and other old dismounted Cannon at several Landing-places. As to the Climate, Soil, Animals, Trade, and Productions of this Isle, they are much the same with those of the other *Caribbee Islands*, only this is fuller of Mountains, which are covered with Cedars and other Trees, that make it a lovely Prospect from the Sea: The Vallies are fruitful, and better stored with fresh Water than those of *Antigua*.

According

According to the best Accounts that have been received from this Island of late Years, it is rather increasing, both in the Number of People, and in the Value of their Settlements, than not; as to the former, it is computed, there may be about four thousand five hundred white Persons, and about twelve thousand Negroes, in this Country: And as for the latter, I mean the Value of its Produce, we shall have Occasion to speak of it hereafter.

The Island of *Barbuda* lies in the Latitude of 17 Degrees 30 Minutes North, is about fifteen Miles long, and lies North-east from the Island of which we were last speaking. The Land is low and fruitful, and the *English* began to plant it as early as *Nevis*, *Montserrat*, or any other of the Leeward Islands, *St. Christopher's* excepted; for Sir *Thomas Warner*, who first settled there, placed a small Colony in this Island, but the *Caribbeans* disturbed them so much, that they were often forced to desert it and their Plantations. There hardly passed a Year but they made one or two Incursions, and that generally in the Night, for they durst not attack them by Day; the Damage the *English* sustained by them, made them weary of dwelling in a Place where they were so much exposed to the Fury of those Barbarians, who diminishing daily in number, and the *Europeans* encreasing, the *English* again possessed themselves of *Barbuda*, and in a few Years there were five hundred Inhabitants. There are now a thousand or twelve hundred Souls upon it, and their Number is daily encreasing. The Proprietor is the Honourable *Christopher Codrington*, Esq; and he puts in a Governor here, having the same Prerogative as the other Lords Proprietors in their several Jurisdictions in *America*. This Island has bred great store of Cattle, and the Inhabitants employ themselves mostly in that sort of Husbandry; Corn and Provisions coming almost always to a good Market in the Sugar Islands. There is plenty of all Sorts of tame Cattle, as in *Europe*; and the *English* live here much after the same Manner as they do in the Countries in *England*; only their Labour in the Field is not so hard as here, the Country being so much hotter.

The next Plantation to this, if it may be properly so called, is *Anguilla*, or *Snake Island*, so called from its Figure, being a long Tract of Earth, but narrow, winding almost about; near *St. Martins*, from whence it may easily be seen: It lies in 18 Degrees 12 Minutes. The Country is level and woody; the Soil fruitful, and the Tobacco that grew there formerly was reckoned very good in its kind. There is not a Mountain in it; where it is broadest there is a Pond, about which the *English* settled in the Year 1650. Their Business, like the Inhabitants of *Barbuda*, was to plant Corn, and breed tame Cattle, for which purpose they brought Stock with them. They were poor, and continue so to this Day, being perhaps the laziest Creatures in the World. Some People have gone from *Barbadoes*, and other *English Caribbean Islands*, thither, and there they live like the first Race of Men, without Government or Religion, having no Minister or Magistrate. They are said to make up, altogether, about one hundred and fifty Families, or nine hundred Souls; and their Condition in that Place is singular enough to deserve particular Notice, if we had any room to spare; but as we have not, it shall suffice to say that they have no great Quantities of Sugar upon the Island, but addict themselves rather to farming, in which they have had very good Success; and this it is that enables them to live in the old Patriarchal Way, every Man being a kind of Sovereign in his own Family, and no other Government there is in *Anguilla*.

We have now gone through all the Leeward Islands, *Antigua*, or *Antego*, only excepted, of which we are to speak in the next Section, as not having been settled within the Period to which we have confined this. As to the general Produce or Value of these Islands, which may serve to shew of how great Consequence they are to *Great Britain*, the best Account I have been able to obtain, is to the following Effect: *St. Christopher's* is the largest of all the Islands, but the middle Part of it being extremely mountainous, it is thought that there are not above twenty-four thousand Acres of Land, fit for Sugar,

in the whole Island, which produces about ten thousand Hogsheads of that valuable Commodity. *Antego* contains about seventy thousand Acres, and produces sixteen thousand Hogsheads of Sugar yearly. *Nevis* is said to be about twenty Miles in Circumference, and produces six thousand Hogsheads, *Montserrat*, which is less than any of them, produces two thousand five hundred, and sometimes three thousand, Hogsheads of Sugar. In *Barbuda* they breed Cattle, and in *Anguilla* they raise Corn.

19. We are now, according to the Method that we have hitherto pursued of speaking of our Plantations, in the Order of Time in which they were settled, obliged to return to the Continent of *North America*, in order to give an Account of the noble Colony of *Maryland*, which remained a Part of *Virginia* till the Year 1632, which was the eighth of King *Charles I.* when that Monarch was pleased to grant all the Country to the North of *Potowmack River*, not then planted, unto *Cecilius Calvert*, Lord *Baltimore*, of the Kingdom of *Ireland*, and his Heirs; and this Part of the Country was afterwards called *Maryland*, in Honour of the then Queen Consort, *Henrietta Maria*, youngest Daughter of the *French King*, *Henry the IVth.* The Lord *Baltimore* having obtained his Grant, sent over his Brother, the honourable *Leonard Calvert*, Esq; with some *Roman Catholic* Gentlemen, and other Adventurers, to the Number of two hundred, to take Possession of the Country; who, setting sail for *England* on the 22d of *November* 1633, arrived at *Point Comfort* in the Bay of *Chesapeake*, on the 24th of *February* following; where, being kindly received and supplied with Provisions by the *English* of *Virginia*, they continued their Voyage Northward, to the River *Potowmack*, appointed to be the Boundary between *Virginia* and *Maryland*, on the East-side of the Bay.

The Adventurers sailed up this River, and landing on several Places of the northern Shore, acquainted the Natives they were come to settle amongst them, and trade with them; but the Natives seemed rather to desire their Absence than their Company: However, there were no Acts of Hostility committed on either Side; and the *English* returning down the River *Potowmack* again, made choice of a Place near the Mouth of a River (which falls into it, and by them called *St. George's River*) to settle their first Colony. They advanced afterwards to an *Indian* Town called *Yeamac*, then the Capital of the Country, and at a Conference with the *Weorance* or Sovereign of the Place, to whom they made considerable Presents, the *Weorance* consented that the *English* should dwell in one Part of the Town, reserving the other for his own People, till the Harvest was over, and then agreed to quit the whole entirely to the *English*, and retire farther into the Country, which they did accordingly. And the *March* following Mr. *Calvert* and the Planters were left in the quiet Possession of the whole Town, to which they gave the Name of *St. Mary's*; and it was agreed on both Sides, that if any Wrong was done by either Party, the Nation offending should make full Satisfaction for the Injury. The Reasons the *Yeamac* Indians were so ready to enter into a Treaty with the *English*, and yield them Part of their Country, was in Hopes of obtaining their Protection and Assistance against the *Sasquahanah* Indians, their northern Neighbours, with whom they were then at War; and, indeed, the *Yeamac* Indians were upon the Point of abandoning their Country, to avoid the Fury of the *Sasquahanah* Nation, before the *English* arrived; from whence it appears that the Adventurers, sent over by the Lord *Baltimore*, cannot be charged with any Injustice in settling themselves in this Part of *America*, being invited to it by the original Inhabitants.

The Inhabitants who were thus settled at *St. Mary's*, applied themselves, with great Diligence, to cultivating the Ground, and raised large Quantities of *Indian* Corn, while the Natives went every Day into the Woods to hunt for Game, bringing home Venison and Turkeys, to the *English* Colony, in abundance, for which they received Knives, Tools, and Toys, in return. And thus both Nations lived in the greatest Friendship, doing good Offices to each other; till some of the *English* in *Virginia*, envious of the Happiness of this thriving Colony, suggested

gested to the *Indians*, that these Strangers were not really *English* as they pretended, but *Spaniards*; and would enslave them as they had done many of their Countrymen: And the *Indians* were so credulous as to believe it, and appeared jealous of Mr. *Calvert*, making Preparations as if they intended to fall upon the Strangers, which the *English* perceiving, stood upon their Guard, and erected a Fort for their Security, on which they planted several Pieces of Ordnance; at the firing whereof the *Yoamacos* were so terrified, that they abandoned their Country without any other Compulsion, and left the *English* in full Possession of it; who receiving Supplies and Reinforcements continually from *England*, and having no other Enemy to contend with than Agues and Fevers (which swept off some of them before they found out a proper Regimen for the Climate) they soon became a flourishing People, many *Roman Catholic* Families of Quality and Fortune transporting themselves thither to avoid the Penal Laws made against them in *England*; and *Maryland* has been a Place of Refuge for those of that Persuasion from that Day to this.

While the civil War lasted in *England*, the Lord *Baltimore's* Family were deprived of the Government of this Province, but were restored to their Right by King *Charles II.* soon after his own Restoration. Whereupon the Lord *Baltimore* sent over his Son, *Charles Calvert*, afterwards Lord *Baltimore*, to be Governor of *Maryland*, who continued in that Post upwards of twenty Years, and long after his Father's Death. By whose Prudence the Colony became almost as considerable as *Virginia*, for its Tobacco and other Products of the Soil; and all the *Indian* Nations on that Side put themselves under their Protection. The *Indian* Chiefs were appointed, or at least approved and confirmed in their Commands, by the Lord *Baltimore* the Proprietor, whose Success is to be ascribed, in a great Measure, to the Endeavours he used to cultivate a good Correspondence with the *Indian* Nations, and to give them as little Offence as possible.

In the reign of King *James II.* we are told that Father *Peters*, a Jesuit, whom that Prince admitted into his Councils, which contributed not a little to his losing first the Hearts of his Subjects, and after that his Dominions, took such a Prejudice to the then Lord *Baltimore*, though of his own Religion, but a Nobleman of great Wisdom, Justice, and Moderation, that he resolved to deprive him of the Power of nominating a Governor, by extending the royal Prerogative at the Expence of the Grant made by the Crown, to the Ancestors of his Lordship. But before this could be effected, the Revolution intervened, but the Change of Government did not prove serviceable to his Lordship; for the Crown prosecuting the former Project, deprived him of his Power of Nomination, which was so much the harder, because it is universally allowed that no People were ever better governed than the Inhabitants of this Colony, while they depended solely upon this noble Family.

The present Lord *Baltimore* is a Protestant, and inherits the Virtues, as well as the Title, of his Ancestors; being in all respects a Blessing to that Country, as he is the Proprietor of it. His Lordship once took the Pains to visit his Colony, was received with all due Marks of Respect on account of his Quality and Interest in that Country; but when he left it, the People gave him much stronger Testimonies of their Affection, and their Regret at parting with him, on account of his Mildness, public Spirit, and sincere good Will towards them, of which he gave them so many Instances, and testified upon all Occasions, such a Readiness not only to comply with, but to go beyond, their Requests; that there was not a Planter in *Maryland*, who did not consider him rather as a Father and a Friend, than as their Lord Proprietor; and to say the Truth, they had so much Experience of him in the former Characters, and felt so little of him in the latter, that it was extremely natural for them to behave as they did.

Whatever the great Design might be when this Settlement was first made, most certain it is that no Country in *America* can boast of having had fewer Disturbances on the Score of Religion. There are, indeed, of all Per-

suasions in the Colony; but notwithstanding this, they live together in the greatest Tranquility, as if they made it their Business to forget the Points about which they differ, and to remember that they agree in those of being *Englishmen* and *Christians*, as sufficiently appears by their kind Behaviour towards the *Indians*, who have scarce ever had any Difference with them, and of whom the Colony have no sort of Apprehensions, though they are much more numerous in that Country than in *Virginia*. But after shewing how this Country was first planted, what remarkable Accidents have since happened therein, and in what State the Colony now is with respect to the Government; the next thing is to give a succinct View of the Place itself, in order to bring it the better to the Acquaintance of every *English* Reader, who is curious on this Subject.

This Province is situated between 38 and 40 Degrees of Northern Latitude, and between 44 and 48 Degrees of Western Longitude, as is generally computed; but it must be confessed the Western Boundaries are very uncertain, some extending them beyond the *Apalachean Mountains*. The North End of the Bay of *Chesapeake* divides *Maryland* into two Parts, called the *Eastern* and *Western Shores*. It is bounded, at present, by Part of *Pennsylvania* and the *Atlantic Ocean* on the East, by *Virginia Proper* on the South, and by the *Apalachean Mountains* on the West. It is separated from *Virginia* on the South, by the River *Potowmack* on the Western Shore, and the River *Pocomoas* on the Eastern Shore, the Length from North to South being about an hundred and forty Miles, and the Breadth from East to West, if we extend it no farther than the Country already planted, will not be so much, though its future Limits possibly may extend much farther. As to the Face of the Country, this, as well as *Virginia*, may be divided into, 1st. the *Lowlands* next the Sea; 2dly, the hilly Country towards the Heads of the Rivers; and 3dly, the *Apalachean Mountains*, which are exceeding high, and run parallel to the *Atlantic Ocean*, viz. from the North-east to the South-west. The *Lowlands* heretofore consisted of Swamps or Woods, being one continued Forest almost, till the *English* cleared Part of it, either to make room for their Plantations, or for building of Ships and Houses, and the making Tobacco Casks and Pipe-staves for Exportation, which has made such Havock among their Woods, that some of them begin to apprehend the Want of Timber, especially near their Forts and Rivers; for as to that which lies remote from the Water it is of little use to them, the Price of the Carriage exceeding the Value of the Wood. Towards the Heads of the Rivers there is a Mixture of Hills and Valleys, as in *Virginia*, well planted, with Variety of Timber and Fruit Trees; and where these are wanting there are large Meadows or Savanahs, where the Grass grows to a most surprizing Height.

This Country, like *Virginia*, is watered by innumerable Springs and a great many fine Rivers, of which the chief are, 1st, *Potowmack*, which, rising in the Mountains North-west, runs to the South-east, and separates *Maryland* from *Virginia* on the South-west, falling into the Middle of the Bay of *Chesapeake*. 2dly, The River *Pocomoac*, which rising near the Ocean, runs also directly South, and then turning to the West, falls also into the Bay of *Chesapeake*, near *Watkins's* Point. A Line drawn from the Mouth of the River directly East, to the *Atlantic Ocean*, is the true Boundary between *Maryland* and *Virginia* on the Eastern Shore. 3dly, The River *Patuxent*, which rising in *Anne Arundel* County, runs to the South-east, and falls into the Bay of *Chesapeake*, about twenty Miles to the Northward of the Mouth of *Potowmack River*. 4thly, *Severn River*, which rises on the North-west Part of *Maryland*, running South-east, falls into the upper Part of the said Bay. 5thly, *Cheptonk*, which rises on the Eastern Shore, runs to the South-west, and falls into the same Bay. 6thly, *Sassafras River*, which rises in the North-east of *Maryland*, and running almost due West, falls into the North End of the said Bay. 7thly, *Wicomo River*, which rises on the Eastern Shore, runs to the South-west, and falls into the Bay almost against the Mouth of *Potowmack River*. The 8th and last

last River I shall mention is *St. George*, on the West-side of the Bay ; which, running from North to South, falls into the Mouth of the River *Potowmack*. Here the *English* first settled, and built the Town of *St. Mary's*. There are a great many more Rivers capable of receiving large Ships, which, with the numerous Bays and Creeks, that indent the Land on every Side, give the Seamen an Opportunity of bringing their Vessels up to the very Planters Doors, to receive their Freight, as in *Virginia*.

The Air of this Country is excessive hot some part of the Summer, and very cold in Winter when the North-west Wind blows ; but the Natives tell us, that they are happily situated ; that their Heats are very seldom troublesome, and then only by Accident, in a perfect Calm ; but that this does not happen above two or three Days in a Year, and then lasts but a few Hours at a time, and even this Inconvenience is made very tolerable by their cool Shades, their open and airy Rooms, Arbours and Grottos ; and in Spring and Fall the Weather is as pleasant as can be wished ; that their Winters are not of more than three or four Months Duration, and in these they seldom have one Month's bad Weather, all the rest they are happy in a clear Air and a bright Sun, and are scarce ever troubled with Fogs ; it is acknowledged they have hard Frosts sometimes, but they last no longer than while the Wind blows from the North, and North-west, Points, which is seldom more than three or four Days.

At other times they have no Frost at all ; and their Frosts are attended with bright and serene Weather ; and in the Spring, Summer, and Winter, their Winds are only cool pleasant Breezes. Their Rains, except in the Depth of Winter, are very pleasant and refreshing ; in Summer they last but a few Hours, and then bright Weather succeeds : However, it is acknowledged, that the Showers which fall in Summer are very heavy for the Time they last ; and the Part of the Country which lies on the Bays of the Sea, and the Mouths of the Rivers, which is much the best peopled, is certainly hot and moist ; indeed, higher up the Country, whither the Plantations are now extended, the Air is much more healthful especially since their Lands are cleared of Wood. They have here, however, dreadful Thunder in the Heat of Summer ; but as it cools and refreshes the Air, they rather wish for it than fear it, though it sometimes does much Mischief, but less than formerly.

Since the *Indians* transferred, or yielded, this Province to the *English*, it has been divided into ten Counties, six on the West-side of the Bay, and four on the East-side of it ; those on the West-side, taking them from South to North, are, 1. *St. Mary's* County. 2. *Charles* County. 3. *Prince George* County. 4. *Calvert* County. 5. *Anne Arundel* County. And 6. *Baltimore* County. The Counties on the East-side of this Bay, lying also from the South, are, 1. *Somerset* County. 2. *Dorchester* County. 3. *Talbot* County. 4. *Cecil* County. As for the County of *Kent*, that, or the greatest Part of it, is now said to be in *Pensylvania*. *St. Mary*, the Capital of the County of the same Name, and, for some time, of the whole Province, is situated on the East-side of the River *St. George*, in 38 Degrees and some Minutes North Latitude. This, as has been intimated, was the first Town in *Maryland* built by the *English*, who raised a Fort for its Defence ; but in its most flourishing State never had more than thirty or forty Houses in it, and since the Seat of the Government has been removed to *Annapolis*, seems to be upon the Decline ; for the same Humour prevails here as in *Virginia*, of Gentlemen living on their respective Plantations, and not in Towns.

In this County also are the Parishes of *Hervington*, *St. Clement's*, and *St. John's* ; and here is a noble Seat of the Lord *Baltimore* the Proprietor, called *Mettapany*, situate on the Mouth of the River *Patuxent*. In *Prince Charles* County, which lies North of *St. Mary's*, are the Parishes of *Bristol*, and *Piscataway* ; and in that of *Prince George*, the Parish of *Masterkout*. In *Calvert* County, which is divided from *Charles* County by the River *Patuxent*, are the Parishes of *Abington*, *Warrington*, and *Calverton*. In the County of *Anne Arundel*, which lies North of *Charles* County, the chief Town is *Annapolis*, now the Capital of the Province, and formerly called *Severn*, being situate on the River of that Name,

in 39 Degrees and some Minutes North Latitude. Here the Courts of Justice, and the General Assemblies were ordered to be held, in the Year 1699 ; and this has ever since been the Residence of the Governor ; notwithstanding which, there are not yet an hundred Houses built in the Town.

In *Baltimore* County, which lies between *Anne Arundel* County and the Province of *Pensylvania*, is the Parish of *Baltimore*, situate on the North-west Part of the Bay of *Chesapeake*. In *Somerset* County, which is the most southerly County on the East-side of the Bay, are the Town and Parish of *Somerset*. In *Dorchester* County, which lies North of *Somerset*, are the Town and Parish of *Dorchester*, besides a great many *Indian* Towns. In *Talbot* County, which lies North of *Dorchester*, are the Parishes of *Oxford*, *St. Michael's*, *Bolingbrooke*, and *Cecil*, the most northerly County on the East-side of the Bay, is bounded both on the North and East by the Province of *Pensylvania*.

Throughout the whole Colony of *Maryland*, as in that of *Virginia*, the *English* live at large at their several Plantations, which hinders the Increase of Towns ; indeed every Plantation is a little Town itself and can very well subsist with Provisions and Necessaries ; every considerable Planter's Warehouse being like a Shop, where he supplies not only himself, with what he wants, but the inferior Planters, Servants, and Labourers ; and has Commodities to barter for Tobacco, and other Goods, there being little Money in this Province, and little Occasion for any, as long as Tobacco answers all the Uses of Silver and Gold in Trade. There are few Merchants, or Shopkeepers, who may be properly so called, and live wholly by their Trade : The Tobacco of this Province, called *Oronoko*, is stronger than that of *Virginia* ; and no *Englishman*, who has not a very coarse Relish, will bear it ; yet it is as profitable to the Planter, and to the Trade of the Nation in general, being in Demand in the Eastern and Northern Parts of *Europe*, where it is preferred before the sweet-scented Tobacco of *James* and *York* Rivers, in *Virginia*. The Planters in *Maryland*, finding so good Vent for their Commodity in foreign Markets, have cultivated it so much, that the Province is thought to produce as much Tobacco as *Virginia*. The Soil is here as fruitful as in any Country, being a large Plain ; and the Hills in it so easy of Ascent, and of such a moderate Height, that they seem rather an artificial Ornament to it, than one of the Accidents of Nature.

The Abundance of Rivers and Brooks is no little Help to the Fertility of the Soil, and there is no Grain, Plant, or Tree, which grows in *Virginia*, but thrives as well here ; the Product, the Animals, and every Thing, are the same here as there, only the black and yellow Bird, called the *Baltimore Bird*, goes by another Name in *Virginia* ; it had that given it, because the Colours of the Field of the Lord *Baltimore's* Coat of Arms are *Or* and *Sable*. It is thought that the Number of Souls in *Maryland*, may be about thirty thousand, or rather more. There are several hundred Sail of Ships employed yearly in the Commerce between *Great-Britain* and this Country, and the Benefit which results to this Nation from thence, is very large, as may be easily computed from the Principles laid down in the foregoing Account of the Colony of *Virginia* ; which may likewise serve with respect to all the other Colonies that do not interfere with their Mother-Country in their Manufactures.

20. When *Oliver Cromwell*, after subverting entirely the Constitution of his Country, took upon him the Title of Protector, he resolved to obliterate the Memory of what was past, by undertaking somewhat that might be of great and lasting Advantage to his Country. It was with this View, and to rid himself of many Officers whom he suspected, that he framed a Project of attacking the *Spaniards* in the *West Indies*, and of taking from them the noble Island of *Hispaniola* or *St. Domingo* ; in the adjusting of which Design, he depended chiefly on the Information he received from one *Father Gage* a Priest, who had been many Years in the *Spanish America*, and who died in this Voyage ; for which tho' great Preparations were made ; yet they went on very slowly, and it was certainly though the best conceived, yet the worst executed of all his Enterprizes.

The Squadron commanded by General *Penn*, being ordered to rendezvous at *Portsmouth*, where the Land Forces were to embark, Complaints were made to *Venables* of Disorders and Discontents among the People, and more particularly about the Badness of the Provisions; which, by his Means, being made known to General *Desborough*, he, by very harsh Expressions, signified his Discontent thereat; and particularly charged *Venables* with a Design of frustrating the intended Expedition, by being the Author of Reports which were false; while he, on the other hand, endeavoured to justify himself, and to shew that he intended no otherwise than for the public Good; and there was a shrewd Suspicion that *Desborough's* Dissatisfaction herein arose, from his being concerned with those who had the Management of victualing the Navy. After *Venables* had attended near four Months without any positive Assurance whether the Government was determined to go on with the Design or not, although it was publickly discoursed of, and the *Spaniards* had thereby not only the Knowledge thereof, but Opportunities of providing for their Defence; he was some time after sent to, and directed to hold himself in a Readiness to proceed; and though he then requested that the Draughts which were to be made out of the Regiments, might be Men, in all respects, fitting for the intended Service, yet the Colonels were permitted to pick and cull them as they pleased, insomuch that most of them were raw and altogether undisciplined, and amongst them many *Irish* Papists; nor had not half of them Arms in any Degree serviceable: And so far were the Council from permitting him to stay till better could be furnished in their Room, that they sent him positive Orders to leave the Town next Day, upon pain of Imprisonment.

Before he came to *Portsmouth* many of the Troops were embarked, and the rest shipping off with the utmost Haste, so that he had no Opportunity of viewing, much less of exercising, them on Shore; and thereby informing himself of their Condition, with respect to their Abilities or otherwise; and although he was promised that the Store-ship, with Arms and other Necessaries, should join him at *Spithead*, he was at last told that no Delay must be made in staying for her, but that he might expect her coming to him at *Barbadoes*. He was likewise assured that he should carry out with him, at least, ten Months Provisions for ten thousand Men, but the most Part thereof was sent back to *London*, to be shipped off there, under pretence that there was not sufficient Room for the same in the Ships at *Portsmouth*, although the Officers in the Fleet found Passage in them for no inconsiderable Quantities of Goods, with which they designed to traffic when they arrived at the aforesaid Island.

The Forces being embarked, and the Wind presenting fair, the Squadron sailed, and arrived at *Barbadoes* on the 29th Day of *January*, 1654; soon after which, General *Venables* wrote to the Protector, the Lord President of the Council *Laurence*, the Lord *Lambeth*, and several others, letting them know in what a miserable Condition the Army was, and how destitute they were, not only of Provisions, but Arms and other Necessaries, proper for carrying on the intended Design; insomuch that they were constrained to make the hardest Shifts to supply them with the small Quantities, either of one or the other, that could be had in these Parts. The first thing that was done after the Fleet's Arrival at *Barbadoes*, was the seizing such *Dutch* Ships and Vessels as were found there, and General *Penn* appointed a Nephew of his to take an Account of their Cargoes, and all things belonging to them, without admitting any Cheque on him as General *Venables* desired and insisted on, that so no Embazzlements might be made.

The 18th of *March* *Venables* thought it necessary to hold a Council of War of the Land Officers, to consider of the State of the Army; and it was resolved to make these Propositions to *Penn*, among several others, viz. 1st. That as the Officers of the Army had resolved not to desert the Fleet, he with his Officers would reciprocally resolve not to leave the Army, at least not till such time as their expected Supplies arrived from *England*. 2dly, That it should be proposed to the Commissioners,

that a fit Quantity of Shipping might be taken up for transporting the Forces. 3dly, That they might not proceed on Service with less than twenty Tons of Ball, and that they might likewise be furnished from the Fleet with two hundred Fire-arms, six hundred Pikes, besides Pistols, Carbines, and two hundred Half-Pikes. To this *Venables* received no satisfactory Answer from *Penn*, and the Stores not arriving from *England*, he again desired to know from him what Arms, Shot, Match, and other Necessaries he could furnish from the Fleet; General *Desborough* having assured him, when in *England*, that the Commissioners had Power to dispose of what might be on board the Ships, to the necessary Use of the Army; but to this *Penn* returned him an Answer, that fifteen shot a Man, and a few Tons of Match, was all he could spare; besides which, he at length prevailed with him to add thereunto a few Half and Quarter Pikes, which gave Occasion to one of the Commissioners to let fall some Words, as if he doubted they were betrayed.

Besides all these Disappointments, and the Badness of the Provisions sent from *England*, yet even of them the Soldiers were put to short Allowance, while the Seamen were at whole, which occasioned no little Discontent, and rendered them very sickly and weak; and as the Commissioners were empowered and required to dispose of all Prizes and Booty taken towards defraying the Charge of the Expedition, and only a Fortnight's Pay was offered to the Officers and Soldiers in lieu of whatever Booty should be taken at *St. Domingo* (whither they were first designed from *Barbadoes*) it very much increased the Dissatisfaction of the Army; for most of the Officers, when they set forwards on the Expedition, were in hopes of bettering themselves very considerably. At length General *Venables* prevailed with the Officers and Men to accept of six Weeks Pay instead of their Plunder; and thereupon himself and *Penn* issued out Orders, restraining all Persons from pillaging without Orders, or from concealing the same on pain of Death, and Forfeiture of their Pay. But although the Officers were willing to submit to this, yet the Commissioners refused to sign it, insomuch that the Soldiers publickly declared they would return to *England*, and never more strike Stroke where there were Commissioners who should have Power to controul the Army.

The Fleet being now in a Readiness to sail, General *Venables*, with some of the Commissioners, and the Officers of the Army, proposed that they might proceed to the Harbour of *St. Domingo* (but for what Reason it doth not appear, unless it was for want of experienced Pilots). That was refused, and a Resolution taken to land the Troops at the River *Hind*; that so they might endeavour to force the Fort and Trench. It was also resolved among the Land Officers, 1st. That the Regiments should cast Lots which of them should go on Shore first. 2dly, That two or three Regiments should be landed at once. 3dly, That the Seconds to each Regiment should be appointed. 4thly, That the Ships wherein the Regiments were, should keep near each other, for their more regular landing. And it was farther determined, that if the Surges of the Sea ran high, and that the Enemy were prepared to defend the Fort and Trench, the Army should be landed behind the second Point to Leeward, and that, when on Shore, one Regiment should be ordered to march Eastward of the City, provided General *Penn* would engage to furnish the Army with all Necessaries.

Lots having been cast as aforesaid, it fell to Colonel *Buller's* Regiment to land first, and there was one *Cox* who had lived in those Parts many Years, was to have been their Guide, but he had been sent of some Errand by *Penn*, so that he was at this time absent; and Vice-Admiral *Goodson* declaring that he neither had Orders to go into *Hind River*, nor Pilots to conduct the Ship thereinto; the Army were constrained to land at the West Point (which *Venables* protested against) and by that means were exposed to a tedious March of forty Miles, through a thick woody Country, without any Guide, insomuch that both Horse and Men, by the Fatigue and Extremity of Heat, fell down with Thirst, and were miserably

rably afflicted with the Flux, by their eating Oranges and other green Fruit, having no Water to moisten their Mouths with. After four Days March the Army came to the Place where they might first have been put on Shore, but by that time the Enemy had summoned in the whole Country to their Assistance; and even now many of the Soldiers had no more than one Day's Provisions of the three that had been promised them from the Ships.

Colonel *Buller* being sent with his Regiment to a particular Station near *Hind River*, and ordered not to stir from thence until the rest of the Army joined him, he was so far from complying with those Commands from the General, that he marched away under the Guidance of *Cox*, who was now arrived from the Fleet; insomuch that for want of the said Guide, the General mistaking the Way, marched ten or twelve Miles about; and *Buller* having suffered his Men to straggle, they fell into, and suffered much by, the Ambuscades laid by the Enemy. The Hardships the Forces had undergone for want of Provisions, and their being denied what Plunder they might happen to take at *St. Domingo*, so exasperated them, that the Seamen who had been first sent ashore, and soon after those on the Land, were in a general Mutiny: However, in this Condition they forded the River *Hind*, with a Resolution to march to the Harbour, that so they might be furnished with Provision and Ammunition from the Ships, but they were Strangers to the Way, neither had they any Water to drink. At length Colonel *Buller*, and *Cox* the Guide, joining them, promised to conduct them to a Place where they might be supplied with Water. But some of the said Colonel's Men having rambled about for Pillage, encouraged the Enemy to lay Ambuscades for them in their March, who, falling upon the Forlorn, routed them, and killed several Officers; but they were soon after beaten back with Loss, and pursued within Cannon-shot of the Town; yet when the Action was over, many Men, as well as Horses, perished with Thirst.

A Council of War being called to consider of the Condition of the Army, it was found that many of the Men had eat nothing for four Days together, unless it were some Fruits they gathered in the Woods; and that they were without Water, the *Spaniards* having stopped up all their Wells within several Miles of the Town. Neither knew they the Country, or how to get to their Ships, for *Cox* the Guide was slain in the last Skirmish; however, after mature Consideration, it was resolved to march to the Harbour in the best Manner they could, and at length arriving there, they staid three or four Days to furnish themselves with Provisions and other Necessaries, and then advanced with a Mortar Piece, in order to reduce the Fort; but the Enemy having laid an Ambuscade, they charged the Van, which was to have been led by Adjutant General *Jackson*, very vigorously, and were answered in like Manner; whereas *Jackson's* Party running away, and the Passage through the Woods being very narrow, they fell upon the General's own Regiment, who, to no purpose, endeavoured to stop them with their Pikes; for they first disordered that Regiment, and soon after Major General *Haynes's*: Mean while the Enemy followed very eagerly, and giving no Quarter, the said Major General, and the best of his Officers, who preferred Death before Flight, fell in the Action.

At length the General's own Regiment making head against them, as also that of the Seamen, commanded by Vice Admiral *Goodson*, they, with their Swords, forced the Runaways into the Woods, rather chusing to kill them than they should disorder the rest; which the Enemy perceiving, they retreated, and our Men kept their Ground, though the Shot from the Fort killed many of them. The Troops, nevertheless, were so very weak and disheartened, that not many of them could be brought to play the Mortar against the Fort; and though the General was reduced to a very low Condition, by the Flux, he caused himself to be led from Place to Place to encourage them; but fainting at last, was forced to leave the Care to Major General *Fortescue*, who soon found that he could prevail no more than the General himself.

It was resolved soon after, at a Council of War, that since the Enemy had guarded every pass, and that the Army were under very great Necessities for Water, they should march to a Place where they had been informed a Supply thereof, and of other Necessaries, had been put on Shore for them from the Ships. But in that March the Soldiers accompanied their Officers no farther than till they found them in Danger, and then left them, insomuch that the Commissioners owned, in a Letter they wrote to the Governor at *Barbadoes*, that had not the Enemy been as fearful as our own Men, they might, in a few Days, have destroyed the whole Army; and withal they let him know, that those who had occasioned the greatest Disorder, were those of *Barbadoes* and *St. Christophers*, insomuch that they, the said Commissioners, who were *Penn*, *Winslow*, and *Buller*, had resolved to leave the Place, and try what could be done against the Island of *Jamaica*.

21. The Army was accordingly in little Time embarked; but the Sick and Wounded were kept on the bare Decks for forty eight Hours, without Meat, Drink, or dressing, insomuch that Worms bred in their Sores; and even while they were on Shore the Provisions sent to them were not watered but candied with Salt, notwithstanding they had not Water sufficient to quench their Thirst. Nay, after this Misfortune on Shore, *Venables* averred that *Penn* gave Rear Admiral *Blagge* Orders not to furnish them with any more Provisions of what kind soever, so that they eat up all the Horses, Dogs, and Asses, in the Camp, and some of them such things as were in themselves poisonous, of which about forty died; and before the Forces were embarked, Adjutant General *Jackson* was tried by a Court Martial, and not only sentenced to be cashiered, and his Sword broken over his Head, but to do the Duty of a Swabber, in keeping clean the Hospital Ships; a Punishment suitable to his notorious Cowardice. The Fleet and Troops arriving at *Jamaica*, Orders were issued by General *Venables*, that where it should be found any Man attempted to run away, the next Man to him should put him to Death, or that if he failed so to do, he should be liable to be tryed for his Life; and now all the Troops being ready for Service they advanced towards the Fort, which they made themselves Masters of with little Loss; and next Morning when the Sun rose, they began to march towards the Savanah, which was near the Town, when some *Spaniards* came towards them, and desired to treat; but the General refused so to do, unless they would send them a constant Supply of Provisions, then much wanted; which they punctually did, according to the Promise they had made. The Articles agreed on at last were these, viz. 1st. That all Forts, Arms, Ammunitions, and Necessaries for War, and all kinds of Shipping in any Harbour in the Island, with their Furniture, &c. as also all good Wares, Merchandize, &c. should be delivered up to General *Venables*, or whom he should appoint, for the Use of the Protector, and the Commonwealth of *England*. 2dly, That all and every of the Inhabitants of the Island (except some that were particularly named) should have their Lives granted, and as those who inclined to stay had leave so to do, so was it agreed to transport the others to *New Spain*, or some other of the Dominions belonging to the King of *Spain* in *America*, together with their Apparel, Books, and Papers, they providing themselves with Victuals and Necessaries. 3dly, That all Commission Officers, and none others, should be permitted to wear their Rapiers and Poniards. 4thly, All Artificers, and meaner Sort of People, should be permitted to remain on the Island, and to enjoy their Goods, provided they conformed themselves to the Laws which should be established.

By these Means the noble Island of *Jamaica* was subdued, and though the *Spaniards* continued to lurk in some Parts of the Island for several Years afterwards, and once made a bold Attempt to recover the Place; yet Colonel *Doyly* forced them to withdraw, and reduced the whole Island so effectually, that at the Restoration the *Spaniards* yielded it to the Crown of *Great-Britain*, to which it has belonged ever since; and is, beyond Question,

on, the noblest Possession we have in these Parts. The History of this Country, since it came into our Possession is so well known, and would also take up so much room, that we cannot enter into it here, nor indeed is it necessary, because our chief Business is to shew the Value and Importance of our Colonies, with respect to their Mother-Country, which is always best done by describing the Plantation, explaining the Nature of its Product, and giving as good an Account as may be of the Nature of its Trade and the Number of its Inhabitants; and as this appears to be the most material Part, to an *English* Reader, where we cannot insert all that relates to a Colony, we prefer this Part to any other.

22. We have a very large and accurate Account of this noble Country written by a learned, candid and indefatigable Person, who resided long there, I mean Sir *Hans Sloane*, from whom others have taken their Materials, and so must I; as not knowing where to find any so good, or that may be so well depended upon; which Acknowledgment, as it is due to his Merit, I think it but Justice to make, as I hope it will add some Degree of Credit both to his Work and mine.

It is from him, therefore, that we learn most of the Particulars, which follow, and are every way sufficient for our Purpose. *Jamaica* is situated on the *Atlantic Ocean*, between 17 and 18 Degrees North Latitude, and between 76 and 79 Degrees Western Longitude, about twenty Leagues East of *Hispaniola* and as many South of *Cuba*, and upwards of an hundred and fifty Leagues to the Northward of *Porto Bello* and *Carthagena* on the Coast of *Terra Firma*. This Island stretches from East to West one hundred and forty Miles in Length and about sixty in Breadth in the Middle; growing less towards each End; the Form is pretty near oval.

The whole Island has one continued Ridge of Hills running from East to West through the Middle of it, which are generally called the *Blue Mountains*; the Tops of some are higher than others; one of the highest is called *Mont Diabolo*: Other Hills there are on each Side of this Ridge of Mountains, which, however, are much lower. The outward Face of the Earth seems to be different here from what it is in *Europe*, the Valleys being very level, with little or no rising Ground or small Hills, without Rocks or Stones; the mountainous Part is very steep, and furrowed by very deep Channels on the North and South Side of the highest Hills; these Channels are made here by frequent and very violent Rains, which every Day almost fall on the Mountains, and first wearing a small Trough or Course for their Passage, wash away afterwards whatever comes in the way, and make their Channels extraordinary steep. The greatest Part of the high Land of this Island is either Stone or Clay, which resists the Rains, and so is not carried down violently with them into the Plains, as the Mould proper for Tillage and friable Earths are: Hence it is, that in these mountainous Places one shall have very little or none of such Earths, but either a very strong tough Clay or a Honey-Comb, or other Rock, upon which no Earth appears. All the high Land is covered with Woods, some of the Trees very good Timber, tall and strait; and one would wonder how such Trees should grow in such a barren Soil, so thick together among the Rocks; but the Trees send down their fibrous Roots into the Crannies of the Rocks, where here and there they meet with little Receptacles of Rain-Water, which nourish their Roots.

It is a very strange thing to see in how short a Time a Plantation formerly cleared of Trees and Shrubs will commonly grow foul, which arises from two Causes; one, the not stubbing the Roots, whence arises young Sprouts, and the other the Fertility of the Soil. The Settlements and Plantations not only of the *Indians* but the *Spaniards* being quite overgrown with tall Trees, so that there would be no Footsteps left were it not for old Pallisadoes, Building, Orange Walks, &c. which evidently shew Plantations have been there. There are the same Layers of Earth, one over another, in the fruitful Part of the Island, as are to be met with in *Europe*; and the same Difference of Soil appears as in *England*, in digging of Wells, and other Occasions of opening the Ground. Most of the Savanahs, or Plains fit for Pasture, and cleared of Wood, are like our Meadow

Land, lye near the South Side of the Island, where one may ride a great many Miles without meeting the least Ascent; some of these Plains are within Land, incircled with Hills. These Savanahs after Rain are very green and pleasant, but after long Droughts are very much withered, and look yellow and parched.

The chief Ports in the Island are, 1. *Port Royal*, a fine capacious Harbour. 2. *Old Harbour*, which lies seven or eight Miles South-west of *St. Jago*. 3. *Port Morant*, at the East End of the Island; and, 4. *Point Negril*, at the West End of this Island; besides which, are several more on the South and North Sides of the Island; but it is dangerous approaching the Coast, without a Pilot, on account of the Coral Rocks, which almost surround it. There are near an hundred Rivers in *Jamaica*, but none of them navigable; for rising in the Mountains in the Middle of the Island, they precipitate themselves down the Rocks to the North or South, falling into the Sea before they have run many Miles, and carrying down with them frequently great Pieces of Rock and Timber. Yet fresh Water is very scarce in dry Years in the Savanahs distant from Rivers, so that many of their Cattle die with driving to Water. Near the Sea the Well-water, as at *Port Royal*, is brackish; this brackish Water, which is very common in Wells on Sea Shores is not wholesome, but the Cause of Fluxes and other Diseases in Sailors by their drinking it.

Their River Water carries with it much Clay or Earth, and has an odd Taste, which in *St. Jago* gives Occasion to the *Spaniards* to call it *Rio Cobre*, and the *English* to say it is not wholesome, and tastes of Copper; whereas, on the Trial of the Sand, there is no Metal found therein; this River-Water, however, if suffered to settle some Days in Earthen Jars is good; Spring-Water, at a Distance from the Sea, is preferred to River or Pond-Water. There are some Springs as well as Rivers, which putrify their Channels, and stop their Course by a Cement, uniting the Gravel and Sand in their Bottoms. There is a Hot-Bath or Spring near *Port Morant*, in the East Part of the Island, situate in a Wood, which hath been bathed in, and drunk of late Years for the Belly-ach, the common Disease of the Country, with great Success. A great many Salt Springs arise in a level Ground under the Soils in *Cabbage-Tree Bottom*, about a Mile or two distant from the Sea, which united, make what is called the Salt River. Salt is made here in Ponds, into which the Sea or Salt Water comes, and by the Heat of the Sun the Moisture being exhaled, leaves the Salt, which is in great Plenty; at the Salt Ponds about *Old Harbour* the Salt is not perfectly white, or in small Grains, but in large Lumps, and has an Eye of Red in it, as some *Salt Gemmae*, from *Spain*, or what comes from the Island of *Salt Tortuga* near the Main of *America*, which is here reckoned the stronger and better. *Salt Lagunas*, or great Ponds, there are many here, one whereof, *Riottoa Pond*, receives a great deal of Water by a River, which yet has no visible Rivulet or Discharge runs from it; some Rivers in the Mountains rise above and go under ground again in a great many Places. *Rio d'Oro* particularly falls and rises two or three times, and so it is in many others. At *Abraham's* Plantation on the North Side is a River, which has stopt its own Course by letting a Settlement fall, and putrifying its own Bottom. It is very common to have Cataracts or Cascades in Rivers among the Mountains fifty or sixty Feet high.

This Island being seven Degrees within the Tropic, has the Trade-Wind continually there, which is on the South-side of the Island, called the Sea-breeze. It comes about eight o'Clock in the Morning, and increases till twelve in the Day; and then, as the Sun grows lower, it decreases till there is none at four in the Evening. About eight in the Evening begins the Land-breeze, blowing four Leagues into the Sea, and continues increasing till twelve at Night, and decreases again till four. The Sea-breeze is now and then more violent than at other times, as at new or full Moon, and encroaches very much on the Land-Winds; and the *Norths* when they reign, viz. in the Months of *December*, *January*, and *February*, blow over the Ridge of Mountains with Violence, and hinder the Sea-breeze, which blows stronger and longer near the Sea, as at *Port-Royal*, or *Passage-*

Passage-Port, than within Land, as at *St. Jago de la Vega*, or *Spanish-Town*; as on the contrary the Land-Wind blows harder at the Town than at *Passage-Port* or *Port-Royal*. The Land-Wind blowing at Night, and the Sea-Breeze in the Day-time, no Shipping can come into Port except in the Day, nor go out, but at break of Day, or very soon after.

The Norths, as they call them, come in when the Sun is near the Tropic of *Capricorn*, and so farthest off Southerly, and are very cold and unhealthy Winds, more violent in the Night, because it is then they have the additional Force of the Land-Wind. They check the Growth of Canes, and all Vegetables on the North-side, but are hindered by the Ridge of Mountains from shewing much of their Fury on the South, where it seldom rains with this Wind. The South Winds bring the most lasting Rains. The Rains from the South are lasting on the South-side of this Island. As at Sea with the Trade-Winds one meets with Tornadoes, so at Land here sometimes will be a violent West, directly contrary to the Trade, Wind; but this happens seldom, and is soon over. The Sea-Breeze, when it blows hard, is thought to hinder the Rain from coming to the Plains, it for the most part then raining on the Hills. On this account it is that there are in the Mountains many Springs and Rivers, and few or none in the Plains. And this is likewise the Cause why there is never any Want of Water in the Rivers coming from them through the Plains, and likewise that, sometimes, Rivers suffer very great Increase and Inundations in the Plains, when no Rains have fallen in the Places where such Inundations appear.

Earthquakes, as they are very frequent in *Hispaniola*, where they have formerly thrown down the Town of *St. Domingo*; so they are too common also here: The Inhabitants expect one every Year, and some of them think they follow their great Rains: One happened on Sunday the 19th of February, 1688: As if People had raised the Foundation of the Houses, it was felt all over the Island about the same time, some Houses being wrecked, and very near ruined, and very few escaped some Injury; the People were in a very great Consternation, and the Ships in *Port Royal* Harbour felt it: It was observed, that the Ground rose like the Sea, in Waves, as the Earthquake passed along. But this was nothing to the Earthquake which happened at *Port Royal* in the Year 1692, by which that Town was almost swallowed up. Thunder is heard almost every Day in the Mountains, with the Rains there; so that any Persons in the Plains may hear it, as well as see the Rain; it does not so ordinarily accompany those Rains that come from the Sea, although when it does it is very violent. Lightning for the most part precedes Thunder, in this Island, as elsewhere; and, if it be fair Weather, especially in the hottest Seasons, it lightens almost all the Night, first in one Part of the Sky, or Horizon, out of some Clouds, and then out of others opposite to them, as it were answering one another. Frost or Snow are never seen in this hot Climate; but sometimes Hail, and that very large; it comes with very great Norths, which reach with great Violence to the South-side, and throw down every thing before them.

The Dews here are so great within Land, that the Water drops from the Leaves of the Trees in a Morning, as if it had rained; a Man riding in the Night, will find his Cloaths, Hair, &c. very wet in a small time; but there are seldom any Fogs in the Plains or sandy Places near the Sea. The Rains there are violent, and the Drops very large; according to the different Positions of Places, so the Rains are more or less violent, and come at different times, but generally speaking the great rainy Seasons are in May and October; in which Months, at new or full Moon they begin, and continue Day and Night for a whole Fortnight, so that the Earth in all level Places is laid under Water for some Inches, and it becomes loose for some Inches deep, and consequently the Roads are almost impassable. "In the Town of *St. Jago de la Vega*, "in those rainy Seasons, I was forced to ride on Horse-back (says Dr. Sloane) although but from Door to "Door, to visit the Sick." And these Seasons, as they are called, from being fit to plant in, are generally so

VOL. II. NUMB. 87.

over the whole Island, though they are much altered in their Time and Violence of late Years, which arises from the clearing much of the Country of Wood. In the Month of January is likewise expected a Season, or Rain; but this is not so constant and violent as the other two, and probably may come from the violent Norths, at that time passing over the Mountains, with part of their Rains with them.

As to the Produce of the Island of *Jamaica*, it is not easy to give a very clear Account thereof in a narrow Compass; however, I shall do the best I can. In the first place, I shall mention Cocoa, of which there still comes more from this than from any of our Plantations; and as it is known to be a very rich and valuable Commodity, the Reader will probably be pleased with a particular Account of it. Cocoa grows on a Tree in Cods, green, red, and yellow, every Cod having in it three, four, or five Kernels, about the Bigness and Shape of small Chestnuts, which are separate from each other by a Substance like the Pulp of a roasted Apple, moderately sharp and sweet, from which its Nuts are taken when ripe, and by drying cured. The Body of a Cocoa Tree is commonly about four Inches Diameter, five Foot in Height, and above twelve to the Top of the Tree. These Trees are very different; for some shoot up in two or three Bodies; others in one; their Leaves are, many of them, dead and most discoloured, unless on very young Trees; a bearing Tree generally yields from two to eight Pounds of Nuts a Year, and each Cod contains from twenty to thirty Nuts. The Manner of curing them is, to cut them down when ripe, and to lay them to sweat three or four Days in the Cods, which is done by laying them in Heaps; after this the Cods are cut, the Nuts taken out and put into a Trough covered with Plantain Leaves, where they sweat again about sixteen or twenty Days; the Nuts that are on each Cod are knit together by certain Fibres, and have a white kind of Pulp about them, very agreeable to the Palate, as has been hinted before; by their turning and sweating, their little Strings are broken, and their Pulp is imbibed and mingled with the Substance of the Nut: After which they are put to dry three or four Weeks in the Sun, and then they become of a reddish-dark Colour. The Cods grow out of the Body, or great Limbs and Boughs; at the same Place there are Blossoms, and young and ripe Fruit. It is planted first in the Night, and always under Shade; some set them under Cassave, others under Plantain Trees, and some in the Woods. The Spaniards used a certain large shady Plant, called by them *Madre di Cocoa*, the Mother of Cocoa; the English use the others only.

It must always be sheltered from the North-east Winds. The People at *Jamaica* seldom transplant it, only when it falls, as it does often, in open, poor and dry Lands; for this Tree requires to have a flat, moist, low Soil, which makes them be planted commonly by Rivers, and between Mountains. 'Tis an Observation, that it is ill living where there are good Cocoa Walks. In a Year's time, the Plant becomes four Feet high, and has a Leaf six times as big as an old Tree, which, as the Plant grows bigger, falls off, and a lesser comes in its place. The Trees are almost always planted at two Feet Distance; and sometimes at three Years old, where the Ground is good, and the Plant prosperous, it begins to bear a little, and then they cut down all or some of the Shade. The Fruit increases till the tenth or twelfth Year, when the Tree is supposed to be in its Prime. The Root generally shoots out Suckers, they supply the Place of the old Stock when dead, or cut down; unless any ill Quality of the Ground, or Air, kill both.

The Manner of planting them is, in Order, like our Cherry-Gardens: They place a Plantain by every Tree, and when it is grown up it resembles a Cherry Tree; it delights in Shade, and for that Reason has the Plantain set by it. The Cocoa-walks are kept clear from Grass by hoeing and weeding. The Trees begin to bear at three, four, or five Years, and, did they not almost always die before, would come to Perfection at fifteen Years Growth, and last till thirty; which renders them the most profitable Tree in the World, one Acre of them having cleared above two hundred Pounds in a Year;

Y y y

but

but the old Trees planted by the *Spaniards* being gone by Age, and few now thriving, as the *Spanish* Negroes foretold, little or none now is produced worthy the Care and Pains in planting and expecting it. Those Slaves ascribe its not coming to Perfection to a superstitious Cause, many religious Rites being performed at its Planting by the *Spaniards*, which their Slaves were not permitted to see. But 'tis probable that wary Nation, as they removed the Art of making Cochineal, and curing Veneloes, into their inland Provinces, which were the Commodities of the Islands in the *Indians* Time, and forbade the opening any Mines in them, for fear some maritime Nation might be tempted to conquer them; so in transplanting the Cocoa from the *Caraccas* and *Guatamala* on the Continent, they might conceal, wilfully, some Secret in its planting from their Slaves.

There is also more Indico produced in *Jamaica*, than in any other Colony, by reason of the great Quantity of Savanah Land, for it thrives best in sandy Ground. The Seed from whence it is raised is yellow and round, something less than a Tare. The Ground is made light by hoeing; then Trenches are dug like those our Gardeners prepare for Pease, into which the Seed is put about *March*: It grows ripe in eight Weeks Time, and in fresh broken Ground will spring up about three Foot high, but in others to no more than eighteen Inches. The Stalk is full of Leaves of a deep green Colour, and will, from its first sowing, yield many Crops in one Year. When it is ripe it is cut and steeped in Fats twenty-four Hours, then it must be cleared from the first Water and put into proper Cisterns, where, when it has been carefully beaten, it settles about eighteen Hours. In these Cisterns are several Taps, which let the clear Water run out, and the thick is put into Bags of about three Foot long, made commonly of Ozenbrigs, which being hung up all the liquid Part drops away; when it will drop no longer, it is put into Wooden Boxes, three Foot long, fourteen Inches wide, and one and an half deep; these Boxes must be placed in the Sun till it is very hot, and then taken in till the extreme Heat is over; this must be done continually till it is sufficiently dried. In Land that proves proper for Indico, the Labour of one Hand, in a Year's time, will produce between eighty and one hundred Weight, which may amount from twelve to fifteen Pounds to the Planter, if no Accident happen; for Indico, as well as other Commodities in those Parts, is subject to many; the most common are Blasting and Worms, by which it is frequently destroyed.

Pimento is another Natural Production of *Jamaica*, from whence it is called *Jamaica* Pepper, alluding to its Figure and the chief Place of its Growth; the Trees that bear it are generally very tall, and spreading, having a Trunk as thick as one's Thigh. It rises strait, above thirty Foot high, is covered with an extraordinary smooth Skin of a grey Colour; it is branched out on every hand, having the End of its Twigs set with Leaves of several Sizes, the largest being four or five Inches long, and two or three broad, in the Middle, where it is broadest, and whence it decreases to both extremes, ending in a Point smooth, thin, shining, without any Incisures of a deep green Colour, and standing on Foot-Stalks an Inch long; when bruised very odoriferous, and in all things like the Leaves of a Bay Tree. The Ends of the Twigs are branched into Bunches of Flowers, and each Stalk sustaining a Flower bending back, within which Bend are many Stamina of a pale green Colour; to these follows a Bunch of crowned Berries, the Crown being made up of four small Leaves, which are bigger, when ripe, than Juniper Berries: At first, when small, greenish, but when they are ripe, black, smooth, and shining; containing in them a moist, green, aromatic Pulp, two large Seeds separated by a Membrane, each of which is a Hemisphere, and both joined make a spherical Seed.

It grows on all the hilly Part of the Island of *Jamaica*, but chiefly on the North Side; and wherever these Trees grow, they are generally left standing when other Trees are felled; and they are sometimes planted where they never grew, because of the great Profit from the cured

Fruit exported yearly in great Quantities into *Europe*. The *Jamaica* Pepper Tree flowers in *June*, *July*, and *August*, but sooner or later, according to their Situation and different Season for Rains; and after it flowers the Fruit soon ripens: But 'tis to be observed, that in clear open Grounds it is sooner ripe than in thick Woods. There is no great Difficulty in curing or preserving this Fruit for Use; 'tis for the most Part done by the Negroes. They climb the Trees and pull off the Twigs with the unripe green Fruit, and afterwards carefully separate the Fruit from the Twigs and Leaves, which done, they expose them to the Sun, from the Rising to the Setting, for many Days; spreading them thin on Cloths, turning them now and then, and carefully avoiding the Dews, which are there very great. By this means they become a little wrinkled, and from a green, change to a brown Colour, when they are fit for the Market; being of different Sizes, but commonly of the Bigness of black Pepper; something like in Smell and Taste to Cloves, Juniper Berries, Cinnamon and Pepper, or rather having a peculiar mixt Smell, somewhat a kin to all of them, from whence it is called All-spice. The more fragrant and smaller they are, they are accounted the better.

It is deservedly reckoned the best and most temperate, mild and innocent, of all Spices, and fit to come into greater Use, and to gain more Ground than it has of the *East India* Commodities of this kind, almost all of which it far surpasses, by promoting the Digestion of Meat, attenuating tough Humours, moderately heating and strengthening the Stomach, expelling Wind, and doing those friendly Offices to the Bowels, which we expect from Spices.

The wild Cinnamon Tree, commonly called, though falsely, Cortex Winteranus, grows in this Island; its Trunk is about the Bigness of the Pimento Tree, and rises twenty or thirty Foot high, having many Branches and Twigs hanging downwards, making a very lovely Top; the Bark consists of two Parts, one outward and another inward; the outward Bark is as thin as a milled Shilling, of whitish Ash or grey Colour, with some white Spots here and there upon it, and several shallow Furrows of a darker Colour running variously through it, of an aromatic Taste; the inward Bark is much thicker than Cinnamon, being as thick as a milled Crown Piece, smooth, and of a whiter Colour than the outward, of a much more biting and aromatic Taste, something like that of Cloves, and not glutinous like Cinnamon, but dry and crumbling between the Teeth; the Leaves come out near the Ends of the Twigs, without any Order, standing on Foot-Stalks, each of them two Inches in Length, and one in Breadth; near the End where broadest and roughest, being narrow at the Beginning, from whence it augments in Breadth to near its End, of a yellowish green Colour, shining and smooth, without any Incisures about its Edges, and somewhat resembling the Leaves of Bay.

The Ends of the Twigs are branched into Bunches of Flowers, standing somewhat like Umbels, each of which has a Foot-Stalk, on the Top of which is a Calix made up of some little Leaves, in which stand five scarlet or purple Patala, within which is a large Stylix; to these follow so many calyculated Berries of the Bigness of a large Pea, roughish, green, and containing, within a mucilaginous pale green thin Pulp, four black shining Seeds of an irregular Figure: All the Parts of this Tree, when fresh, are very hot, aromatic, and biting to the Taste, something like Cloves, which is so troublesome, as sometimes to need the Remedy of fair Water. It grows in the Savanah Woods, very frequently on each Side the Road, between *Passage Fort* and the Town of *St Jago de la Vega*. The Bark of the Tree is what is chiefly in Use, both in the *English* Plantations, between the Tropics in the *West Indies*, and in *Europe*, and is without any Difficulty cured, by only cutting off the Bark, and letting it dry in the Shade. The ordinary Sort of People in the *West Indies* use it instead of all other Spices, being thought very good to consume the immoderate Humidity of the Stomach, to help Digestion, and expel Wind, &c. Rum looses its disagreeable Smell if mixed with this Bark.

The

The true Cortex Winteranus, for which the Drug-gifts sell this wild Cinnamon, was brought by Captain *Winter*, who accompanied Sir *Francis Drake* in his Voyage round the World, from the Streights of *Magellan*.

There is plenty of Cotton in *Jamaica*, and it is finer than that in the *Caribbee Islands*. The Tobacco that was planted there was better than at *Barbadoes*; but there's so little it deserves not the Name of a Commodity. Very good tanned Leather is made there: The Tanners have three Barks to tann with, Mangrove, Olive Barks, and another. They tann better than in *England*; and in six Weeks the Leather is ready to work into Shoes. There's abundance of Dyers Woods, as Fustick, Red-wood, Logwood, and others; with several Sorts of Sweet-woods. The Island abounds in Drugs and medicinal Herbs, as Guaiacum, China, Safaparilla, Cassia, Tamarinds, Venilloes, many sorts of Mistletoe; as also in salutary Gums and Roots; the Plant of which Cochineal is made, grows in *Jamaica*; and yet the Inhabitants, for want of Knowledge how to cure it, make no Advantage of it; besides the East Wind blasts it so, that it seldom or never comes to Maturity.

It is not doubted but that there are Copper Mines in the Island; and the *Spaniards* say the Bells of the great Church at *St. Jago* were made of *Jamaica* Metal; 'tis supposed there are Silver Mines in it, as well as at *Cuba*, and on the Continent; and there is a Place in the Mountains of *Port Royal*, or *Caguag*, where it is reported the *Spaniards* dug Silver, but the *English* have not been so happy as to find it. The *Spaniards* also found Ambergrease on the Coast, but the *English* have not often had that good Fortune: Yet some Years ago an ignorant Fellow found 180 Pound Weight of Ambergrease cast upon the Shore, at a Place called *Ambergrease Point*, where the *Spaniards* came usually once a Year to look for it. This vast Quantity was divided into two Parts, supposed by rolling and tumbling in the Sea; some say it is produced from a Creature, as Honey and Silk; and Mr. *Tredway*, who viewed this Piece, writes, he saw, in sundry Places in this Body, the Beak, Wings, and Part of the Body of the Creature, which he preserved for some Time; he was also told by a Man, that he had seen the Creature alive, and believed they swarmed as Bees on the Sea Shore, or in the Sea; others say it is the Excrement of the Whale, and others, that it issues out of the Root of a Tree.

But, after all, it is the Sugar Cane that is the Glory of *Jamaica*, by which the Inhabitants have acquired such immense Riches. It is generally said, that the Sugar from *St. Christopher's*, is the best in the *Leeward Islands*; but, I think, it is agreed on all Hands, that the Sugar made in *Jamaica* exceeds that of all our Plantations, though it is made there with much greater Ease, since it cures faster in ten Days at *Jamaica* than in six Months at *Barbadoes*. There were in the Year 1670 upwards of three-score Mills in *Jamaica*, which were computed to make about two Millions of Pounds Weight of Sugar; but some Writers tell us, they make ten Times as much at present; whether that Computation be right or not, is impossible for me to decide; but this is certain, that there is Ground enough unoccupied in that Country to make much more, since it is an hundred and forty Miles long and sixty broad; and it contains, according to a moderate Computation, four Millions of Acres, of which, though there may be about one-fourth, in which *English* Subjects have Property; yet, it is certain, that not above a fourth of that fourth is actually planted, and a great deal of this is employed to other Purposes, than that of raising Sugar. It is impossible to say precisely what Quantity may be made here, because Seasons differ, and other Accidents intervene; some have thought they did not rise beyond the Truth, in affirming, that it produces one hundred thousand Hogsheads, which, though it appears a most prodigious Quantity, yet there are many Circumstances that concur to render it credible. As for the Number of People in this Island various Computations have been made; but according to the best Accounts I have been able to gain, there may be, at this Time, seventy thousand white People therein, and one hundred and twenty thousand Negroes.

We may from hence judge of the almost inexpressible Advantages which this Island affords to *Great Britain*; for, as all our Histories of *Jamaica*, and almost every Voyage thither, that has been printed, speaks largely of the Luxury and Expence of all Degrees of People there, which is a plain Proof of their Wealth and vast Acquisitions; so we may rest satisfied, that whatever Shew they may make, whatever Appearance there may be of Magnificence there; yet the real Produce of all their Labour, and of all their Commerce, comes over here to *Britain*, and maintains and enriches the industrious Part of our People; so that there can be nothing more absurd, or unreasonable, than to grudge or envy the People settled there, the great Fortunes they acquire and possess, or to repine at the Pomp and Splendor in which they live; because, whatever it may be in Appearance, it is perhaps an indifferent Reward for their dwelling at such a Distance from Home, and for the Hazards and Labours they run through to acquire such Fortunes, but this will appear much more clearly if we advert a little to the Situation of *Jamaica*, and consider the vast Benefits that accrue from thence, in all Times, and under all Circumstances, of War as well as Peace.

As we are at present in the former Situation, we will treat first of that. There is constantly in time of War a considerable Naval Force kept here, and though this be attended with a great Expence to the *British* Nation, yet it certainly is, or at least ought to be, a great Comfort to us, that our Money is spent with our Countrymen, that it increases the Value of their Plantations, and which is still more to our Purpose, that, sooner or later, all that is spent and circulated there, by some Channel or other returns hither, so that at the long run the Nation loses nothing by the vast Charge she is at in maintaining Fleets upon this Coast. We ought likewise to reflect, that in a Time of War there are many Prizes taken and carried into *Jamaica*, which makes an unusual and almost incredible Plenty of Silver, and is the true Cause of the Dearness and high Price of Necessaries in that Country, all which also in Time comes over hither; so that when we hear of vast Estates raised there in a short Space of Time, it ought to afford us the highest Satisfaction; because, those who make those large Fortunes, or their immediate Descendants, come over hither, and either vest their Money in our Funds or purchase Lands here. Thus a State of War, which implies a Suspension of Trade, produces few of the Inconveniencies that usually attend such a Suspension; because, in *Jamaica*, the very Consequences of War become a kind of Trade, and the Wealth arising from them takes the same Course, and runs in the very individual Channels that any other Trade would do, that is, they finally enrich and tend to the Benefit of the Mother-Country.

But, in time of Peace, besides what we draw from *Jamaica*, considered barely in the light of a Sugar Plantation, we are to consider likewise whatever accrues to the Inhabitants from their Intercourse and Dealings with other People, since whatever they gain is for us; and therefore, it may not, in this Place, be improper to say something of the Trade carried on by the *English* at *Jamaica* with the *Spaniards* on the Continent, which is thus managed: The Merchant or Master of the *English* Ship bound for this Voyage being furnished with a proper Cargo of dry Goods and Negroes, commonly makes first for the Coast near the Harbour of *Porto Bello*; and in War at the *Grout*, within *Monkey-Key*, a very good Harbour, within four Miles of the Town; from thence it is usual for the Merchant or Master of the Ship to send one who can speak *Spanish*, as many of these Traders do to the Town, to give Notice of her Arrival to the Dealers, who appoint the Time and Place for the *Spaniards* Canoe to attend them; they come accordingly, and having purchased as many Negroes and as much Dry Goods as they think fit, they return to the Town, fetch the Money, bring it aboard, and take the Goods. Here such a Ship lies sometimes five or six Weeks trading with the *Spaniards*; for after the first Market is pretty well over, the Dealers, who have soon Information of her being on the Coast, come from *Panama* over the *Isthmus* to trade, travelling like Peasants, with Mules bearing their

their Silver in Jars ; and if any of the King's Officers meet them nothing appears but Meal, which they pretend to be carrying to *Porto Bello* ; but for the most part they travel through Woods and Bye-Ways for fear of being discovered by those Officers. When they have bought what Negroes and Goods their Money will purchase, which they sell again up in the Country, and get very well by it ; the Goods are made up in little Packs fit for one Man to carry, and the *English* supply them with as much Provisions as will serve them Home, cross the *Isthmus* to the *South-Sea*, for they come very far off.

A single familiar Instance will make all this very plain. An *English* Ship lying between *Chagre* and *Porto Novo*, a Signal was given from the *Castle of Chagre*, and she anchored two Miles from it. The *Spaniards* came to her, and one Merchant bought seventy Negroes and a good Quantity of Dry Goods, amounting to three or four thousand Pounds, which was brought on Mules to the Water-side, part Gold and part Silver. From the *Grout* the *English* Ship sailed to the *Brew* near *Carthagena*, where she lay to trade with the Merchants of that City, from which it is about eight Miles distant. The People of the Island *Brew* gave their Merchants Notice of her Arrival, and they came and traded as the others did at the *Grout* ; this trading Ship in about two Months disposed of one hundred and fifty Negroes and a good Cargo of Dry Goods, by which, probably, the Proprietors cleared two thousand Pounds more than would have been got in any other Market ; a plain Proof of the very great Advantage of this Trade between *Jamaica* and *New Spain*, of which we see the *Spaniards* are so fond, that they run as great Hazards in buying the Merchandizes as the *English* do in selling it to them.

There is likewise in time of Peace a great deal of Money brought into *Jamaica* by the *Assiento* Trade, or Sale of Negroes, granted to us by the *Spaniards* in the Treaty of *Utrecht*, which, whatever it may be in other Respects, has certainly proved a very beneficial Trade to that Island. I have indeed heard some very able and intelligent Persons intimate, that if instead of erecting a new Company for the Management of this Trade, it had been put into the Hands of one already erected, I mean the *Royal African Company*, it had preserved that once famous Corporation from falling into its present melancholy Condition, as well as secured much larger Profits to the Nation, which are Things that deserve to be considered before we set in earnest about any Negotiation with *Spain*, that we may indemnify ourselves from the heavy Losses and vast Expences of this War by the Fruits of a solid and well regulated Peace ; which, without doubt, may be as easily obtained as one of a looser and more precarious Nature ; it being the Interest of the *Spaniards* as well as of ourselves, to have all Matters so adjusted, as to prevent not only Wars, but Disputes for the future.

Before I quit this Subject I find it absolutely necessary to take Notice of another Branch of Trade carried on from *Jamaica*, which has been made the Subject of much Debate ; I mean the cutting of Logwood in the Bay of *Campeachy*. This Matter came to be considered with the utmost Care and Circumspection by the Board of Trade and Plantations in the Year 1717, who solemnly reported that we had an undoubted Right to that Trade, in which the Subjects of the Crown of *England* had been maintained and supported by former Kings, his Majesty's Royal Predecessors. They observe, that Logwood is the Product of *Jucatan*, a Peninsula that extends itself an hundred Leagues into the North Sea, on each Side whereof are the Bays of *Campeachy* and *Honduras*, where the Wood is chiefly cut by the *English*.

The *Spaniards* are possessed only of the Town of *Campeachy*, and two more small Places in this part of *America*, and that the rest of *Jucatan* was an uninhabited Desert, till our Logwood Cutters settled at *Cape Catoch*, the North East Promontory of *Jucatan*, or at *Trist*, or the *Laguna de Terminos* in the Bay of *Campeachy*, before, or in, the Year 1667, when a Treaty of Peace was concluded between *Great Britain* and *Spain* ; and thereupon the Privateers of *Jamaica*, who used to disturb the *Spanish* Trade, being obliged to quit that way of Life, became

Logwood Cutters, and settled with others of their Countrymen at *Trist*, and the Lake de *Terminos* aforesaid, and great Quantities of Logwood were afterwards imported from thence to *Old* and *New England*.

They observed that Sir *Thomas Lynch*, Governor of *Jamaica*, under whose Direction that Trade was carried on, in the Year 1671, gave his Majesty King *Charles II.* the following Reasons for his encouraging this Trade. 1st. That the *English* had then used it for divers Years. 2dly, That the Logwood was cut in desolate and uninhabited Places. 3dly, That it was a Right confirmed by Treaty with the *Spaniards*. 4thly, That thereby we excluded the *French* and *Dutch* from that Trade. 5thly, That the *Spaniards* had not then made any Complaint of it. 6thly, That this Employment made the reducing our Privateers, who used to commit Hostilities against the *Spaniards*, more easy. Lastly, that this Trade employed an hundred sail of Ships annually, and encreased his Majesty's Customs, and the Trade of the Nation, more than any of his *American* Colonies.

Sir *Thomas Modyford*, the succeeding Governor of *Jamaica*, informed the Lords of the Privy Council, in the Year 1672, that the *English* Logwood Cutters had used that Trade for three Years, and that they had planted Corn, and built Houses, for their Convenience ; and though they frequently hunted Deer in the Country, they had never seen a single *Spaniard*, or any other Man in that Part of the Country, in all the Time they had been there ; and concludes, that their felling of Wood, building of Houses, and clearing and planting the Ground, was such a Possession, as in the *West-Indies* gave them an undoubted Right to the Countries they thus occupied. And Sir *Thomas*, to justify his Conduct in encouraging this Trade, in the Year 1672 (when the *Spaniards* first complained of it) sent home the Copies of several Depositions he had taken from the Masters of Ships, and others concerned in the Logwood Trade, with a Proclamation he had issued for the Regulation and Security thereof, as a Confirmation of what he had asserted ; and the Lords of the Council thereupon let the Governor know that they approved what he had done.

The Lords Commissioners of Trade further observed, that there is a Clause in the aforesaid *American* Treaty, which provides that the King of *Great Britain* shall keep and possess, in full Right of Sovereignty and Propriety, all Places situate in the *West Indies*, or any Part of *America*, which he and his Subjects were then in Possession of ; and that they actually were then, and had been for several Years, in Possession of *Trist* and the Lake de *Terminos*, and several other Places in the Province of *Jucatan*, which the *Spaniards* began to set up a Title to about this Time, notwithstanding they enjoyed the full Benefit of what *Great Britain* stipulated on her Part, viz. 1st. The securing the Trade of the *Spanish West Indies* to them ; a Point which had never before been yielded. 2dly, The obliging the Privateers to cease their Depredations, whereby the *Spanish* Trade had been miserably harrassed ; and this had been effected chiefly by the Care of his Majesty's Governors, and the employing those People in the Logwood Trade.

That in 1680 the *Spaniards* proceeded in a hostile Manner to dispossess the *English* Logwood Cutters of their Settlements of *Trist*, &c. and even of the Island of *Providence*, a *British* Plantation to which they had no Pretence ; but these were soon repossessed by his Majesty's Subjects, and the Logwood Trade, in 1682, was greater than ever, and was maintained and carried on by the *English*, till the Treaty of *Utrecht* 1713 ; when the Adjustment and Settlement thereof came again under Consideration ; and it was stipulated that only such Places should be restored to the *Spaniards*, as had been taken during the preceding War (in the Reign of Queen *Anne*) among which, *Trist* could not be reckoned one, because the *English* were in Possession of it many Years before that War commenced, and, indeed, had been in the actual Possession of it from 1699 to 1713, except for two or three Months in the Year 1689, when the *Spaniards* surprized and expelled them by Force, as related above.

They farther represented it by a Clause in the Treaty of

of Commerce, concluded in November 1713. The *American Treaty* of 1670 is confirmed and ratified; and it was thereby declared that this should be understood to be without Prejudice to any Liberty or Power, which the Subjects of *Great Britain* enjoyed before, either through Right, Sufferance, or Indulgence; and the *English* having long enjoyed the Liberty of cutting Logwood, whither through Right, Sufferance, or Indulgence, they are by this Treaty entitled to the same, in as plain and express Words as can be imagined. Then the Lords Commissioners proceeded to shew the Importance of the Logwood Trade to *Great Britain*, by the following Account of what Logwood had been imported since the late War.

	Tons.	C.	Q.	lb.
In 1713	2189	15	3	22
In 1714	4848	14	3	24
In 1715	5863	12	1	14
In 1716	2032	17	2	0
	14935	0	3	4

This is, *communibus annis*, 3741 Tons, which cannot be computed at less than 60,000 *l. per Annum*, though the Price is already reduced from 40 *l.* to 16 *l.* per Ton. And before your Majesty's Subjects were settled there, it was worth 100 *l.* a Ton. Nor is this Trade less necessary than beneficial to your Majesty's Dominions, by Reason of the great Encouragement it gives to our Seamen and Shipping, which at all times require a particular Attention, but now especially; when it is daily observed that very many *British* Mariners, either through defect of the Laws, or for want of Employment at home, or in hopes of greater Advantage abroad, enter themselves into foreign Service.

Upon the whole, they gave it as their Opinion, that some Time before, and long after, the Year 1670, the Subjects of *England* were possessed of, and quietly enjoyed, Part of the Country of *Jucatan*, uninhabited by the *Spaniards*, and consequently the Right of *British* Subjects, to cut Logwood, and even to settle in that Country, was not only certain and apparent, but was also settled and confirmed by Treaty.

This Representation is certainly more than sufficient to convince us, here at home, of our being well intitled to this Trade; and therefore it is a Point that deserves to be maturely reflected upon, before any new Negotiation for Peace, with the Crown of *Spain*, is commenced; for, without doubt, Care ought to be taken that our Right, in this Respect, be acknowledged and admitted, in such express Terms, that hereafter no Disputes may arise about it, or afford Pretences for fitting out Guarda Costas to impede and disturb our Navigation. We know, and have heard, what high and loud Complaints were made against the Ministry in the Reign of Queen *Anne*, for not obliging the *French* to restore *Cape Breton*, and for not compelling the *Spaniards* to make such Concessions in favour of our Trade, as were necessary for the carrying it on with Safety and Advantage. But at present *Cape Breton* is ours, and the Superiority of our naval Force in the *West-Indies* is so great, that it would be, certainly, an unpardonable Omission, should there be any thing left to object on any of these Heads for the future. The capital Trade of this Nation, at present, that which employs most Ships, most Seamen, and most Manufactures, is our Commerce to our Plantations; and therefore the securing, encouraging, and improving this Commerce, ought to be the principal Object of our Statesmen; who, as they often lay heavy Burdens upon the Subjects, to carry their Projects into Execution, so they are in Interest, and in Conscience, bound to pay the utmost Attention to those Points, which regard the filling again the Purfes of those to whom they have constant Recourse for the public Service.

23. We have now gone through this Section, and have shewn when, how, and with what Views our Settlements, within this Period of Time, were made. It is easy to perceive from thence, what prodigious Advantages have been derived from them to the People of this

Kingdom. If we consider that at the Death of Queen *Elizabeth*, we had not a single Cottage erected in *America*; and that at the Time of the Restoration of King *Charles II.* we had settled from *Nova Scotia* to the utmost Bounds of *Virginia*, besides peopling many of the Islands, it must appear an amazing thing. The vast Change in our Circumstances, in the Space of sixty Years; the mighty Augmentation of our Shipping; the vast Increase of our Coin, and all the other certain and indubitable Signs of an extended and profitable Commerce, sufficiently prove the Value and Importance of our Plantations; for I make no scruple of affirming that we owed them all to these. To say the Truth, the civil War, which was so ruinous and fatal to these Kingdoms, was, by the kind Disposition of Providence, highly serviceable to the Plantations. In the first Ferment of the Nation, we have seen that *New England* was planted and peopled as it were at once; and in succeeding times, when the Constitution was overturned, and the loyal Nobility and Gentry, who were deprived of their Estates, by those the Fortune of War had made their Masters, and had not even the Liberty of starving here in Peace, *Virginia* and *Barbadoes* were their Refuge: There the Wicked ceased from troubling, and there the Weary were at rest. The Spirit and Vigour with which they set about improving the Places of their Exile, soon changed them into Habitations of Delight, and where they looked only for a quiet and a bare Subsistence, the Blessing of God upon their Industry produced them vast Estates.

We may safely venture to affirm, that a little after the Restoration the Sugar Colonies rose to their greatest Height, *Jamaica* only excepted. Since then the Tobacco Colonies have encreased greatly, and so have the Bread Colonies likewise; for the Reader is to observe, that *Jamaica*, *Barbadoes*, and most of the Leeward Islands, are furnished with Provisions from the northern Colonies, and with Garden Stuff from the Islands of *Bermudas*. But it has so fallen out, that though these Colonies have such a natural Dependence upon each other, yet Complaints have arisen, and we have seen both Sides appealing to the *British* Parliament, the one for Relief, and the other for Protection. The Occasion of these Disputes was this:

A Bill was brought into the House of Commons on the Petition of the Merchants and Planters concerned in the Sugar Colonies in the Year 1731, for securing and encouraging the Trade of the said Colonies. The Intent whereof was to enable them to supply foreign Markets, with Sugar, as cheap as the *French*, which they suggested might be done by prohibiting the Exportation of Horses, Provisions, and Lumber, from our Northern Colonies on the Continent of *America*, to the *French* and *Dutch* Plantations, and by prohibiting the Importation of all foreign Sugar, Rum, and Molasses, to our Northern Colonies; for the permitting of this, they suggested, was giving the *French* and *Dutch*, at least, twenty-five *per Cent*, upon the whole Produce of their Sugar Colonies; and thereby enabled them to afford their Sugar, at foreign Markets, cheaper than our Sugar Colonies can. It was finding them Plantation Necessaries, as well as Money to pay for them; that is, the foreign Colonies paid our northern Colonies for their Horses, Provisions, and Lumber, with Molasses and Rum, which otherwise the *French* must throw away as they did formerly. To induce the Parliament to pass this Bill, the Sugar Colonies endeavoured to shew the vast Importance those Colonies are of to *Great Britain*, observing that they produced, at an Average, eighty-five thousand Hogsheads of Sugar annually at least, which, at ten Pound a Hogshead, amounted to eight hundred and fifty thousand Pounds. This Sum, or much the greatest Part of it, as they affirm, is spent here by the several Proprietors of Estates in the *West-Indies*, who live in *England*, or is sent out annually in the Manufactures of *Great Britain*, either directly to the Sugar Colonies, or to the Coast of *Guinea*, to purchase Negroes for the Use of those Colonies.

Besides this neat Produce of Sugar, another vast Advantage arising from the Sugar Colony Trade, is the large Number of Ships and Seamen employed and maintained in the Course of our Commerce with them; and they

calculate that there are three hundred fail of Ships sent from *Great Britain* (not to mention those from other Places) every Year, to our Sugar Colonies, which are navigated by about five thousand five hundred Seamen; and that the Freight from the Sugars, brought hither, amounts to an hundred and seventy thousand Pounds a Year; and the Duties, Commissions, &c. to little less than two hundred thousand Pounds more, which upon the whole is a good one Million two hundred thousand Pounds a Year Profit and Advantage to *Great Britain*. But besides this considerable Article of Sugar, they observe that these Islands produce great Quantities of Cotton, Ginger, Indico, Aloes, &c. which are all brought to *Great Britain*, where the whole Profit of all our Plantation Product, does and must centre. They have been equal, they insist, to the Mines of the *Spanish West-Indies*, and have contributed, in a particular Manner, to the Trade, Navigation, and Wealth of this Kingdom.

But at present they were in a very bad and languishing Condition: Their Duties high, their Planters poor, their Soil worn out, and their Fortifications destroyed. They observe farther, that the *French* Sugar Islands are much larger, more beautiful, better inhabited, pay less Duties, and have greater Encouragement from *France* than ours have from *Great Britain*. And that if our Sugar Islands, for want of being put in a posture of Defence, should either be taken, as some have been, or moulder, and come to ruin, it would be one of the greatest Blows this Kingdom ever received. It would then lose the Benefit of all their Product imported hither; it would lose the Exports of our Woollen and other Manufactures thither, to the amount of several hundred thousand Pounds a Year; it would lose, in a great Measure, the Trade to *Guinea*; it would lose the employing and maintaining of many hundred *British* Ships, and many thousand *British* Seamen every Year; and lastly, it would lose one of the most considerable and main Branches of our Funds, the Deficiency of which must be made good, and the Weight and Burthen fall on our Lands here at home.

To this Bill, however, many Objections were made by such as were employed here in behalf of the Northern Colonies, and amongst them the most material were these: 1st, That such a Prohibition as was desired by the Bill, would put the *French* upon supplying themselves with Lumber from their own Settlements, and the *British* Colonies on the Continent would thereby lose the Trade in which many Ships and Seamen were employed. 2dly, That the *British* Colonies could not take off their Lumber, or supply them with Rum for their Fisheries, their Trade with the *Indians*, and what they wanted in the Harvest-time. 3dly, That the restraining the Northern Colonies from disposing of their Horses, Provisions, and Lumber to the *French* and *Hollanders*, might draw them into Employments prejudicial to *Great Britain*. 4thly, The *French* would distil their Molosses themselves, and supply the Fisheries with Rum, if the Northern Colonies did not. 5thly, If the Northern Colonies did not take off the *French* Sugars, they would carry them to Market themselves. 6thly, If the Importation of *French* and *Dutch* Rum and Molosses into *New England* was prohibited, and they could go to no other Market for Rum, or sell their Lumber and Provisions any where else, the *English* Sugar Colonies, like other Monopolies, would exact an unreasonable Price for their Rum, and beat down the Price of Lumber, and other Goods, as low as they saw fit. 7thly, That the *French* and *Dutch* Colonies furnish the Northern Colonies with Money, which they bring to *Great Britain* and lay out in our Manufactures. 8thly, That the Luxury and Extravagance of the Sugar Colonies was the Occasion of this Decline. And 9thly, That the Trade of the Sugar Colonies, was still vastly increasing; instancing in *Barbadoes*, which, in the Year 1730, imported twenty two thousand seven hundred and sixty-nine Hogheads of Sugar into *England*, valued at 340,396 Pounds; and that this was the Neat Profit, they insisted, because it was admitted that the Rum and Molosses of Sugar Plantations bear the Charges of them: The Sugar Planters therefore have no Reason to complain, when

so small an Island as *Barbadoes* produced so vast a Neat Profit.

As there is nothing can contribute more to make this Subject thoroughly understood, and to point out effectually what the Inhabitants of the Colonies take to be their respective Interests, I think it will be necessary to add the Replies or Solutions, given by the Friends of the Sugar Colonies to these Objections. As to the first, That the *French*, if not supplied from the Northern Colonies, would furnish their own Settlements with Lumber, they said, That the *French* could not be supplied with Lumber from their own Settlements; or, if they could, it must be at great Charge and Expence, since the only Places they can pretend to be supplied from, are *Cape Breton* and *Quebec*. Some indeed have gone so far, and been so extravagant, as to imagine that the *French* Islands may be supplied with Lumber from the Bay of *Apalachi*, or the Settlement of *Mississippi*: But we must consider that great Snows are necessary for drawing down Trees to the Sides of Rivers; and likewise (upon the Snow's melting) for floating them down to the Mills; and, if they had Snows, these Countries do not produce any Quantity of such kind of Wood as is proper to work into Lumber; nor have they any such Mills, which are expensive to build, and the Labour and Time required to manufacture such Trees into Lumber, would make it extremely dear to the *French*; besides the Navigation to and from such Places, to *Martinico*, and the *French* Islands so much to Windward, would be so difficult and long for such Vessels as are proper to carry Lumber, by reason of the Calms, contrary Winds, and strong Currents against them, that such a Project would probably end in the Ruin of the People concerned in it; which would put an End to such Endeavours of the *French*.

As to *Cape Breton*, though it has the Advantage of Snows, yet it has no other Conveniency; it produces little Wood; they have few Rivers, and those longer frozen, and sooner dried, than in *New England*: It is thinly inhabited, and is a small, and, in that Light, but an incon siderable Island, commodious only for fishing. And as for *Quebec*, allowing all the Advantages the other Places want, and all that our Northern Colonies have, with Respect to Wood, and Mills; yet the Navigation of the River *St. Laurence* (which is practicable only a few Months in the Year) is so very long and dangerous, that all the Lumber from thence must be exceeding dear; and though some may think that these Difficulties in time may be removed, and the Navigation of the River become both safe and easy, it may be wished the *French* had no Supply of Lumber till these Difficulties were removed; for those Difficulties must always continue from the Nature of the Coast, the Rocks, Sholes, and Sands, in that River, and from the Inclemency of the Air, and other natural Causes; which will make that Navigation for ever unsafe. If then the *French* cannot be supplied with Lumber, or at least not upon any reasonable Terms, How much will this give our Sugar Colonies an Advantage over the *French*? But let us suppose the utmost and worst that can be: That they can be supplied with Lumber from their own Settlements, yet, What must the Lumber be bought with? Not with Rum and Molosses, but with Money: So that if this Prohibition of foreign Rum and Molosses takes place, so much will be lost to the *French* Plantations, because they can have no Vent for their Rum, as interfering with Brandy, the Product of *France*.

But what stronger Argument can we have, that the Trade carried on by some of the Northern Colonies is a prejudicial Trade, than the Permission of it by the *French* themselves? They understand the whole Compass of Trade perfectly well, and steadily pursue their Interests: They know that their Colonies either cannot be supplied at all with Horses, Lumber, and other Necessaries, or else they must purchase them at a great Expence: They find they have them for Rum and Molosses, which is all clear Gain to them; that they save at least twenty-five per Cent. in having Lumber and Horses so conveniently from the Northern Colonies; and get twenty-five per Cent. by their Rum and Molosses, which else would be all

Loss to them; and what is more, they plainly perceive that this Trade must shortly and effectually ruin and destroy our Sugar Plantations, by enhancing the Price of our Plantation Necessaries, and stopping the Product of our Manufacture; however specious therefore the Argument may be in favour of this Trade, nothing less than a prohibition of Horses and Lumber, as well as of foreign Sugar, Rum, and Molasses, will be of any real Service or Benefit to the Sugar Colonies.

For if you allow them to carry Lumber, what must they have in Exchange for it but Sugar? And how will it be possible, on so long a Coast as seven or eight hundred Miles, as that of those northern Colonies, where there are so many Bays, Creeks, and Rivers, and so few Officers, to prevent the Running of these Goods, let your Penalties be never so strict. But it may be said, perhaps, that *France* will allow them to carry their Rum to their own Settlements on the Continent; but that is altogether as improbable and as unlikely, as that we should suffer *Ireland* to supply our Plantations with woollen Manufactures. Those Colonies there are abundantly supplied with Brandy from *France*, very cheap, and which is a Spirit much better liked, and what they have been used to.

As to the second Objection, that the *English* Sugar Colonies cannot take off the Lumber they have, or supply them with the Rum they want, they answered, if the Trade and Navigation from the *British* Colonies on the Continent, to the foreign Colonies, be prejudicial to the Sugar Colonies, and to *Great Britain*, and if the restraining it will effectually distress the *French* in the Sugar Trade, it ought to be prohibited, though some few Traders shall suffer Hardships and Inconvenience by it. As to disposing of their Lumber, the Sugar Colonies have more Reason to apprehend that they shall find a Want of it, than that the *New England* People will have much upon their Hands; at least, if what they say be true, and founded in Fact. For we have for many Years been alarmed with Scarcity of Lumber in *New England*, and we have felt the Effects of it in the advanced Price we have paid for it, for some Time, upon this Pretence. Those who were principally concerned there, in the Lumber Trade, complained last Year, 1730, of the great Want of Oak and Firr near the Rivers on which their Saw-Mills stand; and as they are restrained by several Acts of Parliament from cutting the King's Trees, they will hardly be able to supply us long with Lumber, of private Property, at any reasonable Rate, which deserves Consideration. The other Part of this Objection, That our Sugar Colonies are not able to supply them with a sufficient Quantity of Rum, is as groundless as the former. A Gentleman of Distinction, of *St. Christopher's*, informed the Committee, that himself made two thousand Gallons of Rum a Year, but that if he had Encouragement he could make twenty thousand Gallons; and the other Gentlemen of *St. Christopher's*, *Nevis*, and *Montserrat*, who made little or no Rum now, could make a very great Quantity, if there was a Demand for it. Therefore the Question that was asked by a *New England* Gentleman, whether we have any Rum left on our Hands at the End of the Year, is not at all to the Purpose, though at first Sight it seems so.

The Distillers in *New England* find this Trade in Spirits, made of foreign Molasses, very profitable, and for that Reason raise Objections which have nothing in them, in order to make *Boston* the great Staple of Rum. For should the Prohibition take Place on foreign Rum and Molasses, then our Sugar Colonies might send again their Rum to *Virginia*, *Maryland*, *Carolina*, and *Newfoundland*, as they did before, and save the Lives of many hundred of poor Wretches, who, if this Trade be not stopped, will probably be destroyed by this pernicious Spirit, made of foreign Molasses, which is very unwholesome. If we should admit, for Argument's sake, that the *French* Sugar Colonies, and *Surinam* (belonging to the *Dutch*) do take off one half of the *New England* Lumber (which by the Way is more than can be proved) the Deficiency then of the Demand of Lumber, will be one Moiety. Now if it can be proved that the *British* Sugar Colonies, upon a proper Encouragement,

might be improved sufficiently to make as much more Rum and Sugar as they now do, it will follow that the *British* Sugar Colonies may take off all the *New England* Lumber.

Barbadoes is allowed to be at its Perfection, and perhaps incapable of being farther improved, so as to increase its annual Product of Sugar and Rum. *Antigua* is capable of farther Improvements, and may enlarge its Product of Sugar, according to the best Computations, at least, one fifth Part *per annum*; as to the Product of Rum there, it may certainly be enlarged near one half upon proper Encouragement, for the Rum it now makes is not quite one half of its Product of Sugar: That is to say, if *Antigua* makes twenty thousand Hogsheads of Sugar *per annum*, its Product of Rum is not quite ten thousand. But it is evident from the Experience of *Barbadoes*, that out of twenty thousand Hogsheads of Sugar, there ought to be made near fourteen thousand Hogsheads of Rum. And this Increase, both of Sugar and Rum, would certainly be made if there was proper Encouragement. *Montserrat*, *Nevis*, and *St. Christopher's*, for want of Encouragement, do not make one Hogshead of Rum for three Hogsheads of Sugar. Whereas it is evident, by the Experience of *Barbadoes*, that three Hogsheads of Sugar ought to produce two Hogsheads of Rum; consequently the Product of Rum in these three Islands might be, upon proper Encouragement, increased to as much more as it now is. Add to this the Improvement to be made in those Islands, by which the Quantity of Sugar would be increased. It will follow still farther, that the Quantity of Rum which those Islands are capable of making, would be as much more as they now make, and consequently the Demand for Lumber would be proportionable. *Jamaica*, the largest of all the *British* Sugar Colonies, is yet but in its Infancy; having now as much Land uncultivated, as would produce above three times its present Product if cultivated, as it certainly would be upon proper Encouragement.

But farther it appeared by the Custom-house Books, that all the *British* Sugar Colonies do produce about one hundred thousand Hogsheads of Sugar *per annum*; and they ought, in proportion, to make about seventy thousand Hogsheads of Rum; a Quantity more than sufficient to supply the *New England* Fishery, and *Indian* Trade, even according to their own Computation. But the present Product of the Sugar Colonies, under all the incumbent Disadvantages, is more than they of *New-England* can prove to be necessary to both those Trades; nay, on the contrary, they will have a Proof sooner than desired, that their Fishery and *Indian* Trade do not take off one half of the Rum, now actually made in the Sugar Colonies. *South Carolina* trades with eight thousand *Indians*, and yet nine hundred Hogsheads is the most they ever imported in one Year, both to supply their home Consumption, all their Trade with these eight thousand *Indians*, and to trade to other Ports with; and yet this is a Colony that is the hottest, has the largest Harvest of Rice, &c. and is not so well supplied with Beer, &c. as the other Northern Colonies; so let us allow this Colony of *South Carolina* these nine hundred Hogsheads; *North Carolina* one thousand Hogsheads; *Virginia* and *Maryland* three thousand Hogsheads; *New York* and *Philadelphia* four thousand Hogsheads; *Rhode Island* and *New England* ten thousand; which Calculations both by their respective Custom-house Accounts, and by the greatest Estimates that ever have been made, are too large, and yet the whole amounts but to eighteen thousand and nine hundred Hogsheads; whereas the Sugar Colonies produce forty thousand, and might fifty-five thousand, Hogsheads. It was observed also, that the *New England* People thus taking from the *French* their Molasses, Rum, and Sugar, and supplying all the other Northern Colonies, as well as *Newfoundland*, *Great Britain*, *Ireland*, and *Africa*, with large Quantities thereof, was a very great Hurt to the Revenue; for if these Places were not thus supplied, they must be supplied by our own Sugar Colonies, and then every thousand Pounds Value of Rum, or Molasses, of our own Growth, must pay his Majesty a Duty of forty-

forty-five Pounds, and every thousand Pounds value of Sugar a Duty of one hundred and twenty Pounds. It might have been added that it was likewise a great Hurt to the Trade and Navigation of this Kingdom, as well as to the Sugar Colonies, that we cannot supply those Places with Rum, Sugar, and Molosses of our own Growth, and in Ships and Vessels of this Kingdom, without the Disadvantage of paying for our Rum and Molosses a Duty of four and a half *per Cent.* when *New England* can supply all the Markets with Rum, Sugar, and Molosses, of foreign Growth, without paying any of these Duties. Was it not for this Advantage they have over us, a great many of our Vessels that miss a Freight of Sugar in the *West-Indies* for *London*, would take some Rum, Molosses, and Sugar, and go to *Newfoundland* and barter it for Fish or Oil, and then proceed to some other Market with it, and might probably employ themselves to Advantage, or might, with a little Rum, Sugar, and Molosses, go to *North Carolina*, &c. and barter them for a Cargo of Pitch, Tar, and Skins, and bring them to *Great Britain*.

As to what is alledged, That the restraining the Northern Colonies from the disposing of their Horses, Provisions, and Lumber to the *French* and *Hollanders*, might put them upon some Employment prejudicial to *Great Britain*, it is answered, That it hath been shewn already, that there is more Reason to fear the Islands will not be supplied with Lumber as they ought to be, than that the Northern Colonies will want a Vent for their Lumber; but if the *British* Colonies could not take off their Lumber, they might send it to *Spain*, or *Portugal*, or to *Great Britain*, where it might be imported Duty-free. They might employ themselves in raising naval Stores; the Government hath given them a large Bounty upon that Trade, which would be of vast Advantage to our Navigation, and save the Nation three or four hundred thousand Pounds a Year, which is sent out annually to purchase naval Stores with from the North. But this favourite Trade with the foreign Sugar Colonies, hath diverted them from that excellent Design, to the enriching of the *French*, and to the great Prejudice and almost Ruin of our own. As to the fourth Objection: That the *French* would distil their Molosses themselves, and supply the Fisheries with Rum, if the Northern Colonies did not; it was answered, That the *French* distil but very little Rum at present, and know little of the Matter; Worms, Stills, and other distilling Utensils, cost a great deal of Money; and this must be a Work of Time and very great Expence; however, a Possibility of an Inconvenience that might happen ought not to have that Regard paid to it, as to prevent our Colonies from being relieved in a Point so very prejudicial to them, as well as to the Malt Spirits of *Great Britain*, with which their Fisheries were formerly supplied.

To the 5th, That if the Northern Colonies did not take off the *French* Sugars, they would carry them to other Markets themselves; it was answered, The *French* do already carry many Sugars to foreign Markets; if so, they may sell to Advantage, and the Surplus which foreign Markets won't take off, goes to our Northern Colonies, to purchase what is absolutely necessary for them, and what they could not have conveniently from any other Place; but even here the Profit of the Freight is gained not by *Great Britain*, but by the Northern Colonies only; which is a very small Advantage, in Comparison of the Damage done by this Means to our Sugar Colonies, especially as the *French* can afford their Sugars cheaper than ours, and as the high Duties paid for Sugars in our Plantations, make it impossible for us to vend any to the Northern Colonies.

To the next Objection: That if the Importation of *French* and *Dutch* Rum and Molosses was prohibited, and they could have none but what they bought of the *English* Sugar Islands, or sell their Lumber and Provisions any where else, then the *English* Islands would set what Price they pleased upon their Rum, and beat down the Price of their Lumber and other Goods as they thought fit; it was answered: If the Case was as the

Objection states it, the *British* Sugar Colonies would be only upon a Level with *New England*; for, as that Place is the only Market from whence Lumber is imported to the Sugar Colonies, *New England*, by a Parity of Reason, is a Monopoly of the Lumber-Trade, and therefore does exact in the Price of its Lumber. But this is not, nor ever can be, the Truth of the Case, either with Regard to *New England*, or the Sugar Colonies; for as in a Place of such Extent as *New England*, where the Lumber Trade is carried on by a Multitude of People, with a View to each Trader's separate Interest, a Monopoly of Lumber cannot properly be made; so in the Sugar Colonies that lie at a vast Distance from, and are Rivals to, each other, by the Production of the same Commodities, a Monopoly is impracticable. The *New England* Traders have no less than six *British* Islands to go to for Rum and Molosses; each of these Islands is as independent on the other in its Polity, as distant in Situation. There is little or no Intercourse, and less Commerce, between those of them which are situated the nearest, and no Intercourse at all between the remotest of these Islands; because the Produce of them all being the same, there can be no Exchange of Commodities, and consequently no Commerce or Intercourse. It follows therefore, where there is no Intercourse there can be no Combination, no Monopoly. On the contrary, each Island is a Rival to its Neighbour, producing the same Commodities, and will in common Prudence use all proper Means to have its full Share of Trade; to which End nothing can be more conducive, than to sell its Produce at the cheapest Rate possible.

As to the seventh Objection, that the *French* and *Dutch* Colonies furnish our Northern Colonies with Money, which they bring to *Great Britain*, and lay out in our Manufactures, they answered, That there is no Money among the *French* and *Dutch* Sugar Colonies. How therefore they can bring Money from Places, where there is not enough for the common Uses of Life among the Inhabitants, is a Paradox which they must explain before the World will take it upon their Word. If then that Assertion be not founded on Truth, it follows that they do not lay out Money, brought from these Places, in the Manufactures of *Great Britain*; their Traffic for Fish in the Straights (a Trade in which they have supplanted *Great Britain*) may furnish them with Money, but we deny that such Money is laid out by them in the Manufactures of *Great Britain*. On the contrary, it is to be presumed, that their Money is laid out with the *French* and *Dutch* in *Europe*, for *East-India* Goods, *French* Silks, and other foreign Commodities; for, as it appears by their own Evidence, at the Bar of the House of Commons, they import such Wares into *New England*; and we must suppose they pay for them in Money or Fish, till they can prove that Lumber is a valuable Commodity in *France* and *Holland*. But supposing the *New England* People do lay out their Product of Fish in *British* Manufactures, is that a sufficient Compensation to *Great Britain*, for robbing her of the Fish Trade to the Straights? Do not the *New England* People, by their Confession, acknowledge by Implication, that they reap the Profit of it, both in Navigation and Trade up the Straights, which used to be enjoyed by great *Britain* itself? What Advantage is it to *Britain* to have this Money laid out in her Manufactures? Would it not be a far greater to be the Carrier of these Manufactures to the Straights, and to bring home this Money in her own Ships, navigated by her own Sailors?

The Inhabitants of the Sugar Colonies, it is said, are very rich, and very luxurious. That the Product of these Colonies are of the richest Sort, and a Mine to *Great Britain*, is allowed, and has been fully proved; but that the Proprietors of the Soil and Manufactures are far from being rich, is evident from the Proofs already made to the Parliament, that they do not clear five Shillings for every hundred pound Weight of Sugar they make. This the *New England* Traders would think but a moderate Profit upon one of their short Voyages; but it is too much for an Inhabitant of the Sugar Colonies, who runs infinitely more risque in the Heat of the
Torrid

Torrid Zone, does the Duty, and is liable to run the Hazard of a Camp in the Time of War, and in Time of Peace live the hardest Life of all the Inhabitants under the Sun. That this is truly the Case of the Planters in the Sugar Colonies, all Mankind that are acquainted with them will attest; but it may be evinced from the Nature of the *West-Indian* Estate itself, which is subject to Ruin by the *French*, to Fire from the combustible Nature of the Sugar-Canes, which are its Product; from the vast Expence of Materials and Edifices for making Sugar and Rum, and from the like Expence in Negroes, Cattle, and Mules; from the Risque of Mortality in this Part of their Property, which is always half the Value of a well settled Plantation: And lastly, the Expence of feeding, the Care, Anxiety, and prudent Conduct of governing two or three hundred Negroes, with strict Justice and Humanity, and with Advantage to himself, is the Station of a Planter: And is not this a Station that requires as much Fortitude, Industry, and Oeconomy, as catching Fish, or buying Skins from the *Indians* of *New England*? In short, without a good Share of all the Qualifications necessary to conduct an Affair the most complicated in its Nature, surrounded with Difficulties and Hazards, and in which the nicest Oeconomy and Order must be observed, it is impossible a Planter should reap any Profit from his Estate; therefore if Planters are rich, they must be the best Oeconomists, and the most industrious Men in the World, and therefore deserve what they acquire.

To the ninth Objection, That the Trade of the *English* Sugar Colonies is at present vastly profitable; for the little Island of *Barbadoes* in the Year 1730 imported twenty thousand seven hundred and sixty nine Hogheads of Sugar, of which they made 340,396 *l.* clear Profit. It is admitted to be true, when Rum and Molosses bear a reasonable Price; then a Plantation may, with the nicest Oeconomy, pay its own Charges out of those Articles. But if the *New England* Traders take Rum from Foreigners, and Molosses to be distilled into Rum by themselves, then the Rum and Molosses will be so far from bearing such a Charge; that, on the contrary, they will bear no Price at all; but the Molosses must be given to the Hogs, as the *French* used to do, 'till *New England* taught them how to make a better Profit of it. Have not then the *Barbadians* reason to complain? By the Assistance of the *New England* Traders the *French* now have that great Advantage, and the *French* Plantations are now increased above one third of the annual Value, purely by that pernicious Trade. This Increase to Foreigners is a proportionable Diminution of our own Sugar Colonies, and consequently a Disadvantage to *Great Britain*. But is the Product of that little Island *Barbadoes* no less than 340,396 *l.* brought into the Ports of *Great Britain*, in one Year, what a Fountain of Treasure must this be to the Kingdom, even by the Confession of the Enemies to our *British* Sugar Colonies? Do therefore the *New England* Traders imagine that the Parliament of *Great Britain* will sacrifice this immense Treasure to the Advantage of a few *New England* Distillers; or if it was a Disadvantage to all *New England* (from whence *Great Britain* derives no Advantage in comparison of that) would it not be just Policy to support the Sugar Colonies? but when the present Opposition is considered, as founded on a Trade with the *French*, the natural and implacable Enemies of this Kingdom, what honest *Englishman* will look upon it but with Disdain? especially after it has appeared evident from Reason, from undoubted Testimony, and even by the implicit Confession of the *New England* People concerned in this Opposition, that the *French* have increased one third *per Annum* in their Wealth by this very Trade; that our Sugar Colonies have declined in Proportion, as has been proved already; and to compleat the Misfortune, the *New England* Traders have drained even the *British* Sugar Colonies of all their current Cash, for no other Purpose but to purchase Molosses and Rum of the *French*. This is a Fact known by all the Inhabitants of the Sugar Colonies, who are ready to prove it in the most solemn Manner.

The two Houses having heard the several Facts stated, with the Proofs; and considered the Arguments and In-

ferences drawn from them, passed an Act of the following Tenor: That after the 25th of *December* 1738 there should be paid a Duty of Nine-pence a Gallon for all Rum and Spirits made in the Plantations, not subject to *Great Britain*, on the Importation of them into any of the *British* Plantations; that Six-pence a Gallon should be paid for all foreign Molosses and Syrups imported, and Five Shillings for every Hundred Weight, *English* Money, for Sugar and Paneles imported; and that no Sugar, Paneles, Syrups, or Molosses, should be imported into *Ireland*, unless shipped in *Great Britain*. And an Allowance of Two Shillings *per* Hundred Weight more than heretofore granted, on the Exportation of refined Sugars. But the Importation of *Spanish* or *Portuguese* Sugars into *Great Britain* is still permitted by the said Act.

Since the Act, the Merchants and Planters concerned in the *British* Sugar Colonies preferred a Petition to the *House of Commons*, setting forth, that by two Acts of Parliament passed in the 12th and 22d of *Charles II.* the Inhabitants of the said Colonies were restrained from sending Sugar to Foreign Markets before they are first landed in *Great Britain*. That how prudent soever this Restraint may have been at the Time the Sugar Trade in the *West-Indies* was entirely in our Hands, yet now our Sugar Islands are in a declining Condition from the Increase of the *French* Settlements, it would be highly beneficial not only to them but to *Great Britain* to put the *British* Subject in a Capacity of disputing foreign Markets with the *French*, and to permit him to carry his Sugars earlier and cheaper to those Markets than he can do, under the Restraint aforesaid. That the Sugar Colonies import yearly into this Kingdom Sugar enough for our Home Consumption, and also a large Surplus for Re-exportation to foreign Parts; but the Demand from Abroad has greatly decreased within these few Years, and the Markets for that Commodity have been forestalled by the *French*, not only to the Prejudice of the Sugar Trade but also of the general Trade of *Great Britain*, which must affect the Balance thereof. That if *British* Ships were permitted to go to foreign Markets under proper Restrictions without unloading here, the whole Charge, and in a great Measure, the Risque, of a double Voyage would be saved; and the obliging such Ships to return to *Great Britain*, unload, and take their Clearance here, before their proceeding on another *American* Voyage, would be attended with this farther good Effect, that they must afford to carry Freight at the cheapest Rates, or return Home empty; so that this Regulation would extend our Navigation, and contribute to make us the Carriers of *Europe*, without prejudicing the Revenue, all the Duties on Sugar being drawn back on the Re-exportation of it to foreign Parts. For these Reasons the Petitioners prayed that Liberty might be granted of carrying *British* Sugar from our Sugar Colonies in *America* directly to any foreign Markets to the Southward of *Cape Finisterre*, upon the same Conditions that the People of *Carolina* are permitted to carry their Rice to the said Markets, and also of carrying such Sugars to any foreign Markets to the Northward of *Cape Finisterre*, after first touching at *Great Britain*, before they proceed on another *West-India* Voyage. But the great Tendernefs the Parliament has always had for the famous Act of Navigation, has prevented these Indulgences from being granted, that might otherwise perhaps have been yielded to in behalf of the Sugar Colonies.

But the present War with *France* will afford the best Means of coming at the Truth, in respect to the Facts asserted in the Papers before-mentioned; and therefore, whenever a general Peace shall be made, and the Parliament is at leisure to look into Affairs of this Nature, we have all the Reason in the World to expect that this Commerce will be put upon such a Foot as that the Inhabitants both of *Great Britain* and the Plantations, may reap from it the greatest Advantages possible. In order to this, the intelligent Reader will easily discern that the following Steps are necessary. In the first Place, due Care must be taken to give the Inhabitants of the Sugar Colonies all the Relief that is possible from any Hardships

of which they have, or with good Reason might have, complained; such as heavy and exorbitant Salaries to their Governors, large Sums levied upon them, without being applied for their Service, and the Difficulties they are under, in obtaining speedy and effectual Justice, when Persons in public Stations are inclined to extend their Power too far, with a View to promote their private Interest. They should likewise have all possible Encouragement given them for recovering their foreign Trade, and beating out the *French* and other Nations who have interfered in it; since, in regard to both Heads, it ought to be considered that the public Benefit, that is to say, the enriching the Subjects of *Great Britain* by the Balance of Trade in general, is the great Point to be held in View; from the attaining of which, all other incidental Advantages, such as advancing the Revenue of the Crown, enriching particular Families, and raising private Fortunes, would certainly and necessarily follow, without their entering at all into the Motives, upon which Laws for the Good of the Plantations are enacted. For if it could be once brought about, that either the old Markets for Sugar were retrieved or new Ones opened, there is no doubt that *Jamaica* and other Islands, where there are Lands, fit for that Purpose, uncultivated, would be more fully planted, the Inhabitants become more numerous, and their Demands from *Great Britain* consequently larger than they are at present. On the other Hand, the same Care, the same Diligence and Alacrity are requisite, with regard to the Colonies on the Continent; but, at the same Time, it ought to be remembered, that whatever is done to promote the Welfare and Trade of the Sugar Colonies, must necessarily tend to the Benefit and Advantage of the Plantations on the Continent, which supply the Sugar Colonies with Lumber, and other Things requisite for the carrying on their Trade; and if, besides this, Ways and Means could be found to open new Channels for the Benefit of these Colonies also, it ought most certainly to be done.

We have spent a great deal of Time indeed in surveying thus far the *English* Possessions in the *West-Indies*; but in a Work of this Nature Time could not well be spent better; they are, if I may be allowed the Expression, the pacific Conquests of this Nation. Territories acquired, and for the most part, at least, acquired without shedding Blood, which shews that Industry is as capable of rendering a Nation powerful, as a Thirst of War; and that a

martial is not a more noble than a trading Spirit. What is gained by one War is frequently lost by another; and even while it is kept, the Expences created by a disputed Title are greater than the Value of the Possession; but what becomes ours, by this Method of planting, remains always ours, and passes without Debate to our Posterity, the very Power by which we acquire it secures its Continuance, and the longer we hold such Acquisitions the more valuable they are rendered, and the more effectually annexed to our Empire. They are Out-works well garrisoned, which yet put us to little or no Expence; they are distant Dominions, and yet closely connected to us by the Commerce which they create, they are continually drawing People without Prejudice to their Mother-Country, because the more populous they grow the greater their Demands from hence, consequently the quicker our Trade here, which will always bring over hither People from other Countries.

We may therefore safely affirm, that nothing can be of such Consequence to *Britain* as the Improvement of her Colonies; and which, at the same Time, is a Consideration that must powerfully recommend this to our Attention, that it lies wholly in our Power. We may be disappointed in our Views, with respect to other Branches of Trade, by the Intrigues of our Enemies, or from the want of a right Disposition in our Friends, but with regard to this great Branch of our Commerce, nothing can injure, nothing can disappoint, us, nothing can abridge or defeat our Successes therein, if we are not wanting to ourselves. We can from our Plantations bring most of those Commodities that are requisite for the Support of our foreign Commerce; and this is, as well, or rather better, than if we had them here at Home; we can, from our Colonies, supply ourselves with those Necessaries, for want of which only Foreigners could distress us, such as Iron, Plank, Hemp, Pitch, and Tar, and if we so pleased there are few Things we might not fetch from our Plantations; since, it is certain, that Indigo, Cochineal, and Silk, might be had from our Southern Colonies, and many Things from our Northern Settlements, that have never been so much as talked of, but might be easily discovered; if Men well versed in Minerals and Metals were sent thither. In a Word, the Plantations were an Honour of the last Age, and it should be our Study to make them the Glory of this.

SECTION XIX.

An Historical Account of the BRITISH Settlements in America from the Restoration of King Charles II. to the Revolution.

1. *A succinct Account of commercial Affairs at the King's Return, and of the Circumstances that favoured the settling new Colonies.*
2. *The State of the Country now called Carolina, from the Time of its first Discovery to the granting of it to the Lords Proprietors by King Charles II. and thence to the Surrender of that Patent.*
3. *A short Description of the Country of Carolina and the principal Places in that Colony.*
4. *An Account of the Produce, People, Commerce, Shipping, and Importance of this Colony to the British Nation.*
5. *The Grant of the Island of Antego to Lord Willoughby, the planting that Island, its Produce, Commerce and Shipping.*
6. *The Conquest of Nova Belgia from the Dutch, the Grant of that Country to the Duke of York, whence is derived its present Name of New York, and a Defence of our Title to that Plantation.*
7. *An Account of that Country, its Situation, Climate and Product.*
8. *Of its Trade, Interests, and Importance to Great Britain.*
9. *The Grant of the East and West Jerseys to several Proprietors, and the Extent, Product and Trade of these Plantations.*
10. *The Settlement of the Island of New Providence and the Bahama Islands, their present Situation, and the Advantages that may be expected from them.*
11. *An account of the Charter granted to the Hudson's-Bay Company for facilitating the Discovery of a North-west Passage, and of the Settlements that have been made under it.*
12. *The Motives upon which were founded the Grant of the noble Country of Pensylvania to William Penn, Esq, by King Charles II.*
13. *An Account of the Extent, Climate, Soil, Produce, and State of that flourishing Colony.*
14. *The Commerce, Interests, and Importance of Pensylvania to Britain.*
15. *Remarks and Observations on the foregoing Events.*

AT the Time King *Charles II.* returned to the Possession of his Dominions, the Nature of Trade and the Importance of the Plantations were generally un-

derstood, and by very few better than the King himself, who had a Head mighty well turned for the comprehending whatever related to Maritime Affairs; had improved his

his Notions on that Subject in *Holland*, and had conversed much with Persons of Quality and Character, who had found it necessary to seek Shelter from their Enemies in those Parts of the World. We need not wonder therefore, that soon after the Restoration various Schemes were set on foot for enlarging, and effectually peopling, the Colonies already planted in *America*, as well as for settling new Colonies, in such Places as were not already occupied by our own, or any other *European*, Nation. The King was advised by some, and solicited by others, to grant Charters to new Colonies, from various Motives. Prince *Robert*, or as we usually call him, Prince *Rupert*, Duke of *Cumberland*, who had spent some Years in *America*, had great Notions of raising a naval Strength there, capable of distressing the *Spaniards*, and of obtaining a Share of the Gold and Silver they bring from thence. He was likewise persuaded, that there were very rich Mines in *Florida*, and was therefore for promoting, at any Rate, Discoveries and Settlements in that Country; the Earl of *Clarendon*, Lord *Abley*, and several others of his first Ministry, considered Things in a very different Light: They thought that Plantations might be made useful Drains for carrying off warm, and turbulent Spirits; and that by granting Liberty of Conscience there to all the different Sects who were restrained at Home, they might secure Peace in *Britain*, and at the same time procure vast Profit from *America*; for it was a settled Maxim with them, *That Industry was the best Cure for Enthusiasm*; which Experience shewed was extremely well founded.

There were some other Reasons that contributed not a little to render Projects of this Nature acceptable to the King; for at that time there were Numbers of People that wanted some Establishment of this kind for their Support, and whom it was much easier to dispose of in this manner, than to find Means of rendering them easy and content at home. As, for Instance, Multitudes of Royalists who were undone by the War, and who seeing the Success that had attended the Planters in *Virginia* and *Barbadoes*, were better pleased to seek new Fortunes in the *West Indies*, than to continue in a State of Indigence and Necessity in *England*. Many likewise of the Army that had been lately disbanded, were also inclined to take the same Method for obtaining a comfortable Subsistence; and were not afraid of Danger and Fatigues abroad, to which they had been long inured at home. There were a third sort of People who, either from a Disaffection to the Government then newly re-established, or for fear of being called to an Account for what they had done in former Times, were very willing to transport themselves into these distant Parts of the King's Dominions, that they might have a Chance of raising Estates there, and at the same time be secure from any After reckonings for what, during our long Scene of public Confusions they had been doing here: We need not wonder therefore, that as soon as the Government was a little settled, many Proposals should be made for gratifying the Friends to the Government, who had very high Pretensions to the royal Favour, with Grants in *America*, which cost the Crown nothing, and which afforded probable Means of enriching particular Persons at the same Time that it opened a sure and certain Means of extending the Power, increasing the Trade, and augmenting the Wealth of the Nation. We may add, that besides all these Reasons, Expedients, and Advantages, there were likewise some of Necessity; for it was evident, even to such as were no great Politicians, that if some Measures were not taken to prevent it, the *Dutch* and other Foreigners, would infallibly fix themselves in those Countries which belonged of Right to this Crown, and which had been hitherto neglected; and therefore it was very wisely judged, that the Plantations first settled, should be in those Parts of the Continent that were in most Danger of falling into the Hands of other Nations.

Upon these Considerations therefore, the Administration listened very willingly to a Proposal that was made within two Years after the King was restored, for planting the Country now known by the Name of *Carolina*; which seemed the more worthy of being secured, as lying indubitably in the finest Climate in the World; and thereby

promising the highest Advantages to that *European* Nation which should settle and cultivate it. Neither was it at all improbable; that when the Property of this Country was once fixed by a Charter from the Crown, and large Privileges offered to such as would go thither and settle, it might be very soon peopled; since amongst the many Things for which that Country was undoubtedly fit, they were likely to fall upon somewhat that might support and maintain them; it is true, that many Things were given out of the Country at that time, which have not hitherto been verified by Experience; but then, as we shall shew hereafter at large, it seems to be rather imputable to the Want of Industry and Application in the Inhabitants, than to any Defect in the Soil or Climate: But to have just Notions of this, and from thence to form a right Idea of the Value of this noble Country, than which the Globe affords not a better, it is necessary that we should enter into a few Particulars, that we may thoroughly apprehend by what Right we possess it; how it came to be abandoned by another Nation that seized it while unoccupied by us; after what Manner our first Plantations were made; what great Changes have happened in the Constitution of the Colony; the State it is in at present; the Benefits which *Great Britain* reaps from it, and what reasonable Hopes there are, that it may yet turn more to our Advantage. Of all which Heads we shall treat as clearly and as concisely as it is possible.

2. The Country of *Carolina* is Part of that vast Region of *North America* which was formerly comprehended under the Name of *Florida*, a Name bestowed by *John Ponce de Leon*, in the Year 1512; of whose Adventures and Discoveries we have already spoken largely: He advanced, however, no farther Northwards than the River of *St. Matheo*, and therefore it is plain, that the *Spaniards* never had any just Title to *Carolina*: But it is, however, very true that they flattered themselves, that his having touched upon this Continent, gave them a Right to it; which Notion, if well founded, would give us a better Right, since *Sebastian Cabot* had been several Years before on the Northern Coast of this very Country, though it is doubtful whether he advanced so far South as *St. Matheo*. The *Spaniards*, who desired to secure it to themselves eight Years afterwards, sent *Vasquez de Ayllon* to make a farther Discovery of it: He came upon the North Coast, and called the North-north-west River by the Name of *Jordon*. He did nothing except inviting many of the Natives on board his Ships, where, when he had got them, he hoisted Sail, and carried them into miserable Bondage. In the Year 1526, *Charles V.* Emperor of *Germany* and King of *Spain*, sent *Pamphilio Narvaez* to *Florida*, who staid so long in the South-west Part of this Country, which is the most barren, that his People eat one another, his Crew having spent their Provisions. Ten Years afterwards, *Ferdinando Soto* came hither in Search of Gold and Silver Mines, having a little Army of nine hundred Foot and five hundred Horse. Himself and three Parts of his Soldiers died through Want, by Sicknefs, and the *Indians*, and the rest, were led back by *Lewis Moscos* to *New Spain*, though not without great Difficulty, the Natives setting upon them several times in their March, and killing all that fell into their Hands. This unfortunate and expensive Expedition so discouraged the *Spaniards*, that for several Years they made no more Attempts in those Parts, and indeed they searched no farther than that Part of the Continent which lies opposite to the Gulph of *New Spain*, and not within, and beyond the Streights of *Bahama*, which is the most fertile and rich, abounding in many valuable Commodities.

The *French* perceiving the *Spaniards* neglected this long Tract of Land, Admiral *Coligny*, in the Reign of *Charles IX.* procured two of the King's Ships to be sent thither; the Command of which he gave to *Jean Ribaut*, who, after a Voyage of two Months, arrived at the River *Dolphin*, between that of *St. Matheo* and that of *May*; lying about the 30th Degree. The next River to that of *May* he called the *Seine*, the next to that, the *Somme*, then *Loire*, then the *Charente* and *Garonne*, at the Mouth of *Albemarle* River, then called the *Great River*. The Port being safe and commodious, he built a Fort, which he called *Charles Fort*,

Fort, and gave it the Name of *Port Royal*, in 32 Degrees, bordering on *Virginia*, now *North Carolina*, where the first Settlement was made by any *European Nation*. The Civil War raging in *France*, *Ribaut's* Soldiers mutinied for want of Supplies; the Natives, it is true, were very kind to them out of Hatred to the *Spaniards*; but they could not furnish them with many Necessaries that they wanted; and the Admiral was so engaged in Politics at home, that he had not leisure to provide for the Wants of his Colony, so *Ribaut*, having made some Discoveries, in the North-east Part of *Florida*, returned to *France*; and in his Return his Company were reduced to such Extremity, that they killed and eat one of their own Men, and probably would have done so by others, had they not accidentally met with an *English Ship*; the Master of which furnished them with some Provisions. A Peace being concluded two Years after in *France*, between the Papists and the Protestants, *Coligny*, who was then in favour at Court, procured other Ships to be sent to this Country, which was now called *Carolina*, from *Fort Charles*, as that was from the *French King*.

The Command of those Ships and Men on board, was given to *Lewis Laudoner*, who was ordered to carry on the Settlement. He arrived here the 20th of *June*, 1564, with three Ships, and was kindly received by the Inhabitants; but could find no Gold or Silver, though he spent much Labour and Time about them. His Provisions being almost all gone, and the Natives either unwilling or unable to furnish him with more, *Laudoner* resolved to return also to *France*; and as he was preparing to depart, *Jean Ribaut* arrived with three Ships, which had so good an Effect on the *Indians*, that they seemed to be as welcome to them as to the *French*: The Kings of *Homoloe*, *Servaratri*, *Almacam*, *Malica*, and *Castri*, waited upon *Ribaut* to congratulate his Arrival, and promised to conduct him to the *Apalachian Mountains*, which part *Carolina* from *Virginia*. The *French* conceived great Hopes from this Settlement, but all vanished on the Arrival of the *Spaniards*, who with a Squadron of Ships and Land Forces drove the *French* out of their Forts, killed *Ribaut* and six hundred Men, after having given them Quarter, and obliged *Laudoner*, with a few of his Countrymen who remained alive, to return to *France*.

The *French King* was less moved with this Outrage committed on his Subjects, because they were Protestants; and indeed, 'tis thought, *Coligny* intended by this Settlement to secure a Retreat for himself and his Brethren of the reformed Religion in case they were conquered in *France*. *Peter Melanda* commanded the *Spaniards*, who dislodged the *French*, and so provoked the *Indians*, by his Cruelty and Injustice, that they were very ready to revenge themselves when Opportunity offered, as it did not long after. For Captain *de Gorgues*, a *French Gentleman*, at his own Cost, fitted out three stout Ships, and with two hundred and eighty Men sailed to *Carolina*, where he took the Fort, and put the *Spaniards* therein all to the Sword. They had built two other Forts, which he easily reduced, and served the Garrisons as he did that of *Fort Charles*; he demolished them, and was assisted by the Kings of *Homoloe* and *Servaratri*. The *French* travelled into the Dominions of the Great King of *Apalacha*, near the Mountains, where they converted many *Indians* to Christianity. These *Indians* were more civil than those to the Northward, their King's Dominions larger, and their Manners, in a great Measure, resembled those of the *Mexicans*, from whom they were thought to be descended. We do not find that Monsieur *de Gorgues* made any Settlement here, or that the *Spaniards* endeavoured to recover the Country, which from the Year 1567 lay deserted by all *European Nations* 'till the Reign of King *Charles II.* of *England*.

In the Year 1622 several *English Families* flying from the Massacres of the *Indians* in *Virginia* and *New England*, were driven upon these Coasts and settled in the Province of *Malica* near the Head of the River of *May*, where they became a kind of Missionaries among the *Malicans* and *Apalachites*. The King of the Country is said to have been baptized; and in the Year 1653,

Mr. *Brigstock*, an *Englishman*, went to *Apalacha*, where he was honourably entertained by his Countrymen, who were there before him, and from his Relation of the Country ours is taken.

Such was the Situation of Things, and it had been abandoned by the *French* for near one hundred Years, when King *Charles* the II^d made a Grant thereof, bearing Date *March* 24, 1663, to *Edward Earl of Clarendon*, then Lord High Chancellor of *England*, *George Duke of Albemarle*, *William Lord Craven*, *John Lord Berkley*, *Anthony Lord Ashley*, *Sir George Carteret*, *Sir William Berkley*, and *Sir John Colliton*, from the North-end of the Island called *Luck Island*, which lies in the Southern *Virginia Sea*, and within 36 Degrees of North Latitude, and to the West, as far as the *South-Seas*, and so southerly as far as the River *San Mattheo*, which borders on the Coast of *Florida*, and is within 31 Degrees of North Latitude, and so West, in a direct Line, as far as the *South-Seas* aforesaid, with all Royal Fisheries, Mines, Power of Life and Limb, and every thing necessary in an absolute Propriety, paying a Quit-Rent of twenty Marks yearly. These Proprietors afterwards obtained another Grant, which somewhat varied the Bounds of the Province, by fixing its Northern Frontier at *Carotoch River* in 36 Degrees 30 Minutes North Latitude, and extending it to the Latitude of 29 Degrees to the South, within which Bounds both the *Carolinas* and the new Province of *Georgia* are included.

The Plan of Government for this new Colony was struck out by that great Statesman, *Anthony Earl of Shaftsbury*, and digested into Form by the famous Mr. *John Lock*; so that great Expectations were raised by it. But without entering into a long Detail upon this Subject, it is sufficient to say, that how fair soever it might appear in Theory, it was found by Experience impossible to carry it into Practice; so that after struggling with the Inconveniencies produced by it for about sixty Years, to the Prejudice of the Planters and Proprietors; the only Remedy that could at last be found, was to get rid of this fine spun Constitution, in which it was pretended all the Errors in our own were cured, and to put the Province under the Protection and into the Hands of his Majesty, which was accordingly done; and this Remedy has answered all the Ends that could be expected from it in so few Years.

This Surrender was made by the Proprietors to *Edward Bertie*, *Samuel Horsy*, *Henry Smith* and *Alexis Clayton*, Esqrs. in Trust for the Crown. The Proprietors, in their own Right, or in Trust, were then *Henry Duke of Beaufort*, *William Lord Craven*, *James Bertie*, Esq; *Doddington Greville*, Esq; *Henry Bertie*, Esq; *Mary Danson*, *Elizabeth More*, *Sir John Colliton*, *John Cotton* and *Joseph Blake*, Esqrs. who were possessed of Seven-Eighths of the Propriety of the Province, and sold it to the Crown for 17500 *l.* Each Proprietor, who had a whole Share, having 2500 *l.* The outstanding Quit-Rents, and other Incomes, due to the Proprietors from the People of the Province amounting to somewhat above 9000, also were sold to the Crown for 5000 *l.* which was paid to the above-mentioned Proprietors after the Sale and Surrender had been confirmed by a particular Act of Parliament, in the Year 1728, entitled, *An Act for establishing an Agreement with seven of the Lords Proprietors of Carolina, for surrender of their Title and Interest in that Province to his Majesty*. It will appear by the following Clause in the Act of Parliament, that the remaining One-Eighth of the Propriety, and Arrears of Quit-Rents aforesaid, were reserved to the Right Honourable *John Lord Carteret*, now Earl of *Granville*, "Saving and reserving always to the said *John Lord Carteret*, his Heirs, Executors, Administrators, and Assigns, all such Estate, Right, Title, &c. to One-Eighth Part of the said Province or Territories, and to One-Eighth Part of all Arrears, &c."

In consequence of the Powers granted to his Majesty by this Act, he has ever since appointed Governors of *North* and *South Carolina*, and there is a great Prospect of its becoming a Purchase highly beneficial to the Crown, which will, however, in a great measure depend

on the Capacity and Conduct of the Governors they send thither, who ought to have true Notions of the Interests of King and People, and a Firmness of Mind equally capable of resisting Flattery and despising Clamour, to both which he will be as much exposed in these, as in any other Countries in the World, if from what has already passed, we may form any Judgment of what will happen in succeeding Times.

3. After having given the Reader an Account of the Time and Manner in which we became possessed of this Colony, and the Means by which its Government has been changed since it was settled, we are next to enter into an exact Description of the Country itself, that the Reader may be the better able to judge of the Value of this Plantation, and of the Certainty of those Rules, for determining the best Climates, and the Commodities that may be expected, either from the Bounty of Nature, or the Industry of the Inhabitants; with respect to which, more rational Hopes could scarce be formed of any Place in our Possession, or, indeed, of any *European* Nation in *America*, than of this; which, in Point of Situation, as I have hinted more than once, is as happy as could be wished, and in that respect certainly merits the Reader's particular Attention. *Carolina* is situated between the Extremes of Heat and Cold, but the Heat is more troublesome in Summer than the Cold in Winter, their Winters being very short, and their frosty Mornings frequently succeeded by warm Days. The Air is, for the most Part, serene and clear, both in Summer and Winter; yet they have their Winter Rains, and sometimes very heavy Showers about Midsummer; and especially if the Wind changes suddenly from the South-east to the North-west, for then it blows exceeding cold, and brings Distempers on those who do not take care to guard against it; but the Country is generally healthful, where People live regularly, and use any Precaution: Those, indeed, who after a hot Day expose themselves to the cool Breezes of the Evening, usually feel the Effects of it, as others do that indulge their Appetites in eating Fruit, and drinking pernicious Liquors to Excess.

They are subject to Hurricanes as well as the *Caribbee Islands*, but these do not happen every Year; and sometimes are so favourable as not to do much Mischief in seven Years. There was a very terrible one which happened in the Year 1729. This Province is now divided into North and South *Carolina*; and, as we have before shewn, the Country now known by the Name of *Georgia* is also within the original Limits of this Colony. At present we shall concern ourselves only with the two first mentioned Provinces, intending to speak more of the last in its proper Place. *North Carolina* is bounded by *Virginia* on the North, the Ocean on the East, by a Line drawn in 34 Degrees from the Ocean to the Mountains on the South, and by that Part of *Florida*, possessed by the *Indians*, on the West, and is subdivided into fourteen Townships or Parishes. But there is not one Town or Church, as I can learn, in the Country; and it is but very lately that the Society for the propagating the Gospel has sent itinerant Preachers amongst them. *South Carolina* is divided from *North Carolina*, by the abovesaid imaginary Line on the North, by the Ocean on the East, by the River *Savannah*, which separates it from *Georgia*, on the South, and by the Country of the *Indians* on the West, being subdivided into fourteen Parishes or Townships, each of them having a good Church of Brick or Timber.

But the chief and almost the only Town in both *Carolina's*, is *Charles Town*, situate in 32 Degrees 45 Minutes North Latitude, and on the Point of a *Peninsula*, formed by *Ashly* and *Cooper Rivers*; the former of which is navigable for Ships twenty Miles above the Town; and for Boats and Pettyaugers (large Canoes) near 40 Miles. The other River is not navigable for Ships so far, but for Boats and Pettyaugers much farther; the Bar before the Harbour has sixteen Foot Water at a low Tide, and there is good riding when a Ship is got close to the Town, the Harbour being secured by a Fort called *Johnson's Fort*, which has about twenty Guns in it, level with the Surface of the Water. The Town was

regularly fortified some Years ago, and several of the Bastions, near the Water, are still in being, and in good repair. But the Bastions, Pallisadoes, and Fosse, next the Land, being much damaged by a Hurricane, and deemed of too great an Extent to be defended by the Inhabitants, General *Nicholson* caused them to be demolished. The Town now contains upwards of six hundred Houses, generally well built, some of them of Brick, but more of Timber, and most of them sashed, forming regular and spacious Streets; and their Church is much the most magnificent in *English America*, having three Isles, an Organ, and Gallery all round the Church.

The Town of *Beaufort* is situated on the Island of *Port Royal*, in 31 Degrees 40 Minutes North Latitude, an hundred Miles South of *Charles Town*; the Continent and Island forming a fine capacious Harbour, which might hold the Royal Navy of *England*. The Island on which the Town stands, consists of near one thousand Acres, and is navigable all round for Boats and Pettyaugers, and one half of it for Shipping, having four Fathom Water close to the high Bluff, so that Ships may load and unload from the Shore, without the Assistance of Boats. The Harbour is secured by a Fort built some Years since, on which twelve Culverins are mounted, but the Town and Island have no Fortification; nor is the Harbour so well fortified as a Place of this Importance deserves, especially as it lies so nigh *Spanish Florida*, and is said to be demanded by the *Spaniards* as Part of their Territories. There is not, indeed, above fifty or three-score Houses in the Town of *Beaufort* at present, but from its advantageous Situation, and the Goodness of the Harbour, it is expected that this Town will one Day be the Capital of *Carolina*: It is already the Station for the *British* Squadron in those Seas. There is another Port-Town lately erected at *Wingaw*, about fifty Miles to the Northward of *Charles Town*, to which they have given the Name of *George Town*, and the Society for the Propagation of the Gospel have a Missionary here.

It would be needless to enter into a large Description of this Country, or of the Towns that are erected in it; only it may not be amiss to say that *North Carolina* is within this few Years become quite a different Country from what it was, and the Number of People therein is continually increasing; so that there is good Reason to believe that whenever the Inhabitants are blessed with a wise, active, prudent, and public-spirited Governor, this Country may be so improved, as to become infinitely more valuable than from any of the Accounts hitherto received of it could be expected. Indeed it may justly be affirmed, that the Welfare and Prosperity of all our Colonies depend so much upon the Choice of Governors, that we can scarce conceive any thing of so great Importance as the Crown's being extremely careful to vest none with such Authority, but Men of known Capacity, established Reputation, and competent Fortunes.

4. As to the Produce, Strength, and Commerce of *Carolina*, the best Account we have, is from Colonel *Purry*, a Man of great Judgment, Industry, and Integrity, who went thither with a View to settle, as he did; and therefore his Accounts may be very safely depended upon. He observes that all Sorts of Trees and Plants will grow there as well as can be wished; particularly Vines, Wheat, Barley, Oats, Pease, Beans, Hemp, Flax, Cotton, Tobacco, Indico, Olives, Orange Trees, and Citron Trees, as also white Mulberry Trees for feeding of Silkworms; and that the Lands are not difficult to clear, because there are neither Stones nor Brambles, but only great Trees, which do not grow very thick, so that more Land may be cleared there in one Week, than could be done in *Europe* in a Month. The Custom of the Country is, that after having cut down these great Trees, they leave the Stumps for four or five Years to rot, and afterwards easily root them up, in order to manure the Land. It is therefore very certain that *Carolina* is in general an excellent Country.

It is true the Ground is sandy, but then it is a Sand impregnated with Salt or Nitre, so that it brings forth in great abundance, as the like Soil does in diverse Parts of *Europe*. But what seems peculiar to *Carolina*, there

are a great Number of Plantations that have been continually cultivated for near seventy Years, which yet produce great Plenty, without ever being manured by the least Dung, for they never lay any on their Grounds; the Planter only turns up the Superficies of the Earth, and all that he plants and sows therein quickly grows and thrives: Those who understand ever so little of Agriculture will be obliged to own, that if the Lands in *Europe* were not constantly manured, their Strength would be so exhausted that at length the Crops would not pay for their Seed; but a Man who has a little Land in *Carolina*, and is not willing to work above two or three Hours in a Day, may very easily live there, even on so little Labour. Another Consideration deserving our Notice is, the Progress of the first Colonies; their sudden Advancement; the Riches of the present Inhabitants; the great Number of public Expences for which they provide; the great Trade they carry on at present; and lastly, their Misfortunes and Losses, which are entirely repaired. The better to comprehend these Matters, we shall only make the following Observations: That there were no People in *Carolina* till near fourscore Years ago; for the *English* did not send any thither till the Year 1670: That they had at first a very fatal Beginning; afflicted with Sickness, and even the Plague, which daily diminished the Number of the People: That cruel destructive Divisions broke out amongst them: That they had a very bad Government under the Lords Proprietors, being also without Justice, Order, or Discipline: That at a certain Time the Pirates interrupted their Trade and Navigation: That they have often had great Droughts: That a terrible Fire consumed almost all *Charles Town*: That they have been at great Expence in Fortifications, public Edifices, Churches, &c. That they have often sustained long Wars with the *French*, *Spaniards*, and particularly with the *Indians*, who once united together to destroy the whole Province. That notwithstanding all these Misfortunes, the People of *Carolina*, except those who give themselves up to Debauchery, are all rich, either in Slaves, Furniture, Clothes, Plate, Jewels, or other Merchandizes, but especially Cattle; which shews the Goodness of the Country they inhabit.

Silk-worms, in *Carolina*, are hatched from the Egg, about the Middle of *March*; at the same time that the Mulberry-leaves, which are their Food, begin to open; being attended and fed six Weeks, they eat no more; but have small Bushes set up for them to spin themselves into Balls; which thrown into warm Water, are wound off into raw Silk. Rosin, Tar, and Pitch, are all produced from the Pine Trees; Rosin, by cutting Channels in the standing green Trees that meet at a Point at the Foot of the Tree, where is placed a Receiver; the Channels are cut as high as one can reach with an Ax; and the Bark is peeled off from all those Parts of the Tree that are exposed to the Sun, that the Heat of it may the more easily force out the Turpentine, which being taken from the Receiver, and melted in Kettles becomes Rosin. Tar is made thus: They prepare a circular Floor of Clay declining a little towards the Center; from which is laid a Pipe of Wood, the Upper-part of which is even with the Floor, and reaches ten Feet without the Circumference; under the End the Earth is dug away, and Barrels placed to receive the Tar as it runs; upon the Floor is built up a large Pile of dry Pine Wood split in Pieces, and surrounded with a Wall of Earth, which covers it all over only a little at the Top, where the Fire is first kindled: After the Fire begins to burn, they cover it likewise with Earth, to the End there may be no Flame, but only Heat sufficient to force the Tar downward into the Floor; they temper the Heat as they please, by thrusting a Stick through the Earth, and letting the Air in at as many Places as they see convenient. Pitch is made by boiling Tar in large Iron Kettles set in Furnaces, or by burning it in round Clay Holes made in the Earth.

Black Cattle have mightily increased since the first settling of the Colony. About forty Years ago it was reckoned a great deal to have three or four Cows, now some People have a thousand Head; and for one Man to have two hundred is very common. The Cows

graze in the Forest, and the Calves being separated and kept in Pastures fenced in, they return home at Night to suckle them: They are first milked, then shut up in a Fold all Night, milked again in the Morning, and then turned out into the Woods. Here are Hogs in abundance; they go daily to feed in the Woods, where they rove several Miles, feeding on Nuts and Roots; but having a Shelter made at home, to keep them warm, and something given them to eat, they generally return in the Evening. The Beef and Pork that are raised here find a good Market in the Sugar Islands.

The Trade of *Carolina* is now so considerable, that of late Years there have sailed from thence, annually, above two hundred Ships laden with Merchandize of the Growth of the Country, besides three Ships of War, which they commonly have for the Security of their Commerce; and last Winter they had constantly five, the least of which had above an hundred Men on board. It appears from the Custom-house Entries, from *March* 1730 to *March* 1731, that there sailed, within that Time, from *Charles Town*, two hundred and seven Ships, most of them for *England*; which carried among other Goods, forty-one thousand nine hundred and fifty-seven Barrels of Rice, about five hundred Pounds weight *per* Barrel; ten thousand seven hundred and fifty Barrels of Pitch; two thousand sixty-three of Tar; and seven hundred and fifty-nine of Turpentine; of Deer-skins, three hundred Casks containing eight or nine hundred each; besides a vast Quantity of *Indian* Corn, Pease, Beans, &c. Beef, Pork, and other salted Flesh; Beams, Plank, and Timber for Building, most part of Cedar, Cypress, Sassafras, Oak, Walnut, and Pine.

They carry on a great Trade with the *Indians*, from whence they get their great Quantities of Deer-skins, and of other wild Beasts, in exchange for which they give them only Lead, Powder, coarse Cloth, Vermillion, Iron, strong Waters, and some other Goods, by which they have a very considerable Profit. The great Number of Slaves makes another Part of the Riches of this Province, there being above forty thousand Negroes, which are worth, one with another, twenty-five Pounds each. Artificers are so scarce at present, that all sorts of Work is very dear; Taylors, Shoe-makers, Smiths, &c. would be particularly acceptable there; a skilful Carpenter is not ashamed to demand thirty Shillings a Day besides his Diet, and the common Wages of a Workman is twenty Shillings *per* Day, provided he speaks *English*, without which he cannot be understood, and consequently not so useful as others; and when a Workman has but ten Shillings *per* Day, he thinks he labours for almost nothing, though he has his Maintenance besides; but this is *Carolina* Money. Most of their Shoes are brought from *England*, and generally sell for forty Shillings *per* Pair; not but that they have Hides enough, and very cheap, an Ox's Hide being sold for twenty Shillings; neither are they destitute of the Means to tan them, for they make very good Lime with Oyster-shells, and the Bark of Oak Trees is so plentiful, that it costs nothing but the Trouble of gathering; they therefore want only a sufficient Number of good Tanners and Shoe-makers. I might say the same of Leather-dressers, since they send every Year to *England* above two hundred thousand Deer-skins undressed; yet *Carolina* produces Oker naturally, and good Fish-Oil may be had from *New York*, or *New England*, very cheap; so that they might be dressed and made up into Breeches in the Country, for which those Skins are very proper, being cool in Summer, and warm in Winter. There is not one Potter in all the Province, and no earthen Ware but what comes from *England*, nor Glass of any kind; so that a Pot-house and a good Glass-house would succeed perfectly well, not only for *Carolina* but for all the Colonies in *America*. There is a kind of Sand and Earth which would be very proper for those Purposes, as also Wood and Fern in abundance, if they had but Workmen to make Use of them.

It may seem strange to affirm this, in an Age when it is well known, that Men are inclined to go almost any where, and may be tempted to almost any thing, from the Hopes of Money. These Facts, however, are very true,

true, neither is it very difficult to account for them; for if without much Labour and Pains not only a bare Subsistence may be gained, but in time also good Estates may be raised by Methods already in use; we are not to expect that our People in the Colonies will either run Hazards or give themselves much Trouble to strike out new Ways to Wealth, even though they should be convinced that such Ways, at the same time they increased their own Fortunes, would prove beneficial to their Mother-Country likewise. There are indeed some People who take a Pleasure in running down the Countries we have planted in *America*, and in making their Countrymen believe that they are amused with fine Stories, without Truth, or which, at least, have but a small Mixture of Truth in them. They say, for Instance, that tho' *English* Wheat will grow in *Carolina*, yet it is apt to mildew, and almost always runs up into Straw, and produces but a small Grain, and that it is very difficult to keep it from the Weevil. These, however, are Inconveniencies felt in other Countries, where very good Wheat grows, for which many Remedies have been found and applied with Success, as doubtless they might be there, if the Planters went about it. The Truth of the Matter is, that Rice is raised without so much Trouble, and as they can exchange this in *Pensylvania* and *New York*, almost Weight for Weight for Flour, they are content, and indeed think it a Happiness they can have Bread without being at much Pains in procuring it.

The same thing may be said of Wine, which it is now generally agreed cannot be made there, because their Grapes ripening in *June*, when their great Heats and heavy Rains come on, are very seldom fit for pressing. But it is very certain, that this is no better than an Excuse, since the wild Grape ripens in *October*, and Persons skilful in Vineyards would soon teach them the Means of making use of these. The very same Objections were raised in reference to the Country about the *Cape of Good Hope*; and it was as positively said that no Wine could be made there, but the *Dutch* have shewn what Strength there was in the Objection, by their improving into a Paradise a Place we despised, and thought not worth the keeping; and while *Madeira* is to be had so cheap, I am convinced no Grapes will ripen kindly in *Carolina*. As to Silk, the same Objection does not lie; for, it is well known, there are Woods of Mulberry-Trees there, upon which the Worms feed and spin as well as in any Place in the World. I may add, that Silk has been brought over from *Carolina*, as good, in the Opinion of the best Judges, as any that comes from *Piedmont*, for which we pay large Sums of Money every Year; but it falls out unluckily, that from the End of *March* to the Beginning of *May*, when the Worms want most Attendance, all the Hands in *Carolina* are employed in planting and hoeing their Rice, so that they have no time to spare for procuring a Commodity, of which hitherto they do not seem to know the true Value.

But all the Faults do not lye on that Side of the Water; since it is true, that though there comes a great deal of Pitch from thence, we have but little Tar from *Carolina*; whereas, there have been formerly many thousand Barrels brought in a Year, not at all inferior to the best Tar from *Norway*; which was, by this Means, reduced from three Pounds to fifteen Shillings a Barrel, with which Reduction, it seems, we are content to have recourse again to the North Country Tar, and no longer make use of what might come from this Plantation. We may from these few Hints see clearly, that as great as our Trade to these Colonies is, it might still become much greater, and that how beneficial soever they may be to *Great Britain*, we are far from deriving from them all the Benefits we might do; and though considered, in one light, this seems a little distasteful; yet, if we view it in another, it affords us a very comfortable Prospect; since, when we are disposed to apply ourselves heartily to the Improvement of this Commerce, we have a moral Certainty, that our Endeavours will succeed, and that *Great Britain* can never feel any sensible Decay of Trade, while she preserves and cherishes her Plantations.

5. Among other Persons of Quality and Distinction who were justly entitled to the Favour of King *Charles*,

there were few who had a better Title than *Francis* Lord *Willoughby*, who was Governor of *Barbadoes*, and who in 1663 obtained a Grant of the Island of *Antego*, in which he settled a Colony about three Years after. The Country had been known before, and, if I am not mistaken, Sir *Thomas Warner* had attempted to settle it. How it came to pass that after the Death of Lord *Willoughby*, who removed hither, this Island came again into the Hands of the Crown I cannot say, but without all doubt, the Fact is true, and this Island now makes a Part of the Government with the rest of the *Leeward Islands*, and is said to owe its present happy Situation to the Care, Industry, and Skill of Sir *Christopher Codrington*, who made it the Seat of his Government when he was General and Commander in chief of those Islands. It was here, that in the latter End of the late Queen's Time Governor *Park* was killed by the People; an Affair that will be ever remembered, both in that Part of the World and this, though it does not seem to be well understood in either; the Fact most certainly was barbarous and bloody enough; but, at the same Time, it is as certain the Provocations the People had received were great, which was the Reason that most of those concerned in this Murder escaped with Impunity.

But our Business lies not so much with Men as with things, and therefore we shall proceed to the Description of the Island *Antego*, or as it is sometimes written *Antigua*, which lies in 16 Degrees 11 Minutes North Latitude, and in 63 Degrees of Longitude West from *London*. It is of a circular Form, about twenty Miles in Diameter, and near sixty in Circumference. The Climate is not to be boasted of, since it is allowed to be hotter than *Barbadoes*, and very subject to Hurricanes. The Soil too is sandy, and a great Part of the Island is overgrown with Wood; but the worst of it is, that there are but few Springs, and not so much as a single Brook in the whole Island, so that the People depend chiefly upon Rain-water, for which they are sometimes distressed: Yet, notwithstanding these Inconveniencies, it is a very considerable and a very thriving Plantation.

This Island is divided into five Parishes, four of which are Towns; as *St. John's Town* to the Northward, and *Falmouth*, *Parham*, and *Bridge Town* to the Southward; the other Parish is *St. Peters*. *St. John's Harbour* is the most commodious, besides which there are several other good Harbours, as *Five Island Harbour*, so called from five little Islands to the Westward of the Isle of *Carsile Bay*; *English Harbour*, at the bottom of which is *Falmouth Town*, defended by *Charles Fort*; next to it is *Willoughby Bay*; on the East Shore is *Bridge Town*, the *Green Bay*, off which is *Green Island*; then *Nonfuch Harbour*, a spacious Bay. On this Coast, on the North-east Shore, are several little Islands called *Polecat Islands* and *Goat Island*, and more to the Northward *Goana Island*, *Bird Island*, *Long Island*, *Maiden Island*, and *Prickle-Pear Island*. The Forts are now in pretty good Repair; *Monkshill Fort* is mounted with thirty Pieces of Ordnance; it has a Magazine with about four hundred and ten Muskets and eight hundred Bayonets, in good order; the other Fort erected at *St. John's Harbour*, is mounted with fourteen Pieces of Cannon; there are seven other Batteries raised for the Defence of so many landing Places, in all mounted with twenty-six Guns.

The Capital of the Island is *St. John's Town*, which consists of about two hundred Houses; and the Number of Souls in all this Colony are one thousand five hundred at present. It has greater plenty of Cattle and other Beasts, especially Venison, than any other of our *Caribbee Islands*; the Animals of which are much the same, as also their Productions. Sugar, Indico, Ginger, and Tobacco, were the chief Growths and Commodities of *Antego*, when it was first planted, but now Indico and Ginger are very rarely cultivated there. The Sugar and Tobacco were both bad of the Sort; the former so black and coarse, that one would scarce have thought any Art could have refined it; and, as if our Sugar Bakers scorned to put such Dirt into their Coppers, it was generally shipped off for *Holland* and *Hamburg*, being sold for sixteen Shillings a hundred Weight, when other *Muscovada*

covado Sugars fetched eighteen or nineteen Shillings a hundred. The Planters of *Antego* have since improved their Art, and as good *Muscovado* Sugar is now made there, as in any of our Sugar Islands. They have also clayed some Sugar which was not known to have been done in *Antego* forty Years ago.

Though there is not much Tobacco planted in this Island, what there is now is not so bad as was formerly, when it was sold for no other Use but to make Snuff. The wild Cinnamon Tree is said to grow in the *Lowlands*, or *Savanah Woods* in *Antego*. After *Jamaica* and *Barbadoes*, this has been considered by some as the most considerable of our Islands in *America*; and as there is still a great Quantity of Land capable of Improvement, and it is allowed the People there might make a third more Sugar than they do, we may venture to allow, that it either is, or may be so; and if we consider what must have been gained by our Commerce with this Island for upwards of fourscore Years, we cannot but judge that it has been highly advantageous to this Nation, and very well deserves all the Care and Concern that can possibly be expressed for its Protection and Preservation.

6. The next Colony in *America*, which our Method leads us to consider, is that of *New York*, which is ours by a double Right, *viz.* of Discovery and Conquest. It was undoubtedly Part of the Country, the Coasts of which were first viewed by *Sebastian Cabot*, and as such made a Part of the original Province of *Virginia*, I mean the Country known under that Name in the Reign of Queen *Elizabeth*, and was afterwards within the Limits of the Country, granted by King *James* to the Western Company. But before it could be settled, that is about the Year 1608, the famous Navigator *Hudson* discovered that River, which has since borne his Name, and the Country adjacent, which he afterwards sold to the *Dutch* who planted there; but this was looked upon as illegal, because they had not King *James's* Licence, which it seems they afterwards obtained. There are some *English* Writers so very partial in favour of this Republic, as to be angry that this Settlement should be looked upon by us as a kind of Invasion, but surely this is without Reason; for if the Subjects of any Country were at Liberty to sell and dispose of Places they had but just seen, which was the Case of Captain *Hudson*, the Inconveniencies would be so great as to produce endless Wars, and therefore this Practice must be understood to be contrary to the Law of Nations.

But however that Matter might be, King *James* was so great a Lover of Peace, that very probably he was glad to rid himself of the present Difficulty, by granting them a Licence: Yet if we duly consider this, the granting such a Licence was a thing very destructive to the Interest of *Great Britain*, and might have proved extremely prejudicial to our Northern Colonies, and have been such a Bone of Contention, as must have for ever prevented any Harmony between the maritime Powers. These Reflections which rose naturally out of the Subject, have led me a little from my Purpose, which was to explain the first settling here, which the *Dutch* made a little before we planted *New England*; and from their first coming, being seated in Islands and at the Mouth of a good River, their Plantations were in a thriving Condition, and they begun, in *Holland*, to promise themselves vast things from their new Colony. The *English* Puritans in *Holland*, who first removed to *America*, intended to settle here, having had an inviting Description of the River, Climate, and Soil, from the *Hollanders*, who did not care, however, that the *English* should be so near their Plantations, as to be tempted to encroach on them, considering the Flaw that was in their Title. The *English* that went from *Holland*, intended to settle on the Coast, near *Fair Field County* in *New England*, lying between *Connecticut* and *Hudson's River*, but the *Dutch* apprehended they would there be too near Neighbours. These *English*, as has been already related, falling in with *Cape Cod*, after having refreshed a little, tacked about to the Southward for *Hudson's River*: But *Jones*, who was the Master of the Ship they came in, having been bribed by the *Hollanders* to carry them and land farther to the North-

ward, instead of putting to Sea entangled them among dangerous Shoals, which made them willing to get ashore where they were, and give over the Design upon *Hudson's River*. The *Dutch* had, two or three Years before, been insulted here by Sir *Samuel Argall*, in his Way from *Virginia* to *New Scotland*.

He destroyed their Plantations, and it was to prevent the like for the future, they applied to King *James* for his Licence to stay there, to build Cottages, and to plant for Traffic as well as Subsistence, pretending it was only for the Convenience of their Ships touching there for fresh Water and fresh Provisions, in their Voyage to *Brazil*; but they, by little and little, extended their Limits every Way, built Towns, fortified them, and became a flourishing Colony. In an Island, called *Manhattan*, at the Mouth of *Hudson's River*, they built a City which they named *New Amsterdam*, and the River was called by them the *Great River*. The Bay to the East of it had the Name of *Nassau* given it; about one hundred and fifty Miles up the River they built a Fort, which they called *Orange Fort*, and from thence drove a profitable Trade with the *Indians*, who came over land, as far as from *Quebec*, to deal with them. *Henry Christian*, the Master of a Ship, the same who gave the Name to *Marttha's Vineyard*, which he discovered, as the *Dutch* say, was the first Governor there, and his Successor was *Jacob Elkin*, put in by the *West India Company* in *Holland*, to whom the States General granted this Country. The first Bounds of *Nova Belgia* were *Maryland* on the South, the main Land, as far as could be discovered Westward, which would stretch to the Nations bordering on the *Mississippi*, the great River of *Canada* Northward, and *New England* Eastward; but, as will appear hereafter, the Limits of *New York* are not so large at present.

The *Dutch* Colonies were in a very thriving Condition when they were attacked by the *English*, which was at the Opening the first *Dutch War* in King *Charles's* Reign. We find some Writers very willing to represent this as a very unjust War, because Sir *Robert Carr* was sent to attack this Plantation before they, in that Part of the World, could have any Notice of the War; but then it ought to be remembered that it was after the *Dutch* Admiral, *de Ruyter*, attacked our Settlements in *Africa*, and therefore I cannot think that this is so very bad as it has been represented, or that it can at all prejudice our Title to this Country. The Commission of Sir *Robert Carr*, empowering him to act against the *Dutch*, was dated on *St. George's Day* 1664, but he did not arrive till the latter End of the Year. He brought with him between two and three thousand Men, and offering Protection to such of the Inhabitants as submitted, he became Master of the whole Country without a Blow; and it does not appear that the People were at all displeased at changing their Masters. His Majesty, after it was reduced, gave leave to such of the Inhabitants to stay as were inclined thereto, and suffered the rest to depart freely with their Effects. The Number of the latter was but very inconsiderable in Comparison of the former; and Colonel *Richard Nichols*, who was left Governor of the Province, and continued so twenty Years, brought the People, not only to relish, but to be in love with, the *English* Government; so that there never was the least Disturbance among the Inhabitants on the score of their being Subjects to *England*.

The Duke of *York* granted away a Part of this Province, as will be shewn hereafter; but the Remainder, which is what we now stile *New York*, continued a Royal Government, as it still is, but very much changed for the better; since from being one of the poorest, it is become one of the most considerable that we have in *America*, in Consequence of the Colony's becoming one of the most flourishing, and this, though it has had the Misfortune of being sometimes governed by Men of most arbitrary Principles, and capable of doing such violent things, as nothing but their Distance from *Great Britain* could, I think, induce them to venture upon. The last Governor of the *Ferseys*, who is lately dead, felt the Effects of such a Spirit, when in another Station, and rose to that Government by suffering with Decency and Dignity the

Outrages of one cloathed with that Authority ; but when he came himself to execute that Office, he shewed, what we very seldom see, that there are some Natures which even Power cannot corrupt ; for he behaved so well as to abolish the Memory of past Grievances, and to leave a perfect Model for his Successors in that Government.

7. The Country of *New York*, properly so called since it became *English*, is thus bounded, viz. by *Canada* on the North, *New England* on the East, the Ocean on the South, and the five Nations and *New Jersey* on the West, and is about two hundred Miles in Length from North to South, that is, from the Mouth of *Hudson's River* to the Lake of *Champlain* or *Corlaer*, and it might be extended two hundred Miles farther North if we possessed all the Country we claim, as far as the River *St. Laurence* : But the *French* having built Forts on the Lake *Champlain*, have, in a Manner, expelled us from the North Part of this Country ; the *English* only possess the Country South of that Lake at present, and this is exceeding narrow in most Places ; particularly between *Connecticut* Colony on the East, and *New Jersey* on the West, it is scarce twenty Miles broad. But to this we must add the Island *Mankatan*, which the City of *New York* stands upon, *Staten Island* and *Long Island*, all which lie before the Mouth of *Hudson's River*, and are comprehended in *New York Proper*.

This Province is divided into ten Counties, which going from North to South down *Hudson's River*, are *Albany*, *Ulster*, *Duchess*, *Orange*, *King's County*, *Chester*, *New York County*, *Queen's County*, *Suffolk County*, and *Richmond County*, which are pretty well replenished with Provisions and Farms, but have not many great Towns in them. The chief Towns are *New York City*, *Schenectida*, *Albany*, *Westchester*, &c. in all, or most of which Towns, are Missionaries, either Ministers, School-masters, or Catechists, sent over and maintained chiefly by the Society for the Propagation of the Gospel, who have taken most laudable Care in this respect. *New York City* is situated in 40 Degrees 40 Minutes North Latitude, and 47 Degrees 4 Minutes Western Longitude, at the South End of *York County*, being an Island at the Mouth of *Hudson's River*, about fourteen Miles long and two or three broad. As this Town stands upon an Eminence, and contains upwards of a thousand Houses well built with Brick and Stone, with a Wall and Forts, which serve as well for Ornament as Defence, there is scarce any Town in *North America* that makes a better, and but a very few so good an Appearance. It has also an excellent Harbour, furnished with commodious Quays and Warehouses, and employs some hundreds of Ships and Vessels in its foreign Trade and Fisheries. The public Buildings are the several Churches belonging to those of the Church of *England*, to the *Swedes* of the *Lutheran* Persuasion, to the *Dutch Calvinists*, the *French* Refugees, and the *English* Sectaries ; but the Church of *England* may well be looked upon as the established Religion, because the Constitution of the Government is the same as in *England* ; the rest, however, are tolerated, and capable of Posts in the Government, and of sitting in the House of Representatives, as I apprehend. The other public Buildings are the Town House, and that were their general Assemblies and Courts of Justice are held. As to their Fortifications, they are not, I doubt, capable of defending them against an *European* Enemy, any more than those in the rest of the Plantations, for this unanswerable Reason ; because they were some Years ago confessed to be so bad, that it was not fit to enquire into the State of them, lest Foreigners should be acquainted with our Weakness on that Side. There are, indeed, four hundred regular Troops sent from *England* to garrison this, and some other Towns of this Province ; of which two Companies always are, or ought to be, upon Duty in this City ; but admitting they were always compleat, and ever so well disciplined, this seems to be but a very inconsiderable Force to defend a Province of this Importance against an Invasion, unless their Country Militia be more to be depended upon than that of other Places.

As *New York* may be looked upon to be the frontier Garrison in the South against an Invasion from any mari-

time Power ; so *Schenectida Town* and Fort, in the County of *Albany*, twenty Miles North of the Town of *Albany*, may well be deemed their Frontier on the North against the *French* of *Canada*, and their *Indian* Allies, who, in the Year 1688, surprized and almost demolished the Town with the Works about it ; but they have since been repaired and enlarged, and Fort *Nicholson* and some other Forts erected ; in which, and in *Albany*, the rest of the regular Troops are quartered, for the Defence of that Frontier. *Albany* is a considerable Town, situated on *Hudson's River*, an hundred and fifty Miles North of *New York*, having a Fort erected for its Defence ; and here it is that the Sachems, or Kings of the five Nations, meet the Governors of our Northern Colonies, to renew their Alliances, and concert Measures for their Defence against their common Enemy, as has been intimated already. South-west of the Island and County of *New York*, lies *Staten Island*, being about ten Miles in Length and six in Breadth, and in it are a great many good Farms and Plantations, but not one Town that I can meet with in the Accounts of this Province.

Long Island lies East of *Staten Island*, and South-east of that of *New York*, opposite to the Colony of *Connecticut*, being an hundred and fifty Miles in Length, and generally about twelve in Breadth, and contains three of the Counties above mentioned, viz. *Queen's County*, *Suffolk County*, and *Richmond County* ; the chief Towns in *Queen's County*, are *Jamaica* and *Hempstead* ; in *Suffolk County*, the chief Town is *Oyster Bay*. The Town of *Richmond* gives Name to *Richmond County*, in which also is the Town of *Southampton*, in the South-east Part of the Island ; and there also are situated the Towns of *North Castle* and *New Windsor*. There is a celebrated Plain in the Midst of *Long Island*, sixteen Miles long, and four broad, to which they have given the Name of *Salisbury Plain* ; having, as it is said, as fine a Turf as that on *Salisbury Plain* in *Old England* ; and there being an excellent Breed of Horses in the Island, they have Races here every Season, to which the Gentlemen of *New England* and *New York* resort, as they do to *Newmarket* with us. There are other good Towns which lie in the County of *Westchester*, on the Continent, East of the Mouth of *Hudson's River*, the chief whereof are *Westchester* and *Rye*.

8. At the Time we became Masters of this Country, it was very thinly peopled, in comparison to what it is at present, and in no small Danger from the *French*, who settled at the back of it, and the *Indians* who were settled on its Frontiers, but, at present, it is safe enough from both ; the Number of People being vastly encreased, some say to fifty thousand, taking in all Sorts, so that the *French* apprehend Danger from us in their turn ; and the *Indians* think themselves very happy under our Protection ; and such Care has been taken to treat them with proper Kindness, as to preserve them in our Interest, as effectually as if by Force they had been reduced to be our Subjects. They supply the *English*, in the Summer, with Venison, Fish, and Fowl, very cheap. The Trade from *New York* to the Sugar Islands, particularly *Barbadoes*, which is very considerable, is in Corn, Flower, Bread, Beef, Pork, Pease, Bacon Gamons, Smoked Beef, Apples, Onions, Board and Pipe-staves, for which they receive, in return, Sugar, Molosses, Rum, Ginger, &c.

The *New York* Merchants drive also a very advantageous Trade with *Madeira* and the *Azores*, in Pipe-staves and Fish, for which they load their Ships back with Wine and Brandy ; and, generally speaking, there is scarce a more profitable Trade in the *British* Commerce. I am very well warranted in saying this, by what the Agents for the Colony alledged upon the Dispute with the Sugar Plantations, of which we have given so large an Account. They affirm that their Winters being severe they take off more of the Woollen Manufactures of this Kingdom, than all the Islands put together, *Jamaica* excepted ; and return more Gold and Silver to pay for them, which I never heard was denied. What they alledge in Justification of their Dealing with the *French* Settlements is singular enough, and deserves particular Notice. They say that they trade with what they have,

with those who will purchase it, and that while they do this they shall live well, clothe themselves in *English* Stuffs, and pay for them honestly; but if they are deprived of this Trade, the Profits of which enable them to pay for *English* Cloathing, they must endeavour to make use of their own Wool, and supply themselves as well as they can. If this should be prohibited, they affirm, they must absolutely go naked.

This perhaps is straining the Matter a little beyond the Truth; but beyond all Doubt this Colony is very useful to *Great Britain*, and in Conjunction with the other *Bread Colonies*, as they are called, the sole Source of our foreign Sugar Trade, as in a few Words may be shewn. The Sugar Islands must depend for their Subsistence, either upon the *British* Islands or upon these Colonies; since it is very certain, that if they were to draw all their Maintenance from hence, granting that to be possible, it would make Labour in those Islands so dear that no Sugar at all could be exported. On the other hand, if the People of *New York* should be forced to set up Manufactures of their own, this would employ so many Hands as must necessarily raise the Price of Provisions, and this consequently would have, in a great measure, the same bad Effect in making Labour dear in the Islands. It is therefore the Business of *Great Britain* to take care of both, and not to fide hastily with either.

But it is more especially our Business to prevent setting up Manufactures in the Plantations on the Continent; because this would injure the Trade between us and them, lessen the Shipping employed therein, decrease the Number of our Seamen, and detach those Colonies, in a great measure, from their Mother Country; which, as they are Evils not to be borne, so too much Diligence cannot be used to avoid them. As things stand at present, there is not a Colony in *America* which makes a better Figure than *New York*, or where the People seem to have a greater Spirit of Industry, or more hearty Affection to the *British* Nation; and it is universally agreed, that the City of *New York* is, in point of good Government and Politeness, at least equal, if not superior, to any thing we possess in that Part of the World: And as for the Inhabitants of the Inland Part of the Colony, they are our best Defence against the *French*, and are every Day gaining upon them in point of Trade with the *Indians*; which are certainly Circumstances that deserve the utmost Consideration, and ought above all others, to recommend this Plantation to the Protection and Favour of the *British* Government; which no doubt they will always meet with while they continue, as they have hitherto done, to study by every Method to deserve it.

9. The Countries now called the *Jerseys*, or, with greater Propriety, the *East* and *West Jerseys*, come next in our Way. These fell under the Dominion of the Crown of *Great Britain* by Conquest, at the same time with, and as making a Part of, *Nova Belgia*; and if to this Right acquired by War, or rather vindicated by it, for I conceive that the Dominion of this Country, which was all that we gained by the War, we had a very just Title to before; if, I say, there was any thing wanting to fill up the Measure of our Claim, it was certainly made up by the Peace, since an Equivalent was then given to the *Dutch*; so that both Nations had very good Reason to be content. In order, however, to obtain a just and clear Notion of the History and Condition of this Tract of Country, it is necessary to observe, that even the *Dutch* were not the original Inhabitants of it: The several Voyages that had been made for the planting of *Virginia*, made these Coasts very well known to Multitudes of *English* Seamen, and these being dispersed into different Parts of the World, carried the News of these rich and pleasant Lands in *America* along with them wheresoever they went, which inspired Strangers with strong Desires of occupying what we seemed to have abandoned, or the settling of which was beyond our Strength, at least at that Time.

The first *Europeans* that settled here were the *Swedes*, who had three Towns in this Province, *Christina*, called by the *Indians*, *Andastaka*, *Elsinbourg*, and *Gottenbourg*. Their Settlements were chiefly on the South-side of the River towards *Pensylvania*; opposite to which there is a

Place, to this Day called *Fort Elsinbourg*; but the *Swedes* made very little of their Plantation, and the *Dutch*, always industrious for their own Advantage, worked them so far out of it, that *Bergen*, the Northern Part of the *New Jersey*, was almost entirely new planted by *Hollanders*. King *Charles II.* gave this Tract, in his Grant of *Nova Belgia*, to the Duke of *York*; but the *English* never made any Settlement in it till several Years after they were in the Possession of that Province, and had mightily extended their Plantations.

The Duke of *York* having invested this Province, by the Name of *Nova Caneria*, in *John Lord Berkeley* and *Sir George Carteret*, they, or their Assignees, agreed to divide it into two Parts, denominated *East* and *West New Jerseys*, which remained two distinct Proprieties and Governments for many Years afterwards, as will be shewn: *East New Jersey*, or that Part of it which borders on *New York*, fell to *Sir George Carteret*; whose Family being of the Isle of *Jersey*, this Province on that Account took its Name from thence. *West New Jersey*, that Part of it which borders on *Pensylvania*, fell to the Lord *Berkeley*. This whole Province, containing the two *Jerseys*, is thus bounded; it has the main Ocean on the South-east, the River *de la War* on the West, *Hudson's River* on the East, and the main Land on the North; it lies between 39 and 40 Degrees North Latitude; extends itself in Length on the Sea Coasts, and along *Hudson's River*, one hundred and twenty Miles, and is almost as broad as long where it is broadest. We must now take some Notice of the Province as it was under the Division of *East* and *West*, and was divided into two Proprieties; of these, the largest and most inhabited, was *East Jersey*, which extended Eastward and Northward all along the Sea Coast and *Hudson's River*, from *Little Egg Harbour* to that Part of *Hudson's River* which is 41 Degrees North Latitude; and Southward and Westward was divided from *West Jersey* by a Line of Partition from *Egg Harbour*, or *Creswick River*, *Stony River*, and the South Branch of *Raritan River*: It extends in Length along *Hudson's River*, and on the Coasts, 100 Miles: In Breadth it is very unequal. It is divided into Counties, for which there was little Occasion, as *Bergen County*, *Essex County*, *Middlesex* on the North-side of *Raritan River*, and *Monmouth County* on the South. According to some Writers, *West Jersey* is divided from the other by a Line from North to South; contains the like Number of Counties, viz. *Burlington*, *Gloucester*, *Salem*, and *Cape May*.

These two Provinces are in the Hands of different Proprietors, who made many Assignments of their Rights, which would take up too much Room to enter into the Detail of here, and therefore we shall content ourselves with observing, that the Proprietors both of the *East* and *West Jerseys*, on the 22d of April 1702, put them into the Hands of Queen *Anne*, and they have been ever since governed by the royal Authority, having a Governor, Council, and Assembly; which Governor has Power of appointing a Deputy. We must also remark, that sometimes this Government has been granted by a separate Commission to the same Person intrusted with that of *New York*; but at present they are in different Hands. The chief Towns in the *Jerseys* are *Perth Amboy*, the Capital of the County of *Middlesex*, and of all *East Jersey*, pleasantly situated at the Mouth of *Raritan River*, and, had it been built according to the intended Model, would have been one of the finest Towns in *North America*; but Planters have not resorted to it, as was expected; notwithstanding it is so commodiously situated for Trade, that Ships of three hundred Tons may come up in one Tide, and lie before the Merchants Doors: But the Town of *Elizabeth*, situate to the North of it, flourishes much more, and may still be deemed the most considerable Town; in the County of *Bergen*, the Capital of the County of the same Name; *Elizabeth Town*, Capital of the County of *Essex*, and formerly of *Middlesex*; *Middleton*, *Shrewsbury*, and *Frehold*, in the County of *Monmouth*; *Burlington* or *Bridlington*, the Capital of the County of *Burlington*, and of all *West Jersey*: This Town is situate 40 Degrees 40 Minutes of North Latitude, on an Island in the Middle of the River *de la War*, to the Northward of *Philadelphia* in *Pensylvania*.

nia, and on the opposite Side of the River : The Houses are handsomely built of Brick, and laid out into spacious Streets, with commodious Quays and Wharfs, to which Ships of two or three hundred Tons may come up : It has also a handsome Market-place, a Town-house or Guild-hall, where the Courts of Justice were heretofore held, and two good Bridges over the River ; the one called *London-bridge*, and the other *York-bridge*, and having an easy Communication with *Philadelphia*, and the Ocean by the River *Salem*, which falls into *de la War Bay*, it is said to be one of the best Towns in *West Jersey*, whether we consider its Situation, Building, or Trade.

The Trade of the two *Jerseys*, as also the Soil and Conveniences of Rivers and Creeks, are much the same, except that *West Jersey*, by its Situation on *de la War River*, abounds more in the latter. The Country yields Plenty of all sorts of Grain, and the Inhabitants are said to have been so scrupulous, that they would not enter upon a new Plantation before they had purchased it of the *Indians*, which they did at no very dear Rate. It is computed that they are about sixteen thousand Souls, and about three thousand Men fit to bear Arms : There are not two hundred *Indians* in this Province, indeed neither here or elsewhere in the *British* Empire are the *Indians* of any Force unless in Conjunction with the *French* at *Canada*, or the *Spaniards* in *Florida*. The *Indians* are now rather an Help than an Hurt to the *English*, and here especially they wish there were more of them than there are, so useful have they found them. Besides Provisions for the Sugar Islands, the Inhabitants drive a Trade in Furs and Skins, and a little in Tobacco ; but it would be well if the Colonies cultivated that less, and Provision more, or any other Commodities that are fit for foreign Markets, which are much clogged by the Product of our Tobacco Plantations : They ship off Train-Oil, Fish, Corn, and some other Provisions for *Portugal*, *Spain*, and the *Canaries* : Ships may be built at *Perth*, but *New England* engrosses that Trade, and has the best and the most Materials for it ; and it must be owned that *New York* is the best Market *New Jersey* has, for the buying and selling any considerable Quantity of Goods of any kind.

This may possibly keep the *Jerseys* a little under, but notwithstanding the Difficulties they have had to struggle with, it is very certain, that within these twenty or thirty Years past they have increased prodigiously, and nothing can give a Check to it, except some sudden Suspicion of their dealing in Commodities and setting up Manufactures which may interfere with those of their Mother-Country. I do not deny that if there were any just Grounds for such a Suspicion, Care ought to be taken and some Remedy applied, but then this requires great Caution. In former Times, when we were less used to Trade, we encouraged all ; and provided our People were but employed, and Traders busy, we took it for granted that Profit must ensue, and so very probably it did. But the present Age is so unacquainted with the Cause of the Increase of our Riches, that they rather interrupt than encourage it, and instead of enlarging lay hold of some small trifling Things, which they think may touch their private Interest rather than promote the general Good ; and if they think any Commodity from the Plantations interferes with something we have at Home, some hasty Step is taken to prevent it ; so that for the Sake of saving one Penny we often debar ourselves of Things of a thousand Times the Value. This Misfortune will happen to any trading Nation, if the Persons who have the Regulation of the Commerce do not understand it well enough to distinguish nicely between those Channels by which the Riches flow in upon them and those that carry them away ; and therefore, when Things are carried into a wrong Channel by some of the Planters, Merchants are afraid to mention those Disorders for fear the Remedy should prove worse than the Disease. The Gentlemen that would judge of these Things ought to inform themselves what this Nation was one hundred and fifty Years ago, how we have increased in Riches since that Time, what Price Corn, Cattle and Land bore then, and what now ; and what concurring Circumstances have put us in so flourishing

a Condition, who were then so inconsiderable in Trade, that even *London*, the Metropolis of this Kingdom, made but a small Figure, to what *Bruges*, *Antwerp*, and other Hanse Towns did, as well as the great Cities in the *Mediterranean*.

If we examine into the Circumstances of the Inhabitants of our Plantations, and our own, it will appear that not one fourth Part of their Product redounds to their own Profit ; for, out of all that comes here, they only carry back Cloathing and other Accommodations for their Families, all which is of the Manufacture and Merchandize of this Kingdom. If there is any thing to spare it is laid up here, and their Children are sent home to be educated ; if there is enough to support the Family, they come here, and only an Overseer is left upon the Plantation to direct, and the whole Produce is remitted home, and if enough to purchase an Estate, then it is laid out in *Old England*. All these Advantages we receive by the Plantations, besides the Mortgages on the Planters Estates, and the high Interest they pay us, which is very considerable ; and therefore very great Care ought to be taken in regulating all Affairs of the Colonies, that the Planters be not put under too many Difficulties, but encouraged to go on cheerfully. They are born with us, or the Descendants of such, and we know nothing but the Want of the Means to live at home keeps them abroad. There are very few trading or manufacturing Towns in the Kingdom, but have some Dependence on the Plantation Trade. It is true, these, and in general all the Northern Colonies, have not Commodities and Products enough to send us, in return for purchasing their necessary Cloathings, &c. but are under very great Difficulties, and therefore any ordinary Sort sells with them ; and when they are grown out of Fashion with us, they are new-fashioned enough there ; and besides those Places are the great Markets we have to dispose of such Goods, which are generally sent at the Risk of the Shop-keepers and Traders of *England*, who are the great Exporters, and not the Inhabitants of the Colonies, as some have imagined. As the Colonies are Markets for those Sorts of Goods, so they are Receptacles for young Merchants who have not Stocks of their own, and therefore all our Plantations are filled with such who receive the Consignments of their Friends from hence ; and when they have got a sufficient Stock to trade with, they return home, and other young Men take their Places, so that the continual Motion and Intercourse our People have into the Colonies, may be compared to Bees in a Hive, which go out empty, but come home loaded ; by which Means the Foundations of many Families are laid. The Numbers of Sailors, and other Tradesmen, who have all their Dependence upon this Traffic, are prodigiously great.

Our Factors, who frequent the Northern Colonies, being under Difficulties to make Returns for such Goods as they dispose of, what Gold, Silver, Logwood, and other Commodities they trade for upon the *Spanish* Coast, is sent home to *England*, as also Oil, Whale-Fins, and many other Goods ; likewise another great Part of Returns is made by Ships built there, and disposed of in the Streights, and other Parts of *Europe*, and the Money remitted to us. Now all those Ships are called *New England* Ships, and our Factors, after they undertake any Business, are no longer called *Englishmen*, but *New Englanders*, and the Ships they build, we are informed, are registered as *New England* Ships. I shall therefore humbly recommend it to such Gentlemen as are Guardians of the Trade of the Nation, that our own Interest is not mistaken for those of the Planters ; for every Restraint and Difficulty put upon our Trade with them, makes them have recourse to their own Products, which they manufacture, a thing of great Consequence to us, and ought to be guarded against ; for if they are supplied with their own Manufactures, a great Part of the Advantages we should otherwise receive is cut off ; and therefore, as it is elsewhere observed, if Care is taken to find them Employment, and turn their Industry another Way, now they are in their Infancy this may with a very little Trouble be avoided.

There is another Advantage we receive by our Plantations,

tions, which is hardly so much as thought of, I mean the prodigious Increase of our Shipping by the Timber Trade, between *Portugal*, &c. and our Plantations, which ought to have all possible Encouragement, for by it we have crept into all the Corners in *Europe*, and become the common Carriers in the *Mediterranean*, as well as between the *Mediterranean*, *Holland*, *Hamburg*, and the *Baltic*, and this is the Cause of so great an Addition to our Shipping, and the Reason why the *Dutch*, &c. are so exceedingly sunk. But if ever a Stop should be put to the building of Ships in *New England*, &c. and carrying our Timber from thence, we should soon sink in our Navigation, and that of the *Dutch* flourish in its former Height and Grandeur. The Numbers of *English* Ships we so often read of, that are at *Lisbon*, or the *Streights*, is a sufficient Demonstration of the Truth of this; doubtless a great many of these Ships are laden upon Account of the *Dutch*, for nothing is more common than their hiring our Ships (which discharge their Loading in the *Streights*) to transport their Goods from *Spain*, &c. to *Amsterdam*, and other Places.

We have a great many young Men who are bred to the Sea, and have Friends to support them; if they cannot get Employment at home they go to *New England*, and the Northern Colonies, with a Cargo of Goods, which they there sell at a very great Profit, and with the Produce build a Ship, and purchase a Loading of Lumber, and sail for *Portugal* or the *Streights*, &c. And after disposing of their Cargoes, they frequently ply from Port to Port in the *Mediterranean*, till they have cleared so much Money, as will, in a good Part, pay for the first Cost of the Cargo carried out by them; and then, perhaps, sell their Ships; come home; take up another Cargo from their Employers; and so go back and build another Ship: By this Means multitudes of Seamen are brought up, and upon a War the Nation is better provided with a great Number of Sailors, than hath been heretofore known. Here the Master becomes Merchant also, and many of them gain, by this Lumber Trade, great Estates; and a vast Treasure is thereby yearly brought into the Kingdom, in a Way new and unknown to our Fore-fathers, and, indeed, it is gaining the Timber Trade (heretofore carried on by the *Danes* and *Swedes*) our Plantations being nearer the Markets of *Portugal* and *Spain* than they are. Those Advantages have made some People think that though we esteem *New England*, and the Northern Colonies, of small Advantage to us, yet if things were truly stated, they are as profitable as most other of our Plantations, or, which amounts to the same thing, the Cause of the Profits we reap from those other Colonies, which, however, coming to us immediately from thence, seem to enrich us more than they really do, at the same Time that they hide from us the true Sources of their own Wealth. But,

We will now quit this Subject, in order to follow the Thread of our History, which leads us next to speak of the settling the *Bahama Islands*, Places that have not hitherto answered in any Proportion to the great Expectations that were raised upon the first Grant of them; tho' this is certainly so little to be ascribed to them, that about twenty-five Years ago there was a general Disposition in the most knowing People of this Kingdom, to attempt a new Settlement there, which degenerating into a Bubble, all Hopes of that kind seem to be lost. Our Business, however, is not with the modern, but with the antient, State of these Islands; of which, and of the Motives for settling them, we shall give the clearest Account we can.

10. The *Lucayos*, or *Bahama Islands*, are situated in the *Atlantic Ocean*, and to the North of the Island of *Cuba*, stretching from the North-east to the South-west, between 21 and 27 Degrees of Northern Latitude, and between 73 and 81 Degrees of Western Longitude. The Island of *Bahama*, which communicates its Name to the rest, is seated in the Latitude of 26 Degrees 30 Minutes, at the Distance of about twenty and thirty Leagues from the Continent of *Florida*. It is about fifty Miles in Length, but very narrow, scarce any where sixteen, and in many Places not half so broad, but very pleasant

and fruitful; the Air temperate and serene; the Soil remarkably rich, and the Country every where abounding with Brooks and Springs of fresh Water.

Though these Islands were the first Fruits of the new World, *Columbus* arriving first at *Guanahani*, which is one of them, and to which he gave the Name of *St. Salvador*, yet the *Spaniards* never thought of settling there, but contented themselves with extirpating the native Inhabitants; a most barbarous Proceeding surely, since at this Time they were the best People of any Part of all *America*; so that they wantonly murdered many thousands to no purpose in the world. As these Islands lie pretty much out of the Course of Ships bound to the Continent of *America*, it was long before we had any Notice of them; but in 1667 Captain *William Sayle*, being bound to *Carolina*, was forced by a Storm amongst these Islands, which gave him an Opportunity of examining them carefully, particularly a large Island, to which at that Time he gave his own Name, and is that which has been since known by the Name of *New Providence*.

Upon his Return to *England*, he acquainted the Proprietors of *Carolina*, with the Situation and Circumstances of these Islands; observing, that in Case they were settled, they might prove a great Benefit to this Nation, and at the same Time a constant Bar and Check to the *French* and *Spaniards*, in case of a Breach with either or both of those Nations. These Reasons being suggested to King *Charles the II.* his Majesty was graciously pleased to make a Grant of the *Bahama Islands*, between the Latitudes of 22 and 27 Degrees, to the following Proprietors, viz. *George Duke of Albemarle*, *William Lord Craven*, *Sir George Carteret*, *John Lord Berkeley*, *Anthony Lord Ashly*, and *Sir Peter Colliton*, whose Heirs or Assigns are, as I take it, possessed of these Islands at this Day; by which I mean the Soil and Property, for as to the Government, it has been for some time in the Hands of the Crown; upon a Supposition that this Change would render these Islands more beneficial to the Nation, as in Process of Time it very probably may; but hitherto they have not been of any great Service to the Proprietors, the Crown, or the Nation; as we shall shew, by entering a little into their History, from their first Settlement to the present Times, for Reasons that in this History will appear.

Providence Island lies in the Center of some hundreds of Islands, some of them many Miles in Length, others no bigger than Knolls or little Rocks, rising above Water; so that one may imagine it must be very dangerous for Ships to be forced amongst them in Tempests. The most considerable Profit made by the Inhabitants of *Providence*, was by the Misfortune of such as were shipwrecked, or such as, in a Winter Voyage for the Continent of *America*, were driven to the *Bahama Islands*, and put into *Providence* for Provisions; for want of which, after they had lain a long while beating off the Islands, they used to be in great Distress. 'Tis true, this Island had little or none but what came from *Carolina*; however, the Traders here kept Store-houses to supply those that wanted, and they were a great Relief to the unfortunate Mariners, of whom we are speaking. The Isle of *Providence* lies in 25 Degrees North Latitude, is twenty eight Miles long, and eleven Miles broad, where it is broadest.

It had the Name of *Providence* given it by Captain *Sayle*, after he had a second time been driven upon it, when he was bound for the Continent. The first Governor that was sent thither by the Proprietaries, was Mr. *Chillingworth*: The Time of his going there was about the Year 1672; several People went from *England*, and the other Colonies, to settle there, and living a licentious Life, they were impatient under Government; Mr. *Chillingworth* endeavouring to bring them to Reason, they assembled tumultuously, seized him, and shipped him off for *Jamaica*, and lived every Man as he thought best for his own Pleasure and Interest. The Proprietaries found they had got an unruly Colony to deal with, and it was a very small Encouragement for any Man to put himself into their Hands, after the Treatment Mr. *Chillingworth* met with from them.

However, six or seven Years after, the Lords Proprietaries

aries made Mr. *Clark* Governor, whose Fate was worse still than his Predecessor's; for the *Spaniards*, at that Time, being jealous of every new Colony of the *English* towards the South, came upon them in *Providence*, destroyed all their Stock which they could not, or would not, carry off; and burnt several Houses that were upon the Place. The Inhabitants deserted it after this, and removed to other Colonies. Mr. *Trott*, one of Governor *Clark*'s Successors, always asserted, that the *Spaniards* roasted Mr. *Clark* on a Spit, after they had killed him; but perhaps that is said to increase the Terror of the Story; but it is certain they killed him, and that after this Invasion the Island was uninhabited till about the Time of the Revolution, when several Persons removed thither from *Europe* and the Continent; among whom was Mr. *Thomas Bulkley*, who has printed a large Account of his Sufferings there, during the arbitrary Government of one *Cadwallader Jones*, whom the Lords Proprietaries made Governor upon this second Settlement of *Providence* in the Year 1690, where he arrived on the 19th of *June*; but his Administration proved very unfortunate both for himself and the Colony, in which there arose such Troubles and Diffensions, that he was once deposed and made Prisoner, and again restored.

Nicholas Trott, Esq; succeeded Mr. *Jones* in his Government, and he built a Fort in the Town of *Nassau*; notwithstanding which, the famous Pirate *Avery*, forced the Inhabitants to let him have what Victuals he wanted; but some Time after, Governor *Trott* put the Island of *Providence* into so good a Condition, that though the *French* made several Attempts, yet they were always obliged to retire with Loss. In 1697 *Nicholas Webb*, Esq; was sent to succeed Mr. *Trott*, and he held the Government about three Years; in which Time these Islands were in a better Condition than they have ever been since; and there was, in his Time, in *Providence* and the adjacent Islands, near one thousand Inhabitants: Some Tobacco was planted; a Sugar Mill set up, and other Improvements made: But, as we shall see hereafter, these were soon destroyed.

To Mr. *Webb* succeeded *Elias Hascott*, Esq; who was so little liked by the Inhabitants, that they took upon them to seize him, and put him in Irons; and, having sent him away, assumed the Liberty of chusing a Governor for themselves, one *Elias Lightgood*, Esq; in whose Time the Settlements were destroyed; for, in *July* 1708, the *Spaniards* and *French*, from *Petit Guaves*, landed, surprized the Fort, took the Governor Prisoner, plundered and stripped the *English*, burnt the Town of *Nassau*, all but Mr. *Lightgood*'s House, together with the Church, spoiled the Fort, and nailed up the Guns; they carried off the Governor, and about half the Blacks, the rest saved themselves in the Woods; but in *October* they came again, and picked up most of the Negroes. Mr. *Lightgood* having procured his Liberty, by Exchange or Ransom, came to *Carolina*, and going off thence in a Vessel, on some Adventure, was never since heard of. The *English* Inhabitants of the *Babamas*, after this second Invasion, thought it in vain to stay longer; so they removed, some to *Carolina*, some to *Virginia*, and some to *New England*, and other Places.

The Proprietors having appointed one Mr. *Birch* to go over Governor to *Providence*, who, not having heard of the Desertion of the Inhabitants, went thither; but finding it a Desert, he did not give himself the Trouble to open his Commission: He remained there two or three Months, and was all that while forced to sleep in the Woods; after which he returned back, and left the Place uninhabited. This and the other *Babama* Islands, were looked upon to be so necessary for the Security of our Trade in the *West Indies*, that the Parliament of *England* have not thought them unworthy of their Care, as well to have them cleared of Pirates, as to defend them against both *Spaniards* and *French*, who find their Situation very convenient to annoy, or befriend, their Commerce. In Queen *Anne*'s War both *Spaniards* and *French*, over-ran and plundered the *Babama* Islands twice. Upon which, in *March* 1714, the House of Lords addressed her Majesty, that the Island of *Providence* might be put in a Posture of

Defence. Their Lordships observing it would be of fatal Consequence, if the *Babama* Islands should fall into the Hands of an Enemy, they therefore prayed her Majesty to take the said Islands into her Hands, and give such Order for their Security, as in her royal Wisdom she should think fit; but nothing was done. And for the future Guidance of such as have it in their Power to do good Offices for our *American* Colonies, it is not improper to remember that their Lordships, four Years after, took notice of that Neglect in an Address to his late Majesty King *George*; in which they say there were not any the least Means used in Compliance with that Advice, for securing the *Babama* Islands, and that then the Pirates had a Lodgment with a Battery on *Harbour Island*; and that the usual Retreat, and general Receptacle for the Pirates, was at *Providence*. Hereupon his Majesty was pleased to give Directions for dislodging these Pirates, and making Settlements, and a Fortification for its Security and Defence.

Pursuant to this Address, Captain *Woods Rogers* was appointed Governor, the same Person which went with the Duke and Dukes of *Bristol* to the *South-Sea*, and made a prosperous Voyage, eight Years before. He sailed for *Providence* in *April* 1718, taking with him a naval Force for subduing the Pirates; in the mean Time Colonel *Bennet*, Governor of *Bermudas*, sent a Sloop to that Island, requiring them to surrender themselves, pursuant to the late Proclamation. The Pirates who were then on the Island, very gladly accepted of the Mercy offered them thereby, and promised to surrender themselves as soon as they could get Passage to the *English* Colonies; adding that they did not doubt but their Fellows, who were at Sea, would gladly do the same after their Example. Accordingly Captain *Henry Jennings*, and fifteen others, immediately followed the Sloop to *Bermudas*, and surrendered themselves; and Captain *Lassie*, and Captain *Nichols*, with a good Number of their Pirates, sent Word that they would also surrender. The abovementioned Proclamation was brought hither by Captain *Peers*, in the *Phoenix* Frigate, then lately stationed at *New York*: Besides the above, Captain *Hernigold*, Captain *Burges* surrendered, and in the whole, as many of their Men as amounted to one hundred and fourteen, which were followed by many more: However, Piracy was not suppressed, nor did Capt. *Rogers* answer the Expectations of those that employed him; though at his Arrival here he seemed very zealous in the Service he was sent for.

He arrived at *Nassau*, in *Providence*, in *July* 1718. *Vane*, one of the Captains of the Pirates, knowing what Errand he came upon, to reduce those Robbers by the Proclamation, or by Force, caused a *French* Ship of twenty-two Guns, which he had taken, to be set on fire, intending to make use of her as a Fire-ship, to burn the *Rose* Frigate, which came with Governor *Woods Rogers*: And, indeed, the *Rose* would have been in much Danger, had she not got off in Time, by cutting her Cables. But *Vane*'s bold and rash Attempt could not have secured him; for besides the *Rose*, there was at hand the *Milford* Man of War, and another, aboard which was the Governor. These were soon after seen standing in for the Harbour of *Nassau*, upon which *Vane*, and about fifty of his Men, made off in a Sloop. The Governor sent a Sloop of sufficient Force after them, but the Pirates got off; and the *Milford*, and the other Man of War run aground. The 27th of *July* Mr. *Woods Rogers* came on Shore, took Possession of the Fort, and caused his Majesty's Commission to be read in the Presence of the Officers, Soldiers, and about three hundred People, whom he found there at his Arrival; which had been almost daily exercised in Arms for their Defence, in Case of Attack by the *Spaniards* or *French*. As for the Pirates, they were not in so great Fear of them, most of them having been themselves of the Fraternity, who had surrendered and made their Peace with the Government. *Woods Rogers* brought with him above one hundred Soldiers, and this joint Force which was, and might have been still farther, recruited, being sufficient to secure the *Babama* Islands, against any Enterprize of the *French* and *Spaniards*; Mr. *Rogers* set himself to regulate the Government, and restore Order in it, which had been neglected several Years past.

Of the Adventurers who came with him, six were nominated to be of the Council, as also six of the Inhabitants, who had never been Pirates themselves; and thus the Appearance of Government was renewed. As soon as the Governor and Council had settled the Board, about two hundred of those that had been Pirates surrendered themselves to them, had Certificates of their Surrender, and took the Oaths of Allegiance, as did, voluntarily, the greatest Part of the Inhabitants of *Providence*; wherein, a few Years after, were computed to be one thousand five hundred Souls, out of these were formed three Companies of Militia, under Officers of their own Island; these Companies took their turn every Night in the Town Guard at *Nassau*, and the independent Company was always upon Duty in the Fort here, and another of eight Guns erected at the easternmost Entrance into the Harbour.

It was by these Methods that the Face of Affairs, in this Part of the World, was entirely changed; the Town of *Nassau* rebuilt; a regular Force established in *Providence*, and Plantations so laid out, that the Country looked like an *English* Settlement. Within a short Time after, the neighbouring Island of *Eluthera* was settled likewise, upon which, about sixty Families fixed themselves, erected a small Fort for their Defence, and raised a Company of Militia under their Deputy-Governor, Mr. *Holmes*, by whose prudent Management Matters were chiefly brought to bear; the like was done in *Harbour Island*, where the Plantation soon grew more considerable, and a larger Fort was built for the Protection of the Inhabitants. Captain *Woods Rogers* returning to *England*, was succeeded in his Government by Captain *Fitz-williams*, in whose Time an independent Company, that had been sent thither, mutinied, which had like to have produced some very fatal Consequences, but was happily suppressed; and by the Moderation of the Governor, only a few of the most Guilty were made Examples.

This happened in the Year 1736, from which Time these Islands have been improving, though slowly. It may well be wondered at by considerate Persons, that considering the Number of poor People and Men out of Employment, which before the War pestered the Streets of this City, and of all the great Towns in the Kingdom; some Methods were not taken for sending them over to these Islands, which would have been a Relief to the People here, afforded them a comfortable Subsistence, and have contributed to augment the Strength and increase the Riches of this Nation. I shall content myself with just hinting this as it falls in my Way, and proceed to the next Corporation formed for enlarging our Commerce within the Period of Time assigned to this Section.

II. This was the *Hudson's Bay Company*, erected by King *Charles* the II^d. upon the following Occasion: Monsieur *Radison*, and Monsieur *Gooselier*, two *Frenchmen*, meeting with some *Savages* in the Lake of *Assimponals* in *Canada*, they learnt of them that they might go by Land to the Bottom of the Bay, where the *English* had not yet been; upon which they desired them to conduct them thither, and the *Savages* accordingly did it. The two *Frenchmen* returned to the upper Lake the same Way they came, and thence to *Quebec*, the Capital of *Canada*; where they offered the principal Merchants to carry Ships to *Hudson's Bay*, but their Project was rejected; thence they went to *France*, in Hopes of a more favourable hearing at Court; but after presenting several Memorials, and spending a great deal of Time and Money, they were answered as they had been at *Quebec*, and their Project looked upon as chimerical. The King of *England's* Ambassador at *Paris*, hearing what Proposals they had made, imagined he should do his Country good Service by engaging them to serve the *English*, who had already Pretences to the Bay, persuaded them to go for *London*, where they met with a favourable Reception from some Men of Quality, Merchants, and others, who employed Mr. *Gillam*, a Person long used to the *New England* Trade, to perfect this Discovery.

He sailed in the *Nonesuch* Catch, in the Year 1667, into *Baffins Bay*, to the Height of 75 Degrees, and from

thence Southward to 51 Degrees, where he entered a River, to which he gave the Name of *Prince Rupert's River*; and, finding the *Savages* disposed to a friendly Commerce, he erected a small Fortress there, which he stiled *Charles Fort*. The Success of this Expedition was so remarkable, that the Persons concerned in fitting out this Vessel, upon the Return of Mr. *Gillam*, applied themselves to King *Charles* the II^d. for a Patent, who accordingly granted them one, dated the 2d of May, in the 22d Year of his Reign, A. D. 1670. The first Directors of what was called the *Hudson's Bay Company*, were *Prince Rupert*, Sir *James Hayes*, Mr. *William Young*, Mr. *Gerrard Weymans*, Mr. *Richard Craddock*, Mr. *John Letton*, *Christopher Wren*, Esq. and Mr. *Nicholas Haywood*.

The Bay lies from 64 Degrees North Latitude, to 51 Degrees, and is 10 Degrees or six hundred Miles in Length. The Mouth of the Straights lies in about 61 Degrees North Latitude, and is six Leagues over. At the Mouth is an Island called *Resolution*; *Charles Island*, *Salisbury Island*, and *Nottingham* are in the Straights, and *Mansfield Island* is in the Mouth of the Bay. *Hudson's Straights*, which leads to the Bay, are about one hundred and twenty Leagues in Length; the Land on both Sides inhabited by *Savages*, of whom we have little or no Knowledge. The South Coast is known by the Name of the *Terra de Labrador*, the North by as many Names as Men of several Nations have been there, and pretend to the Discovery. On the West Side of the Bay the *English* made a Settlement, built a Fort at *Port Nelson*, and all that Country goes by the Name of *New South Wales*. The Bay here is called *Button's* and *Hudson's Bay*, which is broadest in this Place, and may be near one hundred and thirty Leagues. On the other Shore, or the Coast of *Labrador*, lie several Islands, called the *Sleepers Isles*, and the *Baker's Dozen*. The Bottom of the Bay, by which we understand all that Part of it from *Cape Henrietta Maria*, in *New South Wales*, to *Redonda*, below *Prince Rupert's River*, is about 80 Leagues long, and all the Way between 40 and 50 Leagues over. Here are several Islands to which the first Adventurers gave the Names of some great Men in *England*, or some that employed them; as *Lord Weston's Island*, *Sir Thomas Roe's Island*, *Charleton Island*, and others.

The two opposite Shores are called the *East Main* and *West Main*, the former is *Labrador*, and the latter *New South Wales*. The Continent at the bottom of the Bay is, by the *French*, pretended to be Part of *New France*; and, indeed, to cross the Country from *St. Margaret's River*, which runs into the River of *Canada*, to *Rupert's River*, at the bottom of *Hudson's Bay*, is not above one hundred and fifty Miles. At *Rupert's River* the *English* built their first Fort, which they called *Charles Fort*. They never had any Towns or Plantations here, but live within their Forts in little Houses or Huts, wherein the Builders consider nothing but how to defend them from the Cold and Rains, though they are not so much disturbed by the latter as by the former. There's an Island about five or six Leagues from the *West Main* called the little *Rocky Isle*, it being a mere heap of Rocks and Stones, with some small Brush-wood growing upon it; it is supposed to overflow with great North-west Winds, which make a high Tide all over the Bay; in this Isle is plenty of Gulls and Sea Swallows; about three Miles from the South-south-east Part of the Island lies a dangerous Reef of Sand, which is dry at low Water. *Charleton Island* is a dry white Sand, covered over with a white Moss, full of Trees, Juniper and Spruce, though not very large. This Isle affords a beautiful Prospect to such as are near it in the Spring, after a long Voyage of three or four Months, in the most uncomfortable Seas in the World, occasioned by the vast Mountains of Ice which drive in the Bay and Straights; against which, if Ships happen to strike, they are dashed in Pieces, as certainly as if they ran against Rocks; for, indeed, they are Rocks petrified by the Violence of the continual Frosts. To see one Day the Shore on the *West Main* bare, the Mountains covered with Snow, and Nature looking as if frozen to Death; and the next to behold *Charleton Island*

Island spread with Trees, and the Branches making, as it were, a green Tuft of the whole; is a Change capable of giving the greatest Pleasure, after the Fatigues of an intolerable Winter-Voyage.

The Air, even at the Bottom of the Bay, though by the Latitude it is nearer the Sun than *London*, being in 51 Degrees, is excessive cold for nine Months; the other three Months very hot; but on a North-west Wind the Soil on the *East Main*, as well as the West, bears no manner of Grain: Some Fruits, Gooseberries, Strawberries, and Dewberries, grow about Prince *Rupert's River*. The Commodities for Trade here are Guns, Powder, Shot, Cloth, Hatchets, Kettles, Tobacco, &c. which the *English* exchange with the *Indians* for Furs, Beavers, Martins, Foxes, Moose, and other Skins, and Furs. The great Profits acquired by this Trade, and the Prospect of ingrossing it, wholly engaged the new Company to prosecute their Measures vigorously, and to do all that lay in their Power to settle a good Correspondence with the Natives, whom they found very tractable in that Point, and willing to do any thing they could expect from them upon reasonable Terms; for the *Indians* about *Rupert's River*, and other Places in the Bay, are more simple than the *Canadians*, who have had longer Commerce with the *Europeans*: They are generally peaceable, and not given to quarrel, either amongst themselves or others, except the *Nodways*, a wild, barbarous People on the Borders of *Hudson's Straights*, who sometimes, in slight Parties, make Incursions on the other *Indians*, and having murdered eight or ten, return in triumph.

The *Indians* of certain Districts, which are bounded by such and such Rivers, have each an Okimah, as they call him, or Captain, over them, who is an old Man, considered only for his Prudence and Experience: He has no Authority but what they think fit to give him upon certain Occasions; he is the Speech-maker to the *English*, as also in their own Councils, when they meet every Spring and Fall to settle the Disposition of their Quarters, for Hunting, Fowling, and Fishing: Every Family have their Boundaries adjusted, which they seldom quit, except they have no Success there in their Hunting, and then they join in with some Family who have succeeded. Their Notions of Religion are but very slender; they say, there are two Monetoos, or Spirits, the one sends all the good Things, and the other all the bad. Their Worship consists in Songs and Dances at their Feasts, in Honour of their Monetoos that have favoured them; but if they are sick or famished, they hang some little Bauble which they set a Value upon, on the Top of a Pole near the Tent, to pacify the Spirit offended, as they conceive.

But to return to our History: In the Year 1670 the Company sent over *Charles Bailey*, Esq; as their Governor, who with Mr. *Radison* settled at *Rupert's River*, and another Factory was established at *Fort Nelson*. Some Years after, *William Lydall*, Esq; was sent to succeed Mr. *Baily*, and one Mr. *Bridger* was sent to *Fort Nelson*. In 1683, *Henry Serjeant*, Esq; was made Governor at *Rupert's River*, with Orders to be very careful of the *French*, who began now to shew themselves very jealous of the Trade carried on by the *English* Company with the Natives; and at the same time they were not a little perplexed by some bad Practices among their own Servants; who considering the Hardships they endured in that miserable cold Country, thought they might make bold with some Part of the Profits which were entirely owing to their Labour and Negotiations with the Natives; for the Company, by their Governors and Agents, made such Contracts with the Captains, or Kings, of Rivers, or Territories where they had Settlements for the Freedom of Trade there, exclusive of all others, that the *Indians* could not pretend they had encroached upon them. These Contracts were as firm as the *Indians* could make them by such Ceremonies as were most sacred and obligatory among them.

In the Year 1686 we find the Company in possession of five Settlements, viz. *Albany River*, *Hayes Island*, *Rupert's River*, *Fort Nelson*, and *New Severn*: Their Trade at each of them was very considerable. From *Albany River* they had generally three thousand five hundred Beavers

a Year, and by Mr. *Serjeant's* great Care and Fidelity, their Commerce increased so much, that the *French* began to be afraid all the upland *Indians* might be drawn down to the Bay. They knew they could do any thing with King *James II.* who then reigned in *England*; and therefore they resolved to drive the *English* out of all their Places in the Bottom of the Bay. First they took *Hayes Island*, and then the Fort on *Rupert's River*. The *French* Company at *Canada* procured a Detachment of Soldiers to be sent, under the Chevalier *de Troyes*, who came over Land from *Quebec*, and in a Time of profound Peace committed these Acts of Hostilities. It is worth observing that the *French* have so good an Opinion of their *American* Colonies, as to take not only all lawful, but even unlawful, Means, to preserve and enlarge them, as contemptible as they are in themselves; whereas the *English*, who, next the *Spaniards*, have the richest Plantations in this Part of the World, have been as negligent of them as if they were not worth keeping.

The 8th of *July*, the Chevalier *de Troyes* came before the Fort at *Albany River*, where the Governor, Mr. *Serjeant*, then resided. Two *Indians* having informed him of their having surprised the Forts at *Hayes Island* and *Rupert's River*, and had brought with them the great Guns from these Places, the Governor did all that was in his Power to defend the Place, but was not able to keep it above a Week, as appears by the Articles of his Surrender, dated *July* the 16th, 1686, which Articles were but indifferently kept. In 1693, the *Hudson's Bay* Company, being assisted by the Government, retook all the Forts and Factories of which the *French* had deprived them in Time of Peace; but they were soon after driven out of them again by the *French*.

In the Year 1696, the Company applied themselves to King *William*, representing their own Incapacity to maintain themselves against the *French*, and praying the Assistance of the Crown for their Support: Upon which two Men of War were ordered to their Assistance, under the Command of Captain *Allen*, who coming into the River *Hayes* sent to summon all the Forts to surrender; and the *French* Governor, finding he could not defend them against the *English*, capitulated; and on the 2d of *August*, in the same Year, surrendered *Albany Fort* upon certain Articles, the chief of which were, That all those in the Fort, as well *French* as *Indians*, and one *Englishman*, the Governor's Servant, should have their Lives and Liberties; and, That no Harm or Violence should be done to their Persons, or any thing that belonged to them: That they should march out with their Arms, Drums beating, Colours flying, Match lighted at both Ends, Ball in Mouth, and carry with them the two Guns brought from *France*: That they should all embark with their Cloaths, and Goods, without being visited or pillaged in any Thing; and, if they met with any *French* Vessels, there should be a Truce between the *English* and them; and the said *French* Vessels should be permitted to take aboard the Persons that came out of the same Fort, with all that belonged to them. These Conditions were a little too honourable to grant, tho' they were complied with. Captain *Allen* took the Governor, and some of his Men, aboard his own Ship, the *Bonadventure*; some he put aboard the *Seaford*, and the rest aboard a Merchant-man, called the *Doring*.

In his Return he fought the *Mary Rose* Frigate, then a *French* Privateer of fifty Guns, and was killed in the Engagement; which gave the *Frenchman* an Opportunity to bear away. As to the other two Forts, they followed the Fate of *Albany*, and Mr. *Knight* was restored to the Government of *Fort Nelson*. Mr. *Knight* had served Mr. *Serjeant* while he was Governor of *Fort Albany*, and was acquainted with the Trade. In the Year 1697, the *Hampshire* Frigate, and *Owners Love* Fireship, two of the King's Ships, were lost in this Bay, and all the Men drowned. Indeed the Ice rendered it so dangerous that the Commerce seemed not to be worth the Risque that was run for it. Whether those two Ships run against those frozen Mountains that float in the Sea, or foundered, is not known; but 'tis certain they were lost, and that all the Men perished; which was the Cause of some Inconvenience.

venience. After this Time it appears very clearly, that the Trade of the *Hudson's Bay* Company declined extremely, but whether from any Advantage gained in Trade by the *French*, or from any ill Management of their Affairs at home or abroad, I cannot pretend to say. This, however, is certain, that in the next general War the *French* had renewed their Attacks upon the Settlements of the *Hudson's Bay* Company, and this with such Effect, that they soon left them nothing but *Fort Albany*, which very well accounts for the low State of their Trade to the End of the War, and some Time after. At the making the Treaty at *Utrecht*, great Care was taken of this Company, who by the 10th and 11th Articles have every thing restored to them that had been taken from them, and an equitable Satisfaction stipulated for their Losses. Since which Time the Trade of the Company has wonderfully encreased, insomuch that it became, at least, treble to what it was at the Time that Peace was made, and is still in a very flourishing Condition.

It is very natural for such as reap the Benefit of any Branch of Trade, to be as silent and secret about it as possible, which is the Reason that till within these few Years both the Country and the Commerce of *Hudson's Bay* were very little, and indeed scarce at all, known here, though carried on entirely by this Nation. As for the *French*, they had so little Notion of it, that they treated all Mr. *Iberville's* Projects, upon this Subject, as mere Chimeras; and when a Memorial was presented to the Regent Duke of *Orleans*, setting forth the great Dangers the *French* Settlements in *North America* must run, if the *English* should ever lay open this Trade, or think of transporting their Felons into this Part of the World, it was looked upon as a mere Vision. But since that Time they are become much better acquainted with this Part of *America*, as appears from the Account I have already given from one of their Authors.

But as to the Product and present Condition of this Country, the best Account I ever saw of it, is that published by Mr. *Dobbs*, from the Mouth of one experimentally acquainted with it, and from whom I shall borrow as much as I think may suffice to give the Reader a general Notion of its Nature and Importance. "The *Indians* being obliged to go ashore every Day to hunt for Provisions, delays them very much in their Voyages; for their Canoes are so very small, holding only two Men and a Pack of one hundred Beaver Skins, that they cannot carry Provisions with them for any Time. If they had larger Canoes, they would make their Voyages shorter, and carry many more Beavers to Market, at least four times as many, besides other Skins of Value, which are too heavy for their present Canoes; this, and the high Price of the *European* Goods, by the Company in exchange, discourages the Natives so much, that if they were not absolutely under a Necessity of having Guns, Powder, and Shot, Hatchets, and other Iron Tools for their Hunting, and Tobacco, Brandy, and some Paint for Luxury, they would not go down to the Factory, with what they now carry. At present they leave great Numbers of Furs and Skins behind them. A good Hunter, among the *Indians*, can kill six hundred Beavers in a Season, and can carry down but one hundred; the rest he uses at home, or hangs them upon Branches of Trees, upon the Death of their Children, as an Offering to them, or use them for Bedding and Coverings. They sometimes burn off the Fur, and roast the Beavers like Pigs, upon any Entertainments, and they often let them rot, having no farther Use for them. The Beavers, he says, are of three Colours, the brown reddish Colour, the black, and white; the first is the cheapest, the black is most valued by the Company in *England*, the white the most valued in *Canada*, giving eighteen Shillings, when others give five or six Shillings; it is blown upon by the Companies Factors at the Bay, they not allowing so much for these as for the others, and therefore the *Indians* use them at home, or burn off the Hair, when they roast the Beavers like Pigs, at an Entertainment when they feast together. He says these Skins are extremely white, and have a fine Lustre, no Snow being

"whiter, and have a fine long Fur or Hair. He has seen fifteen taken of that Colour out of one Lodge or Pond.

"The Beavers have three Enemies, Man, Otters, and the Carcajon, or Quecquehatch, which prey upon them, when they take them at Advantage; the last is as large as a very great Dog, it has a short Tail like a Deer or Hart, and has a good Fur, valued at a Beaver and a half in exchange. The Beavers chiefest Food is the Poplar, or Tremble, but they also eat Sallows, Alders, and most other Trees, not having a refinous Juice. The Middle Bark is their Food; in May, when the Wood is not plenty, they live upon a large Root which grows in the Marshes a Fathom long, and as thick as a Man's Leg, the *French* called it Volet: But the Beavers are not so good Food as when they feed upon Trees. They will cut down Trees about two Fathoms in Girth with their Teeth, and one of them observes when it is ready to fall, and gives a great Cry, and runs the contrary Way, to give room for the rest to get out of the Way. They then cut off all the Twigs and smaller Branches, two or three Fathoms in Length, and draw them to their Houses, which they have built in their Ponds; after having raised or repaired their Pond Head, and made it staunch, and thrust one End into the Clay or Mud, that they may lie under Water all the Winter, to preserve the Bark green and tender, for their Winter Provision. After cutting off the small Branches, they cut and carry away the larger, until they come to the Bole of the Tree. The Beavers are excellent Food, but the Tongue and Tail the most delicious Parts of the whole. They are very fat from November until the End of March: They have their Young in the Beginning of Summer, at which Time the Females are lean by suckling their Young, and the Males are lean the whole Summer, when they are making or repairing their Ponds and Houses, and cutting down and providing Timber and Branches for their Winter Store. They breed once in a Year, and have from ten to fifteen at a Litter, which grow up in one Season, so that they multiply very fast; and if they can empty a Pond and take the whole Lodge, they generally leave a Pair to breed, so that they are fully stocked again in two or three Years. The Loup Corvier, or Lynx, is of the Cat kind, but as large as a great Dog; it preys upon all Beasts it can conquer, as does the Tyger, which is the only Beast in that Country that won't fly from a Man. The *American* Oxen or Beeves, have a large Bunch upon their Backs, which is by far the most delicious Part of them for Food, it being all as sweet as Marrow, juicy and rich, and weighs several Pounds.

"The *Indians* West of the Bay, living an erratic Life, can have no Benefit by tame Fowl or Cattle; they seldom stay above a Fortnight at a Place, unless they find plenty of Game. When they remove, after having built their Hutt they disperse to get Game for their Food, and meet again at Night, after having killed enough to maintain them that Day; they don't go above a League or two from their Hut. When they find scarcity of Game, they remove a League or two farther, and thus they traverse through these woody Countries and Bogs, scarce missing one Day Winter or Summer, fair or foul, in the greatest Storms of Snow, but what they are employed in some kind of Chace. The smaller Game, got by Traps or Snares, are generally the Employment of Women and Children, such as the Martins, Squirrels, Ermins, &c. The Elks, Stags, Rein Deer, Bears, Tygers, wild Beef, Wolves, Foxes, Beavers, Otters, Corcajon, &c. are the Employment of the Men. The *Indians*, when they kill any Game for Food, leave it where they kill it, and send their Wives next Day to carry it home. They go home in a direct Line, never missing their Way by Observation they make of the Course they take upon their going out, and so judge upon what Point their Huts are, and can thus direct themselves upon any Point of the Compass. The

"Trees

“ Trees all bend towards the South, and the Branches
“ on that Side are larger and stronger than on the North
“ Side, as also the Moss upon the Trees. To let their
“ Wives know how to come at the killed Game, they
“ from Place to Place break off Branches, and lay them
“ in the Road, pointing them the Way they should go,
“ and sometimes Moss, so that they never miss find-
“ ing it.

“ In Winter when they go abroad, which they must
“ do in all Weathers to hunt and shoot for their daily
“ Food, before they dress they rub themselves all over
“ with Bear's Grease, or Oil of Beavers, which does
“ not freeze, and also rub all the Fur off their Beaver
“ Coats, and then put them on; they have also a kind
“ of Boots or Stockings of Beaver's Skin, well oiled
“ with the Fur inwards, and above them they have an
“ oiled Skin laced about their Feet, which keeps out the
“ Cold, and also Water, where there is no Ice or Snow,
“ and by this Means they never freeze or suffer any thing
“ by Cold. In Summer also, when they go naked,
“ they rub themselves with these Oils or Grease, and ex-
“ pose themselves to the Sun without being scorched,
“ their Skins being always kept soft and supple by
“ it, nor do any Flies, Bugs, or Musketoos; or any
“ noxious Insect ever molest them. When they want to
“ get rid of it they go into the Water, and rub them-
“ selves all over with Mud or Clay, and let it dry upon
“ them, and then rub it off. But whenever they are free
“ from the Oil, the Flies and Musketoos immediately
“ attack them, and oblige them again to anoint them-
“ selves.

“ The *Indians* make no use of Honey; he saw no
“ Bees there but the wild Humble-Bee; but they are so
“ much afraid of being stung with them, as they go naked
“ in Summer, that they avoid them as much as they
“ can. Nor he did not see any of the Mapple they use
“ in *Canada* to make Sugar of, but only the Birch,
“ whose Juice they use for the same Purpose: Boiling
“ it until it is black and dry, and then using it with
“ their Meat. They use no Milk from the Time they
“ are weaned, and they all hate to taste Cheese, having
“ taken up an Opinion that it is made of dead Men's
“ Fat; they love Prunes and Raisins, and will give a
“ Beaver Skin for twelve of them, to carry to their
“ Children, and also for a Thrum or Jews Harp.

“ He says the Women have all fine Voices, but have
“ never heard any musical Instrument. They are very
“ fond of all Sorts of Pictures or Prints, giving a Beaver
“ for the least Print, and all Toys are like Jewels to
“ them. When he got to the Natives, Southward of
“ *Pachegoia*, he had about thirty Cowries left, and a
“ few small Bells, less than Hawks-Bells. When he
“ shewed one of them, they gave him a Beaver's Skin
“ for it, and they were so fond that some gave him
“ two Skins, or three Martin Skins, for one, to give
“ their Wives to make them fine. The Martins they
“ take in Traps, for if they shoot them their Skins
“ would be spoiled; they have generally five or six at a
“ Litter. He says the Natives are so discouraged in
“ their Trade with the Company, that no Skins are
“ worth the Carriage; and the finest Furs were sold for
“ very little, when they came to the Factory in *June*
“ 1742. The Prices they took for the *European* Goods
“ were much higher than the settled Prices fixed by the
“ Company, which the Governors fix so to shew the
“ Company how zealous they are to improve their Trade,
“ and sell their Goods to Advantage. He says they
“ gave but a Pound of Gunpowder for four Beavers; a
“ Fathom of Tobacco for seven Beavers; a Pound of
“ Shot for one; an Ell of coarse Cloth for fifteen; a
“ Blanket for twelve; two Fish-hooks or three Flints
“ for one; a Gun for twenty-five; a Pistol for ten; a com-
“ mon Hat, with white Lace, for seven; an Ax for four;
“ a Bill-hook for one; a Gallon of Brandy for four; a che-
“ quered Shirt for seven; all which are sold at a monstrous
“ Profit, even to two thousand *per Cent*. Notwithstanding
“ this Discouragement, the two Fleets which went down
“ with him, and parted at the *Great Fork*, carried down
“ two hundred Packs of one hundred each, twenty thou-

“ sand Beavers; and the other *Indians* who arrived that
“ Year, he computed, carried down three hundred Packs
“ of two hundred each, making thirty thousand; in all fifty
“ thousand Beavers, and above nine thousand Martins.

“ The Furs there are much more valuable than the
“ Furs upon the *Canada* Lakes, sold at *New York*; for
“ these will give five or six Shillings *per Pound*, when
“ the others sell at three Shillings and Six-pence. He
“ says that if a Fort was built at the *Great Fork*, sixty
“ Leagues above *York Fort*, and a Factory with *Euro-*
“ *pean* Goods was fixed there, and a reasonable Price
“ was put upon the *European* Goods, that the Trade
“ would be wonderfully increased; for the Natives, from
“ the Southward of *Pachegoia*, could make, at least,
“ two Returns in a Summer, and those at greater Dis-
“ tances could make one, who cannot now come at all;
“ and above double the Number would be employed
“ in hunting; and many more Skins would be brought
“ to Market that they can't now afford to bring, for
“ the Expence and low Price given for them. The
“ Stream is so gentle from the *Fork* to *York Fort*, on
“ either Branch, that large Vessels and Shallops may be
“ built there, and carry down the bulky Goods, and
“ also return again against the Stream; and the Climate
“ is good and fit to produce Grain, Pulse, &c. and
“ very good Grass and Hay for Horses and Cattle; and
“ if afterwards any Settlement were made upon *Pache-*
“ *goia*, and Vessels built to navigate that Lake, which
“ is not more Northerly than the Latitude of 52 Degrees,
“ the Trade would be still vastly enlarged and im-
“ proved, and spread the Trade not only up the River
“ and Lakes, as far as the Lake *du Bois* and *du Pluis*,
“ but also among the *Astinibouels*, and Nations beyond
“ them; and the Nation *de vieux Hommes*, who are two
“ hundred Leagues Westward of *Pachegoia*. He says the
“ Nations who go up that River, with Presents, to con-
“ firm the Peace, are three Months in going, and say they
“ live behind a range of Mountains beyond *Astinibu-*
“ *els*; he saw several of them, who all wanted a Joint of
“ their little Finger, which they said was cut off soon
“ after they were born, but gave no Reason for it.

“ Whilst he was at *York Fort* he got acquainted with
“ an old *Indian* who lived at some Distance from *Nelson's*
“ Bay to the Westward, being one of those they call
“ the *home Indians*, who had, about fifteen Years ago,
“ gone at the Head of thirty Warriors, to make War
“ against the *Attimospiquais*, *Tete Plat*, or *Plazcotex de*
“ *Chiens*, a Nation lying Northward, on the Western
“ Ocean of *America*; he was the only one that return-
“ ed, all the rest being killed, or perished through Fa-
“ tigue, or want of Food; upon their Return, when
“ they went they carried their own Families with them,
“ and hunted and fished from Place to Place for two
“ Winters and one Summer, having left their Country
“ in Autumn, and in *April* following came to the Sea
“ Side on the Western Coast, where they immediately
“ made their Canoes; at some small Distance they saw
“ an Island, which was about a League and a half long;
“ when the Tide was out, or Water fell, they had no Water
“ betwixt them and the Island, but when it rose, it co-
“ vered all the Passage and the Island, as high as the
“ Woods upon the Shore. There they left their Wives
“ and Children and old Men, to conduct them home,
“ and provide them with Provisions by hunting and
“ shooting for them upon the Road; and he, with
“ thirty Warriors, went in quest of the Enemies of the
“ *Tete Plat*.

“ After they parted with their Families they came to
“ a Streight which they passed in their Canoes; the Sea
“ Coast lay almost East and West, for he said the Sun
“ rose on his Right-hand, and at Noon it was almost
“ behind him, as he passed the Streight, and always set in
“ the Sea. After passing the Streight, they coasted along
“ the Sea for three Months, going into the Country
“ and Woods as they went along to hunt for Provisions.
“ He said they saw a great many large black Fish, spout-
“ ing up Water in the Sea. After they had thus coasted
“ for near three Months, they saw the Footsteps of some
“ Men on the Sand, by which they judged they were

“ not far from their Enemies ; upon which they quitted
 “ their Canoes, and went five Days through the Woods
 “ and Bushes, which were but very low and shrubby, and
 “ so close they could with Difficulty make Way through
 “ it ; and then came to the Banks of a River ; where they
 “ found a large Town of their Enemies : And, after
 “ making their usual Cry, they discharged their Arrows
 “ and Guns against those who appeared ; upon which
 “ they fled ; but upon finding how few they were, they
 “ returned and killed fifteen of them, and wounded three
 “ or four more ; upon which they fled to the Woods, and
 “ from thence made their Escape to their Canoes before their
 “ Enemies overtook them ; and, after a great deal of
 “ Fatigue got to the Streights, and after getting over they
 “ all died one after another, of Fatigue and Famine, except
 “ this old Man ; leaving him alone to travel to his own
 “ Country, which took him up about a Year’s Time, hav-
 “ ing left his Gun when his Ammunition was spent, and
 “ lost all his Arrows, and upon his Return had not even
 “ a Knife with him ; so that he was reduced to live
 “ upon Herbs and Moss growing upon the Rocks, and
 “ was almost famished when he reached the River
 “ *Sakie*, where he met his Friends, who relieved him
 “ when he despaired of ever again seeing his own
 “ Country.”

This, says Mr. *Dobbs*, is the Account so far as *Joseph la France* could inform me of those Countries Southward of *York Fort*, which may be brought to trade there in time. It must be allowed, that this Relation is equally instructive and entertaining ; it makes us at once acquainted with the Country, and with the Reasons which should induce us think it worth our while to enquire about it ; it shews us, that these Countries are far from being inhospitable, or uninhabitable ; that, on the contrary, there are many Nations already known, and many more of whom the *Europeans* have had Notice ; all of whom are sufficiently in Want, and have it at the same time abundantly in their Power to pay us for Supplies. This, I say, is evidently made appear, since it is affirmed, and the Fact is so true as not to be disputed, that the *French* carry on a great Trade with these *Indians*, and that they are very well able to bear the Rigour of the Seasons in those Parts ; and if they can bear it, surely so may we.

It may indeed be objected, that the *French* are very apt to boast of much more than they perform, and therefore we ought not to give an implicit Credit to their Relations, especially in their own Favour.

But this is easily answered, since Mr. *Dobbs* has also furnished us with *English* Memoirs that prove the very same Thing ; and therefore I shall quote from him what is sufficient for that Purpose, and which is no less entertaining than the Account given us by *Joseph la France*, and of no less Authority than his, since it is given us by an *Englishman* of Credit, who reports nothing but from his own Experience and Observation :

“ Mr. *Frost*, who has been many Years employed
 “ by the Company in the Bay, both at *Churchill* and
 “ *Moose River* Factory, and who was their Interpreter
 “ with the Natives, and travelled a considerable way
 “ into the Country, both North-west of *Churchill* and
 “ Southward of *Moose River* Factory, and has resided at
 “ *Moose River*, since the Factory was made there in
 “ 1730, gives a very good Account of that Climate and
 “ Country there, and up the River Southward of it : He
 “ says the Factory is built near the Mouth of the River,
 “ in Latitude 51 Degrees 28 Minutes, upon a navigable
 “ River, which, at twelve Miles distant from the Fort,
 “ is divided into two Branches ; one comes from the
 “ Southward, the other from the South-west. Upon the
 “ Southern Branch, all sort of Grain thrives, as Barley,
 “ Beans, and Pease do at the Factory, though exposed
 “ to all the chilling Winds which come from the Ice in
 “ the Bay. Upon the Southern Part, above the Falls,
 “ there grows naturally along the River, the same Kind
 “ of wild Oats and Rye mentioned already upon the
 “ Lake of *Sieno*, the Husk being black, but the Grain
 “ within perfectly white and clear, like Rice ; the *Indians*
 “ beating it off when ripe into their Canoes, as they pass
 “ along the River, it growing in the Water, like Rice.

“ In their Woods, at the Bottom of the Bay, at *Moose*
 “ and *Albany*, as well as at *Rupert’s River*, are very
 “ large Timber-Trees of all Kinds ; Oak, Ash, &c. as
 “ well as Pine, Cedar, and Spruce : They have exceeding
 “ good Grass to make Hay, which improves every Day,
 “ as they cut and feed it, and may have every where
 “ within Land all sorts of Pulse and Grain, and all sorts
 “ of Fruit Trees, as in the same Climate in *Europe* ; for
 “ all the Sorts they have tried thrive very well.

“ The Ice breaks up at *Moose* Factory in the Beginning
 “ of *April*, but higher up in the Country in *March*. It
 “ is navigable for Canoes a great way up among the Falls ;
 “ at a considerable Distance there is one Fall of fifty Feet,
 “ but above that it is deep, and navigable for a great
 “ way ; the Climate above the Fall is very good, and
 “ the River abounds with that wild Rice. The *French*
 “ have got a House, or Settlement for Trade, near the
 “ Southern Branch, about one hundred Miles above the
 “ Factory, where they sell their Goods cheaper than the
 “ Company do, although it be so difficult to carry them
 “ so far from *Canada*, and very expensive ; and give
 “ as much for a Martin’s Skin as they do for a Beaver,
 “ when we insist upon three for one ; so that the *French*
 “ get all the choice Skins, and leave only the Refuse for
 “ the Company. The *French* have also got another
 “ House pretty high up upon *Rupert’s River*, by which
 “ they have gained all the Trade upon the *East Main*,
 “ except a little the Company get at *Slude River*.”

He says, “ That upon the South-side of the great Inland
 “ Sea, upon the *East Main*, which has lately been dis-
 “ covered, there is an exceeding rich Lead Mine,
 “ from which the Natives have brought very good Ore,
 “ which might turn to very great Advantage, as well as
 “ the Furs upon that Coast, which might be vastly in-
 “ creased if the Trade was laid open, and Settlements
 “ made in proper Places. He says, when he was at
 “ *Churchill*, he travelled a considerable way in the
 “ Country North-westward of the River of *Seals*, that near
 “ the River and Sea-coast there were small shrubby Woods ;
 “ but for many Miles, at least sixty farther into the
 “ Country, they had nothing but a barren, white Moss,
 “ upon which the Rein-Deer feed, and also the Moose,
 “ Buffaloes, and other Deer : And the Natives told him,
 “ farther Westward, beyond that barren Country, there
 “ were large Woods. He was acquainted when there,
 “ about fifteen Years ago, with an *Indian* Chief, who
 “ traded at *Churchill*, who had been often at a fine
 “ Copper Mine, which they struck off from the Rocks
 “ with sharp Stones. He said it was upon Islands at the
 “ Mouth of a River, and lay to the Northward of that
 “ Country where they had no Night in Summer.

“ As to the Trade at *Churchill*, it is increasing ; it
 “ being at too great Distance from the *French* for them
 “ to interfere in the Trade : In the Year 1742, it amounted
 “ to twenty thousand Beavers. There were about one
 “ hundred Up-land *Indians* came in their Canoes to trade,
 “ and about two hundred Northern *Indians*, who brought
 “ their Furs and Skins upon Sledges ; some of them
 “ came down the River of *Seals*, fifteen Leagues North-
 “ ward of *Churchill*, in Canoes, and brought their Furs
 “ from thence by Land. They have no Beavers to the
 “ Northward of *Churchill*, they not having there such
 “ Ponds or Woods as they chuse to feed upon ; but they
 “ have great Numbers of Martins, Foxes, Bears, Rein-
 “ Deer, Buffaloes, Wolves, and other Beasts of rich Furs,
 “ the Country being mostly rocky, and covered with
 “ white Moss, upon which the Rein-Deer, or Cariboux,
 “ feed.

“ There is a great deal of small Wood, of the Spruce
 “ or Firr Kind, near the old Factory ; but the Wood
 “ improves, as it is farther up the River from the Bay ;
 “ where they have Juniper, Birch, and Poplar. And
 “ more Southerly the Timber is larger, and there are
 “ great Variety of Trees ; they are under great Incon-
 “ veniences at the new Fort, which is upon an elevated
 “ Situation, upon a Rock without Shelter, close by the
 “ Shore, surrounded with Snow and Ice for eight Months
 “ in the Year, exposed to all the Winds and Storms that
 “ happen ; where they can have no Conveniency of
 “ Grass

“Grafts or Hay, or Gardening, and yet they had four or five Horses there, and a Bull, and two Cows, near the Factory; but they were obliged to bring their Hay from a marshy Bottom, some Miles up the River, to feed them in Winter; but if a Settlement was made higher up the River Southward, some Leagues from the Bay, in Shelter, without the Reach of the chilling Winds, they would have Grafts and Hay sufficient, and might have also Gardens and proper Greens, and Roots, propagated there. They say there is a Communication betwixt that River and *Nelson's River*, at a great Distance within Land, or a very short Land-carriage betwixt them; for the *Indians* who trade here tell them, each Season, what Chiefs, with their Followers, go down that Year to *Nelson* or *Albany River*.”

We may justly wonder that we never had before any clear Account of these Matters, considering how long we have had Factories in these Parts; and that on the contrary all the Accounts hitherto given represent the Coasts of *Hudson's Bay*, as the most forlorn and dreadful Part of the Universe, hitherto discovered; as Regions freezing and frightful, almost beyond all Description, and which it would appear dreadful and cruel to send even Malefactors to inhabit. But for this the same Gentleman has fully accounted; and it is requisite that the Public should be very well acquainted with the Account that he has given; for since the great Council of the Nation has thought fit to encourage an Attempt to discover a Passage this Way into the *South Seas*, it is very reasonable to suppose that Endeavours will not be wanting to push that Attempt to the utmost; to facilitate which there is nothing of so great Importance as the proving that the Discouragements which have been hitherto represented as insuperable, have been over-rated, and that notwithstanding all that has been said of them, it is not only possible but probable, that they may be overcome; towards which nothing surely can contribute more than the pointing out the Motives, upon which they have hitherto been constantly represented, in so strong a Light, which is very effectually done in the following Passage from the same Author; who, as he has studied this Point, so it must be allowed he has made it as clear as with Reason could well be expected.

“The Company avoid all they can making Discoveries to the Northward of *Churchill*, or extending their Trade that Way, for fear they should discover a Passage to the Western Ocean of *America*, and tempt, by that Means, the rest of the *English* Merchants to lay open their Trade, which they know they have no legal Right to; which if the Passage was found, would not only animate the rest of the Merchants to pursue the Trade through that Passage, but also to find out the great Advantages that might be made of the Trade of the Rivers and Countries adjoining to the Bay, by which Means they would lose their beloved Monopoly. But the Prospect they have of Gain to be made by trading with the *Eskimaux Indians*, for Whale-fin, Whale and Sea Oil, and Sea-horse Teeth, induces them to venture a Sloop annually, as far as 62 Degrees 30 Minutes, to *Whale Cove*, where these *Indians* meet them, and truck their Fins and Oil with them. But though they are fully informed of a fine Copper Mine on a navigable Arm of the Sea, Northwestward of *Whale Cove*, and the *Indians* have offered to carry their Sloops to it; yet their Fear of discovering the Passage, puts Bounds to their Avarice, and prevents their going to the Mine, which by all Accounts is very rich. Yet those who have been at *Whale Cove*, own that from thence Northwards is all broken Land; and that after passing some Islands, they from the Hills see the Sea open, leading to the Westward. And the *Indians* who have been often at the Mine say it is upon a navigable Arm of the Sea, of great Depth, leading to the South-west, where are great Numbers of large black Fish spouting Water, which confirms the Opinion that all the Whales seen between *Whale Cove* and *Wager River*, all come there from the Western Ocean, since none are seen any

“where else in *Hudson's Bay* or *Streight*. All along this Coast from the Latitude 62 Degrees to 65 Degrees, a very beneficial Fishery of Whales may be carried on with these *Eskimaux Indians*; who, even without the Use of Iron, can harpoon and kill Whales, and if they were supplied with Iron Harpoons, and proper Cordage, they might be brought to kill great Numbers of them. At present all their Nets, Lines, and Snare, are made of Whale-bone, and most of their Boats and other Necessaries of the Seal-skins, Fish-bones, and Sea-horse Teeth, and in making all things necessary for them, they are very neat and ingenious.”

The same judicious Person, from whom we have borrowed so much already, has taken the Pains to give, from very authentic Relations, a very clear, as well as a very copious Account of most of the *Indian Nations* that lie at the back of our Northern Colonies, and between the *French Settlements* in *Canada*, and on the *Mississippi River*; with the Countries they inhabited, and the Product of those Countries, which I esteem a thing of very great Consequence, and as material a Service to this Nation, as has been rendered for many Years; the Account is too long for me to insert, but the Inferences he draws from it are so just, and of so high Consequence, that I think it would be an Injury done the Reader not to report them, as it would certainly be doing both him and the Subject great Wrong, to report them in any other than his own Words, which without farther Preface I shall use; only it is necessary to premise at the Time this Gentleman published his Book, the War with *France* was not actually broke out.

“How glorious, says he, would it be for us at the same Time to civilize so many Nations, and improve so large and spacious a Country, by communicating our Constitution and Liberties, both Civil and Religious, to so many Numbers, whose Happiness and Pleasure would increase at the same Time, that an Increase of Wealth and Power would be added to *Britain*.”

“There is, at present, a Beginning of this Scheme, by the Zeal of Mr. *Barclay*, who is instructing and civilizing the *Mowhawks*, among the *Iroquese*, who from a warlike Nation have embarked in Trade, and entered into Alliances with all Nations round the Lakes *Huron* and *Errie*, and to the Westward as far as the *Mississippi*, which is firmly established by the Gain they make by the Trade. The *English*, from *New York*, have fixed at *Oswega*, in their Country, upon equitable Terms with all the *Indians*, who come now from a great Distance to trade at that Town; *Indians* coming now to Trade there, whose Names were never before known to the *English*. This therefore seems to be the critical Time to begin this Settlement, on the Banks of *Conde River*. If there be a War with *France*, as we are at a great Expence to save the Liberties of *Europe*, and support the House of *Austria*, since we can have nothing in *Europe* beneficial for us; in case we are successful at the Conclusion of the War, we ought to stipulate for something advantageous in *America*; and the least we ought to claim is our Right to the *American Lakes*, and securing the Navigation of them. The *French* have, at present, two little Forts, and about thirty Men in each; at *Niagara*, and the Streights of *St. Joseph*; and a few Men at *Misissickinac*, and at the bottom of the *Illinese Lake*. These we ought to have from them, either by Force or Treaty, which would secure the inland Trade to us, and prevent their future Incroachments, either there or in *Hudson's Bay*; and to do this effectually, would be to make a Settlement near the Lake *Errie*, which may be done with little or no Expence, considering our present Barrier and Alliance, and Trade with the *Natives*; and whenever our Troops are disbanded, some of them may be sent over upon Half-pay, to fix in proper Places, and make good our Possessions, which would be a fine Retreat to our Soldiers, who can't so easily, after being disbanded, bring themselves again to hard Labour, after being so long disused to it.

“By

“ By these Settlements, and those adjoining to *Hudson's Bay*, and by opening the Trade to the Bay, many thousands more would be employed in Trade, and a much greater Vent would be opened to our Manufactures: Whereas, all the Trade we have at present, whilst it is thus confined to the Company, is the Employment of one hundred and twenty Men in all their Factories; and two or three Ships in that Trade, manned perhaps with one hundred and twenty Men in time of War, to enrich nine or ten Merchants at their Country's Expence, at the same Time betraying the Nation, by allowing the *French* to encroach upon us at the bottom of the Bay, having given up by that Means the greatest Part of their Trade there to the *French*. It is therefore humbly submitted to the Government, whether it is not just, as well as prudent, to open the Trade to all the *British* Merchants, and resume, at the same Time, the Charter, so far as to take from them all the Lands they have not reclaimed or occupied, after seventy Years Possession, leaving them only their Factories, and such Lands as they have reclaimed, adjoining to them; and to give Grants, as usual, in other Colonies, to all who shall go over to trade, and make Settlements in the Country; for no Grant was ever intended to be made to them, to enable them to prevent other Subjects of *Britain* from planting those Colonies, which they themselves would not plant or occupy; for such a Power, instead of being beneficial, would be the greatest Prejudice to *Britain*. It is therefore become a general Law in all the Colonies, that those who take Grants of Land, and don't plant them in a reasonable limited Time, forfeit their Right to those Lands, and a new Grant is made out to such others as shall plant and improve them; and if this Grant be not immediately resumed so far, and the Trade laid open, and some Force be not sent to secure our Southern Plantations in the Bay by the Government, in case there should be a *French* War, we shall see the *French* immediately dispossess the Company of all their Factories but *Churchill*, and all these Countries, and that Trade, will be in Possession of the *French*.

“ To the making such Settlements some Objections have been made by the Friends of the Company, as the great Difficulty of getting People to go to settle and plant in so cold a Country, and the Difficulty and Danger attending the making Settlements higher up upon the Rivers, and navigating them, as they are so full of Falls and Rapids, that can only be navigated by the Natives in small Canoes, made of Birch Bark, which can't contain above two Men with any Cargo; and in these they are often overset, and are in such Danger of being drowned, and of spoiling their Goods, that they are often obliged to carry their Canoes and Cargo from Place to Place, which obstructs greatly and delays the Navigation; and that scarce five Men out of one hundred and twenty, which the Company now have in the Bay, will venture themselves in, or can conduct such Canoes, without imminent Danger of being drowned, and consequently these Hardships and Difficulties will counter-balance the Profit to be made of settling higher up in the Country, upon the Rivers, in pleasanter and warmer Climates.

“ To this I answer, That by the Accounts already given here of these Climates and Countries, by impartial Persons, who don't want to disguise the Truth, it appears that the Cold is tolerable, even at these disadvantageous Settlements at present in the Bay; and that upon passing only five or six Leagues up the Rivers into the Country, the Climate is so altered, as to be equal to those of the same Latitudes in *Europe*. And that these prodigious Accounts of the Effects of Cold, are calculated only to serve the Company, in order to prevent People from going there to settle, and encroach upon the Company's Monopoly of Trade. And to the Difficulty they make about navigating these Rivers in those small Canoes, and the small Number employed by the Company, who will venture in them, or can conduct them, I answer, That their Servants being at

present no Gainers by Trade; won't endeavour to learn to navigate these Canoes, where there is any Risque, and Care necessary to prevent the Danger. Besides, the Company allows them no Time to learn, by confining them to their Factories, whilst the *Indian* Trade continues, and the Navigation is open: And at other Times keeps them employed in cutting Wood for firing, bringing it home, shooting, fishing, and digging in their Gardens, to supply themselves with Provisions, to lessen the Company's Expence, so that they are allowed no Time to learn to navigate these Boats, or to go up the Rivers to observe the Soil and Climate, or what Improvements might be made in the Country. But if they were Masters of their own Time, and could advance their Wealth by Trade, and found a considerable Profit to arise to them by their Dexterity in managing these Canoes, and the great Pleasure and Satisfaction they would have by living in a fine Climate among these Lakes and Rivers; they would be as enterprising and dextrous as the *Cureur de Bois*, and be as able to navigate among these Water-falls, as the *French*. Neither is it impracticable to prevent even those Canoes from oversetting, by Outlagers or blown Bladders fixed to their Sides, or other kind of Boats may be used, such as are made at *Torneo* in *Sweden*, upon the Rivers, falling into the *Bothnic Gulph*, and *Laplanders* might be prevailed upon to go there to teach them how to make and manage these Boats, and train up Rein-Deer to draw in Sledges in Winter, and also to use *Lapland* Shoes, which are better than those used in *America*.

“ If the Trade was once made free, the Profit made upon it would induce many to go and settle upon those Rivers, when not only Horses and other Conveniences would be had near the Water-falls, to assist the Land Carriage in Summer, but also Horses and Rein-Deer to draw their Sledges in Winter, as in *Russia*, which is almost as cheap a Carriage as by Water, when the proper Roads are made through the Woods, so that Objection must be of no Force to prevent our opening the Trade, and settling these Countries. But supposing the worst, that we could not manage these Canoes, that could not prevent our settling to Advantage upon these Rivers and Lakes above the Falls, for the Natives might still be our Carriers, in navigating those dangerous Places, and taking our Goods from one Settlement to another, whilst we should be employed in Navigation and Trade among the Lakes and Rivers where there are no Falls, in larger Vessels, and push our Commerce Southward into better Climates and richer Soils, and put the Natives upon Improvements in Trade, by civilizing and instructing them in building convenient Houses, and associating in Towns, making Gardens, and tilling their Lands; providing them with Horses and tame Cattle, and Fowl, for their Use, and proper Tools which our Trade would furnish them with.

“ Another Objection is, that it is a difficult and dangerous Navigation into the Bay, and the Trade is not worth the Risque. To this I answer, That the Navigation is not so dangerous as it is apprehended to be, but appears to be more so by the Insinuations and Report of the Company and their Friends, who gave it out in order to deter others from venturing and interfering in their Trade, and for that Reason they oblige their Captains, under a Penalty, not to publish any Charts of the Bay and Streight. Captain *Middleton*, who was in their Service, made above twenty Voyages to different Parts of the Bay, and never lost a Ship, nor had any Accident in these Voyages; nor have I heard that the Company, in about twenty three Years, have lost any Ships in that Trade, but two, and the Men and Cargo were saved by Captain *Middleton*. Where Captains are careful in the Ice, there is not much Danger; it is of great Advantage to them that there is no Night at that Season they enter the Bay, where the Quantity of Ice is greatest; and when they return in *September*, or even in *October*, all the Ice is in a Manner dissolved or passed out of the

“ Streight

“ Streight into the Ocean, and none seen that can hinder their Passage.

“ It is probable that during the whole Winter, from October to March, there is no Ice in the Streight to obstruct their Passage into or out of the Bay; for a Ship which chanced to be closed up with Ice in an Inlet, by breaking of the Ice got out, and came through the Ice at Christmas, without finding any Ice in the Streight to prevent her Passage: For the Ice which is formed in Bays and Rivers, in Winter, does not break up and get into the Channel or Streight until it begins to thaw upon the Shore in March or April; at which Time it is carried by the Winds and Tide into the Streight, and obstructs the Passage in May or June, until it is dissolved; yet, even then, good Pilots know how to avoid it and get into the Eddy-Tide, out of the Current; where the Ice is more open, and not drove together by the Winds and Current, as it is in the Channel. But these Difficulties would lessen every Day, if the Trade were opened and the Voyages more frequent, by the great Number of Ships, which would make many more experienced Pilots. And as there is now a more accurate Chart published of the Streight and Bay, by Capt. Middleton, with the Islands, Soundings, Tides, and Variation; the Navigation will become less dangerous daily, and Coves, and Places of Shelter for Ships, will be found out, by the Number of Ships which would then pass, and be trading in those Seas which are now unknown. I therefore apprehend that the Danger of the Ice is more in Imagination than Reality, when Care and Judgment are employed; for Ships are mostly inclosed in Ice in calm Weather and Fogs, when the Ice prevents the Motion of the Sea; stormy Weather disperses and breaks the Ice, unless they get under the Lee of a large Island of Ice; and then they fasten to it, and drive along with it whilst the smaller Ice to Leeward is drove from them by the Wind, and the large Islands, being many Fathoms deep in the Water, come on Ground before the Ships are in Danger of being forced on Shore in shallow Water.

“ The greatest Danger and Delay from the Ice is in the Entrance into the Streight; for the first forty Leagues from thence the Quantity is less, and they pass on with less Difficulty; and after getting into the Bay, the North-west Side is the freest from Ice; the Bottom of the Bay is full of low flat Ice, which is all dissolved in the latter end of Summer. Upon the Whole, except two Ships, which were lost in King William's Reign, and a French Ship, after an Engagement with our Ships when they attacked Fort Nelson, I have heard of none, except the Ships already mentioned, which have been lost in the Voyage. The Two Ships which went out with Barlow, in 1719, to find the North-west Passage, contrary to the Inclinations of the Company, if they did not make the Passage, were probably, in the Winter, surprised by the Natives, and were not lost in the Ice; for they say that the Natives, in about Latitude 63 Degrees, where they suppose they were lost, are shyer since that Time in trading with the Company's Sloops; which they apprehend to be from a Consciousness of Guilt, fearing that if it were known they should still be punished for it. Since therefore the greatest Danger from the Ice, is in passing the Streight, and so few Accidents have happened in so many Years, the Navigation, I think, cannot be called dangerous, though it has been so apprehended; and not equal to the Whale-fishers, who go annually to Spitzberg and Davis's Streights to Latitudes 78 and 80 Degrees, without any Objection to that Navigation, either by the Dutch, Hamburgers, Danes, Biscayners, or English.”

He concludes from thence, that the opening the Trade and settling in the Bay, would prove a great Benefit to, and great Improvement of, our Trade, which might be vastly increased, as well in respect to Furs as to Mines, and the Whale-Fishery; all which might be carried on with the Assistance of the Indians, and would turn to a very high Profit, even supposing that no

Passage to the North-west should ever be found; but should future Experience demonstrate that this Gentleman's Notions are, in this Respect, well founded, and this long sought-for Passage should actually be discovered, it would then certainly follow that this Country, so little known and so much despised till very lately, would become of more consequence to us than almost any Colony in America. Here let me take the Liberty of observing what hitherto, as far as I know, has never yet been considered: That if such a Passage to the North-west should be discovered before these Countries are tolerably planted, the French would have a fair Opportunity of supplanting us in the Advantages expected from that important Attempt; and perhaps we should then be forced to fight for the Possession of Countries that are now thought not worth the having.

It may likewise deserve some Thought, whether it be not better to attempt such Settlements without Loss of Time, as must at all Events be highly useful and serviceable to this Nation, by dividing the French Settlements in Canada, and on the Mississippi, from each other, than to wait till the Importance of such Settlements shall appear in so glaring a Light, as they must immediately do if such a Passage should be discovered; for we ought to remember, from the famous Instance of our being disappointed in our Design of settling the Islands of St. Lucia and St. Vincent, that it is a very difficult Matter, in a Time of full Peace, for us to acquire any Advantage in Point of Commerce, at the Expence of the French, who, in such a Case, would not fail to take the same vigorous Measures that they did in the Case before-mentioned. I have taken the more Pains to place this Matter in a fair and true Light, because I am persuaded this is the Time in which only it can be considered to Advantage; for if the Case now in View (I mean the Discovery of a North-west Passage) should ever come, as I am convinced, sooner or later it will come to be the Case in Fact, the Face of Affairs will be quite changed, and this new Rout to the South-Seas and East-Indies, will produce such an Alteration in the whole Commercial System of Europe, that Things will be seen to be then of the utmost Consequence, which at present most People look upon as Dreams and Visions, notwithstanding the late Sanction given them by the Wisdom of the Parliament.

But it becomes a prudent and sensible People, and above all it imports a maritime Power, to consider Things in time, and while what is proposed for their Benefit is easy, or at least practicable; and not to defer and delay Things till from being troublesome and difficult they come to be absolutely impossible. We know what sharp and cutting Remarks have been made on the Meanness of King James's Spirit, in suffering the Dutch to despoil us of the Spice Trade: We cannot but remember the severe Reflections on Queen Anne's Ministry, for not securing to us Cape Breton, and therefore we should be cautious of falling a third time into the same Mistake, and of running the Hazard of making a great Discovery, such as all the World allows that of the North-west Passage would be, rather for other Peoples Benefit than our own, since it must pass for a Blunder, greater than ever was made by our Ancestors, and would render us effectually ridiculous in the Eyes of latest Posterity.

12. The Method we have taken in describing the Acquisitions of our Nation in America, leads us next to speak of the noble Country of Pennsylvania; the best projected, and one of the most flourishing of our Colonies on the Continent of North America. We have before mentioned Admiral Penn, who in Conjunction with Col. Venables, conquered the Island of Jamaica for this Nation; he became afterwards Sir William Penn, and stood in as high a Degree of Credit with King Charles II. and his Brother the Duke of York, as any Seaman of that Time, as indeed he very well deserved; for, with Abilities superior to most, he had as great Modesty as any Man, and was ready, upon all Occasions, to serve his Country in any Station that was found practicable. It was this excellent Disposition of Mind that secured him from Danger under one Government, and recommended him to Preferment under another; for when the

Duke of York proposed to take the Command of the *English* Fleet upon himself in the *Dutch* War, as Lord High Admiral; he made Choice of Sir *William Penn* as the most experienced, and the most capable Officer to serve under him, which he did with equal Satisfaction to his Royal Highness, and Credit to himself; establishing thereby such a Reputation at Court, as lasted during his Life, and proved no less useful to his Son.

But Sir *William Penn* did not long enjoy his high Station, and dying in the *West* Country where he was born, was buried in *Redcliff* Church in *Bristol*, having, in reward of his Services, had a Promise of the Grant of this Country from King *Charles* the II^d. Sir *William* had a Kinsman who was one of the first Planters in *New England*, and it is doubtless from him that he had exact and particular Information of the Advantages that might be made of Lands and Settlements in this Continent of *America*. But young Mr. *Penn* did not for some Years apply himself strenuously to solicit the promised Grant, till at last finding his Friends, the Quakers, were harrassed all over *England* by spiritual Courts, he resolved to put himself at the Head of as many as would go with him and remove to this Country, of which he obtained the Grant in the Year 1679.

He gave it the Name of *Pensylvania* some Time before he was actually invested with it, and so it is called in the original Patent, bearing date *March* the 4th 1680. "It contained all that Tract of Land in *America*, with all the Islands belonging to it, from the Beginning of the 40th Degree of North Latitude to the 43^d Degree, whose Eastern Bound, from twelve *English* Miles above *Newcastle*, alias *de la War* Town, runs all along upon the Side of *de la War* River." So that 'tis bounded on the East by that Bay and River, and the Eastern Sea; on the North by *West New Jersey*, or rather *New York*, for it runs a great Way above the *Jerseys*; on the West by the *Indian* Nations, about the Heads of *Susquabanaugh* and *de la War* Rivers, by which we see it stretches far within Land, that River running through it about two or three hundred Miles; on the South 'tis bounded by *Maryland*, and reaching from *Pensbury* near the Falls of the River to *Hanlope*, near the Mouth of the Bay, above one hundred and fifty Miles directly; but 'tis narrow all along, being very much crowded in the Breadth by *Maryland*.

The Bounds and Extent we have mentioned are in the original Grant; but Mr. *Penn* having afterwards obtained Part of *Nova Belgia* of the Duke of York, it was added to the Country in the first Grant, and both together called *Pensylvania*, which is divided into three upper and three lower Counties; the three upper Counties, *Buckingham*, *Philadelphia* and *Chester*, are the *Pensylvania*, so called in King *Charles*'s Grant. The three lower Counties, *Newcastle*, *Kent*, and *Sussex*, are taken out of *Nova Belgia*, or the Province of *New York*. The upper Counties end at *Marcus Hook*, four Miles below *Chester* Town; the lower run along the Coast one hundred and twenty Miles, and are forty Miles deep towards *Maryland*. Thus the whole Province of *Pensylvania* from the *Falls* Township, to twenty Miles below *Hanlope* or *Cape William*, is in Length three hundred and thirty Miles, and in Breadth two hundred. The River *de la War*, above and below the Falls, for a good Length, is called the *Freshes*, and near the Mouth are the Marshes, very fertile and profitable.

As soon as Mr. *Penn* had got his Patent, he invited several Persons to purchase Lands under it. Though he did not satisfy himself with the Title granted him by *Charles* the II^d. and his Brother. He also bought the Land of the *Indians*. The *Swedes*, who had encroached upon the *Dutch*, the first Planters here, as well as at *New York*, settled upon, or near, the *Freshes* of *de la War*. The *Fins*, or Inhabitants of *Finland*, part of the Kingdom of *Sweden*, applied themselves chiefly to Husbandry. The King of *Sweden* appointed a Governor here, who had often Disputes with the Governor that presided over the *Dutch*. The latter applied themselves mostly to traffic, living upon, or near, the Bay, and by the Neighbourhood of *New York*. The *Dutch* also were too powerful for the

Swedes, who, finding they could not maintain their Ground, submitted to their stronger Neighbours. Accordingly *John Riseing*, the *Swedish* Governor, made a formal Surrender of the Country to *Peter Styerfont*, Governor for the States General, after which this Province continued subject to their Republic till the *English* drove the *Dutch* out of *New Amsterdam* or *New York*, which made the Possession of those Territories the more easy to Mr. *Penn*.

There were a few *English* here before Mr. *Penn* sent over the first Adventurers under his Patent, over whom he placed, as Governor, Colonel *William Markham*, his Nephew, to whom both *Dutch* and *Swedes* submitted. Those that went over, were generally Dissenters, from *London*, *Liverpool*, and especially *Bristol*, for the West of *England* abounded with Dissenters more than other Counties; they shipped themselves at *Bristol* in great Numbers for *Pensylvania*. Mr. *Thomas Gouldney*, and Mr. *Duddleston*, two Tobacco Merchants of that City, about this Time fitted out the *Unicorn*, a Ship of three hundred Tons, for this Voyage; which putting into Start, took in a great many from *Bridgewater*. Mr. *Penn* had sold twenty thousand Acres of his Property to Mr. *James Claypool*, Mr. *Nicholas Moor*, Mr. *Philip Ford*, and others, who formed a Company, and had a Street, and a Side of a Street, set out for them in *Philadelphia*, with four hundred Acres of Land in the City Liberties. They set up a Tannery, a Saw Mill, a Glass House, and a Whalery, of the two latter I suppose they never made any great Profit. The Proprietors Conditions of Sale were these: Buyers purchased after the Rate of twenty Pounds for one thousand Acres, so that he put four hundred Pounds in his Pocket immediately, but that was a Trifle to what went out of it for the Grant and Experiments to people and settle the Country; the Quit-Rent was twelve Pounds for every hundred Acres. This was cheap enough, but I think the Renters were not so well used, for they were to pay so much an Acre yearly. Thus these twenty thousand Acres which he sold the Company, would, if rented, have brought him one thousand Pounds a Year. Since that Time the Value of Land is so much risen, that I have been credibly informed it has sold for twenty Years Purchase, at several Miles distant from *Philadelphia*; and that near it has gone at a Pound an Acre, and in some Places at more than a Pound an Acre yearly.

We have mentioned near four thousand Acres to be at this Time parcelled out for Sale, some at sixty Miles distant from *Philadelphia*; but none of these Parcels will fetch a tenth Part of such Rates as these. Servants, Men and Women, were to have fifty Acres when their Times were out, and Owners of Land fifty Acres a Head for such Servants, Men or Women. In the Year 1681 Mr. *Penn* went himself to *Pensylvania*, and carried with him, and there went after him, two thousand Souls; a prodigious Augmentation in less than a Year! And he might with Reason say as he did, it was made at once a Country. As soon as he arrived he took the Government into his own Hands, and entred upon Treaties with the *Indian* Kings, for purchasing his Patent-Lands, and others, as is before hinted. One may assure one's self he gave but little for them, and if the *French* and *Spaniards* scorned to pay such a Compliment to natural Right, and chose rather to seize the Lands of the *Indian* Natives by Violence, it was what might have been expected from the Religion and Tyranny of the Countries from whence they came. Twenty Miles of Territory were thus bought of the *Indians* for less than an Acre of the best Ground about *Philadelphia* would be valued at now. But the *Indians*, in a little Time, observing what Profit the *English* made of the Land they sold them, and that by the coming over of such Numbers every Year, it would be more and more wanted, they raised the Price ten times as much as as it was at first, and yet it was unconscionably cheap, and for a long Time purchased by the Mile, and not by the Acre. Indeed they knew not what to do with it, they had not Hands enough to cultivate a hundredth Part; and if they could have raised such a Product there was no body to buy it. The Purchase was all clear Gains to them; and

and by the coming of the *English*, the peltry Trade became so profitable, that they were soon in a Condition to better their Manner of housing, cloathing, and living, as they did very much, and are now in these Articles as well accommodated as the *European* Peasantry, in many Places.

When the Province began to be planted, almost to the Mouth of *de la War*, it was laid out into the before-mentioned Counties, in order to chuse Representatives, and establish Courts for the Distribution of Justice. The original Draught of the Constitution for this Province was made by that great Lawyer Sir *William Jones*, and by it the Governor and People have a legislative Power. Sir *William Jones* had too much Understanding, Virtue, and Honour, to throw the People out of the Question, when their Religion, their Liberty, their Well-being in this World and the next, were so nearly concerned in it. No Law can be here made, nor Money raised, but by Consent of the Inhabitants. The Rights and Freedom of *England* were to be in force. They were to make no Law against Allegiance, and then they might enact what Laws they pleased for the Prosperity and Security of the Province. Mr. *Penn* held two General Assemblies while he was in the Country, and with such Unanimity and Dispatch, that tho' they made Laws by Scores, no less than Seventy, yet they had done their Business in three Weeks time. They presented the Proprietary with an Impost on certain Goods, but he remitted it; which was artful enough, to have a Thing given on purpose to give it away again to those that gave it. He established Courts of Justice in every County, with proper Officers, to prevent Law-suits and Contentions. Among these passive People there are also three Peace-makers, chosen by every County Court, in the Nature of common Arbitrators, to hear and end Differences between Man and Man. Every Spring and Fall there is an Orphans Court in each County, to inspect and regulate the Affairs of Widows and Orphans.

Mr. *Penn* was visited by the Kings, and Queens, and great Men among the *Indians*, of whom the greatest did not think himself too good to go on the Proprietaries Errands, if he had thought fit to send him. Both the *Dutch* and the *Swedes*, within this Jurisdiction, were very well pleased with his coming, and his Conduct; and there were, at that Time, almost as many *Swedes* and *Dutch* in *Pensylvania* as *English*. Mr. *Penn* staid here above two Years, till he had settled Things to his own and the People's Liking; he then returned to *England*, to forward the Affairs of the Propriety there, as he had done here: He was generous and free of his Thoughts and Expressions, which were not always sufficiently guarded; and after the Revolution he became suspected, from his Credit with King *James*. That we may form some Idea of the Manner in which this truly great Man acted in this Part of the World, and established his Government upon the solid Basis of a perfect Agreement with the Natives, let us hear what he himself says upon this Subject: Mr. *Penn*, in a Letter to his Friends in *England*, on the Situation of his Affairs at that Time, relates, That he had attended the *Indian* Kings and their Councils in several Treaties, for the Purchase of their Lands, and for adjusting the Terms of Trade between them. And that their Order was thus: "Their King (says Mr. *Penn*) was seated in the Middle of an half Moon, or Semi-circle; his Council, the Old and Wise, sitting on each Hand; behind them, at a little Distance, sat the young Men, in the same Figure: Having resolved their Business, the King commanded one of them to speak to me. He stood up, and came to me, and in the King's Name saluted me; taking me by the Hand, and telling me; he was ordered by his King to speak to me, and that now it was not he, but the King that spoke, because what he should say was the King's Mind. He first prayed me to excuse them, that they had not complied with me in a former Meeting: He feared there might be some Fault in the Interpreter, being neither *Indian* or *English*; besides, it was the *Indian* Custom to deliberate before they

"resolved; and that if the younger People, and Owners of the Land, had been as ready as he, I had not met with so much Delay." Having thus introduced his Matter, he fell to the Bounds of the Land they had agreed to dispose of, and the Price. During the Time this Person spoke, not a Man of them was observed to whisper or smile; the Old were grave, the Young reverend in their Deportment; when they spoke, which was but seldom, it was warmly and elegantly. I have never seen more natural Sagacity, considering them without the Help of Tradition; and he will deserve the Name of Wise that is too hard for them in any Treaty about a Thing they understand. When the Purchase was agreed, great Promises passed between us, of Kindness and good Neighbourhood; and that the *Indians* and *English* must live in Love as long as the Sun gave Light. After which another made a Speech to the *Indians*, in the Name of all the Sachems, or Kings; first, to tell them what was done; next, to charge and command them to love the Christians, and particularly to live in Peace with me, and the People under my Government: That many Governors had been in the River, but that no Governor had come himself to live and stay there before, and having now such an one that had treated them well, they should never do him or his any Wrong. At every Sentence of which they shouted, and said *Amen*, in their way.

This Conduct of his had so good an Effect upon the *Indians*, that they had him always in the highest Veneration, as they still have to his Memory, of which the Reader will find an exemplary Proof in the following Speech, made to Sir *William Keith*, Governor of this Country in 1722; only it may not be amiss to observe, that *Onas* signifies, in the *Indian* Language, a *Pen*; and therefore this is the Name the *Indians* have given to our Proprietor and all his Successors, or Representatives.

"Brother *Onas*, You told us how *William Penn*, that good Man, did, on the first Settlement of the Province of *Pensylvania*, make Leagues of Friendship with the *Indians*, and treated them like Brethren; and that, like the same good Man, he left it in Charge to all his Governors who should succeed him, and to all the People in *Pensylvania*, that they should always keep the Covenant and Treaties he had made with the five Nations, and treat them with Love and Kindness. We acknowledge that his Governors and People have always kept the same honestly and truly to this Day. So we, on our Part, always have kept, and for ever shall keep Peace and Friendship with a good Heart, to all the People of *Pensylvania*. We thankfully receive and approve of all the Articles in your Proposition to us, and acknowledge them to be good, and full of Love: We receive and approve of the same with our whole Hearts; because we are not only made one People by the Covenant Chain, but are also People united in one Head, one Body, and one Heart, by the strongest Ties of Love and Friendship.

"Brother *Onas*, you desire there may be a perpetual Friendship between you and the five Nations, and between your Children and our Children; and that the same may be kept as long as the Mountains and Rivers endure. All which we like well, and on our Parts desire, that the Covenant and Union made with a true and clean Heart between you and us, may last as long as the Sun and Moon shall continue to give light. And we will deliver this in charge to our Children, that it may be kept in Remembrance with their Children and Childrens Children to the last Ages: And we desire that the Peace and Tranquility that is now established between us may be as clear as the Sun shining in its Lustre without any Cloud or Darkness, and that the same may continue for ever.

"Brother *Onas*, We have well considered all you have spoken, and like it well; because it is only the renewing former Leagues and Treaties, made between the Government of *Pensylvania*, and us of the five Nations, which we always believed we were obliged to keep. And as to the Accident of one of our
 "Friends

“ Friends being killed by some of your People, which
 “ has happened by Misfortune, and against our Will;
 “ we say, that as we are all in Peace, we think it
 “ hard that the Persons who killed our Friend and Bro-
 “ ther should suffer; and we do in the Name of all the
 “ five Nations forgive the Offence, and desire you will
 “ likewise forgive it; and that the Men who did it may
 “ be released from Prison, and set at Liberty to go whi-
 “ ther they please; and we shall esteem that as a Mark
 “ of Regard and Friendship for the five Nations, and as
 “ a farther Confirmation of this Treaty.” Upon these
 Principles, which are more likely to be observed in this
 than in most of our Colonies, the Friendship of the *Indians*
 may be preserved as long as they remain a People; which
 shews how possible it might have been to have maintained
 a like Correspondence with them in other Places, which
 would not only have saved a great deal of Blood-shed,
 and have contributed to the quick Growth of the Colonies
 settled in the Countries, inhabited by such *Indians*, but
 would have been very useful in many other Respects:
 Since it is allowed where the *Indians* are treated as in
Pennsylvania, with strict Justice and Humanity, they are
 as firm Allies as any in the World; and in that Quality
 more capable of doing Service, than if reduced to be either
 Slaves or Subjects; because living as they do, they preserve
 their Strength and Activity, and enjoy all the Liberty
 they can desire; and are very willing to fight for those
 under whose Protection they enjoy it.

13. We will now proceed to a more particular Description
 of this famous Settlement, having before given an Account
 of the Situation of the Country in general, and of its Division
 into Counties. The chief Rivers in *Pennsylvania* are, the
River de la War, which rising far North in the Country of
 the *Iroquois*, takes its Course to the Southward, and dividing
 this Province from that of *New Jerseys*, falls into the
Atlantic Ocean, between the *Promontories* of *Cape May*, and
Cape Hanlope, being navigable for two hundred Miles and
 upwards with large Vessels; but has a Cataract or steep
 Fall in it above *Bristol*, which renders the Navigation
 impracticable to the Northward of the County of *Bucks*.
 The second River in this Province, is that of *Susquabanaugh*,
 which, rising likewise in the Country of the *Iroquois*, runs
 South through the Middle of *Pennsylvania*, and falls into
 the Bay of *Chesapeake*, being navigable for large Ships.
 The third River is *Schoolkill*, which having its Source in
 the Country of the *Iroquois*, runs South almost parallel to
 the *Rivers de la War* and *Susquabanaugh*, and at Length
 turning to the Eastward, falls into *de la War*, at the City
 of *Philadelphia*. This River is also navigable for large
 Ships as far as the City of *Philadelphia*, and for Boats
 above an hundred Miles higher. These Rivers, and the
 numerous Bays and Creeks in the Bay of *de la War*, capable
 of containing the largest Fleets, render this Country
 admirably situated to carry on a foreign Trade.

In the County of *Buckingham*, the most northerly of
 any in this Province, the chief Town is *Bristol*, situated
 on the *River de la War*, opposite to *Burlington* in *New
 Jersey*, and twenty Miles North of the City of *Philadelphia*.
 In this County also lies the Mannor House of *Pennsbury*,
 elegantly built by Mr. Penn, the first Proprietor, and
 situate on an Eminence which commands the Country,
 being almost surrounded by the *River de la War*. The
 Country of *Philadelphia* lies South of that of *Bucks*, and
 in it is the celebrated City of *Philadelphia*, the Capital
 of the Province, situated in 40 Degrees 30 Minutes
 North Latitude, being one of the finest Plans of a Town
 that was ever formed. It is an Oblong of two Miles,
 extending from the *River de la War* to the *River Schoolkill*,
 the East end fronting the *River de la War*, and the West
 the *River Schoolkill*, each Front being a Mile in Length.
 Every Owner of one thousand Acres has his House in
 one of the two Fronts, facing the Rivers, or in the high
 Street, running from the Middle of one Front to the
 Middle of the other; and every Owner of five thousand
 Acres, has an Acre of Ground in the Front of his House,
 and the rest half an Acre for Gardens and Court Yards.
 In the Centre of the Town is a Square of ten Acres,
 surrounded by the Town House, and

other public Buildings, and each Quarter of the City is
 a Square of eight Acres. The high Street, which runs
 the whole Length of the Town, is an hundred Feet wide,
 parallel to which run eight Streets, which are crossed by
 twenty more at right Angles, all of them thirty Feet
 wide, and several Canals are let into the Town from each
 River, which add to the Beauty and Conveniency of the
 Place. There is also a fine Quay two hundred Feet Square,
 to which Ships of four or five hundred Ton may come
 up, with wet and dry Docks for building and repairing
 of Ships; Magazines, Warehouses, and all manner of
 Conveniences for importing and exporting of Merchandise;
 there are already fourteen or fifteen hundred Houses in
 the City, most of them well built with Brick, but are
 still a great many more wanting to compleat the Plan:
 However, more could not have been expected than has
 been done in so short a Time, the Ground not having
 been laid out much above fifty Years.

The Town of *Oxford* is situated likewise in the County
 of *Philadelphia*, where a Missionary is maintained by the
 Society, for propagation of the Gospel. *Germain Town*,
 situated to the Northward of the City of *Philadelphia*,
 also is said to be a thriving populous Place, inhabited
 chiefly by the *Dutch*, or those of *Dutch* Extraction. In
 this County is the City of *Radnor*, situated on the South-
 west-side of *Schoolkill River*, being the Capital of a large
 Country, planted by the *Welch*, and extremely well im-
 proved by them. To the South of the County of *Philadelphia*
 lies that of *Chester*, the Capital whereof is the Town
 of *Chester*, situate on the *River de la War*, which is about
 three hundred Miles broad at this Place; and to the South-
 ward of *Chester* lies the Town of *Chichester*; either of
 those Ports are capable of receiving and harbouring the
 largest Fleets, secure from Storms; the County of *Newcastle*
 lies South to that of *Chester*, the capital Town being
 of the same Name. This is said to be a Town of the
 brisk Trade in the Province, next to that of *Philadelphia*,
 and has an Iron Mine in the Neighbourhood of it. The
 Town of *Apoquinemink* lies upon the *River de la War*,
 South of *Newcastle*, and is a Place of good Trade. The
 County of *Kent* lies South of that of *Newcastle*, the
 chief Town whereof is *Dover*, being a commodious Port.
 The most Southern County is that of *Suffex*, the capital
 Town whereof is *Lewes*, being a secure Harbour and a
 Town of Trade.

The Air here is sweet and clear; the Fall begins about
 the 20th of *October*, and lasts to the Beginning of *December*;
 frosty Weather, and cold Seasons are frequent; but as
 in most Countries where are such Seasons the Air is dry
 and hungry; the *River de la War* is sometimes frozen
 over, notwithstanding its Breadth. The Spring lasts from
March to *June*, but the Weather then is more inconstant
 than in the other Seasons, which it generally is in other
 Countries. The Heats are extraordinary in the Summer
 Months, *July*, *August*, and *September*, but alleviated by
 cold Breezes, which make them very tolerable. The Wind
 is South-west during the Summer, but generally North-
 westerly, Spring, Fall, and Winter; which blowing from
 the frosty and snowy Mountains, and Lakes of the *Terra
 Canadensis*, is, doubtless, a main Reason of the excessive
 Cold here in Winter. The Soil in this Tract of Land is
 in some Places a yellow and black Sand, and in others
 a loomy Gravel, in others a fat Earth, like the Vales in
England; especially by inland Brooks and Rivers, where
 the Lands in this Country are mostly three to one richer
 than those that lie by navigable Rivers. There is also
 found a black hazle Mould, on a stony Bottom. The
 Earth is fruitful, fat, and easy to be cleared, because
 the Roots of the Trees lie almost on the Surface of the
 Ground. Some Allowance must be made for Mr. Penn's
 Property in the tempting Description he gives us of the
 Country. We have said enough of the Rivers and Creeks
 in it, and shewn how commodious they are for Navigation
 and Communication; but among other Waters, Mr. Penn
 mentions mineral Waters: These Springs are about two
 Miles from *Philadelphia*, at a happy Distance from
 Water-drinkers, but the Number of them is, since that,
 lessened extremely, and we need not insist on their Virtue.

Here are Trees of almost all Sorts, Oak, red, white,
 and

and black Ash, Beech, *Spanish* Chestnuts, Cedar, Wall-nut, Cypress, and Swamp; the most durable of all are Poplar, Gumwood, Hickory, Sassafras; and as for Shrubs, Snakeroot, Sarsaparilla, Salop, Spruce, and Cranberries; Wheat, Barley, Oats, Rye, Peas, Beans, Water Melons, Muskmelons, Apples, Pears, Cherries, Apricots, Carrots, Turnips, Parsnips, Onions, Cucumbers, Quinces, &c. are in great Plenty here; as also *Indian* Corn, Hemp, Flax, &c. It is common for one Bushel of Corn sown here to yield forty, often fifty, and sometimes sixty Bushels. One Mr. *Edward Jones* had for one Grain of *English* Barley seventy Stalks and Ears of that Corn, in his Plantation on the *Schoolkill*. Of living Creatures there are for Food and Trade, Deer, the Elk as big as a small Ox, Rabbits, Raccoons, Beaver; plenty of Oxen, Cows, and Sheep; of the latter, it is common for Farmers to have four or five hundred in a Flock. Horses, some very good, and handsome enough. Of Fowl here are very fine Bustards forty or fifty Pounds Weight, Pheasants, Heath Birds, Pigeons, Partridges, Clouds of Blackbirds, Swans, Geese, Brantides, Ducks, Teal, and Snipe. The Fish here are Sturgeons, Herring, Eels, Smelts, and Perch; the latter caught in abundance in *de la War Bay*; and in the River above the Freshes, Oysters, Crabs, Cockles, and Muscles. There are also Rock, Shat, Cathead, Sheephead, and other Fish, not worth our particular Regard.

We need not wonder, that in a Country so fruitful and so pleasant, and where there was so clear a Prospect of living happily, with moderate Industry, People should resort in such Numbers. At first, without doubt, Religion was a strong Motive, and the Quakers willingly followed Mr. *Penn*, from a Country where they were persecuted, to a Land of Plenty and Peace. But, in Time, and indeed in a little Time, this Argument ceased, and People resorted thither as they did to the other Colonies, upon the ordinary Motives of Gain and Trade; we may, however, venture to assert that Mr. *Penn's* original Contract, for so the first Constitution drawn by him was stiled, had a very great Influence in procuring Inhabitants, since it must be allowed there never was a more beneficent Scheme of Government devised by the Wit of Man.

By degrees, however, this also has been somewhat altered, not by the Proprietor or those acting under his Authority, but at the Desire and on the Request of the People, with respect to whom it may possibly be true, that such Alterations, in process of Time, might become necessary. The Spirit, however, of Mr. *Penn's* Institution is still preserved, and the People here are as free, and as well, and as cheaply governed, as in any part of the known World. A very strong Proof of this may be drawn from the greatest Error in Government that was ever committed there, which was laying a Tax of Five Shillings a Head upon all new Comers; which shews, that they were once in some Apprehension of being over-stocked; but this Law was very soon repealed, as it ought to be. At present it would be a very difficult Thing to pretend to compute the Number of People in this flourishing Colony, but we may form some Notion of it from the following Instance, which is very certain, *viz.* that the Inhabitants of *Philadelphia* in 1740 were full fifteen thousand.

14. As to the Commerce of *Pennsylvania* with respect to *Europe* and *America*, the Case, according to the best Accounts we have, stands thus: Their Merchandize consists of Horses, Pipe-Staves, Pork, Beef, and Fish, salted and barrelled up, Skins and Furs; all Sorts of Grain, *viz.* Wheat, Rye, Peas, Oats, Barley, Buck-Wheat, *Indian* Corn, *Indian* Peas and Beans, Pot-ashes, Wax, &c. and in return for these, they import from the *Caribbee Islands* and other Places, Rum, Sugar, Molasses, Silver, Negroes, Salt, and Wine; and from *Great Britain* Household-Goods and Cloathing of all Kinds, Hard-Ware, Tools, and Toys. They have also some Rice, but no great Quantities, and a little Tobacco of the worst Sort. Their Trade with the *Indians* consists but in a few Articles; they receive of the Natives chiefly Skins and Furs of their wild Beasts, for which they give them Clothing, Arms, Ammunition, Rum,

and other Spirits in return. This, as well as other Northern Colonies, has also a clandestine Trade with the *Spaniards* upon the Coast of *Terra Firma*, &c. furnishing them with *European* Goods and Merchandize, for which they receive chiefly Dollars in return; and they also trade to the Bays of *Honduras* and *Campeachy* for Logwood, by Connivance, as the *Spaniards* say; but the Subjects of *Great Britain* insist that they have a Right to that Trade, and as we have already shewn, they do not insist upon this, without just Grounds, in the Opinion of those who are the best and properest Judges of that Matter. But after all, it must be admitted, that *Pennsylvania* has no staple Commodity, which, however, is not justly chargeable upon the Inhabitants of this Colony; who, notwithstanding this, have never set up any Manufactures of their own.

But the Point to be enquired into is, Whether they might not have such a staple Commodity if they went about it themselves industriously, and received from hence proper Encouragement? It is a Point out of dispute, that no Country in the World is more proper than *Pennsylvania* for producing Hemp and Flax; and with respect to these, we ought seriously to consider, that there is nothing plainer than that Hemp and Flax are so useful in Navigation and Trade that we cannot do without them; the first for Cordage of all Sorts, the latter for making Sail-Cloth, as well as for the Linen Manufactures carried on in this Kingdom. The Necessity we are under for these Commodities ought to put us upon all imaginable Care how to provide them, that we may not fall under the same Necessity for them that we did in the Year 1703 for Pitch and Tar, when the Government of *Sweden* absolutely refused to let us have them for our Ready-Money, otherwise than in their Shipping, from their Tar Company here, at their own Price, and only in such Quantities as they thought fit. Upon that Disappointment, the Government, by allowing a considerable Encouragement for carrying on the Manufactures of Pitch and Tar, had sufficient Quantities from our own Plantations; and it is greatly to be wished the like Encouragement was given for raising Hemp and Flax; and as all Sorts of Naval Stores may be raised with so many Advantages to this Kingdom, it would be unaccountable to leave us dependent, and at an Uncertainty for them. It is very well known, that our Land is too dear for Hemp and Flax, and what does grow here (though it is tough, and makes strong Linen) neither dresses so kindly, nor whitens so well as that which grows in hotter Climates. In *Russia* the best Hemp and Flax grow in the southermost Parts of the Empire, where the Summer is hot and the Air clear, and yet the Flax is not accounted so good as that which grows in *Egypt* or *Italy*. *Egypt* has always been esteemed for its Linen, and even now supplies *Leghorn* with large Quantities, and the Coast of *Syria*, *Asia Minor*, *Smyrna*, *Constantinople*, and other great Cities, have a Supply of Hemp and Flax from thence.

All our Colonies (which run twelve or fourteen hundred Miles in length, all the way bordering upon the Sea) have very hot Summers, the southermost Parts of them lie near the same Latitude with *Egypt*, and the North Part much about the same with *Ancona* or *Bologna* in *Italy*, where Hemp and Flax grow; therefore, we have the greatest Prospect to receive mighty Supplies of Hemp and Flax from them. Part of the Land in the Colonies are very rich, and of so small Value, there will be Opportunity of breaking up fresh as often as there is Occasion to change the Ground, which if laid down will recover itself again without the Charge of Manuring, as we do here, to the very great Damage of our Ploughing Lands. Nothing impoverishes Land more than Hemp and Flax; and though it is manured, that alone will not do so well, for the Land ought to be changed after three or four Crops, and generally the finest and fattest Pieces are converted to that Use. Those great Conveniencies of having Land so very cheap, and so fine a Climate, which we know produces excellent Hemp and Flax, so commodiously situated along the Sea Coasts, with such Numbers of large Rivers running up the Country to the most inland Settlements, where Provisions may be raised

at so small a Charge, and where Work may be done by the Labour of Slaves, almost as cheap as in *India*, gives Ground to hope, that we may manufacture Linen here cheaper than any Part of *Europe* can import them upon us, and the Colonies be as profitable to us, by raising rough Materials to carry on the Linen Manufacture, as the *Sussex* and other Downs are, for supplying Wool for that Manufacture, the Profits of which we have valued ourselves so much upon, that we have set the rest of *Europe* upon being our Competitors therein.

Now as the Woollen Manufacture, especially the coarse Part, has spread itself of late into several Parts of the Kingdom, which has exceeded the Demand, and caused great Stocks to remain on Hand, if those rough Materials of Hemp and Flax were prepared in our Plantations, the People in *North Britain*, &c. would soon find the Advantage of falling upon that Manufacture; the laborious and coarse Part being performed abroad, the rest would invite not only the Poor and Neccessitous, but People of better Circumstances to employ their Time in it. If these Propositions are sufficiently considered, and heartily put in Practice, we may hope that by providing the aforesaid rough Materials, we shall have the delightful Prospect of seeing Trade flourish; for as the Silk and Linen Manufactures, where brought to Perfection, are altogether as profitable to those Nations as the Woollen is to us; and as we increase in our Linen Manufactures, those of *Silesia* and all the Hereditary Countries of the House of *Austria*, whence we take such Quantities, must abate of course; their People also will resort to us, and help to carry them on; for it has always been observed, where new Manufactures are set up, the Manufacturers will likewise remove. This was the Case with the *Flemings* when Queen *Elizabeth* gave such great Encouragement to have the Woollen Manufacture remove hither; and ours, when we had that Inundation of *China* and *India* wrought Silks, our Weavers went to *Holland*, *Flanders*, *France*, &c. so that several Streets in *Spittlefields* were almost desolate; but when these Silks were prohibited, the Manufacturers returned again.

It is supposed the *Russians* exported to *England*, and all other Parts, in Hemp and Flax, above the Value of a Million a Year. If Hemp and Flax be so valuable a Product for Merchandize with them, there seems to be a much greater Prospect of its being so to our selves, by raising them in our Plantations, because they will not be subject to any Land-Carriage, but shipped immediately from the Place of Growth; because Land is much cheaper in our Plantations than in the South Parts of *Russia*. The Climate, being equal with that in *Egypt* and *Italy*, is supposed to produce Hemp and Flax preferable to theirs. We have before shewn, that in the Cases of Sugar and Tobacco, every white Man employs four at home, that is to say, finds them Work to supply him with Utensils requisite for his. If Sugar and Tobacco employ such a Number of Hands, at home, certainly every Person employed in the Plantations, in raising and dressing Hemp and Flax, must by his Labour there, return more than twice the Advantage that can be produced by Sugar and Tobacco, for they are manufactured in the Plantations: The refining the Sugar and cutting the Tobacco, with the little Quantity that is rolled excepted. Whereas Flax and Hemp are Materials for employing all idle Hands; and of Consequence the Poors Rate will soon be abated, and the Nation will find in a little time what they save yearly thereby, will be more than sufficient to encourage the People to begin that Employment. And if once we come to be employed with Hemp and Flax by the aforesaid Methods, every Place will be filled with Flax-dressers, and the Overseers of the Poor of every Parish where the Wool-spinning Trade is not carried on, may very easily come at Hemp and Flax, which they will find as profitable to them, as the Woollen is to the other; and the more distant the Employment is, the better; for many Inconveniences have attended one Manufacture interfering with another; besides, there will be an Intercourse of Trade created, by one Part of the Kingdom supplying the other with their distinct Manufactures. This will give full Employment to the whole Kingdom, and an universal Chearfulness to every body: For the Poor are

never happier, nor their Minds easier, than when they have full Employment; and when they are employed, Riches is diffused throughout the whole Nation.

It is a common Opinion, that we have above a Million of People in the three Nations destitute of Work; but if those rough Materials (so often mentioned in this Discourse) should come to be raised in our Plantations, there need not be one idle Person: Now, suppose one Million of People were put upon manufacturing those rough Materials, and each Person earned but one Penny a Day, and allowing but three hundred Working-days in the Year, it would amount to one Million two hundred and fifty thousand Pounds: A prodigious Advantage to the Nation, which is still greatly heightened by considering that these People would be then employed, at least in part, and so far as they were employed, would be the better Subjects. That all this might be brought about with less Trouble than has been given the Nation by one *Baltick* or *Mediterranean* Expedition, and at the tenth Part of the Expence of a Campaign in *Flanders*, is a thing will be acknowledged by all who are capable of judging of this Subject; and therefore that it ought to be done, is a Point that cannot be disputed. I would not mislead my Reader by the Comparison, into a bad Opinion of such Expeditions or Campaigns; that is not my Business, or my Intention; the Justice of my Comparison turns upon this, that the Motives to such Expeditions and Campaigns are, comparatively speaking, near and at hand; whereas we are less acquainted, or at least less affected by the Connection between our Interests and those of the Plantations; though, from what has been said, I think it will plainly appear, that they concern us as much, and as nearly; as any Interests can do without the Limits of our own Island.

15. But it is now time to bring this Section to a Close, and after having given the Reader, from the best Authorities I could find, as clear an Account as I was capable of giving of these noble Settlements, I come next to add a few general Remarks, not upon this or that Plantation, but upon the whole Body of our *American* Settlements taken together. We have shewn how the Out-lines were drawn, so early as in the Reigns of King *Henry VII.* and *Henry VIII.* We have taken notice of the Schemes and Preparations that were made for settling the Countries we had a Title to in the Reign of Queen *Elizabeth*. We have given an Account how far these were carried into execution in the succeeding Reigns. And in this Section, we have plainly exhibited the Manner in which this last Plan was fully accomplished. By this Means the Reader sees, that the Discoveries of the *Cabots*, though treated by some unskilful Writers as trifling Things, and Matters of no great Moment, were in Reality the Grounds of our Pretensions, now converted into the actual Possession of that vast Tract of Country from the Northern Coast of *Hudson's Streights*, down to the Southern Limits of the new Colony of *Georgia*, or of the old Colony of *Carolina*; for the Limits are the same. As for the Islands, I take the Settlement of them to have been occasioned by the old Rout to *Florida*, which has been so much ridiculed; but which, notwithstanding, seems to have been the true Source of our Acquisitions in the *Leeward Islands*. *Jamaica* is ours by Conquest, and which is another Circumstance worth remembring, became so, in a great measure, by a Force raised in our Plantations. Whether it be our Interest to think of making such Expeditions for the future, I shall not determine; but Care ought surely to be first taken of the Colonies we have; which it never can be till the Importance of our Plantations in general is thoroughly understood, by the Bulk of this Nation. This is the Point I have principally laboured in this Work, and I shall close all I have to say with the Consideration of three Points; which I hope will make the Matter plain to every Understanding.

The first of these Points is, *What the Condition of this Country was before we had any Plantations?* In regard to this, I think I may safely affirm that it was very low and despicable. In the victorious Reign of *Edward the III.* there was a Balance of Trade struck, and delivered into the Exchequer, by which it appeared that the Exports of one

one Year exceeded the Imports by two hundred fifty five thousand two hundred and fourteen Pounds thirteen Shillings and Eight-pence, which for that Time was a great deal. At the Time Queen *Elizabeth* entered upon the Government, the Customs produced thirty-six thousand Pounds a Year; at the Restoration they were let to Farm for four hundred thousand Pounds; and produced considerably above double that Sum before the Revolution. The People of *London*, before we had any Plantations, and but very little Trade, were computed at about one hundred thousand; at the Death of Queen *Elizabeth* they were increased to one hundred and fifty thousand, and are now about six times that Number. In those Days we had not only our Naval Stores, but our Ships from our Neighbours. *Germany* furnished us with all things made of Metal, even to Nails; Wine, Paper, Linen, and a thousand other things came from *France*. *Portugal* furnished us with Sugars; all the Produce of *America* was poured into us from *Spain*; and the *Venetians* and *Genoese* retailed to us the Commodities of the *East Indies* at their own Price. In short, the legal Interest of Money was twelve *per Cent.* and the common Price of our Lands ten or twelve Years Purchase. We may add that our Manufactures were few, and those but indifferent; the Number of *English* Merchants very small, and our Shipping much inferior to what now belongs to the Northern Colonies. These are plain and certain Facts: But as soon as we began to extend our Trade, and to make Settlements abroad, the Face of our Affairs changed; the Inhabitants of the City of *London* were doubled by the End of the last Period, and were again doubled before the End of this; our Shipping increased in a still greater Proportion; we coined within twenty Years after that Queen's Death about five Millions at the Tower, in twenty Years after that seven, and in the next twenty Years eight, which are indubitable Proofs that we had gained a prodigious Balance of Trade in our Favour.

The next Point I shall consider is, *What our Condition has been since?* and, with respect to this, I may boldly affirm that it has altered for the better, almost to a Degree beyond Credibility or Computation. Our Manufactures are prodigiously increased, chiefly by the Demand for them in the Plantations, where they at least take off one half, and furnish us with many valuable Commodities for Exportation. Instead of taking the Quantities we were wont to do of Goods from other Nations, we actually export those very Goods, and sometimes to the very same Nations; Sugar, Rum, and Tobacco, are the Sources of private Wealth and public Revenue, which would have been so many Drains, that would have beggared us, had they not been raised in our Plantations. It is no longer in the Power of the *Russians* to make us pay what they please for Flax and Hemp. The *Swedes* cannot compel us to pay their own Price, and that too in ready Money, for Pitch and Tar, nor would it be in their Power to distress us, should they attempt it by raising the Price of Copper and Iron. Logwood is sunk seventy five *per Cent.* Indigo, and other dying Materials, are in our Power, and at moderate Prices. In short, the Advantages are infinite that redound to us from our *American* Empire, where we have, at least, a Million of *British* Subjects, and between fifteen hundred and two thousand sail of Ships constantly employed. Such have been the Fruits, such is the Condition of our Plantations, and let any Man doubt of the Benefits resulting from them to this Nation if he can; or when he reflects on the Numbers maintained here by their Industry, and even by their Luxury, let him deny or envy their Wealth if it is in his Power.

When our Plantations were in their Infancy, they were some Burthen and Charge to this Nation, and then it was that some wise and public-spirited Persons took upon them to become Advocates for a thing which they foresaw would prove highly useful and advantageous. I have read many of their Discourses with great Pleasure, because I considered them as written with a kind of prophetic Spirit, in which their Authors have exhibited to the Eye of the Ages in which they wrote, a very just Picture of what has passed in succeeding Times; but with this re-

markable Circumstance, that though several of them were Men as remarkable for bold Flights of Imagination, as for Penetration and Judgment, yet in this Case they have not reached the Truth; the present State of the Plantations exceeding vastly all that they promised, or even hoped from them; the Reason of which I conceive to be their framing Conjectures from the State the Nation was then in, and our Trade was at that Time so inconsiderable in Comparison of what it is at present, that I think there is no wonder the Writers who flourished in those Days should fall so much short in their Expectations from our Settlements in *America*. But, perhaps, it may be objected, that though they did not foresee many things that have since fallen out in those Parts of the World, yet it is very evident that they believed many Advantages would arise from those Colonies that have never yet come to pass; which leads me to the third Point I propose to mention in these Remarks.

This third Point is, *The Improvements and additional Benefits that may be still made in, and accrue from, our Plantations.* We ought, in this respect, to consider of what a vast Extent that Country is, which we actually possess in the New World, to which I will be bold to say this Island does not bear a greater Proportion than the County of *Norfolk*, to the whole Kingdom of *England*; whence we may easily conceive what room there is for making new Improvements in such a vast Tract of Country. It is, indeed, true, that some of our Settlements on the Continent, such as *New England*, *New York*, *Pennsylvania*, *Maryland*, and *Virginia*, are already tolerably well peopled; but then *Nova Scotia* is scarce settled, *New Britain* is a vast Country, and capable of being turned to our Advantage; is so far from being settled, that it is scarce known to us; and the same thing may be said of all the Country bordering upon *Hudson's Bay*. As to the Southern Colonies, by which I mean the two *Carolina's* and *Georgia*, they are very thinly peopled, and very little improved, though beyond all Comparison the most valuable Possessions we have in those Parts. In regard to the Islands of *Bermudas* and *Barbadoes*, they are thoroughly peopled, and most of the *Leeward Islands* tolerably inhabited; but then there are several Islands to which we have as clear and as good a Title, as to any of these, that are not settled at all, though from the Nature of their Climate, Soil, and Situation, they are not inferior to any, but on the contrary, superior to most of those of which we are possessed, as will be hereafter shewn. The noble Island of *Jamaica*, which of itself might serve to enrich any Country to which it belonged, is not a third Part cultivated, so that there is every where room for us to exert our Industry, for the Honour and Advantage of the *British* Nation; which as it has already drawn such immense Profits from its Settlements in *America*, so beyond all Question we may still draw much greater, if we proceed with the same Spirit and Vigour that our Ancestors did, having much more Power in our Hands, much fairer Opportunities than they had, besides the Light and Authority of Experience, to guide, encourage, and support us.

In order to this, and that we may actually add these Advantages in prospect to those which we at present possess, the Steps necessary to be taken fall under the two following Heads: The first is, *Improving such of our Colonies as are already well settled*; and the next, *Providing for the thorough Planting such as are at present but very indifferently, or scarce at all, peopled.* It would require a large Treatise to expatiate fully on these Heads, and therefore I shall content myself with only a few Hints as to each of them. In respect to the first, I cannot conceive that any thing would be more advantageous than providing every Colony with some Staple Commodity, which would infallibly produce the following desirable Consequences: It would make the Inhabitants of those Colonies perfectly easy, and at the same Time it would vastly enrich us. As for *Virginia* and *Maryland* they are possessed of the Tobacco Trade, in which, if any Ease, Encouragement, or Advantage can be granted them, they most certainly deserve it: But with respect to *New England*, *Pennsylvania*, *New York*, and the *Jerseys*, Ways and Means

Means might be found to increase their Commerce with *England* directly, by promoting their Inclinations to furnish us with all kinds of Naval Stores, and with Iron. There was, as to Pitch and Tar, a considerable Bounty given, and it is very remarkable for many Years this produced no Effect, which might possibly countenance an Opinion that the Friends to the Plantations were too sanguine in their Notions on this Head; but Experience afterwards shewed the contrary. For the Circumstances of the Public making it necessary to try how far this might be practicable, it very soon appeared that the thing could be easily done; and upon sending over Persons well acquainted with the Methods of making Pitch and Tar, the People in the Colonies soon fell into it, and such Quantities were imported, as not only supplied our Wants, but enabled us also to supply those of our Neighbours; and then upon a Supposition that the Trade was effectually established, the Bounty was discontinued. The Consequence of this was, that the Importation of these Commodities from *Russia*, *Sweden*, and *Norway*, was revived; for the People of those Countries building large bulky Ships, peculiarly proper for transporting those Commodities, by navigating these Ships cheaper than we can do ours, are thereby able to undersell our Countrymen in the Colonies, by three or four Shilling in a Barrel; so that to keep this Trade there grew a Necessity of granting a new Bounty upon Pitch and Tar from *America*, or laying a new Duty upon what was imported from the North.

We may say the same thing with regard to Iron, of which, at present, we import very near double as much from *Sweden*, as is sold to all the rest of *Europe*, for which we pay mostly in ready Money; and yet no Question can be made of its being very practicable to bring the best Part of the Iron we want from our Plantations, which has been hitherto prevented by Notions so frivolous, that I do not care to mention them. Hemp and Flax have been sufficiently insisted upon already, and to these we may add Pot-ashes; so that the Reader will easily discern that there is no Difficulty at all in the Way of enabling the Northern Colonies to pay us for our Manufactures, and prevent their setting up Manufactures themselves, but our setting heartily about it. The same Thoughts may, in a great Measure, serve for our Southern Colonies, in which Tar may certainly be made as good as any in the World; but then there are other things peculiar to those Colonies, such as the planting Coffee, Tea, Cocoa, Indico, and the Shrub that produces Cochineal; but above all, we ought to think of Silk, for Reasons that shall be given when we come to treat of the Colony of *Georgia*: At present we shall only say that there is this great and extraordinary Conveniency attends the Cultivation of the last mentioned Commodity, that as it is proper for the same Soil and Climate, as Hemp and Flax, so they may be both carried on together; the Silk Harvest, as they call it, being over before Hemp and Flax are ripe.

As to the Sugar Islands, though they have already a Staple Commodity of very great Value, yet this should not hinder us from considering how that Commodity may be still rendered more useful, I mean to the Planters and to us; and how far other things are capable in the same Countries of being improved. It was the Opinion of Sir *Josiah Child* (and I think the Subject well considered it is not easy to produce a better Opinion) that Sugar may be as much made the Commodity of this Nation, as the Gold and Silver of *Peru* and *Mexico* are the peculiar Treasures of *Spain*. The Reasons he gives are very strong, but it is very certain that we have not fallen upon the right Method of bringing his Doctrine into Practice; since instead of exporting one half of the Sugar we bring home, as we formerly did, we do not now export above a sixth, and this not from falling off of the Demand, but because new Markets have been found, at which Foreigners can buy cheaper. To alter this all Heads should be set to work, and all Arts tryed; and till these succeed, it may not be amiss that the Inhabitants of the Sugar Colonies would try to bring some other Goods to Market.

Thus much for the first Head, now for the second: It has been computed, by some, that there is a Million and a half of white People in our Plantations, which Computation has been judged by others somewhat of the highest; perhaps it may be so, but without all doubt it would be our Interest to have two Millions of white People there; nor do I think that there is any Reason to fear that this would either drain the *British* Dominions, or at all indanger the Dependancy of the Colonies. I am, on the contrary, very firmly persuaded, that the Increase of People in the Colonies, as it would certainly increase our Trade, so it must necessarily increase the Number of our People at home; and that the Methods proper to be taken for the better peopling our Colonies, and improving them, would infallibly render them more dependent.

But to come closely to the Point, and shew how this may be done. Give me Leave to observe, that though the general Proposition that the Number of the People is the Riches of a Country be true, yet it is true only of industrious and useful People; and it is in this Sense, that the Number of the People in *Holland* is quoted as an Example; so that if there be in any Country Numbers of People useless, they are so far from contributing to the Wealth of that Country, that they are in Fact the Causes of its Poverty. Now, it is certain, that though this Nation might become more powerful and more rich, by being more numerous than it is; yet there is not any more probable Method of bringing this about than by employing our useful Hands, which perhaps may be easier done Abroad than at Home. We have vast Numbers of Vagabonds throughout the Kingdom, who many of them live by Pity, but most of them by the Folly of better People than themselves; there cannot therefore be any Cruelty in sending these People where they must work, and consequently maintain themselves and be useful to others. We have many People convicted of small Crimes, and from the Ignominy of the Conviction and Punishment rendered desperate; it would certainly be a great Charity to provide for these. We find Multitudes released from Time to Time out of Prisons by Acts of Grace, which set them at Liberty, 'tis true; but, at the same Time, leaves them at little better more than the Liberty of starving; and who can say, that it would not be highly laudable to find out some Means for giving these People Bread as well as Freedom? I humbly conceive, that if a proper Fund was assigned for sending these People abroad, not like Transports or Negroes, but like unhappy *Englishmen*, with due Provision for their comfortable Maintenance in their Passage, and a proper Reception in the Places they are sent to, this might be found an effectual way of easing our Poor-Rates, stocking our Colonies, and enlarging the Trade of the Nation.

But in doing this, great Consideration is to be us'd, there ought to be nothing in it of Shame, and as little of Force as may be. The Terms ought to be such as may encourage People in Distress to accept them, and the accepting them might be in the Nature of a Superfedeas to all Criminal Prosecutions, not of a Capital Nature. They should be sent Abroad for a Term of Years, or till they could repay a certain Sum of Money to the Corporation intrusted with the Management of this Scheme, and considerable Rewards should be given to such as behaved well, and gained a competent Settlement during the Time limited for their remaining abroad; and if to this certain honorary Preferments were added, it would be so much the better. These are the Outlines only of a great Design, worthy the Attention of the Legislature, who perhaps may think a Tax on public Diversions a reasonable Fund for such a Service, there being nothing more just than that Luxury should contribute to relieve Necessity, and that those who are able to be idle should be made willing to help those that must work.

Such, at least, are my Notions of these Matters, and of the Means by which our Plantations might be improved, and the Advantages we derive from them increased and extended. If what I have said be rational and practicable, or without much Difficulty may be altered in such a Manner as to become so, I hope it will be thought worthy of Consideration; but if otherwise, let

let some Person better versed in these Things, and more capable of treating this Subject arise, and set it in its true Point of Light. For this is the critical Time, the Season when the Friends of Trade and the Plantations should exert themselves before a Peace takes Place, and a new

Scene opens, of which it will be impossible to give our Judgment immediately, and as impossible to think of executing those Schemes then, that are easy as well as practicable now.

SECTION XX.

The History of the BRITISH Colonies in America, from the Revolution to the Death of his late Majesty King George I.

1. *The Artifices of the French, under the Reign of James II. defeated by the Probity of Colonel Dungan, Governor of New York.* 2. *The Indians, by their Instigation, and with their Assistance, attack the People of New England in 1690, and are repulsed with Loss.* 3. *An Account of Sir William Phipps's unfortunate Expedition against Quebec.* 4. *The History of the Indian War continued to its Close, with other remarkable Occurrences.* 5. *The Society for the Propagation of the Gospel incorporated by King William III. and the many Advantages flowing from that excellent Establishment.* 6. *The Affairs of the British Colonies, during the Reign of Queen Anne, briefly considered.* 7. *The unfortunate Expedition against Canada, under General Hill and Sir Hovenden Walker.* 8. *The Methods taken by the French for the Benefit of their own Commerce, at the Expence of ours to the Treaty of Utrecht.* 9. *An Account of his Grace the Duke of Montague's Scheme for settling the Islands of St. Lucia and St. Vincent.* 10. *The History of the Expedition for that Purpose, under Captain Uring, and his Relation of its Miscarriage.* 11. *Colonel Braithwaite's Report of his being forced to abandon the Settlement of St. Vincent.* 12. *The indubitable Title of the Crown of Great Britain to those Islands asserted, and the Importance of maintaining it demonstrated.* 13. *Remarks and Observations on the most remarkable Passages in the foregoing Section.*

IT is generally agreed, that the very worst Part of King James's Government was the Inclination that he had to French Counsels, and his falling too readily into French Measures, which is the more extraordinary in Matters relating to Commerce; because never any Prince understood them better than King James. It must therefore have been his violent Zeal for promoting the Popish Cause, that induced him to go the Lengths he did, in Favour of France; contrary most certainly to the Interest of this Nation, as he would have seen sooner than any body, if that Zeal of his had not hindered him. But from hence we see the Difference between English and French Popery. Our deluded Prince, though he understood Trade, was inclined to sacrifice it, in some Measure, for the Sake of his Religion; the French King, though of the same Religion, and pretending to be as zealous for it as King James, made use of it as a Colour to promote his own ambitious Designs, and the Trade of his Subjects at our Expence. I know that this is a delicate Subject to handle, and I should not have mentioned it all, but from a just Sense of its Consequence, and a sincere Love for Truth, and the Interest of my Country.

The French, in the Beginning of King James's Reign, finding their Colony of Canada in the utmost Danger from the Iroquois; a very warlike Indian Nation, jealous of their Liberties, and very capable of defending them by Force of Arms, resolved, since Force had hitherto failed, to try what might be done towards subduing them by the gentler Method of Conversion; in order to which they not only employed a Multitude of artful Jesuits, but contrived likewise, under Pretence of extending the Christian Faith, to engage King James to countenance and assist this Project. In order to this an Irish Gentleman, Colonel Dungan, Son to the Earl of Limerick, was made Governor of New York; and he was directed, by his Master, to permit the French Jesuits to preach to, and convert, the Indians under the Protection of his Government. The Scheme was certainly well laid, and one would wonder how it came not to take effect; which if it had done, must have proved the Ruin of that Colony at least, the Conquest of which had been for a long Time the Object of the French Policy. But this Colonel Dungan, unfortunately for the French, was a Man of very good Sense, and of strict Honour; he obeyed his Master's Commands, though unwillingly, but he kept so strict an Eye upon the French Jesuits, that he very soon saw to the Bottom of their Designs; and, finding them incompatible with the Welfare of the Colony he governed, he obliged them to retire; telling them that they came to promote the

Commerce, rather than the Religion of their Nation; and that if his good Friends the Indians were so much in love with Jesuits, that they could not be without them, he would supply them with those who should make them good Christians and good Englishmen at the same Time.

This greatly provoked the French Governor of Canada, Mr. Denonville, who threatened him with the Displeasure of his own Master, and of the Most Christian King; but this had no Effect upon Colonel Dungan, who would not be either cheated or bullied; and therefore when the French Governor had trapp'd some of the Indian Chiefs, and sent them over to be made Slaves in the French Gallies, by the most notorious Breach of Faith that ever Man was guilty of; the Colonel assisted them in the War occasioned thereby, which brought the French Colony within a Hair's Breadth of Ruin. This Story, which is very remarkable, we have from French as well as English Authors, and which is no less extraordinary, they agree in every Circumstance of it. Only the former are so partial, as to treat the Colonel's Character very ill, because he would not sacrifice the Interest of his Country, his own Honour, and Conscience to their Views. After the Revolution, when he was become Earl of Limerick, King William, who was very well informed of his Proceedings, procured an Offer to be made him of a very considerable Command in the Spanish Service, but he declined it; and though he liked not the Measures, chose to follow the Fortunes, of his Master King James.

The French, by the same kind of Artifices had very near dispossessed the Hudson's Bay Company of that Country entirely; and, as soon as the War broke out, they actually did so, as we have already shewn. They also made a bold Attempt upon the Colony of New York, with the Assistance of the Indians in their Interests, but were repulsed; and Colonel Peter Schuyler, with three hundred English, and the same Number of Iroquois, bravely marched from Fort Albany to Quebec, which is four hundred Miles; and finding the French Governor with seven hundred regular Troops, and as many Hurons, an Indian Nation always at their Devotion in the Field, they boldly attacked them, and killed three hundred Men, and thirty Officers, with very little Loss to themselves; but having no Artillery, and the French retreating into their Forts, the Colonel made a very honourable Retreat, satisfied with the Blow he had struck, and securing his own Country from any farther Depredations. But it was not only on this Side that the French attacked our Colonies at that Time, on the contrary they had framed a Design of greater Consequence against the People

ple of *New England*, of which, as it is a Matter of great Importance, we will give as full and clear an Account of it as we can; for tho' their Intrigues began somewhat earlier than the Period assigned for this Section, yet as our Expedition was not made till after the Revolution, it comes in very properly here.

2. The *French*, in a Time of full Peace, and when, as we have observed, they were soliciting and obtaining Favours from King *James*, excited the *Indians* on the Frontiers of *New England*, to surprise several Out-settlements, where they committed several great Barbarities: Of this Complaints were made to the *French* Governor at *Quebec*, who gave very good Words, pretending that he knew nothing of what had happened; but promised to interpose, and check the Designs of the *Indians* as far as was in his Power, which Promise was very indifferently performed. The *English* thereupon tried what fair Means, and a peaceable Negotiation with the *Indians* would do; in this likewise they were deceived and amused, while their Enemies still persisted in their Depredations, though they continued to treat, and pretended that all Disputes should be amicably settled, well knowing that the Colony would take any Measures rather than engage in an *Indian* War. During these Transactions, the *French* and *Indians* entered into farther Engagements against the *English*, who did what they could with Honour and Justice, to bring Matters to a peaceable Issue, which was rendered very difficult by the Intrigues of the *French*, who upon King *James's* withdrawing to *France*, represented the *English* Nation as in a rebellious and perilous Condition, which was sufficient Encouragement for the *Indians* to continue the War, having the Promise of powerful Assistance from *Quebec*.

They surprised the Garrison of *Quacbecho*, by the Treachery of *Mesandonit*, a Sachem, whom Major *Waldern*, who commanded there, had generously entertained the Night before; and that Traitor lying in his House, opened the Gates in the Morning to a Party of Savages, that lay in Ambush not far off, and rushing in killed the Major and twenty-two Men, burnt four or five of the best Houses, and carried away twenty-nine Persons into Captivity, killing Mr. *Broughton* in their Retreat. The Government ordered Capt. *Noyes*, with a strong Party, to march to *Penocook*, and clear the Country of the Savages; but they cleared it themselves by running away as soon as they heard News of his coming. Captain *Noyes* pursued them, cut down all their Corn, burnt their Wigwams, and laid every thing waste. A Party from *Saco* was surrounded by a great Body of *Indians*, and escaped with Difficulty, having lost six of their Number; they afterwards mastered *Pemmaquid* Fort, by Help of Intelligence given them by one Mr. *Starkey*, who falling into their Hands thought to get out of them by that Service, and told of the weak Condition the Fort was in by the Absence of Mr. *Giles*, and Part of the Garrison; upon whom they fell at *Giles's* Farm, and killed him and fourteen Men. They then got upon a Rock, when they miserably galled the *English*, and obliged the Governor, Capt. *Weems*, to surrender on Promise of Life and Liberty. But the Savages broke the Capitulation, and butchered the greatest Part of them, as also Capt. *Skinner* and Capt. *Farnham*, who were coming to the Relief of the Garrison, and Mr. *Pedishall*, as he lay in his Sloop in the *Barbran*. These Losses caused the Inhabitants of *Sheepscot* and *Kennebeck* to abandon those Places, and return to *Falmouth*.

It was time for the Government of *New England* to look about them, and think of opposing vigorously those Murders and Depredations of the *Indians*: They sent Major *Swayne* with five hundred Men from *Massachusetts*, and Major *Church*, one of their best Officers, from *Plymouth*, with five hundred more, against the Enemy in the East, where they had intercepted Lieut. *Hutchin*, who had drawn off a Garrison he had in those Parts, to set them to work in the Field. The Savages coming unexpectedly upon them cut them to pieces being seventeen in Number, and then came to the Fort, where were only two Boys, and some Women and Children; the Boys defended it against them, wounded several; and when they found that the *Barbarians* were about to set fire to the House

that was in the Fort, and to burn them out, they would not yield but on Terms of Life; which these inhuman Wretches granted, and afterwards killed three or four of the Children, with one of the Boys; the other made his Escape. Capt. *Garner* pursued the Enemy, but they were too nimble for him. Another Party of them assaulted *Cano*, killed Capt. *Brooks*, and had put the whole Town to the Sword, had not Capt. *Hall* come opportunely with Relief. The Designs of Major *Swayne* and Major *Church* were frustrated by the Treachery of some *Indian* Confederates, who being sent out as Scouts, discovered all that they knew to the Enemy; who understanding the Number of the *English* fled to their inaccessible Woods and Swamps: So Major *Swayne*, having garrisoned *Blew Point*, retired to Winter-Quarters. I enter not into the Particulars of the barbarous Treatment the *English* Captives met with from the Savages, there being nothing in it but what might be expected from their Rage and Cruelty, and there was no likelihood of their learning Humanity towards the *English*, by Lessons from their new Allies the *French*, who were very active in instructing and disciplining them for the better Management of the War.

It is plain they had improved in it, both in Arms and in Action, and had continual Assistance from *Quebec*, without which the *English* would soon have chastised them for their Insolence, and taught them to be quiet. To make the *French* some Returns for the many Mischiefs the *English* had suffered by their Means, it was resolved in *New England* to carry the War home to them. In pursuance of this Resolution Sir *William Phipps*, who commanded the Fleet and Forces, sailed from *New England* the 28th of *April*, 1690, and on the 11th of *May* following arrived before *Port Royal*. The *French* had then a very flourishing Colony in *Acadia*, or, as we call it, *New Scotland*, consisting of no less than six thousand People, who got a Living at least by their Trade in Lumber, Fish, and Skins; but for all that the Place was so miserably provided for Defence, the Town being covered only by a slight Pallisade, and a little Fort of no Force, that it was very soon reduced; and Sir *William Phipps* had the Honour of recovering this Country to the Crown of *Britain*. The People in *Nova Scotia* had Leave by the Capitulation, either to retire to *Canada*, or remain in the Country; and about two thousand chose the latter: So that Sir *William* not only acquired a Country, but a People; yet we did not keep the Possession of either, for any Length of Time. To revenge these Losses, Monsieur *Artel*, a *French* Officer from *Canada*, and one *Hoophood* a Leader among the *Huron* *Indians*, Confederates with the *French*, with Men of both Nations, assaulted *Salmon Falls*, killed thirty Persons, and carried away fifty into Captivity; which terribly alarmed all *New England*, it being the first time that the *French* had acted openly with the *Barbarians*. And as *Quebec* was thought to be the Source of all their Calamities in this War, it was therefore resolved to attack that Place, which being reduced, the *French* would have no City to rest in, and carry on their ill Designs against their Christian Neighbours.

3. The Success Sir *William Phipps* so lately had, recommended him to the chief Command in this Expedition; but it seems to have been as ill laid and managed as the other was well contrived; for it is certain, he had a Strength with him sufficient to have driven the *French* out of *Canada*, had it been well used: He had thirty-two Sail of Ships, and they had aboard two thousand Men, a prodigious Armament for such a Colony, and sailed from *Hull* near *Boston* the 9th of *August*; but came not within Sight of *Quebec* till the 5th of *October*. Thus they were eight Weeks in a Voyage, that with good Winds and Weather, might have been made in two or three. The *English* were so long making up the River of *St. Laurence*, that the Governor, Count *de Fontenac*, had time enough to prepare for his Defence by drawing all the Strength of the Colony to *Quebec*, which Sir *William* expected would have been divided by an Army marching over Land, and attacking *Mount Royal* Fort on the Frontiers of *Canada*, while he fell upon the Capital.

This Army was to consist of two thousand Men from
New

New York, Connecticut, and Plymouth Colonies, and one thousand five hundred *Indians*, to whom the *French* gave the Name of *Iroquois*; but the *English* distinguished them by the Names of their several Nations. The *English* marched as far as the great Lake of *Canada*; but as there were no Canoes provided for them to pass it, they returned; and it is very strange that there should have been no Provision for their Passage secured, since the Success of the Enterprize so much depended upon it.

When Sir *William* arrived within Sight of the Place, he fancied that the Conquest would have been as easy as that which he had made of *Nova Scotia*, and therefore he drew up a Paper in the Nature of a Summons to surrender, conceived in very rough Terms; for Sir *William* was originally a Carpenter, and afterwards a Sailor; so that he was very blunt and unpolished, though a very honest, and very brave Man: But the *French* Governor, Count *Fontenac*, was so offended at the Style and Subject, that he caused a Gibbet to be set up, and would have hanged the Major that brought the Paper, had it not been for the Bishop's Intercession. He returned, however, a very insolent Answer, calling *Phipps* and his Company *Heretics* and *Traitors*.

On the 8th of *October* the *English* landed, under Lieutenant-General *Whalley*, to the Number of one thousand four hundred, for to these they were reduced by the Small-Pox, and other Diseases; but had their full Complement been preserved, what were two thousand on board the Ships to four thousand within the City; for so many Men *Fontenac* had now with him? Which *Whalley* understanding, he re-embarked his Troops, though they would very fain have attempted one Assault: But their Bravery was ill-timed, considering the Inequality of their Number to that of the Enemy. Some Writers make the Loss of the *English* from the Opposition they met with on Shore, to be six hundred Men; but, I believe, that Opposition is heightened for the Credit of our Nation, that the Troops might not be thought to abandon this Enterprize without looking the Enemy in the Face. The best Accounts given by the *French* Writers of this Matter, do not ascribe the Deliverance of *Quebec* more to the Courage of their own People than to the Want of Conduct and Discipline in the *English*. The Truth of the Matter is, the Scheme was well enough laid, but those who undertook to execute it had not Capacities suitable to a Design of this Nature; and besides, there fell out some Accidents that were fatal to them, as well as wholly unforeseen, and to which in a great measure we may justly attribute their Disappointment.

The Small-Pox did not only carry off Numbers in Sir *William Phipps's* Fleet, but broke out also in the other Army, that was to have marched by Land to attack *Mount Royal*; and this Malady infecting the *Iroquois*, was the true Reason why that Expedition was abandoned; and this being soon known to the *French*, gave them an Opportunity of throwing their whole Force into *Quebec*, which was much too great for Sir *William Phipps* to struggle with, if he and those who attended him, had been better Officers than they really were; so that there is no great Wonder the whole Expedition miscarried. This shews, that Matters of a military Nature cannot be carried on, especially against the *French*, but by military Men and Officers well acquainted with Service; yet the Zeal and Courage of the People of *New England*, in undertaking and pushing this Project of theirs so far as they did, deserves great Applause, as it fully demonstrates the Spirit of the People, and very plainly proves that with proper Encouragement and proper Assistance, they are both willing to endeavour and able to perform all that in their Circumstances a *British* Government can expect from *British* Subjects. In the present Case, their Efforts rather exceeded than fell short of their Abilities, for their Fleet and Army were numerous enough, well provided, and well paid; the Expence of this fruitless Attempt falling little short of one hundred and fifty thousand Pounds, every Penny of which was furnished by the Inhabitants of this Colony, or, which was worse, they ran in Debt for it, and were left to pay it: Here at home we do not sufficiently reflect upon the Inconveniencies that such Mis-

fortunes as these bring upon our Settlements, but are too apt to charge them with Want of Vigour, Want of Application, and Want of public Spirit; whereas, in Truth, these Wants, generally speaking, lie on our Side the Water; and it is to cover our own Neglects, that we pretend to find Faults in them of which they were never guilty.

The Ships in their Return met with no better Fortune at Sea than the Men had done by Land; some of them were driven as far as the *Leeward Islands*; one was wrecked, another was never heard of; a third foundered with all her Crew in her, a fourth was driven ashore on the desolate Island of *Anticosta*, where Captain *Rinsford* and his Crew, forty at first, were reduced through Want and Weather to half the Number in a Month's Time, and then saved almost miraculously. The Loss of Men in this unsuccessful Enterprize amounted to one thousand, and those as useful Hands as any in the Country. During the Progress of this miserable Expedition, a Party under Lieut. *Clark*, venturing out of *Casco*, to look for the Enemy, met with a Body of four or five hundred *Indians* and *French*, who killed the Lieutenant and thirteen of his Men; the rest escaping into the Town, were pursued by the *Indians* and *French*, who entering the Place reduced it to Ashes. The Garrison surrendered the Fort upon Conditions of safe Conduct to the next *English* Town; but the *French* basely broke the Capitulation, and made them Prisoners of War under a very foolish Pretence of their being Rebels to their lawful King.

The Governor, Major *Davis*, and some of his Men, were sent to *Quebec*; the rest were murdered by the Savages. The Garrisons of *Papocodack*, *Spamwick*, *Black Point*, and *Blue Point*, drew off to *Casco*, twenty Miles within *Casco*, terrified with the Fate of that Place: Their Terror infected that Garrison also, and half of them fled. *Hoophood*, the *Huron*, pursued them and destroyed all the Country, burnt several Houses at *Berwick*, killed thirteen or fourteen Men at *Fort Point*, and carried off six Prisoners; but Capt. *Floyd*, and Capt. *Greenleaf* coming up with him routed his Party, wounded and drove him off to a great Distance. He was afterwards fallen on by the *French* *Indians*, who taking him for an *Iroquois*, killed him and almost all that were with him. The *Indians* and *French* had after that an Advantage over the *English* under Capt. *Wiswell*, whom they killed with fifteen of his Soldiers near *Wheelwright Pond*, the rest were brought off by Capt. *Floyd*. Flushed with this Success the *Indians* and *French* made a Descent upon *Amesbury*, near to the *Massachusetts*, surprised Capt. *Foot* and tortured him to death; but the Townsmen returning into the Fort, maintained it against them. Major *Church* passed by Sea with three hundred Men to *Casco Bay*, where he landed, and passed directly *Peckypset*, an *Indian* Fort, which he found deserted, thence to *Amonoscoggin Fort*, forty Miles up *Casco* River, which he burnt after having killed twenty *Indians*, all that staid in it, and released seven *English* Captives. Having Notice that the *Indians* had agreed to rendezvous on *Peckypset* Plain, in order to attack *Wells*, he hastened thither to give them Battle; which the Savages avoided, and the *English* went into Winter Quarters. Capt. *Convers* and Capt. *Plaistead*, with one hundred Men remaining in those Parts, to scour the Woods; and as the *English* had no Reason to be content with the Success of the War, so they were well pleased at the Sight of a Flag of Truce, with which the *Indians* came to *Wells*, and a Cessation of Arms till the *May* following was agreed on by Commissioners on both Sides.

The Time of the Cessation of Arms with the *Indians* was scarce expired; but the Savages, instead of coming as they had engaged, to restore the Captives, and turn the Truce into a Peace, began to commit new Hostilities, and killed several *English* at *Berwick*, *Exeter*, and *Cape Nidduck*. To prevent further Mischief, Capt. *Marel*, Capt. *King*, Capt. *Sherburn*, and Capt. *Waters*, with four hundred Men, landed at *Macquoit*, and marched to *Speaky*; but these Forces not meeting the Enemy, grew secure, and straggled out in Parties, which the *Indians* observing, gathered in a Body, attacked them and drove them

them to their Ships, with the Loss of Capt. *Sherburn* and several Men, who could not get aboard in time. They killed seven Persons at *Berwick*, twenty-one at *Sandy-Bear*, a Family at *Rowly*, another at *Haverhill*, both in *Essex* County. Thus we find them drawing Southward, and extending themselves into the *Massachusetts*, which they had not done before. The Garrison of *Cape Nidduck* was so thinned by Draughts from it, that the Remainder thought fit to desert it, though a strong Fort. A Party of Popish *Indians* assaulted the Town of *York*, killed fifty *English*, and drove away one hundred into Slavery, and the rest fortified themselves; and though they were but a Handful; yet the Savages, who were several Hundreds, durst not attack them. Here Mr. *Shubal Dunner*, the Minister, was shot at his own Door, to the great Joy of the *French* Papists. A Ship was immediately dispatched to *Sagadahook*, with a Commission, and Effects to redeem the Captives, and those Men who remained in the Town were now thinking of abandoning it.

Major *Hutchinson* was in June 1692 sent with a strong Party under Capt. *Convers*, Capt. *Floyd*, and Capt. *Thaxter*, to assist them, and other *Englishmen* on the Frontiers. Capt. *Convers* was posted at *Wells* with only fifteen Men in the slight Fort there, and fifteen more in two Sloops in the River to be assisting to the others upon Occasion. Against him came no less than four *Indian* Kings, *Modenkawando*, *Moxus*, *Edgerement*, *Warumbo*, and still two greater Men, Monsieur *Labrocree* and Monsieur *Barniff*, with some *French* Soldiers, and five hundred *Hurons*. *Moxus* had not long before attacked *Wells* with two hundred *Indians*, and had been repulsed by Capt. *Convers*, who had not a Quarter of that Number of Men with him, which *Modenkawando* hearing, he said, my Brother *Moxus* has missed it now, but I will go myself the next Year, and have the Dog *Convers* out of his Hole. But he was mistaken, for the *Englishmen* in the Fort, and Chiefs in the Sloops, behaved so gallantly, following the Example of their brave Commander *Convers*, that after several fruitless Attempts of the *Indians* and *French* to master them by Land and by Water, Monsieur *Barniff*, and the four *Indian* Confederate Princes, were obliged to retire. But Monsieur *Labrocree* did not live to bear the Reproach of so scandalous a Retreat, being killed in the first of it. The Enemy happened here to take one *John Diamond* Prisoner, whom they used so barbarously, that it would occasion too much Horror in the Reader to relate it.

Things continued, however, in this Situation, till Sir *William Phipps* came over in Quality of Governor of *New England*, who immediately began to think of erecting a new Fort at *Pemmaquid*, to cover the Frontiers, which he completed in six Months time, though it was one of the strongest Places in *America*; but the Expence, which this occasioned, made the People uneasy; who, it seems, never forgave the raising of the Money it cost, though they could not but be sensible, that it was entirely laid out for their Safety: But it seems in *New* as well as *Old England*, and indeed in all other Countries, it is a much easier thing to serve a Society, than to make that Society sensible of one's Service. In the present Case one might have expected things should have taken another Turn, since by the Care Sir *William Phipps* took, the Frontiers of the Plantation were better secured than in Times past, and the *Indians* more than once defeated in general Engagements; if the Disputes of between two and three hundred Men of a side may be called so, and I see no Reason why they should not, if we consider that the Consequences of these Engagements were of the same Importance to both Nations as if they had been fought by thousands; and I conceive, that it is the Importance of a War, and not the Number of Men employed in it, that renders it worthy of Notice.

These Successes, the building the Forts in the East, and the augmenting the Forces there, inclined the Savages to think in earnest of Peace, especially upon hearing the *Macquas* threatened to fall upon them, for killing some of their Squas or Princesses on *Whortle-bury Plain*. The *Indian* Sachems had a *French* Ambassador at their Courts, who was a Friar, to stir them up against

the *English*, and keep them in Heart. This Priest did his utmost to persuade them to continue the War. But the *French* not assisting them with Men, Arms, and Ammunition, as they promised, the Friar could not hinder them from begging a Peace, which was concluded at *Fort Pemmaquid*, by thirteen Segamores and the *English* Commissioners, who set their Names to the Instrument, August 11, 1693. By this Treaty the *Indians* renounced their Allegiance with the *French*, owned themselves Subjects to the Crown of *England*, confirmed the *English* in the Possession of all the Lands they had acquired, and submitted the Regulation of their Trade to the next General Assembly, which gave great Satisfaction to the People of *New England*; the rather, because hitherto the *Indians* had very honestly kept their Treaties, but it was not long before it appeared that their new spiritual Guides the *French* had taught them other Principles.

4. It was not above a Year before the Jesuits excited their new Converts to break this Peace concluded with Heretics; it is true, there was then a War with *France*, so that as Statesmen and Politicians the Jesuits may be justified, but then they must lay aside all Pretences to Christianity; for it is certain, there is nothing in our Religion that countenances a Behaviour of this Kind, and therefore we may safely say, that all their Labours tended to make these poor People rather Tools to *France* than Christians. The first breaking out of the new War, which happened in the Spring of 1694, was without any previous Declaration, or even Complaint that the Terms had not been kept on the Side of the *English*, nor indeed was this ever so much as pretended. A Body of *Indians* and *French* fell suddenly on *Oyster River Town*, and seized near one hundred Persons, twenty of which were of the Trained-Bands. One *Blackford* courageously defended his House against them, who despairing to reduce him before Succours came, left him, and going to Mrs. *Cut's* Farm near *Piscataway*, they murdered her and her Family. They made an Incursion into *Middlesex* County, and assaulted *Groton*, but were bravely repulsed by Lieutenant *Lukin*, upon which they fell to plundering the Plantations thereabouts, killed twenty Prisoners, and carried twenty more into Captivity. They killed one of the Children of Mr. *Gresham Hobert*, the Minister, and carried off another with them; they murdered three Persons at work near *Spruce-Creek* and eight more at *Kittery*, where they barbarously used a Daughter of Mr. *Downing*. The Savages scalped this young Woman and left her for dead, but she recovered, and was living twenty Years after. Mr. *Joseph Pike*, of *Newbury*, Under-Sheriff of *Essex*, was murdered by them, between *Amesbury* and *Haverhill* in that County.

To balance these Losses the *English* seized *Bommaseen*, a famous Segamore, one of those that signed the last Treaty. He pretended to be just come from *Canada*, and that he came on Purpose to put an End to these Hostilities. But it being proved, that he was a principal Actor in the late Murders, he was sent Prisoner to *Boston*. The taking of *Bommaseen* stunned the *Indians* a little, and they were quiet for six or seven Months. At last a Fleet of Canoes came to an Island a League from *Pemmaquid*, and sent Proposals of Peace to the Garrison. They owned their Guilt in breaking the last Articles, but threw the Blame of it on the *French*. As a Proof of their Sincerity now they delivered up eight Captives, when they had above one hundred still in Captivity. However, a Truce was granted for thirty Days, and Colonel *Philips*, the gallant Major *Convers*, and Lieutenant Colonel *Howiborn*, were appointed Commissioners, to treat with them on the Part of the *Indians*, but because they brought not *Bommaseen* with them, whose Release was all they wanted, the *Indian* Commissioners broke off the Conference, and went away in disgust. They had left the *English* Planters in their Captivity contrary to their Promise to release them as a Preliminary, which was a plain Indication they were not in earnest. Advice was sent immediately to all the *English* Garrisons in the East to be upon their Guard: Notwithstanding which, Major *Hammond*, of *Kittery*, fell into an Ambuscade, and was taken Prisoner;

soner; but having the good Fortune to be transported to *Canada*, he was very civilly treated by Count *Frontenac*, who bought him of his *Indian* Master, and sent him to *Boston* by a Vessel that came to *Quebec* for exchange of Prisoners. In *August* a Party of *Indians* came down to *Bellerica* on Horseback; this was pretty far within the *Massachusetts*. They killed and took fifteen Persons, and plundered Mr. *Rogers's* House. This was the first Time the *Indians* ever made use of Horses. They took nine People out of *Newbury* in *Essex*, and being closely pursued by Captain *Greenleaf*, a valiant and diligent Officer, they so wounded them when they found they could not keep them, that they all died except one Lad, which was a signal Proof of their Barbarity.

Captain *March*, Governor of *Pemmaquid* Fort, desiring to lay down his Commission towards the latter End of the Year, he was succeeded in it by Captain *Chub*. He shewed the Baseness of his Spirit, as well as the Weakness of his Understanding, in one of his first Exploits, after he had the Command of this Garrison, by murdering *Edgeremet* and *Abenquid*, and two other principal *Seagamos*, who had signed the last Treaty, and came to him on Assurance of Security, to confer about a new one. In *August* the *French* landed some Soldiers out of a Man of War, the *Newport*, which they had taken from the *English* to assist the *Indians* in his Neighbourhood.

This News so frightened the Traitor *Chub*, that he surrendered the new and strong Fort of *Pemmaquid*, without the firing one Gun, within or without, though he had near one hundred Men in it double-armed. The surprizing News of this Loss caused a mighty Consternation at *Boston*, and all over *New-England*. Governor *Stoughton*, and the Council, immediately ordered three Men of War in pursuit of the *French*, though it was not probable that these Ships could be fitted for that Service time enough to come up with the Enemy, who having done their Business at *Pemmaquid* better than they could hope for, were gone far enough out of the reach of the *English*. Colonel *Gedney* marched with five hundred Men to the East, but the *Indians* were gone home, and he could do nothing but strengthen the Garrisons there. The Savages, before their Retreat, killed five Soldiers belonging to *Saco Fort*, who must not be with their Garrison. And one may observe, that the greatest Mischief the *Indians* do, is by these Ambushes and Surprizes, which, considering how they were almost intermixed with them, it is strange they should not be aware of, and guard against; for the Country must by this Time, and this Means, be, in a Manner, as well known to them as to the Savages. Colonel *Gedney* arrested *Chub*, and brought him to *Boston*; but nothing treasonable being proved against him, the Government only took away his Commission, and sent him thence to his House at *Andover*, in *Essex County*.

Some Time after this the *Indians* entered *Haverhill*, and carried off thirty Captives, one of which was *Hannah Dufsan*, a Woman of a masculine Spirit. She had lain in not above a Week, yet she and her Nurse walked one hundred and fifty Miles on Foot, to the Town where the *Indian* she was to serve lived. This Woman being afterwards to travel with her Master and his Family to a Rendezvous of the Army of the Savages, where, according to the diabolical Custom of them, she, her Nurse, and other *English* Prisoners, were to run the Gantlet; *Hannah* watched her Opportunity in the Night, and having animated her Nurse, and an *English* Boy who was with her, they three killed ten of the *Indians* with their own Weapons, and made their Escapes; for which Action they received a Reward of fifty Pound from the General Assembly, and Presents from particular Persons to a good Value. The *Indians* continuing their Inroads killed a Man at *York*, another at *Hatfield*, a third at *Groton*, and a fourth at *Exeter*; which shews us that the *New England* People were in constant Danger, and harrassed on every Side. The *Indians* grew every Day more barbarous and more implacable, as having the Intrigues of the *Jesuits* added to their own Fierceness and Thirst of Blood.

They surprized and shot Major *Frost*, and his two Sons, at *Berwick*, as they were coming from Church one

Sunday, and going to his own House about five Miles off. Two Men that rid Post to carry this unwelcome News to the Governor of *Wells*, fell into an Ambuscade as they were returning, and were killed, as were three Men near *Nechawannic*, and a dreadful Defolation threatened the whole Province; certainly more for want of Management than of Power. The Savages roasted a Man to Death a Mile and a half from *Wells*. Three Soldiers, at *Saco Fort*, as they were cutting Fire-wood for the Fort at *Caco Island*, were shot dead, while Lieutenant *Fletcher*, with his two Sons, who were appointed for their Guard, were a fowling in the Woods: But the Lieutenant and his Sons paid dearly for their Negligence, for they fell into an Ambuscade as they returned, and were all three taken Prisoners. The Father, and one of his Sons, died in Captivity, and the other made his Escape.

In the Beginning of 1697 the Government of *New England* was alarmed with Advice that the *French* in *Canada* intended to make a Descent there; that a Squadron of Men of War was come from *France* to support the Army of the *Indians* and *French*, that was to attack the *English* by Land. The Lieutenant-Governor, and Council, prepared for a vigorous Defence; the Forts about *Boston* were repaired; the Militia throughout the whole Province were raised and well disciplined. Major *March* was ordered to the East, with five hundred, to scour the Woods; the *Indians*, who were gathering together about *Casco Bay*, retired as he approached them; but the Major having put his Men aboard some Ships, sailed up among the Eastern Islands, and landed on the Banks of *Damascatos River*; a very prudent Measure, for he could not have overtaken the *Indians* by Land, before they had been got into their Fastnesses. The *Indians* seeing this, fell upon his Men as they were getting ashore, but could not hinder their Landing; upon which a sharp Engagement ensued, and the *English* drove the Enemy to their Canoes, a Fleet of which was in the River to receive them. The *English* had about twelve Men killed, and as many wounded; the Enemies Loss was much greater; but the main Advantage to the *English* was, preventing the *Indians* joining the *French*, who were approaching with the Ships of War and Transports for a Descent; but hearing of the Rout of their Confederates, they made the best of their Way home to *Europe*, with the *French* Troops on board, to their no small Discredit.

A Party of Savages made an Incurfion into *Middlesex*, and plundered *Lancaster*, killing twenty Men, among whom was the Reverend Mr. *John Whiting*, the Minister, and carried five into Captivity. A Month after they killed a poor Man in the Woods, near *Oyster River*. In the Beginning of the next Year they made a Descent upon *Andover*, and killed Captain *Chub* and his Family. They also killed Colonel *Dudley Bradstreet*, took his whole Family, and were carrying them off; but being closely pursued, they released them without doing them any Mischief. The Savages were now in Motion to the Westward, and killed a Man and a Boy in the Meadows near *Hatfield*. They were pursued by a Party of *English* from *Deerfield*, of which one was killed by the *Indians*, who, after that, ran to the Woods. They had attempted *Deerfield* on *Connecticut River*, but were beaten off by the Inhabitants, headed by their Minister, Mr. *John Williams*. These small Actions seemed to presage the End of this War, of which the Savages were as weary as the *English*, and had no Prospect of making any thing of it against a People so much superior to them in Numbers, Arms and Stores; but they ended it with the better Grace, by Means of the Peace of *Ryswick*, between *England* and *France*. Upon which Count *Frontenac* sent to the Sachem of the *Hurons*, and told them he was no longer to support them in their War against the *English*, and advised them to make the best Terms they could for themselves.

The Earl of *Bellamont* was by this Time arrived at *New York*, and a Treaty of a Peace with the *Indians* being set on Foot, he dispatched Major *Convers*, and Colonel *Phillips*, to confer with the *Indian* Sachems at *Penabscot*. They began the Conferences *October* the 6th, in which the Sachems excused themselves for breaking the Peace,

saying, The Jesuits would not let them alone till they had done it; and if the Earl of *Bellamont*, and Count *Frontenac*, would not banish these Devils, they could not promise the next Peace would last long. Major *Convers*, and Colonel *Philips*, concluded it with them on the Foot with the last Treaty; to which they added a more formal Submission to the Sovereignty of the Crown of *England*; wherein, after acknowledging themselves guilty of breaking the last Peace, and in not fulfilling their Engagements entered into thereby, while they enjoyed the Benefit of it, which they charge upon the evil Councils and Instigations of the *French*, they proceed thus:

"Wherefore we, whose Names are hereunto subscribed, Segamores, Captains, and principal Men of the *Indians*, belonging to the Rivers of *Kennebeck*, *Amonoscoggin*, *Saco*, and Parts adjacent, being sensible of our great Offence and Folly, in not complying with the aforesaid Submission and Agreement, and also of the Sufferings and Mischiefs that we have hereby exposed ourselves unto; do, in all humble and submissive Manner, cast ourselves upon his Majesty's Mercy, for the Pardon of all our Rebellions and Violations of our Promises; praying to be received into his Majesty's Grace and Protection; and for, and in Behalf of ourselves, and of all the other *Indians* belonging to the several Rivers and Places aforesaid, within the Sovereignty of his Majesty of *Great Britain*, do again acknowledge and profess our hearty and sincere Obedience to the Crown of *England*; and do solemnly renew, ratify, and confirm, all, and every the Articles and Agreements contained in the aforesaid recited Submission; and in Testimony hereof, we, the said Segamores, Captains, and principal Men, have hereunto set our Hands and Seals, at *Casco Bay*, near *Mares Point*, the 7th Day of *January*, in the tenth Year of the Reign of His Majesty King *William III.* A. D. 1698-9. Subscribed by *Moxus*, and the rest of the Segamores and petty Princes."

Thus ended, to the mutual Satisfaction of both Parties, the *Indian War*, with respect to which the *French* Writers have undoubtedly given a very false Account, and a still more false Account of the Peace; for they say positively that the *Indians* insisted upon it, that they were not subject to the Crown of *Great Britain*; that they declared against their occupying any of their Lands; and that they openly professed they were, and would be, Friends to the *French*; every Tittle of which, as is manifest by their Instrument above recited, and cited for that Purpose, appears to be a direct Falshood; but in one thing I believe the *French* Writers speak Truth, which is, with regard to the Policy of the *Indians*, who made use of the Small Pox for a Pretence to quit the *English* Army, in its March to attack the *French* Colony of *Canada* by Land, from a Foresight that if this Expedition had been attended with Success, the *French* must have abandoned their Country, and they were unwilling to be left wholly at the Mercy of the *English*.

Many of our Authors, indeed, represent the *Indians* as not capable of so great a Stroke in Politics, but I have seen Papers of Governor *Dudley*, and *William Penn*, who were very well acquainted with them, that seem to countenance this Opinion; for they say, they have strong natural Parts, understand their own Interest thoroughly, and do every thing with great Deliberation. It is, indeed, certain, that they are wedded to their own Sentiments, and to their own Manner of living, and therefore we must refer their Politics to their Maxims, and not pretend to judge of them by our own, with which they have not the least Affinity or Connection.

5. We have, in the Course of this Work, given so full and clear an Account of the Manner in which all our Colonies were settled, and of the Motives upon which different Sorts of People resorted to them, that the Reader cannot be surprized at hearing their religious Affairs were in a very indifferent Situation, when in respect to temporal Concerns their Condition was most flourishing. Several worthy Persons, in the Reign of King *Charles II.* had used their Endeavours to correct this Evil, but their pious Desires did not meet with proportionable Suc-

cess, which, however, was far from discouraging others from following their Example; but though they were somewhat more fortunate, chiefly from the Assistance given them by the pious Queen *Mary*, whose Character for Religion and Virtue will live as long as there is either Religion or Virtue in the World, yet it was at last found that nothing could be effectually done, unless the Encouragers of this noble Design of spreading the Christian Faith through the *British* Dominions in *America*, were incorporated by Charter, the Necessity and Expediency of which Dr. *Thomas Tenison*, then Archbishop of *Canterbury*, undertook to represent to King *William III.* and upon his Representation a Charter was obtained, dated the 16th of *June*, in the 13th Year of his Reign, by which several Persons, equally distinguished by their Titles and Virtues, were incorporated for that Purpose, under the most honourable of all Names, the Society for the Propagation of the GOSPEL in foreign Parts.

This truly, says the Author of the History of this Society, Dr. *Humphreys*, was an Action suitable to Archbishop *Tenison's* public Spirit and honest Zeal for the Protestant Religion, and exceedingly becoming his high Station and Authority in the Church. The *American* Colonies, sure, can never, without the greatest Veneration and Gratitude, remember him, when they shall, many Ages hereafter, feel the happy Effects of having the Christian Religion planted among them; and reflect how hearty and forward Archbishop *Tenison* appeared to obtain that Charter, which gave Life and Authority to so glorious an Undertaking: Nay, that his Zeal and Spirit did not rest here, he continued to promote and guide, by his wise Councils, the Affairs of the Society; he paid them an annual Bounty of fifty Pounds, during his Life, and at his Death bequeathed them a thousand Pounds, towards the Maintenance of the first Bishop that should be settled in *America*. A Charter being thus obtained, the next endeavour was to carry their laudable Design into Execution; accordingly his Grace the Archbishop, as impowered by the Charter, caused Summons to be issued for the Members of the Corporation, to meet within the Time limited; and several met at the Place appointed, on the 27th of *June* 1701, and chose proper Officers for transacting the Business. At following Meetings they made divers Rules and Orders for their more regular Proceedings in the Administrations of their Trust, and subscribed, among themselves, near two hundred Pounds; for defraying the Charges of passing the Charter, making the common Seal, and other necessary Expences, they also ordered five hundred Copies of the Charter to be printed forthwith, and distributed amongst the Members, to be shewed by them to all proper Persons, the farther to notify the Design they were engaged in, and to invite more Persons of Ability and Piety to assist in carrying it on.

This Step was but an Opening of the Matter to the Public; the Society were diligent to consider of farther and more effectual Ways and Means to obtain Subscriptions and Contributions sufficient to enable them to maintain the Expence of sending many Missionaries abroad. They immediately agreed that the best Argument to Mankind was Example, and the most effectual Means to engage others to contribute, was to lead the Way themselves, by subscribing towards the Support of the Work. Accordingly Archbishop *Tenison*, the President, the Vice-Presidents, all the Bishops and Members then present, did subscribe a yearly Sum to be paid to the Treasurer of the Society for the public Uses, according to the Form of Subscription drawn up for that Purpose; having now made this Advance themselves, they gave out Deputations, under their common Seal, to several of their Members, and other Persons of Figure and Interest in the Counties of *England* and *Wales*; signifying their being constituted and appointed by the Corporation to take Subscriptions, and to receive all Sums of Money which should be subscribed or advanced for the Purposes mentioned in the Charter; and here it is to be gratefully acknowledged, that several worthy Persons did, with a public Spirit, take these Deputations to help on with a Work so truly for the national Interest, and the Honour of common Christianity; and did, by their Example and Instances,

Instances, so influence several well disposed Persons, that considerable Remittances of Benefactions to the Corporation were soon made, which enabled them to enter on the Work with Success. There were likewise several considerable Sums of Money sent in to the Society by Persons who desired to conceal their Names; and the same Spirit and Ardour has continued; neither has the Society wanted the Encouragement and Protection of the Successors of their Royal Founder, particularly his late Majesty King George I. and the Society have still increasing Views of Success through the Favour of his Majesty now reigning, from his known Zeal for the Protestant Religion, and Royal Care for the Colonies, so considerable a Branch of the *British* Monarchy.

It is a thing that will certainly excite Wonder in the Minds of all calm and considerate People, let their religious Sentiments or Persuasions be what they will; that this Society, with scarce any settled Fund, should be able to maintain, for between forty and fifty Years, so extensive a Scheme as that of their Charter, which tends to correct almost all the Errors and Mistakes that have hitherto happened in the Management of our Colonies; for by their prudent and pious Care, great Check has been given to Atheism and Irreligion, a thing of great Consequence in our Settlements, considered in a political, as well as Christian Light; for without it there is no restraining the *Indian* Traders from being guilty of such Immoralities, as render us despicable in the Eyes of the Heathen *Indians*; which, as may be easily conceived, must tend vastly to our Disadvantage, more especially, if at the same Time we reflect on the Management of the *French* in this Particular, who are very careful in their Endeavours to convert the *Indians*, and keep up a great outward Appearance of Zeal for Religion, which makes strong Impressions on the Minds of the Savages, even though they are not converted, nor have any Inclination to become Papists. If by such Methods they should so far compass their Ends, as to convert many of the *Indians*, and by that Means awe and influence the rest; it must be accompanied with Circumstances very disagreeable to the Inhabitants of our Colonies, as from the foregoing History of the *Indian* War will appear.

But besides the many and great Advantages that would result from the thorough Establishment of the Protestant Religion through the Colonies, with regard to the Conduct and Behaviour of the People, and the great Enlargement of Power that would follow in Case the Conversion of the *Indians* was undertaken by Practice as well as Preaching, by the Example of the Laymen, as well as the Exhortations of the few Clergy that are sent thither; there is yet another Point that deserves as serious Regard. The Negroes in the Service of our Planters, are a prodigious Body of People, and as there are but too many just Causes given for apprehending the Destruction of whole Countries from their Plots and Conspiracies, which have been sometimes prevented by accidental, or rather providential Discoveries, when they were upon the very Point of being executed; so it is certain, that if these People, or the greatest Part of them, could be converted, it would not only prove a Means of taking away these Apprehensions, but would also add a great Strength to the Colonies, in which they are obliged to make use of Negroes; for these People would then conceive new Notions of their Condition, and consider their being Servants to Christians in the Light rather of a Blessing than a Calamity; it would not only make them easy, but chearful in their Servitude, and by degrees would be attended with more Advantages than we can foresee, and yet a very ordinary Degree of Foresight will not fail to shew us a great many. That this is, and must be, attended with many Difficulties, will be readily granted, but that it is very far from being impracticable, will appear from what Dr. *Humphreys* tells us has been in this respect already done, and which I take to be as material a Point as any that occurs in the History of this Period.

The Negroe Slaves, says he, even in these Colonies, where the Society send Missionaries, amount to many thousands of Persons of both Sexes, and all Ages, and most of them are very capable of receiving Instructions;

even the grown Persons; brought from *Guinea*, quickly learn *English* enough to be understood in ordinary Matters; but the Children born of Negroe Parents in the Colonies are bred up entirely in the *English* Language. The Society looking upon the Instruction and Conversion of the Negroes, as a principal Branch of their Care, esteeming it a great Reproach to the Christian Name, that so many thousands of Persons should continue in the same state of Pagan Darkeness under a Christian Government, and living in Christian Families, as they lay before under in their own Heathen Countries; the Society, immediately, from their first Institution, strove to promote their Conversion, and inasmuch as their Income would not enable them to send Numbers of Catechists sufficient to instruct the Negroes, yet they resolved to do their utmost, and at least to give this Work the Mark of their highest Approbation. They wrote therefore to all their Missionaries, that they should use their best Endeavours, at proper times, to instruct the Negroes; and should especially take occasion to recommend it zealously to the Masters, to order their Slaves, at convenient Times, to come to them, that they might be instructed.

These Directions had a good Effect, and some hundreds of Negroes have been instructed, received Baptism, and been brought to the Communion, and lived very orderly Lives. It is a Matter of Commendation to the Clergy, that they have done thus much in so great and difficult a Work. But alas! what is the Instruction of a few hundreds in several Years, with respect to the many thousands uninstructed, unconverted, living and dying down-right Pagans? It must be confessed, what hath been done is as nothing, with regard to what a true Christian would hope to see effected. But the Difficulties the Clergy meet with in this good Work, are exceeding great. The first is, the Negroes want Time to receive Instructions; several Masters allow their Negroes only *Sundays* for Rest, and then the Ministers of the Parishes are fully employed in other Duties, and cannot attend them. Many Planters, in order to free themselves from the Trouble and Charge of feeding and cloathing their Slaves, allow them one Day in a Week to clear Ground and plant it, to subsist themselves and Families; some allow all *Saturday*, some half *Saturday* and *Sunday*; others allow only *Sunday*. How can the Negroe attend for Instruction, who, on half *Saturday* and *Sunday*, is to provide Food and Raiment for himself and Family for the Week following: The Negroe will urge in his own Excuse, that the Support of himself and all that is dear to him, doth absolutely depend upon this his necessary Labour on *Saturday* and *Sunday*; but if this be not strictly justifiable, yet it is certain the miserable Man's Plea will engage the Reader's Compassion.

This is the Case in some Colonies, in others it differs. In some Places the Negroes do the whole Labour of the Country in the Field, in others they are used only as House Servants. Another Difficulty arises from the Habitations and Settlements of the Masters being at a great Distance from each other in most Places in the Colonies, for which Reason neither can a Minister go to many Families, if the Negroes were allowed Time to attend him, nor can a proper Number of them assemble together at one Place, without a considerable Loss of Time to their Masters. But the greatest Obstruction is, the Masters themselves do not consider enough the Obligation which lies upon them, to have their Slaves instructed. Some have been so weak as to argue the Negroes had no Souls, others that they grew worse by being taught and made Christians. I would not mention these, if they were not popular Arguments still, because they have no Foundation in Reason or Truth.

After the Society had given the general Order mentioned before, to all their Missionaries, for the Instruction of the Slaves, they agreed to use another Method, which they believed would more successfully promote this Work. They opened a catechising School for the Slaves at *New York*, in the Year 1704, in which City there were computed to be about one thousand five hundred Negroe and *Indian* Slaves, and many of their Masters well disposed to have them made Christians. The Society hoped

this

this Example set, might kindle a Zeal in some other good People, to carry on this Work which they were unable to effect, and to erect Schools for the Instruction of the Negroes, and to employ Catechists to teach them at appointed Times; and that the Legislature of the Colonies would by a Law oblige all Slaves to attend for Instruction. The Society found soon, it was not easy to procure a Person proper to be a Catechist: Mr. *Elias Neau*, a Layman, then living in *New York* City as a Trader, was represented to be the properest Person for that Office. He was by Nation a *Frenchman*, and made a Confession of the Protestant Religion in *France*, for which he had been confined many Years in Prison, and seven Years in the Gallies: When he got released, he went to *New York*, and traded there; and had the Character, from People of all Persuasions, of a Man of Piety, of sober Deportment and serious Life. He accepted of the Offer of being Catechist; and his former Sufferings on Account of his Religion did, with great Advantage, recommend him to be a Teacher of the Christian Faith, and his Humility enabled him to bear with the many Inconveniencies in teaching these poor People.

He entered upon his Office in the Year 1704 with great Diligence. At first he was obliged to go from House to House to instruct the Negroes; this was out of measure laborious; afterwards he got Leave that they should come to his House; this was a considerable Relief. There were two Obstructions still; the Time was much too short, and the Place inconvenient, for teaching the great Number of Negroes; a little Time in the Dusk of the Evening, after hard Labour all Day, was the whole Time allowed them for Learning and for Relaxation, and to visit their Wives and Children, which were generally in other Families, not in their Masters. At this Time their Bodies were so fatigued that their Attention could not be great. They were dull and sleepy, and remembered they must rise early the next Day to their Labour; the Place also was incommodious, being the uppermost Floor of Mr. *Neau's* House, and was not able to hold conveniently a small Part of the Slaves that might resort thither. Besides, the Negroes were much discouraged from embracing the Christian Religion, upon account of the very little Regard shewed them in any religious Respect. Their Marriages were performed by mutual Consent only, without the Blessing of the Church; they were buried by those of their own Country, or Complexion, in the common Field, without any Christian Office, perhaps some ridiculous Heathen Rites were performed at the Grave by some of their own People. No Notice was given of their being sick that they might be visited; on the contrary, frequent Discourses were made in Conversation that they had no Souls, and perished as Beasts.

Mr. *Neau* contended with these Difficulties, and notwithstanding all proved an Instrument of bringing many to the Knowledge of the Christian Faith: He took great Pains in reading to them, in making short Collections out of Books on the Catechism, and in making an Abstract of the historical Part of the Scriptures; so that many who could not read, could yet, by Memory, repeat the History of the Creation of the World, the Flood, the giving of the Law, the Birth, Miracles, and Crucifixion of our Lord, and the chief Articles and Doctrines of Christianity. This was a Work of great Pains and Humanity. Mr. *Neau* performed it diligently, discoursing familiarly with those poor People, and labouring earnestly to accommodate his Discourse to their Capacities. His Labours were very successful. A considerable Number of the Slaves could give a sufficient Account of the Grounds of their Faith, as several of the Clergy, who examined them publicly, before they gave them Baptism, have acquainted the Society. In the mean time, while the Society was thinking of farther Ways to advance this Work, a Calamity appeared, which mightily discouraged this Country from promoting the Instruction of their Slaves.

In the Year 1712 a considerable Number of the Negroes of the *Carmantee* and *Pappa* Nations, formed a Plot to destroy all the *English*, in order to obtain their Liberty, and kept their Conspiracy so secret that there

was no Suspicion of it, 'till it came to the very Execution: However, the Blow was, by God's Assistance, happily defeated. The Plot was this: The Negroes set Fire to a House in *York* City, on a *Sunday-Night* in *April*, about the going down of the Moon: The Fire alarmed the Town, who from all Parts run to it. The Conspirators planted themselves in several Streets and Lanes leading to the Fire, and shot or stabbed the People as they were running to it. Some of the wounded escaped and acquainted the Government, and presently by the firing a great Gun from the Fort, the Inhabitants were called under Arms, and prevented from running to the Fire; a Body of Men was soon raised, which easily scattered the Negroes; they had killed about eight Persons, and wounded twelve more. In their Flight some of them shot themselves, others their Wives, and then themselves; some absconded a few Days, and then killed themselves, for fear of being taken, but a great many were taken, and eighteen suffered Death. This wicked Conspiracy was at first apprehended to be general among all the Negroes, and opened the Mouths of many to speak against giving the Negroes Instruction. Mr. *Neau* durst hardly appear abroad for some Days, his School was blamed, as the main Occasion of this barbarous Plot. But upon the Trial of the Wretches there were but two of all his School so much as charged with the Plot, and only one was a baptized Man; and in the Peoples Heat, upon slender Evidence, perhaps, too hastily condemned; for soon after he was acknowledged to be innocent by the common Voice; the other was not baptized. It appeared plain that he was in the Conspiracy, but guiltless of his Master's Murder, who was *Hooglands*, an eminent Merchant. Upon full Trial, the guilty Negroes were found to be such as never came to *Neau's* School; and what is very observable, the Persons whose Negroes were found to be most guilty, were such as were the declared Opposers of making them Christians: However, a great Jealousy was now raised, and the common Cry was very loud against instructing the Negroes.

The Common-Council of *New York* City made an Order, forbidding the Negroes to go about the Streets after Sun-set without Lanthorns and Candles. This was in Effect, forbidding them to go to Mr. *Neau's* School; for none of them could get Lanthorns, or come to him before Sun-set; but some time after, the more serious and moderate People abated of this Violence; it appearing to be a Plot of a few only, not a general one of all the Negroes, no Consequence attended the Action, and the People grew more composed. *Robert Hunter*, Esq; the Governor of the Province, observed their Fears were ill grounded, and that Mr. *Neau's* Scholars were not the guilty Negroes; and therefore, in order to support the Design of instructing them, he was pleased to visit his School, attended by the Society's Missionaries and several Persons of Note, and publicly declared his Approbation of the Design; and afterwards, by a Proclamation put out against Immoralities and Vice, he recommended to the Clergy of the Country, to exhort their Congregations from the Pulpit, to promote the Instruction of the Negroes. This gave new Life again to the Work, and the Negroes frequented Mr. *Neau's* School as before; several were instructed, and afterwards examined publicly in the Church before the Congregation, by the Reverend Mr. *Vesey*; and gave a very satisfactory Account of their Faith, and received Baptism.

The Society had Accounts from time to time of Mr. *Neau's* Diligence and Success, particularly one very ample Testimonial, signed by the Governor (*Robert Hunter*, Esq;) the Council, the Lord Mayor, and Recorder of *New York*, and the two chief Justices, setting forth, That Mr. *Neau* had demeaned himself in all things as a good Christian, and a good Subject: That in the Station of Catechist he had, to the great Advancement of Religion in general, and the particular Benefit of the Free *Indians*, *Negro* Slaves, and other Heathens in those Parts, with indefatigable Zeal and Application, performed that Service three times a Week: And, that they did sincerely believe, that as a Catechist, he did in a very eminent Degree deserve the Countenance, Favour,

Favour, and Protection of the Society. The Society were fully satisfied with Mr. *Neau's* Behaviour, and continued to send him Numbers of *Catechisms* and small Tracts of Devotion and Instruction, to give among the Slaves and Servants at his Discretion. Mr. *Neau* persevered with the same Diligence till the Year 1722, in which he died, much regretted by all who knew his Labours.

The Society have been very careful in carrying on that great and good Work, as far as in their Power lay, ever since; and though they have not been so successful as they could have wished, yet their Disappointments have not been of a Nature to make them despair, and we may reasonably presume, that by degrees, and by a constant Perseverance, they will, in process of Time, overcome all Difficulties.

6. After the Accession of Queen *Anne* to the Crown, and this Nation's engaging in another general War against *France*, it was thought a thing of very great Consequence to secure the five *Indian* Nations bordering upon *New England* and *New York*; and therefore, instead of waiting for an Application from the Society, an Order was directed to them from the Privy Council upon this Subject; and they were directed to send over Missionaries without delay, with a Promise that they should be properly supported; and this in Terms that very plainly shewed the Government looked upon it as a Matter that did not only regard the Church, but the State. The Society, upon this, sent over, very soon after, one Mr. *Moor*, and intended to have sent over other Missionaries if his Endeavours had met with any Success. The Scheme was very wise and very good, yet it did not answer in the Execution, for Want, as I conceive, of proper Expence about it. In a national Concern like this, Money should not have been spared, and great Care ought to have been taken in Preparations before any thing had been hazarded in the Execution; so that a Number of Missionaries should have entered the *Indian* Countries at once, some or other of which would certainly have fallen upon the right Way of gaining the Affection of these People, which it seems was not the good Fortune of Mr. *Moor*; who arriving at *New York* in 1704, was very well received by Lord *Cornbury*, who was then Governor of that Colony, and who also gave him all the Assistance he could desire in his Mission; but the *Mobocks*, to whom he addressed himself, did not treat him as he expected; for at first they seemed to express very great Satisfaction at his Arrival, and to be extremely well pleased with his Concern for their Salvation; but they trifled with him afterwards, and at last gave him plainly to understand, that his coming amongst them would be to little purpose; for under Pretence that Religion was a public Concern, in which all their Families and little Clans had an equal Concern, so that he could not be received by any without the common Consent, they put him off from Time to Time, and would have put him off for ever, if, after a Years waiting, he had not returned to *New York*; where he embarked on board a Ship for *England*, but was unhappily lost in his Passage.

Thus was the Attempt frustrated; but the Society received Accounts that this ill Success was owing not only to the Aversion of the *Indians* to Christianity, but was very much occasioned by the Artifices of the *French* Jesuits, who industriously obstructed the Labours of the *English* Missionaries among them, and left no Means untried to seduce them from their Fidelity to the Crown of *England*, and keep them in a continual War with the *English*. And indeed all the Evils that the *English* Colonies have undergone during the last War, have been occasioned by the *Indians*, that is, those *Indians* which the Jesuits have by their Artifices corrupted; for among the five Nations there is a great Number of *French* Jesuits, who are incorporated, by Adoption, into their Tribes, and as such they ostentatiously assume *Iroquois* Names; and the Chief of the poor silly *Indians*, considering them as Persons of their own Blood, do intirely confide in them, and admit them into their Councils, from whence one may easily imagine what Disorders the Jesuits make in their Affairs. Besides, the *Indians* border-

ing on *New England* are the most cruel and barbarous of all the Savage Nations, and have destroyed all their innocent Neighbours. They are always unfixed, either rambling for several Months together, or hunting, or upon warlike Expeditions; and at their Return to their Villages, have generally forgot all their former Instructions, and it is impossible for any Minister to accompany them in their Rambles of three or four hundred Leagues at a Time. After this good Endeavour was defeated, the *Indians* remained without Instruction, except that some few were taught by the *Dutch* Minister at *Albany*. But the Year 1709 produced an Event, which the Society hoped might have had very happy Consequences, and fixed Christianity among the *Iroquois*. Four Sachems, or four chief Persons of four Nations of the *Iroquois*, came in the Nature of Embassadors to *England*, confirming the Peace made with the Governor of *New York*, and requesting her Majesty would be pleased to direct that their Subjects might be instructed in Christianity, and Ministers might be sent to reside amongst them.

The Archbishop of *Canterbury* received, thereupon, the following Letter from the Earl of *Sunderland*, then one of her Majesty's principal Secretaries of State.

“ MY LORD, Whitehall April 20, 1710.

“ The inclosed being a Copy of what has been given
“ to the Queen, by the Embassadors lately arrived from
“ the five *Indian* Nations; I am ordered by her Majesty
“ to transmit it to your Grace, and to signify to you her
“ Pleasure, that you lay it before the Society for propa-
“ gating Religion, that they may consider what may be
“ the most proper Ways of cultivating that good Dis-
“ position these *Indians* seem to be in for receiving the
“ Christian Faith, and for sending thither fit Persons for
“ that purpose, and to report their Opinion without
“ Loss of Time, that the same may be laid before her
“ Majesty.

I am, &c.

Sunderland, &c.”

The Archbishop was then much indisposed, and confined to his House with the Gout, and therefore signified to the Secretary of the Society to call a Committee to meet at *Lambeth*; a Committee met, and it was agreed there, and afterwards by the Society at a general Meeting, that two Missionaries should be sent to the *Mobock* and *Oncydes's* *Indians*, with a Salary of one hundred and fifty Pounds Sterling each, together with an Interpreter and School-master, to teach the young *Indians*; and this Opinion was humbly laid before the Queen; her Majesty was farther pleased to direct that a Fort should be built among the *Mobocks*, at the Government's Expence, with a Chapel and a Mansion-house for the Minister, for his greater Conveniency and Security, and that the religious Offices might be performed with due Decency; a Fort was soon after built one hundred and fifty Foot Square, and garrisoned with twenty Soldiers and an Officer, and a House and Chapel compleated. The reverend Mr. *Andrews* was appointed Missionary, and Mr. *Clausen*, who had been several Years employed as Interpreter by the Government of *New York*, in Transactions with the *Indians*, was received as Interpreter to Mr. *Andrews*, and Mr. *Oliver* made School-master. Mr. *Andrews* was particularly directed by the Society, to use all possible Means to persuade the *Indians* to let their Children learn *English*; and the School-master was to make it his whole Business to teach them. The Society was now in good Hopes this Attempt would prove successful, since her Majesty was so graciously pleased to provide for the Security of the Missionary, by building a Fort just by the *Mobocks* Castle, to which the Men and Children might easily resort to be instructed; and the Sachems, the chief Persons of this People, had been in *England*, received many Marks of Royal Favour, had been Eye-witnesses of the Greatness of the Nation, had been nobly entertained here, and carried home to their own Countries safely and honourably, and had themselves also desired their People might be instructed in the Christian Faith.

Mr. *Andrews* arrived at *Albany* in November, 1712. The Sachems who had been carried home before he went from *England*, were convened by Order of the Governor of *New York*, to meet Mr. *Andrews* and the Commissioners for *Indian Affairs* at *Albany*, in order to give a public Authority and Sanction to Mr. *Andrews's* Mission, and that the Sachems might receive him their Minister with greater Solemnity. The Sachems came to *Albany*, met the Commissioners for *Indian Affairs*, and Mr. *Andrews*, the Missionary, made a long Speech to the Sachems, reminding them how gracious her Majesty was in building a Fort, sending a Minister to them; put them in mind how earnestly they had requested it; and set forth what Advantages they and their Children would reap by being taught our Religion and Learning. A Letter from the Archbishop of *Canterbury* was delivered to them, and afterwards read to them in *Indian* by Mr. *Clausen*, the Interpreter of the Province. Some of the Sachems made Speeches, and returned Thanks to the Queen, expressed a great Satisfaction in having a Minister sent them, and received Mr. *Andrews* as such, and promised him all civil and kind Usage.

The whole Affair was transacted with much Ceremony, the Sachems returned home, Mr. *Andrews* staid some time at *Albany* to refresh himself; soon after he went up to the Fort, two hundred Miles from *New York*, accompanied by *Robert Livingston*, Esq; the Mayor of *Albany*, Capt. *Mathews*, Mr. *Stroopman* of *Schenectady*, the Reverend Mr. *Barclay*, and several other Gentlemen: He was presently visited by a great many *Indians*, Men, Women, and Children, who saluted him with abundance of Joy, and bid him welcome to their Country. The Castle or chief Town of these *Mohocks* is neighbouring to the Queen's Fort, consisting of about fifty Wigwams or Houses: These Wigwams are Huts made of Mats, or Barks of Trees put together with Poles about three or four Yards high. The *Mohocks* Cloathing is a short Cloke, like a Mantle, made of a Blanket, or Bear-skin. Their Bed is a Mat, or Skin, laid on the Ground. They paint and grease themselves very much with Bears Fat clarified. They cut the Hair off from one Side of their Heads, and tie up some of that on the other Side in Knots, on the Crown, with Feathers. The Men are very slothful, the Women very laborious, meer Servants to their Husbands. They carry all Burdens, fetch the Venison home their Husbands kill (the Men are too lazy to bring it), get in the Wood to burn and dress it; carry their Children on their Backs in their Rambles of many hundreds of Miles; hoe the Ground and plant all the *Indian* Corn that is raised. The Language of these People is very difficult, their Ideas are very few, and their Words therefore not many, but as long as Sentences, expressing by a long rumbling Sound what we do in a short Word. There is here no manner of Conveniency of Life for a Missionary; for four or five Months in the Year there is scarce any stirring abroad, by reason of the extraordinary Coldness of the Weather, and the deep Snows that fall; and in the Summer-time, the Flies and Musketoos are almost intolerable, and the Rattlesnakes very dangerous: The nearest Place of getting any Provisions is at *Schenectady*, twenty-four Miles distant, or from *Albany* forty-four Miles off. The Road to these Places is, for the most part, only a small, rough *Indian* Path through vast Woods, where riding is very dangerous, by reason of the Road being in many Places, stopped with fallen Trees, Roots, Stones, and Holes; besides many steep Hills, and dead Swamps or Bogs in the Way; there was nothing desirable to be seen; the Face of the Earth rude and uncultivated, like the wild Inhabitants; no Pleasure to be found but that of doing good to the miserable Natives.

These were the Circumstances of the Place and People, whither Mr. *Andrews* was appointed; and notwithstanding all these Inconveniencies he resided there, and invited the *Indians* to come to him; many came: He used very often to discourse with them, instructing them in the chief Articles of Faith, and giving them short general Accounts of our Religion. This was done by the Help of Mr. *Clausen*, who always attended and interpreted to the *Indians*. Mr. *Clausen* had been formerly taken Pri-

soner by the *Indians*, lived long among them, and understood their Language sufficiently. Mr. *Andrews* used to draw up short Accounts of the Christian Doctrines, and some historical Parts of the *Bible*; particularly the Creation of the World, and Miracles of the Lord. The Interpreter used to read them to the *Indians*, and divine Service used to be performed in *English* to the Soldiers in the Garrison. The School-master, Mr. *Oliver*, opened his School; the *Indians*, at first, sent many of their Children; he began to teach them *English*; the Parents obstinately refused to have them taught *English*; all possible Endeavours were used to persuade them, they still persisted. Mr. *Andrews* sent this Account to the Society, and rather than quite break with the *Indians*, the School-master, and Interpreter, began to teach the Children a little in *Indian*. The Society were forced to comply with the *Indians* Obstinacy: They procured an Impression of *Hornbooks* and *Primmers* in *Indian*, for the Children, sent them great Numbers, as also Leathern Ink-horns, Pen-knives, a Quantity of Paper of several sorts, and several other little Necessaries. The Children were now taught in *Indian*, and were treated with great Kindness; no Correction dared to be used, for the Parents were so fond of their Children, and valued Learning so little they thought it not worth gaining, at the least displeasing of their Children.

To engage them farther to learn, Mr. *Andrews* used to give the Children who came to School Victuals, and some small Utensils for their Parents. The Children used often to come for the sake of getting Victuals, for the *Indians* are frequently drove to great Extremities on account of their making little or no Provision before-hand. The Children had a good natural Capacity, and an Aptness for Learning; many of them begun to read, and some to write. This Method of giving them Victuals, engaged the Parents to send them for some time to School. In the mean time Mr. *Andrews* proceeded to instruct the grown *Indians* by help of the Interpreter, in some of the chief Articles of Faith, and Rules of Life; Divine Service was constantly performed on *Sundays* and *Holidays* in *English*, to the Soldiers, and such *Indians* as understood any *English* frequently attended in the Chapel: The Chapel was very decently adorned; Queen *Anne* had given a handsome Furniture for the Communion-Table, the Imperial Arms of *England* painted on Canvas were fixed up in the Chapel. Archbishop *Tenison* gave twelve large *Bibles* very finely bound, for the Use of the Chapel, with painted Tables containing the Creed, Lord's Prayer, and Ten Commandments. Mr. *Andrews* was very civil to all the *Indians* who came to hear him; used frequently to entertain them at his House, and give them Provisions home with them when they wanted very much, and that they often did.

The Society, since they could by no Means prevail with the *Indians* to learn *English*, neither young nor old, laboured to get some good Translations made of Parts of the Scripture, at least, into the *Indian* Language, though exceeding improper to convey a due Idea of the Christian Doctrines; as being willing, by all Methods of Compliance, to gain something upon them: The Society were much assisted in this by Mr. *Freeman*, a very worthy Calvinist Minister; he had been five Years Minister at *Schenectady*, to a *Dutch* Congregation, and had been employed by the Earl of *Bellamont*, in the Year 1700, to convert the *Indians*. He had a good Knowledge of the Dialect of the *Mohocks*, which is understood by all the *Iroquois*, who reach near four hundred Miles beyond *Albany*. The Society applied to him for any proper Papers wrote in that Language, which he might have. He acquainted the Society, that he had translated into *Indian*, the Morning and Evening Prayers from our Liturgy, the whole Gospel of St. *Mathew*, the three first Chapters of *Genesis*, several Chapters of *Exodus*, several *Psalms*, many Portions of the Scripture relating to the Birth, Passion, Resurrection, and Ascension of our Lord; and several Chapters of the first *Epistle* to the *Corinthians*, particularly the fifteenth Chapter, proving the Resurrection of the Dead. He very frankly gave the Society a Copy of these Translations, which were sent to Mr. *Andrews* for his Help,

Help, and they were a great Help to him. He used frequently to read some of these to the *Indians*, and they could comprehend well enough by his reading. But the Society were desirous some Part of the Scriptures might be printed in *Indian*, and the Copies given to the *Indians*, and they taught at least to read that; accordingly the Morning and Evening Prayer, the Litany, the Church Catechism, Family Prayer, and several Chapters of the *Old and New Testament* were printed at *New York*. The Copies were sent to Mr. *Andrews*, and he gave them to such of the *Indians* as knew any thing of Letters.

He had Hopes now of some Success in his Mission; several of the Women and some Men began to lead more orderly Lives. They were instructed, and retained well in their Memory what the chief Articles of our Faith are, and Rules of Life; a good Number were baptized, and particular Accounts were sent regularly to the Society. Mr. *Andrews* was willing to try what good he could do in another Nation of the *Indians*; he travelled to the Castle of *Onydans*, one hundred Miles distant from the *Mohocks*; the Country all the Way was a vast Wilderness of Wood, and the Road through it was a narrow Path. He was forced to carry all Necessaries with him, and at Night to lie upon a Bear's Skin. When he arrived at the Castle he was visited by more than one hundred People, who seemed all glad to see him; he read several Papers to them, staid some Time with them, and, after Instruction, baptized several, whose Names have been transmitted to the Society. Mr. *Andrews* afterwards returned to the *Mohocks*, his Place of Residence. In a short Time the *Indians* grew weary of Instruction: The Men grown would go out in Bodies a hunting for several Months, and forget all they had been taught; and the young Boys, when they grew up, were taken out by their Fathers to hunt, and so lost all they had got. This roving Life utterly destroyed all the Missionary's and School-master's Labours.

But besides this Difficulty, and the natural Averseness of the *Indians* to Learning, two Misfortunes happened which created a Jealousy, and afterwards a Hatred in the *Indians* against all the *English* as well as against their Religion. Some Jesuits, Emissaries from *Quebec* among the *Canada Indians*, adjoining to the *Iroquois*, had infused into the Minds of those People, that the *English* did not intend, by building a Fort among the *Iroquois*, to teach them their Religion, but to cut them all off at a proper Juncture; and that a Box had been found accidentally, left by the *English* when they attempted *Quebec*, containing Papers which discovered this Intention of the *English*. The *Canada Indians* believed this idle Story, and spread it among all the *Iroquois*. This stirred up some Jealousy, but a farther Misfortune quite set the *Indians* against the *English*; some of the *Tuscararo Indians* who had fled from *North Carolina* after the War there with the *English*, came and settled in the Country of the *Onontages*, one of the *Iroquois* Nations bordering on the *Mohocks*. These People being enraged at the *English*, stirred up the *Onontages* against them, telling them they had been most barbarously used and drove out of their Country, and the *English* watched only for an Opportunity to extirpate them too. The other *Indians* were too easily persuaded to believe every thing the *Tuscararo Indians* told them; so that when any of these People came by the *Mohocks* Castle, and the Queen's Fort, in their Way to *Albany*, to trade and buy themselves Necessaries, they used only to mock at Mr. *Andrews* when he would offer to talk to them about Religion, and when he proffered to go to their abode they absolutely forbid him.

In a little Time the old *Mohocks* left off coming to the Chapel to Mr. *Andrews*, and the Children came no more to School. Mr. *Andrews* wrote the Society Word of the ill Success of his Mission, though he had spared no Pains; that the hopeful Beginnings proved of no Effect at last; and that he began to despair of converting the *Indians*. The Society found now, from several Accounts, that the Mission among the *Indians* proved fruitless; that it was not possible to teach them the Christian Religion, before they were in some Degree civilized; and they found the following Difficulties did only hinder that. No Way

could be found to engage the *Indians* to lead a settled Life, to apply themselves to cultivate the Ground, to build Towns, and to raise Cattle; they would still rove through their vast Woods many hundreds of Miles, depending for their Subsistence upon the Game they could kill. They would eat all Sorts of Carrion, and in some long Rambles, when by various Accidents they could get no Game, would kill and eat one another, even their Wives, and that without any Concern or Remorse. Generally half of a Hord or Nation went out a hunting or a warring upon a neighbouring Nation together, and on those Expeditions forgot all the little they had learned; and at their Return were as meer Savages as ever. They could not be dissuaded from taking Wives and leaving them at their Pleasure; this not only hindered Religion from being fixed among them, but was the Cause that a great many aged Men and Women perished miserably, as having no one to take any care of them.

They would, in their Wars, use the greatest Barbarities, and destroy all the Prisoners they could take, by such extreme Tortures, it would move too much Horror in the Reader to repeat in this Place. It is true, they were very fond of their Children, but they perverted even so good a Principle; they would not oblige them to learn any manual Art, or our Language, but let them live a lazy bestial Life: Nay some of the young Children who have by Chance fallen into the *English* Hands, and lived in Families, been taught our Language, learnt a decent Behaviour, and known something of Tillage or Handycraft; when they have grown up have run wild again, have thrown off their Cloaths, and chose rather to ramble naked almost in the Woods with their own People, than to live a sober and settled Life. But the greatest Obstruction to their being civilized, was their Greediness of strong Liquors, especially Rum, and the fatal Effect Drunkenness hath upon them. When they drink they will never leave off till they have gone to the greatest Excess, and in this Condition they are most wretched Objects. They grow quite mad, burn their own little Huts, murder their Wives and Children, or one another; so that their Wives are forced to hide their Guns or Hatchets, and themselves too, for fear of Mischief. And if the Men, through this Excess, fall into any Sickness, they perish miserably, as having no Methods of helping themselves by Physic or otherwise.

It is, indeed, Matter of great Wonder, that these wretched People who have lived joining to the *English* Settlements so many Years, and cannot but observe that the *English*, by Agriculture, raise Provisions out of a small Spot of Ground, to support in Plenty great Numbers of People; whereas they, by their hunting, cannot get a wretched Subsistence out of all their Wildernesses of several hundred Leagues in Extent, should still refuse to till their Ground or learn any manual Art; should still live a brutal Life, insensible of Shame or Honour. It is true, the *English* have taken from them exceeding large Countries, yet this, far from being a Prejudice, would be a vast Advantage to them, if they would but learn the *English* Language, Arts, and Industry. They have still an immense Extent of Land, Part of which, if duly cultivated, is able to maintain many Millions of People more than there are. It might have been imagined the Sachems, that is, those petty Kings who were in *England* in the late Queen's Time, should have been so strongly affected with seeing the Grandeur, Pleasure, and Plenty of this Nation, that when they came to their own Countries, they would have tried to reduce their People to a polite Life; would have employed their whole Power to expel that rude Barbarism, and introduce Arts, Manners, and Religion; but the contrary happened; they sunk themselves into their old brutal Life; and though they had seen this great City, when they came to their own Woods they grew all savage again.

Mr. *Andrews* wrote several Accounts more in 1718, that all his Labours proved ineffectual. That the *Indians* would not send their Children to School, and no body came to the Chapel; that the four other Nations of the *Iroquois*, as they came by the *Mohocks* Castle, insulted and threatened him; that the Interpreter

and

and School-master perceived all their Labour was lost, and that they were frequently in Danger of their Lives if they went out of the Fort. The Society received these Accounts with much Dissatisfaction, as being extremely contrary to what their good Desires had made them hope. However, they were so unwilling to abandon this wretched People to themselves, that they would not dismiss Mr. *Andrews* from his Mission, upon his own Representation of his ill Success. They wrote to the Governor of *New York*, *Robert Hunter Esq*; acquainted him with the Accounts they had received, and requested the Favour of his Excellency to cause an Inquiry to be made, whether Mr. *Andrews's* Labours were so fruitless among the *Indians*, and submitted to his Judgment to dismiss Mr. *Andrews* if they should be so found. The Accounts transmitted hither were found true upon Examination, and Mr. *Andrews* left that miserable Race of Men.

We have chosen to give the whole of this remarkable Account together, that the Reader may see, and be fully apprised of the many and great Obstacles that lie in the Way of our bringing the *Indians* to embrace our Interest together with our Religion; but there are still Hopes, that as the Society proceeds in the great Design of settling a regular Clergy in our Colonies, and thereby influencing the Planters, not only to profess, but to shew, themselves Christians; these Obstacles will be lessened by Degrees, and the *Indians* come to have a better Opinion of our Faith, in the same Proportion that they grow better pleased with the Justice and Regularity of our Behaviour towards them; but in the mean Time what has been related shews that this important Task has not remained unattempted, and that if it has been in some Measure interrupted, this Interruption was occasioned by Accidents unforeseen, inevitable, and in their Nature hitherto unconquerable.

7. But it is now Time for us to proceed to that great and singular Expedition, undertaken in the Queen's Reign, for dispossessing the *French* of *Quebec*, and driving them entirely out of *Canada*. This was first conceived practicable, and Measures taken for putting it in Execution, in the Year 1707, at which Time the Earl of *Sunderland*, then Secretary of State, wrote to the Government of *New England*, to prepare for giving what Assistance lay in their Power, towards a Design of such Importance to, and so often recommended by, the People of that Colony; who from the Time Sir *William Phipps* miscarried in it, were continually wishing for an Opportunity to recover their Credit, and to revenge their Loss upon the *French*, by renewing their Attempts upon *Canada*. The Person then intended to command the Land Troops, was General *Maccartney*, and every thing was settled with respect to his Voyage, when the fatal Battle of *Almanza*, in *Spain*, made it absolutely necessary to send the Troops designed for this Service into that Country, to prevent the total Ruin of the late Emperor's, then King *Charles*, Affairs. The Circumstances of the War in succeeding Years hindered the Revival of this Project till the Change of the Ministry, and then it was resolved upon afresh, as the most effectual Means of forcing *France* into a speedy and solid Peace.

How it was executed is a very hard Task to say; but we will make use of the Account published by the Secretary of the Admiralty, who had it in his Power to give the fullest and fairest Relation of this Matter; and if he has not done so, we know not where to find a better. He tells us the Queen's Instructions to Sir *Hovenden Walker*, Rear Admiral of the White, were dated the 11th Day of *April*, 1711, by which he was ordered to take under his Command, the *Torbay*, a Ship of eighty Guns, the *Edgar*, *Swiftshure*, and *Monmouth*, of seventy Guns; and *Dunkirk*, *Sunderland*, *Kingston*, and *Montague*, of sixty Guns, with two Bomb Vessels; as also the *Leopard* and *Saphire*, one of fifty and the other of thirty Guns, sent before to *North America*; with all these, except the two last, together with the Store-ships and Transports designed on the Expedition, he was, as soon as might be, to rendezvous at *Spithead*; and when Mr. *Hill*, General and Commander in chief of the Forces, should be embarked, and the Troops on board, he was, with the first Opportunity of the Wind, to proceed to

Boston in *New England*, without touching at any Island, Country, or Place, if it could possibly be avoided; and as he was required to appoint proper Signals and Places for Rendezvous, in case of Separation, so was he to give strict Orders to the Captains of the Ships under his Command, that if they happened to be so separated, they should not inform the Enemy, or any other, on what Design they were going.

In his Passage to *Boston*, the chief Town in *New England*, he was, when himself and the General should judge it most proper, to detach one Ship of War or more to convoy directly to *New York* the Transport Ships, in which were laden Artillery, Silks, Cloaths, and Accoutrements, with other Things, for the Use of Forces to be raised there, as well as in the *Jerseys* and *Pennsylvania*; the same to be delivered as the General should direct; and then the Ships of War were to be ordered to return to *Boston*: But if it should not be judged proper to make such Detachment, the Transports were to be sent to *New York*, under a sufficient Convoy, when he arrived at *Boston*; and the said Convoy, to bring there such Necessaries and Stores as should be provided for the Squadron and Forces. When he arrived at *New England*, he was to take the *Leopard* and *Saphire* under his Command, and consider whether it might be necessary to make any Addition to the Squadron by the Convoy to the *New England* Mast Ships or others stationed on the Coast of *America*, which he was impowered to do; and if the General should, upon advising with him, think it practicable to send any of the Transports with some of the new raised Troops in *New England*, to garrison *Annapolis Royal*, lately called *Port Royal*; and to bring from thence the Marines left there, or any Part of them, or the Artillery, or Stores of War, he was to appoint a sufficient Convoy, with Directions for them to return forthwith to *New England*.

He was, when at *Boston*, to take under his Care all Transport Vessels, Ketches, Hoys, Boats, and other Necessaries provided in *New England*; and as soon as the Forces from thence, and those raised there, should be on board, he was to sail with them into the River of *St. Laurence* up to *Quebec*, in order to attack that Place; and being arrived, to make a proper Disposition of the Ships for that Purpose, as well of such as might be fit to be employed before the Town, as others; upon consulting with the General to pass the Place, and proceed up the River towards the Lake, not only to prevent any Communication with *Quebec*, but to protect the Canoes and Boats with the Forces from *New York*, to which End he was empowered to convert some of the small Vessels sent from thence to *New England* into Frigates, suitable to the Navigation of the upper-part of the River, and to man and arm them accordingly at *New England*, or elsewhere; he was to assist the General with Vessels and Boats proper for landing the Forces and embarking them again, but more especially upon his Arrival at *Quebec*, or fresh transporting them from Place to Place.

He was also ordered to send to the General such Marine Soldiers as should be on board the Squadron, when he should demand the same; which he was to have the Command of while employed on Shore: Besides which, he was to aid him with such a Number of Seamen, Gunners, Guns, Ammunition, and other Stores from the Ships, as he should demand for the Land Service; which Seamen were to assist in drawing and mounting the Cannon, or otherwise, as should be found necessary. He was strictly required to lose no time in proceeding to *New England*, and proceeding from thence to the River *St. Laurence*; nor in putting in Execution the Service at *Quebec*; but that on his Part, all Expedition should be used in the Reduction of the Place, and of the Country of *Canada*, or *New France*; and in the seasonable Return of the Squadron and Transports. Her Majesty impowered him to direct the Commissary of the Stores to deliver to any Ship or Vessel, whether of War or otherwise, any Provisions or Liquors under his Care: He was likewise to provide any other naval Stores for the Use of the Squadron; and in case of Success it should be found necessary by him and the General to have

have a naval Force left in the River of *St. Laurence*, he was to appoint such Part of the Squadron to remain there as might be judged proper for taking Care to make suitable Provision for the Maintenance and Repair of such Ships; and the like Liberty was given as to any of the smaller Vessels, such as Transports or otherwise, or to make use of any of the Enemy's Ships that might be taken, if proper, to bring into *Europe* such Governors, regular Troops, religious Persons, or others whom the General, by his Instructions, was directed to send away from *Canada*, with Commissaries, Stores, and Provisions for their Transportation.

These Services being directed, he was to take on board the General, if he should think fit to return, and such of the Forces as might not be left in *Canada*, and hasten with the Squadron and Transports out of the River; and if the Season of the Year would permit, he was to proceed to, and summon and attack, *Placentia* in *Newfoundland*, in such manner as General *Hill* should direct; which Service being over, he was to order such Ships of War as did not properly belong to the Squadron under his Command, to return to their several Stations, directing the Masters of the Transports which he should have no Occasion for, to go and seek Freight either upon the Continent of *America* or in the Islands, to ease the Public of the farther Charge of them, and for the Benefit of the Trade of *Great Britain*. Lastly: It was recommended to him, as it was to the General of the Land Forces, to maintain a constant good Understanding and Agreement, and on all Occasions to render each other all necessary and requisite Assistance; and if any Differences should arise between them, upon any Construction of Command, or the Nature of Command in the Service, or otherwise howsoever, the Queen was pleased to reserve the Determination of the same to herself, at their Return to *Great Britain*, without Prejudice to either of them in submitting to each other for the Good of her Majesty's Service.

And that he might be sufficiently informed of her Majesty's Design upon *Canada*, and of the Preparations directed to be made for the carrying it on, to the Governors of *New York* and *Massachusetts Bay*, and *New Hants*; as also of the additional Instructions to the Governors of *New York*, and of those to *Francis Nicholson*, Esq; and the several Governors of the Colonies of *Connecticut*, *Rhode Island*, *Providence Plantations*, and *Pennsylvania*.

These were the Contents of the Queen's Orders to Sir *Hovenden Walker*, prepared without so much as consulting the then Lords Commissioners of the Admiralty, either as to the Fitness of the Ships appointed for the Expedition, or the Nature of the Navigation; but on the contrary, the Design on which they were bound was rather industriously hid from them, as may appear by some Letters to Sir *Hovenden Walker*, before he sailed from *Spithead*, by which the Secretary seemed to value himself very much, that a Design of this Nature was kept a Secret from the Admiralty, who, had they been consulted, would not, I am apt to think, have advised the sending Ships of eighty and seventy Guns to *Quebec*, since the Navigation up the River of *St. Laurence*, was generally esteemed to be very dangerous; nor were their Lordships permitted to know any thing of this Matter, at least not in Form, until Advice received, that the *French* were equipping a considerable Squadron at *Brest*, which some of the Ministry might be apprehensive were designed to intercept Sir *Hovenden Walker*; but it was too late to take any proper Measures for preventing it, if the Enemy had really had any such Intention. Having thus given a brief Account of what Steps were taken to set forth this Squadron, which, ere it returned, put the Nation to a very considerable Expence, it remains that we accompany them on the Expedition, and I shall give as particular an Account of their Proceedings as the Papers which I have before me, will enable me to do.

Sir *Hovenden Walker* was under Sail with the Ships of War and Transports off of *Dunnoose* on the 29th of *April*, 1711; but coming off of the *Start* the 1st of the next Month, a westerly Wind obliged him to put in at *Plymouth*; being the Length of the *Dead Man* the 4th, he

met with the *Kent*, *Essex*, and *Plymouth*, which Ships he took with him some Leagues into the Sea, and then left them to their former Service of cruizing from the Soundings. The 24th of *June* he arrived at *Nantasket*, near *Boston* in *New England*, having then with him five Ships of the third Rate, six of the Fourth, one of the Fifth, and two Bomb-Vessels. But not meeting with that ready Assistance which was expected from the Government and People of that Country; it was the 30th of *July* before he sailed from thence, and then he was on his Way to *Quebec*, with the *British* and *New England* Forces. The 14th of *August* he got the Length of the *Bird Islands* which lie about two hundred and fifty Leagues from *Cape Ann*; and having sent the *Chester*, *Leopard*, and *Saphire*, to cruize between *Placentia* and *Cape Breton*, on the Island opposite to *Newfoundland*, expected their joining him in his Passage to *Quebec*; the former of which Ships had taken and sent into *Boston*, before he sailed thence, a Ship of about one hundred and twenty Tons, with ten Guns, and had seventy Men on board, whereof thirty were Soldiers for the Garrison of *Quebec*.

The *Leostoff*, *Feverham's Enterprize*, and *Tryton's Prize*, all small Vessels, which were stationed at *New York* and *Virginia*, he ordered to join him off of *Cape Breton*, being impowered by her Majesty's Orders so to do, if he should find it necessary, and this the rather because they might be of good use to him in his Proceeding up the River to *Quebec*, which Navigation most of the People with whom he had spoken represented to be very dangerous; and therefore he rightly judged the *Humber* and *Devonshire*, which mounted eighty Guns each, too big to be ventured thither; for which reason he sent them home, and shifted his Flag on board the *Edgar*, a Ship of seventy Guns, General *Hill* removing into the *Windsor*, which carried ten less; but since he had Information that a Ship of sixty Guns, and another of thirty, were expected from *France* very shortly; he ordered the aforesaid Ships, *Humber* and *Devonshire*, to cruize in the Opening of the Bay of *St. Laurence*, until the last of *August*, and then to pursue their Voyage home.

He had very fair Weather until he got into the aforesaid Bay, when it came changeable, sometimes thick and foggy, and other while calm and little Winds, and the Navigation appeared to be intricate and hazardous. The 18th of *August*, when he was off *Gaspe Bay*, near the Entrance of the River *Canada*, it blew fresh at North-west, and lest the Transports should be separated, and blown to Leeward, he anchored in that Bay; where, staying for an Opportunity to proceed up the River, he burnt a *French* Ship which was a fishing, not being able to bring her off. The Wind veering westerly the 20th of *August*, he had Hopes of gaining his Passage; but the next Day Afternoon it proved foggy, and continued so all Night and the Day following, with very little Wind till the Afternoon, when there was an extreme thick Fog and it began to blow hard at East-south-east, which, rendering it impossible to steer any Course with Safety, having neither Sight of Land or Soundings, or Anchorage; he, by the Advice of the Pilots then on board him, both *English* and *French*, who were the best in the Fleet, made the Signal for the Ships to bring to with their Heads Southward, at which Time it was about eight at Night, believing that in that Posture they should not come near the North Shore, but rather have driven with the Stream in the Mid-channel; but on the contrary, as they lay with their Heads Southwards, and the Wind easterly, in two Hours Time he found himself on the North Shore among the Rocks and Islands, at least fifteen Leagues farther than the Log-line gave, where the whole Fleet had like to have been lost, the Men of War escaping with the utmost Difficulty; but eight Transport Ships were cast away, and almost nine hundred Officers, Soldiers, and Seamen perished.

The *French* Pilot, who, as it was said, had been forty Voyages in this River, and eighteen of them in Command, informed him, that when it happens to be so foggy as to prevent the Sight of the Land, it is impossible to judge of the Currents, or to steer by any Course; for he himself had lost two Ships, and been himself near the South, in-

so much that it was extremely difficult to procure Men in *France* to proceed on so dangerous a Navigation, since almost every Year they suffered Shipwreck. Thus it appeared how things had been misrepresented in *Great Britain*, by those who pretend to aver that Fleets of Ships might safely proceed up the River to *Quebec*; and it was demonstrable that the People of *Boston* knew not any thing of what they proposed, when Schemes were laid for such an Expedition. After this unhappy Disaster, and when Sir *Hovenden Walker* had plied two Days with very fresh Gales, between the West and the South, to save what Men and other things he could, he called a Council of War, and upon enquiring of the Pilots (who had been forced on board the Ships by the Government of *New England*) and duly examining into every Circumstance, it was judged impracticable for a Fleet to get up to *Quebec*, since there were so many apparent Dangers, and no Pilots qualified to take the Charge; besides it was the Opinion of them all, both *English* and *French*, that had the Squadron been higher up the River, with the hard Gales they met with, all the Ships would have been inevitably lost. At this Council of War there were, besides the Rear Admiral, Captain *Joseph Soames*, Captain *John Mitchel*, Captain *Robert Arris*, Captain *George Walton*, Captain *Henry Gore*, Captain *George Paddon*, Captain *John Cockburn*, and Captain *Augustine Rouse*. The Consultation being over, the *Saphire* was sent to *Boston*, with an Account of the Misfortune, and the *Montague*, to find out the *Humber* and *Devonshire*, and to stop all Ships bound up to *Quebec*; and the *Leopard* being left with some Sloops and Brigantines, to take any Men from the Shore that might be saved, and to endeavour to weigh some Anchors left behind, he proceeded to *Spanish River*, in the Island of *Breton*, the Rendezvous he had appointed, there to be perfectly informed of the State of the Army and Fleet, and to settle Matters for their farther Proceedings.

But all the Ships did not join till the 7th of *September*; the Day following, by consent of the General, he called a Council of War of Sea and Land Officers, where it was considered, whether under their present Circumstances it was practicable to attempt any thing against *Placentia*, which all of them very much inclined to; but upon examining into the State of the Provisions on board the Men of War and Transports, it was found there was but ten Weeks Provision, at short Allowance, in the former, and in the latter much less, so that it was unanimously agreed not any thing of that kind could be undertaken; but that it was necessary the Squadron and Transports should proceed to *Great Britain*, since they had but barely Provisions sufficient for the Voyage, and that there was not any Prospect of a Supply from *New England*, and the Season of the Year being too far advanced for navigating safely in those Parts of the World. At this Council of War there were, besides the Sea Officers of the last, General *Hill*, Colonel *Charles Churchill*, Colonel *William Windresse*, Colonel *Campanfelt*, Colonel *Clayton*, Colonel *Kirk*, together with Colonel *Vetch*, and Colonel *Walton*, who commanded the Forces raised in *New England*.

It was in pursuance of this Resolution taken in *Spanish River*, that he sailed on the 16th of *September* for *England*, where he arrived the 9th of *October* following, and not long after his Return, the *Edgar*, a seventy-gun Ship, on board of which he hoisted his Flag, took fire, and blew up at *Spithead*, by some Accident, the Cause of which was never known; and thus ended an Expedition every Way unfortunate, and which brought nothing but Discredit and Blame upon those who contrived, and those who were concerned in the executing, it, and particularly Sir *Hovenden Walker*, a very honest plain-spoken Man; who, if there was any dark Secret in this Business, was most certainly ignorant of it. His Opinion always was, and he died in the full Belief of it, that though the Expedition might be justly stiled unfortunate, inasmuch as it miscarried, and the Fleet never reached *Quebec*; yet it would have been much more so, if they had got up the River of *St. Laurence*, and had actually landed their Men, as they were by their Instructions directed to do; and the Reasons he gave for it are very well worth the hearing,

especially at this Juncture, when an Expedition of the same kind is said to be under Consideration. The Reasons that he gave for it were these: That in Case the *French* had retired from *Quebec*, they would have carried their Provisions with them, and have destroyed what they could not carry, so that the *English* would have had nothing but a wild, barren, uncultivated Country before them, with the Conquest of which they might please themselves; but in which, nevertheless, they would find it impossible to subsist.

“For, continues he, our Peoples Provisions would have been reduced to eight or nine (perhaps to six) Weeks, at short Allowance; no Relief could possibly be hoped for in less than ten Months, if so soon; the *Feverham*, and three Store-ships, laden with the Provisions designed for their Supply, being cast away in their Passage; so that if they had escaped Shipwreck, which would have been a very great Chance, between ten and twelve thousand Men must inevitably have perished with Hunger and Cold, and the Ship have become a Prey to the returning Enemy. On the other hand, had the Enemy held out till our People had spent all their Provisions, they must have laid down their Arms, and have surrendered to the *French* at Discretion, to avoid Death in its most frightful Shape, Famine; or if they had taken the Place, either by Storm or Capitulation, the remaining Provisions of a small Garrison would not have gone far towards subsisting so large a Number; nor could they, at that Season of the Year, have marched through the Country in search of more: And this would have been the Case, had they afterwards attempted *Placentia*.”

How far this Gentleman might be in the Right or in the Wrong, I shall not at present desire the Reader to enquire; but, most certainly, what he says has at the first Sight the Appearance of Sincerity and Truth, and therefore we ought to be very cautious of running any fresh Hazards of this Nature: But the driving the *French* from *Canada* is most certainly a Thing very possible and very practicable, provided the Scheme be laid by those who are well acquainted with the State and Force of our Colonies, the Navigation of the River of *St. Laurence*, and the Condition of the Colony we propose to dislodge; and if it be executed by Seamen and Officers of Experience in their respective Professions, and who found the Hopes of promoting their private Interest on the solid Basis of exerting their utmost Abilities in the public Service.

8. The *French*, during the whole Course of the last War, were particularly attentive to the Preservation of their own Colonies, and annoying of ours, in both which Schemes they were but too successful, which however was not owing so much either to the Wisdom of their Councils or the Vigour of their Arms, as to the Faults in our Measures, and the Miscarriages of our Sea Officers. I shall not pretend to enter into a strict Detail of these disagreeable Points, but shall content myself with a few general Points which I flatter myself will be sufficient for my Purpose. At the very beginning of the War, the gallant old Admiral *Benbow* was sacrificed by some of his Officers who had a Pique to him. He was a Man of great Honour and strict Discipline, but had some of the Roughness of a Tar about him, which rendered him very disagreeable to the fine Gentlemen of the Navy, amongst whom were three of the Captains that deserted him; their Conduct indeed had the Look of Cowardise, and of that they were found guilty by a Court Martial, and suffered Death for it very deservedly; but they only acted the Cowards and were not so, for they had behaved gallantly upon other Occasions, and never Man looked Death in the Face with more Intrepidity than Capt. *Kirby* did, which however was so far from extenuating, that in my Opinion it heightened his Offence.

The executing severe Justice upon those three Gentlemen, which certainly was a very wise and right Step, and was taken by the mildest Government this or perhaps any other Nation ever saw, had a very good Effect, and taught People to fear the Justice of the Nation, in case they sacrificed the Concerns of the Public to their particular Resentments or private Views; but that it did not

not entirely put an End to the Evil is very certain, since something of the same kind happened afterwards to Sir Charles Wager, and prevented his taking at least another Galleon. The Admirals also, and great Sea Officers, that were stationed at *Jamaica* for the Protection of the Island and Security of Commerce, did not behave so well as they might have done, as appears from those authentic Registers the Votes of the House of Commons, where the Reader will find, that, after long and strict Enquiries, in which the Merchants were admitted to make particular Charges, and allowed to support them by Evidence, Censures were passed upon those Officers who appeared to be guilty; and both Houses shewed a warm Zeal for redressing those Mischiefs occasioned by the ill Conduct of the Navy, and thereby left ample Testimony of their Regard for the Public, though it was not attended with that Success that might have been wished.

In the mean time the *French* went on in quite a different way; and, when they found their Fleets were able to do little against ours, they very wisely declined waisting their Naval Force in Combats at Sea, and applied it almost entirely to the protecting their own Trade, and distressing ours. They undertook the escorting the *Spanish* Plate Fleets, and were, generally speaking, but too successful in that Undertaking. Notwithstanding our superior Force, they attempted a Commerce with the *Spanish* Settlements in the *South-Seas*; and in this too they succeeded, notwithstanding the dangerous Navigation round *Cape Horn*, and from thence they reaped two great Advantages, *viz.* maintaining and improving their Manufactures, even in a time of War; and bringing vast Sums into *France*, without which she could not possibly have continued the War.

Yet, in some respects, it manifestly appeared that her Force was very insufficient for supporting her Views in the *West Indies*, since, in an Attempt they made upon *Carolina* in 1706, they were shamefully repulsed by the natural Force of that Colony, without any Assistance from hence. And, on the other hand, our People succeeded in their Attempt to drive the *French* out of what they possessed in the Island of *St. Christophers*; which plainly shewed what might have been done, in that War, towards destroying their Sugar Colonies, if, as our Interests most certainly led us, we had considered that Point more attentively than we did some others, which did not concern us near so much. For, had we used the Opportunity that was given us to have driven the *French* out of all or most of their Islands, it must have turned so much to our Advantage, in Point of Trade, that, in all human Probability, we should have had no Reason to regret the vast Expences of that long and consuming War.

But, instead of doing this, our Views were almost entirely confined to *Europe*, where our Success was indeed very honourable for our Arms, but was very far from procuring us any Advantages in respect to Trade; which I do not say with any Design of reflecting on the Ministers by whom that War was managed, who perhaps might mean us well, and did for us as much as was in their Power; but to shew where the Fault really lay, which was our entering into many Engagements that were either useless or detrimental to our Commercial Interests.

Whereas the *French*, who had but very lately entertained any Thoughts of Trade, kept that continually in view, both in their Operations during the War, and in their Negotiations for bringing about a Peace. In respect to the former, besides what they did against us in the *West Indies*, they attacked the *Portuguese* in *Brazil*, ruined the Commerce between the *Dutch* and *Spaniards*, and established their own; and, besides all this, when they had actually begun to treat with us, and our Court considered them in a manner as Friends, they sent a Fleet to distress us in the *Leeward Islands*; which excessively provoked our Ministry, though they were too far advanced in their pacific Measures to retreat.

At the Conclusion of the Treaty, the *French* shewed the same Care for, and the same Steadiness in, supporting their Commerce. It was with Difficulty that they were prevailed upon to restore what they had taken from our *Hudson's-Bay Company*. *Nova Scotia* we had, and, because

they could not take it from us, they left it to us; but they plainly cheated us out of *Cape Breton*. And tho' they pretended to renounce all Pretensions on *Newfoundland*; yet they preserved what they never had any title to, and what, with respect to that Country, was all they ever wanted. By these Arts they secured great Advantages to themselves, which were all at our Expence; brought a heavy Load of Reproach on the Ministers who transacted with them, and left the Treaty of *Utrecht* as a Memorial to all succeeding Ministers of the Danger of entering into any separate Negotiations with *France*.

9. After the Accession of his late Majesty King *George I.* to the *British* Throne, there followed several Disturbances at home and abroad, which might very well hinder the Ministers from contriving any new Schemes for the Advantage of our Colonies, or from perfecting those which had been formerly laid for that Purpose. The Rebellion in *Scotland* first, and after that the Quadruple Alliance, and the Measures which preceded and followed it, sufficiently occupied their Thoughts, and if they went on in the ordinary way, in protecting them, and providing for their Security, they might very well be excused for postponing Thoughts or Projects of another Nature to more favourable Times.

But the *French*, always watchful for their own Advantage, at the very time when they seemed most solicitous in cultivating the Friendship of *Britain*, and were daily receiving Benefits from it, projected the Settlement of the Island of *St. Lucia*, which had been always included in the Commission of the Governor of *Barbadoes*; and for that Purpose the *French* King thought fit, in the Year 1719, to make a Grant of that Island to the Marshal *d'Etree*, who immediately made the necessary Dispositions for establishing a Colony in that Island, and sent over People for that Purpose. The Governor of *Barbadoes*, as it was his Duty, opposed this Settlement vigorously, and declared roundly, That, if the *French* persisted in settling, he should find himself under a Necessity of driving them off that Island, which belonged to the King his Master, by Force.

At the same time our Minister at the Court of *Paris* presented a Memorial, in which he set forth the Title the Crown of *Great Britain* had to this Island, and, consequently, the great Injustice of the *French* King's Grant, which was very apparent from the following Particulars in relation to the History of this Island, in which both *English* and *French* Writers agree. The *English* settled on the Island of *St. Lucia* in 1639, and lived there near two Years without any Interruption or Disturbance; but in 1640 they were driven off from the said Island, and the Governor and most of the Inhabitants killed by the *Caribbeans*, and, as the *English* suspected, by the Instigation and Encouragement of the *French*; which the *French* Generals, *Parquet* and *de Poincy*, however, both disowned. Nor did the *French*, at that time, or any other time, make any sort of Pretension to the Island. A tacit Acknowledgment undoubtedly of the Right of the *English*.

The Civil Wars in *England* breaking out, the *English* neglected this Settlement; and *Monf. du Parquet* sent thirty or forty *Frenchmen* to take Possession of the Island. The *Sieur de Rousselan* governed here till 1694, and was succeeded by *de la Riviere*, whom the *Caribbeans* killed with several of his Men, and carried off his Wife and two of his Children. He was succeeded by *Monf. le Breton*, he by *Monf. Agremont*, who was also destroyed by the *Caribbeans*. After this the *English* made a Treaty with the *Caribbeans* for the purchasing the Island from them; and, in 1663, sent fourteen or fifteen hundred Men on board of five Men of War, who, being joined by six hundred of the *Caribbeans* in seventeen Canoes, came before the Island in June 1664, which was delivered to them without Resistance, on Condition that the *French* Governor and Garrison in the Fort, which amounted only to fourteen Men, should be transported to *Martinico*, with their Cannon, Arms, and Baggage. In 1666 the *English* Governor, *Mr. Robert Cook*, by reason of the Mortality of his People, Want of Necessaries, &c. abandoned the Island, and set fire to the Fort; yet, two Days afterwards, a Bark arrived from *Lord Willoughby*, Governor

Governor and Captain-General of *Barbadoes*, and the other *English* *Caribbee* Islands, to Windward of *Guardaloupa*, with Provisions, Ammunition, and all Necessaries for the Colony. In this deserted Condition it remained thenceforward, but was always considered as a Part of the *British* Dominions. The Interposition of our Minister produced the desired Effect, and the *French* desisted at that time from their Settlement.

10. This Attempt, however, so much alarmed our Court, that the Duke of *Montague* resolved, at a vast Expence, to settle that Island and *St. Vincent*, which was so agreeable to the Ministry and to his late Majesty, that by Letters Patent, dated the 22d of *June*, 1722, both those Islands were granted to his Grace, that he might be encouraged to put so generous and public-spirited a Design in Execution; and for the farther Benefit and Advantage of the new Colonies which he was to settle, the Duke was also constituted Captain-General of the Islands of *St. Lucia* and *St. Vincent*, which till that Time were included in the Commission, and remained under the Government of the Governors of *Barbadoes*. His Grace, having appointed Capt. *Uring* his Deputy-Governor, and provided seven Ships and Vessels to carry over the Planters, with such Provisions and Necessaries as were requisite to settle Colonies in those Islands, obtained of his Majesty the *Winchelsea* Man of War, commanded by Capt. *Orme*, to convoy, attend, and protect the Planters.

Mr. *Uring* embarked on board the *Winchelsea*, on the 10th of *September* 1722, and sailing to *Ireland* to take in Provisions, made it the 15th of *December* before he arrived at *St. Lucia*. Being come to an Anchor in *Pidgeon Island* Bay, a *Barbadoes* Sloop soon after arrived from *Martinico*, the Master whereof communicated to Mr. *Uring* the Copy of a Mandate by the King of *France*, which he said was published by Order of the *French* General in all the Churches of that Island, and in all the Towns by beat of Drum; which contained in Substance, That if the *English* did not leave the Island in the Space of fifteen Days, they were to be expelled by Force of Arms. The next Morning Mr. *Uring* weighed from *Pidgeon Island* Bay, and stood for the Harbour of *Petite Carénage*, which they found to be a very good one, and in it several Places fit for careening Ships, sheltered from every Wind; in one of which, Ships of sixty Guns and upwards may careen very conveniently: The Land is very hilly all round the Harbour, and in most places steep, ascending from the Water-side. At two in the Afternoon we landed fifty Men to cut down the Trees and Bushes on the Point that lay fit for a Battery of Guns to command the Entrance of the Harbour. The same Day he sent Mr. *Faulkner* to *Martinico*, with Letters from the Duke of *Montague* and the Admiralty directed to Capt. *Charles Brown*, Commander of the *Feverisham* Man of War, and Capt. *Brand* Commander of the *Hector*; who were then at *Martinico*; and acquainted them, that the Duke had appointed him Deputy-Governor of *St. Lucia* and *St. Vincent*, and being come to settle those Islands under the Protection of the *Winchelsea* Man of War, he desired that in pursuance of the Orders they had received from the Admiralty for that Purpose, they would join him as soon as possible, being apprehensive the Governor of *Martinico* designed to molest the Colony. In the mean time he proceeded to land his People, Guns, Tools, Planks, and Stores, to fortify the Harbour, and build a large House to shelter the Workmen.

On the 22d of *December* Captain *Brand*, and Captain *Brown*, arrived from *Martinico* with his Majesty's Ships, the *Hector* and *Feverisham*, and soon after a *French* Sloop, which brought a Letter from the *French* General, to acquaint Mr. *Uring* that he had heard of his landing *English* Forces in the Island of *St. Lucia*, and desired to know his Intentions; and at the same Time he received the following Copy of the *French* King's Mandate, viz. A Mandate of the King to the *Sieur Chevalier* de *Feuquire*, Governor and Lieutenant General of the Windward Islands in *America*. "His Majesty having been informed that the King of *England* has given the Islands of *St. Vincent*, and *St. Lucia*, to the Duke of *Montague*, has made his Complaint of it to the Court of *England*,

and has alledged that neither the one nor the other of these Islands belong to that Crown. The first of them ought to remain to the *Caribbees*, according to Conventions made with that People; and the second does belong to *France*, who has been willing to suspend the Settlement of that Island on the request of the King of *England*; notwithstanding those Reasons, his Majesty hath not been informed that there has not been any Revocation of this Grant; on the contrary, he understands that the Duke of *Montague* is repairing to send and take Possession of those Islands, and to transport Numbers of Families thither. This Undertaking being contrary to the Rights of his Majesty, his Intention is, That in Case the *English* should take Possession of *St. Lucia*, and settle there, the *Sieur Chevalier de Feuquire* shall summon them to retire in fifteen Days, in regard that Island belongs to *France*; and if they do not depart, he shall compel them to it by Force of Arms. He shall take Care to charge some of the wisest and most experienced of his Officers with this Expedition. His Majesty desires there should be as little Effusion of Blood as possible, nor will he have any Pillage made; he only wishes the *English* would retire, and not possess themselves of a Country which belongs to him. Done at *Versailles* the 21st of *September* 1722, signed, &c."

Upon reading the Mandate, and the *French* Governor's Letter, in which it was inclosed, Mr. *Uring* sent to Captain *Brand*, and Captain *Brown*, to know if he might depend upon their Assistance if he was attacked by the *French*; but they would give him no positive Answer, and soon after sailed to *Barbadoes*; he also sent a Letter to the Governor of *Martinico*, to acquaint him that he had Orders from the Duke of *Montague*, the Lord Proprietor, under his *British* Majesty's Patent, to plant *St. Lucia* and defend it, but proposed suspending all Acts of Hostility, till they could hear from their respective Courts of *Great Britain* and *France*. Mr. *Uring* also thought fit to write to the President of *Barbadoes*, that the Governor of *Martinico* had threatened to drive the *English* from the Island, if they did not depart in fifteen Days, and to desire his Assistance to support this Part of his Majesty's Dominions. To which the President answered, That he was ready to give him all the Assistance in his Power.

But the Captains *Brown* and *Brand* remained so long absent from *St. Lucia*, that the *French* had an Opportunity of sending between two and three thousand Men from *Martinico*, and landing them on the Island; the Captains of the Men of War also refused to give him Assistance, towards fortifying and defending the Colony by Land, and a great many of the Planters falling sick, and others deserting over to the *French* at the same Time, Mr. *Uring* had not fourscore left to bear Arms, which compelled him at length to come to a Treaty with the *French* General, the Marquis of *Champigny*; and the following Articles were concluded between them: First, That the *English* should quit the Island of *St. Lucia* within seven Days, provided that the Ships of the *English* Nation should at all times have Liberty to come into the Ports of the said Island, and wood and water there, and serve their other Occasions, as the *French* also might. Secondly, That the *English* Colony should be at Liberty to reimbarc all their Cannon, Stores, Arms, Baggage, and every thing belonging to them, without Molestation. Thirdly, That all Deserters should be given up. And, Lastly, That immediately after the *English* had evacuated the Island, the *French* Forces also should evacuate it, and that the Island should remain in the same State it was, till the Controversies between the two Crowns, relating to this Island, were decided. In pursuance of which Agreement Mr. *Uring* embarked with his People, and sailed to *Antigua*, sending the *Winchelsea* Man of War, and Captain *Braithwaite*, in the *Griffin* Sloop, to take a View of the Island of *St. Vincent*, and see if it was practicable to make a Settlement there. In the mean Time a considerable Reinforcement arrived at *Barbadoes*, from the Duke of *Montague*, with Ammunition and Provision, and Orders to attempt a Settlement upon *St. Vincent*, if the Planters were driven from *St. Lucia*.

11. In order to this he had Instructions, and a Commission given him by Mr. *Uring*, which were perfectly well adjusted to the Design upon which he was sent; and in the mean Time Governor *Uring* remained at *Antigua*, where he had all the Civilities paid him, and all the Services done him by the Governor, and other Persons in Authority, that he could either desire or expect; which, in some Measure, mitigated his sharp Sense of the Misfortunes he had met with; for he was both a capable and an honest Man; one who had the Service very much at Heart, and who discharged his Duty so punctually, even in this disastrous Undertaking, as to preserve his Reputation, and to merit a kind Reception from his generous Master the Duke of *Montague*, who was so wise as to expect no more from a Man than was in his Power, and so good as to commend and reward him who did that, though it was not attended with the happy Consequences that might have been expected from it. This Gentleman did not remain long at *Antigua*, before he was made sensible that there was as little, or rather less Hopes of making a Settlement at *St. Vincent*, than he by Experience had found there was of fixing a Colony on *St. Lucia*; for Capt. *John Braithwaite*, returning from his unsuccessful Expedition, delivered to Governor *Uring*, in Justification of his own Conduct, and for the Satisfaction of his Grace the Duke of *Montague*, the following Account of the Measures he had taken for executing the Commission granted to him, in order to fix a Settlement on his Majesty's Island of *St. Vincent*. This Paper being equally curious and important, and also entirely historical, we shall give the Reader an Extract of it in that Gentleman's own Words.

The REPORT of Capt. John Braithwaite to Nathaniel Uring, Esq;.

" In Pursuance of a Resolution in Council, and your Order for so doing the Day you sailed with his Grace's Colony for *Antigua*, I sailed with the *Griffin* Sloop, in Company with his Majesty's Ship the *Winchelsea*, to *St. Vincent*: We made the Island that Night, and the next Morning run along the Shore, and saw several *Indian* Huts, but as yet no *Indians* came off to us, nor could we get ashore to them, by reason there was no Ground to anchor in. Towards the Evening two *Indians* came on board, and told us we might anchor in a Bay to leeward, and when we were at Anchor they would bring their General on board. Here we came to an Anchor in deep Water, and very dangerous for the Sloop. One whom they called General came on board with several others, to the Number of twenty-two. I entertained them very handsomely, and made the Chief some trifling Presents; but found him to be a Person of no Consequence, and that they called him Chief to get some Present from me. Here two of the *Indians* were so drunk that they would not go ashore, but staid on board some Days, and were well entertained. After this, little Winds and great Currents drove us off for several Days, but at last we came to an Anchor in a spacious Bay to the leeward of all the Island, the Draught of which I ordered to be taken by our Surveyor, for your better understanding the Place; being the only one where a Settlement could be made. The Ship and Sloop were scarce come to an Anchor before the Strand of the Shore was covered with *Indians*, and amongst them we could discover a white Man, who proved to be a *Frenchman*. I took Capt. *Watson* in the Boat with me, with a *Frenchman*, and immediately went on Shore. As soon as I came amongst them, I asked why they appeared all armed, for every Man had a Cutlass; some had Muskets, Pistols, Bows and Arrows, &c. They with very little Ceremony enclosed me, and carried me up the Country for about a Mile, over a little Rivulet, where I was told I was to see their General: I found him sitting amidst a Guard of about an hundred *Indians*; those nearest his Person had all Muskets, the rest Bows and Arrows; and all observed a great Silence: He ordered me a Seat, and a *Frenchman* stood at his Right-hand, for an Interpreter: He demanded

of me, What brought me into his Country, and of what Nation? I told him, *English*; and I was put in to wood and water, as not caring to say any thing else before the *Frenchman*; but told him, if he would be pleased to come on board our Ships, I would leave *Englishmen* in Hostage for those he should be pleased to take along with him. But I could not prevail with him, either to come on board, or suffer me to have Wood or Water. He said, he was informed we were come to force a Settlement. And we had no way to remove that Jealousy but by getting under sail. As soon as I found what Influence the *Frenchman's* Company had upon him I took my Leave, after making such Replies as I thought proper, and returned to my Boat, under a Guard; and when I came to the Shore, I found the Guard was increased by a Number of Negroes, all armed with Fuzees. I got into my Boat without any Injury, and went on board to Capt. *Orme*, and told him my ill Success. Immediately after I sent ashore the Sloop's Boat with a Mate, with Rum, Beef, Bread, &c. with some Cutlasses; and ordered a *Frenchman* who went with the Mate, to desire the Guard to conduct them to their General, and to tell him, that though he denied me the common Good of Water, and a little useless Wood, nevertheless I had sent him such Refreshments as our Ships afforded. Our People found the *Frenchman* gone, and that then the *Indian* General seemed pleased, and received what was sent him; and in return, sent me Bows and Arrows. Our People had not been long returned but the General sent a Canoe with ten Chief *Indians*, who spoke very good *French*, to thank me for my Presents, and to ask Pardon for his refusing me Wood and Water, and assured me I might have what I pleased; and they had Orders to tell me, if I pleased to go ashore again they were to remain Hostages for my civil Treatment. I sent them on board the Man of War; and with Capt. *Watson* went ashore. I was well received, and conducted as before: But now I found the Brother, the Chief of the Negroes, was arrived with five hundred Negroes, most armed with Fuzees. They told my Interpreter, they were sure we were come to force a Settlement, or else they would not have denied me what they never before had denied any *English*, viz. Wood and Water; but, if I thought fit, I might take what I pleased under a Guard. Finding them in so good a Humour, I once more introduced the Desire I had to entertain them on board our Ships, and with some Difficulty I prevailed with them by leaving Capt. *Watson* ashore under their Guard as a Hostage. I carried them on board the King's Ship, where they were well entertained by Capt. *Orme*, who gave the *Indian* General a fine Fuzee of his own, and to the Chief of the Negroes something that pleased him. Capt. *Orme* assured them of the Friendship of the King of *England*, &c. The Negro Chief spoke excellent *French*, and made Answers with all the *French* Compliments. Afterwards I carried them on board the Duke's Sloop; and after opening their Hearts with Wine, for they scorned to drink Rum, I thought it a good time to tell them my Commission, and what brought me upon their Coast. They told me, it was well I had not mentioned it on Shore, for their Power could not have protected me; that it was impossible; the *Dutch* had before attempted it, but were glad to retire. They likewise told me, that two *French* Sloops had, the Day before we came, been amongst them, and gave them Arms and Ammunition, and assured them of the whole Force of *Martinico* for their Protection against us: They told them also, that they had driven us from *St. Lucia*; and that we were come now to endeavour a Settlement there; and notwithstanding all our specious Pretences, when we had Power we should enslave them; but they declared they would trust no *Europeans*: That they owned themselves under the Protection of the *French*, but would as soon oppose their settling among them, or any Act of Force from them, as us. They had

“ lately given an Example, by killing several; and they
 “ further told me it was by very large Presents the *French*
 “ ever got in their Favour again, but they resolved never
 “ to put it in their Power, or of any *Europeans*, to hurt
 “ them: They advised me to think what they said was
 “ an Act of Friendship. This being all I could get
 “ from them, I dismissed them with such Presents as his
 “ Grace ordered for that Service, with a Discharge of
 “ Cannon; and received in Return, as regular Volleys of
 “ small Shot as I ever heard. In the Night the *Winchelsea*
 “ drove from her Anchors, which as soon as I perceived,
 “ and had received Capt. *Watson* from the Shore, I got
 “ under Sail, and stood to the Man of War; this is a
 “ faithful Report of all I *John Braithwaite* can recollect.”

12. Mr. *Uring* having read the above Report of Captain *Braithwaite*, he judged there was like to be little good done at *St. Vincent*, and the second Scheme on *St. Lucia* being laid aside, he determined to unload all the Stores, and discharge the Vessels, and proposed to Lieutenant General *Matthews*, to do it at *Antigua*; which he said he thought could be done with more Ease and Security, and in much less Time, and would save a great deal of Charge and Trouble, and less Hazard than at *St. Christophers*; the Lieutenant General answered, that in his House at *St. Christophers* was room enough to hold all the Duke's Stores, and should cost his Grace nothing; and, that as he had the Government of that Island, he had such an Influence over the People, that the Duke's Servants would be more secure there, and that he could better provide for the Officers, than at *Antigua*; and further said, that the Servants could be kept together in *Charles Fort*, where they might have an Opportunity to discipline them against any new Undertaking; and accordingly asked Leave of General *Hart* to discipline them, which was granted. Mr. *Uring* taking Notice of the Advantages that the Lieutenant General proposed, and seeing him so very earnest for the Stores to be lodged at *St. Christophers*, agreed to it, and accordingly ordered them down thither, during their attending the *Griffin's* Return from her Errand to *St. Vincent* and *Martinico*.

Mr. *Uring* frequently visited the Transports, to see things were in good Order; Lieutenant General *Matthews* went in the *Charles* and *Freemason*, to *St. Christophers*, with them; and as soon as they arrived at that Island, he, in Concert with Mr. *Uring*, cantoned the Officers in several Places, as there was Convenience, and they were ordered to their respective Quarters. They had now four Vessels to unload at the same Time, and at a considerable Distance, and a difficult Way to carry the Stores to the Store-houses. Mr. *Uring* ordered such a Number of Servants ashore from the Vessels, as he thought useful for carrying up the Stores; and Officers were appointed at different Places in the Avenues, to keep the People from running into the Country; but notwithstanding all the Care they could take, great Part of them were gone by Night. He ordered more ashore next Day, and continued landing the Stores, Cannon, Arms, Ammunition, &c. and as the Casks very often came to Pieces in getting up to the Store-houses, Mr. *Uring*, for the most Part, stood by till they were repaired, and was, at least, thirty times a Day from the Landing-place to the Store-houses, in order to prevent any Embezzlement, and to hasten the Work. The Officers thinking the Work too hard for them all Day, though they generally stood in one Place, Mr. *Uring* divided them, the one half to attend in the Morning, and the other in the Afternoon; though he was obliged to attend the whole Day, in order to preserve the Stores, which he hoped was in a good Measure done; the Goods landing from so many Vessels at one and the same Time, so many Sorts loose, as well as in Casks, made it no easy Matter to keep an exact Account.

The whole Care of every thing, as well as the Stores, was upon Mr. *Uring*. However the Goods were landed and stored, and after the Ships were unloaded, he searched every Ship by Warrant, to see if there remained any thing belonging to the Duke of *Montague* on board them, which the Masters said there did not: Several Provisions were found on board the *Charles* and *Freemason*,

which were put ashore. When every thing was landed out of the several Ships, his next Care was to put them in good Order; many of the Casks being broken, they would not hold the Weight in them, therefore they started them into other sound Casks and Chests, which were made for that Use. He also caused all the Provisions to be turned out of the Store-houses and looked over, and such as were in Casks, or wanted Pickle, were put into better, and new pickled; and he directed the worst to be first spent. He fitted up a Smith's Shop, kept the Smiths and Armourers at Work, and cleaning the Arms. The Men were disciplined, so that they could do their Exercise very well, and made as regular Fires as the King's Troops.

Mr. *Uring* paid off several of the Seamen belonging to the *Griffin* Sloop to ease the Charge, and ordered such Servants on board her as were Seamen, and as many more as he dared trust. By that Time they had put things into tolerable Order, the *Hopewell* arrived, with about ninety Servants and several Officers, a great Quantity of Provisions, with Cannon, Ammunition, and warlike Stores, which were also landed under the Care of Mr. *Uring*, who had Letters by this Ship from the Duke of *Montague*; which informed him that his Grace was in Treaty for five hundred *English* Families, and five hundred *Irish*, which he intended to transport to *St. Lucia* as soon as possible. The *Hopewell* brought from *Barbadoes* a Number of live Sheep, which had been carried thither by the *Leopard*, which was arrived at that Island, laden with Boards, Plank, and Frames of Houses, for the Use of the Colony.

When Lieutenant General *Matthews* returned to *Antigua*, he left Mr. *Uring* his House to live in, where was Room for most of the Officers. He sent then to acquaint them, that he had Convenience for them, and designed to keep a Table for their Entertainment, considering it would be much more convenient and less Charge to his Grace, for them to keep together, than be separated. All the Servants that were not lent to the Planters were lodged in the Out-houses, and due Care was taken both of the Sick and the Well, to have their Provisions at proper times, and well ordered. Mr. *Uring* seldom went to Dinner before he saw all the Sick provided, and well served with fresh Meat and Broth, which was for the most Part four times a Week, and those that were sick, every Day. The Lame, though there were a great many of them, he dressed himself for several Days, when he had no Surgeon. The Servants were all well supplied out of the Duke's Stores, with Cloathing and Necessaries, though they often stray'd about the Country and sold them, and then complained to the Planters that they were naked; for which they were punished and again supplied. He frequently sent out the Sergeants with Parties, to bring in the Stragglers, and had no little Trouble to keep them in a tolerable Decorum; he also put up Advertisements at all the Port Towns, to warn the Masters of Ships from entertaining or carrying any of them off the Island; and in the beginning of *May* sent Captain *King* in the *Griffin* Sloop to *Barbadoes*, to bring down the Runaways from thence, and such Letters as were lodged there from the Duke of *Montague* for him; and after her return he ordered Captain *Watson* to careen her, in doing of which she sunk.

Mr. *Uring* having Notice thereof, went to see her Condition, and hired two Sloops to weigh her, and the *Griffin* was made again fit for the Sea. Mr. *Uring* having been informed that many of his Grace's Servants had made their Escape to *St. Eustatia*, he wrote several Letters to the Governor of that Island, by Officers of the Dukes, which were sent for that purpose, to acquaint him therewith, and to desire him to secure them, that they might be returned to *St. Christophers*, and accordingly two Men were brought back from thence. He had ordered the *Griffin* Sloop to *Antigua*, to lie there during the hurricane Months; when he had a Letter from Lieutenant General *Matthews*, which advised him that the Duke of *Montague* had impowered him to have the sole Disposal of all his Affairs in the *West Indies*, and sent him a Copy thereof. Mr. *Uring* then observed his Direction, until

until his Grace had wholly laid aside the Thoughts of any new Settlement; and had given him Orders to deliver up every thing belonging to him, into the Hands of the Lieutenant General, to whom his Grace had given Direction to discharge all, and pay them their Salaries to that Time, with an Allowance for their Passages for *England*. After Mr. *Uring* had delivered up all Stores, Arms, Cannon, &c. to the Agent of Lieutenant General *Matthews*, he went up to *Antigua*, to finish his Affairs with him, and from thence to *Barbadoes*, where he was received very kindly by Mr. *Worsley*. He staid a Week at that Island, and then returned to *Antigua*, and from thence to *St. Christophers*, where he took a Passage for *England*, and arrived at *Dover* the 28th of May 1724.

Thus we have given a large and circumstantial Account of this Expedition, from the Beginning to the End of it, from the authentic Papers of the two Gentlemen chiefly concerned in it, and very frequently in their own Words. From whence it appears, that it was in all respects the greatest and most expensive Scheme that was ever undertaken by a Subject of this Crown, or of any other; for besides the Ships, naval and military Stores, Cannon, small Arms, &c. he maintained four hundred and twenty-five Servants for a Year and a Half, besides eighty-five Tradesmen and Artificers of several sorts, who had from twenty to thirty Pounds a Year Wages; and upwards of fifty Officers, with Salaries from fifty to four hundred Pounds a Year, all duly paid, and themselves victualed in a very dear Part of the World, during the greatest Part of the Time. The computing therefore of the Duke of *Montague's* Expence at forty thousand Pounds is rather under than over doing the Business; and nothing can induce us to suspect the Largeness of the Sum but the very singular Circumstance that attends it, of its coming out of a private Purse for the public Service. This indeed, and the Time at which this Expedition was undertaken, renders it almost incredible; but whoever considers that in Seasons of the greatest Corruption (as surely that of the *South-Sea*, and the Bubbles that attended it, was here) Providence usually raises up some extraordinary Instances of a contrary Spirit, such as *Phocion* in the Decline of the *Athenian* Commonwealth, and the younger *Cato* when the *Roman* Republic was on the Point of Ruin, will the more readily credit this, and admire it the more. I should insist farther upon this noble and memorable Example but for two Reasons; the first is, that as the illustrious Person to whom it relates is living, amongst the many Instances of Freedom of Speech that may be met with in this Work, I should be ashamed to mix any thing that might be suspected of Flattery. The second Reason is, that the Virtues of the Duke are so well known, and so universally confessed, that I could do no Honour to any but myself, by endeavouring to celebrate them.

But though I am willing to decline a Task to which I confess myself unequal, I shall not be afraid of observing that this is the only proper time of reviving our Claim to those Islands, at least to that of *St. Lucia*, to which our Title is unquestionable. If we were not the first Discoverers, we were at least the first Planters of that Island, and besides the Title which this gives us, we have another, and perhaps a better, *viz.* that of Purchase from the Natives, and original Inhabitants of it. The *French*, it is true, have also settled upon that Island, but as Intruders only, and as such were obliged to quit it in the Reign of King *Charles II.* since which our Rights to that Island have been confirmed by Treaties. But their last quitting it, in 1719, is the strongest and clearest Proof of all. For had they not been sensible of their having no just Pretensions to *St. Lucia*, it is impossible to suppose that Men who so vigorously exerted themselves to prevent our Establishment, would so tamely have given up their own. What their Motives might be to so strange a Conduct, in the Compass of so short a time, I shall not pretend to guess, but this I may safely and honestly say, that no Change in their Conduct could possibly create a Change in their Title or ours: If our Right in 1719 was certain, it must have been as certain in 1722, and if certain then, it must be so still; which

gives us a fair Demand to have this Right of ours acknowledged by the next Treaty of Peace, that can never be concluded on good Terms for this Nation, if while we struggle to make *France* do Justice to others, we suffer her to persist in Acts of Injustice to ourselves. We see very clearly that the general Expressions contained in former Treaties avails nothing against *France* in a Time of full Peace, and therefore common Sense teaches us, and a due Concern for the Good of our Country requires, that we should have Justice done us on this Head before the Conclusion of the present War, because unless it be done now, past Experience shews us that we can never expect it for the future: That we may very rationally hope for it now, appears to every Man of tolerable Understanding, who reflects, that *France*, in this Respect, gives us nothing of which she is in Possession, or to which, in her own Opinion, she has any just Title; so that to refuse it when she pretends to be in a pacific Temper, must be a plain Proof that she dissembles, and then it would be Madness to trust her.

There is, however, one Particular in relation to this Affair that ought to be discussed before we leave it, which is, what Proceedings have since happened between the two Crowns in relation to this Island, after the Expedition before-mentioned; and as to these, I have received two remarkable Papers while this was printing, which I shall give the Reader immediately. In the mean time it is requisite to observe, that his present Majesty King *George II.* having constituted and appointed *Henry Worsley, Esq;* Governor and Commander in chief of this Island, as all his Predecessors had been, who were Governors of *Barbadoes*, he was graciously pleased to send him the following Instruction, in reference to the Disputes that had happened about it.

GEORGE R.

“ Trusty and well beloved, we greet you well:
 “ Whereas the *French* for some Years have claimed
 “ the Island of *St. Lucia*, and do insist that the Right
 “ to the Islands of *St. Vincent* and *St. Dominico*, under
 “ your Government, is in the *Caribbeans*, now inhabit-
 “ ing the same, although we have an undoubted Right
 “ to all the said Islands; yet we have thought fit to agree
 “ with the *French* Court, that until our Right be deter-
 “ mined the said Islands shall be entirely evacuated by
 “ both Nations. It is therefore our Will and Pleasure,
 “ and you are accordingly to signify the same to such
 “ of our Subjects as shall be found inhabiting any of
 “ our said Islands, that they do forthwith quit the same
 “ until the Right shall be determined, as aforesaid; and
 “ that they do comply with this our Order within thirty
 “ Days from the Publication hereof in each of the said
 “ Islands respectively, under Pain of our highest Dis-
 “ pleasure; and you are to use your best Endeavours
 “ that no Ships of our Subjects, or of any other Nation,
 “ do frequent the said Islands during the time aforesaid
 “ except coming for Wood or Water. But it is our Will
 “ and Pleasure, that you do not execute this our Order
 “ until the *French* Governor of *Martinico* shall have re-
 “ ceived the like Direction from the *French* Court, and
 “ shall, jointly with you, put the same in Execution
 “ without any Exception. And you are hereby further
 “ ordered to transmit to us, by the first Opportunity, a
 “ full Account of your Proceedings, as likewise of those
 “ of the *French* in this Behalf, taking Care by all Op-
 “ portunities to inform ourself whether our Subjects, and
 “ those of the *French* King, do comply punctually with the
 “ true Intent and Meaning of this Agreement, until such
 “ time as the Right to the said Islands shall be absolutely
 “ determined as aforesaid. And for your so doing this
 “ shall be your Warrant. And so we bid you farewell.
 “ Given at our Court at *St. James's* the 30th Day of
 “ *November*, in the fourth Year of our Reign, by his
 “ Majesty's Command.

Holles Newcastle.

It appears plainly from this Instruction, and it will appear still more clearly from the *French* King's Letter upon this Head, that the two Courts had come to an Agree-

Agreement about this Matter, that is, about the immediate Settlement, not as to their Rights; for our King declares fully and plainly, that he looked upon his to be wholly unimpeached by this Dispute; and so to be sure it was, and is. But let us see the Instructions from *France*, which are referred to in the foregoing Paper, which were conceived in the Words following:

The French King's LETTER or MANDATE, to the Governor of Martinico, dated December 26, 1730.

Monsieur DE CHAMPIGNY,

“ The *English* have, for some time past, laid Pretensions to the Island of *St. Lucia*, which belongs to me, and to which I have an incontestable Right. The same Pretensions they have laid to the Islands of *St. Vincent* and *St. Dominico*, said to belong to the *Caribbeans*, Natives of the Country, according to the Treaty of the 31st of *March*, 1660; and in the Possession of which it is my Intention to support them. I have, nevertheless, agreed with the Court of *England*, that until these Pretensions shall be determined, the said Islands shall be evacuated by both Nations. And this is to acquaint you, that it is my Pleasure, that you make it known, &c.” As in the former.

Upon these Papers I shall make but one Remark, which is, that they clearly unravelled and exposed the true Intention and Design, and, indeed, the whole Workings and Policy of the Court of *France*. There were many who saw and said this at the Time, but thought it indecent and improper to publish so much, when our Court had consented to accept of this Expedient. But now that Reason is removed, and we are at full Liberty to say whatever can be said with Truth upon this Subject, I cannot avoid doing so, and shall dispatch it in very few Words. The *French* had not, in their own Opinion, any Title to the Island of *St. Lucia*, but what arose from Expediency. They saw it lay near them, and they very well knew the Consequences that would follow from its being settled by the *English*, and this, more than any Advantages they expected from it, put them upon the Attempt to settle it.

The Reader may possibly imagine that I only assert this, but the Fact is otherwise; I can really prove it. The *French* Writers on Geography and Trade, nay the *French* Politicians, never dreamed of any such thing, as appears from the Books; and the famous Mr. *Savary*, in his *Dictionary of Commerce*, tells us plainly, that the *French* possess or claim ten of the *Caribbee Islands*, eight entirely, and two in Conjunction with the *Dutch*; all of which he names, but does not include *St. Lucia*; which shews that such People in *France*, as must soonest have heard of this Claim, if they had any, knew nothing about it. When I say that this Settlement was made to prevent our gaining the Island, rather than from any great Hopes of Profit, I mean that these were the Motives of the *French* Ministry, because they had been long of Opinion that *Hispaniola*, or *St. Domingo*, ought to be the great Object of their Concern in those Parts of the World, for many Reasons, which will fall properly in another Place. All therefore that they desired, with respect to the Islands, was to prevent our settling upon them, which, besides an immediate Loss, might prejudice their future Views; and therefore they were willing to take Possession of *St. Lucia* as an Out-work. If they kept it, it was well, but if they kept it only from us it was better; and this was the true Reason of their proposing the Expedient contained in the foregoing Papers, which actually answered their Ends better than if the Island had been absolutely yielded to them by us.

But if the Situation of Affairs in *Europe* fifteen Years ago was such, as made it reasonable for us to suspend our Right, which I lay down as a Supposition, but am far from asserting as a Fact; the Face of Affairs is since changed, and gives us now the fairest Opportunity to establish that Right; if the War continues we may, and we ought to, do it by Force; and whenever there comes a Peace, the *French* can assign no Colour or Pre-

tence whatever, against the confirming that Right, by renouncing their unjust and ill-founded Claim, to the preventing our settling on it. If they took Advantage of a past Conjunction, when it was not convenient for us to break with them, it is our Business, as I hinted before, to take the Benefit of the present Conjunction; when, without Question, it is the Interest, and will be consequently the Business, of *France* to deny us nothing of this Kind, if we insist upon it, that is to say, if we shew we have it at Heart; and that we are determined to exert our naval Power, and to employ our Negotiations for the Service of our own Country, for the promoting our Trade, securing our Navigation, and extending our Interest in the *West Indies*.

But the Question may be asked, what is the real Value and Importance of the thing for which you would have us contend? What is this *St. Lucia* worth? What can be made of it? Why should we trouble ourselves about it? In answer to this, I can only say, in few Words, that it has been computed, that the Product and Commerce of this Island might, in a few Years, be brought to yield *Great Britain* an annual Rent of two hundred thousand Pounds; but to shew the Possibility, or rather the Probability, if not the Certainty, of this Calculation, I shall give the Reader Captain *Uring's* Description of this Island, who went thither on purpose to settle it; who was a Man of great Understanding in Matters of this Nature, and whose Honesty was as little questioned as his Capacity; so that I cannot discern any Objection that can be reasonably made to his Account, which is also remarkably plain and succinct, and with which, as to this Subject, I shall conclude.

“ *St. Lucia* is about twenty-two Miles in Length, and eleven broad; the greatest Part of it very good Land, and in many Places hilly, and many rich Valleys very well watered with fine Rivers all through the Island, which makes it exceedingly pleasant and delightful, and it must be very healthful, by its being so narrow; and the Hills being not so high to intercept the continual Trade-winds, that always fan it from the Eastward, whereby the Heat of the Climate is mitigated, and made rather agreeable than troublesome. The Variety of Situations that it affords by the Hills and Vales, makes it both convenient and delightful, as well as the Pleasantness of the Prospects; and it is full of all Trees, amongst which are great Quantities of good Timber, fit for building Houses and Windmills; from whence both *Barbadoes* and *Martinico* have been furnished with very great Quantities, and are still; the Cacao or Chocolate Nut grows here very well, and there grows also a great deal of Fustic, and there is abundance of wild Fowl. It lies West-north-west from the Island of *Barbadoes*, about twenty-four Leagues; South from *Martinico* about seven Leagues; and the same Distance North by East from *St. Vincent*; and hath several good Bays, and excellent Harbours for Ships to anchor in: One of which is the *Petite Careenage*, where we designed the first Settlement. This Harbour is on the North-west Part of the Island, and is much the finest, and most convenient in all the *Caribbee Islands*; great Numbers of Ships may be there safe in all kinds of Weather, and it is very commodious for careening Ships of War and other Vessels. If this Island had been settled, as was intended by his Grace the Duke of *Montague*, proper Forts built, and Garrisons placed therein, for the Protection and Defence thereof, it would have been of the greatest Importance for the securing the *Leeward Islands*, and even *Barbadoes*, from being invaded by *France* in Time of War; for no Armament can be made, nor any Expedition carried on by the *French* at *Martinico*, against any of those Colonies, but must be known at *St. Lucia*, almost as soon as the Design is formed, by the Nearness of its Neighbourhood to that Island; from whence, likewise, *Barbadoes* and the *Leeward Islands* might have Notice to provide for their better Defence. If *St. Lucia* were well inhabited by the *English*, the People of *Martinico* would know their Interest better than to enter upon any Expedition

“ against

“ against *Barbadoes* or the *Leeward Islands*, when they
“ had an Enemy so near them; for they must needs
“ consider, if their Men were sent off that Island to in-
“ vade the *Leeward Islands*, the *Barbadians* would join
“ the People of *St. Lucia*, and fall upon *Martinico* in the
“ Absence of their Men; which would endanger the
“ Loss of that Island, or at least the Plunder or spoiling
“ of it; and would be more Damage to them than any
“ Benefit they can propose to themselves, by invading
“ the *Leeward Islands*, and so the same if their Design
“ is against *Barbadoes*; the *Leeward Islands* People join-
“ ing these of *St. Lucia*, *Martinico* will be in the same
“ Danger, and by that Means our Plantations; in those
“ Parts, will be entirely secured by the Possession of *St.*
“ *Lucia*, and it will also be in the Power of the *English*
“ to disturb the *French*, and not in the Power of the
“ *French* to hurt the *English*. But if both Nations should
“ sit still without hurting each other, yet *St. Lucia* will
“ be of the greatest Advantage to *Great Britain*, if it
“ were appointed the Place of Rendezvous for his Ma-
“ jesty’s Ships of War; from whence they might con-
“ tinually relieve each other, if need were, and keep
“ always cruising on the *French*, that they could not be
“ able to have a Vessel go in or out of their Harbour,
“ but what might be intercepted by the King’s Ships,
“ and so the Trade of our Plantations would thereby
“ become secured, and the *Martinicans* would have no
“ Reason to boast as they did in the late War, that they
“ maintained their Islands chiefly by privateering on the
“ *English*, which is too well known to the Merchants
“ that have been Traders to those Parts. But in case *St.*
“ *Lucia* was settled, and proper Measures pursued, it
“ would entirely prevent such Mischiefs for the future,
“ and the *English* would soon grow too powerful for the
“ *French*, who at present have greatly the Advantage of
“ the *English*; and the *Leeward Islands* are in the greatest
“ Danger, in case of a War with *France*, of being inva-
“ ded, which the *English* Planters are most sensible of,
“ and it is what the wisest of them apprehend every
“ Day.”

13. The Remarks that have been already made in the
Course of this Section, upon the several Subjects to
which it relates, make it unnecessary for me to detain
the Reader very long with Observations at the Close.
But, however, some things are both fit and requisite to
be said here, for the Information of my Readers in ge-
neral; and for reminding those in particular, who have
it in their Power to be useful to the Colonies. It is cer-
tain, that from the very Time Sir *Walter Raleigh*, the
Father of our *English* Colonies, and his Associates, first
projected those Establishments, there have been many
who have either found an Interest, or took a Pleasure, in
misrepresenting or lessening the Value of them. When the
Intention of improving these distant Countries, and the
Advantages that were hoped for from it, were first set
forth, there were some who treated them not only as
chimerical, but as dangerous: They said that it was very
uncertain whether we might meet with Success, and if
we did, it might dispeople the Nation. These, and
many other Objections, flowing partly from a Narrow-
ness of Understanding, but I am afraid chiefly from a
Narrowness of Heart, have been disproved by Experience,
which has shewn that what was then proposed was prac-
ticable in itself, profitable in its Consequences, and attend-
ed with none of those Mischiefs that these timorous or
ill intentioned People either apprehended or seemed to
apprehend.

The Difficulties which attended, and which will always
attend, Settlements at the Beginning, proved a new Cause
of Clamour; and many spiteful things were said about
the sacrificing so many *Englishmen*, to the obstinate Desire
of fixing Colonies in Countries, which at that Time did
not produce any great Advantages. But by Degrees, as
these Difficulties were overcome, those Complaints like-
wise ceased, and we heard no more of these pretended
Hardships; which, in reality, were no other than the
sending such, as from the Perverseness of their own Dis-
positions were capable only of doing Mischiefs here; such
as the Severity of their Creditors would have destined to

perpetual Imprisonment; and such as, either from Lazi-
ness or Indigence, would have perished in our Streets,
to be useful to themselves and to the Community in the
Colonies.

But when these Complaints ceased, others rose in their
stead; and when it could be no longer said that the Co-
lonies were useless, it was alledged that they were not
useful enough to their Mother Country; that while we
were loaded with Taxes, they were absolutely free, and
that the Planters lived like Princes, while the Inhabitants
of *Great Britain* laboured hard for a tolerable Subsistence.
This produced Customs and Impositions upon all Plan-
tation Commodities, which if they are grievous to the
Inhabitants of the Plantations, must turn to our Disad-
vantage as well as theirs, and consequently become a great
Prejudice to both. At present there is a vast Change in
the Face of Affairs in these Parts of the World, which
has consequently produced a Change in the Notions and
Sentiments of those who are settled there, and ought
likewise to produce a Change in our Conduct. The prin-
cipal Point in this Change is, the surprizing Growth of
the *French* Power in *America*, from whence we have had
many Warnings given us, which certainly were not re-
ceived with so much Attention as they ought to have
been. If we had considered, that in the Reign of King
Charles II. when *France* had very little Trade, and her
Colonies were of no great Consequence, she was almost a
Match for all *Europe* beside, and that too when the ma-
ritime Powers were in their most flourishing Condition;
we might have easily foreseen to what a Height her Power
would increase with the Help of Colonies and Commerce:
But either we did not foresee it, or we suffered ourselves to
be so much taken up with nearer Objects, that we did
not sufficiently provide against an Evil, which of all others
we ought most to apprehend.

The very thing that has hitherto hindered us from con-
ceiving as we ought to do of our Danger, in this Res-
pect, would have convinced us most fully, if we had
viewed it on the right Side, and reasoned upon it as be-
came us. If we find that in Conjunction with the great-
est Powers upon the Continent, we have not been able
for fifty Years past, to set any Bounds to the Ambition
of *France* in *Europe*, what Limits are we like to set to
her Power in *America*, when it comes to bear any Pro-
portion there, to what she has attained here, and towards
which, as we see she has already made large Strides?

It may be answered, that at present she is very far
from being equal to us in Strength in that Part of the
World; that the Colonies are very apt to think them-
selves in Danger, long before they are so; and that if
their Fears were really so great as they would sometimes
represent them, as they have a Force sufficient, it is scarce
to be doubted that they would at length find a Will to
help and relieve themselves. We may answer to this, that
if the *French* had a Power in *America*, in any Degree ap-
proaching ours, our Care might probably come too late,
especially considering the great Change that has happened
there, where, instead of having all the World for Allies,
we have hardly so much as a Friend in Appearance, the
Spaniards being become Friends to *France*, and the *Dutch*
having neither Force, nor, perhaps, Inclination to assist us.
The Nature of their Government also, though it makes
their Subjects less happy, makes their Colonies more
formidable, and enables the Prince to protect them more
effectually, and to grant them from Time to Time greater
Encouragements; so that we need not wonder they have
overcome so many Difficulties, or that the Trade of the
French Islands should be so much more considerable now,
than it was at the Peace of *Utrecht*. We may be likewise
sure of this, that the more their Trade increases, the
more it will be encouraged; because the *French* Ministry
pay a particular Regard thereto; and as we have already
shewn in our History of the *East India* Company, they
are never wanting to such as are not wanting to them-
selves; but from the great Principle of promoting the
Grandeur of *France*, yield all the Assistance they can to
what they visibly perceive will increase the Wealth, and
augment the naval Power, of the Kingdom.

As to the Apprehensions of the Colonies, Time has

shewn they are but too well founded; our Settlements upon the Continent are, in a Manner, surrounded by them; the Correspondence between *Canada* and *Louvisiana* is in some Measure settled; and, though a great length of Time may be necessary to perfect the Designs they may have formed on that Side, yet if we do not interpose, as indeed we might easily do, they will be some time or other perfected, and then we shall find our Circumstances very uneasy. This to every Man who will but turn his Thoughts upon the Subject, must appear very plain and very certain; we should not therefore wonder that those who both see and feel it, express themselves with some Warmth upon this Topic: And at the worst, our Colonies had better alarm us too soon than slumber themselves, and suffer us to slumber till it is too late. The *French* have already a great Power in the Islands, and if ever they should become entirely Masters of *Hispaniola*, which we know not how soon they may, the Effects would be fatal to us. We have, at present, no Idea of the Importance of that Island, or at least no adequate Idea of it; because the *Spaniards*, who are possessed of the greatest Part of it, either from their Laziness or their Weakness, make no Use of it; but we should find it quite otherwise if the Whole was in *French* Hands; and therefore amongst all our Guarantees, it would be very right to have a general Guarantee for the *Spanish* Dominions in the *West Indies*.

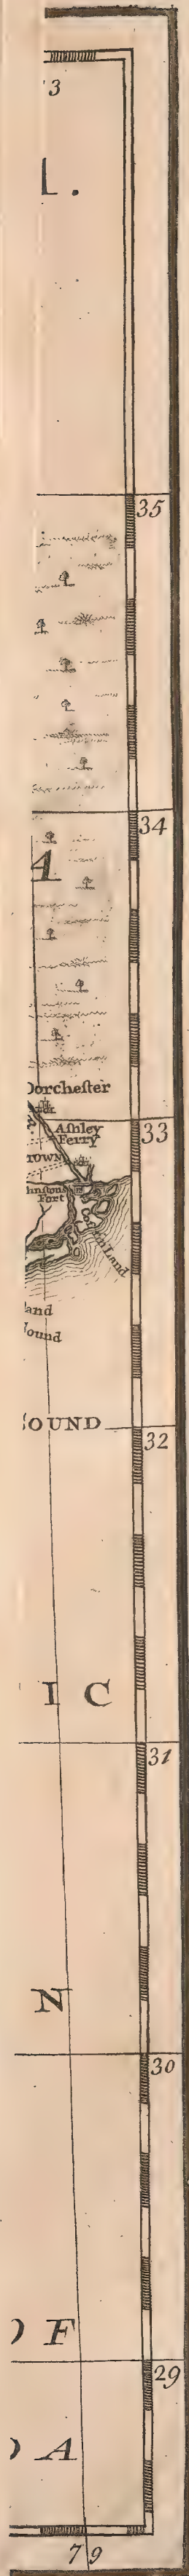

As to our Colonies helping themselves, there is no Doubt they do so, or their Situation would be very bad. We hear daily of great Things done by their Privateers, but our Squadrons perform very little; and whoever compares the Exploits done by the *Buccaneers*, who were but *West-Indian* Privateers, with what has been done by regular naval Force, would scarce believe they were of the same Nation: Men of War in their Ports, and Commodores and Captains on Shore, do our Colonies very little Service; for they neither protect our own Trade, nor distress that of the Enemy; so that whatever Expence this may create to us we ought not to charge it upon them. If any Expedition is concerted here, we find the People in *Jamaica* and the *Leeward Islands*, ready enough to expend both their Treasure and their Blood in the Execution of it; and in Case of Miscarriages, we have seldom had Reason to lay the Blame at their Doors. As to the Northern Colonies, we have known them do some, and attempt many, great Things; so that it is barbarous to accuse them of being wanting to themselves.

The Truth is, we want a proper Military Force in *America*; and I have often wondered that some Way was not contrived to send our Half-pay Officers thither: I do not mean to send them thither upon Half-pay; but to take such Measures as that they should have Whole-pay, one Half from home, and the other raised there. We might likewise make it worth the Attention of our Invalids, both Soldiers and Seamen, who, if they have common Sense, would like a comfortable Establishment in *New York*, *Pennsylvania*, or *Virginia*, with their Wives and Families, full as well as an Apartment in any College, or being cooped up in our Garrisons, or in the *Scilly* Islands. If by these, or by any other Methods, we could establish a regular Military Force, and even in time of Peace keep the Men some way or other in Action and Discipline, our Colonies would be a Match or Overmatch for the *French*, as Experience shews from the Colony of *Georgia*, where we have been always a Match, and once an Overmatch for the *Spaniards*, by mere Dint

of Military Discipline, though we had but a very Handful of People.

These are Things that demand immediate and general Consideration. Our Colonies were always of great Consequence, but they are now of the greatest Consequence, to the Nation; for at least one Half of our Commerce depends upon them, as the Whole of our Strength and Happiness depends upon it: Our Wealth produces Liberty, and our Wealth was produced by Trade; whatever lessens that will therefore effect these, and if ever it should be taken away, we must certainly feel what we felt before, Poverty and arbitrary Power. The wisest Use therefore that we can make of Wealth while we have it is to secure its Sources, by employing our Fleet in that Part of the World where their Success must be attended with certain and immediate Advantages; for distressing the Trade of the *French* must benefit ours. In King *William's* War we had *Spain* for an Ally, and therefore we could not then take any Advantage from her Weakness. In the next general War we were neither her Friend nor Foe; we did her some Hurt, and ourselves no Good. But the *French* have been Gainers by both Wars; they had plundered the *Spaniards* in the first, as open Enemies; they stripped them of their Money in the last, by being pretended Friends. In the present War we have done pretty well, and the *French* have perhaps been no great Gainers by their Friendship with *Spain*. This ought to teach us the Wisdom of living with that Nation always either upon the best Terms or the worst; as cordial Allies or as open Enemies; for whenever we are between both of these we are sure to be the Sufferers, and the *French* and *Dutch* run away with all.

It is our Business therefore to continue always armed in this Part of the World, where we have a superior Force, and where we should be ever ready to exert it, not against innocent and inoffensive Neighbours, but against false Friends and treacherous Allies. If our legal Trade with the *Spanish West Indies* were restored, we ought to make it our Business to see that it be a legal Trade; for it is certain that the Nation neither gets nor loses, while the same Quantity of Goods are disposed of by different Hands: We ought therefore to convince the Crown of *Spain*, that we can treat, and mean to treat, them well; and at the same time, we should shew them, that as it is not their Interest to treat us ill, so it is not our Nature to bear it: Illicit Trade and Conventions may do well enough for a feeble Republic, but are beneath a powerful Kingdom; that, as it owes its Power to, ought to be always able and willing to protect, its Trade. Such are the Sentiments which ought to inspire the Breasts of *British* Statesmen. The rest of the World are convinced that we have not the Talents of Negotiation; we ought therefore to convince them, that we do not stand in need of such Talents; but that we can do our Business without them. The *Dutch*, whatever Language they may use in *Europe*, have always talked in this Tone in the *East Indies*, and we ought to use it in the *West*; while our Power is great there, we should exert and increase it; when once it begins to decline, Advice will come too late, and therefore no Man can be blamed for giving it in time, whether it be followed or not. It is the Privilege of every Freeman to speak and write for the Service of his Country, and the Privilege only of a few to act; but if the former excite, and the latter will perform, nothing is clearer, than that our Country must be served; which in this World is the worthiest End of Men, and therefore what we should all pursue.

A NEW MAP of GEORGIA, with Part of CAROLINA, FLORIDA and LOUISIANA.

Drawn from Original Draughts, assisted by the most approved Maps and Charts.

Collected by Eman: Bowen Geographer to his Majesty.

SECTION XXI.

The History of the RISE, PROGRESS, and PRESENT STATE of the Colony of GEORGIA; with the Attempt made upon it by the Spaniards, and their total Defeat. Interspersed with Original Papers.

1. *An introductory Account of the Motives which gave Rise to this Design of settling to the South of Carolina, and the Nature of the Colony proposed.*
2. *A large Extract of the Charter granted by his present Majesty, for incorporating the Trustees, and enabling them to carry their Design into Execution.*
3. *The Resolution taken by the Trustees when incorporated, for securing Estates in Land to the original Planters and their Heirs Male, and for the perpetual Exclusion of Negroes.*
4. *The first Colony sent over under the Direction of James Oglethorpe, Esq; the Town of Savannah laid out, and the first Treaty with the Creek Indians.*
5. *The Return of Mr. Oglethorpe to England, in 1734, and his bringing with him Tomochichi and other Indians; the Acts prepared by the Trustees for the Government of Georgia, approved by the Lords of Trade and Plantations, and ratified by his Majesty.*
6. *The great Embarkation, in the Year 1735, on the extraordinary Grant of twenty-five thousand Pounds by Parliament, grounded upon a Memorial from South Carolina; with a Copy of that Memorial.*
7. *The History of the Colony farther continued, together with an Account of the Improvement made therein, and Indulgencies granted to the Planters by the Trustees.*
8. *The same Subject pursued to the Year 1740, and a View of the Number of People sent over by the Trustees, from the Time their Charter was granted to the Close of that Year.*
9. *A Prospect of the Country of Georgia as it is now settled, the Number, Situation, and Importance of the Towns, Forts, &c. erected there; with various other Particulars.*
10. *The Condition of the People in this Colony on the breaking out of the War with Spain, and the Resolution taken of acting in Conjunction with the Carolinians, offensively, against the Spaniards.*
11. *A succinct Account of the Expedition against Fort St. Augustin, and the Consequences of that Expedition.*
12. *The Grand Invasion on that Colony by the whole Force of New Spain, and the true End of this extraordinary Armament.*
13. *The total and wonderful Defeat of that great Force by his Majesty's Forces, under the Command of General Oglethorpe.*
14. *The Congratulations on the News of this important and decisive Action, from the Governors of our several Colonies, to General Oglethorpe; which shews their Sense of the Consequences of this happy Repulse.*
15. *The present State of the Colony of Georgia considered, and its Importance demonstrated, as a Frontier against the French and Spaniards, as an Asylum for distressed Englishmen, and foreign Protestants; as a necessary Means for maintaining a good Correspondence with all the Indian Nations, as an excellent Support to the Islands of Jamaica and Barbadoes, and as a Colony from whence we may reasonably expect Silk, Wine, Pot-ashes, &c.*

1. **T**HE last of the *British Colonies* in Point of Settlement, and of which hitherto we have had no accurate or just Account, much less a clear and authentic History, is *Georgia*; of which I intend to treat with as much Perspicuity as possible, that the Reader may apprehend the Nature of the Country, the Importance of its Situation, the Motives upon which it was settled, the Progress of that Design, the Attempts and Disappointments of the *Spaniards*, the present Situation of Things there, and the Hopes that we may rationally entertain as to its Fate and Success. This is certainly a very extensive Plan; but at the same time it is the only Plan upon which we can proceed, in order to give the inquisitive and public-spirited Reader, a true Notion of the Nature and Importance of this new Settlement; which is undoubtedly of far greater Consequence to this Nation than hitherto it has been generally conceived to be: And therefore such a History as we propose will be equally necessary and entertaining; necessary, as it effectually compleats the History of the *British America*, of which this is not only the last Colony in Point of Time, but the last also in respect to Situation, inasmuch as it extends as far southward as we claim any Right to, and fills up entirely the Discoveries of the *Cabots*, which have been so often mentioned; entertaining, as it consists almost wholly of new Matter, and as it shews that even in this Age, when Luxury and all its Attendants, seem to be so firmly established in *Europe*, a Scheme has been formed for erecting in the pleasantest and most fruitful Part of *North America*, a *British Settlement*, upon the truest Principles of Virtue, Industry, and Freedom, which cannot fail of striking firm and deep Root, and of flourishing in such a manner as to do Honour to those worthy, disinterested, and public-spirited Persons who were first concerned in laying the Foundation of this Design, and by whose hearty and vigorous Endeavours it has been so far as it is carried into Execution.

In order to proceed regularly, it is requisite to observe, that about fourteen Years ago, when this Nation enjoyed a profound Peace, and when there appeared no just Cause to

apprehend its being speedily interrupted, some Persons of great Distinction, from Principles of true Patriotism, and Love to Mankind, observing what great Numbers of People there were in these Kingdoms, who from a Variety of Misfortunes and untoward Accidents, found themselves in no Condition of subsisting, at least of subsisting in such a Way as to be useful to themselves and the Community, which is the sole Means whereby a Number of People become a Blessing, generously turned their Thoughts towards the Means of employing such Multitudes of distressed and indigent Persons for their own and the public Good. These Speculations produced at first some Thoughts of improving the most northern Parts of our Plantations on the Continent of *America*; but upon more mature Reflection, and for very good Reasons, they changed their Purposes, and turned their Thoughts to the South, particularly to that Part of *America* which makes properly our Frontier towards the *Spaniards* and the *French*, and which, though within the Bounds of the Province of *Carolina*, as described in its Charter, was in reality no Part of it, as not being at all settled; and for that Reason, rather a Burden than an Advantage to the Province to which it belonged. Upon confining their Thoughts to this Country, they very quickly perceived, that though it had been so long neglected, it was nevertheless the most valuable Part of our Possessions in *North America*, and the most capable of being made a fruitful, populous, and useful Country, though at that time lying entirely waste, overgrown with vast Woods, which gave Shelter to a few *Indians*, Run-away Negroes, and other Banditti; affording great Advantages to the *Spaniards* in time of War, and upon the Extremities of which great Incroachments might be made before this Nation could have proper Intelligence of them. They saw that as to Climate and Situation no Country could claim a better, that it extended seventy Miles from North to South, and that it was three hundred Miles from the Midst of the Coast to the *Apalachian Mountains*, the Country widening all the way; they were convinced that when a little opened and cleared, there could not be

be a pleasanter or healthier Country upon the Face of the Globe ; that the Soil would prove fruitful, and easy to be cultivated ; that therefore People might subsist there upon very moderate Labour ; which Circumstances induced them to think, there could be no Place more proper found for the Habitation of the unhappy People before-mentioned.

But besides these Sentiments of private Pity, they were influenced likewise by Motives of public Utility : They foresaw that if this Project could be brought to bear, it would turn vastly to the Advantage of *North and South Carolina*, then lately purchased by the Crown, by providing an effectual Frontier against the *Spaniards* and the *French*, which they had hitherto wanted, and of the Want of which they had loudly complained : They judged by this Means, that new Alliances might be contracted with the *Indians* ; or in case that could not be effected, the new Colony must certainly keep them in Awe, and prevent their being so terrible as within a few Years before they had been to the People of *Carolina* : And they saw just Reasons to believe that this new Colony, when established, might cultivate many rich and valuable Commodities for the Service of *Great Britain*. These, and many other Reasons of like Nature, engaged them to think seriously of bringing so compassionate, so practicable, and so useful a Project to bear ; in order to which they found it necessary to apply themselves to the Crown for sufficient Powers, to enable them to set this Undertaking on foot. They did so, and received all the Countenance and Encouragement they could desire or expect, as will appear by the following Extract from the Instrument by which they were incorporated, and so put into a Condition of legally executing what they had so charitably projected.

2. " His Majesty King *George II.* by his Letters Patent, bearing Date the 9th Day of *June*, 1732, reciting, amongst other things, that many of his poor Subjects were, through Misfortunes, and want of Employment, reduced to great Necessities, and would be glad to be settled in any of his Majesty's Provinces in *America* ; where, by cultivating the Lands waste and desolate, they may not only gain a comfortable Subsistence, but also strengthen his Majesty's Colonies, and increase the Trade, Navigation, and Wealth of his Majesty's Realms ; and that the Provinces in *North America* had been frequently ravaged by *Indian Enemies*, more especially that of *South Carolina*, whose Southern Frontier continued unsettled, and lay open to the Neighbouring Savages ; and that to relieve the Wants of the said poor People, and to protect the Subjects of *South Carolina*, a regular Colony of the said poor People should be settled and established in the Southern Frontiers of *Carolina* ; and for the Considerations aforesaid, constitute a Corporation by the Name of *the Trustees, for establishing the Colony of Georgia in America*, with Capacity to purchase and take Lands ; to sue and to be sued ; to have a common Seal, and to chuse Members in the said Corporation on the third *Thursday* in *March* yearly ; with restraining Clauses that no Member of the said Corporation should have any Salary, Fee, Perquisite, Benefit, or Profit, whatsoever, for acting therein ; or should have any Office, Place, or Employment of Profit, under the said Corporation ; with a Direction to the said Corporation, every Year to lay an Account in Writing before the Lord Chancellor, Chief Justice of the King's Bench, Master of the Rolls, Chief Justice of the Common Pleas, and Chief Baron of the Exchequer, or any two of them, of all Money or Effects by them received or expended, for carrying on the good Purposes aforesaid ; with a Power to make Bye-Laws, Constitutions, Orders, and Ordinances ; and granted, amongst other things, to the said Corporation, and their Successors, under the Reservations therein mentioned, seven undivided Parts (the whole into eight equal Parts to be divided) of all these Lands, Countries, and Territories, situate, lying, and being, in that Part of *South Carolina* in *America*, which lies from the most Northermost Stream of a River there, called the

Savannah, along the Sea Coast to the Southward, unto the most Southern Stream of a certain other great Water or River, called the *Altamaha*, and Westward from the Head of the said Rivers, respectively in direct Lines to the *South Seas*. To have and to hold the same to them, the said Corporation, and their Successors for ever ; for the better Support of the said Colony, under the yearly Rent of four Shillings Proclamation Money of *South Carolina*, for every hundred Acres of the said Lands, for every of which the said Corporation should Grant, Demise, Plant, or Settle, but not to commence until ten Years after such Grant, Demise, planting or settling ; and erected and created the said Lands, Countries, and Territories, into one independent and separate Province, by the Name of *Georgia* ; and made the Inhabitants who should reside therein free, and not subject to any of the Laws, Orders, Statutes, or Constitutions of *South Carolina*, except the Commander in chief of the Militia ; and authorized the said Corporation, for the Term of twenty one Years, from the Date of the said Letters Patent, to form and prepare Laws, Statutes, and Ordinances, for the Government of the said Colony, not repugnant to the Laws and Statutes of *England* ; to be presented under their common Seal to his Majesty in Council, for his Approbation or Disallowance ; and that the said Laws so approved of, should be in full Force and Virtue, within the said Province. And impowered the said Council for the Time being of the said Corporation, or the major Part of them, to dispose of, expend, and apply all the Money and Effects belonging to the said Corporation, and to make Contracts for carrying on and effecting the good Purposes therein intended ; and that they should from Time to Time appoint a Treasurer, Secretary, and such other Officers, Ministers, and Servants of the said Corporation, as they should see proper for the good Management of their Affairs, and at their Pleasure to remove them, and appoint others in their stead ; and that they should appoint reasonable Salaries, Perquisites, and other Rewards for their Labour or Services ; and that such Officers should be sworn before they act, for the faithful and due Execution of their respective Offices and Places ; and declared that the Treasurer and Secretary for the Time being, should be incapable of being Members of the said Corporation ; and granted to the said Corporation, that it should be lawful for them, their Officers and Agents, to transport and convey, into the said Province, such of his Majesty's Subjects, and Foreigners, as were willing to go and inhabit, and reside there ; and declared all Persons born within the said Province, and their Children, and their Posterity, to be free Denizens, as if they had been born within any of his Majesty's Dominions ; and impowered the said Common Council, in the Name of the Corporation, and under their common Seal, to distribute, assign, transfer, and set over such particular Portions of the said Lands, Tenements, and Hereditaments, unto such of his Majesty's Subjects and others, willing to live in the said Colony, upon such Terms, and for such Estates, and upon such Rents, Reservations, and Conditions, as the same might lawfully be granted ; and as to the said Common Council, or the major Part of them, should seem fit and proper, provided no Grant should be made of any Part of the said Lands, unto, or in trust for, or for the Benefit of, any Member of the said Corporation ; and that no greater Quantity of the said Lands be granted, either entirely or in Parcels, to, or to the Use of, or in trust for, any one Person, than five hundred Acres ; and declared that all Grants made contrary to the true Intent and Meaning thereof, should be absolutely null and void. And granted, that the said Corporation, for the Term of twenty one Years, from the Date of the said Letters Patent, should have Power to erect and constitute Judicatures, and Courts of Record, or other Courts to be held in his Majesty's Name, for the hearing and determining all Manner of Crimes, Offences, Pleas, Processes, Complaints, Actions, Matters, Causes, and things

“ things whatsoever arising or happening within the said Province, or between Persons inhabiting or residing there; and for awarding and making out Executions thereupon, and directing the said Corporation to register, or cause to be registered, all Leases, Grants, Plantings, Conveyances, Settlements, and Improvements whatsoever, as should at any Time be made of any Lands, Tenements, or Hereditaments, within the said Province; and yearly to transmit authentic Accounts thereof, unto the Auditor of the Plantations, or his Deputy, and to the Surveyor of *South Carolina*, to inspect and survey the same, to ascertain the Quit-rents, which should become due according to the Reservation before mentioned. But not to have or take any Gratuity, Fee, or Reward, for such Survey or Inspection, on Forfeiture of their Office; with a proviso that all Leases, Grants, and Conveyances, to be made of any Lands within the said Province, or a Memorial containing the Substance thereof, should be registered with the Auditors of the Plantations, within one Year from the Date thereof; otherwise that the same should be void. And directed, that all Rents, Issues, or Profits, which should come to the said Corporation, issuing or arising out of, or from, the said Province, should be laid out and applied in such Manner, as would most improve and enlarge the said Colony, and best answer the good Purposes therein mentioned, and for defraying all other Charges about the same. And directed the said Corporation, from Time to Time, to give in to one of the Secretaries of State, and to the Commissioners of Trade and Plantations, Accounts of the Progress of the said Colony. And directed that the said Common Council should, from Time to Time, for the said Term of twenty-one Years, from the Date of the said Letters Patent, have Power to appoint all such Governors, Judges, Magistrates, Ministers, and Officers, Civil and Military, both by Sea and Land, within the said District, as they should think fit and needful for the Government of the said Colony (except such Officers as should be appointed for managing, collecting, and receiving such of his Majesty's Revenues, as should arise within the said Province) with a proviso that every Governor, so appointed, should be approved by his Majesty, and qualify himself as other Governors in *America* are by Law required to do, and give Security for observing the Acts of Parliament relating to Trade and Navigation, and obeying all Instructions from his Majesty, or any acting under his Authority, pursuant to the said Acts. And granted, that the said Corporation, for the said Term of twenty-one Years, from the Date of the said Letters Patent, should have Power by any Commander, or other Officer, for that Purpose appointed, to train, intrust, exercise, and govern a Militia for the special Defence and Safety of the said Colony, to assemble in martial Array; and put in Warlike Posture the Inhabitants of the said Colony; and in Time of actual War, Invasion, or Rebellion, to use and exercise the Law Martial, and also to erect Forts, and fortify any Place within the said Colony; and the same to furnish with all necessary Ammunition, Provision, and Stores of War, for Offence and Defence, and from Time to Time to commit the Custody and Government of them to such Person or Persons as to them should seem meet; declaring that the Governor or Commander in Chief of *South Carolina*, should have the chief Command of the Militia of *Georgia*, and that they should observe his Orders. And granted, that the said Corporation should have Power to import and export their Goods, at and from any Port or Ports that should be appointed by his Majesty, within the said Province, for that Purpose, without being obliged to touch at any other Port in *South Carolina*. And declared, that after the End of the said twenty-one Years, such Form of Government, and making of Laws and Statutes, and Ordinances, for the Government of the said Province and its Inhabitants, should be established and observed within the same, as his Majesty, his Heirs and Successors, should ordain and

“ appoint, and should be agreeable to Law; and that “ after the End of the said twenty-one Years, the Governor, and all Officers, civil and military, within the said Province, should be appointed by his Majesty, “ his Heirs and Successors.”

3. As soon as they had obtained this gracious and extensive Charter, the following noble and honourable Persons undertook, in Quality of Trustees, to engage vigorously in the Execution of this Design, viz. *Anthony Earl of Shaftsbury*, *John Lord Viscount Percival*, since created *Earl of Egmont*, *John Lord Viscount Tyrconnel*, *James Lord Viscount Lymerick*, *George Lord Carpenter*, *Edward Digby*, Esq; *James Oglethorpe*, Esq; *George Heathcoate*, Esq; *Thomas Tower*, Esq; *Robert More*, Esq; *Robert Hucks*, Esq; *William Sloper*, Esq; *Francis Eyles*, Esq; *John Laroche*, Esq; *James Vernon*, Esq; *Stephen Hales*, A. M. *Richard Chandler*, Esq; *Thomas Frederick*, Esq; *Henry L'Apostre*, Esq; *William Heathcoate*, Esq; *John White*, Esq; *Robert Kendal*, Esq; *Richard Bundy*, D. D. Their first Care was to obtain a Fund sufficient for the sending over a considerable Number of People, and providing them with all kinds of Necessaries, towards which they subscribed liberally themselves; obtained considerable Sums by way of Collection from well-disposed People, and had besides a Grant from the Parliament of 10,000 l.

They next turned their Thoughts, as to the most proper Method of settling these People, when sent over to *Georgia*, so as that they might be enabled to live comfortably themselves, and at the same Time answer all the Ends for which they were sent thither; it being judged highly reasonable, that those who were thus provided for, at the public Expence, should be made in every Respect, as useful to the Public as possible. They resolved therefore to consider each Inhabitant in a double Capacity, as a Planter, and as a Soldier, who were consequently to be provided with Arms for their Defence, as well as Tools for the Cultivation of their Land, and taught the Exercise of both. They also resolved, that upon the first settling of this Colony, Towns should be laid out, and Lands allotted each of them for their Maintenance, as near those Towns as possible; that the former might serve for their Defence, and the latter for their Subsistence. In Consequence of these Resolutions, it was agreed that every Lot or Portion of Land, should consist of fifty Acres; and that it should be granted them in Tale Male, as the properest Tenure for the Colony in its Infancy, and the fittest to preserve it from those Inconveniencies to which it was most obnoxious; and with respect to any Hardships that might arise from this Tenure, they determined to remedy them occasionally, till such Time as the Condition of the Colony should render an Alteration necessary.

They likewise determined to prohibit Negroes, the Use of them seeming absolutely inconsistent with the Design of this Colony, and besides this, in many respects, inconvenient and dangerous. Inconvenient, as the first Cost of a Negro is about thirty Pounds; a Sum, that it was not to be supposed many of the People sent to *Georgia* could lay out for themselves; nor was it fit that the Trustees should do it for them, since this would pay the Passage, provide Tools, and defray the Expence of a white Man's Subsistence for a Year, who would then become a Security to the Province. It was foreseen, that if a white Man kept a Negro, he would be less willing and less able to labour himself. If such as were in Circumstances to go over at their own Expence, were allowed to make use of Negroes, it was judged that this would dispirit the poor Planters, would incline such as were possessed of Negroes to absent themselves, as in other Provinces; might enable them, if successful, to eat up and oppress their poorer Neighbours; or tempt them, if unsuccessful, to mortgage or sell their Lands to the Negro Merchants. These were apparent and great Inconveniencies, but the Dangers were still more numerous and more certain. In the first Place, it was evident that as the Planters in *Georgia* were to be sent over with their Families, if Negroes were allowed, whenever the Men were absent from their Plantations upon any Duty, their

Wives and Children would be at the Mercy of these Negroes; and thus, besides the Case of securing themselves against foreign Invasions, they would be likewise under a Necessity of providing for their domestic Safety. In the next Place, it was foreseen that the *Spaniards* at *St. Augustin* would be continually inticing away the Negroes; or inciting them to Insurrections; the former of which would have been very easy, as they had only a small River or two to swim over, which they might do singly as well as in Parties; the latter was so much the more to be dreaded, as an Attempt or two of this kind must have greatly discouraged, if not totally subverted, the *English* Colony; and the Certainty of these Evils was the greater, because in a Time of profound Peace, the *Spaniards* had practised both in regard to the Colony of *South Carolina*, though at a greater Distance, from whence Negroes had often fled in little Boats to the *Spaniards*, and been protected; and they have likewise been incited to rise in large Bodies, to the great Terror of the Inhabitants, and to the no small Hazard of the Loss of that Province: Besides, the allowing Negroes in *Georgia*, would have facilitated the Desertion of the *Carolina* Negroes, through this new Province; and consequently the Colony, instead of proving, as it was intended, a Frontier, and thereby adding Strength to the Province of *South Carolina*, would have proved a Means of drawing away their Slaves, to the great Prejudice of the Planters; and which was much worse, would add thereby to the Strength of their Enemies at *St. Augustin*. So that taking these Considerations together, viz. that Wine, Silk, Pot-ashes, and other Produces, which were expected from the new Colony, did not at all require Negroes; as the Introduction of them so near to a Garrison of the *Spaniards*, would weaken, rather than strengthen, the Barrier; and as they would introduce with them a greater Propensity to Idleness among the Planters, and too great an Inequality among the People; it was thought proper to make the Prohibition of them a fundamental Article of the Constitution.

When the Trustees had made these Dispositions, and were enabled, by Benefactions from the Public, and several private Persons, on the 3d of *October* 1732, it was resolved to send over one hundred and fourteen Persons, Men, Women, and Children, being such as were in decayed Circumstances, and thereby disabled from following any Business in *England*; and who, if in Debt, had leave from their Creditors to go; and such as were recommended by the Minister and Church-Wardens, and Overseers of their respective Parishes; and *James Oglethorpe*, Esq; one of the Trustees went with them at his own Expence, to settle them. On the 24th of the same Month, the People were all examined, whether any of them had any Objections to the Terms and Conditions proposed to them, which they all declared they had not, but that they were fully satisfied with them; and executed Articles under their Hands and Seals, testifying their Consents thereto, which are now in the public Office belonging to the Trustees. But four of them desiring their Daughters might inherit as well as their Sons, and that their Widow's Dower might be considered, the Trustees immediately resolved, that every Person who should desire the same, should have the Privilege of naming a Successor to the Lands granted to him; who, in Case the Possessor should die without Issue Male, should hold the same to them and their Heirs Male for ever; and that the Widows should have their Thirds, as in *England*; with which Resolution the People being all acquainted, were very well satisfied.

The Trustees prepared Forms of Government, agreeable to the Powers given them by the Charter; they established under their Seal a Court of Judicature, for trying Causes, as well criminal as civil, in the Town of *Savannah* (the Name which was given to the first Town to be raised) by the Name and Stile of the Town Court. They also appointed Magistrates there, viz. three Bailiffs and a Recorder, and inferior Officers, viz. two Constables and two tything Men. They chose for Magistrates, such as appeared to them the most prudent and discreet; but amongst a Number of People, who were all upon a Le-

vel at the first setting out, it was impossible to make any Choice or Distinction, which would not create some future Uneasiness among them. As I have no Relation to, or Connection with, the Trustees of *Georgia*, I shall take the Liberty of making some Remarks upon their Proceedings, which otherwise I should not have thought becoming either them or me. The Scheme of their Incorporation is entirely new, as was the Project of Mr. *Oglethorpe's* going over at his own Expence, and purely to see these People put into a Way of living without him, whom he had extricated out of so many Difficulties, and who, but for this Condescension in him, must have fallen back into those Difficulties again. The Attempts of Sir *Walter Raleigh*, for settling of *Virginia*, were of this Nature with respect to him; that is to say, what he did was from a Motive of public Spirit; but what the *Virginia* Company did, was from a Principle of Gain; whereas this whole Design rose from the charitable and beneficent Disposition of a few worthy and good Men, and has been hitherto conducted according to the same Disposition, for the Benefit of the Colony, and of the Public; and from no other View or Interest in the Trustees, but the making themselves happy from the Consciousness of well doing; which at the same Time that it reflects Reputation upon them, does the highest Honour to this Age and Country, in which the Desire I have to have some small Share, produced the Pains taken in this Section, which I flatter myself will, like its Subject, prove of great Utility to the Public.

4. On the 15th of *November* Mr. *Oglethorpe* set out for *Gravesend*, from whence he soon sailed for *Carolina*, where they arrived on the 15th of *January* following, and were received at *Charles Town* by the Governor, with great Kindness and Civility; who ordered Mr. *Middleton*, the King's Pilot, to carry the Ship into *Port Royal*, and *Small Craft* to convey the Colony from thence to the River *Savannah*. In ten Hours they proceeded to *Fort Royal*. On the 18th Mr. *Oglethorpe* went ashore upon *French's Island*, and left a Guard upon *John's*, being a Point of that Island, which commands the Channel, and is about half Way between *Beaufort* and the River *Savannah*. They had Orders to prepare Huts, for the Reception of the People in their Passage from thence. Mr. *Oglethorpe* went to *Beaufort Town*, and was saluted with a Discharge of the Artillery, and had a new Barrac fitted up, where the Colony landed on the 20th, and were cheerfully assisted by Lieutenant *Wats*, and Ensign *Farrington*, and the other Officers of the independent Company; as also by Mr. *Ledebur*, and other Gentlemen of the Neighbourhood; from thence he went to view the *Savannah* River, and pitched upon a convenient Spot of Ground, ten Miles up the River, on which he designed to build a Town. The Reader will observe that this was exactly agreeable to the Resolutions taken by the Trustees at home; and as there was no Time lost in fixing upon the Place, so on the 9th of *February* the Town was marked out, and the first House begun.

The chief Reasons that determined Mr. *Oglethorpe* in the Choice of this Place were, Health, Pleasure, and Conveniency. Before his Arrival in the Country, it had the Name of an *Indian* Nation, viz. *Yamacraw*, who inhabited here, under the Command of the Chief, *Tomochichi*, and who readily gave them Place, and entered into a close Friendship with him; so much the more agreeable to both Parties, as there was no other *Indian* Nation within fifty Miles. But Mr. *Oglethorpe* called the Town by the Name of the River *Savannah*. It lies, according to Captain *Gascoign's* Observations, in the Latitude of 31 Degrees 58 Minutes, which he took off *Tybee*, an Island that lies at the Mouth of the *Savannah* River. It is distant from *Charles Town* South-west, according to the Course and Windings of the Rivers and Creeks, about one hundred and forty Miles, but by a direct Course seventy-seven, allowing *Sullivan's Island* to be in the Latitude of 32 Degrees 47 Minutes; from *Augustin* North-east and by East about one hundred and forty Miles; and by the Course of the Rivers is distant from *Fort Moore* three hundred Miles; but upon a direct Line but one hundred and fifteen Miles North-west

west and by West; this Bluff is distant ten Miles from the Mouth of the River on the South-side; and *Parrysburgh* is twenty four Miles above it, on the North, and is so situated as to have a beautiful Prospect, both up and down the River. It is very sandy and barren, and consequently a wholesome Place for a Town or City, if *Savannah* should ever grow up and rival *Philadelphia*.

After putting things into order here, and assigning every Man his proper Station and Employment, Mr. *Oglethorpe*, in Company with Colonel *Bull*, who came from *Charles Town* to pay him a Visit, and testified great Satisfaction at the Progress they made, set out for *Charles Town* to solicit Succours for his Colony. Before we take Notice of the Success he met with on that Occasion, it may not be amiss to transcribe a Paragraph from the *South Carolina Gazette*, dated *Charles Town*, March the 22d, 1732, in which there is an Account given of a Journey to *Georgia*, which will shew the Sentiments of the People of that Colony, at a Time when they were freed from all Prejudices, Apprehensions, and Prepossessions. After describing the Town in the Manner we have done, they say, "When they, that is the new Colony, arrived, there was standing on it, viz. the Place where the Town now stands, a great Quantity of the best Sorts of Pines, most of which are already cut down on the Spot where the Town is laid out to build. The Land is barren about a Mile back, when you come into very rich Ground; and on both Sides, within a quarter of a Mile of the Town, is choice good planting Land. Colonel *Bull* told me that he had been seven Miles back, and found it extraordinary good. Mr. *Oglethorpe* is indefatigable, takes a vast deal of Pains; his Fare is but indifferent, having little else at present but salt Provisions: He is extremely well beloved by all his People. The general Title they give him is *Father*. If any of them are sick, he immediately visits them, and takes a great deal of Care of them. If any Differences arise, he is the Person that decides them: Two happened while I was there, and in my Presence, and all the Parties went away, to outward Appearance, satisfied and contented with his Determination. He keeps a strict Discipline; I never saw one of his People drunk nor heard one swear, all the Time I was there. He does not allow them Rum, but in lieu gives them *English* Beer. It is surprising to see how chearfully the Men go to work, considering they have not been bred to it. There are no Idlers there, even the Boys and Girls do their Parts. There are four Houses already up, but none finished; and he hopes when he has got more Sawyers, which I suppose he will have in a short time, to finish two Houses in a Week. He has plowed up some Land, Part of which he sowed with Wheat, which is come up, and looks promising. He has two or three Gardens, which he has sowed with divers Sorts of Seeds; and planted Thyme, with other Sorts of Pot-herbs, Sage, Leeks, Scallions, Celery, Liquorice, &c. and several Sorts of Fruit-Trees. He was pallisading the Town, and inclosing some Part of the Common, which I do suppose may be finished in a Fortnight's time. In short, he has done a vast deal of Work for the Time; and I think his Name ought to be immortalized."

This sufficiently shews how well pleased the People at *Carolina* were, as indeed they had Reason to be, with this new Settlement; as a further Testimony of which, not only the Assembly, but the People in general, contributed largely to the Assistance of the new Comers; five hundred Pounds of which Money Mr. *Oglethorpe* laid out immediately in Cattle, and having given other Directions for providing at *Charles-Town* what his People might have Occasion for, he very speedily set out on his return for *Savannah*, and on his way lay at Colonel *Bull*'s House on *Ashly River*. There the Reverend Mr. *Guy*, Rector of *St. John's Parish*, waited on him, and told him his Parishioners had raised a handsome Contribution. Being arrived at *Savannah*, he found that Mr. *Wiggin*, the Interpreter, with the chief Men of the *Lower Creek* Nation, had been to treat of an Alliance with the new Colony. The *Lower Creeks* are a Nation

of *Indians*, who formerly consisted of ten, but now are reduced to eight, Tribes, who have each their different Government, but are allied together, and speak the same Language. They claim from the *Savannah River* as far as *St. Augustin* and up *Flint River*, which falls into the Bay of *Mexico*. *Tomochichi*, Mico, and the *Indians* of *Yamacraw* were of the *Creek* Nation and Language.

Mr. *Oglethorpe* received the *Indians* in one of the new Houses. They were as follows: From the Tribe of *Coweeta*, *Taban Lakee*, their King or Mico, *Effaboo*, their Warrior, the Son of *Old Brim*, lately dead; whom the *Spaniards* called Emperor of the *Creeks*, with eight Men and two Women Attendants. From the Tribe of *Cussetas*, *Cusseta*, their Mico, *Tatchiquatchi*, their Head Warrior, with four Attendants. From the Tribe of *Owseecheys*, *Ogeese*, the Mico or War King; *Neath-louthko* and *Ougachi* two chief Men, with three Attendants. From the Tribe of *Cheecheaws*, *Outbleteboa*, their Mico, *Tblautho-tblukee*, *Figeer*, *Sootamilla*, War Captains, with three Attendants. From the Tribe of *Echetas*, *Cbutabeeche* and *Robin*, two War Captains (the latter was bred among the *English*) with four Attendants. From the Tribe of *Polachucolas*, *Gillattee*, their Head Warrior, and five Attendants. From the Tribe of *Oconas*, *Oueekachumpa*, called by the *English* Long King, *Koorwoo*, a Warrior. From the Tribe of *Eufaula*, *Tomaumi*, Head Warrior, and three Attendants.

The *Indians* being all seated, *Oueekachumpa*, a very tall old Man, stood, and made a Speech, which was interpreted by Mr. *Wiggin* and Mr. *Musgrove*, and was to the following Purpose: He first claimed all the Lands to the Southward of the River *Savannah*, as belonging to the *Creek Indians*. They then said, though they were but poor and ignorant, he that had given the *English* Breath had given them Breath also. That he that had made both had given more Wisdom to the White Men. That they were persuaded that the great Power which dwelt in Heaven, and all around, (and then he spread out his Hands and lengthened the Sound of his Words) and which hath given Breath to all Men, had sent the *English* thither, for the Instruction of them, their Wives and Children: That, therefore, they gave them up freely their Right to all the Land they did not use themselves. That this was not only his Opinion, but the Opinion of the eight Towns of the *Creeks*, each of whom having consulted together, had sent some of their chief Men with Skins, which is their Wealth.

Then the chief Men brought a Bundle of Buck-Skins, and laid eight from the eight Towns before Mr. *Oglethorpe*. He said these were the best Things they had, and that they gave them with a good Heart. He concluded with thanking him for his Kindness to *Tomochichi*, Mico, and his *Indians*, to whom he said he was related, and though *Tomochichi* was banished from his Nation, that he was a good Man, and had been a great Warrior; and it was for his Wisdom and Justice that the banished Men had chose him King. He also said, that he had heard that the *Cherokees* had killed some *Englishmen*, and that if Mr. *Oglethorpe* would command them, they would enter their whole Force into the *Cherokee* Country, destroy their Harvest, kill the People, and revenge the *English*. When he had done speaking, *Tomochichi* came in with the *Yamacraw Indians*, and making a low Obeisance, said, I was a banished Man, and I came here poor and helpless to look for good Land near the Tombs of my Ancestors, and when the *English* came to this Place I feared you would drive us away; for we were weak and wanted Corn. But you confirmed our Land to us, and gave us Food. Then the Chiefs of the other Nation made Speeches to the same Purpose as *Oueekachumpa*'s.

After which they agreed with Mr. *Oglethorpe* on a Treaty of Alliance and Commerce, which was signed by him and them. A laced Coat, a laced Hat, and a Shirt, were given to each King, and to each of the Warriors a Gun, a Mantle of Duffils, and to all their Attendants coarse Cloth for cloathing, and other things. The Articles of Agreement were, I. The Trustees agreed to let their People carry into the *Indian* Towns all Sorts of Goods fitting to Trade at Rates and Prices settled by the Treaty. II. Restitution and Reparation to be made for Injuries on both Sides, and Criminals to be tried and punished

nished according to the *English* Law. III. Trade to be withdrawn from any *Indian* Town offending against Treaty. IV. The *English* to possess all Lands not used by the *Indians*, provided, that upon settling of every new Town the *English* should set out for the Use of their Nation, such Lands as should be agreed on between the *English* beloved Men, and the Head-Men of their Nation. V. To restore all runaway Negroes, and carry them either to *Charles Town*, the *Savannah*, or *Petachubula* Garrison, upon being paid for every such Negro four Blankets, or two Guns, or the Value thereof in other Goods, if taken on the other Side *Ocorivy River*; and one Blanket if the Negro is killed in taking or endeavouring to make his Escape. VI. Lastly, They promise, with strait Hearts and Love to their Brother *English*, to give no Encouragement to any other white People to settle there, and to all this they set the Marks of their Families. This Treaty being concluded, Mr. Oglethorpe thought fit to return into *England*, as well to report the Situation things were in, in that Country, as to procure the necessary Supplies for promoting the new Colony.

5. In the Month of *June* 1734 Mr. Oglethorpe arrived safely in *England*, bringing with him *Tomochichi*, Mico or King of the *Yamacraws*; *Senawki*, his Consort, and *Toonakowi*, the Prince his Nephew; as also *Hillispilli*, a War Captain, and *Apakowski*, *Stimalechi*, *Sintouchi*, *Hinguithi*, and *Umphychi*, five other *Indian* Chiefs, with their Interpreter. They were lodged at the *Georgia-Office*, *Old-Palace-Yard*, where they were handsomely entertained; and, being suitably dressed, were introduced to the Court, then at *Kensington*. *Tomochichi* presented to the King several Eagles Feathers; which, according to their Custom, is the most respectful Gift he could offer, and made the following Speech to his Majesty. “ This Day I see the Majesty of your Face, and
“ Greatness of your House, and the Number of your
“ People; I am come for the Good of the whole Na-
“ tion called the *Creeks*, to renew the Peace they had
“ long ago with the *English*. I am come over in my
“ old Days; though I cannot live to see any Advantage
“ to myself. I am come for the Good of the Children
“ of all the Nations of the *Upper* and *Lower Creeks*, that
“ they may be instructed in the Knowledge of the *Eng-
“ lish*. These are the Feathers of the Eagle, which is
“ the swiftest of Birds, and who flieth all round our
“ Nations. These Feathers are a Sign of Peace in our
“ Land, and we have brought them over to leave them
“ with you, O! great King, as a Sign of everlasting
“ Peace. O! great King, whatsoever Words you shall
“ say unto me I will tell them faithfully to all the Kings
“ of the *Creek* Nations.” To which his Majesty made a gracious Answer, assuring those Nations of his Protection and Regard.

These *Indians*, but more especially their Mico or Prince, gave evident Marks, during their Stay in *England*, of good Sense, and of a sincere Inclination to carry on a friendly Correspondence between their own Nation and ours; and therefore they desired of the Trustees, that the Measures, Prices, and Qualities of Goods to be purchased by them, with their Deer-Skins, might be settled, as likewise the Weights; that no body might be allowed to trade with the *Indians* in *Georgia*, without a Licence from the Trustees, in order, that if they were in any respect injured, or defrauded by the Traders, they might know where to complain. And they further desired, that there might be but one Store-house in each *Indian* Town, for supplying them with the Goods they might want to purchase, from whence the Traders should be obliged to supply them at their fixed Prices. The Reason which the *Indians* gave for this Application was, because the Traders with them had often, in an arbitrary Manner, raised the Price of Goods, and defrauded them in the Weights and Measures; and, by their Impositions, had often created Animosities between the *English* and *Indians*, which had frequently ended in Wars between them, prejudicial to both.

In Compliance with this Request of theirs, the Trustees prepared a Law, intitled, *An Act for maintaining the Peace with the Indians in the Province of Georgia*; which

contained the same Regulations and Provisions that were made in an Act passed by the Council and Assembly in *South Carolina*, in the Year 1731, which Act would have reached the Country now called *Georgia*, if it had not been erected into a separate Province. They likewise prepared another Law, calculated for the same salutary Purpose, I mean the preventing any Dangers from the *Indians*, by the pernicious Effects of spirituous Liquors, as well as the Health of the People already settled, and that might be settled, in their new Colony, which was intitled, *An Act to prevent the Importation and Use of Rum and Brandy in the Province of Georgia, or any kind of Spirits, or strong Waters whatsoever*. They likewise prepared a third Law, upon a very mature Deliberation, and for the Reasons before mentioned, intitled, *An Act for rendering the Colony of Georgia more defensible, by prohibiting the Importation of Black Slaves, or Negroes, in the same*. These three Acts were laid before the King in Council, in the Month of *January* following; and after a Report from the Board of Trade, That they were proper to receive his Majesty's Approbation, they were accordingly ratified. Two Embarkations were made this Year, whose Numbers are hereafter mentioned, which consisted chiefly of *Salisbury* men, who with the *Salisbury* men that went before, were settled in a Town called by them *Ebenezer*, upon the River *Savannah*, at some Distance above the Town; and by the Sobriety and Industry of the People, they prove a very thriving Settlement.

6. In the succeeding Year, 1735, the Trustees were encouraged by an extraordinary Supply of twenty-six thousand Pounds, granted by Parliament, and very considerable Benefactions, as well in *Carolina* as in *England*, to think of making very considerable Embarkations for strengthening the southern Part of *Georgia*; and to obviate any Objection that might be made, as in Undertakings of this Nature Objections will never be wanting, of their sending useful Poor from hence, it was resolved, That these Embarkations should consist mostly of People from the North of *Scotland*, and persecuted *German* Protestants. The Reader will observe, that by the Care taken in this Respect, the Nation gained a very considerable Advantage, since by this Means the Overflowings of all the Northern Countries of *Europe*, which are known to breed robust, hardy and industrious People, were secured for our Service, and carried over and settled in that Part of his Majesty's Dominions where such People were wanted most; where, from their Circumstances, they were obliged to fulfil (as indeed they have always done) the Ends for which they were sent thither; and so became an Accession of Strength of great Consequence and Advantage, at a very small and inconsiderable Expence. But that the Reader may be fully apprized of, and perfectly comprehend, the true Reasons which induced the Parliament to grant so much Money, for the Settlement and Improvement of the Colony this Year, and may likewise be enabled to judge of the Weight and Importance of these Reasons, it is requisite to inform him, that the Colony of *South Carolina* drew up a Memorial, dated the 9th of *April* 1734, signed by *Robert Johnson*, Esq; their Governor, *Thomas Broughton*, President of the Council; and *Paul Jenys*, Speaker of the Commons; containing a Representation of the State and Condition of that Province, and therein so full, so clear, and so authentic an Account of Facts, equally curious and important, that it is impossible to set them down either in fewer or better Words than are used in that Memorial; Part of which therefore we shall give here, and should very willingly have given the Whole, if the Nature of our Work would have allowed us Room.

“ Your Majesty's Subjects of this Province, having
“ often felt, with Hearts full of Gratitude, the many
“ signal Instances of your most sacred Majesty's peculiar
“ Favour and Protection to these distant Parts of your
“ Dominions, and especially those late Proofs of your
“ Majesty's most gracious and benign Care, so wisely
“ calculated for the Protection of this your Majesty's
“ Frontier-Province on the Continent of *America*, by
“ your royal Charter to the Trustees for establishing
“ the Colony of *Georgia*; and your great Goodness so
“ rightly

“ rightly and timely applied in protecting the Settlement
“ of the *Swiss* at *Purrysburg*. Encouraged by such just Views
“ of your Majesty’s wife and paternal Care, extended to
“ your remotest Subjects; and excited by the Duty which
“ we owe to your most sacred Majesty, to be always
“ watchful for the Support and Security of your Majesty’s
“ Interest, especially at this very critical Juncture, when
“ the Flame of a War breaking out in *Europe*, may very
“ speedily be lighted here, in this your Majesty’s Frontier
“ Province, which by its Situation is known to be of the
“ utmost Importance to the general Trade and Traffic of
“ *America*: We therefore, your Majesty’s most faith-
“ ful Governor, Council, and Commons, convened
“ in your Majesty’s Province of *South Carolina*, crave
“ Leave with great Humility to represent to your Majesty
“ the present State and Condition of this your Province,
“ and how greatly it stands in need of your Majesty’s
“ gracious and timely Succour in Case of a War, to assist
“ our Defence against the *French* and *Spaniards*, or any
“ other Enemies to your Majesty’s Dominions, as well
“ as against the many Nations of Savages, which so
“ nearly threaten the Safety of your Majesty’s Subjects.

“ The Province of *Carolina*, and the new Colony of
“ *Georgia*, are the southern Frontiers of all your Majesty’s
“ Dominions on the Continent of *America*; to the South
“ and South-west of which is situate the strong Castle of
“ *St. Augustin*, garrisoned by four hundred *Spaniards*,
“ who have several Nations of *Indians* living under their
“ Subjection, besides several other small Settlements and
“ Garrisons near the *Appellaches*, some of which are not
“ eighty Miles distant from the Colony of *Georgia*. To
“ the South-west and West of us, the *French* have al-
“ ready erected a considerable Town near *Fort Thoulouse*
“ on the *Moville* River, and several other Forts and Gar-
“ risons, some not above three hundred Miles distant
“ from our Settlements; and at *New Orleans* on the
“ *Mississippi* River, since her late Majesty Queen *Anne*’s
“ War, they have exceedingly encreased their Strength
“ and Traffic, and have now many Forts and Garrisons
“ on both Sides of that large River, for several hundred
“ Miles up the same. And since his most Christian Majesty
“ has taken out of the *Mississippi* Company the Government
“ of that Contry into his own Hands, the *French*
“ Natives of *Canada* come daily down in Shoals, to
“ settle all along that River, where many regular Forces
“ have been sent over by the King, to strengthen the
“ Garrisons of those Places; and according to our best
“ and latest Advices, they have five hundred Men in Pay
“ constantly employed as Wood-Rangers, to keep the
“ neighbouring *Indians* in Subjection, and to prevent the
“ distant ones from disturbing their Settlements; which
“ Management of the *French* has so well succeeded, that
“ we are very well assured they have wholly now in their
“ Possession, and under their Influence, the several numer-
“ ous Nations of *Indians* that are situate near the *Missis-*
“ *sippi* River; one of which, called the *Choctaws*, by
“ Estimation, consisting of about five thousand fighting
“ Men, and who were always deemed a very warlike
“ Nation, lies on this Side the River, not above four
“ hundred Miles distant from our Out-settlements.
“ Among whom, and several other Nations of *Indians*,
“ many *French Europeans* have been sent to settle, whom
“ the Priests and Missionaries among them encourage to
“ take *Indian Wives*, and use divers other alluring Me-
“ thods to attach the *Indians* the better to the *French*
“ Alliance: By which Means the *French* are become
“ thoroughly acquainted with the *Indian Way* of warring
“ and living in the Woods, and have now a great Num-
“ ber of white Men among them, able to perform a
“ long March, with an Army of *Indians*, upon any
“ Expedition.

“ We further beg Leave to inform your Majesty,
“ That if the Measures of *France* should provoke your
“ Majesty to a State of Hostility against it in *Europe*, we
“ have great Reasons to expect an Invasion will be here
“ made upon your Majesty’s Subjects, by the *French*
“ and the *Indians*, from these *Mississippi* Settlements:
“ They have already paved a Way for a Design of that
“ Nature, by erecting a Fort called the *Alabama Fort*,

“ alias *Fort Louis*, in the Middle of the *Upper Creek*
“ *Indians*, upon a navigable River leading to *Moville*,
“ which they have kept well garrisoned, and mounted
“ with fourteen Pieces of Cannon; and have already been
“ prevented from erecting a second nearer to us in that
“ Quarter. The *Creeks* are a Nation very bold, active,
“ and daring, consisting of about thirteen hundred
“ fighting Men (and not above one hundred and fifty
“ Miles distant from the *Choctaws*) whom though we
“ heretofore have traded with, claimed, and held in our
“ Alliance, yet the *French*, on account of that Fort,
“ and a superior Ability to make them liberal Presents,
“ have been for some time striving to gain them over to
“ their Interest, and have succeeded with some of the
“ Towns of the *Creeks*, which if they can be secured in
“ your Majesty’s Interest, are the only Nation which
“ your Majesty’s Subjects here can depend upon, as their
“ best Barrier against any Attempts, either of the *French*
“ or their confederate *Indians*.

“ We most humbly pray Leave further to inform your
“ Majesty, that the *French* at *Moville*, perceiving that they
“ could not gain the *Indians* to their Interest without
“ buying their Deer Skins, which is the only Commo-
“ dity the *Indians* have to purchase Necessaries with, and
“ the *French* not being able to dispose of those Skins,
“ by reason of their having no Vent for them in *Old*
“ *France*, have found Means to encourage Vessels from
“ hence, *New York*, and other Places which are not
“ prohibited by the Acts of Trade, to truck those
“ Skins with them for *Indian* trading Goods, especially
“ the *British* Woollen Manufactures, which the *French*
“ dispose of to the *Creeks* and *Choctaws*, and other
“ *Indians*; by which Means the *Indians* are much more
“ alienated from our Interest; and, on every Occasion,
“ object to us, that the *French* can supply them with
“ Shrouds and Blankets as well as the *English*; which
“ would have the contrary Effect, if they were wholly
“ furnished with those Commodities by your Majesty’s
“ Subjects trading among them. If a Stop were there-
“ fore put to that pernicious Trade with the *French*, the
“ *Creek Indians* chief Dependance would be on this
“ Government, and that of *Georgia*, to supply them with
“ Goods; by which Means great Part of the *Choctaws*
“ living next the *Creeks*, would see the Advantage the
“ *Creek Indians* enjoyed, by having *British* Woollen
“ Manufactures wholly from your Majesty’s Subjects,
“ and thereby be invited, in a short time, to enter into
“ a Treaty of Commerce with us, which they have
“ lately made some Offers for, and which, if effected,
“ will soon lessen the Interest of the *French* with these
“ *Indians*, and by Degrees attach them to that of your
“ Majesty.

“ The only Expedient we can propose to recover
“ and confirm that Nation to your Majesty’s Interest,
“ is by speedily making them Presents, to withdraw
“ them from the *French* Alliance, and by building some
“ Forts among them. Your Majesty may be put into
“ such a Situation, that on the first Notice of Hostilities
“ with the *French*, your Majesty may be able to reduce
“ at once the *Alabama Fort*, and we may then stand
“ against the *French* and their *Indians*; which if not
“ timely prepared for, before a War breaks out, we
“ have too much Reason to fear we may be soon over-
“ run by the united Strength of the *French*, and the
“ *Creeks*, and *Choctaws*, with many other Nations of
“ their *Indian* Allies: For should the *Creeks* become
“ wholly our Enemies, who are well acquainted with all
“ our Settlements, we probably should also soon be de-
“ serted by the *Cherokees*, and a few other small Tribes
“ of *Indians*; who, for the Sake of our Booty, would
“ readily join to make us a Prey to the *French* and Sa-
“ vages. Ever since the late *Indian War*, the Offences
“ then given us by the *Creeks*, have made that Nation
“ jealous of your Majesty’s Subjects of this Province.
“ We have therefore concerted Measures with the Ho-
“ nourable *James Oglethorpe*, Esq; who being at the
“ Head of a new Colony, will, we hope, be successful
“ for your Majesty’s Interest among that People. He
“ has already, by Presents, attached the *Lower Creeks* to

“ the Service of your Majesty, and has laudibly undertaken to endeavour the fixing a Garrison among the
 “ *Upper Creeks*; the Expence of which is already in Part
 “ provided for, in this Session of the general Assembly
 “ of this Province. We hope therefore to prevent the
 “ *French* from incroaching farther on your Majesty’s
 “ Territories, until your Majesty is graciously pleased
 “ further to strengthen and secure the same.

“ We find the *Cherokee* Nation has lately become very
 “ insolent to your Majesty’s Subjects trading among
 “ them, notwithstanding the many Favours which the
 “ Chiefs of that Nation received from your Majesty
 “ in *Great Britain*; besides a considerable Expence
 “ which your Majesty’s Subjects have been at, in making
 “ them Presents, which inclines us to believe that
 “ the *French*, by their *Indians*, have been tampering with
 “ them. We therefore beg Leave to inform your Majesty,
 “ that the building and mounting some Forts also
 “ among the *Cherokees*, and making them Presents, will
 “ be highly necessary to keep them steady in their Duty
 “ to your Majesty, lest the *French* may prevail in seducing
 “ that Nation; which they may the more readily be inclined
 “ to, from the Prospect of getting considerable Plunder in
 “ Slaves, Cattle, and Commodities, which they very well know
 “ they have among us. Several other Forts will be indispensibly
 “ necessary, to be a Cover to your Majesty’s Subjects settled
 “ backwards in this Province, as also to those of the Colony
 “ of *Georgia*, both which in Length are very extensive.
 “ For though the Trustees for establishing the Colony
 “ of *Georgia*, by a particular Scheme of good Management,
 “ faithfully conducted by the Gentleman engaged here in that
 “ charitable Enterprize, have put that small Part of the Colony
 “ which he has yet been able to establish, in a tenable Condition
 “ against the *Spaniards* of *Florida*, which lye to the Southward;
 “ yet the back Exposition of those Colonies to the vast
 “ Number of *French* and *Indians*, which border on the
 “ Westward, must, in case of a War, cry greatly aloud
 “ for your Majesty’s gracious and timely Succour. The
 “ Expence of our Safety on such an Occasion, we must in all
 “ Humility acquaint your Majesty, either for Men or Money,
 “ can never be effected by your Majesty’s Subjects of this
 “ Province, who, in Conjunction with *Georgia*, do not, in the
 “ whole, amount to more than three thousand five hundred
 “ Men that compose the Militia, and wholly consist of
 “ Planters, Traders, and other Men in Business.”

There are some other Paragraphs in this Memorial which
 “ are still more worthy of Notice, and which therefore we shall
 “ give the Reader in the Words thereof. We must further beg
 “ Leave to inform your Majesty, that amidst our other
 “ perillous Circumstances, we are subject to many intestine
 “ Dangers, from the great Number of Negroes that are
 “ now among us, who amount, at least, to twenty-two thousand
 “ Persons, and are three to one of all your Majesty’s white
 “ Subjects in this Province. Insurrections against us have been
 “ often attempted, and would at any Time prove very fatal,
 “ if the *French* should instigate them by artfully giving them
 “ an Expectation of Freedom. In such a Situation we most
 “ humbly crave Leave to acquaint your Majesty, that even the
 “ present ordinary Expences, necessary for the Care and
 “ Support of this your Majesty’s Province and Government,
 “ cannot be provided for by your Majesty’s Subjects of this
 “ Province, without your Majesty’s gracious Pleasure to continue
 “ those Laws, for establishing the Tax on Negroes, and other
 “ Duties, for seven Years, and for appropriating the Laws
 “ which now lie before your Majesty, for your royal Assent
 “ and Approbation; and the further Expences that will be
 “ requisite for the erecting some Forts, and establishing
 “ Garrisons in the several necessary Places, so as to form
 “ a Barrier for the Security of this your Majesty’s Province,
 “ we most humbly submit to your Majesty.

“ Your Majesty’s Subjects of this Province, with Fullness
 “ of Zeal, Duty, and Affection, to your most gracious and
 “ sacred Majesty, are so highly sensible of the great
 “ Importance of this Province to the *French*, that

“ we must conceive it more than probable, if a War
 “ should happen, they will use all Endeavours to bring
 “ this Country under their Subjection. They would
 “ thereby be able to supply their *Sugar Islands* with all
 “ Sorts of Provisions and Lumber, by an easy Navigation
 “ Trade, which, to our great Advantage, is now not so
 “ practicable from the present *French* Colonies: Besides the
 “ Facility of gaining then to their Interest most of the
 “ *Indian Trade* on the Northern Continent, they might also
 “ easily unite the *Canadees* and *Choctaws*, with the many
 “ other Nations of *Indians* which are now in their Interest.
 “ And the several Ports and Harbours of *Carolina* and
 “ *Georgia*, which now enable your Majesty to be absolutely
 “ Master of the Passage through the *Gulph* of *Florida*,
 “ and to impede, at your Pleasure, the transportation
 “ Home of the *Spanish* Treasure, would then prove so many
 “ convenient Harbours for your Majesty’s Enemies, by
 “ their Privateers or Ships of War, to annoy a great
 “ Part of the *British* Trade to *America*, as well as that
 “ which is carried on through the *Gulph* from *Jamaica*,
 “ besides the Loss which *Great Britain* must feel in so
 “ considerable a Part of its Navigation, as well as the
 “ Exports of Masts, Pitch, Tar, and Turpentine, which,
 “ without any Dependence on the Northern Powers of
 “ *Europe*, are from hence plentifully supplied for the
 “ Use of the *British* Shipping.

“ This is the present State and Condition of your
 “ Majesty’s Province of *South Carolina*, utterly incapable
 “ of finding Funds sufficient for the Defence of this wide
 “ Frontier, and so destitute of white Men, that even
 “ Money itself cannot here raise a sufficient Body of
 “ them.” The great Length of this Memorial prevents
 “ our making many Remarks thereon; some few, however,
 “ are absolutely requisite.

The Reader will, from hence, see how well timed,
 “ and how well contrived, the new Settlement of *Georgia*
 “ was, in the Opinion of those who were the best Judges;
 “ how just and how prudent the Precaution of the Trustees
 “ in prohibiting Negroes; and how wisely and happily for
 “ the public Service they contrived to send over, both
 “ from our own Country, and other Parts of *Europe*, white
 “ People, and Protestants, by which they effectually provided
 “ for the Security of all the Northern Colonies behind it;
 “ which, whenever this Country comes to be thoroughly
 “ peopled, as it may be in a very few Years Time in Days
 “ of Peace, if due Attention be had thereto, will be such a
 “ Barrier, as neither *Spaniards* nor *French* can ever break
 “ through, and consequently will for ever put an End to
 “ those Terrors and Apprehensions, that are so strongly and
 “ so emphatically expressed in the foregoing Paper. But to
 “ proceed in our History.

In the Month of *January*, 1735, the *Highlanders* arrived
 “ in *Georgia* (and with them several of the same Country,
 “ as Servants to private Grantees). They were settled on the
 “ *Altamaha River*, about sixteen Miles distant by Water
 “ from the Island of *St. Simon*, which is at the Mouth of
 “ the River. They soon raised convenient Huts till their
 “ Houses could be built; and the Town, at their own
 “ Desire, was called *Darien*, which Name that District
 “ still retains; but the Town which they afterwards built
 “ they thought fit to call *New Inverness*.

On the 6th of *February* following the great Embarkation,
 “ under the Direction of Mr. *Oglethorpe*, arrived, and the
 “ People were settled upon the Island of *St. Simon*. The
 “ *Creek Indians* who came down upon this Occasion, in
 “ consequence of their claiming a Right to the Country,
 “ were treated with, and agreed that the *English* should
 “ possess that, and all the Islands adjacent, which necessary
 “ Step being taken, the Town of *Frederica* was soon laid
 “ out, and the People set to work in building Houses. When
 “ I call this the great Embarkation, it seems but reasonable
 “ that I should express the Number of Persons sent over,
 “ which were four hundred and seventy; and it is likewise
 “ fit to say something of the Island upon which they were
 “ settled. In Point of Situation, a better could hardly
 “ be wished for in that Part of the World, lying as it
 “ does at the Mouth of a very fine River; the Size of it
 “ too was very convenient, being about forty-five Miles in
 “ Extent,

Extent, the Soil rich and fruitful, full of Oak and Hickery Trees, intermixed with Meadows and old Indian Fields.

As soon as this Settlement was made, Care was taken for its Security, and for the Fortification of the Southern Barrier, with which View a regular Fortrefs, strengthened by four Bastions and a Spur-work, towards the River, was erected at *Frederica*, and several Pieces of Cannon mounted thereon; a strong Battery was also raised for the Protection of *Iekyll Sound*, where ten or twelve Forty-gun Ships may safely ride. Another Fort was built on the South-west Part of *Cumberland Island*, where are several Pieces of Cannon pointed towards the River, so as to command all Sloops and Small-craft navigating that Passage; within the Pallisade which surrounds the Fort there are fine Springs of Water, and likewise a well framed Timber-house, with large and convenient Magazines under it for Ammunition and Provisions. But while so much Care was taken of the South Frontier, agreeable as it was conceived to the Design of the Parliament's Grant, and the Prayer of the before-mentioned Memorial; the Northern Part of the Colony was not neglected, since Orders were given for erecting a Fort at *Augusta*, a Place situated on the River *Savannah*, which is now become a very thriving Place; where the Traders with the *Indians*, from *South Carolina* and *Georgia*, resort, on Account of its Conveniency for that Purpose; and where there are large Warehouses furnished with such Goods as the *Indians* want, the Deer Skins taken in Exchange being sent two hundred and thirty Miles down the River, to the Town of *Savannah*, in Boats, which carry each about nine thousand Weight. It may be easily conceived from hence, how necessary a thing it was to have a good Fort here, which was both erected and garrisoned at the Expence of the Trustees for some Time; and a Horse-Road was made from thence to the Town of *Savannah* one Way, and to the Dwellings of the *Cherokee Indians*, who live above the Town of *Augusta*, the other. By these Precautions the Trade of both Colonies, with these *Indians*, was facilitated, and the Country on that Side secured against any sudden Attempts of an Enemy, which was all that could be expected in so short a Time, and in a Tract of Land in Comparison of the Colony, of so large an Extent.

7. The Presence of Mr. *Oglethorpe* contributed greatly to the settling and Preservation of the Colony; which was already become considerable enough, not only to draw the Attention, but to excite the Jealousy, of the *Spaniards*; who, without all Question, would have been glad to have overpowered, and driven out, these new-come Neighbours, if it had been a thing in their Power; and if they had not been apprehensive of the ill Consequences that must have attended the breaking out of a War between the two Nations, on Account of the Disputes between these Frontier Provinces; which Circumstances were so well improved by Mr. *Oglethorpe*, and the *Indians* who had entered into Friendship with the new Settlement were so strongly attached to the *English* Interest, that the Governor of *St. Augustin*, upon mature Deliberation, found it more expedient to enter into a Negotiation, and to endeavour to conclude an amicable Agreement with the *English* Colony; which Mr. *Oglethorpe* also knowing to be very convenient for the Security of *Georgia*, he negotiated, and concluded a Treaty, upon very just and reasonable, as well as safe and advantageous, Terms; as will appear from the following Copy of the Treaty itself, and the Powers by him given for concluding and signing it.

“ To CHARLES DEMPSEY, Esq;

“ I have impowered you, by Procuration, dated the 23d of June, 1736, to treat and conclude, concerning certain Matters of Importance, relating to these Provinces, with his Excellency *Don Francisco del Moral Sanches*, Captain General of *Florida*, and Governor of *St. Augustin*, and the Council of War of the said Garrison; and having, since the Dates of these Letters, received Advice from the Governor of *St. Augustin*, as also a Message from his Excellency *Don Juan Francisco Geumes de Horcastas*, Major General in his Ca-

“ tholic Majesty's Service, Captain General of the Island above, and Governor of *Havanna*, by *Don Antonio de Arredondo*, they both impowering him to treat concerning the said Matters, I do hereby impower, constitute, and appoint you, to treat, conclude, and sign the following Articles; and deliver the same unto the Governor and Council of *St. Augustin*, they signing, sealing, and interchanging the said Articles.

“ First, That his Excellency the Governor of *St. Augustin*, shall restrain his *Indians*, Subjects to the King of *Spain*, from committing any Hostilities upon the Subjects of the King of *Great Britain*. I will restrain the *Indian* Subjects to the King of *Great Britain* in this Province, from any Hostilities upon the Subjects of his Catholic Majesty.

“ Secondly, That in respect to the Nations of free *Indians* called *Creeks*, I will use my utmost amicable Endeavours upon any reasonable Satisfaction given them, to prevail with them to abstain from any Hostilities whatsoever, with the Subjects of his Catholic Majesty.

“ Thirdly, That with respect to the Fort built on the Island of *St. George*, I will draw off that Garrison, together with the Artillery, and all other things by me posted there; provided that none of his Catholic Majesty's Subjects, nor any other Person, shall inhabit, people, or fortify, the said Island; provided also that no Prejudice shall arise to the Right of the King my Master, to the said Island, nor to any other Dominions or Claim that his Britannic Majesty hath upon this Continent. But that his Right shall remain to the said Island, and to all other Places whatsoever; as if the said Garrison had never been withdrawn; and the said Garrison shall withdraw within fourteen Days after the Ratification of these Articles.

“ Fourthly, I will agree with his Excellency the Governor of *St. Augustin*, and the Council of War, That his Britannic Majesty's Subjects, under my Command, shall not molest, in any Manner whatsoever, any of his Catholic Majesty's Subjects, provided that his Catholic Majesty's Subjects do not molest any of his Britannic Majesty's Subjects, nor his Allies.

“ Fifthly, That concerning any Differences that have or shall arise, concerning the Limits of the respective Government and Dominions of the two Crowns, such Differences shall remain undecided, till the Determination of the respective Courts; and that the Subjects of each Crown here, shall remain in profound Peace, and not in any Manner molest each other, until the Determination of the respective Courts on this Subject.

“ Lastly, That no Person shall be received from any Garrison in either Government, without a Passport from the Governor to whom such Persons belong.

“ Given under my Hand and Seal, at *Frederica* in *Georgia*, the 27th Day of September, 1736.

“ By the Power to me given, by his Excellency *James Oglethorpe*, Esq; Governor and Director General of the new Colony of *Georgia*, by his Excellency's Procuration, bearing Date the 27th Day of October, in the tenth Year of the Reign of our Sovereign Lord *George* the Second, by the Grace of God of *Great Britain*, *France*, and *Ireland*, King, Defender of the Faith, &c. and in the Year of our Lord 1736: I do hereby confirm and ratify the above Articles, with his Excellency *Don Francisco del Moral Sanches Villegas*, Captain General and Governor of *St. Augustin* of *Florida*, and with the Council of War of the said Garrison of *St. Augustin*; as witness my Hand and Seal, this 26th Day of October, 1736.”

The Counter-part of this Treaty, executed by the Governor of *St. Augustin*, by the Advice, and with the Consent, of a Council of War, was certified by *Bartholomew Niotto*, Notary-Public, and I have it before me; but as it contains only a Repetition of the foregoing Articles, it seems unnecessary to insert it here, since what we have already given the Reader very sufficiently explains the Nature

Nature of this Treaty : But it seems the Governor of *St. Augustin* was not in the Secret of the Court ; for the *Spanish* Ministry at Home were very far from being desirous that a fair Correspondence should be established between the two Colonies. On the contrary, they aimed at obliging us to desist from our Design of settling the Colony of *Georgia* ; and with this View Sir *Thomas Geraldino*, on the 1st of *September*, presented a Memorial to his Grace the Duke of *Newcastle*, in which, among other Things, he was pleased to say, It is indisputable that the Colony of *Georgia* was settled upon his Master's Dominions ; so that a plainer Proof cannot be had, that the *Spaniards* were determined if possible, to oblige the Crown of *Great Britain* to give up this Settlement.

But as it was not very probable, that we should be induced to do this by Sir *Thomas Geraldino's* Memorials, the *Spanish* Ministry were contriving to do it by Force, and by transporting Troops into the *Spanish Florida*, from the adjacent Island of *Cuba*, and other Parts of their Dominions. It is true, that these Orders were mostly given before they had any Intelligence of the provisional Treaty concluded between the Governor of *St. Augustin* and Mr. *Oglethorpe* ; but when they did know of it, they were so far from laying aside their former Design, or even from suspending it, that they highly disapproved of the Governor's Behaviour in that Particular, the rather perhaps because it was altogether inconsistent with their own Projects and Pretensions. It is also very probable, that as the *Spanish* Councils were at that time wholly guided by those of *France*, this might contribute not a little to their forming Views of expelling us from *Georgia*, which the *French* without doubt consider as equally dangerous to them and their Schemes, or rather more so, than to the *Spaniards*, who on their Side have much more Reason to be offended with the *French* Settlements on the River *Mississippi*, than at our new Colony of *Georgia*. But be this as it will, the Preparations they made were in their Nature so open and extraordinary, that it was not long they could be concealed from our Governors, and other Officers in the *West Indies*, whose Duty it was to observe, and transmit Intelligence hither of Things of that Nature.

The Lieutenant Governor of *South Carolina*, having heretofore acquainted the Trustees by a Letter, dated from the Council-Chamber in *Charles Town*, the 7th of *February*, 1636-7, That he had received Advice from *Commodore Dent*, of Preparations made by the *Spaniards* at *St. Augustin* and the *Havanna*, in order to make an Attack on the Colony of *Georgia* ; and the Trustees having, in a Memorial to his Majesty, set forth the Inability of the Colony to protect themselves against such a Force as was preparing at the *Havanna* and *St. Augustin* ; his Majesty was graciously pleased to order a Regiment of six hundred effective Men to be raised, and sent to *Georgia*, for the Defence and Protection of it.

As an Encouragement for the Soldiers good Behaviour, the Trustees resolved to give each of them a Property in the Colony, and therefore made a Grant in Trust, for an Allotment of five Acres of Land to each Soldier of the Regiment, to cultivate for his own Use and Benefit, and to hold the same during his Continuance in his Majesty's Service. And for a further Encouragement, they resolved, That each Soldier who at the End of seven Years Service, from the Time of his enlisting in the Regiment, should be desirous of quitting his Majesty's Service, and should have his regular Discharge, and would settle in the Colony, should, on his Commanding Officer's Certificate of his good Behaviour, be entitled to a Grant of twenty Acres of Land.

The Parliament having taken into Consideration the great Expences which the Trustees had been at in making Roads through the Province, and the several Fortifications in it, and the Presents made to the *Indians* to engage them firmer in the *British* Interest, and likewise the Preparations that were making by the *Spaniards* in order to take or distress the Colony ; granted thereupon for this Year the Sum of twenty thousand Pounds, for the further settling and securing the Colony, the Trustees made another Em-

barkation, which consisted chiefly of persecuted *German* Protestants.

In Consequence of so considerable an Augmentation of People, all the Towns laid out in *Georgia* began to be improved, and to receive considerable Supplies ; and so mindful they were of their Security, that even at *Savannah*, which was least exposed to Danger, they traced out, and began to build, a considerable Fort ; and in all the Frontier Places, the utmost Care was taken to put the Fortifications into the best Posture of Defence that the Circumstances of the Province would allow. On the Arrival of the Regiment, of which Mr. *Oglethorpe* was appointed Colonel, he distributed them in the properest manner for the Service of the Colony ; but notwithstanding this was of great Ease to the Trustees, and a vast Security to the Inhabitants ; yet Colonel *Oglethorpe* still kept up the same Discipline, and took as much Care to form and regulate the Inhabitants with respect to military Affairs as ever. He provided likewise different Corps for different Services ; some for ranging the Woods ; others, light-armed, for sudden Expeditions ; and he likewise provided Vessels for scouring the Sea Coasts, and for gaining Intelligence. In all which Services he gave at the same time his Orders and his Example ; there being nothing he did not, which he directed others to do ; so that if he was the first Man in the Colony, his Pre-eminence was founded upon old *Homer's* Maxims : He was the most fatigued, and the first in Danger, distinguished by his Cares and his Labours, not by any exterior Marks of Grandeur, more easily dispensed with, since they were certainly needless.

The strict Attention shewn by the Trustees for their infant Settlement was so remarkable, and their Punctuality in supplying what was necessary, so generally known throughout *America*, that it was not long before it created some Inconvenience from the Address of such as were desirous of turning such Instances of public Spirit to their private Advantage ; for several Merchants, and Captains of Ships, had, for their own Interest, carried into the Colony from *New York* and other Places, large Cargoes of Provisions, &c. great Part of which (to save Merchants from Losses) were taken at the Store, without proper Authority from the Trustees, and an Expence created thereby, which the Trustees could not estimate, nor have Ability to discharge, and for which certified Accounts were returned to them ; and therefore the Trustees published an Advertisement in the *London Gazette*, and ordered it to be published in the *South Carolina Gazette*, and to be affixed on the Doors of the Store-houses at *Savannah* and *Frederica*, that out of a due Regard to public Credit they had resolved, That all Expences which they had ordered, or should order, to be made in *America*, for the Use of the Colony, should be defrayed and paid for in *Georgia*, in Sola Bills of Exchange only, under their Seal ; and they gave Notice, that no Person whatsoever had any Authority from them, or in their Name, or on their Account, to purchase or receive any Cargo of Provisions, Stores, or Necessaries, without paying for them in the said Sola Bills.

Yet they were as ready as ever in expending Money, where it was necessary and serviceable to the Colony ; for upon a Petition of one *Abraham de Lyon*, a Freeholder of *Savannah* in *Georgia*, That he had expended a great Sum in the Cultivation of Vines, which he had carried from *Portugal*, and had brought to great Perfection ; and several Certificates being produced of his great Improvements, and of the Goodness of his Grapes, and their thriving in the most barren Lands in the Province, the Trustees assisted him to proceed in his Improvements. But, to be the more able to supply these Expences, they took Care to be frugal, where it was practicable. And the Security of the Colony being provided for by the Regiment sent over by his Majesty, the Parliament gave eight thousand Pounds for the further settling the Colony ; therefore the Trustees sent over an Estimate of all the Expences which they allowed to be made in the Province ; by which several military Expences which they had been engaged in for the Defence of the Colony, and which were very great, were reduced.

In the Year 1738 the Trustees sent over the Reverend Mr. Norris to *Frederica*, with a Salary of 50 l. a Year, and Orders that a House should be built for him, and another provided for the Performance of public Worship, till such Time as a Church could be erected. But while their Cares were thus employed, they met with some Interruption from unforeseen Accidents, both without and within the Province: In respect to the former, the Assembly of *South Carolina*, having the last Year passed an Ordinance for raising a Sum to indemnify their Traders, in Opposition to the Act, which was approved of by his Majesty in Council, for maintaining the Peace with the *Indians* in the Province of *Georgia*; upon a Memorial from the Trustees, complaining of the said Ordinance; and upon the Petition of the Council and Assembly of *South Carolina*, against the said Act, there was a solemn Hearing before the Lords Commissioners for Trade and Plantations; and afterwards before a Committee of the Lords of his Majesty's Privy Council: Whereupon his Majesty was pleased to order, that the said Ordinance of Assembly of *South Carolina* should be repealed, and declared void; and was pleased to send an Instruction to the Trustees, to prepare a proper Act, or Ordinance, for settling the Trade, carried on by the Provinces of *South Carolina* and *Georgia* with the *Indians*, on such a Footing, as might be for the mutual Benefit and Satisfaction of both Provinces. And his Majesty, at the same Time, was graciously pleased to give an Instruction to *Samuel Horsey*, Esq; Governor, and Lieutenant General of *South Carolina*, to recommend to the Council and Assembly there, to pass a Law for that Purpose, in that Province. But *Samuel Horsey*, Esq; dying soon after, and no other Governor having since gone to *South Carolina*, that Affair remained unsettled. The Trustees immediately sent to Colonel *Oglethorpe* a Copy of his Majesty's Instructions, and desired that he would consult with Lieutenant Governor *Bull* in *South Carolina*; that Plans of proper Acts might be prepared, and sent over to the Trustees, for their Consideration, in order to answer the Purposes of his Majesty's Instructions; and that, in the mean Time, the Commissioners of *South Carolina*, and the Commissioners of *Georgia*, might proceed in their respective Provinces, in concert with each other, to carry on a mutual Trade to the *Indians* in both Provinces.

In Reference to the other Sources of Disturbance and domestic Disquiets, they were of different Kinds; but the greatest was owing to a Number of Persons enjoying the Benevolence due to the Colony, without any real Merit in themselves, or just Title thereto; for which, however, a Remedy was speedily provided. The Trustees, both by their Letters and Instructions to the Magistrates, had constantly exhorted and encouraged the People to a Cultivation of their Lands, on which they were to depend for their Support; and as they found that many (as well of those whom they had sent over as Objects of Charity, as of others, who at different Times had gone into the Country from other Colonies, for their temporary Maintenance) still continued in their Idleness, and were a Burden upon the Trustees; they gave Orders for striking off the Store, all such as having had Time to cultivate their Lands had neglected it. This carried from the Colony many of those who had gone thither, or joined it from other Parts of *America*, to gain a Subsistence for a Year or two, and of others who had not considered the Hardships attending the first Settlement of a Country, and were weary of their Labour. The Trustees receiving an Account, dated *February* 12, 1738, from their Secretary of the Province, of an Uneasiness among several Persons, upon the Tenor of their Lots being confined to Heirs Male; and they, considering that the Colony had been some Time established, the People grew more numerous, and a Regiment being stationed in it, for its Defence, whereby the former Tenures became less necessary; did, on the 15th of *March* following, at their anniversary Meeting, resolve, that in Default of Issue Male, the legal Possessor of Land, might, by a Deed in Writing, or by his last Will and Testament, appoint his Daughter as his Successor, or any other Female Relation; with a Proviso that the Successor should, in

the proper Court in *Georgia*, personally claim the Lot granted and devised within eighteen Months after the Death of the Grantor or Divisor. This was soon after extended to every legal Possessor being empowered to appoint any other Person as his Successor.

The mildest Governments are often but too subject to Discontents; and though the whole Study of the Trustees was to make their People as easy in their private Capacities, as their Duty to, and Concern for, the Public, would permit. Yet this did not hinder ignorant and malicious Persons, who either could not, or would not, comprehend the true Interests of the Colony, from endeavouring to raise fresh Disturbances, for the sake of obtaining what they thought might be of Service to them; and which, if they had judged rationally, they must have perceived would have turned to their Ruin. In short, Part of the People settled in *Georgia*, sent over a Memorial to the Trustees, complaining of the Want of a Fee-simple in their Lands, and of not being permitted the Use of Negroes. But those who were settled on the Frontier, and consequently most exposed to the *Spaniards* and others, who, by their own Industry, had improved their Plantations, so as to draw from them a comfortable Subsistence, sent over a contrary Memorial; in which they represented the Disadvantages and Dangers that would arise from the Permission of Negroes.

It likewise fell out, that at the very Time some of the People of *Savannah* were so clamorous for Negroes (for seventy-five Land and Freeholders, of whom fifty-two were Freeholders, did not apply for them) the Province of *South Carolina* was under frequent Alarms, upon Account of the Negroes there. They had Intelligence that a Conspiracy was formed by the Negroes in *South Carolina* to rise, and forcibly make their Way out of the Province, to put themselves under the Protection of the *Spaniards*; who had proclaimed Freedom to all that should run to them from their Owners. This Conspiracy was discovered at *Winyaw*, the most Northern Part of that Province, from whence as the Negroes must bend their Course, it argued, that the other Parts of the Province must be privy to it, and that the rising was to be universal; whereupon the whole Province were upon their Guard; the Number of Negroes in *South Carolina* being computed to be about forty thousand, and the Number of white Men, at most, not above five thousand. As several Negroes who were employed in *Perryauguas*, and other like Craft (which they carried off with them) had taken the Benefit of the *Spaniards* Proclamation, and gone to *St. Augustin*, the Government of *South Carolina* sent a solemn Deputation to demand their Slaves. This Deputation consisted of Mr. *Braithwaite*, a Member of the Council; Mr. *Rudlidge*, one of the Assembly; and Mr. *Binian*, Clerk of the Assembly. But the Governor of *St. Augustin*, though in Time of profound Peace, peremptorily refused to deliver them up; and declared he had Orders to receive all such as should come thither, and protect them. Upon this, and the Petitions which were sent from the *Highlanders* at *Darien*, and the *Saltzburgers* at *Ebenezer*, representing the Danger, and the Inconvenience, of the Introduction of Negroes; the Trustees sent under their Seal, an Answer to the Representation from some of the Inhabitants of *Savannah*.

In this Answer, which is dated *June* the 20th, 1739, the Trustees say, "That they should deem themselves very unfit for the Trust reposed in them by their Majesty on their Behalf, if they could be prevailed on by any such irrational Attempt, to give up a Constitution framed with the greatest Caution, for the Preservation of Liberty and Property; and of which the Laws against the Use of Slaves, and for the Entail of Lands, are the surest Foundations; and the Trustees are the more confirmed in their Opinions of the Unreasonableness of this Demand, and that they have received Notions from *Darien*, and the other Parts of the Province, representing the Inconvenience and Danger which must arise to the good People of the Province, from the Introduction of Negroes; and as the Trustees themselves are fully convinced, that besides the Hazards attending of that Introduction, it

“ would destroy all Industry among the white Inhabit-
 “ ants, and that, by giving them a Power to alien
 “ their Lands, the Colony would soon be too like its
 “ Neighbours, void of white Inhabitants, filled with
 “ Blacks, and reduced to be the precarious Property of
 “ a few, equally exposed to domestic Treachery, and
 “ foreign Invasion; and therefore the Trustees cannot
 “ be supposed to be in any Disposition of granting this
 “ Request; and if they have not, before this, signified
 “ their Dislike of it, their Delay is to be imputed to
 “ no other Motives but the Hopes they had conceived,
 “ that Time and Experience would bring the Complain-
 “ ants to a better Mind. And the Trustees readily
 “ join Issue with them, in their Appeal to Posterity,
 “ who shall judge between them, who were their best
 “ Friends, those who endeavoured to preserve for them
 “ a Property in their Lands, by tying up the Hands of
 “ their unthrifty Progenitors, or they who wanted a
 “ Power to mortgage or alien them? Who were the
 “ best Friends to the Colony, those who, with great La-
 “ bour and Cost, had endeavoured to form a Colony
 “ of his Majesty's Subjects, and persecuted Protestants
 “ from other Parts of *Europe*; had placed them on a
 “ fruitful Soil, and strove to secure them in their Pos-
 “ sessions by those Arts, which naturally tend to keep
 “ the Colony full of useful and industrious People, ca-
 “ pable both to cultivate and defend it; or those, who
 “ to gratify the greedy and ambitious Views of a few
 “ Negro-Merchants, would put it into their Power to
 “ become sole Owners of the Province, by introducing
 “ their baneful Commodity; which it is well known,
 “ by sad Experience, has brought our Neighbour Colo-
 “ nies to the Brink of Ruin, by driving out their white
 “ Inhabitants, who were their Glory and Strength, to
 “ make room for black, who are now become the
 “ Terror of their unadvised Masters?”

The Trustees had great Reason for proceeding as they did in this Respect; since among the Persons to whom Grants were made, in order to their settling at their own Expence in the Colony, some never went over to take them up, or to settle at all; others were Gentlemen of *Carolina*, who neglected the Prosecution of their Grants, and never so much as desired to have their Lands laid out; and of the rest, several had quitted their Plantations, and the laborious Life of Planters, to go and reside more at their Ease at *Savannah*; where, by the Exercise of their several Trades and Professions, they brought many of the People in Debt; and besides all this, Horse-Races and other Diversions were set on foot, and such a Spirit of Idleness began to prevail, as very easily accounted for their Eagerness in desiring to have Negroes granted them; and plainly shewed with what fatal Consequences it must have been attended, if the Trustees had not remained firm to their first Resolutions, and had not given such an Answer as shewed they were resolved to preserve that Spirit in the Colony upon which it was settled, and which could alone render it worth that Care, which had been hitherto taken of it by the Public. However, to make the People as easy and contented as they could, they published an Advertisement in the *London Gazette*, the 8th of September, 1739, and other Papers, which were continued for several Days, and ordered it to be published in the *South Carolina Gazette*; that they had resolved to enlarge their Grants on Failure of Issue Male, and to make a certain Provision for the Widows of the Grantees, in the following Manner, viz. That the Lands already granted, and such as should hereafter be granted, should, on Failure of Issue Male, descend to the Daughters of such Grantees; and in case there should be no Issue Male or Female, that the Grantees might devise such Lands; and for want of such Devise, that such Lands should descend to their Heirs at Law, with a proviso that the Possession of the Person who should enjoy such Devise, should not be increased to more than five hundred Acres; and that the Widows of the Grantees, should hold and enjoy the dwelling House, Garden, and one Moiety of the Lands their Husband should die possessed of, for, and during the Term of, their Lives. The Trustees directed in the Advertisement, that those who

intended to have the Benefit given them, should enter their respective Claims, in order that proper Grants and Conveyances in the Law might be forthwith prepared and executed for that Purpose; and that no Fee or Reward was to be taken for the entering any such Claim, directly or indirectly, by any Person or Persons whatsoever. It appears clearly from these Concessions, how very desirous the Trustees were of giving the People, settled in *Georgia*, all imaginable Satisfaction, consistent with the Scheme they had formed of securing these Lands to the actual Planters, and thereby prevent those Inconveniencies, to which others, particularly the southern Colonies, were liable, and which would have been so much the more fatal in a Colony, the chief Inducement to establish which, was the making a strong Frontier.

9. The *French*, who by degrees grew more and more uneasy at the Settlement of *Georgia*, and our Intercourse with the *Indians*, began to make use of every Method they could devise, in order to create Differences and Jealousies between us and the *Creeks*, which was no sooner known, than it greatly alarmed, not only the People settled in *Georgia*, but the whole Province of *Carolina*, from a just Sense of the Danger they should be in, if the *French*, either by their Artifices or Presents, should draw over the *Creek Indians* to their Party, as appears by their Applications, both to Colonel *Oglethorpe*, and to the Government at home. Upon this Mr. *Oglethorpe* thought it necessary to enter into a close Alliance with this Nation; and therefore resolved upon a Journey to the *Coweta* Town, though at the Distance of no less than five hundred Miles from *Frederica*, where he then was, and through a Country very little known to, and very difficult for, *Europeans* to travel. He provided him, however, with Horses and Presents fit for the Purpose; set out for that Place, and after a painful and fatiguing Journey, reached it in Safety, where he was received by the *Indians* with all imaginable Marks of Friendship and Respect; and where he had an Opportunity of conferring, not only with the Chiefs of all the Tribes of this Nation, but also with the Deputies of the *Choctaws* and *Chickesaws*, who lie between the *English* and *French* Settlements, and who had sent their Deputies thither with that View. The Consequence of this Meeting was, the making a new, more full, and explicit Treaty with the *Lower Creeks*, than the former; which was of so great Consequence, that Colonel *Bull*, Lieutenant-Governor of *Carolina*, declared, that if the *Creeks* could be secured, they should be under no Apprehensions from the Intrigues of the *French* with the other Nations; and, that this was effectually done, the Reader will perceive from the Perusal of the Treaty then concluded with that Nation; of which the following is a Copy from an Instrument, containing the Exemplification of the said Treaty, under the Seal of the Province of *Georgia*, with all the necessary Certificates from the Magistrates, indorsed thereupon; and which ought therefore to be considered as the most authentic Evidence of that Gentleman's Diligence, Zeal, and Success, in the Service of his Country, and of the *British Colonies* in *America*.

Proceedings of the assembled Estates of all the Lower Creek Nations, held on Saturday, the 11th Day of August, Anno Domini 1739.

“ By Powers from his most sacred Majesty *George* the
 “ Second, by the Grace of God King of *Great Britain*,
 “ *France*, and *Ireland*, &c. General *James Oglethorpe*
 “ being appointed Commissioner, was present in the
 “ Behalf of his Majesty, and opened the Assembly by a
 “ Speech. There were also present at the said Assembly
 “ of Estates, the Mico, or King, of the *Coweta* Town;
 “ *Chickley Ninia*, Mico of the said Town; *Malachi*, Mico,
 “ Son of *Brim*, late Emperor of the *Creek* Nation, and
 “ the chief Men and Warriors of the *Coweta* Towns;
 “ the Mico, or chief King, of the *Cussitas*; and *Sciskeligo*,
 “ Mico, next to the King of the *Cussitas*; *Iskeigo*, third
 “ chief Man of the *Cussitas*, and the other chief Men
 “ and Warriors of the said Town; and also *Ocakcha-*
 “ *pacho*,

“ *pacho*, and the chief Men of the Town of *Polachuchulas*;
 “ *Kolatto*, chief War-Captain, and other chief Men
 “ and Warriors; being Deputies, sent with full Powers
 “ to conclude all Things necessary for the said Town.
 “ *Tawmarwme*, Mico of the *Ufawles*, with several other
 “ chief Men and Warriors; being Deputies sent with
 “ full Powers to conclude all Things necessary for the
 “ said Town. *Metalccheko*, War-Captain of the *Echetees*,
 “ with several other chief Men and Warriors; being
 “ Deputies sent with full Powers to conclude all Things
 “ for the said Town. *Neathacklo*, chief Man of *Ocsa-*
 “ *chees*, with several other chief Men and Warriors,
 “ sent with full Powers to conclude all Things for the
 “ said Town. *Ocullaveche*, chief Man of the *Cbecaws*,
 “ with several other chief Men and Warriors; being
 “ Deputies sent with full Powers to conclude all Things
 “ for the said Town. *Howanawge Thalacko*, chief Man
 “ of the *Oxmulges*, with several other chief Men and
 “ Warriors; being Deputies sent with Powers to con-
 “ clude all Things for the said Town. The Mico, or
 “ chief King, of the *Occouys*, with several chief Men and
 “ Warriors, having full Powers to conclude all Things
 “ for the said Town. *Nealboclo*, a second chief Man of
 “ the *Swales*, with several other chief Men and Warriors;
 “ being Deputies sent with full Powers to conclude all
 “ Things for the said Town. The said Estates being
 “ solemnly held, and opened at the great Square in the
 “ Town of *Coweta*, and adjourned from thence to the
 “ Town *Cussitas*; and the Deputies having drank black
 “ Drink together, according to the ancient Custom of
 “ their Nation (being a religious Form, transmitted down
 “ by their Ancestors) the whole Estates declared, by a
 “ general Consent, without one Negative, that they ad-
 “ hered in their ancient Love to the King of *Great*
 “ *Britain*, and to their Agreements made in the Year
 “ one thousand seven hundred and thirty-three, with the
 “ Trustees for establishing the Colony of *Georgia* in
 “ *America*; a Counter-part of which Agreement was
 “ then delivered to each Town; and the Deputies of
 “ the several Towns produced the same; and farther
 “ declared, That all the Dominions, Territories and
 “ Lands, from the River *Savannah*, to the River *St.*
 “ *John’s*, and all the Islands between the said Rivers;
 “ and from the River *St. John’s* to the Bay *Appallache*,
 “ within which is all the *Appallache* old Fields; and from
 “ the said Bay of *Appallache*, to the Mountains; doth
 “ by ancient Right belong to the *Creek* Nation, and
 “ they have maintained Possession of the said Right,
 “ against all Opposers by War; and can shew the Heaps
 “ of Bones of their Enemies slain by them, in Defence
 “ of the said Lands. And the said Estates further de-
 “ clare, that the *Creek* Nation hath, for Ages, had the
 “ Protection of the Kings and Queens of *England*, and
 “ that the *Spaniards*, nor no other Nation, have any
 “ Right to any of the said Lands, and that they will
 “ not suffer them, or any other Person, except the
 “ Trustees for establishing the Colony of *Georgia* in
 “ *America*, to settle on the said Lands. And they do
 “ acknowledge, by the Grant they have already made
 “ to the Trustees for establishing a Colony of *Georgia*
 “ in *America*, all the Lands upon the *Savannah* River,
 “ as far as the River *Ogeeche*; and all the Lands along the
 “ Sea Coast, as far as the River *St. John’s*, and as high
 “ as the Tide flows, and all the Islands as far as the said
 “ River, particularly the Islands of *Frederica*, *Cumber-*
 “ *land*, and *Amelia*, to which they have given the
 “ Names of his Majesty’s Family, out of Gratitude to
 “ him. But they declare, that they did and do reserve
 “ to the *Creek* Nation, all the Land from *Pipemakes*
 “ *Bluff*, to *Havanna* and the Islands of *St. Catharina*,
 “ *Ossebarw*, and *Sappalo*. And they further declare,
 “ That the said Lands are held by the *Creek* Nation as
 “ Tenants in common. And the said Commissioner
 “ doth declare, That the *English* shall not enlarge, or
 “ take up any other Lands except these granted as above
 “ by the *Creek* Indian Nation, to the Trustees: And
 “ doth promise and covenant, That he will punish any
 “ Person that shall intrude upon the said Lands which
 “ the *Creek* Nation hath reserved, as above. Given

“ under my Hand and Seal this 21st Day of *August*, at
 “ the *Coweta*-Town, 1739.

James Oglethorpe.

At this Distance, it is a very difficult, if not imprac-
 ticable, Thing, to give the Reader a clear and distinct
 Intelligence of the Difficulties surmounted, and the Ad-
 vantages acquired by Mr. Oglethorpe’s Journey, and his
 Success in concluding this Alliance: We will, however,
 endeavour to represent them as clearly and as fully as we
 can. In the first place, his making such a Journey as
 this, gained him a great Reputation with the *Indians*;
 impressed upon them Sentiments of deep Respect for the
English Nation, and of particular Affection for the Colony
 of *Georgia*. At the same time it struck the *French* with
 Amazement; some of their Governors of *Canada* had
 indeed made considerable Journeys from *Quebec*, in or-
 der to confer with the *Indians*, and to conclude Treaties
 with them; but then they always thought it requisite
 to be well attended, and never made these Excursions
 but at the Head of a considerable Body of regular
 Troops. Whereas General Oglethorpe had no such
 Attendants, but relied entirely on the good Faith of the
Indians, and of his own Behaviour towards them. He knew
 the Consequence of their living in sincere Amity with the
English; and he was willing to run any personal Hazard
 necessary to establish it. In short, he found it requisite
 for the Welfare of the Colony which he had settled, that
 they should be able to place an intire Confidence in the
Indians, and the *Indians* in them; which reciprocal
 Confidence he actually procured, by reposing himself
 entirely on their Faith; and by the Treaty that he con-
 cluded with them.

His coming to the *Coweta* Town dissipated all their
 Fears, and extinguished all their Jealousies; they told
 him so fairly in their first Conferences. They said it had
 been insinuated to them, that he was come into that
 Country to deprive them of their Land; and that they
 had been assured, he was actually preparing to invade
 them; but they were now convinced that these were all
 Falshoods and Calumnies; that he really meant them all
 the Good they could expect; and that instead of injur-
 ing them by the Settlement he was making, it would
 prove a new Security to them, as well as to the *English*;
 and put it out of the Power of their common Enemies to
 hurt either. For which Reason they were, on their Parts,
 ready to do all that he could expect from them, and were
 perfectly satisfied that he would perform his Engagements
 towards them, with the like Punctuality. There is no
 Wonder therefore, if the *French* were excessively alarmed
 on the News of this Conference, and of the Alliance
 which General Oglethorpe had concluded; since they
 could consider it in no other light, than as the first Step
 to a general Confederacy with all the *Indian* Nations that
 had met at, or sent Deputies to, the *Coweta* Town; from
 whence they foresaw many and great Inconveniencs to
 themselves; for, in the first Place, this new Treaty with
 the *Creeks*, defeated all the Measures they had been
 taking, unravelled all their Designs, and connected that
 Nation more closely than ever with the *English*, which
 in itself was a very great and unlooked for Disappoint-
 ment.

But that was not all, they clearly comprehended that
 by this Means we should not only keep our old Friends,
 but draw off also some of theirs. Of all the Nations that
 bordered upon them, they are most afraid of the *Chic-*
kefaws, whom they look upon as the fiercest and bravest
 Race of *Indians* in *America*, with whom they have never
 been upon good Terms, more especially since the Year
 1731, when they discovered, or pretended to discover, a
 Design they had formed, to surprise and destroy all their
 advanced Settlements. They were also in a very great
 Fear of the *Choctaws*, or as the *French* call them *Tchoctas*,
 both because they are a very numerous Nation, and are
 so situated as to be able, at any time, to disturb and
 disquiet their Settlements. But it soon appeared by Ex-
 perience, that the new Treaty operated successfully, since
 the Governor of *New York*, having given Information
 to Colonel *Bull*, of *Carolina*, of the March of a Body of
 French

French Troops, and *Indians* from *Quebec*, with Intent to attack the *Indians* in Friendship with *England*; but though this put the People of *Carolina* and *Georgia* upon their Guard, there followed nothing from it; for the *French* found the *Indians* well prepared and disposed to receive them, and therefore desisted from their Design, for fear it should produce a general War, that might prove fatal to the Colonies on the *Mississippi* River; the People of which were excessively apprehensive of what might happen from the general Confederacy of the neighbouring *Indians* against them.

The Trustees proceeded as vigorously as it was possible in the Execution of every Part of their Scheme; and having, with such unwearied Diligence, provided for the Settlement of a new Colony, and for the Security of its Frontiers, they began next to employ their Skill and Pains, to promote all kinds of Improvements; and were especially solicitous to obtain from thence some Specimens of the Possibility of raising, in that Country, the Commodities that were expected from it. They very well knew that this required hard Labour, and that nothing had accrued to *Great Britain* worth speaking of, from any of the Colonies in *America*, in many Years longer than this Settlement of *Georgia* had been made. But on the other Hand, they also knew that the *English* Nation was naturally impatient; that great Sums of Money had been issued for the Service of this Colony; that great Expectations were had of it; and that, if nothing soon appeared, however certain in themselves, and just in their Nature, no Excuses would prevail. They therefore recommended it to their Servants in *Georgia*, to use their utmost Skill and Diligence in promoting the Culture of Mulberry Trees and Silk, so that it might be, at least, demonstrated, that they were not deceived in their Expectations; but that in due Time, and with reasonable Encouragement, the Nation might hope to see a full Return in that Commodity, for the Expence she had been, and must be, at, in bringing the Colony of *Georgia* to Perfection. For they persuaded themselves, that from the Methods they had used in sending over proper Persons for the Management of that Business, their Demands, with a due Degree of Care and Diligence in their Servants, might be answered, which would afford them an Answer to all Objections.

A Parcel of raw Silk was accordingly brought this Year from *Georgia*, by Mr. *Samuel Augspourguer*, who made an Affidavit, before a Master in Chancery, that he received it from the Hands of Mr. *Thomas Jones*, the Trustees Store-keeper at *Savannah*, who told him it was the Produce of *Georgia*; and the said *Samuel Augspourguer*, who resided in the Southern Part of the Province, said, That when at *Savannah*, he saw the *Italian* Family there winding off Silk from the Coquons. The Silk was shewed at the Trustees Office, to Mr. *John Zacary*, an eminent Raw-Silk Merchant, and Mr. *Booth*, one of the greatest Silk Weavers in *England*, who declared it was as fine as any *Italian* Silk; and that it was worth, at least, twenty Shillings a Pound. This Mr. *Samuel Augspourguer*, who joined the Colony in the beginning of the Year 1736, left it in July 1739, with two Men Servants and their Children, on his Plantation, and came over to obtain a Grant of five hundred Acres of Land, and to get some of his Countrymen from the Canton of *Bern* in *Switzerland*, to go with him as Servants, on his return to *Georgia*, in order to proceed more effectually in the Cultivation of his Lands.

The Trustees, this Year, also took further Methods for the Satisfaction of the People in the Province. They extended the Tenures, by which the Daughter of a Grantee, or any other Person, was made capable of enjoying, by Devise, or Inheritance, any Quantity of Lands which did not increase her or his Possession, to more than two thousand Acres. A Licence was also granted for all the present Possessors of Land in *Georgia*, to make Leases of any Part of their Lots, for any Term not exceeding three Years, to any Person residing in *Georgia*, and who should reside there, during the Term of such Lease. A general Release was likewise passed, by which no Ad-

vantage was to be taken against any of the present Possessors of Land in *Georgia*, for any Forfeiture incurred at any Time before *Christmas* 1740, to the Tenure or Cultivation of Land; and the Possessors of fifty Acres were not obliged to cultivate more than five Acres thereof, in ten Years from their Grants; and those of under fifty Acres in Proportion; and the Possessors of five hundred Acres of Land were not obliged to cultivate more than one hundred and twenty Acres thereof, in twenty Years from their Grants; and those of under five hundred Acres, and above fifty Acres, in proportion, to prevent any Forfeiture for want of cultivating the Quantities required. Under these Circumstances it is presumed that no Complaint can now, with Reason, be made against the Tenure, by which the Inhabitants at this Time hold their Lands, since they have more Power than is generally given by Marriage Settlements, in which the Grantees are only Tenants for Life, incapable of mortgaging, or alienating, or making any Disposition by their last Will: Whereas the Freeholders in *Georgia* are now become Tenants in Tail-general, and may, with the Licence of the Common Council of the Trustees, upon Application made to them for that Purpose, mortgage, or alien, and further, without Application, have it absolutely in their Power, on Failure of Issue in Tail, to dispose thereof by their last Will. At least this was all the Trustees thought themselves at Liberty to do, considering the Obligation they were under to the Public, as well as to the Settlement; and that they were as much bound to provide, that the Nation had a just Satisfaction for what she disbursed in Favour of the Colony, as that the Inhabitants of *Georgia* should be made easy in their Settlements, and meet with sufficient Encouragement to proceed with Industry in all their Undertakings; and with this double View, to the Service of the Public, and the Welfare of the Settlement, all their Applications at home, and all their Directions abroad, are to be referred.

9. We have now run through the History of this Province for above seven Years, that is, from the time of projecting such a Settlement as this on the South Frontier of *Carolina*, to the carrying that Design into Execution, and bringing the new Province into some tolerable Degree of Order; and, in the Course of our History, we have had occasion to observe, from time to time, what Care and Circumspection has been used, to render it useful to those Ends for which it was intended. We have taken notice of the Sense which the whole Province of *Carolina* had of the Necessity, as well as Expedience, of such a Settlement. We have shewn, that those who were sent over were disciplined in such a manner, as to be able to defend, as well as acquire, Property. We have set down the Reasons why Negroes were prohibited; and those Reasons very clearly prove, that the Colony could not have answered any of those Ends for which it was established, if Negroes had been permitted. We have given some Account, and, if the Bounds of this Section would have permitted, we should have given a farther Account, of the Jealousies entertained by the *Spaniards* and the *French* on Account of this Settlement, which we conceive to be so many demonstrative Proofs of its Utility. We have given the Reader a large Extract from the Memorial of the Assembly of *South Carolina*, setting forth, in the clearest and strongest Terms, the Wants of that Province, and the Points in which they stood in need of Assistance. We have shewn, by a plain Narrative of Facts, how agreeable the Conduct of General *Oglethorpe* was to the Demands of that Memorial; and how far, by the happy Success attending those Endeavours, they have been answered, more especially by his last Treaty with the *Creek Indians*, which, as we shall have Occasion to shew hereafter, has effectually answered his Ends and theirs, so as not only to come up to, but even to exceed and go beyond, their Expectations. We have likewise, from time to time, exhibited the Alterations that, in Compliance with the Peoples Desires, the Trustees have thought fit to make in their Constitution, for the Ease and Encouragement of the Planters. And we have likewise given an Instance, that they have not been disappointed

pointed in their Views as to the Produce of this new Colony; but that it is both possible and practicable to raise therein as good Silk as we can purchase with Money (which is, generally speaking, the Case at present) from any Part of the World.

It remains, according to the Plan that we have laid down, to give a Description of this new Province in the Manner it is now settled, that the Reader may see what the Fruits have been of the Care and Expence of the Legislature, the Prudence and Attention of the Trustees, and the Vigilance and Activity of those intrusted by them in the Management of their Affairs in this Part of the World. And though, as yet, they have not received so copious and so exact a Description of their new Colony as they expect; yet, from what we are enabled to say upon this Subject, it will incontestibly appear, that much has been done, that many Towns have been settled, great Improvements made in the Neighbourhood of each of them, several Fortresses erected, due Care taken of the Frontiers, and, in a Word, as much performed as could be rationally expected in so short a Space of Time, and all Circumstances considered.

The Town of *Savannah* is about ten Miles up the River *Savannah*. There are, besides Warehouses and Huts, at least one hundred and thirty Houses in the Town. As these, for the sake of Air, and to prevent the spreading of any Fire, are built at some Distance from each other, they make several spacious Squares and wide Streets. There is a regular Magistracy settled in the Town, which the Trustees are obliged to be at the Expence of supporting, till the Colony arrives at sufficient Strength to do it. There are, in the Town, a Court-house, a Store-house, a Goal, a House for the Trustees Servants, a Wharf, a Guard-house, and some other public Buildings. A Church is at present building, and a Clergyman is settled there. The Town is excellently situated for Trade, the Navigation of the River being very secure, and Ships of three hundred Tons can lie within six Yards of the Town, and the Worm does not eat into them. About four Miles from *Savannah*, inland from the River, are the two Villages, *Highgate* and *Hamshead*, which lie at about a Mile distance from each other: The People settled there apply themselves chiefly to Gardening, and supply the Town of *Savannah* with Quantities of Greens, and Garden-stuff: There are twenty Plantations within twenty Miles round *Savannah*, which have each of them from five to thirty Acres of Land, shared.

About fifteen Miles from *Savannah* is a Village called *Abercorn*; about twenty Miles further up the River is the Town of *Ebenezer*, where the *Saltburghers* are settled with two Ministers; one of whom computed, that the Number of his Congregation, in July 1738, consisted of one hundred and forty-six; therefore, as the Infants could not be reckoned in the Computation, and as seven more have since been sent and settled with them, it is believed the Numbers have increased, especially since the Town is so healthy, that by a Letter sent to the Society for promoting Christian Knowledge, by the Reverend Mr. *Bolzius*, one of the Ministers at *Ebenezer*, dated the 26th of June 1740, he declared, That in a Year's time one Person only had died, which was a Child fourteen Years old. The People are industrious and sober, they raise not only a sufficient Quantity of Corn and other Produce for their own Subsistence; but they sell great Quantities to those at *Savannah*, who have not been so careful of their Plantations. They have great Herds of Cattle, and are in so thriving a Condition that not one Person has abandoned his Settlement, or sent over the least Complaint about the Tenures, or the Want of Negroes: On the contrary, they in a Body petitioned against the Use of Negroes; and their Ministers have declared, that their signing that Petition was a voluntary Act; and at their Desire another Embarkation of their Countrymen, who are willing to go from *Germany* and join them, is designed to be sent with all convenient Speed.

About ten Miles from hence, upon a River running into *Savannah*, is a Place called *Old Ebenezer*, where is a Cow-Pen, and a great Number of Cattle for the Use of

the Public, and for Breeding. At a considerable Distance from hence is the Town of *Augusta*, before described, which, from the great Resort of Traders and *Indians*, is in a thriving Condition, and is, and will be, a great Protection to both the Provinces of *Carolina* and *Georgia* against any Designs of the *French*. In the southern Part of the Province is the Town of *New Inverness*, upon the River *Altamaha*, where the *Highlanders* are settled. And about twenty Miles from hence, on the Island of *St. Simon*, near the Sea, is the Town of *Frederica*, with a regular Magistracy, as at *Savannah*, supported at the Expence of the Trustees: Strong Fortifications round the Town are almost finished. And at the South-east Point of the Island, are Barracks for three hundred and thirty Men. There are Settlements on the Islands of *Iekyl* and *Cumberland*, which lie a small Distance from each other to the southward of *Frederica*; and on the last two Forts are built, one of which was described before, and the other was finished in April 1740.

Upon the South-end of the Island it commands the Inlet of *Amelia Sound*, is strongly pallisaded with Flankets, and is defended by eight Pieces of Cannon: Barracks are built upon this Island for two hundred and twenty Men, with Store-houses, which were finished in October 1738. There are six Forts in the Province, and a Battery of Cannon erected to secure the Harbour at *St. Simon's*, under which Ships may safely lie. The *Indians*, from the Presents which they have annually received from the Trustees, and from the Justice and Humanity with which they have been treated, are secured in the *British* Interest, notwithstanding the Arts both of the *French* and the *Spaniards* to seduce them. By this, *South Carolina* has been free from Wars, in which (as the Preamble to his Majesty's Charter set forth) they had frequently suffered, and so late as the Year 1715 had been laid almost waste with Fire and Sword; and by the Security which *South Carolina* received by such a Frontier as *Georgia* is to it, very large Tracts of Land have been cultivated in the southern Part of that Province, which no Person would venture to settle on before; and a great Quantity of Rice raised thereon.

This is a clear Proof of the Injustice of supposing that the Nation hath hitherto received no Advantage from this Colony; since whatever has been gained by *Carolina*, in virtue of the Protection she enjoys by the Settlement of this new Province, ought to be looked upon and considered as the Produce of *Georgia*; and though even this may not be any great Matter hitherto, yet as it is an Instance of the Benefits to be expected from this Colony, it ought to be kindly accepted, as an Earnest of better Things. As to the Number of People sent over to, and settled in, *Georgia*, within the Space of eight Years, they amounted to upwards of two thousand, taking in those that went at their own Expence, which, if compared with the small Number of People that were in *Carolina*, after it had been settled forty Years, will enable us to distinguish between the Consequences of Attention to private Profit, and Concern for the public Good: To say the Truth; of all the Methods that have been hitherto tried, in fixing Colonies in distant Parts of the World, this may very truly and on good Grounds be pronounced the best; because by it due Provision is made, that the People sent over shall all be carefully settled and well taken Care of, and supported from time to time with proper Supplies; that this Care should not cease immediately, on their having Plantations, but be continued till the People are in a Condition to support themselves.

By this Method Towns are formed, not at Random and by Chance, but in proper Situations, and for good Reasons; not purely for the sake of immediate Advantages, but with Views to the general Good, and future Benefit of the Colony. By this Means, every Step made by the rising Plantation may be directed to public Use, and every Measure be calculated for the Service of the Mother-country; which cannot be expected where Grants are made to the Use, and for the Service, of particular People, where Numbers of Men transport themselves for the sake of a better Livelihood, at their own Expence, or where People are transported against their Will; since in all these Cases it is to be presumed, that Men will

follow the Bias of their Inclinations or Interests; but as in this Case, where the Public is at the Expence, and where the Management is intrusted with Persons of Distinction for the Benefit of the Public, nothing of this kind can happen; they will be sure to discharge their Duty, and in Proportion, as the Colony increases and answers the Ends of those who compose it, it will be likewise sure to answer those Ends for which it was settled. Besides all this, the Form of Government, the enacting proper Laws, and the Spirit originally infused into the People, will render such a Colony more dutiful and observant to her Mother-country, than any that want these Advantages.

Lastly, we may be sure that in such a Colony, the Produce will be managed most to the Advantage of the Country from whence it is settled; as for Instance in this of which we are speaking, due Care will be certainly taken that they do not run into the Cultivation of such Commodities as are already produced in the neighbouring Colonies, but bend their Endeavours to the promoting of such as have not been yet raised to any great Advantage in those Colonies, though perhaps their Soil and Climate were sufficiently fit for them. Flax, which as we have before shewn, may be cultivated here to the greatest Advantage, will be certainly attended to; and so also Potashes and Silk, which above all Things claim our Care, of which we had formerly great Hopes from *Virginia*; and with a View of obtaining of which *Carolina* was actually settled; but in both we were disappointed for want of some proper Authority to direct a continued Application in the Planters settled there for that Purpose, without which nothing that does not turn to large Profit immediately can be brought to Perfection; but in Colonies settled by Trustees, their Recommendation will go far, their Authority farther enforce what they desire, and Premiums enable them with Certainty to procure Success; as we shall have Occasion to shew hereafter.

Our Aim at present is to prove the Excellency of this Method of Settling, which far surpasses that of establishing exclusive Companies, as will be evident if we consider that they regard their own Profit solely, and as soon as they have fallen into Ways of promoting it effectually, they forget the Obligation received from the Public, as is but too evident in many Cases, and has justly occasioned almost a general Outcry against such Companies; whereas a Board of Trustees constituted for a limited Time, inspect the Concerns, and promote the Welfare, of a rising Colony, and by their Commission cease to have Power over it when their Care is no longer necessary; but as for Companies, they keep all who belong to them continually in Leading-strings, and never consider how Trading may be made beneficial to a Nation in general; but how it may be ordered so as to become most beneficial to themselves. But it is time to quit these Reflections, in order to resume the Thread of our History, and to shew how, after a few Years Peace, this Colony became strong enough, not only to hold up her Head and preserve her Being; but to repulse her Enemies, and prove a Security to all her Neighbours in time of War; a Thing wonderful in all Respects, and of which Posterity will speak with Admiration, though from an unaccountable Negligence, and want of Attention, in the present Age, we are scarce so well acquainted with that Transaction as it deserves.

II. The Government in *Great Britain* having, after many repeated Insults and Provocations, found themselves under a Necessity of obtaining Satisfaction from *Spain* by Force, a Squadron for that Purpose was sent to the *West Indies*, and Orders issued to the Governors of our respective Colonies, and others his Majesty's Officers in *America*, to annoy the *Spaniards* by all Methods possible. These Orders were received by Mr. Oglethorpe, in Quality of general Commander in chief, in the latter end of the Month of *September*, 1739. Whereupon he immediately considered of Ways and Means for putting them in execution; in order to which he put his own Regiment, and all the Forces he could raise in *Georgia*, into the best Condition possible. He sent to inform the *Cherokees*, and other *Indian* Allies, of the Situation that Affairs were in, and to empower them to enter into the

Spanish Territories. He also sent up to *Charles-Town*, to acquaint the Governor and Assembly with the present Posture of Things; and to acquaint them with his Readiness to undertake an Expedition against *St. Augustin*; for the joint Service of *Carolina* and *Georgia*. The plain Reason that he was desirous of beginning to act offensively against the *Spaniards* was, to raise the Spirits of his own People, to divert the *Spaniards* from the Designs which they were forming to our Prejudice, and to keep the War at the greatest Distance possible.

It is very clear, that from the Situation of Things in *Georgia*, it was altogether impossible for him to obtain a Force sufficient for the Execution of these Designs, without the Assistance of the Province of *Carolina*; and as it was of equal Importance to that Province, that those Designs should be carried into Execution, it was but reasonable for him to expect, that all the Assistance possible should be given him. Governor *Bull*, upon the General's Application, acquainted the Assembly of *Carolina* with what had been proposed; and as they were very sensible of the Importance of the Undertaking, of the Views the *Spaniards* had to their Prejudice, and of the Preparations they were making to annoy both Provinces, they shewed a Disposition to give him what Assistance was in their Power.

But at the same time that they had these Inclinations, they could not help considering the Situation of the Province, which under its Circumstances at that time, was very far from being in a Condition to enter into a large Expence, unless there was a great Probability of Success; by which it seems they understood the reducing the Fortress of *St. Augustin*, with the Strength of which, as it was a regular Fortification, had always in it a good Garrison, and was highly considered by the *Spaniards*, they were very well acquainted; and they knew, besides, that several former Attempts upon that Place had been disappointed. That they might act therefore in such a manner as might equally shew their Zeal for his Majesty's Service, and their Regard for the Welfare of their Constituents, the Assembly directed, that General *Oglethorpe* should be desired to explain himself fully, as to the Nature of the Assistance he expected, and the Ends he conceived it might answer, in case they should agree to grant him the Assistance he required.

Upon which the General, by the following Letter, dated at *Frederica* December the 29th, 1739, laboured to give them all the Satisfaction that was possible, as well in Regard to the Matters under their Consideration, as with respect to his own Conduct, in Reference to the Designs he had in View, and the Assistance he expected. This Letter was conceived in the following Terms, viz. "I send up with this an Officer to concert Measures for the Siege of *St. Augustin*; it will be necessary to have twelve Cannons of eighteen Pounders each, with two hundred Shot for each Gun, and Powder proportionable; one Mortar-Piece, and Bombs, with Powder sufficient; eight hundred Pioneers, Negroes, or white Men, with Tools sufficient for that Number of Men; such as Spades, Hoes, Axes, and Hatchets, to dig Trenches, make Gabelines, and Fascines. If they are Negroes, there must be white Men sufficient to guard them, and oversee them; Vessels and Boats sufficient to carry the Artillery-Men, Provisions, &c. We shall have one thousand *Indians*; six thousand Bushels of Corn will be necessary to feed them, or Rice proportionable; also as many Horsemen as can be had, who may pass over the River *Savannah*, and passing the *Oakmulgy*, and *Orony*, and from thence to the Ferry, on the River *Alata*, where they may pass over into the *Spanish Florida*. Captain *M'Pherson*, or Mr. *Jones* of *Ponpon*, can shew them the Path; for I should think the People of *Carolina* would do very well to raise a Troop of Rangers, under the Command of Captain *M'Pherson*, who is a very good Officer. Captain *Warren* assured me that he would be very willing to assist in convoying the Vessels, and in carrying Cannon, &c. The *Cherokee Indians* have promised me to be down in *March*; I have not heard from the *Creek* Nation lately, but I expect them down about " the

the same Time, and have had a Party of them with me for some Months. I can march four hundred Men of the Regiment, and leave sufficient for the Garrisons behind me. I have ordered three Troops of twenty Men each to be raised, but I have been disappointed of Horses by Captain *Cuthbert's* Death, so I have got yet only twelve. If the *Carolina* People will pay them, I believe they may raise fifty very good Men at *Purrisburg*. I should desire four Months Provisions for four hundred Men of the Regiment, of Rice and Meat, with Boats for carrying it to *St. Augustin*, at the Rate of one Pound of each *per Diem* for each Man. I have thirty-six Cohorns, and about eighteen hundred Shells: Of the People of the Province of *Georgia* I cannot draught many, because I must not leave the Country naked; and, as they are poor, if they neglect their planting Season, it will be difficult for them to subsist; therefore I would only raise two hundred, which is equal to the Number of Soldiers I shall leave behind, and this I cannot do unless I can pay them. I believe they will be content with 9 *l.* *Carolina* Currency *per Month*, and six Pounds of Meat, and six Pounds of Rice, each *per Week*, besides which there must be Pay to the Officers. Therefore if the Assembly should grant me a Sum sufficient to pay them, and the Provisions, I would raise the Men. This is my Opinion with relation to the Preparations for dislodging the *Spaniards* at *St. Augustin*, without which we certainly cannot do it. The legislative Power of *Carolina* will be the best Judges of the Service it will be to them. For my own Part, I think that if we do not take this happy Opportunity of attacking *St. Augustin* whilst it is weak, the *Havanna* being blocked up by our Men of War, which renders them incapable of receiving Succours from *Cuba*, all *North America*, as well as *Carolina* and this Province, will feel it severely. As soon as the Sea is free, they will send a large Body of Troops from *Cuba*. You remember the Account you sent to *England*, of the Preparations some Time since made at *Havanna*; every thing is there still, and if they should come up and land in *Florida*, we must then make a defensive War, and they may then chuse who they will attack separately. They may molest all *North America* with their Privateers, and if they can by any Means get the start of the Men of War, they can run into Shore-Water, where they cannot follow them. I am willing myself to do all I possibly can for annoying the Enemy as his Majesty has ordered, and shall spare no personal Labour or Danger towards freeing *Carolina* of a Place from whence their Negroes are encouraged to massacre their Masters, and are openly harboured after such Attempts. The *Spaniards* attacked the Island of *Amelia*, and murdered two Men there: I, to return their Civility, landed in *Florida*; the *Spanish* Horse with a Party of Negroes and *Indians* advanced as if they intended to attack us; but before they were within two Miles of us went very fast off. Our *Indians* pursued them to their Forts, and killed one of the Negroes who had run away from *Carolina*, within a few Miles of *St. Augustin*. I hope you will excuse this long Letter, and believe me to be, &c."

It is very clear from this Letter, that the General meant to make the Assembly of *Carolina* perfectly acquainted with his Intentions, and with every thing relating to the Execution of them; and that this might be more fully and effectually done, he went himself to *Charles Town*, where, after many Conferences, and much Deliberation on both Sides, a Scheme of Action was agreed upon, and an Act of Assembly was passed *April* the 5th 1740, for carrying the same into Execution; the *Carolina* Regiment for this Service was raised, and put under the Command of Colonel *Vanderdussen*, and Mr. *Oglethorpe*, as General and Commander in Chief, published a Proclamation, settling the Terms of the Expedition, and amongst other things, declared that he would give whatever Share of Plunder came to him as Commander in Chief, towards the Relief of such Men as might happen to be maimed or wounded, towards the Assistance of the Widows and

Children of such as might be killed, and towards rewarding those that might distinguish themselves in the Service. All things being prepared for entering upon this Expedition, with the Troops of both Provinces; the Rendezvous for all the Forces was appointed at the Mouth of *St. John's* River, where, accordingly, most of them arrived the 9th of *May*. But some Time before this the General had attacked and taken *St. Francis de Pupa*, a little *Spanish* Fort, wherein were a Serjeant and twelve Soldiers, about seventeen Miles from *St. Augustin*.

From the Mouth of *St. John's* River the Army marched on the 10th of *May* to attack *Fort Diego*, about twenty Miles distant; which Fort had nine Swivels, two Carriage Guns of two Pound Shot, and fifty Men; and having surrounded it, on the 12th they sent in a *Spanish* Prisoner with a Drum, to summon the Garrison, who immediately capitulated on the following Conditions: 1st. The Garrison to surrender Prisoners of War, and deliver up the Fort, with the Guns and Stores, to the King of *Great Britain*. 2dly, That they should have Liberty to keep their Baggage, and not be plundered. 3dly, That Seignior *Diego Spinoza*, to whom the Fort belonged, being built at his Expence, and on his Lands, should hold his Lands, Slaves, and such other Effects as were not already plundered in the Field. 4thly, That no Deserters or Runaways from *Carolina*, should have the Benefit of this Capitulation, but be surrendered at Discretion. This Fort was garrisoned by sixty of the General's Forces; and from thence they returned to the Place of Rendezvous, where they were joined by Colonel *Vanderdussen*, with the rest of the *Carolina* Regiment, on the 19th of *May*, whence they marched again to *Diego* the 31st; and from thence, in two Days, to *Fort Moosa*, in view of, and near two Miles distant from, *St. Augustin*, and twenty-three from *Diego*. The *Spaniards* having deserted *Moosa*, the General ordered the Gates to be burnt, and three Breeches to be made in the Walls, which was plainly with a Design to prevent any of his own People from taking Post within the Place.

They then proceeded with the whole Army to reconnoitre the Town and Castle, after which they returned back to *Diego*; from thence the General ordered Colonel *Vanderdussen* to march with his Regiment, and take Possession of *Point Quartell*, lying to the North of the Bar, and separated from *Port Moosa* by a Creek; while the General, with about two hundred and sixty Men of his Regiment, and the greatest Part of the *Indians* embarked on board the Men of War, and arrived at the Island of *Anastasia*, opposite to the Castle; leaving behind him on the *Main* but between ninety and one hundred white Men, *Highlanders* and others, in his Pay, with forty-two *Indians*, and two commissioned Officers, to alarm the *Spaniards* on that Side; but he gave a verbal Command of the whole to Colonel *Palmer*, a Volunteer from that Province. About the same Time two hundred Sailors, from the Ships, were landed upon that Island, which the *Spaniards* directly abandoned, under the Command of Captain *Warren*, Captain *Law*, and the Honourable Captain *Townsend*, who were all very instrumental in that Service.

While things were in this Situation, the *Spaniards*, on the 15th of *June*, marched a very considerable Body of their Forces from *St. Augustin*, in the Grey of the Morning, in order to attack the People, under Colonel *Palmer*, at *Moosa*, in which they were but too successful; since they surprized the People that were there, cut many of them to Pieces, and took Part of the rest Prisoners, which was owing to the Neglect of the Orders given them not to shut themselves up in a Place which had been dismantled and ruined, on purpose to shew that the General did not intend to keep or use it as a Fortification. But the Conveniency of lying under Cover, tempted them to forget those salutary Instructions, which brought on their Misfortune, and gave the General inexpressible Concern, more especially for Colonel *Palmer*, who was a Gentleman of Experience and Interest, as well as a Volunteer, who served purely out of Zeal for the public Good, and therefore justly esteemed.

To prevent any Accident of the like Nature, and the more

more effectually to block up the Place, which for want of Numbers they were not able regularly to invest, the *Carolina* Regiment was sent over to *Anastatia*. In this Island there were three Batteries erected, all above a Mile from *St. Augustin*: But, however, they fired from them warmly, with some Prejudice to the Place; from whence they were as warmly answered, but were most hurt from the Fire from six *Spanish* Half-Galleys that lay within the Harbour. This induced a Proposal to the Captains of the three Men of War, to attempt the burning of these Half-Galleys; and upon a Consultation between them and the Land Officers, this was agreed to; but afterwards the Sea Captains declared they thought it impracticable, for want of sufficient Depth of Water at the Entrance: Yet this was disproved on the 27th of *June*, by the going in of Captain *Robert Tyrrel*, and his coming out again on board a Schooner, who reported that there was Water enough; yet the Majority voted the Design still impracticable, which hindered any Attempt to carry it into Execution, though the Land Officers considered it as a Point that would have greatly contributed to the reducing of the Place.

When it was first proposed to attack the Galleys, it was projected in the following Manner, *viz.* the General was to make a Diversion on the *Main*, by attacking the Town; Colonel *Vanderdussen*, with Part of his Regiment, was to keep a continual Fire on the Town and Castle, from the Batteries, while Captain *Tyrrel* was to have set upon the Galleys, with the Seamen and the rest of the Colonel's Regiment. The General was accordingly on the *Main* with his Troops, expecting that Service; but the Commodore disapproving this, and it being yet a second Time agreed to be attempted, upon the Remonstrances of Colonel *Vanderdussen*, and Captain *Warren*; when the Commodore's Lieutenant was to have commanded the Attack, new Difficulties were further started when they came on Shore, and so it was still unattempted. Yet it appears, that soon after the Men of War slipping their Cables, and putting out to Sea in a Storm, the Colonel endeavoured to revive the Attempt on the Galleys in their Absence: But proposing it to the Commodore's Lieutenant, Mr. *Swanton*, who appeared to be a Gentleman of Spirit, and commanded the Seamen left on Shore, he was told, "He had Orders left not to venture any of them before the Return of the Shipping."

Towards the End of *June*, some Sloops, with a Supply of Provisions for the Garrison, got in safe at the South Entrance, to the Harbour of *St. Augustin*, called the *Metanfas*, without having been discovered by any of our Men of War, till it was too late to intercept them. How this happened has not been hitherto accounted for, but it was a seasonable Relief to the Garrison, who had not then above three Days Provision of Bread-kind in the Place; and the Hurricane Season coming on, the Commodore gave Notice to the General, that he must leave his Station, and sail away with the King's Ships on the 5th of *July*. Upon this it was represented, "That since the Men of War were obliged to sail away, it would be necessary to send the two Men of War Sloops into the *Metanfas*, to guard that, and either secure the Retreat of the Forces to *Anastatia*, if they should be reduced to one, or assist in continuing the Blockade, till they should be enabled to act more offensively, by a further Assistance."

To this Proposal it was agreed, provided the Sloops of War had Water enough to get in there; and a Council was held *July* the 3d, wherein some of the Pilots that had been sent to sound, declared upon Oath, "There was not Water enough on the Bar of the *Metanfas* for the Sloops to go in, and if they could go in, they could not lie safe there from a Hurricane, nor could they fight above one a-breast, in case they were attacked by the Galleys."

But the Commodore, afterwards asking Mr. *Blomfield Barradel*, Lieutenant of the *Wolf* Sloop, who had been along with the Pilots, and happened to be aboard his Ship that Night, with some Captains, what he had to say in that Affair? he replied, that the Pilots had given

their Opinion, and that he was not then to be examined; but if they asked his Opinion, he would give it. They then desired he would; he affirmed, "That there was Water enough on the Bar for the Sloops to get in; that they could lie safe from a Hurricane when in; and that there was also sufficient Room, when in, to fight three a-breast, in case they were attacked." Upon the Pilots afterwards objecting to their lying safe, he asked them, "Whether they remembered to have seen such an Island when they were there?" And when they acknowledged they did, he replied, "That they ought to know they could lie safe from a Hurricane under that Island." Notwithstanding which, it was resolved afterwards in Council, that they should take off all their Men, and sail away, leaving Captain *Townsend* at *Frederica*; which put an End to the Enterprize.

Thus ended this Expedition, which, though not attended with the Success some expected from it, I mean the taking the Fortress of *St. Augustin*, was nevertheless of very great Consequence, inasmuch as it kept the *Spaniards* for a long Time upon the defensive; when if the Siege had not been undertaken, they would certainly have been otherwise employed; it laid all the Country open, so that the *Indians*, in Friendship with us, made Excursions up to the Gates of the Fortress; and the War being carried on in this Manner for a length of Time, and in Conjunction with the *Indians*, bound them so strongly to the *English* Interest, that with a very little Assistance from the People of *Georgia*, they kept the War at a Distance; so that the Inhabitants of *Carolina* felt none of its Effects as a Colony, except the Losses suffered by their Privateers, till the *Spaniards* executed their long projected Invasion, in 1742; in which they employed the whole of their Strength, and from which they expected to have changed the whole Face of Affairs on the Continent of *America*; and even then the People of *Carolina* suffered only by their Fears.

12. This Expedition of the *Spaniards*, as has been already hinted to the Reader, was really meditated before the War commenced, and had very probably taken place, if Reprisals had not been made upon the *Spaniards*, on Account of the Depredations committed by their *Guarda Costas*; at least we have Reason to judge so, from the Memorial of Sir *Thomas Fitzgerald*, before-mentioned; in which he asserted, that *Georgia* belonged to the Crown of *Spain*, and which he repeated in a subsequent Memorial. But the Operations of our Fleet in the *West Indies*, under Admiral *Vernon*, put a Stop to their Preparations at the *Havanna*; and the Siege of *St. Augustin*, and its Consequences, retarded them likewise for some time. Yet as the *Spaniards* are not apt to desist from Projects they have once formed, and as the Ministry at *Madrid* had very high Expectations from the Execution of this, they still kept it on foot, and only waited for a favourable Opportunity for performing what they imagined would have entirely changed the Scene of Things in *North America*. As to the Manner in which they executed it at last, and the amazing Disappointment they met with notwithstanding the vast Force they employed, and the smallness of that by which they were assisted, we had so full, so clear, and so authentic an Account published by Authority, that I know of no Method more fit to convey an Idea of it, or less liable to any Exceptions, than transcribing it, the rather because as it stands here connected with the History of *Georgia*, the Reader will have all the Lights that are necessary to render every Circumstance in it perfectly intelligible. Thus then that Account, transmitted to us by General *Oglethorpe*, ran: "The Beginning of *May* last the *Spaniards* fitted out their Fleet from the *Havanna*, consisting of fifty-six Sail and between seven and eight thousand Men, with an Intent to invade *Georgia* and *South Carolina*, and the other northern Colonies. At their first setting out, in turning the *Moor* Castle, they lost a large Settee with one hundred and fifty Men, and a few Days after the Fleet was dispersed by a Storm; so that all the Shipping did not arrive at *St. Augustin*. The latter end of *May*, or beginning of *June*, Capt. *Haymer* of the *Flamborough*, in his Cruise to the Southward, sent in to General

Oglethorpe

“ *Oglethorpe* for Intelligence ; who acquainted him, that
 “ he would probably meet with some *Spanish* Vessels to
 “ the Southward of *St. Augustin* ; which he accordingly
 “ did, and engaged ten Sail of the *Mosquetos* and
 “ drove some of them ashore ; but in the Action lost
 “ seventeen of his Men. He on his return acquainted
 “ the General with what had happened, and could not
 “ then come in for the Defence of *Georgia*, but pro-
 “ ceeded to *Charles-Town*, to clean his Ship. The Ge-
 “ neral thereupon sent Lieutenant *Maxwell* by Water, and
 “ Lieutenant *Hugh Mackay* over Land to *Carolina*, with
 “ Advice to the Governor, but no Assistance came from
 “ thence till after the Retreat of the *Spaniards*. Lieute-
 “ nant-Col. *Cook* was at *Charles-Town*, in his Way to *Lon-*
 “ *don*, when Lieut. *Maxwell* arrived with the said Advice.
 “ The 21st of *June*, nine Sail endeavoured to come
 “ into *Amelia* Sound ; but the eighteen Pounders from
 “ *Fort-William*, and the Guard-Schooner with eighty
 “ Men, commanded by Capt. *Dunbar*, fired so briskly
 “ that they sheered off as fast as they could. The Ge-
 “ neral, on this Advice, resolving to support the Forts
 “ on *Cumberland*, set out with a Detachment of the Re-
 “ giment on board his Boats ; sent Capt. *Horton* with his
 “ Company of Grenadiers before, and was himself obliged
 “ to fight his Way with two Boats, through fourteen Sail
 “ of *Spanish* Vessels which endeavoured to intercept him
 “ in *Cumberland* Sound. In this Engagement, several
 “ of the *Spaniards* being killed, the said Vessels set out to
 “ Sea, and did not join their Fleet till the Day before
 “ they left *St. Simon's* Sound. Lieutenant *Tolson*, who
 “ commanded the Boat of the greatest Strength, instead
 “ of following the General, run into a Marsh, where he
 “ remained till next Morning, when he returned to *St.*
 “ *Simon's* ; for which Behaviour he was put in Arrest, in
 “ order to be tried. Major *Heron*, from the Shore,
 “ seeing the General surrounded by the Enemy, and hid
 “ in Smoke, concluded him lost ; but next Day, to the
 “ great Joy of the People, he returned in the Guard-
 “ Schooner to *St. Simon's*, after having drawn the Com-
 “ mand from *St. Andrew's*, and the Stores and Artillery
 “ that were there, and reinforced *Fort William*, where he
 “ left one of the Boats he had with him.
 “ He having laid an Embargo on all Vessels in the
 “ Harbour, took Capt. *Thomson's* Ship, which mounted
 “ twenty Guns, into the King's Service, and manned her
 “ out of the small Vessels which were of no Force. He
 “ also called in the *Highland* Company from *Darien*.
 “ Capt. *Carr's* Company of Marines, and the Rangers,
 “ from where they were differently detached ; and sent
 “ Mr. *Mullryne* to *Carolina*, to get all the Men he could.
 “ The 28th of *June* the *Spanish* Fleet came to Anchor
 “ off *St. Simon's* Bar, who were diverted from coming
 “ in, or landing any of their Troops, for several Days ;
 “ in which time the General raised another Troop of
 “ Rangers ; and by rewarding those who did extraordi-
 “ nary Duty, and promising great Encouragement to all
 “ who should signalize themselves on this Occasion, he
 “ kept up the Spirits of the People, and increased their
 “ Numbers daily. The 5th of *July*, with the Tide of
 “ Flood, and a brisk Gale, thirty-six *Spanish* Vessels entred
 “ *St. Simon's* Harbour, nine of which were large Top-
 “ mast Vessels. We received them with a brisk Fire from
 “ our Batteries and Ships, killed some of them with
 “ our eighteen Pounders from the Fort, and our four
 “ Pounders from the lower Battery. The *Spanish* Com-
 “ modore, on board a Ship of twenty-two Guns, with
 “ a Settee, with an eighteen Pounder and two nine
 “ Pounders in her Bow, attempted to board Captain
 “ *Thomson's* Ship ; but he with his great Guns, Captain
 “ *Carr* with his Company of Marines, Lieutenant *Wall*
 “ and Ensign *Otterbridge* with a Party of the Regiment,
 “ made so brave a Defence, that the *Spaniards* were
 “ obliged to retire with Loss. A Snow of sixteen Guns
 “ at the same time attempted to board our Guard-
 “ Schooner, but was also repulsed by Capt. *Dunbar* ;
 “ the Engagement lasted upwards of three Hours, in
 “ which the Enemy lost seventeen Men, and had ten
 “ wounded. They passed all our Vessels and proceeded
 “ up the River, upon which the General held a Council
 “ VOL. II. NUMB. 92.

“ of War at the Head of his Regiment, where it was
 “ the Opinion of the Whole immediately to march up to
 “ *Frederica*, for the Defence of that Place.
 “ The General accordingly gave Orders for the Regi-
 “ ment to march, and ordered all the Troops that were
 “ on board the Vessels, to come ashore, and directed
 “ Capt. *Thompson*, with the Guard-Schooner and Prize
 “ Sloop, to make the best of their Way to *Charles-Town* ;
 “ and this was all done in Sight of the Enemy. The
 “ General, during this Action, being obliged to be some-
 “ times on Shipboard, sometimes at the Batteries, and
 “ to act as Engineer, found himself under a Necessity
 “ of having a Lieutenant-Colonel with the Regiment ;
 “ he therefore appointed Major *Alexander Heron* Lieute-
 “ nant-Colonel, in the Absence of Lieutenant-Colonel
 “ *Cook*, who was also Engineer, and the Sub-engineer,
 “ having attended him to *Charles-Town*, was also absent.
 “ Late at Night the General arrived at *Frederica*, after
 “ having destroyed all the Stores at *St. Simon's*, and sunk
 “ the Vessels that might be of Use to the Enemy, and
 “ rendered the Guns incapable of Service, and ordered
 “ the Wounded to be carried off on Horseback. That
 “ Night the Enemy landed their Forces on a dry Marsh,
 “ about a Mile and an half from the Camp, under Cover
 “ of their great Guns. They lay all that Night under
 “ Arms, and the next Morning took Possession of the
 “ Camp which we left.
 “ 13. About Noon the *Creek Indians* brought us five
 “ *Spanish* Prisoners, from whom we had Intelligence, that
 “ Don *Manuel de Monteano*, Governor of *St. Augustin*, com-
 “ manded in chief the Expedition ; and that Major-
 “ General *Antonio de Redondo* chief Engineer, and two
 “ Brigadiers, came with the Forces from *Cuba* ; that their
 “ whole Number consisted of about five thousand, and
 “ that the Night before they had landed about four thou-
 “ sand three hundred Men. One of the Prisoners the
 “ General sent with Mr. *Bedon* to *Charles-Town*. The
 “ 7th of *July*, at nine in the Morning, a Ranger of the
 “ Patrol brought an Account, that the Enemy were
 “ marching within a Mile and an Half of the Town.
 “ Whereupon the General immediately ordered four
 “ Platoons of the Regiment to march, and in the mean
 “ time went himself with the *Highland* Company,
 “ who was then under Arms. The *Indians*, and a Party
 “ of Rangers, came up with the Enemy about a Mile
 “ from the Town, as they were entering the *Savannah* to
 “ take Possession of a Ditch they had a Mind to use as
 “ an Intrenchment, but the Enemy were attacked so
 “ briskly that the General soon overcame them ; most
 “ of their Party, which consisted of one hundred and
 “ twenty of their best Woods-Men, and forty *Indians*,
 “ being killed or taken Prisoners. The General took two
 “ Prisoners with his own Hands ; Lieutenant *Scroggs* of
 “ the Rangers took Capt. *Sebastian Sachio*, Prisoner,
 “ who commanded the Party. *Toeanoeowi*, being shot
 “ through his Right Arm by Capt. *Mageleto*, drew his
 “ Pistol with the Left, and shot him through the Head.
 “ The General pursued the Enemy near two Miles,
 “ and halted on an advantageous Piece of Ground until
 “ the Party of the Regiment came up ; he posted them
 “ with the *Highlanders* in a Wood, with a large *Savan-*
 “ *nah* or Meadow in the Front, over which the *Spaniards*
 “ must pass in their Way to *Frederica*. After which he
 “ hastened back to *Frederica*, and ordered the Rangers,
 “ and Company of Men, to make ready. In the mean
 “ time two Companies of *Spaniards* of fifty Men each,
 “ and two hundred more of the Enemies best Troops,
 “ came up with Shouts, and Drums beating ; where-
 “ upon the General hearing Platoons firing, immediately
 “ made haste that way, and met three of the Platoons,
 “ who in the Smoke and drizzling Rain had retreated in
 “ Disorder, and the Fire continuing, he ordered his Men
 “ to rally and follow him, who hastening on, found that
 “ Lieutenant *Sutherland*, with his Platoon, and Lieute-
 “ nant *Charles Mackay*, with the *Highlanders*, had intirely
 “ defeated the said three hundred of the Enemy, in
 “ which Action Don *Antonio Barba* was made Prisoner,
 “ and mortally wounded ; several others were killed, and
 “ two Grenadiers were taken Prisoners. Capt. *Demeret*,
 “ and

“ and Ensign *Gibbon*, rallied their Platoons, and came up to the Ground. Capt. *Carr*, with his Company of Marines, and Lieutenant *Cadogan*, with a Party of the Regiment, came up at the same time, and were followed by Major *Heron*, with the Body of the Regiment. In both Actions the Enemy lost two Captains, one Lieutenant, and two Sergeants; two Drummers, and about one hundred and sixty private Men; and one Captain and nineteen Men were taken Prisoners. The General, with the Regiment, halted all Night, about a Mile and a Half from the Enemies Camp, to intercept those who had straggled in the Woods; and expecting the Enemy to make a second Attempt to march in the Morning; but the General having advanced with a Party of *Indians*, before Day-break, towards the *Spanish* Camp, found them all retreated into the Ruins of the Fort, and under Cover of their Cannon.

“ Next Morning, the 8th of *July*, the General and his Men returned to *Frederica*, and he appointed a General Staff, viz. Lieutenant *Primrose Maxwell*, and *Hugh Mackay*, Aids de Camp; Lieutenant *Sutherland*, Brigade-Major; and Sergeant *John Stuart*, second Ensign, for his brave Behaviour in the late Engagement. The 9th and 10th of *July* all Hands were employed in the Works at *Frederica*, and the *Indians* brought in some Scalps and Prisoners. The 11th of *July* a Settee and two Quarter-Galleys came within Gun-shot of the Town; but on our firing some Guns and Bombs from the Fort, and the General going towards them with his Boats, they returned to their Fleet, and with the rest drew up in Line of Battle. The next Morning, being the 12th of *July*, an *English* Prisoner escaped from them, who informed us, that the Enemy, on their landing, had resolved to give no Quarter; but from the Day their Grenadiers were defeated, they were in great Terror, and intrenched themselves, and gave Orders that none should go without their Sentinels, for fear of being surprized by the *Indians*. By other Prisoners and Deferters we were also told, that upon their calling over their Rolls, there were two hundred and forty Men and nineteen of their *Indians* missing; that there were great Divisions among them, infomuch that Don *Antonio de Redondo*, who commanded the *Cuba* Forces, encamped separate from those of *St. Augustin*, and that the Commodore had ordered all his Seamen on board. That Night the General and five hundred Men marched within a Mile of the Enemy's Camp, intending to surprize them, but was prevented by the Treachery of a *Frenchman*, who was got among the Company of Boatmen, and fired his Piece and gave Alarm to the Enemy, and then deserted to them. When the General found his Intention discovered, he ordered all his Drums to beat the Grenadiers March, and then returned to *Frederica*.

“ The General the next Day, being the 13th of *July*, in order to defeat the Information of the *French* Deferters, directed a Letter to be wrote, and sent by a *Spanish* Prisoner, who, for the sake of Money the General gave him, and the Promise of Liberty, undertook to deliver it to the said *Frenchman*, wherein he was instructed to acquaint the Enemy's Commanding Officer of the defenceless State of *Frederica*, and encourage them to come up by Water under his Pilotage; which Letter the *Spanish* Prisoner delivered to the Governor of *St. Augustin*, and it had so good an Effect, that the said *Frenchman* was immediately taken into Custody, and looked upon as a double Spy, and thereupon put into Irons. The next Morning, being the 14th of *July*, the *Spaniards* burnt the Barracks and Officers Houses at *St. Simon's*, and Capt. *Horton's* House on *Iekyll*; and the same Night they reembarked with so much Precipitation, that they left a Quantity of Ammunition, Provisions, and some Guns, behind them. On the 15th all the large Vessels with the *Cuba* Forces on board sailed Southward, and the Governor and Troops from *St. Augustin* on board the small Craft, went within Land,

“ and encamped in *St. Andrew's*, and caught fifty Horses, with a Design to carry them away; but on the General's appearing in his Boats, the Enemy shot the said Horses, and burnt the Fort and Houses at *St. Andrew's*. The General the next Day, being the 16th of *July*, followed the *Spaniards* with all his small Craft, but was not strong enough to attack them. He landed a Man out of his Boat on *Cumberland*, who that Night passed the Enemy's Camp, and early the next Morning came to *Fort-William*, with Advice to Ensign *Stuart* that the *Spaniards* were beat off *St. Simon's*, and that the General was coming with Succours, and ordered him to defend the Fort to the utmost. On the 18th of *July* twenty-eight Sail of *Spanish* appeared off *Fort-William*, fourteen of which came within Land, and attacked the Fort from their Gallies and other Vessels, and attempted to land, but were repulsed by a Party of Rangers from behind the Sand-Hills. Ensign *Stuart*, who commanded with sixty Men in the Fort, defended it so bravely, that after an Attack of upwards of three Hours, they were obliged to put to Sea with considerable Loss.

“ The Eighteen Pounders there disabled two of their Gallies. The 19th of *July* the General was on his Way to *Fort-William*. The 20th of *July* the General arrived at *Fort-William*, and sent his Boats and Rangers as far as the River *St. John*, who returned next Day, and brought Advice that the Enemy was quite gone: Upon which the General gave the necessary Orders for repairing *Fort William*, and on the 22d returned to *Frederica*. A few Days afterwards the Men of War from *Charles-Town* came off *St. Simon's* Bar, and Capt. *Thompson* with some Volunteers from *Carolina*; our Guard-Schooner and two Gallies came into *St. Simon's* Harbour; and Capt. *Hardy*, of the *Rye* Man of War, receiving a Message from the General, by Lieutenant *Maxwell*, who went on board him, sent for Answer, that he would take a Cruise with the rest of the King's Ships. But the General apprehending the *Spaniards*, upon recovering their Fright, might return with more Courage and better Conduct, continued Capt. *Thompson's* Ship in the King's Service, and sent Expresses over Land to the Northern Provinces on this Occasion.

“ These Forces were commanded by Don *Manuel de Monteano*, Governor of *St. Augustin*, Commander in Chief of the Expedition; Major-General *Antonio de Rodondo* Engineer-General, two Colonels with Brevits of Brigadiers; and consisted of one Regiment of Dragoons dismounted, with their Saddles and Bridles; the Regiment called the Battalion of the *Havanna*, ten Companies, of fifty Men each, draughted off from several Regiments at *Havanna*; one Regiment of the *Havanna* Militia, consisting of ten Companies of 100 Men each; one Regiment of Negroes, regularly officered by Negroes; one ditto of Mulattoes, and one Company of Miquelets; one Company of Train, with proper Artillery; *Augustin* Forces consisting of about three hundred Men, ninety *Indians* and fifteen Negroes, who run away from *South Carolina*. To these Accounts I shall add the following Deposition of *Samuel Cloake*, formerly belonging to his Majesty's Ship the *Flamborough*, and taken Prisoner off *St. Augustin* by the *Spaniards* in May 1742.

Frederica in
Georgia, fs.

“ This Deponent, being duly sworn, saith, That he was put Prisoner on board a Ship called the *Pretty Nancy*, taken by the *Spaniards* from the *English*, fitted out with ten Carriage and six Swivel Guns, which was Part of the Fleet that carried the Troops from *St. Augustin* for the Invasion of *Georgia* and *South Carolina*: That she had one hundred and fifty Soldiers on board, besides Sailors: That he counted forty-four Sail, besides the Launches and those that went in Land, and Pettiauguas which carried the *Indians*: That they sailed from *St. Augustin* the beginning of *June*, and met with very hard Gales for three Days, which dispersed the Fleet: That the chief Pilot on board the Commodore was one

Parris,

Parris, belonging to Port Royal in South-Carolina, and who was married there, and had a Plantation in that Province: That they came to an Anchor with Part of the Fleet off Frederica Bar, to the Northward of it; and the Spaniards said that they should not have found out Georgia, had it not been for Parris their Pilot: That they lay several Days at Anchor off the Bar, during which Time the Men were put into small Boats in order to land; but seeing several Men marching on the Beach, they were afraid to land, as they intended, and came on board again; for about three Days after, holding a Council of War, they resolved not to land any Men till they had made themselves Masters of the Harbour. During the Time they lay off this Bar, the Spaniards often whetted their Swords, and held their Knives to this Deponent's and other English Prisoners Throats, saying, they would cut the Throats of those they should take at Georgia. They sailed on the 5th of July with a strong Easterly Wind and Tide of Flood: That the English fired from the Batteries and Ships very briskly, and the Spaniards said that the English stood very well: That a Four-Pound Shot hulled the Ship where the Deponent was; and one Eighteen-Pound Shot from the Battery killed seven Men on board the large Ship: That there were of the Spaniards eight Three-Mast Ships; the Commodore's was a Twenty-Gun Ship; there was also a Snow with fourteen Nine-Pounders, and a Galley with three large Guns, one of which he heard was a Twelve-Pounder, which was manned with above one hundred Men; there were also several Privateers, some of them with ten Guns, and some with eight: That the Spaniards and some Irishmen on board told him, that in the whole Fleet there were about five or six thousand Men, and were come with a Design to take Georgia, and after that go to Port-Royal in South-Carolina. He farther says, that they had a whole Regiment of Negroes, with a Company of Grenadiers, in the same Manner as other Regiments have, and clothed in the same Livery as other Spanish Regiments; they were commanded by Negro Officers, and he saw the Officers walking along with the Governor of St. Augustin ashore; that they were dressed in gold and silver-laced Cloaths, like other Officers, and that they were kept in the same Pay as the other Regiments. He further saith, that the Ship where this Deponent was, was loaded with Grenadiers and Dragoons, who had on board Saddles, Bridles, Pistols, and all Accoutrements: That they landed all them from on board his Ship, and put a small Guard of ten Men on board: That two or three Days afterwards one of the Captains and one Sergeant of the Grenadiers came on board, and this Deponent asking the Sergeant whether he had been at Frederica, he answered, that the Woods were so full of Indians that the Devil could not go through them, and that the Indians had killed about one hundred and fifty of their best Men, and that there were but very few Soldiers: Those who came on board were so down-hearted that they could hardly speak a Word: That upon this they were ordered to get Water on board, in order to get to Sea in a Hurry, which this Deponent took the Advantage of, and made his Escape to General Oglethorpe.

Mark.

SAMUEL X CLOAKE.

14. It may be truly said, that there never happened in this Part of the World, any thing more honourable for the English Nation, or more likely to strike a Terror into their Enemies, than this entire and total Defeat of so formidable an Invasion, by such a Handful of Forces. Instead of raising and heightening this Success, to do Honour to the General's Character, we ought rather to lessen or diminish some of its Circumstances, to render it in such an Age as this more credible; but we have taken no Liberties at all, the Facts are represented Step by Step as they happened; and the Reader is left to judge how far it appears from hence that Georgia is a true Frontier, in respect to Carolina; and what Advantages are to be hoped for in case the new Colony should increase in a

reasonable Proportion, for twenty Years to come; but to help the Reader's Judgment in this Respect, and to shew him in what Light this Transaction was considered by all our Colonies in America; the Inhabitants of which were certainly the ablest, and most equitable Judges; it is requisite to observe, that John Tinker, Esq; Governor of the Bahama Islands; Lewis Morris, Esq; Governor of New Jersey; William Gooch, Esq; Governor of Virginia; George Clark, Esq; Lieutenant-Governor of New York; Gabriel Johnson, Esq; Governor of North Carolina; Thomas Bladen, Esq; Governor of Maryland; and George Thomas, Esq; Governor of Pennsylvania; all wrote to General Oglethorpe upon this memorable Occasion, to congratulate him upon being the happy Instrument in so honourable and so important a Service; to assure him of the Share they took in the Honour he had acquired, and of the true Sense they had of the great Deliverance that Providence had wrought for all the British Colonies in North America, by his Conduct and Courage. Stronger Testimonies than these, with respect to the Consequence of the Action he had performed, it was impossible for him to receive, and better Evidence than these Letters afford it is likewise impossible that we should have here at home; and therefore to set this Fact in its true Light, and that the People of Great Britain may have a just Notion of the Advantages arising from this wise and well conducted Defence, in which the Bravery of British Soldiers, their Affection for, and Confidence in, their Commander, is so clearly expressed, I thought it reasonable to annex the Copies of the Letters written by the three first mentioned Gentlemen, as being equally honourable for them, and for the Person to whom they are addressed; and if I add no more, it is to avoid being tedious, and that I may have an Opportunity of closing the historical Part of this Section, with Papers that do so much Honour to the new Colony of which it treats.

Copy of a Letter from his Excellency JOHN TINKER, Esq; Governor of the Bahama Islands, to General JAMES OGLETHORPE.

S I R,

N. Providence, Nov. 6. 1742.

I am favoured with both of your Excellency's Letters, of the 31st of July and 16th of September, with an inclosed Account of the Spaniards Descent upon your Province, and your fortunate Victory over them: Upon which I beg leave to congratulate you, and to assure you none of your Acquaintance can receive more real Satisfaction at an Event that must contribute so much to your Honour and Reputation as this last. I rejoice too for the Public, because I am sure if you had not given so good an Account of them, the neighbouring Provinces would have been in imminent Danger. I know the General had Orders to attack this Island upon their Return, so I may justly thank you for saving me a great deal of Trouble.

If there is any thing in this Government that can contribute to your Pleasure, and facilitate the Continuance of our Friendship and future Correspondence, I shall, with Joy, embrace the Proposition. The Bearer has been a long Time here, and can give you an exact Account of the Carte du Pais. We are, at present, employed in repairing the Fortifications, and making some additional ones, which will, I hope, be compleated this Winter. I have the Honour to be, with great Regard and Truth,

Your Excellency's

most obedient humble Servant,

(signed)

JOHN TINKER.

Copy of a Letter from his Excellency LEWIS MORRIS, Esq; Governor of New Jersey, to General JAMES OGLETHORPE.

S I R,

Burlington, the 2d of Nov. 1742.

I received the Honour of yours of the 31st of July last,

last, by the Express you sent along the Continent, who is now got thus far back in his Return to you. The Contents of it gave me very great Pleasure, as it informed me of your Health, and of the great (or rather wonderful) Success God has been pleased to give to his Majesty's Arms under your Conduct: And I doubt not has effectually convinced the Aggressors how unable they are to cope with resolute *British* Troops; and I hope will be a sufficient Discouragement to a second Attempt of that kind; which, if the first had succeeded, might prove of dangerous Consequence to his Majesty's Plantations on the Continent, especially the most southern ones.

You have gathered unenvied Laurels, and well deserve to wear them. I take Leave to assure you no body can be better pleased with your Success, than,

S I R,

Your most humble,

and obedient Servant,

(signed) LEWIS MORRIS.

Extract of a Letter from the honourable WILLIAM GOOCH, Esq; Governor of Virginia, to General JAMES OGLETHORPE.

S I R,

October the 12th, 1742.

I received the Letter of the 31st of *July* your Excellency honoured me with, by the Hands of your trusty Courier, Mr. *Watkins*, and with it a very sensible Satisfaction: I rejoice to hear your Courage and Conduct have had their deserved Success, in so unequal a Trial. Your prudential Behaviour on the Occasion, cannot be too much applauded, nor Actions so truly laudable too much admired. The whole Continent is under lasting Obligations to you, for your extraordinary Vigilance and Magnanimity, when, not thinking your Services to your King and Country compleated, nor your Valour sufficiently proved in the Defence of your infant Settlement, against the repeated Attacks of cruel and inhuman Foes, more than could be expected, considering their Numbers; with an uncommon Resolution you forced them in the Field to a precipitate Retreat, and effectually defeated the desperate Designs of an Enemy that had the Vanity to flatter themselves with the Hopes of making an easy Conquest of some, at least, of the *British* Provinces.

As these great Actions are to be attributed to your Fortitude, so in my Judgment the unexpected and vigorous Opposition they met with, ending in so severe a Rebuff, has thrown them into such Disorder, that I am confident those Troops, were they all together in *St. Augustin*, could not so soon recover sufficient Courage to animate them to the like Undertaking: The Confusion and Hurry in which they reimbarcked, are such evident Tokens of their being terrified and dismayed, that with your usual Watchfulness you may rest secure from further Disturbance, &c.

I am,

S I R,

Your most obedient,

and most humble Servant,

(signed) WILLIAM GOOCH.

15. We have now compleated the History of the *English* Colonies in *America*, in such a Manner, that the Reader cannot help discerning their intrinsic Value and great Importance; there is therefore no Necessity of our adding any thing on this Subject here, and therefore we will confine our Remarks entirely to the Colony of *Georgia*, and endeavour to shew from what Views, upon what Hopes, and in how great a Degree the Public is interested in the Maintenance and Support of this new Colony. In the first Place, we have seen that the Trustees originally designed it for a Boundary or Frontier to cover

the other Provinces upon the Continent; that it was extremely proper for this, the very Situation of it shews; that it was extremely wanted we may gather from the Histories of the other Provinces, in which we find various Instances of the Ruin of their advanced Settlements; from their leaving so large a Country as *Georgia* uncultivated, a plain Sign of their Fear of becoming nearer Neighbours to the *Spaniards*; and from the Names of Places, such as *Bloody Point*, which commemorate the Massacres that have been heretofore committed in those Parts; but the strongest and clearest Proof of all, is the Memorial from the Assembly of *Carolina*, in which the Reader has seen this Matter stated in the fullest and fairest Light; from all which I infer, that the establishing of such a Barrier, was a Point worthy of public Attention; and that the Benefits accruing from it to *Carolina*, and all the Provinces to the Northward, might very well be considered as a sufficient Recompence for any Expence that might attend the establishing of such a Frontier. That the Public were not amused in the Hopes that were given them by the Trustees of *Georgia* in this respect; that the sending a Regiment thither, was not a needless or useless Expence; and that the Money employed in fortifying there, was not either wasted or thrown away, manifestly appears by their repulsing the *Spaniards* in the late Invasion. If this was solely owing to the Bravery, Firmness, and Strength of the new Colony, then surely there is no room to find Fault with it; and if the Province is as some People would have it, thinly peopled, and very little capable of Defence, what Applause is due to the General? Who, without the least Assistance from any other Place, could repel such a Force, and thereby secure all our Colonies in *North America*: Take it either Way, we are sure of a Barrier while we have *Georgia* under his Direction.

In the second Place, this Country was designed as an Asylum for distressed People in our own Country, and for such industrious foreign Protestants as should be willing to go thither. If we consider the thing in this Light, the supporting this Design was no Favour in the Government; for it is the Duty of every Government to provide for such of its poor Subjects as are willing to work; and the least they can do, is to send them to the Colonies, since it must be owing to their Mismanagement that they have not Employment at home; but it is not their Duty only, it is their Interest also; for Men active and industrious, who can find nothing to do, and are at a Loss to find any thing to eat, are not apt to remain long in such a Condition: And surely it is better to send such People abroad, though at a small Expence, than see them, for want of such Care, send themselves to the Gallows. In times of general and continued Peace, there will, however, be such Overflowings in most Nations; under arbitrary Princes from Mens Aversion to Slavery, under free Governments from a superabundance of People. In both Cases that Government is to be commended, which laying hold of these Overflowings, applies them to its own Use. To give such People Territories, is to acquire, though it seems a Solecism in Speech, the very Territories you give; for Land without People is of no Use; but Land inhabited and cultivated by white People, let it lie where it will, is of great Value; and that Value is much enhanced when that Land is cultivated, and those People are settled precisely where you want them most. This is the Case of *Georgia*; for the *Carolina* Memorial tell us, that white Men were not to be raised there for Money; which was the same thing as if they had told the Government, that the best Way they could employ their Money, was in sending of white People thither. But when we consider the Expence of sending white Men, and compare it with the Purchase of Negroes, the Case appears still more advantageous: Since the white Men come cheaper, and are of much greater Advantage: By settling them you acquire useful Subjects, and consequently increase your Force; by purchasing Negroes, you only gain so many Slaves that increase your Danger and Terror, by lessening your Force. Your own People and foreign Protestants will be always yours, but Negroes are any body's that will

will but promise them better Conditions than they have under you, which may be very easily done; and of what ill Consequence this may prove, appears from the Negro Regiment in the *Spanish* Service; for had they succeeded in their Invasion, and once penetrated into a Colony full of Negroes, they might have raised new Regiments by barely beating their Drums; Regiments that would have been equally terrible to us, and useful to them, from their Knowledge of the Country, and from their Hatred of their old Masters.

There was a third Advantage proposed in the settling this new Colony where it is settled, and from the Terms upon which it was settled; and that was, the securing the Nations of *Indians* which inhabited the vast Countries to the South and South-west of *Georgia*, in the *British* Interest. A thing so much the more necessary, considering the Views that the *French* had of the same kind; and of vast Importance to all the Colonies, as the maintaining of Friendship with these Nations, must necessarily interrupt the Correspondence between the *French* Colonies of *Canada* and *Louisiana*, upon which their being formidable to us *North America* absolutely depends; since if ever they complete it, every Child that can be brought to comprehend a Map, will see that they will surround all our Colonies on the Main, from *Nova Scotia* to *Georgia*; but by this last Colony, we have bid fair for interrupting their Design, by engaging in our Interest those *Indian* Nations most capable of doing us good, and them hurt: As for Instance, the *Lower* and *Upper Creeks*, a Nation so called from their Country being intersected with Rivers, which Country extends from the River *Savannah* to the Lakes of *Florida*, Southward and Westward, to the *Cherokee Mountains*, and the River *Cousa*; so that we may easily discern how useful their Friendship must be to the Colonies of *Georgia* and *Carolina*, more especially when it is considered that they are a very brave, a very numerous, and a very faithful Nation, as appears from their Conduct in the present War; in which they have shewn as heroic Courage as any the *Greek* History records, and a Fidelity to their Allies, equal to that of the early *Romans*, which has been owing to Alliances concluded with Equity and supported by Integrity, and the same Conduct constantly pursued towards them, will for ever bind them to our Service.

The *Cherokees* possess the mountainous Country Westwards to the River *Mississippi*, as the *Chickesaws* do the Plains to the Southwest of the Country of the *Cherokees*, both brave and numerous Nations, enthusiastically fond of Liberty; in which it is our Interest to support and maintain them against the *French*. Hence it appears, that in this Light the Trustees were both well informed, and have happily succeeded; the Reason of the thing, and the History of the Country, plainly proves this; and, besides, they have the only kind of Evidence in Credit with the Moderns: I mean, that all they promised themselves has been verified by the Event.

By the happy Situation of this Country, the Inhabitants of it will not only be enabled to protect and defend the Northern Colonies that lay behind it, but may be also of great Use to *Jamaica* and the *Leeward Islands*. I am sensible that there are many that will affect to treat the first Part of this Assertion as ridiculous, and to sneer at the latter as chimerical; but I have considered very well what I have asserted, and am from thence convinced of the Truth of what I say. I can very easily foresee that it may be objected, my own Book shews that there are thousands and ten thousands in *Virginia*, *Pennsylvania*, *New York*, the *Jerseys*, and *New England*; and therefore it is a Jest to say that these great and populous Countries are to be protected by a handful of poor People just settled in *Georgia*: Yet for all this the Fact must be true, or that Colony abandoned. If we, here at home, continue to protect and to support the People of *Georgia*, and in Consequence of that Protection and Support, induce them to consult their private Interest, by pursuing such Schemes as are most for the public Advantage, *Georgia* will very soon be full of People, and of useful People, who must have their Tools, their Cloathing, and other Necessaries from hence; and who will be in a Con-

dition to pay us plentifully for all they have. *Georgia*, if attended to, may become as populous as *Barbadoes*, or the *Bahama Islands*, and that in a very short Space of Time; for if a large Bounty were given for a certain Number of Years, upon every Pound of Silk imported from thence, we should see it a rich and thriving Colony, and People would flock thither from all Parts; who, by maintaining their Treaties with the *Indians*, might establish an effectual Barrier against both the *French* and *Spaniards*, with all their *Indian* Allies. All this is highly possible and practicable, nay, and very probable too; and when once it comes to be a Fact, there will be no Sort of Absurdity in saying the People of this Colony, and their *Indian* Allies, will afford Shelter and Protection to the Settlements that lie to the North of them. But this is not all, for, as I observed before, if the Inhabitants of *Georgia* once become numerous, they will then, in Consequence of their Situation, be most able to help *Jamaica*, by a Supply of stout, well disciplined, white Men, in Case of any Attack by the *French* or *Spaniards*; or, which is an Evil they are not altogether secure from, any sudden Insurrection of their Negroes. I very readily grant that I argue from an Uncertainty, that is to say, we are not sure that this Colony will be so protected and supported; but if it be, the Consequences are absolutely certain; and the Consideration of these Consequences ought to be no mean Argument with our Government to maintain and support it.

We are now come to the very last Article of our Remarks, which is the Hopes that may be rationally entertained of the Produce of this Country. We will begin with what the Trustees certainly designed should be the Staple Commodity of *Georgia*; I mean Silk: That this Country is very happily situated, that its Soil and Climate render it very fit for producing Silk, cannot be denied by any who are at all acquainted with this rich Branch of Commerce, which some very good Judges have affirmed to be much more considerable than either the Linen or the Woollen Manufacture. This Country lies along the Sea-side, is well watered within Land, has a Soil extremely proper for the Culture of the Mulberry-Tree, and is seated in a Latitude and Climate we might judge would prove agreeable to the Silk-worm. These Circumstances might very naturally lead one to expect that the Inhabitants might set about the Production of Silk in this Country, for their own Advantage. With a View to this, proper Persons have been sent thither: The Experiment has been tried, Silk made in *Georgia* has been sent over, and Sir *Thomas Lombe*, and other excellent Judges of that Commodity have declared, that it is in all Respects as good, and works to the full as well, or better, than any *Piedmont* Silk, which stands us in twenty Shillings a Pound. At the very Time that this Section is under my Hand a Letter has been received from the Reverend Minister of the Protestant Congregation at *Ebenezer*, by which it plainly appears, that Silk may be produced in the greatest Perfection, and without any considerable Difficulty in this Country, provided the People had proper Encouragement. We are not to understand by this, that the People in that Country affect to make Terms with us, and refuse to raise Silk unless we will give them more for it than it is worth; for the Fact is quite otherwise, the Encouragement they demand, is not so much on their own Behalf as for the sake of the Commodity.

All Beginnings are hard, and these People, in undertaking this Work, are beginning two Things at the same time, *viz.* to raise Silk, and to raise a Subsistence: If these interfere with each other, 'tis very plain that the former must give way to the latter. It is natural for People to wish to live well, but it is necessary that they should live some way or other; and therefore this poor Clergyman honestly tells us, that his People having now got into a Way of winding the Silk off the Coccons, they would apply themselves more diligently to this Business, if they were not called off by other Cares, that is, to get wherewithal to live upon. If therefore we really mean to promote the raising of Silk in general, and aim, instead of Curiosity, to make it a Commodity, we need only declare a Bounty upon it: This would speedily do the Bu-

finest; it would encourage every body there to turn their Hands to this Work, and it is a Work to which all Hands may be turned, Women and Children as well as Men; and no such hard Labour as to render Slaves necessary. What this might produce we may in some measure guess, from what the Culture of Silk produces in *Italy*; where four and five Pounds an Acre are common Prices for Lands that bear Mulberry Trees, where the Leaves are sold at a high Rate, and where the poor People willingly give their Time and Labour, in feeding and attending the Worms, for half the Price of the Silk; which is but divided between the Labourer and the Landholder; amounting commonly to between three and four Pounds a Tree. If once this Business was effectually set a-going, there is no Question but the Progress would be very speedy, and the Bounty paid for a few Years, would most effectually establish both Commodity and Colony.

On the other hand it ought to be considered, that the Price of *Georgia* Silk, and the Bounty upon it, would be both paid in our own Commodities, whereas we pay now for *Piedmont* Silk wholly in ready Money; so that the Difference to the Nation will be but a very Trifle; perhaps I should not carry the Thing too far, if I said nothing. It is very possible, that when this Trade came to flourish in *Georgia*, it might also be set up in *Carolina*, and even in *Virginia*, there being no sort of Doubt, that with due Attention and Application, Silk might be produced in both these Colonies; neither is this any new Discovery, but what has been observed by all the Writers upon the Affairs of the Plantations for many Years past; but if it should be the Case, it would not be at all detrimental to this Nation; but on the contrary, this very Thing will lay us under a new Obligation to *Georgia*, for then we should have the Silk Manufacture as much in our Hands, if not more, than we have the Woollen; and how vast an Alteration this would make in the Balance of our Trade, may be easily shewn.

It is to be observed, that in all Silk Manufactures there are two Kinds of Silk employed, one for the Warp or Cane, which is the very Silk that our Colonies would produce; but before this Silk can be used, it must be thrown by an Engine into what is called Organzine, for which there is at present but one Engine in this Kingdom, which is the famous Silk-mill at *Derby*; since the erecting of which his *Sardinian* Majesty has prohibited the Exportation of raw Silk from his Dominions; so that what we have from his Country is Organzine. He has done still more for the Benefit of his Subjects; for he has laid such high Duties upon our Manufactures, as amount almost to a Prohibition; so that as I have more than once said, we are obliged to pay for this Silk in ready Money, for it is so necessary to us, that our Silk Manufactures cannot be carried on without it; and by this Means his Subjects take annually from this Nation about two hundred thousand Pounds in Money. Besides what we receive from *Piedmont*, we have likewise considerable Quantities of raw Silk of the same Kind with that from *Genoa*, and other Parts of *Italy*; which is thrown into Organzine by the Engine at *Derby*.

As to the other Kind of Silk, which makes the Woof or Shute, it comes to us from many Places, but particularly by the Way of *Turky*; so that if we had the former Kind of Silk from our Plantations, it would enable us to consume a much greater Quantity of this other Silk that cometh to us by the Way of *Turky*, for which we pay in our Woollen Manufactures: So that here is plainly a double Advantage; first, of saving the ready Money which is paid for one Kind of Silk; and next, increasing the Exportation of our own Goods, for which we bring Home in exchange that other Kind of Silk; and if once we were in possession of these Advantages, there would follow a third, equal, if not superior, to both; for we should be then incontestibly able to fabricate all Kinds of wrought Silks at so cheap a Rate as to under-sell most Parts of *Europe*; which would draw a Demand from *Germany*, *Flanders*, *Spain*, and *Portugal*, to the inconceivable Benefit of the Merchants and Manufacturers of this Kingdom, who are beyond all Question, in Con-

junction with the Seamen, who must thrive when they do, the most valuable People in it, and by whose Industry the rest are maintained. Thus we see that the Design of establishing the Business of raising Silk in *Georgia*, is in itself a Matter of vast Moment, not to the Trustees or the Inhabitants of that new Colony only, but to the whole Nation; a Thing that would give a new Turn to our Trade; employ a Multitude of Hands at Home, by promoting both the Silk and Woollen Manufactures; enlarge our Commerce Abroad; increase our Shipping; augment the Number of our Seamen, and enable us the better to bear those vast Expences into which, it is said, the Circumstances of Affairs Abroad have necessarily plunged us.

Before I part with this Subject, I think it becomes me to add somewhat with respect to the Conduct of the King of *Sardinia*, which, from what I have said above, may be thought in some measure unkind towards this Nation; whereas, properly understood, nothing of that sort will appear. The first and great Concern of every Prince, or at least of every wise and good Prince, is the Welfare of his own Subjects; and with respect to the Monarch of whom we are speaking, he has pursued it with great Steadiness and Prudence. His Duties upon *French* Commodities are very low; so that his Subjects are furnished from thence with Woollen Manufactures at very reasonable Rates, and by putting our Goods under a very high Custom his Subjects sell their Silk dear, and for ready Money: And thus, by the Interposition of the Government, they make the most of their Goods, and are as rich as the Nature and Extent of their Country will permit them to be. It must indeed be allowed, that as Things stand at present his *Sardinian* Majesty's political and commercial Concerns are in a manner opposite to each other; but this does not hinder him from pursuing both. The Balance of Power in *Italy* is a Thing of vast Importance to him, since, if it should be lost, he would scarce be able to keep his Dominions; but the Trade of his Subjects is likewise of very great Importance, for without that his Dominions would be hardly worth keeping. His Conduct therefore, in both Respects, is wise and just, though it falls out to be in some measure prejudicial to us, and that too in our tenderest Concerns, our Manufactures and our Trade.

But what then, ought we to differ with or blame him? Nothing like it: We ought, on the contrary, to admire and imitate him; we ought to make the same Distinction that he does, between our political and commercial Interests; we ought to shew ourselves firm in supporting the former, and in order to it we must be vigorous in promoting the latter. We see very plainly and clearly, or at least we may see it if we will, that there is nothing more practicable in the World, than the raising the Silk Trade in *Georgia*; the Country is fit for it, the Climate is fit for it; we have raised, and may raise, what Quantities of Mulberry-trees we will: The Silkworm thrives there wonderfully well, which however is the Case of very few Countries; and the Silk brought from thence has been found excellent. If all this does not pass for Demonstration in a Matter of this Nature, it is in vain to look for Demonstration. On the other hand, that the raising of Silk in *Georgia* would fill that Country with White People; would secure to us the Affection, and the Assistance of the neighbouring *Indian* Nations, and so render it an effectual Frontier, is beyond all Dispute; and that the Advantages accruing to this Kingdom, by enabling that Plantation to furnish us with Silk equal in Quality to the *Italian*, are so plain and certain that I make no Scruple of affirming, that if due Care was taken in this Respect, all the Expence necessary to establish the Silk Trade there, would not amount to above one Year's Purchase of the Profits, five and twenty Years hence: By which I mean, that the Advantages accruing from this Colony to *Great Britain*, in 1771; supposing the Silk Trade immediately settled there, and by immediately, I mean no more than as soon as possible, will equal all that the Public has, or may lay out upon that Settlement before it becomes able to maintain itself. We manure our Lands before we expect Crops from them; we manufacture our Goods before

before we send them to Market; we educate our Children before we expect they should provide for themselves; and why should not we take the same Care of this Colony, before we expect public Advantages from thence?

It has been already shewn what may be expected from the different Method pursued in the establishing this and other Colonies; and how easily, and how entirely, it may be turned to the Service of *Great Britain*, so as in the Compass of a few Years to answer national Expectations, better than Colonies that have been much longer settled. But we must keep these Points in View; we must proceed as we have begun, or all that we have hitherto done will be thrown away; and if it should, we can blame no body but ourselves. We have seen the Silk Trade planted there; we have seen it take Root, and even bring forth Blossoms, which, if the best Judges may be trusted, promise the fairest Fruit; let it not then be lost for a little Care or a little Expence, if that be necessary, in pruning and watering it.

I might likewise take Notice of the raising Wine here; indeed I have promised it, but I have insisted so long upon Silk, that I can be but short upon this Head; yet something I will say. There were great Hopes that this Improvement might soon have been brought to Perfection, but some Difficulties have been found in the Way, and they are chiefly these: The Coat of the natural Grape is not strong enough, and therefore when it grows ripe they burst. The Frost, about the vernal Equinox, frequently kills the Vines when they are shooting; and as to the *European* Grapes, it is found that the Insects of the Country destroy them. Yet Experience has shewn, that by grafting the *European* on the wild Vine, all these Inconveniencies are in a great Measure prevented; for then it shoots later, and so escapes the Frost better; the Grape Skins become thicker and stronger, and Insects do it less Prejudice: So that there are still Hopes that Wine may be made there, both in great Plenty, and in great Perfection; and if we reflect on the Mistake we made, with respect to the *Cape of Good Hope*, which we abandoned as worth nothing, and which the *Dutch*, by their Industry, have made one of the finest and most valuable Plantations in the World; we shall not be hasty in slighting these Hopes.

Besides, there is nothing wanting in this Country but a sufficient Number of Inhabitants, to render it, in every respect, a fertile and a pleasant Settlement. They reap very good Wheat here in *May*; they mow their Grass in *June*; they might cultivate Rice here to great Advantage, if that was judged proper, which, however, for many good Reasons is thought not so; Olives flourish there in the greatest Perfection; and so do Oranges in the South Part of the Province, where (I speak on the Credit of Eye-witnesses) an Orange Tree has been known, in seven Years Time, to have been fifteen Foot from the Root to the Branches.

These Considerations, with Respect to the Consequences that may follow from the Improvement of this last Settlement, which I look upon to be the Honour of the present Age, have proceeded solely from a regard to Truth, and to the public Service, which are the same Motives that have directed me through the Course of this Undertaking. It appeared to me that there were many things, in relation to most of the Colonies, and

particularly in respect to this, about which the World in general was either misinformed or not informed at all; and therefore I thought it would be doing some Service to Trade, to the Colonies, and to the Public, if these Points were fully and fairly treated; for which Purpose I took Pains to procure the best Materials I could, and have digested them in the best Method I was able, but in such a way that the principal Facts appear all along with their proper Authorities; so that the Reader sees to what he gives Credit, and is not obliged to take any thing upon Trust from me; all my Reasonings being submitted, as they ought to be, to his Judgment, with full Liberty to admit as little or as much as he thinks fit, when he has duly weighed the Arguments that are offered in support of them. It is in this way, and in this way only, that sedentary Persons can make themselves useful to Society, and in this way they may be very useful, by furnishing others with an Opportunity of viewing and reflecting upon things which otherwise might never have come to their Notice.

One thing more I must observe before I conclude this Section, which is, that if there be any thing in it, or indeed in any of those relating to the *British* Plantations, which ought, in a particular Manner, to claim the Attention of the Public; it is, in a great Measure, due to the Lights afforded by the Honourable *James Oglethorpe*, Esq; from whom, if the Author has caught any Part of that generous Spirit, which inclines a Man to bend all his Thoughts, and turn all his Labours, to the Service of his Country, it is but just that he should acknowledge it; and this he is the more ready to do, because if there be any Merit in his Performance, capable of making it known to, and esteemed by, Posterity; he would willingly consecrate it as a Mark of his Esteem and Gratitude, for the many Informations he has received, and the right Turn that has been given to his Inquiries, by that knowing and worthy Person, who is equally happy in rendering the greatest personal Services himself to the Community, and by infusing the like Disposition in others, both by his Example and Conversation.

There remains, in order to complete our History of the *West Indies*, no more than an Account of the *French* and *Dutch* Settlements in that Part of the World, in reference to which we may have leave to be the shorter in our Relations, as we have already taken Occasion to deliver many things concerning the former, and there cannot be a great deal said with respect to the latter. In treating both, however, we shall endeavour to represent all things fairly and agreeable to Truth, without exaggerating, as some have done, the Power of the *French*, or as others, the Industry of the *Dutch*: Both indeed are worthy our Notice and our Attention, but neither as things stand at present can justly provoke our Envy, since there is no Comparison between our Condition and theirs; nor can we justly apprehend any considerable Alteration in our Circumstances but what must follow from our own Negligence, rather than from any Attempts of theirs; though it must be confessed that both are ready enough to catch at any Advantages for promoting their Interests in that Part of the World, though it should be at the Expence of their Neighbours; things that ought to teach us Care and Circumspection, which are as necessary to secure Prosperity, as to obtain it.

SECTION XXII.

A succinct History of the DISCOVERIES, SETTLEMENTS, and CONQUESTS, made by the FRENCH in America; a View of their Policy, Numbers, Commerce, and Strength, in that Part of the World; and some Conjectures as to the Event of their Designs; extracted chiefly from their own Authors.

1. *An introductory Account of the first Voyages made, or said to be made, by the French to America, with a more particular Detail of that of John Verazzano, or Verazani, under the Reign of Francis I.*
2. *The Voyage of James Cartier of St. Malo's, who discovered Canada; and a curious Account of the Etymology of that Word.*
3. *The first Establishment of the French on the Banks of the River of St. Laurence; the building of the Town of Quebec, and the Difficulties found in fixing a Colony in those Parts.*
4. *A Description of the Savages, Natives of Canada, their Customs, Manners, Superstitions, and enthusiastic Fondness for their own Way of Life.*
5. *A concise Account of the Illinois, by Mr. Joutel; and a larger Relation of the Customs and Manners of the same Nation, by Father Marquette.*
6. *A more particular Description of the Colony of Canada, or New France, the City of Quebec, and other Places therein, with an Account of the French Commerce with the Indians, and their Force in those Parts.*
7. *The present State of that Colony, its Strength, Produce, Shipping, and Importance to France fairly represented.*
8. *The Consequence of Acadia, Placentia, and Isle Royal to France, in respect to their Fishery, &c. set in its true Light.*
9. *The first Expeditions of the French to the West Indies, their Views, and the Consequences of those Expeditions in relation to Commerce.*
10. *The Settlements made by that Nation in the Leeward Islands; the Situation, Extent, Produce, Strength and Importance of those Islands.*
11. *Their Trade with our Northern Colonies, their own directly to France, and the Value of the Sugars they export, with other Particulars.*
12. *A brief Relation of the first settling of the Subjects of France on the Island of Hispaniola, or St. Domingo; the amazing Progress of their Colony there; a true Representation of its present Condition and vast Importance.*
13. *A short Account of the various Attempts of the French, to seize Part of the Southern Coasts of Florida; their repeated Disappointments; and new Project of finding the Course and Mouth of the great River of Mississippi.*
14. *The Consequences of these Inquiries; the making this Affair a Bubble; the Resolution of settling Louvifiana owing to that Bubble; the Nature of that Settlement, and what may be probably expected from it in Time, both as to the Benefit and Disadvantage of the French Trade.*
15. *A fair Prospect of the present Situation of the French Colonies, Affairs and Commerce throughout all America, with some short Observations and Remarks, in order to set the Subject of this Section in the clearest and justest Light possible.*

1. **T**HE national Vanity of the French is in nothing more visible, than in the Accounts that some of their Authors have given us of their Settlements in America. William Postel has had the Assurance to assert, that the French were not only the first Discoverers of America, but that the ancient Gauls carried on the Fishery on the Banks of Newfoundland, before the coming of Jesus Christ; but, that finding those Countries without Corn, without Cities, and but very thinly inhabited, they despised and neglected these Discoveries; which Dream of his is as ridiculous and absurd, as it is groundless and without Foundation. We have some Accounts of Frenchmen who visited North America at the Close of the fifteenth, and the Beginning of the sixteenth, Century; but the Relations we have are very uncertain, and at most prove no more than this, that some French Seamen and Pilots that had been employed in the Newfoundland Fishery, had some Knowledge of the adjacent Continent, which is not a thing of very great Consequence.

At length, in 1523, Francis the Ist, one of the wisest and greatest Monarchs the French ever had, began to think of making Establishments on the Coast of America; and with this View he fitted out John Verazzano, a Florentine, who had, under his Command, only one Ship, with fifty Men on board, and Provisions for eight Months; he returned to Dieppe in July 1524; but we know nothing of his Discoveries at that Time. He sailed, towards the latter end of the succeeding Year, on the same Design, and arrived on the Coast of North America, and it is not very clear upon what Part of that Coast he arrived. He seems to have been a timorous Navigator; for he did not care to venture himself within any of the Bays or Ports that he saw before him; but wanting Water, and lying in a Road very near the Shore, he persuaded one of his Seamen to swim thither; and by the Help of Presents, with which he furnished him, procure what they stood in need of from the Natives, who came down in Crouds upon the Strand, to gaze upon the

Ship. The poor Fellow, when he got on Shore, and came to have a nearer View of the Savages, was so excessively amazed at their uncouth Appearance, that throwing his Presents down upon the Ground, he ran as fast as he could to throw himself again into the Sea, that without loss of Time he might recover his Ship. But the Waves disappointing his Design, threw him back upon the Shore, with such Force, that he lay breathless upon the Sands, and had, in all probability, been drowned, if the Savages had not hastened to his Relief; they took him up, carried him in their Arms to a Place at some Distance, and took all the Pains they could to bring him to himself.

But when he recovered his Senses a little, and saw there were none but Savages about him, he set up such a Cry, as made the Woods ring; and the poor Indians, hoping to quiet him, cried as loud or louder than he, which terrified him still more. At last they began to make a great Fire, before which they undressed him, admiring greatly the Whiteness of his Skin, and the Hair on several Parts of his Body; the Seaman taking it for granted, that they were going to eat him, or burn him, trembled excessively, and those on board the Ship were also very much frightened, for they saw every thing that was done, and expected every Moment when he should have been sacrificed; by degrees, however, they were all satisfied that the Savages meant him no manner of Harm; for after drying his Cloaths, they suffered him to put them on again, and having given him something to eat, conducted him, at his Request, to the Sea-side, and, retiring to some Distance, looked on till he swam safely aboard the Ship, and then quietly departed; as for Verazzano, he returned home to France, reported nothing but this Story, and that it happened in the Latitude of fifty Degrees. This very plainly shews, that neither he nor his People were of a Disposition fit for the Task they had undertaken.

However, they engaged the next Year in a third Voyage, but

but what became of him was very uncertain; some say that he was lost; others, that he went ashore with Part of his Crew, and that falling into the Hands of the Savages, they killed and eat them, which, however, is very improbable; certain it is, that in this Voyage he was lost: And from what the Reader has seen, he will be of Opinion, that the *French* have no great Cause to boast of his Expeditions, which were thirty Years later than those of the *Cabots*.

2. After this unlucky Adventure, it was some Years before the *French* thought of fitting out any more Ships for Discovery; but at length Admiral *Chabot* prevailed upon *James Cartier*, an experienced Pilot of *St. Malo's*, to undertake another Expedition: Upon which he sailed from that Port the 20th of *April* 1534, with two Ships of sixty Tons each, and one hundred and twenty Men. He arrived on the 10th of *May* on the Coast of *Newfoundland*, and finding the Country covered with Ice and Snow, sailed to the Southward, and entered into a Bay, which bears, at present, the Name of *Spanish Harbour*; where, liking both the Country and the People, he went ashore. It is reported that the *Spaniards* had long before visited this Coast, and there are some Authorities to prove it; but finding no Signs of any Minerals, they were in a Hurry to go off again, crying out, in their Language, *Aca Nada!* that is, *there is nothing here*, meaning the Country was good for nothing; which Words the *Indians* retained, and when the *French* came ashore, cried out *Aca Nada! Aca Nada!* which they took for the Name of the Country, so that it has been called *Canada* ever since. This is a very strange Derivation, but as we find it in the best *French* Authors, it is worth setting down.

He afterwards discovered a good Part of the Gulph of *St. Laurence*, and of the Islands that are situated therein; after which he returned to *France*, where he arrived safely on the 5th of *September*. The next Year he was sent again with three large Ships, in order to make a Settlement; and because he entered the Gulph on the Feast of *St. Laurence*, he gave it that Name, which was afterwards extended to the River, which in his first Voyage he had called the River of *Canada*. He was very successful in this Expedition, and went up as high as the Fall of *St. Louis*, giving Names to the Islands and Rivers as he thought proper; and it is certain that he shewed himself, in the Course of this Voyage, a very expert Seaman. But though at first he was extremely well pleased with the Country, yet the Scurvy getting among his People, and bringing them into a very low Condition, so that twenty-five of them died in a very short Space of Time; he began to alter his Sentiments, and to fancy that it was a very unwholesome and bad Climate. At last, however, when he found himself attacked with this Distemper, he applied to the Inhabitants, and enquired of them, as well as he could, whether they knew of any Cure for this Distemper? Upon which they taught him to make an Infusion of the Leaves and Bark of the White-thorn-tree, by which they were all very speedily recovered.

As soon as the Season of the Year would permit, he returned into *France*, where he arrived in the Spring of 1536; but there is no obtaining any Certainty as to the Account he gave of the Country which he had discovered: If we trust to his written Memoirs, it will appear, that he gave King *Francis I.* a very just and fair Account of the Places he had visited, and represented the settling a Colony in that Part of the World, as an Action extremely worthy of the most Christian King; but if we adhere to what is generally reported in *France*, either he, or some who came home with him, acted a very different Part, and gave so discouraging a View of this new-found Country, that the King looked upon it as not worth the keeping, or troubling himself about.

However, three or four Years after, the Project of settling in this Country began again to be talked of, and a Gentleman of *Picardy*, whose Name was *Francis de la Roque*, Lord of *Roberval*, undertook to accomplish this Design; to qualify him for which, King *Francis I.* by Letters Patent, dated *January* 15, 1540, granted him

abundance of fine Titles, such as Viceroy, and Lieutenant General in *Canada*, *Hockelaga*, *Saguenay*, *Newfoundland*, *Bellisle*, *Cape Breton*, *Labrador*; the grand Bay and Coast of of *Baccaloes*; giving him the same Power and Authority in those Places that he had himself, which was very easily done, since there was not a *Frenchman*, or a Cottage, in any one of the Places, nor had he any more Title to most of them, than to Lands in the Moon. However this Gentleman, who had a good Estate, and was a Man of Family, resolved to pursue this Expedition, and prevailed upon *James Cartier*, by the large Promises he made him, to undertake another Voyage to the Coasts of *Canada* in Quality of his Pilot.

3. It was this Gentleman that, in two or three Voyages he made, first fixed some *French* Settlements in *America*, which however were afterwards abandoned. After this Time the Navigation of the River *St. Laurence* fell into different Hands, and from time to time Voyages were made thither to very little Purpose. In 1608, or thereabouts, they laid the Foundation of the City of *Quebec*, after having settled, and abandoned, several other Places. It was some time after, that *Champlain* bestowed the Name of *New France* upon this Country; but then he took in likewise *Acadia*, and other Coasts, that had long before been discovered by us; for the *French*, according to a Maxim natural enough with them, thought every Country which they had not seen before, unknown to all the rest of the World, and so set up Crosses and the *French* Arms, to shew that they had taken Possession of them. It must be observed, that most of these Expeditions were made in the Reign of our King *James I.* when the *English* Colonies were but thin, and far enough from being strong; and yet his Subjects asserted their prior Rights to those Places of which the *French* had taken Possession, demolished their Crosses, drove away the People where they found them, and forced them to confine their Views to the Gulph and River of *St. Laurence*, where, with much-ado, in the Space of twenty Years, they raised three or four Settlements, of which *Quebec* was, as it still is, the chief.

In 1629 the *English*, under the Command of Sir *David Kerk*, followed them even thither, as looking upon *Canada* to be within the Limits of the *English* Dominions, and made themselves Masters of *Quebec*, and of all their Settlements. When this News arrived in *France*, that new discovered Country was looked upon to be of so little Consequence, that it was long debated in the *French* Councils, whether they should demand the Restitution of this Colony, though they already had established a Company for managing that Commerce; but at last it was resolved, that it should be demanded; and it was accordingly restored by the Treaty of 1632, but in a very bad Condition, and as a Place hardly worth the keeping. Mr. *Champlain* was the first Governor after it fell again into the Hands of the *French*, and from this Time forward they pursued their Discoveries and Settlements in those Parts, without any Molestation from us, but still with many and great Difficulties; so that though they have often changed their Manner of conducting their Affairs in these Parts of the World; have applied to, and received the Protection of the ablest of their Ministers; and have had Company after Company set up, on purpose to promote and to encourage their Commerce, yet have they been able to make no greater Matter of it, though, besides their Pains and Attention, these Settlements in *Canada* have actually cost the *French* vast Sums of Money.

The Reasons of these many and great Difficulties are very easy to be found; for with respect to *France* itself, though it be a very large Country, and tolerably well peopled, yet it is the Inhabitants only of Part of its Coasts, that are inclined to naval Expeditions, or, to say the Truth, are capable of them, and they have not a Force sufficient for any great Undertakings. In the next place, the Country of *Canada* is very far from being agreeable to *French* Constitutions, more especially before there were any regular Settlements made there; so that of Numbers of People sent thither, a great Part perished by the Hardships they endured; many of them took the first Opportunity of returning; and at their Return gave

such a dreadful Account of the Colony they had left, as discouraged others from going thither, and made the Ministry repent of the Pains they had taken about it; but the greatest Obstacle of all was, their continual Wars with the Natives, of which they have given us very large Accounts, that, in my Opinion, do no great Honour either to the particular Persons who have had the Direction of their Affairs in those Colonies, or the *French* Nation in general. Before we proceed, however, to an exact Description of this Country, it will be very requisite to say something of its original Inhabitants, their Customs, and Manners, and the rather because what we shall offer on that Subject, will be equally useful and entertaining.

4. Among all the *French* Writers who have taken upon them to treat of this Subject; and to describe the *Indians* with whom they had conversed, the most sensible and most worthy of Credit that I have met with is Mr. *Joutel*, who accompanied the famous *Monf. de Sale*, in his Discoveries on the River *Mississippi*. He behaved himself in every respect so as to obtain an established Reputation; and as no body had better Opportunities than he to be acquainted with the Nations he describes, so I see not the least Reason to doubt of what he has delivered about them. As to the Accounts of *Lakontain*, and Father *Hennepin*, they have been formerly very much admired, yet we are now very well satisfied that they are rather Romances than Relations, and that their Authors had their particular Schemes so much in View, that they have made no manner of Scruple of abusing the Confidence of Mankind; so that if we except some Parts of their Writings which relate to Matters in which they could not so well deceive their Readers, they are not much to be depended upon. But for Mr. *Joutel*, he did not set up for a great Politician, but confined himself barely to the reporting what he saw; which he does in a very plain, natural Way: Whereas most of the Missionaries either magnify the Savages at the Expence of *Europeans*, or else run them down, as if they were very little better than Beasts. Our Author comes nearest to the latter Opinion, which by comparing him with later Writers, appears to be most consistent with Truth; and if we follow the Lights he gives us, we must regard them as Men as much distinguished from the rest of the human Race, as the Country they live in is from the rest of the World: He speaks of them thus:

Allowing, says he, that there are some *Barbarians* less wicked and brutal than the others; yet there are none good, nor thoroughly capable of knowing such Things as are above the Reach of our Senses: There is no relying on them; there is always Cause to suspect them: And, in short, before a Savage can be made a Christian, it is requisite to make him a Man; and we look upon these Savages as having neither King nor Laws, and, what is most deplorable, no God; for if we rightly examine their Sentiments and their Actions, it does not appear they have any sort of Religion, or well formed Notion of a Deity; if some of them, upon certain Occasions, do sometimes own a first or sovereign Being, or pay some Veneration to the Sun; as to the first Article, they deliver themselves in such a confused manner, and with so many Contradictions and Extravagancies that it plainly appears they neither know or believe any thing of it; and as for the second, it is only bare Custom, without any serious Reflections on their Part. The same Traveller, speaking of an Interview he had with the Chiefs of another Nation, to the westward of the River *Mississippi*, says, their Elders came to meet us in their Formalities, which consisted in some Goats-skins dressed, and painted of several Colours; which they wore on their Shoulders like Belts, and Plumes of Feathers of several Colours on their Heads like Coronets; six or seven of them had square Sword-Blades, like the *Spanish*, on the Hilt whereof they had fastened great Plumes of Feathers, and Hawks-bells; some of them had Clubs, which they called Head-breakers; some only their Bows and Arrows; others Pieces of white Linen, reaching from Shoulder to Shoulder: All their Faces were daubed with black and red: There were twelve Elders, who walked in the

Middle, and the Youth and Warriors in Ranks, on the right and left of the old Men. Being come up to us in that Manner, he that conducted us made a Sign for us to halt, which, when we had done, all the old Men lifted up their right Hands above their Heads, crying in a most ridiculous Manner; but it behoved us to have a care of Laughing. That done, they came and embraced us, using all Sorts of Endearments. The whole Company conducted us, afterwards, to their Chief's Cottage, and after we had staid there a short Time, they led us to a larger Cottage, a quarter of a League from thence, being the Hut in which they had their public Rejoicings, and great Assemblies: We found it furnished with Mats for us to sit on. The Elders seated themselves round about it, and they brought us to eat some Sagamite, which is their Pottage, little Beans, Bread made of *Indian* Corn, and another Sort they made with boiled Flower; and at last they made us smook. The Cottages that are inhabited, are not each of them for a private Family, for in some of them there are fifteen or twenty, each of which has its Nook, or Corner-bed, and other Utensils to itself, but without any Partition to separate it from the rest: However, they have nothing in common besides the Fire, which is in the Midst of the Hut, and never goes out: It is made of great Trees, the Ends whereof are laid together, so that when once lighted, it lasts a long Time, and the first Comer takes Care to keep it up.

The Cottages are round at the Top, after the manner of a Bee-Hive, or a Rick of Hay; some of them are six Foot in Diameter: In order to build them they set up long Poles as thick as a Man's Leg, tall and strait; and placing them in a Circle, join the Tops together; then they fasten and cover them with Weeds. When they remove their Dwellings, they generally burn the Cottages, and build new ones on the Ground they design to inhabit. Their Moveables are some Buffaloes or Bullocks Skins well cured, some Mats close wove, wherewith they adorn their Huts, and some Earthen Vessels, which they are very skilful in making, and wherein they boil their Flesh, Roots, and Sagamite Pottage. They have also some small Baskets made of Canes, serving to put their Fruit and other Provisions in. Their Beds are made of Canes, raised two or three Feet above the Ground, handsomely fitted with Mats and Bullocks Hides, or Goats Skins, which serve them instead of Feather-beds, Quilts and Blankets, and these Beds are parted one from another by Mats hung up. Their Tillage consists in breaking up just the Surface of the Earth with a wooden Instrument like a Pick-ax, which they make by splitting the End of a thick Piece of Wood, which serves for the Handle, and putting another Piece of Wood sharp-pointed at one End into the Slit. This Instrument serves them instead of a Hoe or Spade; for they have no Iron Tools. When the Land has been thus broke up, the Women sow and plant the *Indian* Corn, Beans, Pumpions, Water-Melons, and other Grain and Garden-Stuff. The *Indians* are generally handsome, but disfigure themselves by making Streaks on their Jaws, from the Top of the Forehead down the Nose to the Tip of the Chin, which is done by pricking the Skin till it bleeds, and then strewing fine Charcoal on the Skin, which sinks in and mixes with the Blood. They also make, after the same Manner, the Figures of living Creatures, of Leaves and Flowers, on their Shoulders, Thighs, and other Parts of their Bodies; and paint themselves, as has been said before, with Black or Red, and sometimes both together. The Women are generally well-shaped, and would not be disagreeable did they adhere to Nature; but they disguise themselves as ridiculously as the Men, not only with the Streaks they have like them down their Faces, but by other Figures they make at the Corner of their Eyes and on their Bodies, particularly on their Bosoms. The Women do all the Work in the Cottage, either in pounding the *Indian* Corn and baking their Bread, dressing their other Provision, drying, parching, and smoking their Flesh, fetching the Wood they have Occasion for, or the Flesh of wild Beasts killed by their Husbands in the Woods, which are often at a great Distance. I did not observe that their Women were naturally

rally given to Leudness; but their Virtue is not Proof against some of our Toys when presented to them, as Needles, Knives, and more particularly Strings of Beads, whereof they make Necklaces and Bracelets: That Temptation is rarely resisted by them; and the less, because they have no Religion or Law to prohibit that Practice. It is true, their Husbands, when they take them in the Fact, sometimes do punish them, either by Separation, or otherwise.

The Country of these *Indians* being generally warm, almost all of them go naked, unless when the North Wind blows; then they cover themselves with a Buffalo's Hide, or a Goat's-skin Card. The Women wear nothing but a Skin, or some Sort of Clout, hanging round them like a Petticoat, and reaching half way down their Legs before and behind: On their Heads they wear nothing but their Hair platted and knotted behind. As for their Temper, it may be said of these as of all other *Indians* of that great Continent, that they are not mischievous, unless wronged or attacked, in which Case they are fierce and revengeful. They watch all Opportunities to be revenged, and never let any slip when offered, which is the Cause of their being continually at War with their Neighbours, and of that martial Humour so predominant among them. As to the Knowledge of God, they did not seem to us to have any fixed Notion of him; it is true, we met with some in our Way, who, as far as we could judge, believed there was some superior Being which was above all things, and this they testified by lifting up their Hands and Eyes to Heaven, yet without any Manner of Concern, or believing that the said exalted Being does regard at all what is done here below. However, none of them having any Places of Worship, Ceremonies, or Prayers, to manifest their Devotion, it may be said of them all, that they have no Religion at all, at least, those that we saw. They observe some Ceremonies it is true, but whether they have any Regard to a superior Being, or whether they are only popular, and proceeding from Custom, is what we were not able to discover. Those Ceremonies are as follow: When the Corn is ripe, they gather a certain Quantity in a Basket, which is placed on a Stool dedicated to that Use, and serving only upon these mysterious Occasions, which they have a great Veneration for. The Basket with the Corn being placed on the venerated Stool, one of the Elders holds out his Hands over it, and talks a long Time; after which, the said old Man distributes the Corn among the Women, and no Person is allowed to eat of the new Corn till eight Days after the Ceremony. This seems to be in the Nature of offering, or blessing, the first Fruits of their Harvest.

At their Assemblies, when the Sagamite, or Pottage, which is the most essential Part of their Meal, is boiled in a great Pot, they place that Pot on the Stool above-mentioned, and one of the Elders stretches out his Hands over it, muttering some Words between his Teeth for a considerable Time, after which they fall to eating. When the young Folks first take upon them to be Soldiers, their Garment, consisting of some Skin or Clout, together with their Bow, Quiver, and Arrows, are placed on the same Stool, an old Man stretching out his Hands over them, muttering the consecrating Words, and then the Garments, Bows, Quivers, and Arrows, are given to the Persons they belong to. The same Ceremonies are used by them in the cultivating their Grain and Product, but of the Tobacco particularly.

There is one Particular relating to these People, which he does not mention; and that is, the strong and general Passion for Liberty, which prevails through the whole Nation; which is born, and grows up, with them, governs all their Actions, and is never to be extinguished but with their Lives. It is their Notion of Liberty, that induces them to prefer their own Manner of living, to that of the *Europeans*; and they say sometimes, what is not altogether destitute of good Sense, that if they possess fewer Conveniences, they have the less Trouble in acquiring what they think necessary, and consequently the more Time to themselves, which their middle-aged and old Men usually spend in conversing together; and

if we may trust to some of our own Country, as well as the *French* Writers, there are as great Politicians among them, as in any Nation in *Europe*, the *Italians* themselves not excepted. There is another *Indian* Nation of whom Mr. Joutel has given us a Relation, which deserves to be considered, because they are thought to be very different in their Manners from the *Iroquois*.

5. As for the Manners and Customs of the *Illinois*, they are, in many Particulars, the same as those of the other Nations before-mentioned; they are naturally fierce and revengeful, and among them, the Toil of sowing, planting, carrying of Burdens, and doing all other things that belong to the Support of Life, appertains peculiarly to the Women; the Men have no other Business, but going to the Wars and hunting. The Nations I have spoken of before, are not at all, or very little, addicted to thieving, but it was not so with the *Illinois*; it behoves every Man to watch their Feet as well as their Hands, for they know how to turn any thing out of the Way very dextrously. They are subject to the general Vice of other *Indians*, which is, to boast very much of their warlike Exploits, that is the main Subject of their Discourse, and they are very great Liars. They pay a Respect to the Dead, as appears by their Care in burying them: This is also practised among the *Accanceas*, but they differ in this Particular: That the *Accanceas* weep and make their Complaints for some Days, whereas the *Chabouanous*, and other People of the *Illinois* Nation, do just the contrary; for when any of them die, they wrap them up in Skins, and then put them into Coffins, made of the Barks of Trees; then sing and dance about them for twenty-four Hours; those Dancers tying Gourds about their Bodies, with some *Indian* Wheat in them, to rattle and make a Noise; and some of them have a Drum, made of a great earthen Pot, on which they extend a Goat-skin, and beat thereon with a Stick; during that rejoicing, they throw their Presents on the Coffin; such as Bracelets, Pendants, or Pieces of Earthen-ware, and Strings of Beads, encouraging the Singers to perform their Duty well. If any Friend happens to come thither at that Time, he immediately throws down his Presents, and falls a singing and dancing like the rest. When the Ceremony is over, they bury the Body with Part of the Presents, making Choice of such as may be most proper for it: They also bury with it some Store of *Indian* Wheat, with a Pot to boil it in, and repeat the same Ceremony at the Year's-end.

With respect to this People, there is a very large and curious Account in the Travels of Father Marquette, a Man of good Sense and fair Character; and therefore I shall subjoin it, that we may not be obliged to dwell longer upon this Subject. His Account in his own Words runs thus: "The Word *Illinois*, in their Language, signifies Men, as if they should look upon the other Savages as Beasts; and truly it may be confessed, that they are not altogether in the wrong, for they have more Humanity than all the other Nations that I have seen in *America*; the short Time I remained with them, did not permit me to inform myself as much as I desired of their Customs and Manners, but here is what I was able to observe: They are divided into several Villages, whereof some are very remote from those that I have seen, they call them *Perouarea*. But as they live so far one from the other, their Language is also very different: However, it is a Dialect of the *Algonquin*, and therefore we were able to understand what they said, and to converse with them. They are good-natured Men, tractable and easy. They keep several Wives, and yet they are exceeding jealous; they observe with very great Care their Behaviour, and if they find them in any Fault as to their Chastity, they cut their Noses and Ears; and I saw several of them, who carried upon their Faces these Marks of their Infidelity.

"The *Illinois* are very well shaped, and very dextrous. They are good Marks-men with their Arrows and small Guns, with which they are supplied by the Savages, and have a Commerce with the *Europeans*. This makes them formidable to the other Nations, inhabiting

“ to the Westward, who have no Arms. The *Illinois* knowing how much they are frightened at the Noise of their Guns, make Excursions very far to the Westward, and bring Slaves from thence, which they barter with other Nations for the Commodities they want. Those Nations are altogether ignorant of Iron Tools, and their Knives, Axes, and other Instruments, are made of Flints, and other sharp Stones. When the *Illinois* go upon any Expedition, the whole Village must have Notice of it, and therefore they use to make an Out-cry at the Door of their Huts the Evening before they go, and the Morning they are to set out. Their Captains are distinguished from the Soldiers by red Scarfs, made with the Hair of Bears, or wild Oxen, that are curiously wrought. They have abundance of Game; and their Soil is so fertile, that their *Indian* Corn never fails, and therefore they never labour under Famine. They sow Beans and Melons, which are excellent, and especially those whose Seed is red.

“ They esteem much their Citruls, though they are none of the best; they dry them up and keep them till the Winter and Spring. Their Cabbins are very large, they are made covered, and paved with Mats of Marsh Rushes. Their Dishes are of Wood, but their Spoons are made with the Bones of the Skulls of wild Oxen, which they cut so as to make them very convenient to eat their Sagamite. They have Physicians amongst them, towards whom they are very liberal when they are sick, thinking that the Operation of the Remedies they take, is proportionable to the Presents they make unto them, who have prescribed them. They have no other Clothes but Skins of Beasts, which serve to cover their Women, for the Men go most of the Year stark naked. I don't know by what Superstition some of the *Illinois*, and *Nadoneffians*, wear Womens Apparel; when they have taken the same, which they do in their Youth, they never leave it off. And certainly there must be some Mystery in this Matter, for they never marry, and work in the Cabbins with Women, which other Men think it below them to do. They may go, however, to the Wars, but they must use only a Club, and not Bows and Arrows, which are fit, as they say, only for Men. They assist at all the Superstitions of their Jugglers, and their solemn Dances in Honour of the Calumet, at which they may sing, but it is not lawful for them to dance. They are called to their Councils, and nothing is determined without their Advice; for because of their extraordinary way of living, they are looked upon as Manitoes, or, at least, for great and incomparable Genii.

“ I must speak here of the Calumet, the most extraordinary thing in the World. The Scepters of our Kings are not so much respected; for the Savages have such a Deference for this Pipe, that one may call it the God of Peace and War, and the Arbitrer of Life and Death. One, with this Calumet, may venture among his Enemies, and in the hottest Engagements, they lay down their Arms before this sacred Pipe. The *Illinois* presented me with one of them, which was very useful to us in our Voyage. Their Calumet of Peace is different from the Calumet of War. They make use of the former to seal their Alliances and Treaties, to travel with Safety, and receive Strangers; and the other is to proclaim War. It is made of a red Stone, like our Marble: The Head is like our common Tobacco-Pipes, but larger; and it is fixed to a hollow Reed to hold it for smoaking. They adorn it with fine Feathers of several Colours, and they call it the Calumet of the Sun, to whom they present it, especially when they want fair Weather, or Rain; thinking that that Planet can have no less Respect for it than Men have, and therefore that they shall obtain their Desires. They dare not wash themselves in Rivers in the Beginning of the Summer, or taste the new Fruit of Trees, before they have danced the Calumet, which they do in the following Manner: “ This Dance of the Calumet, is a solemn Ceremony amongst the Savages, which they perform upon im-

portant Occasions, to confirm an Alliance, or make Peace with their Neighbours. They use it also to entertain any Nation that comes to visit them; and in this Case we may consider it as their Balls. They perform it in Winter-time in their Cabbins, and in open Fields in the Summer. They chuse for this Purpose a set Place among Trees, to shelter themselves against the Heat of the Sun, and lay in the Middle a large Mat, as a Carpet, and set upon it the God of the Chief of the Company who gave the Ball; for every one has his peculiar God, whom they call *Manitoe*: It is sometimes a Stone, a Bird, a Serpent, or any Thing else that they dream of in their Sleep; for they think that this Manitoe will prosper their Undertakings, as Fishing, Hunting, and other Enterprizes. To the Right of their Manitoe they place the Calumet, their great Deity, making round about it a kind of Trophy with their Arms *viz.* Their Clubs, Axes, Bows, Quivers, and Arrows. Things being thus disposed, and the Hour of Dancing coming on, those who are to sing take the most honourable Seats under the Shadow of the Trees, or green Arbours they make, in case the Trees be not thick enough to shadow them. They chuse for this Service the best Wits amongst them, either Men or Women. Every body sits down afterwards round about, as they come, having first of all saluted the Manitoe, which they do by the blowing the Smoke of their Tobacco upon it, which is as much as offering to it Frankincense; every body, one after another, takes the Calumet, and holds it with his two Hands, dances with it, following the Cadence of the Songs.

“ This Preludium being over, he who is to begin the Dance appears in the Middle of the Assembly, and having taken the Calumet presents it to the Sun, as if he would invite him to smoke; then he moves it into an infinite Number of Postures, sometimes laying it near the Ground, then stretching its Wings as if he would make it fly, and then presents it to the Spectators, who smoke with it one after another, dancing all the while: This is the first Scene of this famous Ball. The second is, a Fight, with Vocal and Instrumental Music; for they have a kind of Drum, which agrees pretty well with the Voices; the Person who dances with the Calumet gives a Signal to one of their Warriors, who takes a Bow and Arrows with an Ax from the Trophies already mentioned, and fights the other, who defends himself with the Calumet alone, both of them dancing all the while. The Fight being over, he who holds the Calumet makes a Speech, wherein he gives an Account of the Battles he has fought, and the Prisoners he has taken, and then receives a Gown, or any other Present, from the Chief of the Ball: He gives then the Calumet to another, who having acted his Part, gives it to another; and so to all the others, till the Calumet returns to the Captain, who presents it to the Nation invited unto the Feast, as a Mark of their Friendship, and a Confirmation of their Alliance. I cannot pretend to be so much Master of the Language, as to judge of their Songs; but methinks they are very lively and witty.”

6. This Country of *Canada*, as we find it described by the best *French* Writers, is said to be half as big as *Europe*, reaching from the Latitude of 39 Degrees to that of 65; that is, from the Lake of *Errie* to the North of *Hudson's-bay*, and from the Longitude of 284 Degrees to 336; *viz.* from the River *Mississippi* to that Part of the Continent which fronts *Cape Rase* in *Newfoundland*. According to this Description, it has *Hudson's Bay* on the North, the Sea on the East, the *English* Colonies on the South, *Louvisiana* on the South-east, and the Territories of the Crown of *Spain* on the West. This we must allow is a very large and noble Plan of *New France*, if it were in any Degree in the Possession of the Subjects of that Crown; but the Truth of the Matter is, that a great Part of this Tract is not so much as known to them, and, at the very most, there is not a twentieth Part of the Country that can with any Propriety be said to be under their Jurisdiction. The great River of *St. Lawrence*,

rence, which at its Mouth is about sixty Miles big, and runs through the Middle of this Country, but the Source of it is still unknown, though some of the *French* Buccaneers affirm, that they have gone eight hundred Leagues up it; but then they take it for granted, that it passes through five or six great Lakes, which are those of *Frontinac*, *Errie*, the Lake of the *Hurons*, the *Upper Lake*, the Lake of *Leuempigon*, and that of the *Affinipouals*; beyond which the *Indians* tell them there is another Lake still greater than any of these, out of which this River originally comes.

But the Truth however seems to be, that the River of *St. Laurence* flows from the Lake of *Frontinac*, and from thence runs a Course of two hundred Leagues, to the Sea. At the Mouth of the River of *St. Laurence* lies the Island of *Anticosty*, which some say was formed, but all agree, was very much enlarged by an Earthquake; the *French* have a very small Settlement upon this Island, for the sake of trading with the *Indian* Nations on both Sides, for Seal-skins and Furs; in exchange for which they give them Fire-arms and Ammunition. The Town or City of *Quebec* lies upon the great River of *St. Laurence*, at the Distance of about a hundred and ten Leagues from the Sea. The Foundation of it was laid, as we said before, in the Year 1608; and that which is now called the *Lower Town*, was formerly the Bed of the River, which has since sunk so far below this Place. It must be allowed to be both a large Town and a strong one, for besides a Fortrefs or kind of Citadel, in which the Governor resides, the whole Extent of the Place is covered by a regular Fortification, with several Redoubts well furnished with Artillery; there is a Cathedral, and episcopal Palace, which are very stately Buildings; the *Jesuits* have a fine College here, and there are several other religious Houses; but after all, if we consider that this is not only the Capital, but almost the only Town in *New France*, it is no great Affair, since according to the last Account which the *French* themselves have published of it, there are not in it above seven thousand Inhabitants, and none of these are said to be very rich.

From *Quebec*, which lies in the Latitude of 47 Degrees 56 Minutes, to *Montreal*, which is in the Latitude of 44 Degrees 30 Minutes, the Banks of the River are pretty well settled; but without either Towns or Villages; and the *French* distinguish this Part of the Country by the Name of the Coasts. Some of their Writers, indeed, making use of that Licence which is allowed to Travellers, speak of two Villages between *Quebec* and the Island of *Montreal*, each of fifty Leagues in Extent, by which they mean, that both Sides of the River are so thoroughly planted, that the whole on each Bank may be considered as a Village. The Town of *Montreal* is strong by Situation, but is only surrounded with a Pallisado, and is looked upon to have about a third as many Inhabitants as *Quebec*. The Savages come down hither in Boats, and sell their Skins; for the sake of which Trade the Place was built; but this Commerce is not now any thing comparable to what it was.

The Manner in which this is carried on is singular enough to deserve Notice: When the Savages who are in Amity with the *French* come thither to trade, their Chief, first of all, demands Audience of the Governor-General, and if he is not there, of the Governor of *Montreal*, to which he is with great Ceremony admitted. This Audience is generally given in the great Square or Court, in the Middle of the Town; where a Chair of State is placed for the Governor, and the several *Indian* Nations, each by itself, take their Places round him, with their Pipes in their Mouths: After a due Silence kept, the oldest Chief of the *Indians* lays down his Pipe, then stands up and addresses himself to the Governor, to this Purpose: "He tells him, that his Brethren are come to visit him, and to renew their ancient League and Friendship with his Nation: He adds, that having nothing in View but the Ease and the Advantage of the *French*, they have brought down with them good Quantities of Skins and Furs, being sensible that the *French* could not obtain so many, or so good, if they did not bring them down to their Settlements; that

"they are sensible how much these Things are valued and esteemed in *France*, and know, that what they are to take in Exchange are but paltry Things, and of little Value; but however, that their good Friends, the *French*, may not be without Furs, they are content to deal with them; and therefore hope, that in order to enable them to bring a greater Plenty of their Goods the next Year, as well as to put them into a Condition to fall upon the *Iroquois*, in case they should attack or disturb their good Friends, they will let them have Guns, Powder, and Ball, upon reasonable Terms." At the Close of his Speech he lays a String of Beads, and a Packet of Skins, at the Governor's Feet, and desires "that he will secure them a free and fair Trade, and protect them from Thieves." Then retires to his Place, and takes up his Pipe again. The Governor speaks next, assures them of his Protection, and makes them a Present in return. The next Day the Trade begins, and is soon over; by which the *French* gain very considerably; but they are not allowed to sell either Wine and Brandy to the Savages, because they are extremely apt to drink to Excess, and are then furious and mad, and at such times, if they do any Mischief to one another, or to the *French*, they can scarce be brought to give any Satisfaction; for they affirm, it was the Liquor, and not the Man that did the Mischief; and that it is unjust to punish a Person for what he does when he is out of his Senses.

Chambli was formerly as great a Place of Trade as *Montreal*, and there was a pretty good Town there, but now the *French* have only a Port, to hinder the Natives, and their own People, from trading with the *English*. They have, besides, three other Towns, none of them of any great Size, at the three Rivers, at a Place called *Tadoussac*, and at *Richlieu*; and yet, according to their Computation, there are two hundred thousand Souls in *Canada*, but perhaps this is pretty largely reckoned; but their regular Troops and Militia, which are able Men and well disciplined, amount to eight or ten thousand, and this renders them formidable to their Neighbours, both of the *English* Colonies, and *Indians*. They sometimes talk of drawing Lines, and extending a Chain of Fortifications from their advanced Settlements to the River *Mississippi*; but whoever considers the Extent of that Country, and compares it with their Force even as stated by themselves, will plainly see that this is impossible and impracticable, or rather, to place it in its true Light, absurd and ridiculous. But this, however, is no Reason that we should grow careless or negligent; for there is no doubt they will extend themselves as fast as they can, and therefore it is our Business to interrupt their Designs as much as it lies in our Power.

7. Though this Country of *Canada* is situated in the midst of the North temperate Zone, yet the Air of it is excessively sharp, so that their Winter, which sets in about the Middle of *November*, and lasts to the Middle of *May*, is excessively severe. It is not very difficult to assign the Causes of this Cold, which seems so little consistent with the Climate; for we ought to consider, in the first Place, that the Winds which blow from *Hudson's Bay*, and from the Ocean, that is, from at least half the Points of the Compass, pass over vast Tracts of Snow and Ice, and are consequently loaded with prodigious Quantities of nitrous Particles, which is one great Cause of their rigorous Seasons. Secondly, there are vast Forests in this Country, of which, but a very small Part is cultivated, and this is another great Cause of Cold; because, as Experience shews us, in all northern Countries, where the Lands are well broken and tilled, the Climate becomes milder, by the sulphurous Exhalations from the Earth, which are totally bound up in barren Soils, by the Influence of the Cold. I restrain this to the northern Countries, because Experience has also shewn in the *West Indies*, that the cutting down of the Wood alters the Seasons, and where it is done without Judgment, has a very bad Effect, which is owing to the different Degree of Heat. A third cause of Cold is, the too great Quantity of Water; the Exhalations from those vast Lakes and Rivers, which are found in this Country, occasion Fogs,

Fogs, Mists, and Rains, which are extremely prejudicial. But notwithstanding these Inconveniencies, the *French* boast very much of the Fertility of this Country, and, indeed, where it is cultivated, it yields *Indian*, and other Sorts of Corn, Peas, Beans, and, in short, all kinds of Herbs and Vegetables in great Plenty.

As for Trees and Fruits, they are much the same here as in *New England*, and the like may be said of Animals; so that with a reasonable Degree of Labour, there is no Doubt that People may subsist there tolerably well; and as they are not burdened with Taxes, and as the Gentry are allowed great Privileges in their Estates, the People of *Canada* live, as the *French* Authors themselves express it, very much at their Ease, and exercise a generous kind of Hospitality, which is very laudable, and makes them some amends for living, as it were, out of the World; as to the Produce of this Colony, it consists of Furs, especially Castors, which they purchase from the *Indians*; in several kind of Hides or Skins, which they likewise purchase from the Natives; in Fisheries, which, however, are of no great Consequence; in some Sorts of Drugs, and in what we call Lumber, that is, Planks, Pipe-staves, and other things of that Nature. The greatest Part of the Commerce of the Country is carried on in light Canoes, made of Bark, proper for the navigating their Lakes and Rivers, incumbered with Water-falls, which render them unfit for other kind of Vessels; so that whatever Improvements are made here, no Increase of Shipping or Seamen can possibly be expected from them. In Winter they make use of a kind of Sledges, which are drawn either by Horses, or by Dogs, and are very proper for passing over vast Tracts of Snow and Ice, and enable them to continue their Commerce with the *Indians* all the Winter, which, however, the *French* tell us is attended with one great Inconveniency.

The Persons who carry on this Trade must have Licences granted by the Governors, which are confined to a certain Number every Year; and though this brings them in large Sums, yet by hindering the Resort of *Indians* to their Fairs in the Summer, when every Man is at Liberty to make the most of his Goods, this Practice turns to the Prejudice of the Colony in general. The *Normans* were the first who ingrossed the Trade of *Canada*, and for many Years there were no Ships seen in the River of *St. Laurence*, but from *Rouen*, *Dieppe*, and *Havre du Grace*. The Trade then fell into the Hands of the Inhabitants of *St. Malo's* and *Nantes*, and last of all it is become, in a great Measure, the Property of the People of *Rockelle*, except that some Ships are sent from *Bordeaux* and *Bayonne*, which are freighted with Wines, Brandies, Tobacco, and all Sorts of Iron and Steel Wares.

There are two Seasons in which Ships sail from *France* to this Country, viz. towards the End of *April*, or the Beginning of *May*, and at the Close of *August*, or Beginning of *September*; the Reason of which is, that they may arrive as the Ice is just broke, or a little before it is formed, for with respect to the rest of the Year, there is no going thither. The Vessels employed in this Trade export all their Goods from *France* Custom-free, neither are they liable to any Duties in *Canada*, except for Brazil Tobacco; upon which there is five Pence a Pound, or about twenty Shillings Sterling per hundred Weight; the Cargo of these Vessels is pretty much the same with what is sent to the *French* Islands, and as we shall speak of them hereafter, there is no need of mentioning them here; but it is proper to observe, that Tobacco, Sugar, and some other *West Indian* Commodities, make a Part of those Cargoes, the Soil and Climate of *Canada* not allowing its Inhabitants to raise any of these Commodities for their own Use; and we must likewise remark, that for the same Reason there is a Difference in the Woollen Goods exported thither, coarse Cloths being sent to *Canada*, and thin and light Stuffs to the Islands; the Profits upon these Goods are very large, seldom less than fifty per Cent. and those that go off best are of least Use, such as Ribbands, Laces, Snuff-Boxes, Watches, Rings, Necklaces, and such kind of things, of which there

are never too many, though they are commonly sold for four times their Worth, all Charges included.

As soon as the Vessels arrive at *Quebec*, the Merchants there send away the greatest Part of their Cargoes that are fit for the *Indian* Trade to *Montreal*, and the three Rivers, where they have Factors; but the finest Goods, more especially those before-mentioned, remain at *Quebec*, and are sold amongst the *French* themselves; all these different Sorts of Merchandize are paid for in Money, in Bills of Exchange upon the Merchants of *Rockelle*, in Furs, or in Lumber.

It must, however, be observed, that it is seldom or never these Ships return full laden into *France*, because the Colony does not produce what is sufficient for that Purpose; and therefore, that their Voyages may turn to Account, they generally run down to *Cape Breton*, and there take on board a large Quantity of Coal for the *French* Sugar Islands, where they are sure to complete their Cargoes with Ease. We may gather from all this, that whatever our own, or the *French*, Writers may say upon this Head, the Advantages received from *Canada*, by the *French*, are very far from being so great as most People imagine. If ever there is any Money in the Colony, it comes thither from *France*, in virtue of the Establishment on the King's Account; this amounts to about one hundred thousand Crowns of their Money, which makes somewhat more than twelve thousand Pounds of ours, which is generally drawn off again by the Over-Balance of their Trade with *Old France*. This royal Establishment accounts, likewise, for the Bills of Exchange, but at the same Time it most evidently shews that this cannot be accounted a thriving Colony, when it cannot bear its own Expences, or even keep a Part of the Money that is sent thither to pay the King's Officers; for it appears by the best Accounts that can be had from thence, that the running Cash of *Canada* amounts but to a very inconsiderable Sum, and is sometimes reduced even so low as a thousand Crowns, and there is always three fourths of that at *Quebec*. The Calculations of the whole Trade of *Canada* are so various, that there is no reckoning upon any of them with tolerable Security; but I persuade myself that I rather exceed than fall short in my Computation, when I estimate the Amount of this Trade at eight hundred thousand Livres a Year, or at thirty-five or thirty-six thousand Pounds Sterling.

The Reader will easily see from hence, that the Calculations, with respect to the People in *Canada*, which we have taken from *French* Authors, are excessive, and that after all there cannot be above half the Number of Souls they speak of. The Danger, therefore, of our Colonies does not at all arise from the Trade carried on between *Old* and *New France*, but from the Number of Inhabitants in the latter; who, while they can subsist themselves there, will be always very dangerous and troublesome Neighbours, and therefore we need not wonder that the People of *New England* are so uneasy about them; but could we once people *Nova Scotia*, and secure the Possession of the Island of *Cape Breton*, I must confess that, in my Opinion, our Fears would be soon over, since the Trade between *Old* and *New France*, in the Space of a few Years, would be lessened half in half, and perhaps in a few Years more would decline to little or nothing.

8. While the *French* were in possession of *Acadia*, or *Nova Scotia*, they raised that Colony to a much greater Degree of Perfection, than they are ever like to do *Canada*; and, indeed, a great Part of the Trade of the latter was owing to the former, and to the Settlement of *Cape Breton*; the Loss that the *French* have suffered by the Cessions made to us by the Treaty of *Utrecht*, and the true State of their Affairs in this Part of the World and ours, will best appear from the following Account taken from Father *Charlevoix*, who is, beyond Comparison, the most accurate Writer that I have ever met with upon this Subject; the Person who knew most, and has shewn the greatest Sincerity in speaking what he knew, and not over-valuing things, as is the Custom with most of the

the Writers of his Nation, and, indeed, of all other Nations, when speaking of their own Concerns.

By the Cession of *Acadia* and *Placentia*, says he, to the *English*, there remained to *France* no other Place to carry on the Fishery of Cod-Fish, or at least to dry their Fish in, but the Island of *Cape Breton*, which is now only known by the Name of *Isle Royal*; this Island is situated between 45 and 47 Degrees of North Latitude; and forms with the Island of *Newfoundland* (from which it is distant but about fifteen Leagues) the Entrance of the Gulph of *St. Laurence*; the Streight which separates *Cape Breton* from *Acadia*, is about five common Leagues of *France* in Length, and about one in Breadth, it is called the Passage of *Fronsfac*. The Length of the Island, from North-east to South-west, is not quite fifty Leagues; its Figure is irregular, and it is in such a Manner cut through by Lakes and Rivers, that the two principal Parts of it hold together only by an Isthmus of about eight hundred Paces in Breadth, which Neck of Land separates the Bottom of *Port Toulouse* from several Lakes, which are called *Labrador*. The Lakes empty themselves into the Sea to the East, by two Channels of unequal Breadth, which are formed by the Islands *Verderronne*, and *la Boularderie*, which is from seven to eight Leagues long. The Climate of this Island is pretty much the same with that of *Quebec*, and although Mists and Fogs are more frequent here, yet no one complains that the Air is unwholesome. All the Lands here are not good, nevertheless they produce Trees of all Sorts. There are Oaks of a prodigious Size, Pines for Masts, and all Sorts of Timber fit for Carpenters Work; the most common Sorts, besides the Oak, are the Cedar, Ash, Maple, Plane Tree, and Aspin; Fruits, particularly Apples, Pulse, Herbs, and Roots; Wheat, and all other Grain necessary for Sustenance; Hemp and Flax abound here less, but are every whit as good as in *Canada*.

It has been observed, that the Mountains may be cultivated up to the Tops, that the good Soil inclines always towards the South, and that it is covered from the North and North-west Winds by the Mountains which border upon the River *St. Laurence*. All the domestic Animals, such as Horses, Horned-cattle, Hogs, Sheep, Goats, and Poultry, pick up a good Living here. What is got by Hunting, Shooting, and Fishing, is able to maintain the Inhabitants a good Part of the Year. This Island abounds in Coal-pits, which are in the Mountains, consequently the Trouble and Expence of digging deep, and making Drains to carry off the Water, are generally saved; here is likewise Plaster in great Abundance; 'tis said that there is no Part of the World where more Cod-fish is caught, nor where there is so good Conveniency for drying it; formerly this Island was full of Deer, they are now very scarce, particularly Elks; Partridges are here almost as large as Pheasants, and in their Feathers not unlike them: In a Word, the Fishery of Sea-Pike, Porpoises, &c. is in great Abundance here, and carried on with great Ease.

All its Ports open to the East, turning a little to the South, and within the Space of fifty-five Leagues, beginning at *Port Dauphin*, and continuing to *Port Toulouse*, which is almost at the Entrance of the Passage of *Fronsfac*. In all other Ports of the Island it is difficult to find Anchorage for small Vessels, in small Creeks, or amongst the Islands. All the Northern Coasts are very high, and almost inaccessible; and it is very difficult to land on the Western Coast, till you come to the Passage of *Fronsfac*, out of which you are no sooner got, but you meet with the *Port Toulouse*, known formerly by the Name of *St. Peter*. This Port is strictly between a kind of Gulph (which is called *Little St. Peters*) and the Island *St. Peter* over against the Islands *Madame*, or *Maurepas*. From thence ascending towards the South-east, you find the Bay of *Gaborie*, of which the Entrance (which is near twenty Leagues Distance from *St. Peter's* Island) is a League broad, between Islands and Rocks. It is not very safe to come near these Islands, some of which advance a League and a half into the Sea. This Bay is two Leagues deep, and the Anchorage very good.

The Harbour of *Louisbourg*, formerly called the *En-*

glish Harbour, is not above a League from the above Bay, and is, perhaps, one of the finest in *America*; it is near four Leagues in Circumference, and every where there are six or seven Fathom Water; the Anchorage is very good, and you may, without Danger, run a Ship a-ground upon the Mud. The Entrance is not above two hundred Fathoms wide, and lies between two small Islands: It is discovered at the Distance of twelve Leagues at Sea, by the Cape of *Lorembec*, which is but at a small Distance from it, to the North-east. Two Leagues farther up is the *Port de la Baleine*, the Entrance of which is very difficult, occasioned by many Rocks which the Sea covers when it runs high; no Ships of greater Burden than three hundred Tons can go into it, but they are quite safe there when they are got in. From thence, in less than the Distance of two Leagues, you come to the Bay of *Penadou*, or *Medanou*, the Entrance of which is about a League broad, and the Bay itself is about two Leagues deep. Almost over against this Bay, is the Island *Scatari* (formerly called *Little Cape Breton*) which is above two Leagues long; the Bay of *Mire* is separated from it by a very narrow Neck of Land; the Entrance of this Bay is likewise near two Leagues wide, and it is, at least, eight Leagues deep: It grows narrower the further you go into it; however, large Ships may go into it about six Leagues, and find there good Anchorage under Cover of the Hills.

Besides the Island of *Scatari*, there are many other small ones, and Rocks, which the Sea never covers, but may be discovered a great Way off. The largest of the Rocks is called the *Forillon*; the Bay of *Morienne* is higher up, separated from the Bay of *Mire*, by the *Cape Brule*; and a little higher is *l'Isle Plate*, or *l'Isle a Pierre de Fusil*, directly in the Longitude of 46 Degrees 8 Minutes. There is, between all these Islands and Rocks, very good Shelter, and you may go amongst them, and near them, without Fear or Danger. From hence proceeding for about three Leagues to the North-west, you find a very good Harbour, which is called *l'Indiane*, but is fit only for small Vessels; from thence to the Bay *des Espagnols* there are two Leagues. This Bay is a very fine Harbour; its Entrance is but about one thousand Paces wide, but it grows wider, and at the Height of a League divides itself into two Branches, which may be sailed up for two Leagues; both these Branches are excellent Ports, which might be made better at a very small Expence. From this Bay, to the lesser Entrance of *Labrador*, is a Gulph about twenty Leagues long, and is above three or four wide in its greatest Breadth. It is counted a League and a half from the large Entrance of *Labrador* to *Port Dauphin*, or *St. Anne*, and you may come to an Anchor almost any where amongst the Islands of *Cibou*; a Neck of Land almost entirely covers the Port, and leaves Room for no more than for one Ship at a Time to go in. The *Port Dauphin* is about two Leagues in Circumference, and Ships hardly feel the Wind there, by reason of the Height of the Mountains which surround it. They may come as near the Shore as they please. All the Harbours and Ports being so near each other, it would be very easy to make Roads by Land from one to the other; and nothing could be more advantageous to the Inhabitants, than these Communications, which would save them the Trouble in the Winter Season of going so far about by Sea.

This is the Description given of this Island in general, by the above-mentioned Jesuit, who has been a long time there, pretends to be very exact in his Enquiries, and published his History a very little while before this important Island was conquered by the *English* Nation: He afterwards proceeds to describe more particularly some of the above Ports, such as that of *Louisburgh*, and that of *St. Anne* or *Port Dauphin*.

After the Cession of *Placentia* and *Acadia* to the Crown of *England*, it is certain, the *French* had no other Place where they could dry their Fish, or even fish in Safety, but the Island of *Cape Breton*; they were therefore drove by Necessity to settle an Establishment there, and to fortify it. They began by changing its Name, and called it the *Royal*;

Royal; they next debated upon the Choice of a proper Place to settle the general Quarters in, and they were for a long time divided between *Louisburgh* and *Port Dauphin*. It has been already said, that the former is one of the finest Harbours in all *America*, that it has near four Leagues in Circumference, that there is Anchorage that is good, and that one may run a Ship a-ground in the Mud, without Danger. Its Entrance is not two hundred Fathoms wide between two little Islands, which may easily defend it, by having Batteries erected on them.

The Cod-fishing is there very abundant, and one may fish from the Beginning of the Month of *April* to the End of *December*; but then it was said, that the Land about this Port is barren, and that it would cost immense Sums to fortify it, because all the Materials must be brought a great way; besides which it had it seems been remarked that there was no sandy Bottom in this Harbour for more than about forty fishing Vessels. It has likewise been observed, that the Port *St. Anne*, or *Dauphin*, has a sure and safe Road for Ships at its Entrance, amongst the Islands of *Cibou*; and that a Neck of Land, almost entirely shuts up the Port, leaving a Passage for no more than one Vessel at a time.

This Port, thus shut up, has near two Leagues Circumference, in an oval Form; Ships may here lie just as they please; for the Land, and the Mountains that surround it, keep off the Winds in such a manner that they are hardly felt. They who were for opening this Port for the chief Settlement alledged, that it might be rendered impregnable at an easy Rate; that more might be done here for two thousand Livres, than at *Louisburgh* for two hundred thousand; because every thing necessary for building a large City, and fortifying it, was at Hand. It is further certain, that this sandy Bottom is as extensive here as at *Placentia*; that the Fishing is very good; that there is a great Quantity of excellent Timber about this Place, such as Maple, Beech, and Wild Cherry-tree, but above all, Oaks of above thirty Feet high, fit for Building, &c. It is likewise true, that Marble is here very common; that the Lands are generally good; that about the great and smaller Entrances of *Labrador*, which are about the Distance of a League and an Half, its Soil is very good. In a Word, this Port is but four Leagues from the Bay of *Espaniola*, which is likewise a very good Harbour, where the Lands are excellent, and covered with Woods, fit for almost all Uses: It is true that here is no fishing in small Boats, on Account of the westerly Winds which generally blow here, but one may fish here, as in *New England*, in large ones; the only Inconveniency in *Port St. Anne* is, that the Entrance is difficult, and this Inconveniency alone determined the Controversy in favour of *Louisburgh*, where, says he, neither Pains nor Expence have been spared to render it both convenient and impregnable. With respect to the former, this Author was right; but in regard to the latter, Experience shews us that he was absolutely in the wrong.

The *French* reaped many great Advantages from their Possession of this Island, and promised themselves many more; which might, however, be all reduced to these three Points: First, That this Island might be planted to great Advantage, as containing in itself Commodities of considerable Value; such as Cod-fish, Oil, Coals, Plaister, Timber, and other Things. Secondly, it was capable of being made a Magazine, or Staple, between *Old* and *New France*, and of becoming thereby of very great Advantage to both. And lastly, a Fishery might be erected there, or rather several Fisheries, from whence vast Benefits might be derived. It was with a View to the Execution of all these Projects, that so great Care was taken of this Island, such mighty Fortifications erected at a very large Expence, and such Encouragement given to those who would settle there. And as their Plan was well laid, I think there is very good Reason to believe that the *French* were actually great Gainers with respect to every one of the three Heads before laid down, but more especially with regard to the last, though I am also of Opinion, that the Calculations that have been made of their Profits by their Fishery, the Numbers of their Ships, and Seamen employed therein, very much

exceed the Truth; but at the same time I readily admit, that in the Space of a few Years, those Calculations would have been made good.

The Inferences I would draw from all that has been said on this Subject, are three, which I esteem of very great Consequence, as being perfectly satisfied in regard to the Truth of every one of them: The first is, that *Canada* considered independently, and by itself, never was, or ever can be, of any great Consequence to the *French*, either as to its Product, its Commerce, or the Number of Shipping and Seamen that are, or can be, employed thereby. My next is, that *Nova Scotia* and *Cape Breton*, which I esteem but one, the latter being but Part of the former, and belonging to us of Right as much as any of our Colonies, were of far greater Use and Benefit to *France*, than *Canada*, and the Possession of them all that could possibly have rendered *Canada* itself of any Use or Importance, and were, therefore, very dangerous to us, and what we could never suffer to remain in *French* Hands, without being wanting to ourselves, and sacrificing, at once, our Honour and our Interest. Our Honour, as these Places were indisputably Part of our *American* Dominions; our Interest, as they were the only Countries by the Possession of which the *French* might be able to increase their naval Power, and become troublesome to us in that Part of the World. The third Observation I have to make is, That as Providence has put in our Power to remove these Inconveniencies, and to rid ourselves of these Dangers, it would be inexcusable in us not to take the utmost Care to improve the Advantages gained in this War, or to neglect securing them, when a general Peace shall be made; because by this means we may be entirely safe, and *France* can have no right to expect we should restore what we always claimed as our own, and what she kept only by deceiving or deluding our Ministers, at the making the last general Peace at *Utrecht*. A thing so notorious to this Nation, that there is no great Reason to fear any other Ministry will ever be guilty of the like Mistake, with which Remarks I shall close this Part of my Subject.

9. We have already observed, in the Account we gave of the Island of *St. Christophers*, that the *English* and *French* took Possession of that Island the same Day, and from thence we are to date the Power of the *French* in the *West Indies*. The Reader must remember, that the *Leeward Islands* were originally discovered by the great *Columbus*; but after the *Spaniards* had settled themselves in *Cuba*, *Hispaniola*, *Porto Rico*, and other great Islands, they neglected the rest; and it was the Knowledge that the *English* and *French* had of this that induced them to think of settling these lesser Islands. It was in the Year 1625, that Sir *Thomas Warner*, on our Part, and Mr. *Desnambue*, for the *French*, took Possession of this Island; but, in the Space of two Years, both the *English* and the *French*, who agreed very well together, were attacked and driven out of the Island by the *Spaniards*, and this was more fatal to the *French* than to us; for our Colony, after a short Time, returned; the *French* being once separated, scattered themselves through all the adjacent Islands, and began to apply themselves to the very worst Sort of Methods, in order to get a Living; and from this Accident, as the *French* Writers with great Probability affirm, sprung up two Sorts of People, that proved afterwards the Curse and Plague of the *West Indies*. We generally speak of them under one Name; but the *French* Writers seem to have distinguished them rightly enough into *Boucaniers*, or, as we write it, *Buccaneers*, and *Flibustiers*, whom we call *Freebooters*. The first of these were a kind of Huntsmen, and consisted of such of these People as settled on the North-side of the Island of *Hispaniola*, where, by killing wild Cattle of all sorts, they obtained an indifferent Livelihood; but some of these People growing weary of the Hardships to which they were exposed, applied themselves to the *Dutch*, to whom they sold their Skins, to furnish them with Vessels to cruize upon the *Spaniards*, which they very readily did, and those Vessels being originally Flyboats, the Privateers who made Use of them received their *French* Name from those Vessels; whereas we affirm from the Trade they

they carry on of robbing and spoiling all they meet with, they had the Name of *Freebooters*, which, as I apprehend, means pretty much the same thing with *Pirates*.

But Mr. *Desnambuc*, who was a Gentleman of a very good Family, was very far from being guilty of any thing of this sort; but with those that remained faithful to him returned to *St. Christopher's*, fortified himself there, and laid the Foundations of a good Colony, for the Support of which there was a Company already formed in *France*. He saw with extreme Regret, that Sir *Thomas Warner* had got the Start of him; that the *English* Colony was in a much better Condition than his own, and that they had already made themselves Masters of several of the adjacent Islands. He resolved therefore, and indeed he had no other Choice to make, to send over some of the principal Persons in his Colony to *France*, that they might secure Supplies, and chiefly with a View of settling the Island of *Guadaloupe*. Amongst the Persons he sent over there was one Mr. *Olive*, a bold enterprising Man, and one who had nothing in View but his own Interest. He had it seems some Notice of the *French* Governor's Design, in which he resolved to supplant him; and having entered for that Purpose into a Treaty with one Mr. *du Plessis*, and some other Merchants of *Dieppe*, who formed a Company for the Support of this Scheme; these two were sent over Governors, with joint Authority to the Island of *Guadaloupe*, where they arrived on the 8th of *June* 1635, with about five hundred Men. It so fell out that in the very Beginning of their Enterprize they committed two Mistakes; the first was, they settled on the wrong Side the Island, where the Soil was very bad; the second, that they fell out with the Natives before their Colony was in a Condition to subsist. The bad Consequences that actually attended these Errors, and the Foresight he had of what must certainly follow, soon broke the Heart of Mr. *du Plessis*. As for Mr. *Olive*, who was now sole Governor, his Haughtiness and Pride had certainly brought the Colony to Ruin, if he had not fallen blind. Upon which the Company sent over one Mr. *Aubert*, a very discreet and prudent Gentleman, who, in a few Years time, put the Affairs of this Colony into Order, and established it so effectually, that the Inhabitants have subsisted very happily ever since. But though Mr. *Desnambuc* had the Misfortune to see this Country thus taken out of his Hands; yet he had the Pleasure before his Death to settle the Island of *Martinico*, of which, by that Means, he became Proprietor, and by his Last Will and Testament left it to his Family.

At this time Cardinal *Richlieu* came to the Head of the *French* Councils; and having received an Account of the Advantages that were like to arise from the settling of these Islands, he thought proper to send over a Person of Distinction, to take the Direction of the whole Island, and accordingly made choice of Mr. *de Poincy*, a Knight of *Malta*, whom he sent over thither, with the Title of Governor and Lieutenant General of the Islands in *America*: He embarked at *Dieppe* on the 15th of *January*, 1639, and after a very short Passage arrived at *Martinico*, from whence he went to *Guadaloupe*, and afterwards to *St. Christopher's*. He was a Man of very great Parts, had read much, and was well acquainted with the World; and with all this he had the Qualities that rendered him the fittest Man in the World for his Office: He was very severe in the Execution of his Authority against those who were for making hasty Estates, at the Expence of the Public: He was extremely kind and good to the industrious Part of the Inhabitants who were willing to discharge their Duty, and let their private Fortunes depend upon the flourishing State of the Colonies: He had a true Notion of Religion, caused Churches to be built in all the Islands, took care that the Priests were well maintained; but would have no Monasteries or Monks: He established also an excellent Form of Justice, granted Commissions to Privateers, and hanged up Pirates with very little Ceremony. His Concern for the Public Good was so apparent, that without any Assistance from the *French* Government he was in a manner absolute, and his Orders were obeyed with the utmost Alacrity, because the People were sensible that he had nothing in View but

their Interest. In short, he changed the whole Face of Things in that Part of the World, settled desert Islands, and though he made many hundreds of People rich and happy, contented himself with the Pleasure of doing it, without making any Fortune of his own.

But after the Death of Cardinal *Richlieu*, and the Disturbances that followed in *France*, the Colonies sunk, by the ill Management of the Company; and then the Chevalier *de Poincy*, in the Year 1651 purchased the Islands of *St. Christopher*, *St. Bartholomew*, *St. Martin*, and of the *Holy Cross*, for the Order of *Malta*. In the like Manner other Islands were disposed of by the *French* Company, to such as would give any thing for them; which, as may be easily conceived, was of very bad Consequence; and brought the Affairs of the *French*, in that Part of the World, into a very strange Situation. The *Dutch*, always attentive to their own Interest, taking notice of the Condition things were in, established Magazines at *Flushing* and *Middleburgh*, for *West India* Commodities; and employed, in the Trade of the *French* Islands, upwards of one hundred Ships every Year. This continued till about the Year 1664, when a new Company was set up in *France*, which, with the Assistance of the Government, purchased back from the Island of *Malta*, and from the other Proprietors, the Rights that they had acquired, put an End to the *Dutch* Trade, and brought the Commerce of the Colonies once more into a right Channel, which was what the Government had chiefly at Heart; for when after ten Years Possession of their Grant, they began to increase their own Profit, by Methods prejudicial to the People, the Ministry thought fit to interpose again; and as they had made use of the Company to deliver the Inhabitants from the Oppression of Foreigners; so when once it was discovered, that they meant to become Oppressors themselves, that was put out of their Power, and every thing so settled, that such as were diligent and industrious might be secure of reaping the Fruits of their own Labours, and the Profits of the Trade in general be secured to the *French* Nation. These new Regulations took Place about the Year 1680; since which, the *French* Islands have been in a very flourishing Condition, and are, at this Day, of very high Consequence to the Crown of *France*, as they contribute greatly to the promoting Manufactures at home, and are the Source of a very extensive and profitable Commerce abroad.

10. This general View of the Manner in which these Islands were first settled and secured to *France* being given, we shall next proceed to a very short Account of the Islands themselves, as they lie from South to North; and then we shall give a more particular Detail of their Commodities, which will shew the general Value and Importance of these Settlements, and rectify some Mistakes that have been made about them; a thing as useful and necessary to us, as to the *French* themselves.

To begin then with *Granada*; it is situated in 12 Degrees North Latitude, about thirty Leagues South-west of *Barbadoes*, and about the same Distance North of *Caribiana*, or *New Andalusia*; this Island is twenty-five Leagues in Circumference, and has several good Bays and Harbours, some of which are fortified. It is esteemed a fruitful Soil, and well watered; producing Sugar, and such other Plants as are found in the rest of the *Caribbee* Islands; there are abundance of very small Islands that lie at the North End of *Granada*, which are called the *Granadillas*.

Martinico is situated between 14 and 15 Degrees of North Latitude, and in 61 Degrees of Western Longitude, lying about forty Leagues North-west of *Barbadoes*. It is twenty Leagues in Length, but of an unequal Breadth; the inland Part of it hilly, and, at a Distance, appears like three distinct Mountains, being exceedingly well watered by numerous Rivulets, which fall from the Hills; and there are several commodious Bays and Harbours on the Coast, some of them so well fortified, that they bid defiance to the *English*, when they made a Descent there, with several thousand Men in the last War. They were forced to return to the Ships

after they had burnt and plundered some Plantations in the open Country. The Produce of this Island is the same with that of *Barbadoes*, viz. Sugar, Cotton, Ginger, Indigo, Aloes, Piemento, &c. and as it is much larger, it has many more Inhabitants, and produces greater Quantities of Sugar than *Barbadoes*. This Island was replenished with *Indians*, when the *French* first attempted to settle here, anno 1635, and many Battles were fought between them and the Natives, with various Success. But the *French*, at last, overpowered and extirpated the ancient Inhabitants, and it is now the Chief of all the *French Caribbean Islands*, and the Seat of their Governor-General.

Marigalante is situated in 16 Degrees North Latitude, a little to the South-west of *Guardaloupe*, and is about five Leagues in Length, and four in Breadth: It was discovered by *Columbus*, in his second Voyage to *America*, anno 1493, and named by him *Marigalante*, or the *Gallant Mary*, after the Name of his Ship. The *French* began to send Colonies thither about the Year 1647; and having expelled the Natives, after several Years Wars, the *French* remained in the peaceable Possession of this Island, the Produce of which is the same with the rest of the *Caribbees*.

Guardaloupe, so named by *Columbus*, from its Hills resembling those of that Name in *Spain*, is situated in 16 Degrees North Latitude, and 61 Degrees of Western Longitude, about thirty Leagues North of *Martinico*, and almost as much South of *Antigua*. It is said to be the largest of all the *Caribbee Islands*, being twenty-two Leagues in Length, and half as much in Breadth at each End; but almost cut in two by a deep Gulph or Bay on each Side, so that the Ends are joined together by a narrow Isthmus. This, like *Martinico*, abounds in Sugar, Cotton, Indigo, Ginger, &c. and is in a very flourishing Condition, and, agreeable to the Consequence it is of to the *French*, they have taken Care to fortify it with several regular Forts and Redoubts, which were in so good a Condition, when the *English* Admiral *Benbow* made a Descent here, with a considerable Body of Land Forces, anno 1702, that he did not think fit to attack them; but he destroyed a great many of their Plantations, and open Villages. The *French* began to send Colonies to this Island about the Year 1632, but knew so little what the Soil was good for then, that for many Years they were in Danger of starving; and afterwards the Planters, by their Divisions, almost ruined one another; so that this Island did not make any great Figure till the present Century; since the Beginning of which it has vastly increased, and makes more Sugar now than any of the *British Islands*, except *Jamaica*.

Desiada, or *Diserada*, the desirable Island, so called by *Columbus*, because it was the first Land he discovered in his second Voyage to *America*, anno 1493. It is situated about ten Leagues North-east of *Guardaloupe*, a little inconsiderable Island, not so fruitful as some others which belong to the *French*. *St. Bartholomew's* is a small Island, about ten Leagues North of *St. Christopher's*, taken by the *English*, under the Command of Sir *Timothy Thornhill*, in the Year 1689, but restored to the *French* at the Peace of *Ryswick*. *St. Croix*, or *Santa Cruz*, another small Island, situate in 17 Degrees 30 Minutes North Latitude, about twenty Leagues East of *St. Christopher's*, and has been contended for by the *English*, *Dutch*, *Spaniards*, and *French*; but it is now in the peaceable Possession of the *French West India* Company. *St. Martin's*, another Island of no great Consequence, belonging to the *French*, situate a little to the North-west of *St. Bartholomew's*.

The Island of *Martinico* is the chief of the *French* Settlements: The Governor-General, and Intendant, reside there; it is also the Seat of the sovereign Council, which has Jurisdiction, not only throughout the *Antilles*, but also over the *French* Settlements in *St. Domingo* and *Tortugo*. The Number of People in this Island, by which we are obliged to compute the rest, are affirmed to be ten thousand Whites, and twenty thousand Negroes. It appears from hence, that the *French* are very numerous in these Islands, and though they have been

exposed to many and great Difficulties in raising and establishing these Plantations, yet they are now brought to a very fair and flourishing Condition, carry on a great Trade, and are daily improved. The principal Commodity they raise at present in these Islands, is Sugar, whereas formerly it was Tobacco. Mr. *de Poincy*, before-mentioned, was the first who taught them the Art of raising the Sugar-Cane, and curing the Juice of it. He was a Man of such extraordinary Genius, that he improved upon the Methods then in Use at *Brazil*, and the *Madeiras*; the Mills he caused to be erected, were stronger, neater, and better fitted for Use; and his Furnaces likewise were contrived to much greater Advantage; so that he not only introduced it, but carried the Art of Sugar-making to a very high Degree of Perfection. Besides Sugar, they raise also a great deal of Indigo, in which they did not so soon succeed as in Sugar; which, I find, the *French* Writers attribute to the intolerable Stench with which the making that Commodity is attended. But they were more happy in raising Cotton, which requires very little Pains or Labour.

They also cultivate Cacao to great Advantage, and draw considerable Profit from the Ginger, Cassia, and Piemento, which is what we call *Jamaica* Pepper, or Allspice, of which they export considerable Quantities. They likewise manufacture Rocou, for the Use of Dyers, and send home Variety of medicinal Gums, and wet Sweet-meats of several kinds. These Islands produce also several kinds of valuable Woods, which are used for dying, inlaying, and Cabinet-Work; such as Rose-wood, which, when wrought and polished, has a very beautiful Appearance, as well as a fine Smell. The *Indian* Wood is also of the same Nature, and the Iron Wood, so called from its being excessively hard, is esteemed preferable either to Cedar or Cypress; *Brazil*-Wood they have in great Quantities, and *Brazillito*, yellow Wood, or Fustick, and green Ebony, which is both used by the Cabinet-Makers and the Dyers. We may add to these Commodities, raw Hides, and Tortoiseshell, and then the Reader will have a tolerable Comprehension of all the Wealth and Riches of the *French West Indies*. But to execute our Design effectually, it is necessary we should give an Account of the Commerce of these Islands, which is what we shall endeavour to do in as few Words as possible, and in such a Method, as may take in the full Extent of their Trade, a thing that has not hitherto been attempted, at least in our Language.

II. In the first Place then, it is to be considered, that though these Islands produce so many rich and valuable Commodities, yet they stand in need of very large Supplies of various Kinds of Necessaries, without which they could not possibly subsist, such as Horses, and Cattle of all Kinds; Corn, Roots, dry Fish, and all sorts of Lumber, of which they receive considerable Quantities from *Canada*, and the rest from our Northern Colonies, in Exchange for Sugar, Tobacco, Indigo, and other Goods, which are sent to *Canada*, and for Melasses or Molasses, to our Colonies, where it is distilled into Rum, of which Kind of Commerce we have spoken largely elsewhere, and therefore there is no need that we should dwell upon it here. The Inhabitants of this Island stand always in want of Negroes, with which they were formerly supplied by their own *African* and *Senegal* Companies, which, as we have already shewn, have been long ago united to the *French East-India* Company, by whom this Slave-Trade is now carried on with great Regularity, and much Profit. The Negroes are sent to *Martinico*, where they are purchased by the Inhabitants of the other Islands, at a settled Price of so many Hogsheads of Sugar a Head, as in the *Spanish* Ports they are bought for so many Pieces of Eight.

Before we speak of the direct Trade between those Islands and *France*, it will be proper to give a short Account of the Quantities of Sugar, that, according to the best Computations, are raised in them; because this being the Staple Commodity, it will enable us to form some sort of Notion of the whole Extent and Value of their Exports. In *Martinico* it is computed that they make, one Year with another, ten thousand Hogsheads of Sugar, each

each of about six hundred Weight; in *Guardaloupe*, about four thousand Hogsheads; and in the other Islands, about one thousand Hogsheads all together. The *French*, employ in this Trade annually between two and three hundred Ships, from the Burden of one hundred to three hundred Tons. The time in which they sail from *France* is between *September* and *February*, that they may avoid as much as possible the Hurricanes, and arrive in a fit Season for compleating their Cargoes.

The Vessels from *Rochelle* and *Bordeaux* are, generally speaking, laden with salt Beef and Pork, Flour, Brandy, all sorts of Wines of the Growth of that Part of *France*, and also *Madeira*, which they take in at that Island; dried Cod, pickled Herrings, Oil, Cheese, Butter, Tallow, Iron, Linen, and most sorts of Mercery Goods. The Ships from *Rouen* seldom carry Provisions, but are freighted with Woollen and Linen Goods, Silk, Ribbons, Shoes, Stockings of all Sorts, Hats, Tin, Copper, and Brass Ware, small Arms, and Sword Blades, Pewter, Pins, Needles, Paper, Pens, Cards, and an infinite Number of other Things of the same Kind. The Ships from *Marseilles* and *Toulon* are freighted with Oils, dried Fruit, Wines, and several Kinds of light Stuffs, that are manufactured in *Provence*. Thus we see what prodigious Advantages these Settlements bring to *France*, by encouraging Industry, employing a large Number of Ships, and consequently raising and maintaining many hundreds of Seamen. It is no Wonder therefore that the *French* Government pay so much Attention to this important Branch of their Traffic, and are so careful in taking every possible Method to encourage these Colonies, and to protect their Trade, which, however, suffered considerably in the two last Wars, and still more considerably at the Beginning of this.

As to the general Amount of their Trade, it is a very difficult thing to make so much as a probable Calculation, but if we may depend upon that of Mr. *Savary*, who was allowed to understand these Matters as well as any Man in *France*, the Goods exported from that Country rise to the Value of about four Millions of Livres, or two hundred thousand Pounds of our Money, annually; for which he computes they bring home very near double the Value in *West India* Commodities; and if we take in the other Branches of Trade before-mentioned, we may fairly compute the Profits of these Islands at half a Million Sterling, provided the Calculations before-mentioned are tolerably exact.

We may venture, before we quit this Subject, to make some few Remarks, for the Service of the *English* Reader: As for instance, That it appears clearly from this Account, we were very considerable Gainers, by securing to ourselves that Part of the Island of *St. Christopher*, which had been almost one hundred Years in the Possession of the *French*, and in their Part of which they raised more and better Sugars than in any of the Islands they now possess, *Martinico* and *Guardaloupe* excepted; and perhaps we should not carry the Matter too far, if we said, more Sugar than in all their Islands, exclusive of those before-mentioned. We may likewise observe of how great Consequence it would be to us to plant the other Islands to which we lay claim; as this would increase our Trade and our Strength in that Part of the World, at the same time; and contribute also, in the Time of a *French* War, to curb and annoy out Enemies. The *French* themselves, for Reasons that have been already assigned, do not seem very desirous of extending their Plantations, and therefore cannot offer any just Reasons why we should be debarred any longer from settling those Islands that belong to us, and which they do not desire to settle themselves. We may also consider it as a Thing very practicable in any *French* War, to reduce these Islands to the greatest Extremity, by the proper Distribution of our naval Force in the *West Indies*, which in Proportion to the Value of their Commerce, would distress the Merchants in *France* to the last Degree, and give our own Colonies vast Advantages in supplying those Markets which are at present supplied by the *French*; and there are some who are very good Judges of our Strength and theirs, who think these Islands might be entirely ruined by us in a few Years.

12. We reserved the Island of *St. Domingo* to be treated of separately, as being a distinct Government, and indeed a distinct Concern to the *French* from all their other Islands. When this Country was first discovered by *Columbus*, in 1492, it was called by the Inhabitants in their own Language *Ayty*; but their Followers gave it the Name of *Hispaniola*, or Little *Spain*; the Admiral himself intended to call it *Isabella*; but the City he founded in 1494 being dedicated to *St. Dominic*, the Name was first extended to that Quarter, and, in Length of Time, to the whole Island; so that it is now equally well known in *Europe* and the *West Indies*, by the Appellation of *St. Domingo*, and is generally so called in Charts: This Island is reckoned four hundred Leagues in Circumference; but if all the Creeks, Inlets, and Bays, be measured, it will be found six hundred at least; it is allowed to be the most fruitful, and by much the pleafantest, in the *West Indies*; the Forests are vast in Extent, and the Trees taller and larger, the Fruit more lovely to the Eye, and better tasted than in the other Islands; the Meadows or Savannahs, as they are called, are extremely large, and in a manner boundless, in which there are innumerable Herds of Black Cattle that belong to the Country, as also wild Horses, and wild Hogs, produced from the Stock of those Animals brought over by the *Spaniards*. There is scarce a Country in the World better watered, either by small Brooks or by navigable Rivers, all of which are full of Fish. Add to this, that there are many rich Mines of Gold, Silver, and Copper, which were formerly wrought with great Profit; but the *Spaniards* being now too weak to carry them on for their own Advantage, conceal them with all imaginable Care, to prevent any other Nation's driving them out, and reaping the Advantage of those Treasures which by their Indolence and ill Management are no longer in their Power.

The Reasons that induced that Nation to abandon so rich and valuable a Country, were chiefly these: First, the Severity of the Government; for the sovereign Council of the *Indies* being established at *St. Domingo*, kept the Inhabitants more within Bounds than in other Places. Secondly, the vast Riches gained by their Countrymen in *Mexico*, the Noise of which drew Numbers to forsake this Island, in Hopes of coming in for a Share of this Wealth that was to be had elsewhere. Thirdly, the great Demands for People to maintain and secure their Conquests on the Continent. Fourthly, the Destruction of the *Indians*, which put it out of the Power of the *Spaniards* to cultivate their Lands; for as yet, the Use of Negroes had not reached the *Spanish* Settlements; but was confined intirely to the *Portuguese* in *Brazil*. And, lastly, the Descents of the *English* and *French* on the western Part of the Island, which by Degrees obliged the *Spaniards* to abandon all the Country between *Mont-christo* and *Cape Mongon*.

This made Way for the Settlement of the *Buccaneers* in those Parts, but chiefly in the little Island of *Tortugo*, where they soon raised a kind of Settlement, which, however, the *Spaniards* destroyed in the Year 1638, with inexorable Cruelty; notwithstanding which the *Buccaneers* were not hindered from returning, and resettling in that Island, under the Command of Captain *Willes*, an *Englishman* of established Reputation, whose Courage and Conduct soon put them out of Fear of being disturbed by the *Spaniards*. It was not long however that they continued in this Situation, for *Monf. de Poincy*, whom we have so often mentioned, thought fit to secure this Island for the *French*; and with that View sent thither one Mr. *Vasseur*, with whom the *French* *Buccaneers* that were already in the Island joining, *Capt. Willes*, with the Forces under his Command, found himself under an absolute Necessity of abandoning the Place.

This put the *French* in Possession of it for that Time; but the *Spaniards* harrassed them for many Years, and drove them out of the Island more than once; however, being constantly supported from their Islands, and being joined from Time to Time by Adventurers of all Nations, they still kept up their Claim, and not only fixed themselves effectually upon this little Island, but began also to make Settlements upon the West End of *St. Domingo*; where, in twenty Years Time, they became so strong,

strong, that the *Spaniards* were glad to live upon good Terms with them. Yet they never considered them in any other Light, than as Usurpers, and Men whom Force maintained in a Country to which they had no manner of Right. The Way in which the *French* settled themselves was very singular, for they might well be divided, and, indeed, the *French* Historians have divided them into three very distinct Sorts of People.

First, The *Buccaneers*, or Hunters, who, for the Conveniency of killing black Cattle, and selling their Skins, fixed upon the Continent of *Hispaniola*, and built some Villages for their Retreat, and several Fortresses for their Security. *Flibustiers*, or *Privateers*, who were furnished by Commissions from the *French* Governor of *Petit Guaves*, to cruize upon the *Spaniards*, and who were mostly at Sea, sometimes in small Vessels, every Crew upon its own Account, and sometimes in large Squadrons, with fifteen hundred or two thousand Men on board them, but of all Nations, and who resorted from Time to Time into the *French* Ports, to careen their Ships, dispose of their Prizes, and to recruit. The third Sort of People were, Men of a more sober way of Living, who settled in the Country, laid out Plantations, in which they raised Tobacco, and other valuable Commodities, whom the *French* therefore stile *Inhabitants*. These three Sorts of People were very useful to each other; for the *Hunters* furnished Provisions and Hides in vast Quantities; the *Privateers* brought in Prizes of great Value, and spent their Money very freely; and by enriching increased the Number of *Inhabitants*, so that in a short Space of Time, the *French* extended their Settlements all along the South-west Coast of *St. Domingo*; and as for the Tortoise Island, so called from its being thought to resemble that Animal; it was very thoroughly planted, and the Tobacco they raised there was very good, and grew into great Esteem.

It is true, that in Time of Peace, both the *Spaniards* and the *English* complained loudly of the Conduct of the *French* Governors, under Colour of whose Commissions the *Privateers* committed great Disorders, took Ships of all Nations, and disturbed the whole Commerce of *America*. But the *French* did not give themselves much Pain upon this Head; on the contrary, though they sometimes gave good Words, and promised some Redress, yet they suffered the Governors to go on in the same Way, because they found that it drew numbers of People to their Settlements, and was like to secure them the Possession of the Western Part of *St. Domingo*. In 1664 they set up a particular Company for managing the Trade of these Parts, but that was soon found ineffectual; and therefore in about two Years Time they let it fall. It was not till the Year 1697 that they gained a legal Possession of this Country, by the Treaty of *Ryswick*, by which the *Spaniards* yielded to them one half of the Island; and the Boundaries between them and the *French* were settled, by a Line drawn cross the Country, from North to South; so that the *French* enjoy all the Western half of *St. Domingo*, which they have settled very effectually. In the Year 1726 the Number of People there was computed at thirty thousand Whites, and one hundred thousand Negroes, and Mulattoes. The principal Place they have on the North Side of the Island is *Cape Francoise*, which is very happily situated, and has a very good Port; the Town is large and well peopled, and is thought to contain four thousand white, and as many Negro, *Inhabitants*; on the West Side they have the Town and Port of *Leogane*, which is the Seat of the Government; and, besides these, they have several other good Ports and great Towns.

The principal Trade of *St. Domingo*, for many Years, consisted in Tobacco, in which it is said there have been from sixty to one hundred Ships employed; but upon the establishing an exclusive Farm of this Commodity in *France*, the Trade of *St. Domingo* for that Commodity began to decline, and is, at last, sunk to nothing. Instead of Tobacco, they fell to planting of Sugar, and though at first they met with some Difficulties, which was occasioned by the too great Fertility of the Soil, yet these were soon got over, and Sugar became, in a short

Space of Time, the staple Commodity of the Island; it is, in the Opinion of some, the very best Sugar made in the *West Indies*, and, generally speaking, yields three or four Shillings a hundred more, than the Sugar from any of their other Islands, which has occasioned a surprizing Progress in the Cultivation of this Commodity in *St. Domingo*, which, in 1726, stood thus: There were then two hundred Sugar Works in the Island, which, it was computed, yielded, one with another, four hundred Hogheads of Sugar, each Hoghead of about five hundred Weight. At this Time Sugar yielded, upon the Spot, from twelve to thirteen Livres per hundred Weight; so that from this Computation, it appears that the Sugar of this Island produced the *French*, annually, about two hundred thousand Pounds, and the Indigo is said to produce near half as much; they raise, likewise, Cacao, Ginger, and Cotton. Coffee grows there very well, and some are of Opinion, that Cinnamon, Clove, and Nutmeg Trees might be raised in this warm Climate; but the great Profit the *Inhabitants* make at present of their Sugar and Indigo, hinders them from running into any new Improvements; and as the *French* Ships that come hither return well laden with the Commodities before-mentioned, and raw Hides, it is very probable they will continue to go on in the Way they are in, till such Time as the Price of the Sugar falls considerably. The *French* are thoroughly persuaded that there are considerable Mines of several Sorts in their Part of the Island, but as one of their Writers expresses it, while the Sugar Mine, and the Indigo Mine, produce so much, and with such Certainty, they are never like to look for any other Mines.

Corn has been sown here, but is said to ripen at different Times, so that it cannot be reaped with any Profit; and though their Grapes are very fine, yet it is pretended they will neither make Wine, nor Raisins; but the Truth of the Matter seems to be, that the Government discourages raising either, and this from very just and reasonable Motives; for say they, if *France* takes off all the Sugar and Indigo, made by the *Inhabitants* of *St. Domingo*, it is but reasonable that the People of that Colony should take Corn and Wine from *France*; we may very well suppose, that from the same Motive they discourage Silk, of which the *Spaniards* made great Quantities, and very good. It is very apparent, from what has been said of this Island, and what might be said of it, that it is, beyond Comparison, the most considerable, and most important, Colony, that the *French* have; which is the Reason they are so desirous of obtaining the Cession of the other half from the *Spaniards*; which, some Time or other, it is more than probable they will obtain, unless the other Powers of *Europe* provide against it, by a special Clause in their Treaties with the House of *Bourbon*, which appears to me a Matter of the greatest Consequence.

For should the *French* once carry their Point, and become sole Masters of this Island, we may very reasonably believe, that in the Space of fifty or sixty Years, it would become the richest and most valuable Country in that Part of the World, especially if the *French* should abandon their other Islands, and transport their *Inhabitants* thither; and even in that Case, there would be no Danger of its being over-peopled, and its Fertility is such, that they would all find Room to exercise their Industry, and that Industry would be richly rewarded; besides, this would afford them many Advantages; for whereas their other Islands are subject to many Inconveniences, but more especially the Want of Provisions; these would be all remedied there, and it would afford them an Opportunity of encreasing their Strength to such a Degree, as would put it out of the Power of any of their Neighbours to give them much Disturbance; on the contrary, they would soon become formidable, both to us and to the *Spaniards*; which is an Evil, that as it has been foreseen in Time, it is hoped Care will be taken to prevent its ever coming to pass.

Before we quit this Subject, it is necessary to observe, that on the South Side of the *French* Part of *St. Domingo* there lies a little Island, called *Avache*, at the Distance of about

about twelve Leagues from the Continent; this Island is about nine Leagues in Compass, the Soil very good, and there are two or three tolerable Ports, one of which is capable of receiving Ships of three hundred Ton. This Island lies very convenient for carrying on a Trade with the *Spanish* Colonies on the Continent of *America*, and sooner or later the *French* will, in that respect, make it turn to good Account. It is also very commodious for maintaining an Intercourse with the only Settlement they have on the Coast of *South America*, I mean the Island of *Cayenne*, of which it is requisite that we should next give the Reader an History, and short Description; because that in Time, likewise, this may become a troublesome Settlement, though hitherto the *French* have not drawn from it any very considerable Advantages.

The Island of *Cayenne* has been a *French* Colony ever since the Year 1625; it lies close by the Continent of *Guiana*, and only cut off and made an Island by the Rivers *Ovia* on the East, and *Cayenne* on the West, from which last it takes its Name, as may be seen in the Map. The Town and Fort where the great Road is, at the Mouth of the River *Guiana*, are exactly in 4 Degrees 50 Minutes of North Latitude, and 332 Degrees of East Longitude from *Ferro*. It is reckoned about eighteen or twenty Leagues in Compass, standing high on the Coast, and looks, at a Distance, like Part of the Continent. The Length of the Island, from the River of *Ovia*, to the River *Cayenne*, is about seven Leagues, and the Breadth about three. The River *Cayenne* falls into the North Sea, on the West Side of it, dividing the Country of the *Caribbees*, from that of the *Galibis*. The Island forms three principal Capes or Promontories, being those of *Fort Lewis*, *Seperon*, and *Matiuri*; it has much meadow and pasture Ground in several Parts, the rest is low and marshy, especially in the Middle, so as to be almost impassable. The Edges of it are mostly covered with Trees, which we call Mangroves, having that peculiar Quality of growing in Salt Water, so deep, thick, and wide rooted, that from these very Roots other Trees rise up without End, so wonderful close, interwoven with one another, that in some Parts of the Island a Man may walk Leagues on them without touching the Ground.

About six Years ago the Island was extraordinary unhealthy, by reason of the long Rains, which lasted above nine Months in twelve, but especially from *December* till *June*; as also because the Ground was close wooded, and so marshy, that it occasioned several Sorts of Diseases among the Inhabitants, which in a more particular Manner affected young Infants, insomuch that many died almost as soon as born, and others at a very tender Age; for which Reason the most substantial Planters used to send them over to *France* very young, to preserve them from the Malignity of that bad Air; which is now nothing near so pernicious to those young Babes, since the Land has been grubbed up, so that they grow up healthy and strong; besides, the Women are safer in Child-bed, and the generality of the Inhabitants are less subject to the Distempers than they were before the Island was cleared of most of the Wood; however, it is still, and always will be, an uncomfortable Place to be in, because of the long rainy Season every Year, and scorching close Air Night and Day, which dispirits a Man; and the heavy Showers and Vapours exhaled from the swampy Grounds, which still occasion Disorders in Men and Beasts, though not so much as formerly; large Cattle, particularly, can scarce live there. They are also continually tormented with Gnats, Flies, and Worms, Ants, Bugs, and other Sorts of Vermin; all which, together, render the Place very disagreeable and uneasy; for which Reason several Planters, when grown rich, retire into *France*, and let their Plantations.

The Soil of *Cayenne*, by reason of the continual Rains, produces plenty of Sugar Canes, which, though small and short jointed, yield very plentifully; also Mandioca, or Cassibi, *Indian* Wheat, Rocou, Cotton, Accajou-Apples, Banillas, Pete, Ebony, Letter, and Violet Wood, Ananas, Tuberoses, very fine and large Papaia's, and several Sorts of *American* and *European* Grain and

Seeds, besides Lemons, Oranges, Indigo, and Figs, &c. The Country abounds in wild Boars, called there Packs, Deer, Agontils, Woodcocks, Ortolans, Nightingales, Arras, Occos, Toucans, Parrots, Parroquets, and other Birds, only remarkable for their Feathers: Also Flamingos, Birds about as big as a Hen, flying in Swarms like Ducks or Cranes; large wild Ducks with red Tufts on their Heads, Lizards, Cameleons, and very large Serpents, some of them above twenty-five Feet long, besides many smaller. The chief Town of *Cayenne* stands on the West Part of the Island, in an advantageous Situation, Nature and Art having equally contributed to the fortifying of it. It is of an irregular hexagon Figure; the Fortifications of the Town, which are extensive, were mostly cast up with Earth by the *Hollanders*, after they had driven the *French* from the Island, and have several Batteries mounted with Cannon, and a dry Ditch quite round, besides rows of Trees that surround it in a Triangle, which makes a handsome Prospect at a Distance; within this slight Fortification stand above two hundred Houses, disposed in such a Manner, as to make two different Streets or Lanes; all built with Planks of a certain Tree, by the *French* called *Poirier*, and of other Sort of Timber, and thatched: Which is the Reason they are now and then burned down so fast, that nothing can be saved, to the great Loss and Damage, not only of the Owners, but of several Inhabitants round the Town. On the North-east Part of it, towards the Gate of *Armire*, the Jesuits have a little Chapel standing in an open Place by itself, and before it a Grove of Lemon Trees, which afford a pleasant Shade to walk under; the Chapel is adorned with a small Spire of Planks, with good Bells.

On a pretty steep Hill, or Eminence, stands the Fort of *St. Lewis de Caperoux*, built by order of *Lewis XIII.* King of *France*, on the Sea-side, commanding every Way, mounted with forty-two Iron Guns; the Garrison whereof commonly consists of four Companies of regular Forces, besides near five hundred Inhabitants, mostly *French*, and divers *Indians*, who retire into the Island with their Canoes, and there make their Cottages and Carbets, living either in the Town, or on the Island round about, as far as mount *Sincry*, because of the Goodness of the Soil, and the Wholesomeness of the Air, as it lies much higher than the Island. These, upon the least Alarm, are obliged to stand to their Arms; the Signal to give Notice to them to come together, being to fire off some Cannon, especially in the Night-time. The weakest Places of this Island are also defended by some Batteries and Guns. The next Town in the Island to this, is *Armire*, distant about three Leagues Eastward, but small and thinly peopled, where the Jesuits have a Chapel also for the Convenience of the Inhabitants of that Part of the Island; and about a League farther East is the Point *Maturi*, and near it a very fine Plantation for Sugar, and is a fit Place to land at. West of this Plantation stands an *Indian* Carbet. These are all the remarkable Towns of *Cayenne*, except here and there some few Cottages and Plantations about the Island; the fourth Part of which is stored with fine large Meadows, or pasture Ground, called *Savannahs*, and three Rivulets; they have usually a Watch-house, and a Battery of some Iron Guns at *Armire*, to give Signals when they discover Ships coming from the Eastward. *Fort Lewis* commands both the Town and the Sea; the anchoring Place for Ships is under the Cannon of the Fort, within Musket-shot from Land, in three Fathom and a half muddy Ground, South-west of the Water-gate, which has four good Guns to defend the Road.

The Colony is partly subsisted by Provisions brought from *France* in Merchant Ships by way of Trade, which commonly are Wine, Brandy, Meal, and powdered or salt Meats, for Beef is very scarce there, besides that they are not allowed to kill any, nor Calves neither, without Leave of the Governor, or his Substitutes, that Cattle may multiply in the Island: All sorts of Linen-Cloathing, Stuffs, Silks, Shoes, and other wearing Apparel, are also carried thither from *France*, for the Use of Men, Women, and Children; and all sorts of Tools, and small Wares, either for the Service of the Colony, or

for the *Amazons* and *Indian* Trade, are bartered for Sugar, Rocou, Indigo, Tortoise-shells, Tyger-skins, and other inconsiderable Curiosities of the Country, which did once turn to great Profit to the Traders there. The other necessary Provisions of the Product of the Island are Manetada or Cassibi, and *Indian* Wheat, of which each Planter sows large Quantities, both for the Subsistence of their own Families and Slaves, and to sell to the other inferior Inhabitants. The Sea and River Fish, Poultry, Pidgeons, Quets, or Ring-doves, whereof there is great Plenty, and delicate Turkeys, Venison, Hares, Agontils, Hogs, and Packs, that is, wild Boars, are also a Part of their Subsistence.

But Lamentins and Sea-Tortoises are their chief Provision, and may well be called the *Manna* to the poorer sort; the Manati's Flesh used at *Cayenne* is brought ready salted from the River of the *Amazons*, several of the principal Inhabitants sending the Barks and Brigantines thither with Men and Salt, to buy it of the *Indians* for Beads, Knives with white Hafts of a low Price, some Linen, Toys, and Iron Tools. When these Vessels have entered the River of the *Amazons*, the *Indians*, who always follow the Manati-fishery, go on board, take the Salt, and with it run up the River in Canoes or Frigates, to catch the Manaties, which they cut in Pieces, and salt as taken, returning with that salt Fish to the Brigantines, which go not up, because the *Portuguese* who dwell to the eastward, at *Para*, and other Places of *Brazil*, claim the Sovereignty of the North-side of that River, and give no Quarter to the *French*, or other *Europeans*, they can take in their Liberties; which has occasioned many Disputes and Quarrels between them. That Controversy was decided by the Treaty of *Utrecht*, in the Year 1713, which fixed that Boundary.

They have ever since been using all the Arts imaginable, to render this Colony of some Use, but hitherto they have been able to make no great Matter of it, the Expence being so large, that by their hardest Labour the Inhabitants find it difficult to gain wherewithal to purchase their Subsistence. As for the Trade carried on from *France*, it consists chiefly in Provisions, such as salt Meats, Flour, Wine, Brandy, Linen, Stuffs, and Mercery Goods; in return for which they export Sugar, Dying-woods, and for the most part, the same Kind of Commodities they do from the *Leeward Islands*. It is thought, that the Number of Whites upon this Island may amount to twelve or fifteen hundred, and that the whole Number of the People, taking in Soldiers and Slaves, may amount to three thousand, or thereabouts; amongst these there are sixty or seventy *Jews*, who, besides cultivating their Plantations, carry on a kind of underhand Trade with the *Dutch* and the *Portuguese*; and what little Quantity of Gold and Silver they have in that Country is in the Hands of these People, who notwithstanding are far enough from being rich.

13. We have already, in the History of the *French East India* Company, mentioned the several Attempts made by *Monf. de la Salle*, for the Discovery of the *Mississippi*, and therefore we may be allowed to be the shorter here. This Gentleman was certainly a Person of great Worth and good Understanding; and the Notion he had of fixing Colonies in this Part of the World, was, in general, well enough founded; but it does not appear that he was so well qualified to govern or conduct a Colony: He had passed down the River he sought, in the Spring of the Year 1683, to the very Mouth of it; he afterwards remounted that River, and returned to *Canada*, in the Month of *October* the same Year; from whence he took his Passage back to *France*, where he gave a large Account of the mighty Advantages that would certainly accrue from the settling of a Colony in those Parts; upon which a new Company was formed in the Beginning of the succeeding Year, for the carrying those great Designs into Execution; and on the 24th of *June*, 1684, he sailed with a Squadron consisting of four Vessels, having on board a sufficient Number of Persons, and all kind of Goods and Provisions necessary for the Service of the new Colony, which he proposed to fix at the Mouth of the *Mississippi*; but when he arrived in the

Bay of *Mexico* he was not able to find the Mouth of the River, as he expected; and therefore attempted to fix a Colony at the Bay of *St. Lewis*, which is one hundred Miles to the West of the River *Mississippi*; where they endured such Hardships that most of them perished miserably; while *Monf. de la Salle*, still intent upon Discoveries, made various Excursions with such of his Company as were still able to move; in one of which he was barbarously murdered by two of his own People, which put an End to the Design for the present.

Seven Years after, *Monf. d' Iberville* undertook to perform all that *Monf. de la Salle* had promised; and, as he was a Man who had already performed great Things, the Court encouraged him; and he was really as good as his Word. He carried his People very safely and happily to the Mouth of the great River, and there laid the Foundations of the first Colony the *French* ever had on the *Mississippi*. He took Care to provide them with every Thing necessary for their Subsistence, and obliged them to erect a strong Fort, for their Protection against the *Indians*, before he would return to *France* in order to obtain Supplies. The Success of his Voyage made him extremely welcome to the King, who promised him all the Assistance he could desire; so that he was soon in a Condition to put to Sea again; and his second Voyage was as fortunate as the first; but very unluckily for his Colony, he fell sick and died, as he was preparing for the third. This had very near overturned the whole Design, if it had not been for the Generosity and public Spirit of a private Man, who undertook to support it at his own Expence, receiving from the Government an Authority to act.

In the Grant of *Louisiana* to Mr. *Crozat*, by *Lewis XIV.* anno 1712, the Bounds of it are said to be the River and Lake of *Illinois* on the North, *Carolina* on the East, the Gulph of *Mexico* on the South, and *New Mexico* on the West. As to *Canada*, or *New France*, the *French* would scarce admit it had any Bounds to the North on this Side the Pole, till they were limited on that Side by an Article in the Treaty of *Utrecht*; which assigns *New Britain* and *Hudson's Bay* on the North of *Canada* to *Great Britain*; and Commissioners afterwards on both Sides, ascertained the Limits by an imaginary Line, running from a Cape or Promontory of *New Britain* to the *Atlantic Ocean*, in 38 Degrees 30 Seconds, North Latitude, and running from thence South-west to the Lake *Miscosink* or *Mistassim*, and from thence farther South-west directly to the Latitude of 49 Degrees. All the Lands to the North of the said Line, being assigned to *Great Britain*; and all the South of that Line, as far as the River of *St. Laurence*, to the *French*. These are the true Limits of *Louisiana* and *Canada*.

This Grant to Mr. *Crozat* did not subsist long, for it being necessary to have some plausible Pretence for setting on Foot a Project for changing the Face of public Affairs in *France*, this Settlement was thought the most convenient; and therefore all imaginable Pains were taken to represent it as a Paradise, and a Place from whence inexhaustible Riches might be derived, provided due Encouragement could be obtained from the Government; and for this Purpose it was thought requisite, that a new Company should be erected; to make Way for which Mr. *Crozat* was to resign his Grant, and this he accordingly did, as we have hinted in another Place.

14. This occasioned that Noise that was made about the *Mississippi*, not in *France* only, but throughout all *Europe*, which was filled with romantic Stories of the vast Fruitfulness of the Banks of this great River, and the incredible Wealth that was like to flow from thence. It was these *Indies* in the *North Seas* that produced our Notions of finding *Indies* in the *South*; but in the End both proved Bubbles, partly from the Falshood of those Relations, and partly from there being no fixed and settled Resolutions of promoting the Trade to either. This *Mississippi* or River of *St. Lewis*, according to the *French* Account, rises in the North-west Part of *Canada*, taking its Course first to the South-east, and in 45 Degrees, turning almost due South, continues that Course till it discharges itself into the Gulph of *Mexico* in 30 Degrees North

North Latitude, and 95 Degrees of western Longitude. By four or five Mouths of several large Rivers falling into it, both from the East and West, the *Mississippi* is swelled into a very large deep River; and some *French* Writers add, that it is a gentle Stream, and navigable for large Vessels from the Source almost to the Mouth; but other *French* Writers, and some *English* Seamen, affirm, that it has a very rapid Stream; and that there are Cataracts in several Parts of it, which obstruct the Navigation, and that there are such Shoals at the Mouth of the River, that large Ships cannot enter it.

The Country upon the Banks of this great River has nothing very extraordinary to recommend it, except that the Air is milder, and the Soil more fruitful than that of *Canada*, which might be reasonably expected from its Situation. There is no sort of Question that People may live there with the Help of their own Industry, in Peace and Plenty; but perhaps they might live with as little Pains and Trouble in *France* itself. But as to what was pretended when such a Noise was made about the *Mississippi*, that the Country abounds with Silver Mines, and that it was not improbable that Gold might be found here, it was a mere Fable; and those that have been sent from *France* to make Trial of the Mines have reported, That they are far from being valuable, and that it would be very difficult, if not impracticable, to work them; so that now we hear no more of the Metals in this Country; but they are content to talk of Furs, raw Hides, Tobacco, Corn, and Silk, of which indeed there is more Probability; but no very great Progress has been hitherto made in raising any of them. As this Country lies in the Middle between the *Spanish* Settlements on one Side, and the *English* on the other, the *French* have fancied to themselves a Possibility of driving out both; but this must certainly arise from their national Vanity, since there is no great Probability of their becoming in some Ages very formidable to either, unless both should become very negligent, and the *French* more happy than they have hitherto been in their Improvements.

At present they have divided this Country into nine Provinces, in each of which they have some small Posts, but the only Place they have of any Consequence is, *New Orleans*, so called from the late Regent, who was the Parent of this new Settlement. It is seated about one hundred and twenty Miles from the Mouth of the *Mississippi*, in a very fruitful Part of the Country, where the Inhabitants raise Corn sufficient for their Subsistence, and some Tobacco. The Expence they have been at from time to time about their Colonies in this Country has been very large, but the Profits drawn from them very inconsiderable, and no way answerable to their Expectations; yet it must be allowed, that in its present Situation, *New Orleans* is a considerable Place, both with respect to its Size and Strength, and the Jesuits sent from *Europe* thither have taken a great deal of Pains to bring over the *Indian* Nations to the *French* Interest, the only Means by which they can become troublesome to their Neighbours; but notwithstanding this, they are not able to rely much upon their new Converts, there having been frequent Instances of their revolting, attacking, and destroying, their new Masters or Allies, when they least expected it: So that on what Grounds they build their Hopes of establishing a powerful Empire in this Part of *America*, must be left to their own Writers to declare.

To say the Truth, I see but one Way that any Thing worth mentioning can ever be brought about here; and that is at the Expence of their own Colony of *Canada*; for if it should ever appear that an easier Livelihood is to be gained in the Colonies on the Banks of the *Mississippi*, than in those on the River of *St. Laurence*, it is not at all impossible, that the People settled on the one may by Degrees remove to the other. This would become daily more and more practicable, and perhaps more necessary, if we proceed in the Settlement of *Nova Scotia*, and preserve the Possession of the Island of *Cape Breton*; for then, as I have before observed, *Canada* will rather become a Burden than an Advantage to *France*; and the wisest Step she could take would be to remove the Inhabitants thither. At the same time that I say this, I desire the Read-

er will consider it as a pure Conjecture; and as a Thing barely possible; and not at all as a Design thought of by the *French*, or that is ever likely to come to pass: But, however, this we may be allowed to affirm, that if they do not take this Step, it is not at all likely that either of those Colonies will become more considerable than they are at present. We have already observed, that the Computations they have given the World of the Inhabitants of *Canada* are very extravagant, and much beyond the Truth; and I doubt the same Thing may be with equal Truth affirmed, of what they report as to the Numbers of those settled in *Louisiana*, which some of their Authors raise to twelve thousand Souls, while many intelligent People think there are not much above half that Number.

15. The Observations and Remarks upon this Period may be the more concise, since we have already taken Occasion to deliver something of that Nature, in respect to each of the Colonies we have mentioned. The *French* have not been very fortunate in the Management of their Interests in this Part of the World; for their Settlements are as unconnected and ill placed, as their Enemies could wish them. *Canada* is at a vast Distance from their Islands, and the Navigation of the River of *St. Laurence* so difficult, that they cannot make above two Voyages in a Year. We may say the same with respect to the Island of *Cayenne*, which lies out of the way of all the rest of their Colonies, and for that Reason has little or no Correspondence with any of them; and it is pretty much the same with their Settlements on the *Mississippi*, which is a great Disadvantage to them; as may appear from the Consideration of our own Colonies, that strengthen and support each other, by their mutual Commerce, there being several hundred Vessels employed in the *American* Trade only, in which the *French* employ very few or none. We may, therefore, with strict Regard to Truth, divide the *French* Settlements into those which are profitable, and those which are not; the former including their Islands, and the latter all the rest.

It must, indeed, be owned, that it is very possible to raise several Commodities of Value, both on the River of *St. Laurence*, and on the *Mississippi*; but, as the *French* are at present circumstanced, it may very well be doubted, whether they will be ever able to do this, because it does not appear that they could do it to their own Advantage. While our Northern Colonies supply their Sugar Islands with Lumber, in Exchange for their Molasses, it will hinder their taking, except in Time of War, those kind of Goods, even from their own Colonies, and nothing but an open and advantageous Market can tempt the Inhabitants to raise them. As for Tobacco, Wine, and Silk, in *Louisiana*, they may serve to talk of, but there is little Reason to suppose they will ever apply to the Cultivation of them in earnest. For, first, in regard to Tobacco, it is not at all likely that they should raise it better or cheaper than in *Virginia*, from whence the *French* take that Commodity at present, in Preference to what might be raised in *St. Domingo*, and the adjacent Islands; and, with respect to Wine and Silk, though they would be valuable Commodities to us, they could scarce be so to them; considering how much of their own Wine they export to the Colonies, and what Quantities of Silk they raise in their own *European* Dominions. It is their Islands therefore that the *French* chiefly concern themselves about; and as to the rest, it is rather for the Credit of their Crown, and for the Sake of distant and very improbable Expectations, that they make a Point of maintaining their other Colonies.

It may be, if they were to transfer the People of *Canada* to their Settlements in *Louisiana*, and be at some Pains to establish a Correspondence between that and their Sugar Islands, they might render both more beneficial than they are at present; but even in that Case, perhaps some insurmountable Difficulties might be found, which are not at present foreseen; and though they are not, yet even the Possession of *St. Domingo* entire, if ever they should obtain it, would make that Commerce decline. Upon the whole, though the *French* have great Views in *America*, and seem indefatigable in pursuing those Views, yet,

yet, to speak impartially, there is very little Ground to believe, if we mind our own Affairs, and could once come to a right Understanding with *Spain*, they will be ever able to succeed. I may add farther, that if ever we come to form right Notions of the Importance of the Sugar Trade, and in Consequence thereof give all neces-

sary Encouragement to the Inhabitants of our Islands, in Time of Peace, and make it our Business, in Time of War, to distress the *French* in this tender Point; it is possible we may drive them out of a great Part of that Trade, which would be the happiest Event that could be for us, as well as the greatest Disappointment to them.

SECTION XXIII.

The DISCOVERIES, CONQUESTS, SETTLEMENTS, and PRESENT STATE of the DUTCH Colonies in America; the Nature and Value of their Commerce with the Spaniards, and the Manner in which their Returns are made to Europe; to which is added an Account of the Danish Settlement; the whole collected chiefly from the Dutch Writers.

1. *A short View of the Scheme formed by Count Maurice of Nassau, for erecting a Dutch Empire in America, equal, if not superior, to that of the Spaniards.*
2. *The Expedition of General Brewer, in order to the Execution of that Scheme; and his Successes in Chili, to the Time of his Death.*
3. *The History of that Expedition continued, in which the principal Causes of its Miscarriage are clearly pointed out.*
4. *The Dutch Settlements on the Continent of South America, at Surinam, Boron, Berbice, and Approwack, described; together with an Account of the Commodities raised there, and the Importance of those Settlements.*
5. *A View of the Islands possessed by the Dutch in the West Indies, viz, Tabago, St. Eustachius, St. Martin, Curacao, and its Dependencies; their Produce, and the Nature of their Commerce with Holland.*
6. *A large and exact Relation of the clandestine Trade, carried on by the Inhabitants of these Islands, with the Spaniards.*
7. *The present State of the West India Company in Holland, and the Causes of its declining Trade.*
8. *A Description of the Island of St. Thomas, of the Danish Settlement there; its Produce, Commerce, and Importance.*
9. *Observations and Remarks on the foregoing Section, which concludes the History and present State of the Continent of America and the West Indies.*

1. **W**E have, in several former Sections, taken some Pains to explain the Rise, Progress, and Extent of the *Dutch* naval Power; which, if I am not altogether mistaken in my Judgment, was much superior to any thing of the same Kind, that we read of in ancient or modern History; so that if their Project of establishing a *West India* Company had succeeded, as well as that did for erecting one for managing the Trade of the *East Indies*, I see no Reason to doubt of their becoming the most formidable Power in *Europe*. It would take up a great deal of Time, which we have not to spare, to shew how this miscarried; but there is a particular Incident, which falls in with the Subject of this Section, that will fully prove the Truth of both these Assertions. The Reader may remember that we insisted in the History of *Brazil* very largely, on the Conduct and Measures of Prince *Maurice of Nassau*, as able a Captain, as great a Statesman, and I must have leave to say, because I am convinced of it, the honestest Man, and the best Patriot, that Family ever produced. In that Section we clearly proved, that the running him down by the republican Faction in *Holland*, was the Ruin of their Affairs in *Brazil*, and, at present, it shall be our Business to shew, that it lost an Opportunity of making them as great in the *West Indies*, as they are now in the *East*; for that Prince had formed a Scheme of raising such an Empire at once in *America*, as, had it been as steadily pursued as it was wisely projected, would have defied the Rage of Enemies, defeated the Power of Accidents, and, perhaps, would have escaped the Teeth of Time itself.

He saw plainly, that their Establishment in *Brazil*, as fair and as flourishing as it seemed, under his wise and glorious Administration, would sink to nothing, if it was not supported by new Acquisitions; for he knew that a naval Power is, of all others, least at a stay; and that if it did not proceed, it would decline with the same Rapidity with which it rose; and, to prevent this, he formed Project after Project, all of which succeeded but one; and, had that one succeeded, he knew that there had been need of no more. This Project we are to give an Account of here, and in few Words; it was this: He was informed that the Inhabitants of *Chili*, which lies at the back of *Brazil*, fronting the *South Seas*, as this does the North, and the richest Country in *America*, had revolted from, and driven out, the *Spaniards*; he conceived therefore a Design of fixing a *Dutch* Colony there,

which he thought might be easily done, under the plausible Pretences of assisting the Natives against their late imperious Lords the *Spaniards*.

He communicated this Design to the States General; he shewed them the Utility of it; he explained to them the Advantages with which it would be attended, and which were chiefly three. First, That it would give them the Possession of a large, fruitful, and agreeable Country, abounding with the Necessaries of Life, and with what is capable of supplying Necessaries in any and all Countries, the richest Gold Mines in the World. Secondly, That it would humble the *Spaniards*, by distressing them in the tenderest Part; secure, as well as open, a Commerce in the South Seas; and render their two great Empires in *Mexico* and *Peru* precarious, unless secured by a Peace with the *Dutch*. Thirdly, That it would complete, and firmly cement, the Circle of their Commerce; for the Slaves, procured by their Settlements in *Africa*, would be taken off by that Colony and by *Brazil*. The Passage from thence to the *East Indies*, and from them round to *Europe*, would, in Time, become common; that this new Trade would fill that Country with People, and facilitate a Correspondence between their Dominions on both Sides the Continent of *South America*; which would soon put them in a Condition of rooting out all their Enemies, and enable them to keep the best and most valuable Part of the new World entirely to themselves. Vast and prodigious as this Design was, every competent Judge will, at first Sight, perceive, that in the State things were then, it was both possible and practicable, and therefore we need not at all wonder that the States General readily embraced it, and cheerfully disposed all things requisite for the carrying it into Execution, without much regarding either the Difficulty or the Expence.

2. The States, however, thought it requisite, that a great Part of the Charge should be borne by their *West India* Company, because in Case of Success they were to reap the greatest Part of the Benefit, since, in Virtue of their Charter, the new conquered Country was to belong to them; but, however, the regular Troops that were to serve in this Expedition were to remain in the Pay of the States. The Person fixed upon to command in chief, with the Title of General, was Captain *Henry Brewer*, a Man of great Abilities, and remarkable for his personal Courage; which had, however, a strong Tincture of what

what the *Dutch* called Severity, which, in any other Language, would have been denominated Cruelty. He had served with Reputation in the *East Indies*, and was allowed to have a surprizing Power over the Seamen. He had under him four Captains of established Character, and his Squadron consisted of five Sail of stout Ships, on board of which he had eighteen hundred Men, with every thing that was thought necessary, either for making a Descent, or for establishing a Colony.

General *Brewer*, and his Squadron, sailed from the *Texel* the 6th of *November*, 1642, and arrived at *Fernambuco* on the Coast of *Brazil*, in 9 Degrees of South Latitude, on the 22d of *December* following; where, having consulted with Count *Maurice of Nassau*, General and Commander in chief for the *Dutch* in *Brazil*, he sailed from *Fernambuco* with five Ships well equipped, and provided with Necessaries, on the 16th of *January* 1642-3; and, on the 5th of *March*, they came in Sight of the Straights of *La Maire*, as they were then called, which is only a Passage between *States Island* and the most Easterly Point of *Terra del Fuego*, in 45 Degrees some Minutes South Latitude, and since stiled *Brewer's-Straights*, in Memory of this Expedition. They came to an Anchor in a Bay of *States Island*, to the Eastward of the Straights of *La Maire*; where, having remained till the 25th of *March*, they sailed round *Cape Horn*, suffering pretty much by stormy Weather; and losing the Company of one of their Ships, called the *Orange Tree*, and arrived with the other four on the Coast of *Chili*, on the 30th of *April* 1643; and on the 9th of *May* they came to an Anchor in a Bay of the South Sea, in 41 Degrees 30 Minutes South Latitude, to which they gave the Name of *Brewer's-Haven*.

An Officer being sent on Shore with a Company of Soldiers, they discovered great Herds of Oxen, Sheep, and Horses, and some Houses; but the Inhabitants were fled. However, they supposed that Part of the Country to be in the Possession of the *Spaniards*, by the large wooden Crosses they saw fixed at the Entrance of the Houses; and going ashore the next Day they discovered a Party of *Spanish* Horse, and some Cannon-shot were fired at the Boat. A Company of fifty Soldiers being sent ashore again, the 20th of *May*, they discovered the Town of *Carelmappa*, and had a smart Engagement with a *Spanish* Party, consisting of ninety Men, Horse and Foot, whom they defeated; whereupon the *Spaniards* abandoned the Town of *Carelmappa*, and the *Dutch* took Possession of it, where they remained till the 25th, and then setting fire to the Town, and killing the Horses they had taken in the Engagement, they retired to their Ships. They afterwards sailed to the Town of *Castro*, on the Island of *Chiloe*, where they arrived on the 6th of *June*.

There appeared a good Body of *Spanish* Horse and Foot on Shore; but the *Dutch* no sooner landed some Soldiers, than the Inhabitants set fire to the Town, and abandoned it, having before carried away every Thing that was valuable. This Place, called *Castro*, had been a fine *Spanish* Town, adorned with magnificent Buildings pleasantly situated on a Hill, surrounded with fruitful Orchards and Gardens, and the Fields beyond well cultivated, and at the Time when the *Dutch* arrived there, the Fruit then remained on many of the Trees, though it was in the Beginning of their Winter. The *Dutch*, taking an hundred Sheep and some Hogs off the Island, re-embarked on the 17th of *June* and returned to *Brewer's-Harbour*. From hence they proposed to sail to the River *Baldivia*; but the North Wind blowing hard in their Teeth, they altered their Minds, and came before *Carelmappa* again; where landing a Company of Soldiers, on the 16th of *July*, they took three *Spanish* Prisoners, who informed them, that the Winters on that Coast were usually tempestuous, but that the most stormy Month was past: That there were Gold Mines at *Orsorno*, and more at *Baldivia*; but that the Mines were not wrought of late, and that at *Castro* there were none to be seen, the *Indians* not having been compelled to work in the Mines since the general Revolt in 1595.

They learned also, from an old *Spanish* Woman they

had taken, that before the said general Revolt, the *Spaniards* lived in great Splendor at *Orsorno*, that the meanest of them had three hundred *Indian* Vassals at least, who were compelled to pay their respective Lords a certain weekly Tribute in Gold, and were used so cruelly by the *Spaniards*, that the *Chilese* arose as one Man, drove them from *Orsorno*, and other *Spanish* Towns; and they possessed little more in this Part of *Chili*, than *Carelmappa* and *St. Michael de Calembuco*; since which, however, the *Indians* of *Orsorno*, *Baldivia*, *Villarica*, *Imperial*, *Jucapel*, *Arauco*, and *Puren*, had lived in a pretty good Intelligence with the *Spaniards* till very lately, when the *Indians* took up Arms again, and they were actually here in a State of War with the *Spaniards*, which was confirmed by five *Indian* Caziques, who came on board the 20th of *July*, and assured the *Dutch* they were extremely rejoiced that they were come to assist them against their ancient Enemies the *Spaniards*.

The *Dutch* answered, They had brought good Store of Arms to exchange with their Countrymen of *Orsorno*, *Baldivia*, and other Places, for such Merchandize as *Chili* afforded, that they might be enabled to carry on that War against the *Spaniards*, and were ready to assist them to the utmost of their Power. The *Chilese* replied, They lived very uneasy under the *Spanish* Government of *Carelmappa*, and were contriving how to get to their Friends at *Orsorno* and *Baldivia*; but the *Spaniards* had possessed all the Passes, and the Country was so overflowed by the Winter Rains, that they found it impracticable to go by Land at present; and therefore desired the *Dutch*, that they would carry them to *Baldivia* in their Ships; which the General agreeing to, they returned ashore, to give their Friends an Account of it, and make Preparations for their Voyage. The next Day, more *Chilese* went on board, and one of them brought the Head of a *Spaniard* with him whom he had killed, and declared they were determined to shake off the *Spanish* Yoke. Whereupon the General made a Present to them of some Spears and Swords, as also Muskets with Powder and Ball; and the *Chilese* sent some black Cattle on board in Return.

3. Thus far this Expedition had succeeded perfectly well, as being entirely under the Management of one who was altogether equal to the Project he went upon; for it is essential to great Designs that succeed, that they are contrived and concerted by great Men, and that they are executed by great Men also; for when once People of mean Parts and narrow Understandings come to be lifted up into Employments beyond their Capacities, they soon ruin all that wiser Heads have been long framing; and this, notwithstanding they do their best, and use their utmost Endeavours to prosecute their Predecessor's Plan.

The *Dutch* Officers, who perhaps never considered this Maxim, were experimentally taught the Truth of it, by the Death of their General *Henry Brewer*, which happened on the 7th of *August*; a fatal Day to them, though they did not perceive it at the Time. He had set his Heart upon the Undertaking, and died in the full Persuasion, that it might have been accomplished. Though Capt. *Hackerman*, who succeeded him in the Command, might have no less Zeal to serve his Country, yet he certainly miscarried for want of proper Address. He too soon discovered to the Natives with what View the *Hollanders* visited their Coasts, and created Jealousies in them, which he found it impossible afterwards to remove, as will appear hereafter. The late General was so confident of the Success of the Enterprize, that he directed his Countrymen to take his Corpse with them, and bury it at *Baldivia*, which he had intended to fortify; and appointed the *Chilese* to rendezvous there and meet the Fleet, not doubting of a general Revolt in their Favour. His great Ambition was, to have a Tomb erected in that Place, which might perpetuate the Memory of his being the Author of so great a Good to his Country. But to proceed: The *Dutch* having taken four hundred and seventy *Chilese* on board, who had furnished themselves with Corn and Cattle, and other Provisions for the Voyage, set sail for the River *Baldivia* on the 21st of *August*, where they arrived the 24th of the same Month.

The River is about a League over at the Mouth, and

the *Dutch* having sailed half a League up it, they observed three Channels, of which, taking the Middlemost they run aground, and it was two or three Days before they could get all their Ships afloat again; so that it was the 28th before they arrived at the Town of *Baldivia*, where they only found the Ruins of the ancient Gates, which were very high, and strong built; but the Place was now over-run with Bushes and Weeds, and more like a Wilderness than a City: Here they found three or four hundred *Chilese* Horse and Foot armed with Spears, eighteen Foot long, some of whom came on board, and welcomed them at their Arrival. The *Dutch* General harangued them by an Interpreter, and acquainted them, That the *Hollanders* were now in the Possession of *Brazil*, upon the same Continent, not above two Months sail from them, and were in a Condition to supply them from time to time with Arms and Ammunition, and would assist them to drive their Enemies, the *Spaniards*, out of the Country, desiring they would enter into a League offensive and defensive with them. He also presented them with the Letters from the Prince of *Orange*, of the like Tenour; which were interpreted to the *Indians*; for it is to be remarked here, that neither the People of the *East* or *West Indies* have any Notion of a Republican Form of Government, and therefore the *Hollanders*, in all Negotiations with those distant Nations, pretended to be authorized to treat with them by the Prince of *Orange*, or some single Person, whom they insinuated to be their Monarch.

The *Caziques* gave the General no other Answer to his Propositions at present, but, That they would consult their Brethren of *Orsorno* and *Coneo*, and then return to *Baldivia*. Whereupon the *Dutch* proceeded to land their Soldiers on the 2d of *September*, and the General took a View of the Ground, in order to erect a Fort. The same Evening arrived above one thousand *Chilese* from *Orsorno* and *Coneo*, to treat with the *Hollanders*; and the next Day the General, by his Interpreter, made them another Speech: He acquainted them, That the chief Motive of their Voyage was to assist the *Chilese*, the Fame of whose great Actions had reached as far as *Holland*: That the *Dutch* had been at War with the *Spaniards* for upwards of fourscore Years, as well as the *Chilese*, for the Preservation of their Liberties, and had met with the like Success, extending their Conquests as far as *Brazil*; and if the *Chilese* would now enter into a Confederacy with the *Hollanders*, they were ready to supply them with Cannon, small Arms, and Ammunition; which they would exchange for the Product of their Country; and the *Chilese* would be enabled thereby, not only to defend themselves, but to expel the *Spaniards* from their Coasts. After which a Letter was delivered to every one of the *Caziques*, as sent them from the Prince of *Orange*. To which the *Caziques* answered, That they thought themselves extremely fortunate to meet with a Supply of Arms from so distant a Country as *Holland*, at a Time when the War with the *Spaniards* was revived; and that they would consider of what was proposed.

The *Dutch* thereupon enquired if the *Chilese* could supply their Fleet with Flesh and other Provisions, if they continued on their Coast to protect them against the *Spaniards*? To which they unanimously answered, They would not fail to bring them all the Provisions they wanted, for they had Plenty of Corn and Cattle; provided the Fleet did not stir from the Coast. And they readily entered into a verbal Alliance Offensive and Defensive, with the *Hollanders* against the *Spaniards*; but would not be persuaded to execute written Articles, which were offered, and interpreted to them; declaring, That this was not customary amongst them; but, that Promises were ever looked upon as sacred, and of equal Obligation with written Contracts. The *Hollanders* then proceeded to build a Fort at *Baldivia*, for their Security; which the Natives did not seem to oppose; but when the *Dutch* proposed the Trafficking with the *Chilese*, and exchanging Arms for their Gold, the *Caziques* immediately appeared jealous of their new Allies; and declared, they had no Gold Mines, nor was there any such Thing as Gold in Use amongst them: They remembered indeed

that, heretofore, they had been obliged to pay heavy Taxes to the *Spaniards* in Gold, on Pain of losing their Ears and Noses, as many of them actually did who could not procure as much as was expected; and this had given them such an Abhorrence of that Metal, that they could not bear to hear it named amongst them; that they were very far from valuing or coveting it as they found all Strangers did; and that it was the Cause of many Mischiefs to them, from which the *Indians* were free.

The General finding the Natives were not ignorant of his Views, replied they were not come to exact any thing of them, as the *Spaniards* had done; but were ready to pay them with Arms, or whatever Merchandize they liked best for their Gold; and every one was at Liberty to exchange what he pleased. Whereupon the *Caziques* stared at one another without returning one Word of Answer; and the *Dutch* relate, they did not think fit to urge them any farther on that Head, lest they should imagine they had a Mind to serve them as the *Spaniards* had done, though they were certain there were very rich Mines in that Part of the Country. The *Dutch* General, therefore, seeing now he could expect but little Assistance from the Natives, and that it would be impossible to maintain his Ground long against the *Spaniards*, and the rest of the *Chilese* in Alliance with them, dispatched Captain *Chrisspinson*, with two of his Ships, to *Fernambuco*, in *Brazil*, to give their Friends an Account of the State of their Affairs, and to desire a further Reinforcement; and, in the mean Time, continued to fortify the Post he had taken at *Baldivia*, where he hoped to defend himself till those Supplies arrived. In the Letter the *Dutch* General sent by Captain *Chrisspinson* to *Brazil*, he informs the Government, that the *Spaniards* had not more than fifteen hundred Soldiers, either on the Continent or Islands of *Chili*, viz. three hundred in *Valperiso* and *St. Jago*; one hundred in *Serena* or *Coquimbo*; one hundred on the Bank of *Riolio*; eighty in *Tucupel*; five hundred in the Forts in the Valley of *Arauco*; one hundred and twenty in the Island of *Chiloe*, *Carelmappa*, and *Calembuco*; what the Number of the *Spanish* Inhabitants were, he does not say, only that they were more numerous than the Garrison Soldiers; and it is evident, that many of the *Chilese* professed the Christian Religion, and were intermarried with the *Spaniards* at this Time; and therefore were, in a Manner, one People with them, and that some Tribes or Clans that were not under the *Spanish* Government, were in Alliance with them, though most of them were in a State of War with the *Spaniards*. And in those Circumstances the *Dutch* General informs the Government of *Brazil*, that in Case ten Ships, and three Yachts, with eight hundred Soldiers, Seamen, Cannon, and Ammunition in Proportion, were sent to his Assistance, he did not doubt of making himself Master of all the *Spanish* Settlements above-mentioned; and should have no Occasion to be afraid of all the Force the *Spaniards* had, either in *Chili* or *Peru*; and if he could make himself Master of *Chili*, by this Means, it might encourage the Natives of *Peru* to throw off the *Spanish* Yoke.

These *Indians* having entertained an inconceivable Aversion to the *Spaniards*, he informs his Employers also, that they had received the Advice, that the Natives of the neighbouring Provinces of *La Plata*, had rose upon the *Jesuits* (the then Sovereigns or Usurpers of that Country) and had murdered many of those Fathers, which was looked upon as an Indication of a general Revolution against the *Spaniards*; and then repeating his Importunities for a speedy and effectual Supply, concludes, that when the War was once kindled on that Side, it might spread over all the *Spanish West Indies*; and the *Hollanders* might supplant them in the *West*, as they had done the *Portuguese* in the *East Indies* and *Brazil*. This Express had not been dispatched a Week, before the *Dutch* General became sensible of his Mistake; and that whatever Misunderstanding there might be between the *Chilese* and the *Spaniards*, the Natives were much more afraid of the *Hollanders*, than of their ancient Enemies, and would probably join with the *Spaniards* to expel them their Country. For the next Conference he had with the *Caziques*, they gave him to understand, that he must expect no Provisions

vifions from them; and endeavoured to terrify the *Dutch*, by reporting that the *Spaniards* were affembling their Forces, by Sea and Land, to drive them from *Baldivia*; and it is probable that the *Dutch* General expected no Affiftance from their new Alliance, but were rather apprehenfive they would betray them to the *Spaniards*; for he foon after demolifhed his new erected Fortification; and, having reimbarbed his People, fet fail for *Brazil* on the 28th of *October*, 1643; and, having doubled *Cape Horn*, repaffed the Streights of *La Maire* on the 21ft of *November*; and on the 28th of *December* arrived at *Fernambuco* in *Brazil*; fo that they were but juft two Months in their Voyage from *Baldivia* to the northern Part of *Brazil*.

This fhews how eafily the Communication might have been maintained between the two Colonies, if the *Dutch* had been fo fortunate as to have eftablifhed themfelves in *Chili*; but at the Time the Fleet arrived at *Brazil*, Prince *Maurice* had refigned the Government; fo that they were no longer at a Lofs for the Reafon of their not being fupported in Time, as with great Juftice they expected, and as the Importance of the Enterprize deferved. We have been more particular and circumftantial in the Hiftory of this Expedition, becaufe it appears to have been of the higheft Confequence in itfelf, and in all refpects the beft concerted and contrived, of any in which the *Dutch* were ever concerned; and in Cafe it had fucceeded, would abfolutely have been a Means of giving, not only a new Face to their Affairs, but to the general Situation of things in *America*; nor is it eafy to fay with what Confequences it might have been attended. But it is Time to proceed from this Detail of the Ruin of their projected Empire, to an Account of the fmall Remains of their Territories in *America*; which, though they would be of very little Ufe to any other Nation, are, notwithstanding, highly beneficial to them.

4. We will begin with their Settlements upon the Continent; the firft, and moft confiderable, of which, is *Surinam*; that formerly belonged to us, and was the fole Remains of Sir *Walter Raleigh's* Discoveries in *Virginia*, of which we have given an Account already, and of the Manner in which it was exchanged for *New York*, which we had taken from the *Dutch*; this Settlement of *Surinam*, while in our Hands, was a Place of very little Confequence or Advantage; but, however, we met with very little Difficulty in keeping it, as living upon very good Terms with the Natives; whereas the *Dutch* have been always upon fo bad a footing with them, that they have been obliged to erect a ftrong Fort, and to keep in it a good Garrifon, in order to cover their Settlements; without the Limits of which, if the *Indians* meet with any *Dutchman*, they are fure to give him no Quarter. The Commodities they raife, are Sugar, Indigo, Ginger, and Cotton; for the Improvement of which they have constant Supplies of Negroes from their Colonies in *Africa*; where a Part of their Goods likewise are taken off, and when it amounts to more than the Value of their Negroes, the Ballance is commonly paid in Gold Duft. This, however, returns into *Europe*, in Payment for the Goods fent over to the Colony, by the Merchants of *Amfterdam*, who have ingroffed almoft all this Trade to themfelves.

They have, befides this Settlement, three others upon the Continent, viz. *Boron*, *Berbice*, and *Approwack*, which are at no great Diftnce from each other; and in which they raife, for the moft Part, the fame Commodities as in *Surinam*, except that at *Berbice*, befides an extraordinary Quantity of Cotton; they have likewise the Advantage of preparing of a very rich Dye, called *Orlane*, from an Herb of the fame Name, much in the like Manner as they prepare Indigo. They have likewise the good Fortune to have for their Neighbours in that Colony, a Race of mild and good-natured *Indians*, with whom they trade for Provifions, Hides, and other kind of Merchandize.

But as thefe Colonies lie on the Frontiers of the Country of *Guiana*, the Reader will, very probably, be well pleafed to fee fome Account of this Region, from thofe who actually inhabit it; and the Relations they give

us of it, amount to this: That this Country is, in many Parts, very wild and thinly peopled, efpecially the loweft Lands, which are often over-flowed by the Rivers; but the upper hilly Countries are very populous, the Soil being watered by fo many Rivers, very commodious for Travellers. The Air in that Up-land Country is much colder than towards the Coaft; and the Hills are very rich in Mines of feveral Sorts. Fruit is very plentiful and good; and all Sorts of Grain grow there all the Year round, except Wheat, coming up in a fhort Time, and with little or no Diftnction of Seasons; for there being no Winter, the Trees are always green and full of Leaves, Blossoms, and Fruit. Though this Country is between the Line and the Tropic of Cancer, that is, within the Torrid Zone, the Climate is pretty temperate, and the Air wholefome; the Heats being generally allayed by a frefh eafterly Wind, which reigns the greateft Part of the Year, during the Day; and at Night the Land-Breezes prevail, but do not reach to two or three Leagues out at Sea. The Waters are, likewise, excellent, and of fuch a particular Nature, that they will keep fweet and frefh during the longeft Voyages, as has been often found by Experience. On the Sea-Coasts, which, as has been faid, are generally low, there are many large Iflands, fit, if improved, to feed Cattle.

The Sea, about the Coasts, abounds in Fifh, the moft common is that which the *French* call *Machoran*, and the *Englifh* Cat-fifh, being of a yellow Colour, and very large, fweet Mulletts, and Thorn-backs, Lamentynes, and Sea-Tortoifes. Fowl is alfo very plentiful, either tame or wild, and other Game, with all which they fupply the *European* Settlements at the Sea Coasts, exchanging for Toys and Iron. This Country produces divers Sorts of Phyfical Gums, Woods, and Roots, as well as feveral Sorts of Woods for dying, and for making of Cabinets, and inlaid Works; among which is the Letter-wood, by the *French* called *Bois de la Chine*, and which grows no where in the World but here. Yet the Natives cut and carry it quite to the Water-fide, fo cheap, that a Tun Weight of it does not coft above ten Shillings; and in *Europe*, a Tun of that Wood has formerly yielded fifty Pounds Sterling, or more, and never under twenty-five or thirty Pounds to this Day. There is Ebony of a different Sort from the Letter-wood, and one Sort called *Bois de Violet*, and feveral others very common. There are alfo prodigious large Trees, whereof the *Indians* make Canoes, which carry twelve or thirteen Tuns in Cafks; befides a prodigious Store of very lofty large Trees, the Wood of which is exceffively hard and weighty, but has the Advantage of refifting Worms in Salt-water.

Here are alfo incredible Numbers of Monkeys of divers Sorts, among which is the Sort, called by the *Indians*, and after them by the *French*, *Sapajous*; a kind of little yellowifh Ape, with large Eyes, a white Face, and black Chin: It is of a low Stature, and of a lively and diverting Nature; but fo tender in cold Weather, that it is, with great Difficulty, they can carry fome over to *Europe* alive: where they are there much efteemed, and yield a confiderable Price among Perfons of Quality. There are Tamerinds, Sagovias, Parrots, Cameleons, Agontils, Arras, Ocos, Tocaus, or Toucans, Flamans, and wild large Ducks, with red Feathers at their Head, but not in great plenty, which eat very well, being ftewed, and feveral other Birds, which have nothing remarkable in them befides their Feathers. It likewise abounds in fmall Tygers, Deer, Pigs, little Porcupines, large and monftrous Serpents, and divers other Sorts of Animals.

As to Fruits, befides Sugar Canes (which grow very well in *Guiana*) the *Cafia*, *Papaye*, *Accajou*-Apples, *Vanillas*, *Tobacco*, *Pete*, and *Rocou*, it produces alfo *Indian* Wheat, *Mandioca*, Cotton, Indigo, and the other Fruits common in *Brazil*, and feveral others among the Plants, which the *Indians* cultivate in their Plantations. Cotton is one that abounds moft, and is ufed by the Women, who adorn themfelves with it, and can fpin it as fine as they pleafe. There is fuch Plenty of it every where, that if it were poffible to have Women enough there to fpin it, to fave the great Trouble and Expence of

of transporting it in the Wool to *Europe*, which renders the Profit very inconsiderable to the Planters, it might furnish all *Europe*, without costing the *Dutch* any other Trouble than purchasing it of the *Indians*, for very inconsiderable Toys, and Haberdashery Ware of little Value. The *Indians* esteeming a Grain of Crystal, to adorn their Necks or Ears, as much as a Diamond of the same Bigness is valued among the *Europeans*; and if the Disorders which have happened in the *European* Settlements in *Guiana*, at several Times, had not hindered the establishing a regular Commerce, this advantageous Trade would have been already settled, and a vast Number of People enriched by it; but in a more peculiar Manner the Inhabitants of *Cayenne*, because of the Situation of their Island, their Sea-port Town, and great Interest with the *Indians*.

The Pete is an Herb that can be peeled, as Hemp and Nettles with us, but the Threads are finer than Silk, and would have long since supplanted it, if it had been allowed to be transported into *Europe*. The Vanilla is a Weed that creeps up Trees as Ivy does; the Leaves are of a bright Green, long, strait, thick, and pointed at the Ends. When it has been seven Years set in the Ground, it begins to bear a kind of Husks, full of an oily Matter, and Seed much smaller than that of Poppy, which they use there to perfume Liquors and Tobacco, and is used in some Parts of *Europe*, in Chocolate. The Papaye is a thick Fruit, tasting somewhat like a Cucumber, of a round Shape, the Stem tall, but slender, with large Leaves, cleft like Vine-leaves; the Tree is hollow, and grows fifteen Foot high in one Year. The Accajou-apple is long, thick, and of an Orange-red; it has a sharp Taste, and is commonly eaten baked. At the End of this Fruit is a green Nut, which tastes like *Spanish* Nuts or Filberts, much in the Shape of a little Sheep's Kidney; the Shell whereof is oily; the Oil staining the Skin black, so as it does not rub off in a long Time, and is medicinal and very laxative. The Plant is a round Sort of Tree like a Chestnut Tree, and the Leaves in Shape and Form resembling those of the Bay-Laurel. The Wood is very fine, proper to make all Sorts of Household Goods. The *Indians* make their long Canoes, which they call *Piraguas*, of it; though these are commonly forty or fifty Feet long. It has been observed that wherever the Juice of this Apple falls, the Stain cannot be taken away till the Season of the Apple is quite over.

We will now proceed from the Country and its Produce, to the People, of whom the *Dutch* Writers speak to this Purpose: The *Indians* are generally red, and of a middling or rather low Stature, of a robust strong Constitution, having black, long, and lank Hair, going all naked, their Privy-Parts covered only with a little Cotton-wool hanging down to the Legs: The Women are shorter generally than the Men, and of a red Colour, but tolerably handsome; their Eyes for the most part blue, and very regular Features in their Faces, and well framed; they use a Piece of Cloth about six Inches square, which they call *Camisa*, usually wove in Stripes of divers Colours, and especially white, which is the most valued among them.

The Men cut off their Beards, dye their Faces with Rocou, and cover their Arms and Faces with several Folds of the kind of Cloth before-mentioned. They wear, by way of Ornament, a sort of Crown, or Garland, of Feathers of sundry Colours, and bore a Hole between their Nostrils, where they hang a little Piece of Money or a large green Stone, or rather Crystal, brought from the River of the *Amazons*, which they put a great Value on. These *Indians* are generally of such a robust Constitution, and live so long that they reckon a Man dies young at a hundred Years of Age. They are endued with pretty good Sense, their long Lives serving them to gain Experience, and improve their Judgments in such Things as are within the Reach of the Light of Nature; they are judicious, ingenious, patient and skilful in fishing and hunting, and spend the greatest Part of their Time in those Exercises, and spare no Pains to get their Living, being more inclined to Peace than War, which yet they engage in, either upon a just Quarrel, or Revenge, in

Point of Honour. They perform their Promises to each other exactly, and will not do to others what they would not have others do to them.

It once happened that several of those Nations near the River of *Amazons* entered into a League against another, and were, about a Year in making great Preparations for War, which at last ended in one Night's Expedition, by surprizing two or three Carbets, so they call their Hamlets or Villages, where they burnt about an hundred Persons of all Sexes and Ages, and returned home as proud and fierce as if they had conquered the whole Country; other Wars are seldom concluded till they make forty or fifty of their Enemies Prisoners, whom afterwards they either kill, boil in their Pots, and eat as the *Noragues* do, or sell them to the *Europeans* at the Coast, for Slaves. This Barbarity seems in them to be rather the Effect of an ancient ill Custom, to eat the Flesh of their Enemies, than a natural Disposition; for they seem to be ashamed of it, when the *Europeans* represent to them, in their Language, That by the Laws of God we are forbid to kill an Enemy when he is taken Prisoner, and much more to eat him. And they did not offer to reply to it, and some of the *Alguas* have appeared full of Indignation when they heard that some *Galibis* insinuated, they would be roasted by them, if the *Europeans* should venture to travel through their Country. Whence it may be inferred, that though this barbarous inhumane Practice is so much established and received among these *Asoguas* and *Noragues*, yet it seems to be no difficult Matter to restrain them from it.

They are generally great Eaters, and drink little or nothing at their ordinary Meals till they have done, and then commonly drink one Draught; but when they assemble together for warlike Enterprizes, or to begin a Canoe, or to launch it, or to admit one into their Council after they have exposed him to several hard Trials, they make extraordinary Rejoicings, which frequently hold three or four Days, continuing till they have drank up all their Liquors; for upon those Occasions they make three or four different sorts of Drink, some of which become very strong by Fermentation, as that which they call *Palinot*, which they make of Cassibi, that is, baked more than ordinary; their common Diet is that they call *Cassibi*, being Cakes made of the Mandioca Root baked on the Embers, as also *Indian* Wheat, Fish, and Fruit.

These Particulars shew, that the Accounts formerly published, when it was proposed to fix an *English* Colony on these Coasts, were perfectly well founded, and that there are no very considerable Obstacles to be surmounted by the *Dutch*, in order to render *Surinam*, and the rest of the Places they possess on the Coast of *South America*, much more advantageous than they are at present; the greatest Difficulty is, to quiet the Minds of the Natives; the greatest Part of the Nations in *Guiana* having conceived an excessive Hatred to the *Dutch*, which is believed to arise chiefly from the Stories told them by the *French* and *Portuguese* Missionaries, who make no sort of Scruple of affirming any thing that may serve their Turns, and hinder the *Indians* from conversing or trading with Heretics. We are told that the Natives pretend to this Day a great Esteem and Veneration for the *English*; and that they tell a great many romantic Stories about them, which are supposed to be owing to the Correspondencies formerly settled there by Sir *Walter Raleigh*. In a Time of profound Peace perhaps it might not be impossible to attempt, and succeed in, fixing an *English* Colony upon one of the two great Rivers, by which *Guiana* is bounded; at least it is right to keep alive the Memory of our having a Right to do this, and that we have a much better Title to this large and agreeable Country than any other Nation in *Europe*.

5. The Island of *Tobago* lies in the Latitude of 11 Degrees 15 Minutes North, and is the most to the East of all the Islands called *Antilles*: It is about twelve Leagues in Length, four in Breadth, and thirty in Circumference. It originally belonged to us; for in 1628 we find that King *Charles I.* granted it, together with *Trinity Island*, *Barbuda*, and *St. Bernard*, to *Philip* Earl of *Pembroke* and *Montgomery*; but it does not appear that ever any

Settle-

Settlement was made thereon, in Consequence of this Grant. In 1642, or thereabouts, the *Dutch*, from *Flushing*, sent a considerable Colony thither, who fixed themselves very commodiously; and though at first they found the Climate sickly and unwholesome, yet by Degrees, as they cleared it, the Air agreed with them better, and they began to extend their Settlements. The *Spaniards*, however, from the Island of *Trinity*, in Conjunction with the *Savages* from *St. Vincent*, fell upon the *Dutch*, murdered them to a Man, and destroyed their Plantations: After which the Island lay for several Years desert.

About the Year 1664 Mr. *Adrian Lampsin*, a *Dutch East-India* Director, and his Brother Mr. *Cornelius Lampsin*, Burgomaster of *Flushing*, one of the Deputies to the States-General, from the Province of *Zealand*, formed a Design of re-settling this Island entirely at their own Expence. Mr. *Cornelius Lampsin*, after obtaining a Licence for that Purpose from the States, applied himself to the Crown of *France*, in order to prevent, if possible, any Danger to his new Colony from the Subjects of that Kingdom; and *Lewis XIV.* out of his great Generosity, from a Desire of shewing his Affection to the *Dutch*, and from a Principle of Indulgence to Men of noble Dispositions, created Mr. *Lampsin* Baron of *Tabago*, with all the Privileges of a Baron of *France*, and assigned him also a fair Coat of Arms sprinkled plentifully with Flower-de-Luces. Upon these Encouragements the two Brothers proceeded, and entirely at their own Charge, and by their prudent Management, from a waste and desert Country, in the short Space of eleven Years, rendered it the most flourishing for its Size of all the *Leeward Islands*; they called it, from one of the largest Isles in the Province of *Zealand*, *New Walcheren*, raised a very good Town, and a strong Fortrefs, called *Lampsinberg*, and two other good Forts, *Beveren* and *Belleviste*; and, which is very amazing, they settled, during their Administration, twelve hundred white People in that Island, where they succeeded in raising all the Commodities that are brought from the *West Indies*, viz. Tobacco, Sugar, Ginger, Indigo, Cotton, Cassia, Cacao, Rocou, Fustic, Citrons, Oranges, Ananas, &c. And besides these, they had some very valuable Commodities which were not in the other Islands; such as an excellent Kind of Saffras, a Kind of wild Mace and Nutmegs, and a great Quantity of Gum Copal.

They raised, besides, all sorts of Grain and Provisions in Quantities sufficient for their own Use, and for Exportation to the other Islands. But in 1678. Marshal *d'Estrees*, by the express Command of his Master *Lewis XIV.* sailed with a great Fleet to destroy this very Settlement, notwithstanding it had been made under his Protection, and by his Encouragement; for it seems it is one of the Privileges of the Barons of *France* to be beggared and destroyed whenever their grand Monarch pleases, which with some Difficulty was accomplished; for the *Dutch* defended themselves obstinately; but after two hard-fought general Engagements, they were defeated or rather over-powered by Numbers, and the Colony totally ruined, not more to the Loss of the industrious Planters than to the eternal Infamy of that barbarous Prince, who placed his Glory in making better Men than himself miserable. This Island was restored to the *Dutch* by the Treaty of *Nimeguen*; and they have repaired some of their Settlements; but it is now a Place not worth speaking of, and very probably will never be, in any Degree, restored to its primitive Condition, because, lying within Reach of the *Savages* of *St. Vincent* and the Continent, it will be a very difficult Matter to settle there with Safety, unless a new Colony was undertaken in the same Manner, and carried on with the same Spirit, as the last.

The Island of *St. Eustachius* lies to the North-west of *St. Christopher's*, in the Latitude of 17 Degrees 40 Minutes North. It is but small, being no more than five Leagues in Compass; it appears, to the southward, like a high Mountain rising out of the Sea, but stretches out northward into an indifferent good Country. The *Dutch* took Possession of it in the Year 1635, and the States granted the Propriety of it to Mr. *Vanree*, and some other Merchants of *Flushing*, who very soon settled

a Colony there of about six hundred Families. In the Year 1665 the *English* in *Jamaica* dispossessed the *Dutch*, and sent Colonel *Morgan* with three hundred *Buccaneers* to keep Possession of the Place. He soon after, making an Attempt upon the *French* Part of the Island of *St. Kitt's*, was killed; and the next Year the *Dutch* and *French*, both then engaged in a War against *Great Britain*, attacked and made themselves Masters of this Island, which by the Treaty of *Breda* was restored to the *Dutch*.

In 1689 it was taken from them by the *French*, but was restored to them again by the Treaty of *Ryswick*, since which they have remained in the peaceable and quiet Possession thereof. The Number of Plantations thereon, and the comfortable Condition of its Inhabitants, do very great Honour to the *Dutch* Industry; for without Doubt in any other Hands it would be a very indifferent Place; all the Sides of the Hill are laid out into small Settlements, and cultivated; the Houses are well built and well furnished; most of the Inhabitants are in good Circumstances, and have Warehouses well filled with *European* Commodities, with which they supply their Neighbours at a round Price, whenever they are disappointed of Supplies from *France* and *England*. They likewise raise great Quantities of excellent Tobacco, which comes to a good Market in *Holland*, and some other Commodities; yet there is not a Drop of Water in the Island, but what they are supplied with from the Clouds, which they preserve so carefully in Cisterns, that they are very seldom distressed. The Top of the Mountain is covered with a vast Wood, and in the Midst of it, instead of the Point one would expect, as it rises in the Form of a Sugar-loaf, there is a wide and deep Cavern, whence some have imagined that it was formerly a Vulcano, or burning Mountain.

To the North-west of this Island lies that of *Saba*, in the Latitude of 17 Degrees 35 Minutes, which appears at first Sight to be a Rock; but the *Dutch* Governors of *St. Eustachius* have sent a small Colony thither, who have found a tolerable Valley, where they raise Tobacco, and other Things. It is a great Misfortune to both these Islands that they have not so much as a Port; but in the former there is a good Road, to command which there is a pretty strong Fort, and there all the Ships ride.

The Island of *St. Martin* lies in the Latitude of 18 Degrees 15 Minutes, is in Length about seven Leagues, and in Breadth four: The Climate is very far from being wholesome, and the Soil cannot be very fertile, since there are no Rivers, and very few Springs, in the Island, which are also dried up in the hot Seasons; and then the Inhabitants are forced to have recourse to their Cisterns of Rain-water; yet, as insignificant as this Place may appear, it has been contended for by three, and is actually inhabited by two, powerful Nations; so that the History of it is extremely curious, and very well deserves our Notice. The *Spaniards* in Right of Conquest took possession of it, built a Fort there which was very strong, not so much for the sake of what they were able to make of the Island, as to prevent any other Nation from settling there; but when they perceived that the *French*, *English*, and *Dutch*, had seized the more valuable Islands, they thought it ridiculous to be any longer at the Expence of keeping this, and therefore resolved to quit it. This Resolution was taken in the Year 1648, and was executed very soon after. They destroyed their Cisterns, burnt their Houses, blew up their Fort, and then retired to *Porto Rico*.

It so fell out, that in this Garrison there were four *Frenchmen*, five *Dutch*, and a *Mulatto*, and all these ten hid themselves in a Wood, till the *Spaniards* were embarked, and then courageously sallied out and took Possession of the whole Island of *St. Martin*. But they very soon made choice of different Places to settle in, and, by a very solemn Treaty, agreed to divide the Country between the *French* and *Dutch* Nations. The *Dutch* made a little Canoe, and sent one of their Number to *St. Eustachius*, to inform the Governor of their Situation; and they promised the *French*, that Care should be taken to send the like Notice to the Governor of *St. Christopher's*; the former, being their own Affair, was performed very exactly; but the latter, concerning their Neighbours only, slipped out of their Heads. The *Dutch* did not

neglect this new Acquisition; on the contrary, one *Martin Thomas* was sent from *St. Eustachius*, to take Possession of their Part of the Island, with a considerable Number of new Planters. After this they began to treat the *French* but very indifferently, who, receiving no News from their Countrymen, began to suspect the Reason; and therefore, though with some Difficulty, found the Means of sending a Person to *St. Christopher's*, to inform *M. de Poincy* of the Agreement they had made, and the Hardships they laboured under; whereupon he sent an Officer and thirty Men, to take Possession for the Crown of *France*; but the *Dutch* would not suffer them to land, declaring, that they looked upon themselves as the legal Possessors of that Island.

They founded this Claim upon a prior Possession; of which it may not be amiss to say something. The *French* were the first who attempted to settle this Island; but, allowing the *Dutch* to trade with them, they surprized and drove them out of it, and built a Fort for their own Security; but the *Spaniards*, not liking their Neighbourhood, drove them out in their Turn, and erected a strong Fortrefs on the Island, as has been before-mentioned. As soon as the *French* Officer returned to *St. Christopher's*, *M. de Poincy* sent his Nephew, with three hundred Men, to put an End to this Dispute, and he did it very effectually; so that the *Dutch* Governor was glad to settle the Division of the Island, according to the first Agreement; by which all that Part of the Island, which looks towards *Anguilla*, was to belong to the *French*; and the other Side of the Island, in which formerly stood the *Spanish* Fort, remained to the *Dutch*. The former was the better half in every Respect, except the Salt-pits, which belonged to the *Dutch*. The Contract was settled on the Top of an Hill, the highest on the Island, which was from thence called *la Montange des Acordes*.

From this Time, to the War in the Year 1688, the two Nations lived together in strict Friendship, till the *French* called off the greatest Part of their Inhabitants to people that Part of the Island of *St. Christopher's*, out of which they had driven the *English*; and being afterwards driven out by them, these poor People were, for the most Part, undone; so that when they endeavoured to persuade them in the next general War, to take the same Step, they would not listen to the Proposal at all, but resolved to remain where they were; and the *Dutch* and *French* lived, while that War lasted, in great Quiet and Tranquility; neither would they suffer the Privateers of either Nation to injure the other. The *French* Settlement is of very little Consequence; but the *Dutch* are in a mighty good Condition, have large Warehouses, and carry on a considerable Trade, especially in Tobacco, which is very much esteemed, and the Place would be still more considerable, if they had a tolerable good Port; but they have only a Road, where Ships are much exposed, and, besides, it lies somewhat out of the Way, as being too much to the Leeward, which renders the Commerce to the Windward Islands very difficult. There is great Plenty in this Island of a kind of Tree, which both the *Dutch* and *French* call *Candlewood*. When it grows dry, and fit to burn, it yields a very pleasant Smell; and the small Sticks of it, when lighted, serve for Candles; and at the same Time that they light the Room, yield a very pleasant Scent, which arises from a fragrant Gum in the Tree, which cannot otherwise be extracted.

These are all the Possessions of the *Dutch* in this Part of the World, and it is equally surprizing that they have kept these so long, and that they have not been able to acquire better; since it is certain, that they have succeeded as well as any Nation, in those they have settled, and carry on a considerable Trade to *Holland*, in all Kinds of *West India* Commodities; as on the other Hand, they maintain a very considerable Commerce in *America*, from the great Warehouses of *European* Commodities, which they keep always full, and have small Vessels ready to carry their Goods wherever they hear of a Market, more especially in the Time of War between *Great Britain* and *France*; for then they have an Opportunity of supplying the Colonies of both Nations, in ex-

change for Sugar, and other *West India* Goods, which they transport in their own Vessels into *Europe*; so that in a very few Years such a War cannot fail of making all the *Dutch* Planters prodigiously rich. We are now to proceed to their other Islands, which lie nearer the *Spanish* Coast, and are consequently of more Value to them.

Curaçao, or as the *Dutch* pronounce, and sometimes write it, *Curraçaw*, is a small Island in the Latitude of 12 Degrees 40 Minutes North, about nine or ten Leagues in Length, and about five in Breadth; the Soil of which is far enough from being fruitful, and the Climate still farther from being either wholesome or agreeable; but notwithstanding these Disadvantages, such have been the Care and Industry of the *Dutch*, that they have always drawn great Advantages from this small, and seemingly inconsiderable, Country, in which formerly there were large Pastures, and a great Quantity of Cattle; but of late they have turned these into Sugar and Tobacco Plantations, so that at present it is thought the Provisions of all Sorts, that are raised in this Island, would scarce maintain its Inhabitants for one Day; yet such is the Prudence of the *Dutch* Government, that the Inhabitants are so far from being exposed to Want, that there is not a more plentiful, or better provided, Place in the *West Indies*; but, at the same Time, it is to be understood that every thing fetches a high Price there, which is so far from being a Disadvantage, that, in reality, it is the principal Source of the great Wealth of the Inhabitants. On the South-side of the East End of this Island, there is an Harbour called *Santa Barbara*; but the chief Harbour is about three Leagues from the South-east End, on the South-side, where the *Dutch* have a very good Town, and a strong Fort. Ships bound in thither must be sure to keep close to the Harbour's Mouth, and have a Hausar, or Rope, ready to send one End ashore to the Fort; for there is no anchoring at the Entrance of the Harbour, and the Current always sets to the Westward; but, being got in, it is a very sure Place for Ships, either to careen or lie safe; at the East End are two Hills, one of them is higher than the other, and steepest towards the North-side.

The *Dutch* Town, upon this Island, is, for its Size, one of the fairest and finest in *America*; and there are in it every thing requisite to render it commodious and agreeable, as far as the Climate and Soil will admit; public Buildings there are of all Kinds, very neat and commodious; the Port is rendered as safe as it is possible, and though the Entry is dangerous, yet the Precautions taken for the Service of Strangers, by the Government, are such, as not only free them from all Difficulties, but render them also, in a great Measure, insensible of any Hazard; so that though Nature has made it as inaccessible as any, yet, by the Skill and Industry of the *Dutch*, it is become one of the most frequented Ports in the *West Indies*. All kind of Labour here is performed by Engines, and that with such Dexterity, that Ships are lifted at once into the Dock, where they are carefully and effectually careened, and furnished with Provisions, naval Stores, Ammunition, and even Artillery if they want it; and all this is done with equal Readiness to all Nations, the *Dutch* being in perpetual Alliance with ready Money, let it be *English*, *French*, or *Spanish*; as appeared clearly in our late Expedition to *Laguaira*, and *Porto Cavallo*, where they furnished us with Cables, Ammunition, and even Men, for attacking the *Spaniards*, whom they had before furnished with Powder and Ball, sufficient to render that Attack ineffectual, and, but for the Neighbourhood of this *Dutch* Settlement, the *Spanish* Fortresses before-mentioned had been infallibly reduced, and in our Possession.

Bonaira and *Aruba* are two Islands likewise in the Possession of the *Dutch*, and dependent upon the Island of *Curaçao*; the former, which is twice as big as *Curaçao*, lies ten Leagues to the Eastward of it, and is about seventeen in Compass; the *Dutch* have a Deputy-Governor here, a Guard of Soldiers, and considerable Number of *Indians*; of late Years there is a Fort built for the Protection and Security of the Place, in which the Soldiers do Duty. The *Indians* are Husbandmen, and plant Maize

Maize and *Guinea* Corn, and some Yams, and Potatoes; but their chiefest Business is about Cattle, for this Island is plentifully stocked with Goats, and they send great Quantities every Year in Salt to *Curaçao*. There are some Horses, Bulls, and Cows, but no Sheep or Hogs all over the Island, or any Animals, but those before-mentioned; the South-side is plain Low-land, and there are several Sorts of Trees, but none very large; there is a small Spring of Water by the Houses, which serves the Inhabitants, though it is brackish; at the West End of the Island there is a good Spring of fresh Water; and three or four *Indian* Families live there, but there is no Water or Houses in any other Place.

On the South-side, near the East End, is a good Salt-pond, where *Dutch* Sloops come for Salt, which is now become a very considerable Commodity, and the *Dutch* are contriving Methods for turning it to still greater Advantage. The Island of *Aruba* lies seven Leagues West from *Curaçao*, and is not very considerable; however, they breed some Cattle there, and a great many Horses, which makes it useful to their chief Colony; to which it also furnishes a great Quantity of Garden-stuff, without which the People, at *Curaçao*, could not subsist; for amongst other Methods they have of getting Money, one is, allowing Strangers to erect Hospitals ashore for their Sick, in which they consume a great many Greens and Roots, and pay for them very largely, as indeed they do for every other Conveniency.

6. As this Island is not above seven Leagues distant from the *Spanish* Coast, a more convenient Station cannot be wished for the carrying on a clandestine Trade; it was first introduced by the Sale of Negroes, brought thither by the *Dutch*, from their numerous Settlements on the Coast of *Guinea*. These the *Spaniards* brought, in a Manner, openly, and have transported, in their own Vessels, fifteen hundred at a Time. But since the *English*, from *Jamaica*, have interfered in this Trade, it is sunk very considerably, though they still supply the neighbouring Provinces, and reap a great Profit thereby, because no body understands the Management of this Business better than they do, can bring Slaves at a cheaper Rate, or vend them at a higher Price. Some Writers have asserted, that in its most flourishing Condition, the Slave Trade alone drew from the *Spaniards* considerably above a Million of Pieces of Eight *per annum*.

The Dealers at *Curaçao*, and their Correspondents in *Holland*, were too knowing, and too conversant in Business, to let the Declension of the Slave Trade rob them of the Benefit of this Island. In order to replace what was lost by the *English* interfering with them, they built vast Magazines, and stored them with *European* Goods, which had a very good Effect: In the first Place, it preserved to them the Remainder of their Slave Trade, for the *Spaniards* knowing that this, of all others, was most winked at by their Governors, resolved to keep up a Pretence of buying Slaves, in order to have an Opportunity of purchasing other things. Secondly, It tempted the *Spaniards* to run all Hazards, that they might, at a reasonable Price, obtain any Sort of *European* Merchandise they wanted, and that too whenever they please. It is incredible what vast Sums have been annually traded for in this Way; besides, the Inhabitants of *Curaçao*, to keep up a good Correspondence with their Neighbours, and, as far as possible, to fix their Affections, refused to suffer any Privateers to enter their Ports; nor would, upon any Terms, purchase their Plunder, which, at the same Time, was publicly sold at *Jamaica*, where the Privateers usually spent their Money; this Spirit of Self-denial, however, did not hinder the Traders of *Curaçao* from directing the Privateers to put into the Island of *St. Thomas*, whither they instantly sent Sloops with Money and Agents on board them, to purchase what the Privateers had to sell; taking Care to send the Effects as soon as possible to *Europe*, that the *Spaniards* might have no Intelligence of this Contrivance.

It is to be observed, that in respect to this clandestine Commerce, it is chiefly carried on by the *Spaniards* themselves, who run all Hazards, come in Person to the

Island, and carry away whatever they have bought, in their own Ships. In process of Time, however, some Merchants devised another Way of carrying on the same kind of Commerce, by Ships sent directly from *Europe* to the *Spanish* Coasts. These Vessels were of such Force, that those aboard them stood in no Fear of any Precautions the Governors could take; and, on the other Hand, as their Cargoes passed immediately from their original Owners to the *Spaniards*, they could be afforded considerably cheaper than those consigned to Factors in *America*. The Method of trading, was by a Signal from the Ships, or from the Shore. The Long-boat was then sent off well manned, brought the Merchants aboard with their Money, and carried them back with their Goods. The Reader has been elsewhere told, with what Obstinacy one of these Ships was defended against two *Guarda Costas*, and, to say the Truth, those aboard them chose rather to sink than be taken; a very extraordinary kind of Courage, for which, however, it is not impossible to account; and, as it may be useful as well as pleasant, I think it not amiss to enter into the Particulars thereof.

At the Time one of these Ships is fitting out, Notice is given to all Sailors, that they may have an Opportunity of entering; which they do with great Alacrity, there being, generally speaking, twice as many who offer themselves, as can be made Use of; when the Proprietors have their Complement of picked Seamen, they not only allow every Man his proper Cargo to a certain Value, but also furnish it themselves on Credit, at prime Cost; by this Means every private Man aboard becomes a Proprietor; and if the Ship is attacked, fights for his own Property, which is the Reason that he will drown sooner than part with it, and is one Cause why *Guarda Costas* are not over-fond of meeting with those Vessels, but chuse rather to prey on fair Traders, who have fewer Men, and are of less Force. The Scheme I have mentioned is certainly a right one, though in a wrong Cause. The only Way to support the Spirits, and fix the Affections, of ordinary People, is to consult their Interest; and those who imagine that Justice, Honour, or any thing else, will answer the same End, without a due regard to this, must not expect much Pity when they find their Mistake; so true in all Cases is that divine Maxim, *That the Children of this World are wiser in their Generation than the Children of Light*.

In a Time of full Peace, it has been computed that the Trade of this Island did not produce less to the *Dutch* than five Millions of Florins *per annum*, which is about half a Million Sterling; and considering that they derive this from a Parcel of Rocks, that any but they would scarce think worth keeping, it is a prodigious thing, and must, in the Opinion of every competent Judge, pass for the clearest Proof of the *Dutch* Skill and Industry that can possibly be given. In time of War the Profit is much larger; for then every Article of their Commerce is vastly increased, they sell more Slaves, more naval and military Stores, and more *European* Goods to the *Spaniards*; and the Governors are themselves less strict in Point of Licences; for these are things that must be had, and there is scarce any other Market. Besides, at such a Time, they drive a good Trade with the *English* Squadrons, that come upon those Coasts, and have also considerable Dealings with their Privateers, for which, in Time of War, they always keep a regular Factory at *St. Thomas*, as will be shewn hereafter.

The Reader may collect from hence the true Reason of those Disputes, so often mentioned in the *Dutch* Gazettes, between the Crown of *Spain*, and the Republic; the former looking upon all the Commerce of *Curaçao* as a kind of contraband Trade, which ought to subject the Vessels employed in it to frequent Seizures, by the Law of Nations, which the latter will by no Means allow, pretending that the Tobacco, Indigo, and Hides, aboard those Vessels, are the Produce of their own Colonies; and that the Silver found in them, is nothing more than the Balance of their Trade with other Nations. The *Spaniards*, indeed, know, but are not always able to prove, the contrary, and therefore are sometimes obliged to release the *Dutch* Ships, taken by their *Guarda Costas*,
and

and for those that are confiscated, though the *Dutch* always make a great Noise about it, yet they are sensible enough, that they have not much Reason; and this is the true Cause, notwithstanding all their loud Complaints, that they never proceed to Extremities upon this Subject, but are content with what Restitution they can get, and still keeping up a Claim to what they know will never be restored.

7. We have, in several Parts of this Work, had Occasion to speak of the *Dutch West India Company*, and therefore we shall not repeat here what has been already said upon that Subject, but content ourselves with observing that the *West India Company*, which subsists at present in that Country, is not the same that formerly made so great a Figure in the World, were Masters of *Brazil*, and the Scourge of the *Spaniards*; but another Company erected on the Ruin of that, in the Year 1674, into which the Proprietors of the *Old West India Company* were indeed admitted, but admitted upon such Terms, as shewed plainly enough how low they were fallen, and how near becoming Bankrupts, for they were allowed no more than fifteen *per Cent.* in the new Capital; that is to say, if a Member of the *Old West India Company* was possessed there of one hundred Florins in Property, it gave him a Title to no more than fifteen Florins in the new Stock; neither could they think this hard, since some of their Creditors bore a great Proportion in the Loss. Those that had lent Money upon the Stock, had no more than thirty *per Cent.* allowed them; but as to the fair Creditors, with whom the Company had run in Debt for the Support of their Commerce, they had their Demands converted into Stock at par; so that the Proprietors of the New Company were three different Sorts of People, in Favour of whom the Republic granted all the Privileges and Emoluments which the Old Company had enjoyed; and they entered, likewise, into the Possession of all the Fortresses and Colonies which belonged to the same Old Company.

The Affairs of this New Company were managed, as they still are, by Directors, in the same Manner as those of the *East India Company*; and though by several Calls they raised considerable Sums of Money, and carried on their Trade with tolerable Spirit for some Years, yet they could never retrieve their Affairs, but have been always endeavouring to unite themselves to the *East India Company*, as the only Means left for preserving their Settlements in *Africa* and the *West Indies*. As for *Surinam*, there is a particular Company established for the Management of its Commerce; and the Trade to *Curaçao* is managed by private Persons, who pay the Company for their Licences, and a small Duty upon all the Goods exported or imported. The only exclusive Trade they now enjoy, is that of Negroes, which of late is very much declined. The Reader will easily perceive, that the great Cause why this Company has sunk so low, is the Loss of the Colonies in the *West Indies*; for if they had more Plantations there, and those of greater Extent, it would occasion a Demand for Negroes; and as the *African Trade* is still in the Hands of this Company, they would be great Gainers thereby, and a considerable Part of the Commodities brought from the *West Indies*, must necessarily enter their Warehouses.

As it is, the *Dutch* drive a large and a beneficial Trade to that Part of the World, so that the Nation in general suffers very little, if any thing, by the Company's being in a low Condition; which, in all probability, is the true Cause why the Republic is at so little Pains to recover, or restore, the Affairs of that Company; and, perhaps, would be glad to see it united to that of the *East Indies*, as a Means, and, indeed, the only Means, of reviving and supporting the Slave-Trade. There was a Probability, as we have shewn in another Place, of seeing this accomplished, upon the Proposal made by the *West India Company* for that Purpose, in 1714, when they made it appear, that their Funds amounted to near one hundred and fifty thousand Florins a Year, exclusive of a legal Demand they have upon the Crown of *Portugal* for a large Sum of Money; but, since that Time, the Affair seems to have been no more thought of, or is it at all likely that it

will hereafter be brought to a Conclusion. Upon the whole, therefore, we have very good Reason to suppose, that as their Affairs now stand, the *Dutch* will never make any great Progress in this Part of the World; for, except their Colonies upon the Continent, they have none that are either capable of being improved or extended. *Tobago* can hardly be resettled, unless we should expel the *Indians* out of *St. Vincent*, *St. Eustachius* and *Saba* are down-right Rocks, of which it is wonderful that they make so much as they do, but it is impossible that they should make more; and the same thing may be said of *Curaçao*, and the Islands which depend upon it; so that how much soever private People may gain by the contraband Trade, carried on from thence with the *Spaniards*, yet it is not at all probable that they should ever become formidable to us, or to the *French* in the *West Indies*.

We may add to this, that even a great Part of that Trade is now carried on with the *Spaniards* from *Holland* directly, so that many of the Ships employed therein barely touch at *Curaçao*, that they may have a Pretence for standing over to the *Spanish Main*, where, especially in Time of War, they find a Way to trade, in the following Manner: They bear away directly for a *Spanish* Port, and as they enter it make Signals of Distress, pretending, commonly, that they have sprung a Leak, and that they are in imminent Danger of perishing at Sea, which obliges them to seek for Shelter and Protection in the Port of a Crown allied to the Republic. As soon as they come to an Anchor, the first thing that is done, is to give Notice to the Governor of their great Distress, and, as a full Proof thereof, to send a very considerable Present. By this Means Leave is obtained to come ashore, to erect a Warehouse, and to unload the Ship; but then all this is performed under the Eye of the King's Officers, and the Goods are regularly entered in the Register, as they are brought into the Warehouse, which, when full, is shut up, and the Doors sealed; all these Precautions taken, the Business is effectually carried on in the Night, by a Back-door, and the *European* Goods being taken out, Indigo, Cochineal, Vanillas, Tobacco, and above all, Bars of Silver, and Pieces of Eight, are very exactly packed in the same Cases, and placed as they stood before.

But then, that such as have bought may be able to sell publicly, a new Scheme takes place, a Petition is presented to the Governor, setting forth the Strangers Want of Money to pay for Provisions, building the Warehouse, Timber for repairing the Ships, and a proportionable Number of public Items; in Consideration of all which, Leave is desired to dispose of some small Part of their Cargo, in order to discharge those Debts; these being obtained in the usual Manner, something of each Sort of Goods, which has been privately sold, is now publicly brought to Market, and purchased by those Persons respectively who had large Quantities in their Warehouses before. Thus this whole Scene of Iniquity is transacted with all the formal Solemnity which could attend an Act of Justice and Compassion. The larger Concern the *Dutch* have in this Kind of Trade, the less they will be inclined to planting; that is to say, while they have this Channel for the bringing in of Wealth open, they will be the less ready to think of settling new Colonies, or of extending and improving those that they already have; and indeed, if they were to think otherwise upon this Subject, they would find infinite Difficulties in the Execution of any Design of that Nature, at a Time when all the Nations in *Europe* are thoroughly convinced of the Importance of their *American* Settlements, and are extremely jealous of each other's Progress therein.

8. There remains now but one little Island more in this Part of the World, of which the Nature of our Design obliges us to give an Account: This is, the small Island of *St. Thomas*, which lies in the Latitude of 18 Degrees North, and is one of the largest of that Cluster of Islands which are called the *Virgins*. This Island is not above seven Leagues in Circumference, but has the Advantage of a very good Situation in all Respects: The Port is excellent, the Form of it an Oval, almost entirely surrounded

surrounded by two Promontories, which defend the Ships that lie within from almost all Winds. In the Centre of the Port there is a small Fortrefs, which stands in the Middle of a Plain; it is a regular Square, with four good Bastions though very little, but has neither Out-works or Ditch; and the only Security, besides its Walls, is a Pallisade, with which it is surrounded. On the Right and Left of the Fort, there are two small Eminences, which in our Plantations would be called *Bluffs*, and seem by Nature designed for Batteries, which would command the whole Harbour; but whether the *Danes* have mistaken her Intention, or are unwilling to be at any Expence that may be avoided, certain it is, that there are no Batteries here. The Island belongs to the King of *Denmark*, who has a Governor and a Garrison here; but there is besides, a large Factory on the Island, which belongs to the *Brandenburghers*, or Subjects to the King of *Prussia*.

The Neighbourhood of the *Spanish* Island of *Porto Rico*, which is at no greater Distance than seventeen Leagues, secures the Inhabitants of *St. Thomas*, from any Danger of wanting Provisions, to which otherwise they would not fail to be exposed; for though the Soil of their Island be tolerably good, and every Foot of it cultivated, yet it would not produce sufficient for the Maintenance of the Inhabitants, which for the Size of the Place, are very numerous. The Town of *St. Thomas* consists of one long Street, at the End of which is the *Danish* Magazine, which is a very large, magnificent, and convenient Building, wherein there is room for Stores, Slaves, and Goods of all Sorts. The *Brandenburgh* Factory is also very considerable, and the Persons belonging to it are chiefly *French* Refugees, who fled thither when the Protestants were expelled from the *French* Islands. The chief Produce of their Plantations here is Sugar, which is very fine-grained, but is made in small Quantities, and the whole Amount cannot be very considerable; yet the *Danish* Governor is generally a Man of some Rank, lives in a Manner very suitable to his Character, and generally acquires a very good Fortune in that Station. The Director of the *Danish* Trade becomes likewise rich in a few Years; and the Inhabitants in general, by the Neatness of their Houses, and the Condition of their Plantations, shew plainly enough that they are in easy Circumstances.

All this is derived from their Trade, which is very large and extensive, and of very different Kinds; of all which, however, we will do the best we can to give the Reader a tolerable Idea. In the first Place, the *Spaniards* send hither large Vessels continually, for the Purchase of Slaves, which is the chief Support of the *Danish* and *Brandenburgh* Commerce, as they draw the Slaves which they sell, from their Settlements, upon the Coast of *Africa*, and which, if they had not this Vent for them, would long ago have become useless, and consequently have been deserted. But besides Slaves, the *Spaniards* buy here, as at *Curacao*, all Sorts of *European* Goods, of which there is always a vast Stock in the Magazine, which belong chiefly to the *Dutch*, who carry on a prodigious Commerce here, by which they are great Gainers. Besides this Trade with the *Spaniards*, there is a very great Resort of *English*, *French*, and *Dutch* Vessels to this Port, where there is a common Market for them all; where they can always depend upon the Sale of superfluous, and the Purchase of, necessary Commodities; and this cannot be done without considerable Advantage to the Inhabitants of the Place where these Dealings are transacted. But if in Time of Peace there is a vast deal of Business done at *St. Thomas*, and immense Sums of Money turned in the Space of a Year, in Time of War this is vastly increased; for being a neutral Port, the Privateers of all Nations resort thither to sell their Prizes; and the *Dutch*, who will not receive any thing taken from the *Spaniards* at *Curacao*, buy these Goods without Scruple at *St. Thomas*, and have always an Agent and large Sums of Money there, ready for that Purpose.

This Manner of dealing, in Time of War, is so advantageous, that in Time of Peace the People of *St. Thomas* can hardly leave it off, but are a little too apt to deal with that Sort of Privateers, which, in plain *English*,

are stiled Pirates. This passes in the Eye of the World for the Work of the *Danes*, but the Truth of the Matter is, that the greatest Part of this Commerce is driven by their Neighbours, who are not scrupulous of dealing with any Sort of People, provided always they can deal to Advantage. It was here that the famous Captain *Avery* or some of his Companions, disposed of the greatest Part of the rich Goods, taken in a Ship belonging to the *Mogul*, about forty Years ago, when the Magazines at *St. Thomas*, were so excessively crowded with *Indian* Goods, that they were not entirely emptied in twenty Years after, though they generally sold them at low Prices; and it was by this Accident, that Pieces of *Arabian* Gold, which were, properly speaking, Pagodas, were long current in the *West Indies*, under the Name of Sequins, for they knew not what to call them, at the Rate of about six Shillings, and Nutmegs, Cloves, Cinnamon and Mace, were likewise bought there very cheap, for many Years after.

9. We have now run through the entire History of *America*, from its first Discovery to the present Time: We have shewn how, when, and by whom, all the different Parts of the Continent; and all the several Islands of this new World were discovered, planted, or conquered; but we have been more particularly careful to explain the present State of its Commerce, and the Importance of their Settlements to the several Nations in *Europe* which have Territories in that Country. All therefore that we have now to do is, to add somewhat by Way of Conjecture, as to what may be the future State of these vast Countries, and what Changes may possibly happen in the Affairs of their present Possessors. It is very certain, that a Writer runs a great Risk, who hazards his Credit upon such Contingencies, and is commonly but very little pitied, if he is so unfortunate as to fall into Mistakes, because he might have avoided, if he had been wise, the running any such Risk; but there is great Difference between an Author who has nothing so much in View as raising his own Character, and one who considers only the Benefit of his Readers, and the Advantages that may result from his Writings to others. The latter I freely own is all I aim at, and as I am very certain, that whether the Event justifies my Conjectures or not, the Public will be Gainers, I am very little concerned about my Character as a Writer, and therefore am very willing to take my Chance, whether what I am going to say upon this Subject may raise, or ruin, my Reputation.

The *Spaniards* have undoubtedly, the fairest, largest, and richest Countries in *America*; but I am very far from thinking that they are the most powerful Nation in those Parts, or that they draw greater Advantages from their Settlements, than are derived from their Colonies to the *British* Nation. This will appear to many an absurd and ridiculous Assertion, and will appear to most a Paradox hardly to be maintained; but to me it seems a Truth, and therefore I venture to lay it down; and shall next offer my Reasons in the Support of it. In the first place, though the *Spanish* Empire in *America* be very wide, yet it is also very weak: In the Kingdom of *Mexico*, where they are strongest, the Government is in a very ticklish Situation, the People in general are discontented, and even those entrusted with the Government are far enough from being pleased; insomuch that I am very certain, if any Attempt had been made with a reasonable Force upon that Country, in the Beginning of the present War, a general Insurrection would have ensued. In *Peru* or *South-America* their Situation is much worse, their Force being not near so great, and the Disposition of the People not at all better; so that if any Notice had been taken of a Project published when we first declared War against that Nation, under the Title of *A Proposal for humbling SPAIN*, we might have made ourselves Masters of *Buenos Ayres*, with as little Loss as was sustained in the fruitless Attempt upon *Laguaira* and *Porto Cavallo*, which could not have turned to any great Account if we had succeeded. The *Spaniards*, on the contrary, had it not in their Power to hurt us, as appears from their being defeated in an Attempt upon the least and weakest of our Colonies, with all the Force they

they were able to raise. Such is the Difference between the Strength of their Governments in that Part of the World, and ours.

But to enter more closely into the Matter, let us consider the vast Extent of the Country they have, and the Number of People they have in it, and compare it with our own Territory and Force. The *Spaniards*, on one Side of the Continent, possess a Tract of Land, from 37 Degrees of North Latitude, to 53 Degrees of South; that is to say, from *Cape Sebastian*, the most northern Part of *California*, to the Streights of *Magellan*, which makes about two thousand Leagues; and on the other Side of the Continent, from the River of *Plate*, to the Head of the Bay of *Mexico*, their Territories lie directly along the Shore, or immediately behind it. Yet to guard this immense Tract of Ground, they have not above six hundred thousand white People of all Ranks, Sexes, and Ages, and not above three Millions of Subjects of all Colours; and of these it is generally reckoned that a sixth Part are Ecclesiastics, and consequently useless to the State for its Defence; on the other Side we have five or six hundred Leagues Coast, in which we have very near as many white People as the *Spaniards*, and those continually increasing, both by the Number of Persons bred and born in those Countries, and by the Accession of People from other Places, drawn thither by the Hopes of Profit. The *Spanish* Colonies have been always held dangerous and destructive to *Old Spain*, by draining that Country of its People; but this is so far from our Case, that, as I have already observed, our Numbers have not only increased, since we began to make Settlements in *America*, but have really been increased by them, that is, in Consequence of the Navigation and Trade which those Colonies have produced.

At the Time *Spain* discovered the *West Indies*, and for some Time after, she was the greatest maritime Power in *Europe*; but the Maxims she laid down for securing her Dominions in the New World, ruined her naval Strength in the Old; so that instead of great Fleets and numerous Squadrons, she is now reduced to a few Ships of War of no great Strength; and the whole Trade of her *West Indies* is, as to Shipping and the breeding of Sailors, very inconsiderable. On the other Hand, our naval Power took Rise from our Disputes with them, grew in Proportion as theirs declined, and is, at this Day, supported and maintained by what has weakened them, our *American* Settlements, where, comparatively speaking, we carry on as great a Trade, and employ as much Shipping, as in *Europe*.

The *Spanish* Subjects in *America* are, generally speaking, a weak, lazy, and effeminate People; so that whatever good is derived from them to their Mother Country, arises not from their Industry, but from the Labour and Pains of their tributary *Indians* or Negro Slaves. With respect to our People, it is the very Reverse; they are generally active and busy, engaged in different Methods of getting their Living, and very seldom remain fixed to one Spot for their whole Lives; and whenever there is a War in that Part of the World, and tolerable Encouragement given them, they are able to raise considerable Armies, and fit out Numbers of Privateers. The Weakness and Declension of the *Spanish* Power, is visible in all Parts of their Empire; where several great and flourishing Cities, erected by their first Conquerors, are either sunk into Villages, or totally deserted; but is more especially apparent in their Islands, which were formerly the best peopled, and the most flourishing Parts of their Dominions; whereas they are now fallen so low, that it is with Difficulty they keep them, and there is no direct Trade between them and *Old Spain* at all. Our Colonies are so far from being in such a State, that they are daily increasing; and some of them, such as the Islands of *Bermudas*, are rather over than under peopled; and whenever a long Peace, and a wise Administration, with respect to our Settlements, shall take Place, they will become infinitely stronger, and more considerable, than they are at present; and perhaps it will be found both practicable and expedient to make new Settlements, a

thing unthought of by the *Spaniards*, who can scarce keep what they have.

Upon the whole, all these Circumstances considered, I flatter myself it will not be thought the mere Effects of Partiality, in Favour of *Britain*, that have led me into this Notion, but rather a serious and attentive Consideration of the Situation and Circumstances of both Countries, with respect to their *American* Dominions. I am very well aware of one Objection, which is, the general Computations made of the Profits of both Colonies. It may be said, what Proportion does the Trade, or rather the Ballance of Trade, from the *English* Settlements, bear to forty Millions of Pieces of Eight, which in a Time of Peace, it is computed, are annually brought home by the *Spanish Flota* and *Galleons*; and how idle and ridiculous a thing is it, to compare such immense Treasures of Gold and Silver, with our Cargoes of Sugar, Tobacco, naval Stores, and Fish? But, perhaps, when we consider this more attentively, it will neither appear so ridiculous, nor so much to our Disadvantage, as at first Sight it may seem.

We might, in the first Place, dispute the Matter of Fact; for it is certain, that if we examine it nicely, and require all the necessary Proofs, it can never be brought any thing near that Sum; but this we are content to wave, because if the fraudulent, as well as fair, Trade, be taken in, it is not impossible, in Time of Peace, that there may be in Jewels, Gold, Silver, and Goods, the Value of eight Millions of our Money exported in one Year, from *America* into *Old Spain*. But the next Question is, does it remain there? Does this prodigious Wealth belong to the Subjects of *Spain*? Does it circulate through that Nation? All these Questions must be answered in the Negative, and I believe it will be allowed me, That to suppose two Millions Sterling, or, at most, ten Millions of Pieces of Eight, become *Spanish* Property, is over-doing the thing, and allowing them more Riches than really comes to their Share. But admitting the Case to stand thus, the Comparison between what they gain by their Colonies, and we by ours, is far enough from appearing ridiculous.

But it may be objected, that we do not bring home Money or intrinsic Riches, which is all that can add to the real Wealth of a Nation. Yet this very Objection, which seems to set us farther back than ever, confirms our Argument. The Commodities we receive from our Colonies, are the Produce of Labour and Industry; they are returned us for what was the Produce of Labour and Industry here, become, when imported, the Objects of Labour and Industry again; and after supplying our home Consumption, for the Supply of which we must otherwise have sent out ready Money, the Overplus is once more exported, and actually produces ready Money. Now if we reflect, that every Fact, and every Circumstance attending each of these Facts, is strictly true, with respect to ourselves, and that nothing can be replied to it on the Behalf of the *Spaniards*, who have the Goods and Manufactures they send to the *West Indies* carried to them in foreign Vessels, and the Money which pays for them again, exported from *Spain* in foreign Vessels; we shall be satisfied that this is no delusive Scheme of the Advantages derived to *Great Britain* from her Colonies in *America*. No specious Dream of imaginary Treasures, but a clear and strict Demonstration that Labour, Industry, and Commerce, are more valuable Mines than any in *Mexico* or *Peru*.

But all this is not said with any Design to lift us up, or render us proud, lazy, and negligent, but quite the contrary; it is exhibited to the View of the Reader, that he may see the real Value of Industry and Navigation, and why the Author is of Opinion that the *English* are as powerful as any Nation at present in *America*, and may become, out of Comparison, more so, if they are not wanting to themselves. The *French* come certainly next, but with regard only to their Islands; for as to their Plantations on the River of *St. Laurence*, I cannot believe they will ever turn much to their Advantage; and as to their Settlements on the *Mississippi*, I am persuaded they

they will never enrich the present Generation, and a thousand Accidents may fall out that will hinder their turning to the Advantage of Posterity.

Two Points thoroughly laboured, would set us free from all Apprehensions of the *French*, and consequently of any other Nation in *America*. The first is, giving Relief to the Sugar Planters, which either must be done, or, by degrees, that Trade will be lost, at least as to us, and fall, entirely, into the Hands of the *French* and *Dutch*. People do not go into the *West Indies* to work for others, but for themselves; and if it once comes to pass, that they find they cannot do this in our Colonies, they will go where they can; we have certainly no Power, and I think it very doubtful whether we have any Right, to hinder them. To oblige People to work for little or nothing, at so great a Distance from their Country, and in such uncomfortable Climates, supposing it could be done, would be degrading them into white Negroes, which, except to some modern Governors, would not, I presume, appear a thing reasonable to any of the Inhabitants of the *British* Isles. We are free by Birth, by the Law of Nature, and the Law of these Realms, and therefore Freedom is our Inheritance, in the most distant Part of the *British* Dominions, as well as in the County of *Middlesex*; and the Interests of *British* Subjects, wherever they are settled abroad, ought to be the Care of the Government at home, because they are the Interests of the People at home; and therefore I take it for granted, that the Reports of laying new Duties upon Sugar are absolutely false and groundless; and that as soon as the War is over, proper Measures will be taken for removing some of those Duties that have been laid upon this Commodity already, which are just as serviceable to the *French*, as prejudicial to our own Subjects.

The other Point necessary to be considered is, the raising of Silk, which would open a new Branch of Trade, equal in Value, perhaps, to half of what is now gained by our Trade to the *West Indies*. It is very probable that the introducing and establishing this Commodity, may cost us a great deal of Trouble and Expence; but if Silk can be raised in our Colonies, upon any Terms, whatever, it is worth our while to be at all this Trouble and Expence; since if we once have it, we shall, in Time, most certainly have it cheap. It was with vast Difficulty that Silk was introduced into *France*, nor was it done without Trouble and Expence; but it has paid that Nation abundantly for both, and there is no doubt, could we but get it, it would pay us as well. Besides, laying out our Money is nothing with us, we lay it out every Day, not only for ourselves, but other People, and in some Cases lay it out visibly to our Prejudice; the only Question therefore ought to be, when we are laying it out, what we lay it out for? And if, as in this Case, it can be answered, that we lay it out to get more, all is well. The Sugar Trade preserved, and the Silk Trade acquired, I, for my Part, see no more that can be wished, except it be the improving and preserving them, in order to make us an active and wealthy, as well as keep us a free and happy, People.

But if we should neglect these Advantages, I take it for granted that the *French* would grow upon us in the *West Indies*; for if once they become Master of the Sugar Trade, it will be very difficult, if not impossible, to get it from them: Because it is much easier to preserve a flourishing, than to raise a declining, Commerce. If they get the Sugar Trade, and the Island of *St. Domingo*, they will certainly rival us in the Tobacco; and as their Plantations grow rich and populous, the very Overflowings of them may, for any thing I know, make their Settlements, on the River *Mississippi*, turn to a good Account; which, without some such lucky and unforeseen Accident, they never will. Thus I make the efficient Cause of the *French* Greatness, in those Parts, our Negligence, and not their own Power or Abilities, for these can do nothing, unless we give them room to work; then, indeed, they may, and certainly will, prove dangerous; for where they have the Capacity, we know they never want Will to hurt us.

As for the *Dutch*, whatever they may be elsewhere, it is certain they need not be here the Objects of our Apprehensions; for they can neither extend their own Trade to a Degree of provoking our Jealousy, nor is there any just Reason to fear they will ever hurt ours, unless by our ill Management we drive the most Industrious of our Sugar Planters to take Shelter in *Surinam*, which, with all its Inconveniences they would be apt to prefer to nearer and better Countries, under an arbitrary and popish Government. To conclude the Whole, I cannot forbear saying, that I look upon the *Spanish* Empire in *America*, as a decaying Structure which cannot subsist long, unless its Neighbours will charitably contribute to its Support, in which perhaps they may consider their own Interest enough, to be sufficiently compensated for their Labour. I look upon the *English* Acquisitions there, as the Glory of our Crown, and if we manage them prudently, the inexhaustible Treasures of the Nation. The *French*, in my Apprehension, thrive; but not in such a Degree as to be very formidable hitherto. And as for the *Dutch*, I reckon their Trade more beneficial, but less valuable, than that of the *French*, as being more precarious, and depending entirely upon the good Pleasure of *Spain*, which if her Disputes were thoroughly adjusted with *Great Britain*, might prove but a sandy Foundation.

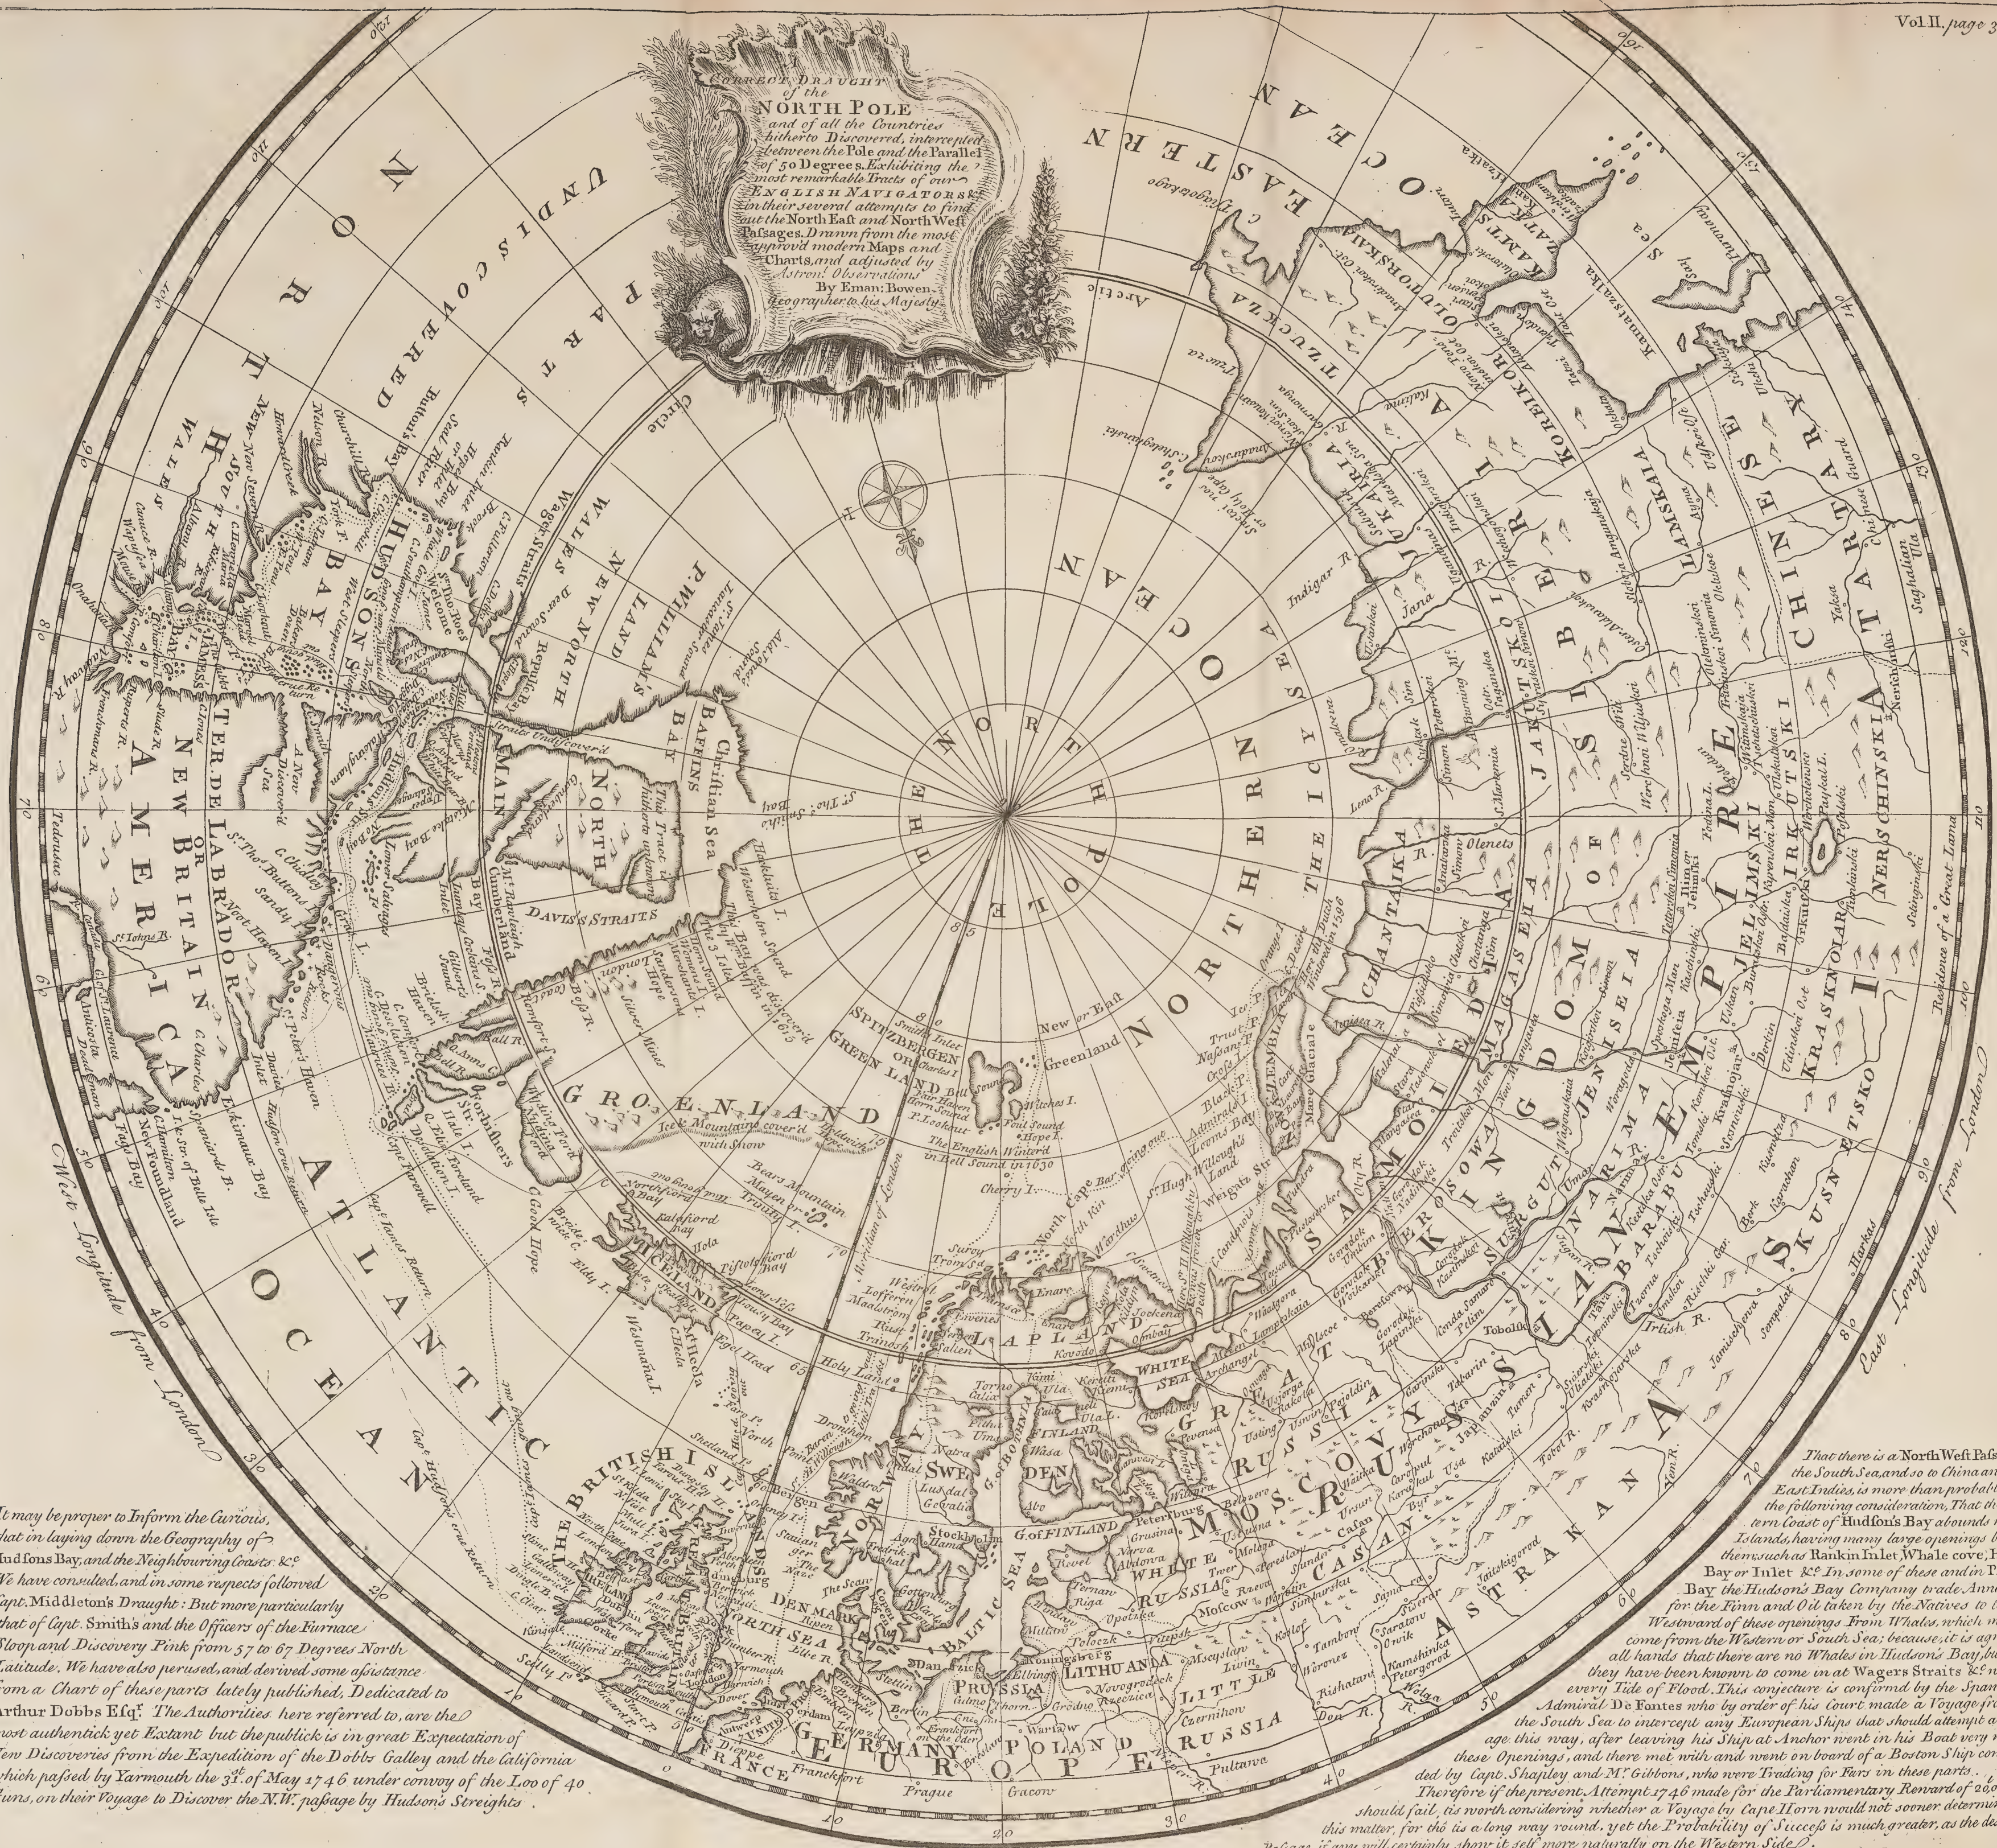

We might easily strengthen these Remarks if it was necessary, by many others of the same Nature, and perhaps it may not be amiss, for the sake of Perspicuity, to give the Reader a few; the rather because they will serve to illustrate this Subject in many other Respects. The Inhabitants of the *Spanish America* have it certainly in their Power to make still great Discoveries, and to extend their Conquests in that Country considerably, if they had Men, or if they had not addicted themselves so much to their Mines, which has been equally the Ruin of their *Indian* Subjects, and of themselves. In the Island of *Hispaniola* it is said to have destroyed Millions, and many more Millions in *Mexico*, which is the true Source of their own Weakness; for had they performed what they pretended in their Applications to the Court of *Rome*, on the Subject of their Discoveries in the *West Indies*, had they studied the Conversion of the People to the Christian Faith, instead of converting them into Slaves, and had they contented themselves with Settlements upon the Coasts, their Power would have been sufficiently great; the Industry of the *Spanish* Nation had been encouraged, and their Navigation extended; whereas, in the present State of Things they are Lords indeed, but precarious Lords only of wide Territories, which are diminishing daily; and at the same time have the Mortification of seeing mighty Acquisitions practicable, if they had but Force sufficient to keep them; but instead of grasping these, they are forced to withdraw their Colonies in the more distant Parts of their Territories, to sustain the main Body of their Dominions, which shew their Government to be in a kind of paralytic State, likely to subsist long, though past all Hopes of Recovery. The *English*, as they have Numbers of People in *America*, so taking Things generally, they are not at all in Danger of wanting Room for their Inhabitants. To the North they have *Nova Scotia* and the Country of *New Britain*; to the South they have *Carolina* and *Georgia*, thinly peopled. A great Part of the Island of *Jamaica*, is still uncultivated, and many of the *Leeward Islands* that we claim are unplanted; so that as our Power is greater than that of the *Spaniards*, by being more connected at present, so it is very easy for us to extend that Power by Degrees, without lessening this necessary, this salutary Connection. The *French* have indeed Room enough, and to spare, in *Canada*; but the more People they send there, the more they lose to their Country; for if that Colony was twice as numerous as it now is, it would be very little, if at all, more advantageous to *France*, unless she considers its being troublesome to us in the Light of an Advantage, and of such an Advantage as may balance the vast Expence she must be at in maintaining and supporting it. Her Islands are already as well peopled as she can wish, unless she knew better how to furnish them with Provisions,

vifions, their Wants often putting them entirely into the Power of their Neighbours, and rendering, not their Trade only, but their very Subfiftance precarious. In *St. Domingo*, indeed, they have more Room, but, perhaps, there may be Reafons why, unlefs they can procure the entire Poffeffion of the Ifland, they may be unwilling to fend more People there, than they have in it already. Upon the River *Missiffippi* they might certainly eftablifh twenty times the Number of People they have there, but this they will be hardly able to do, if they cannot give them better Encouragement than thofe Planters have had they have fent thither already; fo that take it altogether, the *French* have confiderable Difficulties to ftruggle under, but more efpecially thefe three: The firft is, the great Difftance of their Colonies from each other, and their being fituated in fuch a Manner, as to have their Correftpondence eafily interrupted by an Enemy more powerful than themfelves at Sea. The fecond is, the Dangers and Inconveniencies that attend their Navigation, from their refpective Colonies to each other; fo that even in Time of Peace, they are very far from being either fafe, regular, or expeditious. Thirdly, their Want of proper Commodities in their moft Northern, and moft Southern, Colonies, to create, or to continue, fuch a Commerce; which therefore is fcarce to be apprehended, notwithstanding

the Power and Policy of the *French* will be always bent to promote it. As for the *Dutch* and *Danes*, they are at their *Ne Plus ultra*; they may, indeed, increafe their Traffic occasionally, and by Intervals; but it is impoffible they fhould extend their Dominions, or, confequently, that their future Power, in thofe Parts, fhould ever become much greater than we now fee it. And though it may enrich themfelves, it can give their Neighbours no Umbrage.

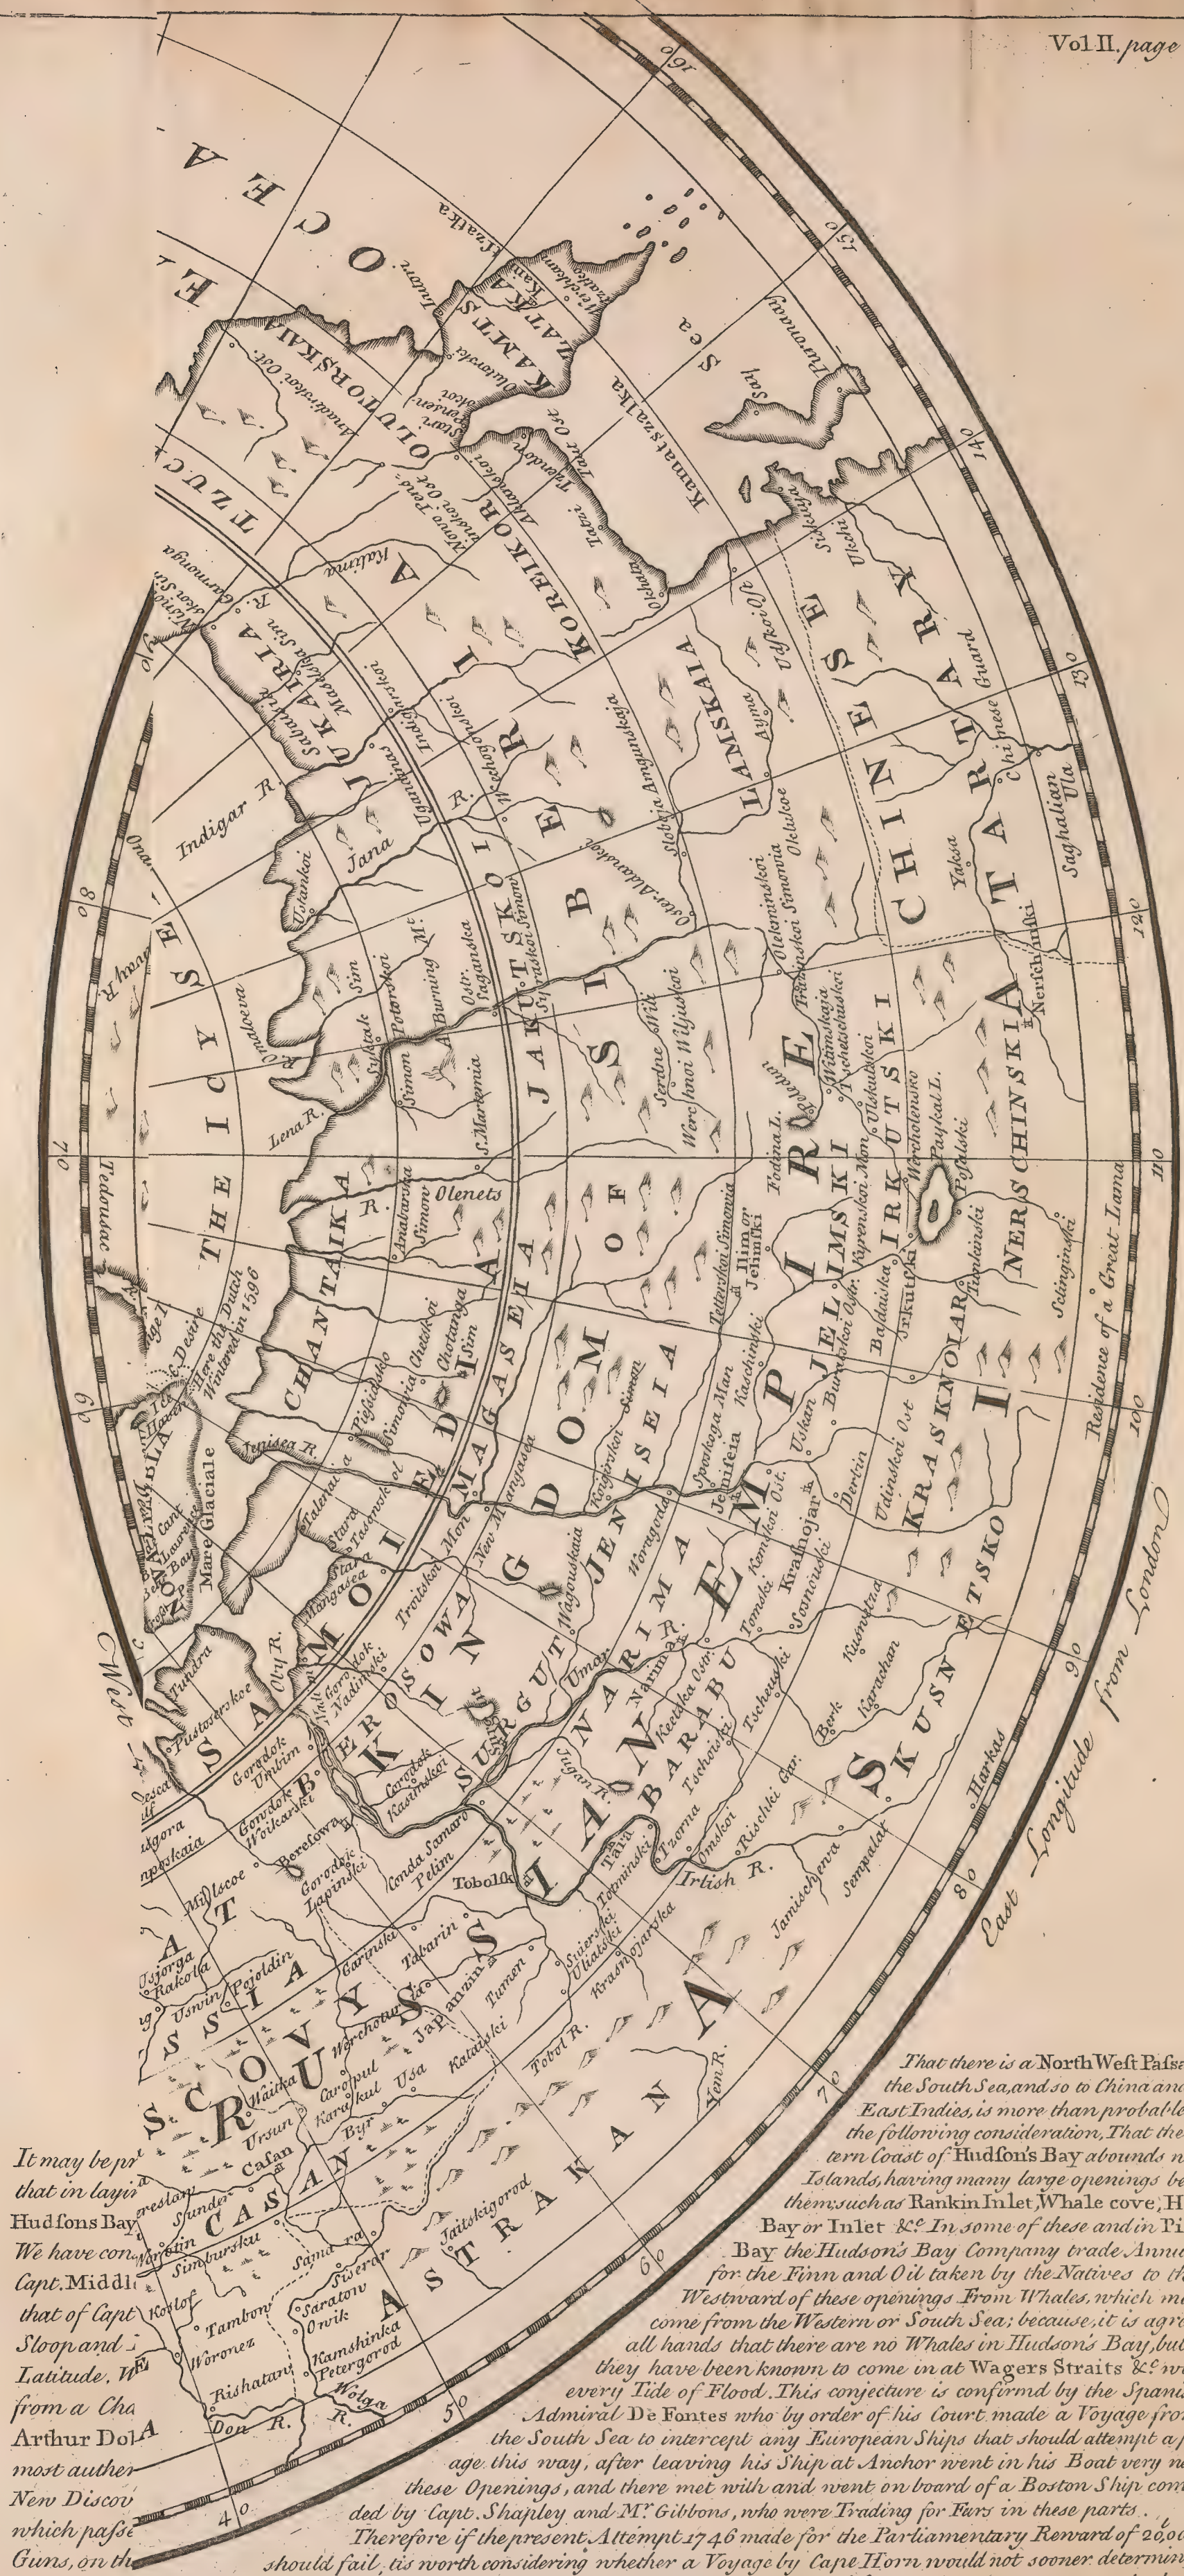

Thus in parting with the Subject, I have endeavoured to give the Reader a Proftpect of the future Condition, as in the foregoing Sections I have endeavoured to exhibit the prefent State, of this great Country, the Difcovery of which gave Chriftians an Opportunity of propagating their Religion, which they miferably abufed. If any thing that is faid herein could contribute to the redreffing this and other Evils, and infpire Men with free and generous Sentiments of promoting Virtue, Induftry, and Peace, it will fully anfwer the Author's Intention, and, which is of far greater Confequence, tend to the Welfare and Benefit of the Human Species; which it is our Intereft, our Duty, and our Glory, to promote, the only good Thing we can defire here, or hope to be rewarded for hereafter.

It may be proper to Inform the Curious, that in laying down the Geography of Hudson's Bay, and the Neighbouring Coasts, &c. We have consulted, and in some respects followed Capt. Middleton's Draught: But more particularly that of Capt. Smith's and the Officers of the Furnace Sloop and Discovery Pink from 57 to 67 Degrees North Latitude. We have also perused, and derived some assistance from a Chart of these parts lately published, Dedicated to Arthur Dobbs Esq. The Authorities here referred to, are the most authentick yet Extant but the publick is in great Expectation of New Discoveries from the Expedition of the Dobbs Galley and the California which passed by Yarmouth the 31st of May 1746 under convoy of the Loo of 40 Guns, on their Voyage to Discover the N.W. passage by Hudson's Straights.

That there is a North West Passage to the South Sea, and so to China and the East Indies, is more than probable from the following consideration, That the Western Coast of Hudson's Bay abounds with Islands, having many large openings between them such as Rankin Inlet, Whale cove, Hopes Bay or Inlet &c. In some of these and in Piftol Bay the Hudson's Bay Company trade Annually for the Finn and Oil taken by the Natives to the Westward of these openings from Whales, which must come from the Western or South Sea; because, it is agreed on all hands that there are no Whales in Hudson's Bay, but that they have been known to come in at Wagers Straits &c. with every Tide of Flood. This conjecture is confirmed by the Spanish Admiral De Fontes who by order of his Court made a Voyage from the South Sea to intercept any European Ships that should attempt a passage this way, after leaving his Ship at Anchor in his Boat very near these Openings, and there met with and went on board of a Boston Ship commanded by Capt. Shapley and Mr. Gibbons, who were Trading for Furs in these parts. Therefore if the present Attempt 1746 made for the Parliamentary Reward of 20,000 should fail, it is worth considering whether a Voyage by Cape Horn would not sooner determine this matter, for tho' it is a long way round, yet the Probability of Success is much greater, as the desirable Passage, if any, will certainly show it self more naturally on the Western Side.

It may be possible that in laying out the Hudson's Bay Company's territory, we have considered that of Capt. Middleton's Sloop and Latitude, which passed from a Chart of Arthur Dolan's most authentic New Discoveries, which passed Guns, on the

That there is a North West Passage to the South Sea, and so to China and the East Indies, is more than probable from the following consideration, That the Western Coast of Hudson's Bay abounds with Islands, having many large openings between them, such as Rankin Inlet, Whale cove, Hopes Bay or Inlet &c. In some of these and in Pistol Bay the Hudson's Bay Company trade Annually for the Furs and Oil taken by the Natives to the Westward of these openings. From Whales, which must come from the Western or South Sea; because, it is agreed on all hands that there are no Whales in Hudson's Bay, but that they have been known to come in at Wagers Straits &c. with every Tide of Flood. This conjecture is confirmed by the Spanish Admiral De Fontes who by order of his Court, made a Voyage from the South Sea to intercept any European Ships that should attempt a passage this way, after leaving his Ship at Anchor went in his Boat very near these Openings, and there met with and went on board of a Boston Ship commanded by Capt. Shapley and Mr. Gibbons, who were Trading for Furs in these parts. Therefore if the present Attempt 1746 made for the Parliamentary Reward of 20,000 should fail, 'tis worth considering whether a Voyage by Cape Horn would not sooner determine this matter, for tho' tis a long way round, yet the Probability of Success is much greater, as the desirable Passage, if any, will certainly show it self more naturally on the Western Side.

VOYAGES and TRAVELS.

B O O K II.

VOYAGES and DISCOVERIES towards the NORTH, and through most of the Countries of *Europe*.

C H A P. I.

The DISCOVERIES made directly towards the NORTH, and the Attempts hitherto made for finding the NORTH-EAST and NORTH-WEST Passages.

S E C T I O N I.

The HISTORY of the Countries lying round the NORTH POLE; their Climate, Soil, and Produce; together with an Account of the Customs, Manners, and Trade of their Inhabitants.

1. A succinct Introduction to the History of the northern Parts of the World, shewing the Reason of considering them in this Part of the Work, rather than in any other.
2. The first Discovery, Situation, and Plantation of Groenland, or old Greenland, and the Accidents by which the Knowledge of that Country was afterwards lost.
3. The several Voyages for the Recovery of that Country, from the Reverend Mr. John Egede, a Danish Missionary, who resided there fifteen Years.
4. The Soil, Produce, Plants, &c. in this Country, and the Probability of its being anciently much more fruitful than at present.
5. The Climate, Seasons, Length of the Days, Fogs, Mountains of Ice, &c. in this Country, and in the Seas adjacent.
6. Of the various Animals in Groenland, and of the Manner in which the Inhabitants hunt the Rain-Deer in the Inland Part of the Country.
7. The different Methods practised by the Inhabitants in Fishing, particularly the various Inventions made use of for catching Seals, and other amphibious Animals.
8. Their Ingenuity in making Hooks, Lines, and other fishing Tackle; their Method of constructing Boats of several Sorts, and their surprizing Manner of navigating them.
9. Their Houses in which they live in Winter; their Beds, Lamps, Kettles, and other Furniture; their Tents in which they live in Summer, and their Manner of transporting them.
10. Their Customs, Manner of Living, Virtues, Vices, Civility to Strangers, and whatever else concerns the Behaviour of the Natives.
11. Their Cloathing, Neatness, and Conveniency of it; Difference in the Habits of Men and Women, and the Changes wrought in this Respect, by the settling a Danish Colony in that Country.
12. The Commodities and Commerce of Groenland; the Religion of the Inhabitants; their Notions of Astronomy, and surprizing Passion for Poetry.
13. Remarks upon the foregoing Particulars; and the Reasons which induced the English, Dutch, and

other Nations, to make Voyages for Discovery in these northern Parts. '14. The Discovery of Spitzbergen, or Greenland, more properly New Greenland; and a short Account of the Dispute between the English and Dutch, about that Discovery. 15. A Description of this Country, its Islands, Bays, Sounds, Harbours, and the usual Places where the English and Dutch fix themselves ashore, during the Whale Fishing. 16. The Soil, Climate, and Seasons, in this Country; with some curious Remarks on the Colour of the Sea Water. 17. Of the Animals that are found here, particularly Deer, Bears, Foxes, &c. with the Method of dressing their Skins upon the Spot. 18. A distinct Account of the Whale; the Size, Strength, and Manner of Swimming of that Creature; and the vast Quantities of Oil extracted from the Fat, or Blubber. 19. An accurate Account of the Manner of catching the Whale, cutting up, and making Train Oil, and Bone, from it, as practised in this Fishery. 20. Of the other valuable Fish in these Seas, such as the Fin-fish, Morje, Horse-whales, Dragon-fish, White-fish, Sword-fish, Sea-unicorn, Hay-fish, and the Profits derived from them. 21. Of the Countries adjacent to Spitzbergen, or Greenland, such as Mayen's Island, Nova Zembla, &c. the Reasons why they were formerly frequented, and have been since deserted. 22. Of the Land of Yedzo, or Jedzo, subject to the Emperor of Japon; supposed to join to, or to be divided by a narrow Streight from, the North Continent, either of Greenland or Nova Zembla. 23. Of the undiscovered Parts of the World, from the Borders of the Land of Yedzo, to the Frontiers of North America towards Hudson's Bay. 24. Of the Advantages that might attend the farther and more complete Knowledge of these Countries, towards the perfect understanding of the terrestrial Globe, and the mutual Relation between its Parts. 25. A circumstantial Account of the present State of the Whale-fishery, and a Computation, as near as may be, of the Share of several Nations in the annual Produce of that Fishery.

HERE is hardly a general Rule that admits of fewer Exceptions than this; That no Sort of Knowledge is burthenome, or appears, upon Reflection, not worth obtaining. If there were any such dark and useless Spot in the noble Science of Cosmography, or general Knowledge of this Globe, one might expect it should lie in this very Quarter, upon which we are now entering; I mean the History of these Northern Countries lying round the Pole, of which, hitherto, we cannot, with any Certainty, say whether they belong to this or that Quarter of the World, or whether they do not form a fifth Part distinct; that is to say, divided from Europe, Asia, Africa, and America; and, if so, there may be, very probably, a sixth Part lying in the like Manner round the South Pole.

But Experience has taught us, that the Knowledge of these dark and dreary Regions is very far from being useless and unprofitable, and still farther from being dry or unentertaining. We have thrown them into a Section by themselves, for the Reason before assigned; because there is no Certainty of these Countries being joined to any Part of the known World, and we have chosen to place them at the Head of this Book, because all we know of them is from their being visited by Europeans.

It is for the same Reason that we begin with *Groenland*, which, for any thing that appears from History, was the first of them that was discovered. The Reader is to observe, that though *Groenland* and *Greenland* be the same Words, the former being only the *Danish* Way of pronouncing and writing the latter, yet they are now made use of to denote two different Countries, sometimes also distinguished by the Names of *Old* and *New Greenland*; for want of attending to which, many modern Authors have fallen into great Mistakes and Absurdities. We shall begin with the first of these, and after giving the best Account of it we can, we shall then proceed to the latter.

2. *Groenland* lies but forty Miles to the West off of *Iceland*, beginning from the 59th Degree 50 Minutes of North Latitude. The Eastern Coast extends itself to the North, as far, probably, as *Spitzbergen*, or *Greenland*, between 78 and 80 Degrees, which is thought to be an Island separated from the Continent of *Groenland*. The Western Shore is discovered as far as 71, or 72 Degrees. Whether it be a large Island, or borders upon Countries to the North, is not yet found out. There seems great Reason to believe it is contiguous to *America* on the North-west Side, because there we meet with the Bay or Inlet, which in the Sea Charts is called *Davis's Streight*, from that famous *Englishman*, who in the Year 1585, was the first Discoverer of it, and is yearly frequented by Ships of different Nations, on Account of the Whale Fishery, but no body, as yet, has been able to find out the bottom of

it. And according to the Notice we have endeavoured to gather from those *Groenlanders*, who live farthest to the North, there is either but a very narrow Passage between *America* and *Groenland*, or, as is most likely, they are quite contiguous; and one is the more inclined to believe this, because the farther you go Northwards in the said Streight, the lower is the Land, contrary to what we observe where it borders on the Sea or main Ocean, where it never wants lofty Promontories.

It is said to have been first discovered by a *Norwegian*, named *Eric Rotcop*, who, having committed a Murder in *Iceland*, resolved to fly to some strange Country. He landed here, and because of its Greenness, called it *Groenland*; he sent his Son to *Olaus Trugger*, King of *Norway*, to get his Pardon, which was obtained. Upon this many Gentlemen ventured to plant there, settled Christianity, and built two Towns, called *Garde* and *Albe*. The King sent thither a Viceroy, who had his Seat at *Albe*, which was also made a Bishop's See, and had a Cathedral. They write also of a Monastery, dedicated to *St. Thomas*, which they pretended was built of Pumice-Stone, and that it had a Spring so hot, as to boil their Meat, and being conveyed into the Rooms by Pipes, warmed them as well as Stoves: But this seems fabulous. This small Colony failed in 1349, whether by a Disease they call the Black Plague, or the Barbarity of the Natives, is not certain. In 1406 the Bishop of *Drontheim* sent one *Andreas* to bring an Account of the State of Christianity there, but he never returned.

The fabulous Accounts after this Period are not worth preserving, because they contain nothing certain, useful, or entertaining; as to Sir *Martin Frobisher's* Voyages, we shall have Occasion to mention them in another Place. It is sufficient for our Purpose to take Notice here, that his Discoveries upon the Coast of *Groenland* put the *Danes* upon attempting something on that Side also, but with very little Success; what they have since done, from that Time to this, is much more within our Power, and worthy of the Reader's Notice; which therefore we shall give him in the Words of the Reverend Mr. *John Egede*, a *Danish* Missionary, who has written a History of this Country from his own Knowledge, and in his own Language, wherein, as to that Matter, he gives us the following, curious, and authentic Account.

3. "After the Expeditions of *Frederick II. Christian IV.* his Successor, with great Cost, ordered four different Expeditions for this Discovery. The first was undertaken under the Command of *Godske Lindenow*, with three Ships. And, as the History tells, *Lindenow*, with his Ship, arrived upon the East Coast of *Groenland* (which I can hardly believe) and found none but wild, uncivilized, People there, like those *Frobisher* is said first to have met with. He staid there three Days, during which Time the wild *Groenlanders* came to trade with him, changing Furs, Skins, " and

“ and precious Stones, against all Kinds of small Iron-ware; such as Knives, Scissars, Needles, common Looking-Glasses, and other such Trifles. When he set sail from thence, there were two *Groenlanders* remained in the Ship, whom he carried off, and brought them home with him. These, as they endeavoured to get away from him, and sometimes would have jumped into the Sea, they were obliged to tie and secure, which, when their Countrymen observed, who flocked together on the Shore, they made an hideous Out-cry and Howling, flung Stones, and shot their Arrows at the Sailors; upon which those from the Ship fired a Gun, which frightened and dispersed them, and so the Ship left them. The two other Ships that set sail in Company, and under the Command, of *Lindenow*, after they had doubled *Cape Farewell*, steered directly for the Streight of *Davis*, in which Navigation they discovered many fine Harbours, delightful green Meadow Lands, but all the Inhabitants along the Coasts wild and savage. It is pretended also, that they, in some Places, found Stones which contained some Silver Ore, which they took along with them; of which one hundred Pound yielded twenty-six Ounces of Silver. These two Ships also brought four Savages home with them to *Copenhagen*.

“ The second Expedition was made by order of the same King, in the Year 1606, with five Ships, under the Conduct of the afore-mentioned Admiral *Lindenow*, carrying along with him three of the Savages (one of them dying in the Voyage) which they had brought off the Year before from *Groenland*. But this Time he directed his Course to the Westward of *Cape Farewell*, standing for the Streight of *Davis*, where, coasting along, he took the Survey of several Places, and then returned home again. The third and last Expedition of this glorious King, was only of two Ships, commanded by Captain *Carsten Richards*, an *Holstenian* by Birth. He espied the Land, and its high and craggy Rocks afar off, but could not come near it on Account of the Ice, and so returned home. The fourth Expedition of King *Christian IV.* under the Conduct of Captain *Jens Munck*, in the Year 1616, was not made for the discovering of *Groenland*, but to find out a Passage between *Groenland* and *America* to *China*, the Misfortunes of which Expedition are related by the said Commander.

“ There were besides these four Expeditions at the King's Cost, a fifth, undertaken in the same King's Reign, by a Company settled in *Copenhagen*, in the Year 1636; of which Company, the President was the Lord High Chancellor *Christian Früs*. Two Ships, fitted out by this Company, directed their Course for the Westward of *Groenland*, fell in with the Streight of *Davis*, where they traded for a while with the Savages; but this was not the main Design of the Commander, who was acquainted with a Coast whose Sand had the Colour and Weight of Gold, which he accordingly did not miss, and filled both their Ships with the same. After their Return to *Copenhagen*, the Goldsmiths were ordered to make a Trial whether this Sand would yield any Gold or no; who not being skilful enough to make such a Trial, condemned it to be all thrown over-board; which was done by Order of the High Chancellor, President of the Company. Some Part of the said Sand was yet kept out of Curiosity, out of which an Artificer, who afterwards came to *Copenhagen*, did extract a good deal of pure Gold. The honest and well-meaning Commander who went upon this Adventure was turned out of Favour, and soon afterwards died of Grief, whereby not only the Treasure they had brought home, but also the Knowledge of the Place where it was to be found was entirely lost, as he kept this absolutely a Secret to himself.

“ In the Year 1654, during the Reign of King *Frederick III.* a noble and wealthy Adventurer, *Henry Muller*, fitted out a Ship for *Groenland*, under the Command of *David de Nelles*, who arrived safe in that Country, and brought from thence three Women, whose Names were *Kunelick*, *Kabelau*, and *Sigokou*,

“ who, according to the Opinion of Bishop *Torlais*, who had perused the said Captain's Journal, were taken in the Neighbourhood of *Herjolfsnes*, on the eastern Shore; but which I cannot believe. My Opinion is, they were brought from the western Shore near *Baal's* River, as some of the Inhabitants who are still living had in fresh Remembrance, telling me their Names, as they are laid down in the afore-mentioned Journal. The last Adventurer that was sent upon the Discovery of *Groenland*, according to *Torfaeus* in his *History of Groenland*, was Capt. *Otto Oxelson*, in the Year 1670, in the Reign of *Christian V.* of glorious Memory; but what Success this Adventurer met with he leaves us to guess; nevertheless we find, in a Manuscript Description of *Groenland*, written by *Arngrim Vidalen*, That his said Majesty did invite, and with great Privileges encourage, Mr. *George Tormuntzen*, Counsellor of Commerce at *Bergen*, to fit out Ships for the said Discovery; whereupon the said Counsellor, not only got ready Shipping well-stored for such an Expedition, but also got together a Number of Passengers, who resolved to go and settle in those Parts; whom he provided with all Things necessary for that Purpose, both Provision and Ammunition, as well as Houses made of Timber, ready to be erected in that Country; but this great Design miscarried, the Ship being taken by the *French*, and carried into *Dunkirk*.

“ Thus for a long while it seemed that all Thought of *Groenland* was laid aside, until the Year 1721, when, after many well-meant Invitations and Projects proposed by me to the *Groenland* Company at *Bergen* in *Norway*, approved and authorized by his late Majesty *Frederick IV.* of glorious Memory, the Company thereupon resolved, not only to send Ships, but also to settle a Colony in *Greenland* in the 64th Degree; when I went over with my whole Family, and remained there fifteen Years. During my Stay, I endeavoured to get all the Intelligence that could be, both by Sea and Land, of the present State of the Country, and did not lose my Labour; for I found some Places that formerly were inhabited by the *Norwegians* on the western Shore.

“ But whereas my main Drift and Endeavour has been all along to discover the eastern District of *Groenland*, which always was reckoned the best of our ancient Colonies; accordingly I received a Letter from the above-mentioned *Groenland* Company at *Bergen*, in the Year 1723, in which I was told, that it was his Majesty's Pleasure, That the East District might likewise be visited, and discovered; which, the better to effect, I took the Resolution to make this Voyage in person, and accordingly I coasted it southwards as far as the *States Promontory*, looking out for the Streight of *Frobisher*, which would have been my shortest way according to those Charts, which lay the said Streight down in this Place; but such a Streight I could not find. Now, as it grew too late in the Year for me to proceed further, the Month of *September* being near at an End, when the Winter Season begun in those Parts, accompanied with dreadful Storms, I was obliged to return. In the Year 1724 the Directors of the said *Bergen* Company, according to his Majesty's Good-will and Pleasure, fitted out a Ship to attempt a Landing on the eastern Shore, as had been formerly practised on that Coast which lies opposite to *Iceland*; but the surprizing Quantities of Ice which barricaded the Coast made the Enterprize abortive and quite miscarry, as many others had done, as there was no Convenience for Ships to approach this Shore.

“ The same King, in the Year 1728, resolved, besides other very considerable Expences, to have Horses transported to this Colony, in hopes that, with their Help, they might travel by Land to this eastern District: But nothing was more impossible than this Project, on Account of the impassable, high and craggy Mountains, perpetually covered with Ice and Snows, which never thaw. Another new Attempt by Sea was, by Order of the same King, made in the Year 1729, by Lieutenant *Richard*, who with his

“ Ship

“ Ship passed the Winter near the new *Danish* Colony in
 “ *Groenland*; and in his Voyage back to *Denmark* made
 “ all the Endeavours he could, to come at the afore-
 “ said Shore opposite to *Iceland*, but to no Purpose, be-
 “ ing herein disappointed like the rest before him.

“ All these Difficulties and continual Disappointments
 “ have made most People lose all Hopes of succeeding in
 “ this Attempt; nevertheless I flatter myself to have hit
 “ luckily on an Expedient, which to me seems not im-
 “ practicable, though hitherto not tried, or at least but
 “ slightly executed, viz. To endeavour to leave the Land,
 “ from the *States Promontory*, (or as we call it) *Cape Prince*
 “ *Christian*, northwards. The Information I have had
 “ from some *Groenlanders*, who in their Boats have coasted
 “ a great Part of the East-side, confirms me in my Opi-
 “ nion; for although an incredible Quantity of driven
 “ Ice, yearly comes from *Spitzbergen*, or *New Greenland*,
 “ along this Coast, and passes by the *States Promontory*,
 “ which hinders the approaching of Ships, as far as the
 “ Ice stretches, where about the best Part of the *Nor-*
 “ *wegian* Colonies were settled, yet there have been found
 “ Breaks, and open Sea, near the Shore, through
 “ which Boats and small Vessels might pass accord-
 “ ing to the Relation of the *Groenlanders*, as well
 “ as agreeable to my own Experience, the Current
 “ that comes out of the Bays and Inlets, always
 “ running along the Shore South-westwards, hinders the
 “ Ice from adhering to the Land, and keeps it a
 “ Distance from the Shore. By which Means the *Groen-*
 “ *landers* at certain Times, without any Hindrance, have
 “ passed and re-passed part of this Coast in their *Cone-*
 “ *boats* (so they call their large Boats) though they
 “ have not been so far as where the old *Norway* Colonies
 “ had their Settlements, of which, no doubt, there are
 “ still some Ruins to be seen on the Eastern Shore.

“ Furthermore: I have been credibly informed by
 “ *Dutch* Seamen that frequent those Seas, That several
 “ of their Ships have at times found the East-side of
 “ *Groenland* cleared of the Ice as far as the 62d Degree;
 “ and they had tarried some time among the Out-rocks
 “ on that Coast, where they carried on a profitable Trade
 “ with the *Savages*; and I myself, in my Return from
 “ *Groenland* homewards, in the Year 1736, found it to
 “ be so when we passed the *States Promontory* and *Cape*
 “ *Farewell*, and stood in for the Shore, where at that
 “ time there was no Ice to be seen, which at other Times
 “ is very uncommon; but as this happens so seldom, it
 “ is very uncertain, and unsafe for any Ship to venture
 “ so far up under the Eastern Shore.

“ But, as I observed a little before, it is more safe and
 “ practicable to coast it from the Promontory along the
 “ Shore in small Vessels, especially if there was a Lodge
 “ erected in the Latitude of between 60 and 61 Degrees;
 “ and it would be still more convenient, if there could
 “ be Ways and Means found likewise to place a Lodge
 “ on the eastern Shore, in the same Latitude; for accord-
 “ ing to the Account the Ancients have left us of *Groen-*
 “ *land*, the Distance of Ground that lies uncultivated,
 “ between the West and East-side is but twelve *Norway*
 “ Miles, by Water; or, according to a later Compu-
 “ tation, it is a Journey of six Days in a Boat; and as
 “ the Ruins of old Habitations, which I have discovered
 “ between 60 and 61 Degrees, are without doubt in
 “ the most southerly Part of the West-side, it of Necess-
 “ sity follows that the Distance cannot be very great from
 “ thence to the most southerly Part of the eastern Side.
 “ Now, if it should be found practicable at certain
 “ Times to pass along the Shore with Boats or small
 “ Ships to the East-side, to the Latitude of 63 and 64
 “ Degrees, little Lodges might be made, though larger
 “ Ships could not yearly visit one of them, but only
 “ touch at the most southern ones, I am also persuaded
 “ that the Thing is possible, if it should please God in
 “ his Mercy to forward this Affair, Colonies might be
 “ established here, which without great Trouble might
 “ be supplied yearly with all Necessaries.

4. As to the Soil, we are informed by ancient Histo-
 ries that the *Groenland* Colonies bred Cattle, which afford-
 ed Milk, Butter, and Cheese, in such abundance, that a

great Quantity was brought over to *Norway*, and, for
 its particular Goodness, was set apart for the King's
 Kitchen, which was practised until the Reign of Queen
Margaret. We also read that some Parts of the Country
 yielded the choicest Wheat; and in the Valleys the Oak
 Trees produced Acorns of the Bigness of an Apple, very
 good to eat. The Woods afforded plenty of Game, such
 as Rain-Deers, &c. The Rivers, Bays, and Seas, fur-
 nished an infinite Number of Fishes, Seals, Morfes, and
 Whales, of which the Inhabitants made a considerable
 Trade. And though the Country, at present, cannot
 boast of the same Plenty, as it lies destitute and unculti-
 vated, yet, no doubt, but the old dwelling Places, for-
 merly inhabited and manured by the ancient *Norway* Co-
 lonies, might recover their former Fertility, if again
 peopled, as about these Places there grows fine Grass,
 especially from the Latitude of 60 to 65 Degrees.

In the great Bay, which at present is called the Bay
 of *Good Hope* (from the *Danish* Colony settled near the
 Entrance of this Inlet) there are on both Sides of the Co-
 lony many good Pieces of Meadow Ground, for the
 grazing of Numbers of Cattle; besides plenty of Pro-
 visions, which the Sea, as well as the Land, yields.
 Woods of any Consideration are rarely to be met with,
 yet there are Underwoods and Shrubs in great Quantity,
 especially of Birch, Elm, and Willows, which afford suf-
 ficient Fuel for the Use of the Inhabitants. The largest
 Wood is in the Latitude of 60 and 61 Degrees, where
 the Birch Trees are two or three Fathom high, some-
 what thicker than a Man's Arm. Small Juniper Trees
 grow here in abundance; the Berries of which are of
 the Bigness of Grey-pease.

The Herb called *Quaun*, which is our Angelica, is
 very common, as well as wild Rosemary, which has the
 Taste and Smell of Turpentine, from which is extract-
 ed a fine Oil and Spirit, of great Use in Medicine. That
 precious Herb Scurvy-grass, the most excellent Remedy
 for the Cure of the Distemper which gives its Name,
 grows every where on the Sea-side, and has not so bitter
 a Taste as in softer Climates. The Country also produces
 a Grass with yellow Flowers, the Roots of which smell
 in the Spring like Roses, and are very wholesome. In
 the Bays and Inlets you have wild Time, on the Side
 of the Mountains, which, after Sun-set, yields a fra-
 grant Smell. Here also you meet with the Herb Tor-
 mentil, and a great many other Herbs. Their most
 common Berries, are those called Blew-Berries, Tittle-
 Berries, and Bramble-Berries; Mult-Berries, which are
 common in *Norway*, do not come here to any Perfection,
 on Account of the Fogs that hang upon the Island at
 the Time these Plants bud.

This Country yields the pleasantest Prospect about the
 Latitude 60 to 64 Degrees, and seems fit to be manured
 for the Produce of all Sorts of Grain, and there is to this
 Day Marks of arable Land to be observed. The Au-
 thor, himself, made a Tryal of sowing Barley in the Bay
 joining to their new Colony, which sprung up so fast,
 that it stood in its full Ear towards the latter End of July;
 but did not ripen on Account of the Night Frosts which
 nipped it, and hindered its Growth. But as this Grain
 was brought over from *Bergen* in *Norway*, no doubt it
 wanted a longer Summer, and more Heat to ripen.
 Turnips and Cole are very good here, and of a sweet
 Taste, especially the Turnips, which are very large. It is
 to be observed, that all that has been said of the Fruitful-
 ness of the *Groenland* Soil, is to be understood of the La-
 titude from 60 Degrees to 65 Degrees, and differs accord-
 ing to the different Degrees of Latitude; for in the most
 Northern Parts, you find neither Herbs nor Plants; so
 that the Inhabitants cannot gather Grass enough to put in
 their Shoes to keep their Feet warm, but are obliged to
 buy it from the Southern Parts.

5. The Natives of *Groenland* have no Reason to com-
 plain of Storms or Rain, which seldom trouble them, es-
 pecially in the Bay of *Disco*, in the 69th Degree of Lati-
 tude, where they commonly have clear and settled Wea-
 ther during the whole Summer Season. But when foul
 Weather falls in, it rages with an incredible Violence,
 chiefly when the Wind comes about Southerly, or South-
 west,

west, and the Storm is succeeded by fair Weather, as soon as the Wind shifts to the West and North. The Country would be exceeding pleasant and healthful in Summer-time, if it was not for the heavy Fogs, especially near the Sea Coast, for it is as warm here as any where, when the Air is clear, which happens when the Wind blows Easterly; and sometimes it is so hot, that the Sea-Water, which, after the Ebbing, has remained in the hollow Places in the Rocks, before Night, by the bare Heat of the Sun, is coagulated into a fine white Salt.

Sometimes for three Months together they have fair settled Weather, and warm sun-shiny Days, without any Rain; the Length of the Summer is, from the latter End of *May*, to the Midst of *September*; all the remaining Part of the Year is Winter, which is tolerable in the Latitude of 64 Degrees; but to the Northward of 68 Degrees, and even there, the Cold is so excessive, that the most spirituous Liquors, as *French Brandy*, will freeze near the Fire-side. At the End of *August* the Sea is all covered with Ice, which does not thaw before *April* or *May*, and sometimes not till the latter End of *June*. It is remarkable, that on the Western Coasts of different Countries, lying in one and the same Latitude, it is much colder than on the Eastern, as in some Parts of *Groenland* and *Norway*. And though *Groenland* is much colder than *Norway*, yet the Snow never lies so high, especially in the Bays, where it is seldom above half a Yard higher than the Ground; whereas the Inland Parts, and the Mountains, are perpetually covered with Ice and Snow, which never melt, and not a Spot is bare, but near the Shore, and in the Bays; where, in the Summer, you are delighted with a charming Verdure, caused by the Heat of the Sun; reverberated from Side to Side, and concentrated in those lower Parts of the Valleys, surrounded by high Rocks and Mountains, for many Hours together, without Intermision. But at Sun-set the Air is changed at once, and the cold Ice Mountains make you soon feel the Nearness of their Neighbourhood, and oblige you to put on your Furs.

Besides the Ice that covers the whole Face of the Land, the Sea is almost choaked with it: Some large and flat Fields of Ice, and some prodigious Mountains of an astonishing Bigness, lying as deep under Water as they soar high in the Air. These are Pieces of the Ice Mountains on Land, which lie near the Sea, and, bursting, tumble down into the Sea, and are carried off. They represent to the Beholders, afar off, many odd and strange Figures, some of Churches, Castles with Spires and Turrets; others you would take to be Ships under sail, and many have been deluded by them, thinking they were real Ships, and going to board them. Nor do their Figures and Shape alone surprize, but also their Diversity of Colours pleases the Sight; for some are like white Chrystal, others as blue as Sapphires, and others again green as Emeralds. One would attribute the Cause of these Colours to Metals or Minerals, in Places where this Ice was formed, or of Waters of which it was coagulated; but Experience teaches, that the blue Ice is the Concretion of fresh Water, which at first is white, and at length hardens and turns blue. But the greenish Colour comes from Salt-water. For it is observed, that if you put the blue Ice near the Fire, and let it melt, and afterwards remove it to a colder Place to freeze again, it does not recover its former blue Colour, but becomes white; from whence it seems that the volatile Sulphur which the Ice had attracted from the Air, by its Resolution into Water exhales and vanishes.

Though the Summer-season is very hot in *Groenland*, it seldom causes any Thunder and Lightening; the Reason of which may be the Coldness of the Night, which allays the Heat of the Day, and causes the sulphurous Exhalations to fall again, with the heavy Dew, to the Ground; as for the ordinary Meteors, frequently seen in other Countries, they are common in *Groenland*, as the Rainbow, flying and shooting Stars, and the like; but what is more peculiar to the Climate, is the Northern Light, or *Aurora Borealis*, which, in the Spring of the Year, about the Time of the new Moon, darts Streams of Light all

over the Sky, as quick as Lightening, especially if it be a clear Night, with such a Brightness, that you may read by it as by Day-light. The Air is not at all unhealthy, for if you except the Scurvy, and Distempers in the Breast, they know nothing here of many other Diseases; and these pectoral Infirmities are the Effects of that nasty foggish Weather, which this Country is subject to; which we may impute to the vast Quantities of Ice that cover the Land, and drive in the Sea, from the Beginning of *April*, to the End of *July*, which is therefore called the foggy Season, and from that Time the Fog decreases.

But as in the Summer-time they are troubled with the Fog, so in the Winter-season they are likewise plagued with the Vapour, called Frost-smoak, which, when the Cold is excessive, rises out of the Sea, as the Smoak out of a Chimney, and is as thick as the thickest Mist, especially in Bays where there is any Opening in the Ice; 'tis very remarkable, that this Frost Damp, or Smoak, if you come near it, will finge the very Skin off your Face and Hands; but when you are in it, you find no such piercing or finging Sharpness, but warm and soft, only it leaves a white Frost upon your Hair and Cloaths. There is a wonderful Correspondence observed in *Groenland*, between Fountains and the main Sea, viz. That at Spring-tides, in new and full Moon, when the strongest Ebbing is at Sea, the hidden Fountains or Springs of fresh Water break out on Shore, and discover themselves often in Places where one could scarce expect to meet with any such, especially in Winter, when the Ground is covered with Ice and Snow. Yet at other Times there are no Water-springs at all in those Places.

6. There are no venomous Serpents, or ravenous wild Beasts, in *Groenland*, if you except the Bear, which some will have to be an amphibious Animal, as he lives chiefly upon the Ice, in the most Northern Parts, and feeds upon Seals and Fish. He very seldom appears near the Colony in which our Author lived. He is of a very large Size, and of a hideous and frightful Aspect, with white long Hair, greedy of human Blood. Rain-Deer are, in some Places, in so great Numbers, that you will see whole Herds of them; and when they go and feed in Herds, they are dangerous to come at. The Natives spend the whole Summer-season in hunting them, going up to the innermost Parts of the Bays, and carrying, for the most part, their Wives and Children along with them, where they remain till the Harvest Season comes on. In that Space, they, with so much Eagerness, pursue and destroy those poor Deer, that they have no Place of Safety but what the *Groenlanders* know; and where they are in any Number, there they chase them by Claphunting, rushing upon them on all Sides, and surrounding them with all their Women and Children, to force them into Defiles and narrow Passages, where the Men lie in wait for them and kill them. And when they have not People enough to surround them, then they put up white Poles with Pieces of Turf to head them, which frightens the Deer and hinders them from escaping.

There are also vast Numbers of Hares which are white, Summer and Winter, very fat, and of a good Taste. There are Foxes of different Colours, white, grey, and blewish; they are of a lesser Size than those of *Denmark* and *Norway*, and not so hairy, but more like Martens. The Natives commonly catch them alive in Traps built of Stones, like little Huts; the rest of four-footed Animals, which ancient Historians tell us are found in *Groenland*, are Sables, Martens, Wolves, Loffes, Ermins, and several others, but none on the Western Side; domestic Animals there are none, but Dogs in great Numbers, and of a large Size, with white Hairs, or white and black, and standing Ears. They are, in their Kind, as timorous as their Masters, for they never bark, but howl only. In the Northern Parts they use them instead of Horses to drag their Sledges, yoking four or six, and sometimes eight or ten, to a Sledge, loaden with five or six of the largest Seals, with the Master setting upon them himself, who drives as fast with them as we can do with good Horses, for they often travel fifteen *German* Miles with them, in a Winter Day, upon the Ice; and though the poor Dogs are of so great Service to them,

them, yet they don't use them well: For they are left to subsist themselves as wild Beasts, feeding upon Muscles thrown upon the Sea-side, or upon Berries in the Summer-season; but when they catch a multitude of Seals, they give them their Blood boiled, and their Entrails.

As for Land-Fowls, or Birds, *Groenland* knows of none but the Rypper, which is a Sort of large Partridge, white in Winter, and grey in Summer-time, and these they have in great Numbers; Ravens seem to be domestic Birds with them, for they are always about their Huts, hovering about the Carcasses of Seals that lie upon the Ground. There are likewise very large Eagles, their Wings spread out, being a Fathom wide, but they are seldom seen in the Northern Parts of the Country; Falcons or Hawks, some grey, some of a whitish Plumage, and some speckled, as also large speckled Owls. There are different Sorts of little Sparrows, Snow-Birds, and Ice-Birds, and a little Bird not unlike a Linnet, which has a very melodious Note. Amongst the Insects of *Groenland*, the Gnats are the most troublesome, whose Sting leaves a swelling and burning Pain behind it; and this Trouble they are most exposed to in the hot Season, against which there is no Shelter to be found. There are also Spiders, Flies, Humble-Bees, Wasps. They know nothing of any venomous Animals, as Serpents and the like; nor have they any Snakes, Toads, Frogs, Beetles, Ants, or Bees; neither are they plagued with Rats, Mice, or any such Vermin. In regard to the Fish in these Seas, more especially Whales, and other large Fish, valued for the Sake of Oil, we shall have Occasion to speak of them so fully, when we come to treat of the Whale-fishing hereafter, that for the Readers Benefit, as well as our own, we shall, to avoid Repetitions, forbear speaking of them here, and proceed to the Manner of these Peoples living, providing for their own Subsistence, and acquiring wherewithal to trade with Strangers.

7. If we measure the good Sense, prudent Behaviour, and polite Carriage of other Nations, by what is esteemed Wisdom, Prudence, and Politeness amongst ourselves, which is the ordinary Way of settling the Standard of those things, it is very certain that these *Groenlanders* will pass for a Race of stupid, barbarous, and brutish People. But if we measure their Conduct, by the Situation of the Country in which they live, the Necessities they are under, and the Want of Communication with any other Race of Men but themselves, which we may justly call the Standard of Nature; we shall find they are neither despicable with respect to their Capacities, nor liable to Reproach from their Manner of living, which, however opposite to ours, is very consistent with their Circumstances, and the Helps with which Providence has furnished them. Their ordinary Employments are Hunting and Fishing: On Shore they hunt the Rain-Deer, and at Sea they pursue the Whales, Morfes, Seals, and other Animals. As for their hunting, we have spoke of it already, and shall therefore only add here, that their Bow is commonly of Fir-Tree, which, in *Norway*, is called *Tenel*, and on the Back strengthened with Strings made of Sinews of Animals, twisted like Thread; the String is made of a good strong Strap of Seal-Skin, or of several Sinews twisted together, and the Bow is a good Fathom long; the Head of the Arrow is armed with Iron, or a sharp-pointed Bone, with one or more Hooks, that it may keep hold when shot into a Deer's Body. The Arrows they shoot Birds with are covered with one or more pieces of Bone, blunt at the End, that they may kill the Fowl without tearing the Flesh. The Sea-Fowls are not shot with Arrows, but struck with Darts, headed with Bones, or with Iron, which they throw very dextrously, and with so steady a Hand, at a great Distance, that no body can hit surer with a Gun.

They are more frequently employed at Sea than on Shore, and they surpass therein most other Nations; for their Way of taking Whales and other Sea Animals is by far the most skilful and easy. When they go a Whale-catching they put on their best Apparel, as if they were going to a Wedding Feast; the *Groenlanders* fancying that if they did not come cleanly and neatly dressed, the Whale would shun and fly from them. The Manner

of their Expedition is thus: About fifty Persons, Men and Women, set out together in one of the large Boats, called a *Cone Boat*. The Women carry with them their Sewing Tackle, consisting of Needles and Thread, to sew and mend their Husbands Spring Coats or Jackets, if they should be torn or pierced through, as also to mend the Boat in Case it should receive any Damage. The Men go in search of the Whale, and when they have found him, they strike him with their Harpoons, to which are fastened Lines or Straps, two or three Fathoms long, and made of Seal-Skins; at the End of which they tie a Bag of a whole Seal-Skin, filled with Air like a Bladder, that the Whale, when he finds himself wounded, and runs away with the Harpoon, may the sooner be tired, the Air-Bag hindering him from keeping long under Water. When he grows tired, and loses Strength, they attack him with Spears and Lances till he is killed, and then they put on their Spring-Coats, made of dressed Seal-Skin, all of one Piece, with Boots, Gloves, and Caps, laced so tight together, that no Water can penetrate them. In this Garb they jump into the Sea, and begin to slice the Fat of him all round the Body, even under the Water; for in these Coats they cannot sink, because they are always full of Air; so that they can, like the Seal, stand upright in the Sea; nay, they are sometimes so daring, that they will get upon the Whale's Back while there is yet Life in him, to make an End of him, and cut away his Fat the sooner.

They go much the same Way to work in killing the Seals, except that the Harpoon is less, to which is fastened a Line of Seal-Skin, six or seven Fathom long, and at the End is a Bladder or Bag, made of a Seal-Skin, filled with Air, to keep the Seal, when he is wounded, from diving under the Water, and being lost again. In the Northern Parts, where the Sea is all frozen over in the Winter, they use other Methods in catching of Seals. They first look out for the Holes which the Seals themselves make with their Claws, about the Bigness of a Half-penny, that they may fetch their Breath; after they have found any Hole, they seat themselves near it in a Chair made for that purpose; and as soon as they perceive the Seal coming up to the Hole, and putting his Snout into it for Air, they immediately strike him with a small Harpoon, which they have ready in their Hand; to which Harpoon is fastened a Strap of a Fathom long, which they hold in the other Hand. After he is struck, and cannot escape, they cut the Hole so large that they may get him up through it; and as soon as they have got his Head above the Ice, they kill him with one Blow of the Fist. But besides these there is a third Way of catching of Seals. They make a great Hole in the Ice, or in the Spring they find out Holes made by the Seals, through which they get upon the Ice to lie and bask themselves in the Sun. Near these Holes they place a low Bench, upon which they lie down upon their Belly, having first made a small Hole near the large one, through which they let softly down a Perch, sixteen or twenty Yards long, headed with a Harpoon, a Strap being fastened to it, which one holds in his Hand, while another, who lies upon the Bench, with his Face downwards, watching the coming of the Seal, which, when he perceives, he cries *Kæ*, whereupon he who holds the Pole pushes and strikes the Seal. The fourth Way is this: In the Spring, when the Seals lie upon the Ice near Holes which themselves make to get up and down, the *Groenlanders*, disguised in Seal Skins, and a long Perch in their Hand, creep along upon the Ice, moving their Head forwards and backwards, and snoring like a Seal, till they come so near him, that they can reach him with the Perch and strike him. A fifth Manner of catching Seals is, when in the Spring the Current makes large Holes in the Ice, the Seals flocking in great Shoals there; the Natives watch their Opportunity to strike them with their Harpoons, and hawl them upon the Ice. There is yet a sixth Way of catching them; when the Ice is not covered with Snow, but clear and transparent, then they lay under their Feet Foxes or Dogs Tails, or a Piece of a Bear's Hide to stand upon, and watch the Animal; and when by his blowing and snoring, they find what Course

Course he takes, they softly follow, and strike him. All these Methods prove, that the *Greenlanders* are so far from being stupid, that they are subtle and ingenious.

8. As this Affair of their Fishing is in a manner the sole Concern of these People, so, from thence we are best enabled to judge of their Characters and Capacities. It is true, that this appears to us a very insignificant Thing; but it is not so to them; for upon their Ability in Hunting and Fishing depends their Subsistence, both as Individuals, and as a Nation, which alters the Case extremely, since with respect to every People upon Earth, the right Management of their principal Concern is what contributes most to their own Happiness, and ought consequently to fix the Notions of the rest of the World about them. In Fishing they make Use of Hooks of Iron, or Bones; their Lines are made of Whalebones cut very small and thin, and at the End tacked together; and with such Lines they will draw a hundred Fish, to one that our People can catch with their Hemp-Lines; but to catch Holy-Butts, they make use of strong Lines made of Seal-skins, or thick Hemp-Lines. Their Way of fishing for small Salmon, or Sea-Trout, is this: At low Water they build small Inclosures with Stone, near the River's Mouth, or any other Place where the Salmon runs along; and when it begins to flow, and the Tide comes in, the Salmon retreats to the River, and in high Water passes over the Enclosure, and remains in the River till the Water falls again; and then the Salmon strives to return to the Sea; but the Fishermen way-lay him at the Inclosure, and stop his Passage; and soon after, when the Water is quite fallen, and it is low Ebb, the Salmon remains upon dry Land, and may be caught with Hand; and when they are left in Holes, they take them with an Instrument made for this Purpose, *viz.* a Perch headed with two sharp-hooked Bones, or with one or two Iron Hooks.

The Rogn-fish, or Roe-fish, so named from the great Quantity of Roe that is found in it; as he is commonly found in shallow Water, and upon the Sands, so is caught like the Salmon with the afore-mentioned Instrument. There is such abundance of these Fish that, as they cannot consume them while fresh, they are obliged to dry them on the Rocks, and keep them for Winter Provision: When catching of them is over, which happens in the Month of *May*, the *Groenlanders* retire into the Bays and Creeks where the Stint-fishing then takes place; there are such numberless Shoals of them near the Shore, that they catch them in a kind of Sieves fastened upon long Poles, and throw them upon the Shore. They open and dry them upon the Rocks, keeping them for their Winter Stock. This Fish is not either agreeable or wholesome when eaten fresh; besides, they have a nauseous Smell, but when dried they are tolerable; the Natives eat them with a bit of Fat, or soured in Train-oil, and so they do all other sorts of Fishes. What the *Groenlanders* cannot consume fresh, they dry upon the Rocks in the Sun, or in the Wind, and lay them up for Winter's Provisions.

As to the *Groenlanders* Boats, there are two sorts of them; the one, of which the Men alone make use, is a small Vessel, sharp, and pointed at both Ends, three Fathom in Length, and at most but three Quarters of a Yard Broad, with a great Hole in the Midst, just large enough for a Man's Body to enter it and sit down: The Inside of the Boat is made of thin Rafts, tacked together with the Sinews of Animals, and the Outside is covered with Seal-skin dressed, and without Hair; one only can sit in it, who fastens it so tight about his Waste, that no Water can enter it. In these small Boats they go to Sea, managing them with one Oar of a Fathom's length broad at both Ends, with which they paddle, sometimes on one side, and sometimes on the other, with so much Strength and Swiftnefs, that they are said to row ten or twelve *Norway* Miles in a Day; they chiefly make use of them in catching of Seals and Sea-Fowls, which they can approach on a sudden and unawares: Whereas in our large Boats we can very seldom come so near as to touch them. They have no fear in venturing out to Sea in them in the greatest Storms, because they swim as light upon the largest Waves as a Bird can fly; and when the

Waves come upon them with all their Fury, they only turn the Side of their Boat towards them, to let them pass without the least Danger of being sunk; for though they may be overfet, yet they easily raise themselves up again with the Paddle; but if they are overfet unawares, as it often happens, and the Boat be not close and tight about their Waste, they are inevitably drowned.

The other Kind of Boats are large and open, like ours, some of them twenty Yards long, and those are called *Cone-Boats*, that is, Womens-Boats, because the Women commonly row them, for they think it unbecoming a Man to row such a Boat, unless great Necessity requires it. And when they first set out for the Whale-fishing, the Men sit in a very negligent Posture, with their Faces turned towards the Prow, pulling with their little ordinary Paddle; but the Women sit in the ordinary Way, with their Faces towards the Stern, rowing with long Oars: The inside of those Boats is composed of thin Rafts, and the Outfides covered with thick Seal-skins. In those Boats they transport their Baggage, as Tents, and the little Household Furniture, when they go to settle in some distant Places, for Conveniency of Provision; in these Boats they also carry Sails made of the Inside of Seals-Guts, fastened to the Deck at the lower-end; so they neither want Braces, Bowlines, or Sheet-ropes, and with these Sails they sail well enough with the Wind, but not otherwise: These Boats, as they are flat-bottomed, are soon overfet. The Men meddle, at home, with nothing but what concerns their Tools for hunting, and their Fishing-Tackle, *viz.* their Boats, Bows, Arrows, and the like; all other Work, even of building and repairing their Houses, belong to the Women, who are to the full as industrious, dextrous, and fearless as the Men.

9. As to their Houses, they have one for the Winter, and another for the Summer-season: Their Winter-habitation is a low Hut, built with Stone and Turf, two or three Yards high with a flat Roof: In this Hut the Windows are on one Side, made of Seals Guts dressed, and sewed together, or of the Maws of Holy-butts, and are white and transparent: On the other Side the Beds are placed, which consist of Shelves or Benches, made of Deal-Boards raised half a Yard from the Ground: Their Bedding is made of Seals and Rain-Deer Skins. Several Families live in one of these Huts, each Family occupying a Room by itself, separated from the rest by a wooden Post, by which the Roof is supported; before it there is a Hearth, in which there is a great Lamp, in the Form of a Half-Moon; on a Trivet, over this, are hung their Kettles, of Brass, Copper, or Marble, in which they boil their Victuals; under the Roof, just above the Lamp they have a sort of a Shelf to put their wet Cloaths upon, to dry.

The Fore-door, or Entry of the House, is very low, so that they must creep upon their Hands and Feet to get in at it, which is contrived so to keep the cold Air out as much as it is possible; the Inside of the House is covered, or lined with old Skins, which before have served for their Boats; some of these Houses are so large that they afford Lodgings for seven or eight Families. Upon the Benches, or Shelves, where their Beds are placed, is the Seat of the Women, attending their Work of sewing, and making up of the Cloathing. The Men, with their Sons, sit on the foremost Parts of the Benches, turning their Backs to the Women. On the opposite Side, under the Windows, the Men belonging to the Family, or Strangers, take their Seats upon Benches placed for that Purpose. I cannot forbear taking Notice that though in one of these Houses there are ten or twenty Train-Lamps; one does not perceive the Steam or Smoke thereof to fill these small Cottages; the Reason probably is, the Care they take in trimming these Lamps, *viz.* They take dry Moss rubbed very small, which they lay on one side of the Lamp, which, being lighted, burns softly, and does not cause any Smoke if they do not lay it on too thick, or in Lumps. This Fire gives such a Heat that it not only serves to boil their Victuals, but also heats their Rooms to that Degree, that they are as hot as a Bagnio; but to those who are not used to this Method the Smell is very disagreeable, as well

well by the Number of burning Lamps, all supplied with Train Oil, as on Account of diverse Sorts of raw Meat, Fish, and Fat, which they heap up in their Habitations; but especially their Urine-Tubs smell most insufferably, and strike one that is not accustomed to it, to the very Heart.

Those Winter Habitations they resort to immediately after Michaelmas, and leave them again at the Approach of Spring, which is commonly about the latter End of *March*; and all the warm Part of the Year lodge in Tents, which are their Summer Habitations. These Tents are made of Rafts or long Poles, set in a circular Form, bending at the Top, and resembling a Sugar-Loaf, fenced by a double Cover, of which the Innermost is of Seal or Rain-Deer Skins, with the hairy Side inward (if they be rich) and the Outermost also of the same Skin, without Hair, dressed with Fat, that the Rain may not penetrate them. In these Tents they have their Beds, Lamps to dress Meat, and a Curtain made of the Guts of Seals sewed together, through which they receive the Day-light, instead of Windows. Every Master of a Family has such a Tent, and a great Woman's Boat to transport their Tents and Luggage from Place to Place, where their Business calls them, in the Manner before-mentioned.

10. They are, undoubtedly, as good-natured, and as inoffensive People in their Behaviour, as any in the World; Hatred and Envy, Strife and Anger, are never heard of among them; and though it may happen that one bears a Grudge to the other, yet it never breaks out into any scolding and fighting; neither in their Language have they any Words to express such Passions. It has, indeed, happened, that a very wicked and malicious Fellow, out of a secret Grudge, has killed another, which none of the Neighbours have taken Notice of, but all let it pass with a surprizing Indolence, save the next of Kin to the Dead, if he finds himself strong enough, revenges his Relation's Death upon the Murderer: They know no other Punishment. But as for a Sort of old Women, called *Witches*, and such as pretend to kill or hurt by their Conjurat[i]on, to such they shew great Rigour, making nothing of destroying and killing them without Mercy. And they insist on it, that it is very well done, those People not deserving to live, who by secret Arts can hurt others. They have as great an Abhorrence of stealing among themselves, as any Nation upon Earth, and therefore they keep nothing under Lock and Key, but leave all free that every body can come at it, without Fear of losing it.

This Vice is so much hated among them, that if a Maid should steal any thing, she would forfeit all Hopes of a good Match. Yet if they can lay Hands upon any thing belonging to Foreigners, they make no great Scruple of Conscience about it. But as the *Danes* have now lived some Time in their Neighbourhood, and are looked upon as settled Inhabitants of the Country, they at last have forbore to molest them any more that Way. As to any Trespasses in point of Chastity, either in Words or Deeds, they are never guilty, except what passes amongst the married People in their public Diversions. They never enter any House where they are Strangers, unless they are invited; and when they come in, the Master of the House, to whom they pay the Visit, shews them the Place where they are to take their Seat. As soon as a Visitor enters the House, he is desired to strip stark naked, and sit down in this Manner, like all the rest; for this is the grand Fashion with them to dry the Cloaths of all their Guests.

When Victuals are put before him, he takes Care not to fall to eating immediately, for fear of being looked upon as starved, or of passing for a Glutton. He must stay till all the Family be gone to Bed before he can lie down, for to them it seems unbecoming, that the Guests should go to rest before the Landlord. When ever a Stranger comes into a House, he never asks for Victuals, though never so hungry, nor is there any need he should; for they exercise great Hospitality, and are very free with what they have, and, what is highly to be admired and praise-worthy, they have most things in

common; and if there be any among them who cannot work or get his Livelihood, they do not let him starve, but admit him freely to their Table; in which they ought to confound, with Shame, such as are called Christians, who suffer, notwithstanding, so many poor and distressed Creatures to perish for Want of Necessaries.

But after all, the *Groenlanders*, as to their Manners and common way of Life, are very slovenly, nasty, and filthy; they seldom wash themselves; will eat out of Plates and Bowls after their Dogs, without cleaning them; and, what is most nauseous, they eat the Vermin which feed on them. They do not blush to set down and ease themselves in the Presence of others; every Family has an Urine-Tub placed before the Entry, in which they make Water, and leave it so standing till it smells insufferably; for they put all the wet Skins which are to be dressed, to steep in it, which affords a loathsome Scent; to the increasing of which, the rotten Pieces of Flesh and Fat, thrown under their Benches, contribute a great deal. Yet notwithstanding this nasty and most beastly way of Living, they are very good-natured and friendly in Conversation. They can be merry and bear a Joke, provided it be within due Bounds; never any of them offered to hurt the *Danes*, unless provoked to it; but on the contrary, reverence them as a Nation superior to themselves.

11. The Reader will not suppose these Folks are over-nice in their Apparel, and yet they are far from being deficient in that Point. Their Cloaths are, for the most Part, made of Rain-Deer and Seal Skin, as also of Birds Skin nicely dressed and prepared, for in this lies their greatest Ingenuity. The Mens Dress are a Coat or Jacket, with a Cap or Hood sewed to it, to cover the Head and Shoulders, in the Fashion of a Domino or Monk's Hood. This Coat reaches down to the Knees; their Breeches are very small, not coming above their Loins, that they may not hinder them in getting into their small Boats; and as they wear no Linen, the Hair of the Skins the Coat is made of is turned inward, to keep them warm. Over this Coat they put a large Frock made of Seal Skin, dressed and tanned without Hair, to keep the Water out; and thus they are dressed when they go to Sea. Between the Leathern Frock and the under Coat they wear a Linen Shirt, or for want of Linen, one made of Seal-Guts, which also helps to keep out the Water from the under Coat; of late they appear sometimes in more shewy Dresses, as Shirts made of striped Linen, and Coats and Breeches of red and blue Stuffs, which they buy of *Danish* or *Dutch* Merchants, but fashioned after their own Way. In these they make Parade when they keep Holidays ashore. The Stockings they wore formerly were made of Rain-Deer or Seal Skin, but now they are better, such as worsted Stockings of different Colours, white, blue, and red, which they buy of the *Danes*; their Shoes and Boots are made of Seal-Skins, red or yellow, well dressed or tanned. They are nicely wrought with Folds behind and before, without Heels, and set well upon the Feet.

The only Difference in Dress between the Men and the Women is, that the Womens Coats are higher on the Shoulders, and wider than the Mens, with higher and larger Hoods. The married Women, that have got Children, have got much larger Coats than the rest, most like Gowns, because they must carry their Children in them upon their Backs, having got no other Cradle or swaddling Cloths for them. They wear Drawers which reach to the Middle of their Thigh, and over them Breeches. The Drawers they always keep on, and sleep in them. Their Breeches come down to the Knee; these they do not wear in the Summer, nor in the Winter, but when they go abroad, and as soon as they come home they pull them off.

Next to their Body they wear a Wastecoat, made of a young Fawn's Skin, with the hairy Side inward. The Coat, or upper Garment, is also made of fine coloured Swan-Skins, trimmed and edged with white, and nicely wrought in the Seams, and about the Edges, which looks very well. Their Shoes and Boots, with little Difference, are like those

those of the Men. Their Hair, which is very long and thick, is braided, and tied up in a Knot, which becomes them; they commonly go bare-headed, as well without as within Doors; nor are they covered with Hoods, but in Case it rains or snows. Their chief Finery is to wear Glass-Beads of divers Colours, or Corals about their Neck and Arms, and Pendants in their Ears; they also wear Bracelets of black Skin set with Pearls, with which they also trim their Cloaths and Shoes.

The *Groenland* fair Sex have, besides this, another Sort of Embellishment, *viz.* they make long black Strokes between the Eyes, on the Forehead, upon the Chin, Arms, and Hands, and even upon the Thighs and Legs. These they make with a Needle and Thread made black, and though this to others seems disfiguring and frightful, yet they think it very handsome and ornamental; and they say those who do not thus decorate or deform their Faces, their Heads shall be turned into Train-Tubs, which are placed under the Lamps in Heaven, or rather in the Land of Souls. They keep their Cloaths pretty clean, though in other things, especially in their Victuals, they are not so nice, particularly the Women who have got Children are very dirty, well knowing that they cannot be repudiated or divorced. But those which are barren, or whose Children are dead, and do not know the Moment they may be sent away, are obliged to be more careful in point of Cleanliness, that they may please their Husbands, and enjoy Maintenance and Protection from them.

12. The Commodities *Groenland* affords, for the entertaining of Commerce, are Whale-Blubber or Fat, and Whale-Bones, Sea-Unicorn-Horns, Rain-Deer Skins, and Bears, Seal and Fox-Skins. These Wares they used to barter against the following Merchandizes, *viz.* Coats and Shirts, made of white, blue, red, and striped Linen, or Woollen-Cloth; as also Knives, Hand-Saws, Needles, Hooks to angle with, Looking-glasses, and such other Merchandizes, or hard Wares; besides what they buy of Wood, as Rafts, Poles, Deal-Boards, Chests; and of Brass and Copper, as Kettles, and the like; Tin Dishes and Plates, for which they pay to the full Price. At the Beginning of the *Danish* Settlements in those Parts, the Trade was much brisker than at present, and much more profitable; for foreign Traders flocking there in great Numbers, so over-stocked them with Goods, and under-fold one another, to draw the Natives to them from others, that the Trade is now constantly slackened and fallen. Yet says Mr. *Egede*, from whom we take this, if we once become Masters of this Trade, as it in justice belongs to us, by the Right the King of *Denmark* claims to these Countries, as much as to any Kingdom or Province subject to him; I trust, continues he, that with this Provifo, the Trade to *Groenland* would prove as profitable as any other Trade whatsoever, which has been evidenced not long ago; when, by his Majesty's special Order, the foreign Trade has been prohibited within a certain Distance on each Side of the Colonies. For if the lading of some Ships with Fish and Train, from *Finmark*, and others with Fish, Train, Salt-Meat, and Butter, from *Iceland* and *Ferro*, bring to the Traders considerable Profit; who would question but the same, or better Advantage, may be expected from the importing Quantities of Whale-Train, Whale-Bones, Rain-Deer Hides, Fox and Seal-Skins, which are of more Value than the *Iceland* or *Ferro* Commodities? And if the Produce of *Groenland* was formerly reckoned of that Importance, that it was esteemed sufficient to maintain the King's Table, why not also at present, provided *Groenland* may, by Settlements and Improvement, receive its former Abundance, which is not impossible?

If the old Lands, formerly inhabited and manured by the *Norway* Colonies, were again peopled with Men and stocked with Cattle, they would, without doubt, yield as much as either *Iceland* or *Ferro*, seeing there is as good Pasture Ground as in those Islands. I shall forbear to mention Salmon and Cod-fishing, as it seems at present to be of little or no Importance, especially on the West-side; though I am credibly informed by the Natives, that on

the Southern Coast they catch abundance of fine large Cods; yet this may be more than sufficiently compensated by the Whale-fishery on the North, and the Capture of Seals on the South, which, if rightly undertaken, and with Vigour set on foot, will bring as much, nay far more, Profit than the Salmon and Cod-catching does in other Places, chiefly the catching of Seal, which can be undertaken at very small Expence, *viz.* at the Coast, with strong Nets, with which they may catch many thousands in *Groenland*, which if hitherto not practised, ought to be imputed to Negligence, and want of a good Regulation. In short, *Groenland*, as we see, is very convenient for trading, and may be very well worth one's while to take in hand, but there is little to be done without an established and formed Company of Men of Substance as well as Resolution, it being altogether impossible for any private Man to master and go through with it.

The Ignorance shewn by these People of a Creator would make one believe they were Atheists or Naturalists; for when they have been asked whence they thought that Heaven and Earth had their Original? they have answered nothing but that it had always been so; but if we consider that they have some Notion of the Immortality of Souls, and that there is another much happier Life after this; as they are addicted to different kinds of Superstition, and that they hold there is a Spirit, which they call *Torngarsuk*, to whom they ascribe a supernatural Power, though not the Creation or the Production of Creatures, one would think they did own a God. But notwithstanding all their Superstitions are grounded upon the Notion they have of *Torngarsuk*, whom their lying Angekuts or Prophets hold for their Oracle; yet the Commonality know little or nothing of him, except the Name only; nay even the Angekuts themselves are divided in their whimsical Ideas they have formed of his Being; some saying he is without any Form or Shape, others giving him that of a Bear, others again pretending he has a large Body, and but one Arm, and some make him as little as a Finger, &c.

They assign him his Abode in the lower Regions of the Earth, where they tell you there is constantly fine sun-shiny Weather, good Water, Deer and Fowls in abundance. They also say he lives in the Water, wherefore when they come to any Water, of which they have not drunk before, and there is any old Man in the Company, they make him drink first, to take away its *Torngarsuk*, or the malignant Quality of the Water, which might make them sick and kill them. They hold likewise that a Spirit resides in the Air, which they name *Innertirrorsok*, that is, the Moderator or Refrainer, because it is pursuant to his Order, that the Angekuts command the People to restrain or abstain from certain earthly things or Actions, that they may not come into Harms-Way. According to their Theology, there are Spirits that govern all the Elements, and their Conjurers pretend to have familiar Spirits, and to be able to do great Matters. They are, however, a Crew of Knaves and Lyars, and it would give very little Satisfaction to the Reader to insert their Fables, which are not at all more false than they are foolish, and serve to shew us that tho' Reason may go a great Way in teaching Men how to manage their Affairs in this World, yet it is far from being strong enough to penetrate into the Secrets of the other World, and of a future State.

Their Notions of the heavenly Bodies are very whimsical; they say the Moon was once a young Man, and the Sun a young Woman his Sister, with whom he was familiar in the Dark; but that she, being desirous to find out her Lover, rubbed her Hands with Soot, with which she marked his white Deer-Skin Coat, and hence they say are the Spots in the Moon. The Sun, flying from his Embraces, ascended into the Air, whither the Moon followed her, and still continues to pursue, without being able to overtake her.

Yet for all this Nonsense, they have given Names to many of the Stars, and Constellations, *viz.* The three Stars in the Belt of *Orion* they name *Sicktur*, that is Separated; because these three, they say, before their Metempsychosis, or rather Metamorphosis, were three honest

Groenlanders, who being out at Sea a Seal-catching, were bewildered, and not being able to find the Shore again, were taken up into Heaven. *Ursa Major*, the great Bear Star, is stiled by those who dwell in the 64th Degree, *Tugto*, or Rain-Deer; while they that live in the Bay of *Disco*, at 99 Degrees, call it *Affelluit*, the Name of a Tree to which they tie their Line when they shoot Seals. *Taurus*, the second Sign in the *Zodiac*, is named *Kelluckturset*, or *Kennel of Hounds*, who seem to have a Bear among them; by this Constellation they reckon their Hours by Night. *Iversuck*, that is two Persons that contend with Songs or Verses in taunting one another, as is customary among the *Groenlanders*. These two Stars are in the Constellation *Taurus*, of which we have already spoken, and there too is *Aldebaren*, or *Nennerroak*, that is, a Light who lights the two Singers.

Canis Major is called *Neleragnek*, which is a Name of a Man amongst them. This they say has got on a Coat of Rain-Deer Skin. *Gemini*, *Auriga*, and *Cupella*, are named *Killaub Kuttuk*, that is the Breast-Bone of Heaven. When two Stars seem to meet together, they say they are visiting one another; others will have it to be two Women, who being Rivals, take one another by the Hair. Concerning Thunder and Lightning, they say that two old Women live together in one House in the Air, who now and then fall out and quarrel about a thick and stiff out-stretched Seal-Skin; because such a Skin, if beaten as a Drum, has some Likeness to the Noise of Thunder; whilst they are thus by the Ears together, down comes the House with great bouncing and cracking, and the Lamps are broken, the Fires and broken Pieces fly about the Air, and this, in their Philosophy, is Thunder and Lightning. In their astronomical System, the Heaven turns about the Point of a huge Rock.

The Snow, according to their Fancy, is the Blood of the Dead, on account that it turns reddish if you keep it in the Mouth. The Rain comes from a Ditch or River above in Heaven. When it overflows there, it rains here below. They have no Kalendar or Almanacks, nor do they compute or measure the Time by Weeks or Years, but only by Months, beginning their Computation from the Sun's first rising above their Horizon in the Winter, from whence they tell the Month, in order to know exactly the Season in which every sort of Fish, Sea-Animals, or Birds, seek the Land, according to which they order their Business. As to their Diversions, they have many, such as Running, Leaping, Wrestling, Football and Dancing.

The most singular Circumstance however in this Respect is, their Talent for, and mighty Delight in, Poetry. In this, from the Specimens we have received in the Relations of *Groenland* lately publish'd, it appears that they are far from wanting either Genius or Method. The Poems they compose are a kind of Lyric Odes, the Harmony of which depends both upon Rhyme and Quantity, there being a visible Regularity in the Number of Syllables of which their Verses are composed, and a plain Regard to Cadence even in our Manner of reading them. They use this sort of Poetry, which, all Things considered, is as far from being rude as it is from being exact, to express all their Passions, such as Love, Joy, Grief, but more especially Anger; for when two People quarrel in this Country, they challenge each other not to fight, for that they never do but in Jest, or by way of Diversion, but to contend in Verse; and he who first wants Words to express himself in this poetical Duel, is held to be conquered, and so the Controversy ends without either Blood or Law-suit.

13. We have given this large Description of this Country, and these People, because both were very much wanted; nothing of this kind having occurred in any of our Collections of Voyages. It accounts for what happened to Capt. *Davis* and his People, which we have related in the former Book; as also, for what befel Capt. *Hudson's* Crew, after they had basely deserted their Captain. It shews how consistent those Relations may be with Truth, which seem to be inconsistent with themselves, by shewing that *Savages*, that are gentle, kind, and humane to each other, may be faithless, thievish,

and cruel to Strangers, as these People really are from Principle; because they look upon the rest of Mankind to be of a different Race, and therefore they don't think that they are obliged to treat them as they do one another.

We may likewise see from hence, how ingenious those People are in providing Necessaries for themselves, who discover, notwithstanding, very little Genius or good Sense in contriving for the Conveniencies of Life. The Boats of the *Groenlanders* are very perfect in their Kind; their Cloaths not only sufficient for Covering, and very warm and strong, but also well-shaped and neatly put together; and their Instruments for Hunting and Fishing admirably contrived in every respect; but then their Houses are very poor, their Manner of living very wretched, and the Bounds of their Knowledge almost as confined as the Animals upon which they feed. Their Skill and Success in former Instances plainly shew that they do not want Capacity; and the Rudeness of their Condition in other Respects, is plainly owing to their Want of Education; or, if I may be allowed to use the Word, because it expresses my Meaning better, Cultivation: Their Minds are not barren, but produce few Things for Want of a Variety of Seed sown in them; and this shews the Advantage of Commerce, not only for improving the Circumstances, but for enlarging and bettering the Understandings, of any People.

Trade will not mend the Climate of *Groenland*, but it may enable the People to live more comfortably there: Fish, Train-Oil, Skins, Furs, and whatever else the Country produces, or can be made to produce, when converted into Commodities, will bring the Inhabitants Variety of Conveniencies, will enable them to convert their Huts into Houses, and change their inhospitable Deserts, not into a fine and pleasant, but into a tolerable, Country; and at the same time will enrich those who take the Pains to trade with, and civilize, these People. If this could be done effectually, they might be made use of to perfect those Discoveries, that politer and wiser Nations have not hitherto been able to make. They may be employed to find out how far the Country behind them is inhabited to the North; and whether, after advancing nearer the Pole, the Climate continues to grow more rigorous, or, as some have imagined, not altogether without Reason, becomes milder.

Our general Notions, with respect to the Situation of the different Parts of the Globe, are not always confirmed by Experience: The Ancients thought the *Torrid Zone* uninhabitable, on the Score of Heat, but we now know with Certainty, that they were mistaken; neither is it impossible that in thinking the Land or Sea absolutely frozen under the Pole, we may be mistaken likewise. That an Experiment of this Kind would not be impracticable to the *Groenlanders*, appears from hence; that as cold as their Country is in 69 Degrees, there are Persons living, who have advanced full ten Degrees farther North, without finding the least Inconveniency from the Cold, in the Day-time. Upon this Occasion, I will take the Liberty of observing, that there is no Country in the World, the Inhabitants of which might make Discoveries of more Importance than the *Groenlanders*, as may appear from what the Reverend Mr. *Egede* tells us he learned among them: "According, says he, to the Relation
"and Opinion of those that inhabit the *Gulph of Disco*,
"their Country is an Island, which they incur from the
"strong Current that runs from the North, and keeps
"the Ice open, even in the Midst of the Sea. They
"will also tell you, they have spoken with People different from themselves, on the other side of the Ice,
"and haled them. Their Language, they say, is the
"same, but the Persons different; so that a small Streight
"only divides *Groenland* from *America*. The Streights
"are so narrow, that Men on both Sides can shoot, at
"one and the same Fish. The Continent farthest to the
"North, is all covered with Ice, the Islands only uncovered, where Rain-Deer, Geese, and other wild Birds,
"are found in great Numbers."

I must confess, I am not very well satisfied with this Account, and believe that the *Danes* may with little Trouble,

Trouble, engage the *Groenlanders* to gain them in time a better, and more certain Account; for, without doubt, in one Summer, they might do more towards the settling the Possibility, or Impossibility, of finding a North-west Passage by their Discoveries on Land than we have been able to do, in upwards of one hundred and fifty Years, by Sea; besides, they might also make Discoveries on the opposite Coast, looking towards *Spitzbergen*; which would lead us to a Certainty, whether there be an open Sea on that Side, or not; a Thing which, as the Reader will see hereafter, is a Matter of far greater Importance than is commonly imagined. It was to penetrate into these Secrets of Nature, and to open to Mankind the entire Knowledge of the Universe, that so many Expeditions were made towards the North, by the *English* and *Dutch*, in the Beginning of the last Century; but which, after all, served only to discover another Country to the East of *Groenland*, which, for any thing that is hitherto known, is absolutely uninhabited, but must not therefore be left undescribed, especially as we want not sufficient Materials for that Purpose.

14. The Country of *Spitzbergen*, or *Greenland*, lies the nearest to the North-Pole of any yet examined by Seamen, that is, from 76 to 82 Degrees North Latitude; but whether it be Continent or Islands is not yet discovered. It received its Name of *Greenland* from the *English*, on Account of its being thought Part of *Old Groenland*; but the *Dutch* call it *Spitzbergen*, that is, sharp Mountains, because the icy Rocks of this Country mount like Pyramids, one behind, or rather, above another, to marvellous Heights. There are great Disputes as to the Discovery of this Place: For, on the one hand, we assert that it was found out by Sir *Hugh Willoughby*, in 1553; which the *Dutch* deny, and have invented a Country called *Willoughby Land*, and placed it in their Maps, to quit themselves of this Difficulty. He was afterwards frozen to death, with his Ship and Company, in the River *Arzana* in *Lapland*, leaving upon his Table an Account of his Discoveries, drawn up in very concise Terms: Wherein he mentions sailing for several Days on the West-side of a Country, in a very high Latitude, which it is believed, and on very good Grounds, could be no other than *Greenland*. After this, Mr. *Stephen Burrows*, in the Year 1556, arrived in the Latitude of 78 Degrees, and sailed along a Coast altogether desolate, the Ice blue, and abounding with Birds, to the Latitude of 80 Degrees 11 Minutes; which was certainly no other than *Greenland*.

The *Dutch* Discoverers were *William Barentz*, and *John Cornelius*, who visited this Country in 1595, and called it *Spitzbergen*. Our Maps differ from the *Dutch*, because the Names of Places in them are all *English*; whereas, in the *Dutch* Maps, they are in their own Language; which however determines nothing as to the Matter of Fact, or who were the first Discoverers. If we decide the Points according to Evidence, the Discovery perhaps ought to be adjudged to the *English*; but the present Possession, and the Profits resulting from thence, are most undoubtedly wholly in the *Dutch*.

15. *Spitzbergen* is actually undiscovered on the North, so that it is not possible to say with Certainty, how it is bounded; On the West it has the Northern Ocean; on the South, the same Ocean between it and the *Muscovite Lapland*; on the East an undiscovered Country, to which it is joined by an Isthmus; on the West-side of it lies *Charles Island*, which is divided from the main Land by a narrow Streight called *Foreland Ford*, between which and *Muscle Haven* are the highest Mountains, most of which are of a red Colour, and reflect the Sun-beams so as to seem all on fire; but seven of the Mountains, all of a remarkable Sharpness, are of a fine Sky-blue. *South-Haven* is the most commodious Place on the Island, affording all the Conveniences necessary for repairing leaky or damaged Ships, and is so large that thirty or forty Sail may ride at Anchor there very conveniently; here also may be had fresh Water, from the melting of the Snows; for as to the Rivers they are brackish, as far as hitherto they have been discovered, and no Springs or Wells have been yet found.

The Mountains about *South Haven* are very high, especially on the Left; and in the Midst of the Harbour is an Island called *Deadman's Island*, because such as die in the Voyage are usually buried here; if the Bodies can be preserved from the Bears, they remain uncorrupt for many Years. There are several Islands in this Neighbourhood, called *Fowl Islands*, from the prodigious Number of Birds that are bred there. The next capacious Haven is that called by the *Dutch*, *Maurice Bay*, where some have wintered: Near this Place were a few Cottages built by the *Dutch*, for the Convenience of making their Oil, and this Place they call *Smearbourg*, or the *Haerlem Cookery*. In the North Bay there is an Island which the *Dutch* call *Voegelsang*, from the great Noise which the Fowls make when they take their Flight; whence some have imagined the famous Problem of our Birds of Passage may be easily solved, since they suppose they are bred in the *Fowl-Islands*, and at a certain Season of the Year fly southward from the Island before-mentioned. *Deer Sound* is so called from the Abundance of Deer which feed about it, though the Soil seems to be all Slates set edgewise. *Muscle Haven* lies at the Mouth of the *Waygate*. *Martens a Humburgher*, who has given us the best Account of this Country, sailed as high as 81 Degrees North, where the Ice hindered him from approaching.

16. The Soil of *Greenland* is for the most part nothing but Rocks, or Heaps of vast Stones, so very high, that half of them are lost in Clouds; the Valleys between them are full of Stones and Ice, which fall from those prodigious Mountains. About *Deer Sound* and *Muscle Haven* there is some low Land, which is also stony, and, for the most part, covered with Snow and Ice; and this being melted, as it sometimes is in the Summer, discovers nothing but a barren Soil, covered with Heath, Moss, and very few Plants. Such of the Mountains as are exposed to the warm Air and Sun-beams are likewise covered with Heath and Moss; and, in the Cliffs of those Rocks, there are infinite Numbers of Fowls, that rest there all the Year.

The Dung of those Birds, with the Moss washed down by the melted Snow, makes a rich kind of Mould on some Places near the Shore, where it produces a kind of Lettuce, Scurvy-grass, exceeding mild and pleasant, Sorrel, Snakeweed, Mouse-ear, Heart's-ease, wild Strawberries, House-leeks, Wall-pepper, and some Plants unknown to us. The Sea is observed not to be so salt here as in other Places, and changes (as it does every where) its Colour with the Sky. If the Air be clear, the Sea is blue; if cloudy, green; if foggy, yellow; in stormy Weather, quite black: But there is one thing remarkable, which is, that, in fair Weather, the Sea is so clear, that you may see ten or twelve, or even fourteen Fathom deep. The Air is so cold, that there is almost a continual Frost, which is strongest in *April* and *May*, and then in a manner intolerable, especially if the Wind blows from the North or East; South or West Winds bring Snow or Rain, and moderate the Cold. In *June*, *July*, and *August* the Weather is usually calm; and in the last two Months, but especially in *July*, the Sun shines so hot, as to melt the Tar between the Seams of a Ship, if the Wind cannot come at it.

The Sun appears about the Middle of *February*, and disappears about the 1st of *October*; but they have a Twy-light when he comes near their Horizon. From the Beginning of *May* to the 1st of *August* the Sun never sets; yet they reckon Day and Night very easily: for, when he is in the West, they call it Night; and, when he comes about again to the East, they reckon another Day begins. It is observed, by *Martens*, that the Light of the Sun is then like that of the clear Moon, so that Men may look upon it without dazzling their Eyes.

17. The Beasts of this Country are white Bears, very differently shaped from those that are seen elsewhere; they have long Heads like Dogs, and bark like a Dog that is hoarse. They are leaner and swifter than other Bears, and very bold. Some of them are six Feet high, and fourteen Feet long; and there has been sometimes an hundred Weight of Fat taken out of one of them. When any of them are killed and not carried off, the rest eat them;

them; but when they are attacked, and begin to howl, such as are within hearing run to their Assistance, and the old ones will rather suffer themselves to be killed, than desert their Young. The largest are those which are called Water-Bears, which live upon what they can get at Sea, and have been sometimes found fourteen Miles from Shore. The Skins of those Creatures make very comfortable Cloathing for such as travel in the Winter, and are dressed at *Spitzbergen*, by treading them in hot Sawdust.

The Deer in *Greenland* are grey and shaggy in Spring, afterwards of a dusky Colour, with cleft Feet, and Horns like a Hart, or Elk. They have three or four Branches on each Side, about two Inches broad, and a Foot long; their Ears are long, and their Tails short. By feeding upon the yellow Moss, they grow so very fat in three Months, that they cut sometimes four Inches deep on the Ribs, which enables them to hold out during the Winter; and yet many of them are starved, and in the Spring they are all very lean. At the Sight of a Man they fly; but, if he stops, they stop too, and this gives an Opportunity for shooting them. Their Flesh is exceeding good roasted. There are Foxes here of various Colours, and prodigious Numbers of Seals, or Sea-dogs, and Sea-horses, which are the same that, in the *South-Seas*, are called Sea-lions; Animals which we shall hereafter describe. There are very few Land Fowl; but of Water Fowl abundance, yet none so curious as to merit a Description here.

18. As for the Fish on this Coast, they deserve Notice, because the taking them is the sole Motive that brings Ships into those Seas, where the Whale-fishing is carried on with great Profit. The true large Whale differs from the rest of the Fish so called by his having no Teeth, instead of which, on each Side of the upper Jaw, grows the Whale-bone, in four or five hundred different Blades, at equal Distances, some exceeding twelve Feet in Length, and a Foot broad at Bottom, growing narrow upwards, like the Sticks of a Fan inverted, the largest of them weighing about twenty Pounds.

He contracts and dilates the Distances of those Blades at the shutting and opening his Mouth, making them serve as Strainers, to separate the Water from the Shrimps, Prawns, and such small Fish as his Food consists of; and, for the same Purpose, on the Inside of the Bone, next the Tongue, grows a Quantity of Hair, to make still a finer Percolation, which is the more necessary, because, notwithstanding the Bulk of a Whale's Body, the Throat of the largest is not above a Foot wide. His Bones are hard, like those of four-footed Beasts; but, instead of having one large Cavity in the Middle, are porous, and full of Marrow. His Eyes measure about six Inches over, with Eye-lids and Hair like a Man's. His Belly and Back are quite red; his Flesh is coarse and hard, like that of a Bull, mixed with many Sinews, and is very dry and lean, because the Fat lies between the Flesh and the Skin. The Fat is mixed with Sinews, which holds the Oil as a Sponge does Water; the other strong Sinews are about the Tail, with which he turns and winds himself, as a Ship is guided by a Rudder.

He swims as swift as a Bird flies, and makes a Track in the Sea like a large Ship under sail. Besides the uppermost thin Skin, there is another almost an Inch thick; but neither of them are very strong, which is believed to be the Reason why the Whale does not exert that mighty Force that might be expected from a Fish of its Size. They are mightily tormented with Lice, which makes them sometimes spring out of the Sea in an Agony. It is also believed they feel great Pains in their Bodies before a Storm, which makes them twist and tumble violently while the Wind blows from the East; but, notwithstanding their violent Agitation, they are naturally very timorous. The middle Sort of them are from fifty to sixty Feet long, and yield from seventy to a hundred Barrels of Blubber; though sometimes they are much larger. *Martens* mentions one that yielded a hundred and thirty Hogsheads. This Blubber lies immediately under the Skin; they cut it into thin Slices, which are put into hot Coppers. The Oil soon melting out, the Skin is thrown away. The Tail

serves for a Chopping-block, upon which they cut the Blubber before it is boiled. The Manner of taking the Whale deserves a particular Description.

19. As soon as the Fishermen hear a Whale blow, they cry out, *Fall, fall!* And then every Ship gets out its Long-boat, in each of which there are six or seven Men; they row till they come pretty near, then the Harpooner strikes him with his Harpoon, which is a sharp Iron, resembling the Head of an Arrow, fixed to a Stick; and this requires great Dexterity. Through the Bone of his Head there is no striking; but, near his Spout, there is a soft Piece of Flesh, into which the Iron sinks with Ease. As soon as he is struck, they take care to give him Rope enough; for otherwise, when he goes down, as he frequently does, he would inevitably sink the Boat: and this Rope he draws so quick, that, if it were not well watered, it would set the Boat on fire. The Line fastened to the Harpoon is six or seven Fathom long, and is called the Forerunner. It is made of the finest and the softest Hemp, that it may slip the easier. To this they join a Heap of Lines, of ninety or a hundred Fathom each; and, when there are not enough in one Long-boat, they borrow from another.

The Man at the Helm observes which Way the Rope goes, and steers the Boat accordingly, that it may run exactly out before; for the Whale runs away with the Line as fast as the Wind, and would overturn the Boat if it were not kept strait. When the Whale is struck, the other Long-Boats row before, and observe which Way the Line stands, and sometimes pull it: If they feel it stiff, it is a Sign the Whale still pulls in Strength; but if it hangs loose, and the Boat lies equally high before and behind upon the Water, they pull it in gently, but take Care to lay it so that the Whale may have it easily again, if he recovers Strength. If he runs out one Level, as he sometimes does, they take Care not to give him too much Line, because he sometimes intangles it about a Rock, and so pulls out the Harpoon. The fat Whales do not sink as soon as dead, but the lean ones do, and come up some Days afterwards. They begin to stink as soon as they expire, and their Flesh ferments, creating such a Steam as inflames weak Eyes. When they see him spout out Blood, they know that he draws towards his End, and then prepare for cutting him up. In order to this, they hawl him close to the Ship-side, and with great Knives slice his Sides, raising the Blubber by a Hook and a Pulley, which they lift up as they cut. Many of these great Flakes they string upon a Rope, and so drag them on Shore, where they are heaved up by a Crane laid upon the Whale's Tail, and chopp'd into small Pieces; afterwards hew'd into Pieces no bigger than Trenchers, and so thrown into Coppers; and as soon as they become brown, are called Fritters, taken out, and cast away.

The Liquor is then laded out into a Boat half full of Water to cool and cleanse it; and thence, by long Troughs, that it may be more cool, conveyed into Hogheads close to the Shore. In the mean time the Head is cut off, and drawn as near as can be to the Shore, and hoisted up by a Crane till the Whale-Bone is cut out, and tied up by Fifties, and then the rest of the Head is boiled for Oil. The Tongue, which in its Figure resembles nearly that of a Wool-Pack, is craned up with great Care: That of a large Whale will weigh about eight Ton, and will yield from six to eleven Hogheads of Oil, tho' there have been Instances of their yielding twenty-four Hogheads; but this is look'd upon as a Thing very extraordinary. The Ships that use this Trade carry thirty or forty Men, five or six Sloops, and from four-hundred to eight-hundred Hogheads of Blubber. Their Arms consist of sixty Launces, six Sea-Horse Launces, forty Harpoons, ten long Harpoons for striking Whales under Water, six small Sea-Horse Harpoons, and thirty Lines of ninety or a hundred Fathom each.

20. There are in these Seas several other kind of valuable Fish, many of which are looked upon to be of the Whale-kind; of these the most remarkable is the Fin-Fish, which is full as long, tho' not so thick, as the Whale, by two Thirds: He blows Water higher than a

The WHALE FISHERY and KILLING the BEARS.

Whale of his Size, thence called the Trumpeter; his Lips are brown, and twisted like a Rope, and the Whale-Bone hangs to his upper Lip; in Colour he resembles a Tench; and is so nimble, as well as strong, that the Fishermen dare not strike him with a Harpoon near the Ice, because by a sudden Jerk he is able to pull them and the Boat under it. When these Fish come upon the Coast, it is a Sign that the Whales are gone. The Horse-Whale, which is also called the Morfe, the Whalerush, or the Sea-Horse, in Shape resembling the Seal, but in Size is full as big as an Ox; the Head is thick, round, and exceeding strong; the Neck is covered with short Hair, and with a Skin near an Inch thick; upon the rest of the Body the Hair is longer, but the Skin thicker; in their upper Jaw they have two long Teeth, from twelve to twenty-six Inches, which are closer, whiter, and keep their Colour better than any kind of Ivory. This Creature feeds upon Herbs and Fish, and is very bold, making toward the Boat as soon as he is attacked, and endeavouring to overset it, by leaping into it; and when he cannot effect this, he sometimes beats Holes through it with his Tusks. They are not easily killed either with Shot or Blows, and therefore the Seamen usually dispatch them with Launces.

When Whales happen to be scarce, the Oil and Teeth of this Creature make up the Voyage. The Dragon-Fish has two Fins on his Back, and two Holes in his Neck, through which he spouts the Water; his Body is long and thin, his Skin greyish, and glitters like Silver. The Butshopf, or Place-head is another Fish of the Whale-kind, with a Spout-hole in his Neck, his Back brown, his Belly white; in Length from sixteen to twenty Feet: And it is to be observed that they swim along by the Shore-side. The White-fish is as large as the Butshopf, and is very fat. When there is Plenty of these Fish, it is a Sign of a good Whale-Season. The Sea-Unicorn has no Fin upon his Back, but a Spout-hole in his Neck, their Bellies are white; they are from sixteen to twenty Feet long, and are chiefly valued for their long and wreathed Horn, which proceeds from their Snout, and is exceedingly white and firm; which Horn, when they are pursued, they sometimes thrust above Water. His Danish Majesty's Throne is composed entirely of these Horns, which were formerly esteemed as Specifics against Poison. All these Fish swim against the Wind, and are observed to tumble against Storms, which some attribute to their having the Cramp in their Bellies.

The Saw-Fish, or Sword-Fish, is of all Sizes from two to twenty Feet long: He is shaped like a Man's Arm; his Eyes stand high out of his Head; his Sword is sometimes smooth and sometimes ribbed or indented like a Saw. This Creature is by Nature an Enemy to the Whale and Fin-Fish, pursuing them with the greatest Eagerness. A few of them will dispatch a great Whale, and then they eat no part but the Tongue. In calm Weather the Fishermen are often Spectators of the Combat; and when they perceive the Whale dying, they row towards him, upon which the Sword-Fish retreats and leaves his Prey in their Hands. The Hay is another Enemy to the Whale, and of these there are several sorts; they are generally of a grey Colour, and from one to three Fathom in Length. Of all Fish the Hay is the most voracious, for it bites great Pieces out of the Whale, as if they had been dug with Shovels, insomuch that sometimes Fishermen take Whales that have half their Blubber torn away in this Manner. The Liver of this Fish abounds in Oil, and is excessively large. The Flesh of their Back, when dried some Days in the Air, is accounted tolerable Provision either boil'd or roasted, and the less the Fish the better. They are caught by a large Hook, baited with Flesh, and fastened to a strong Iron Chain; and in the Sea, if Men fall over-board by Accident, the Hays in their Turn devour them.

21. There are, besides *Spitzbergen* or *Greenland*, some other Islands in these Seas that deserve our Notice, such as *Cherry-Island*, which lies directly South of *Spitzbergen*, in the Midst between it and the Continent of *Europe*. It was so called in 1603, in honour of Sir *Francis Cherry*, by a Ship's Crew which he had fitted out. There were

for many Years after many profitable Voyages made to this Place, which lies in the Latitude of 74 Degrees and 5 Minutes; and where, in one Season, they made twenty-two Tons of Oil out of the Flesh, and got three Hogf-heads of Morfe's Teeth. In the Year 1610, the *Russian* Company took Possession of it, and that Year they killed a thousand Morfes, and made near fifty Tons of Oil: They likewise discovered three Lead and Coal Mines upon this and the small Islands near it, and found the Country so hot towards the End of the Month of *June*, that the Pitch ran down the Side of their Ship. This Island also abounds with several sorts of wild Fowl and Seals; and there are likewise in it a vast Number of Bears. It does not appear that for the last hundred Years any Ships have visited this Coast.

On the South-East of *Spitzbergen* lies the great Country of *Nova Zembla*, which has been discovered from 58 to 68 Degrees of Latitude. It is very uncertain whether it be an Island, or joined to the Continent; for that which is called the Straights of *Weygatz*, and is supposed to divide this Country from *Russia*, is but a fresh Water Bay. In the *Muscovite* Tongue, *Nova Zembla* signifies New Land. It is a most wretched Country, and yet not altogether destitute of Inhabitants. This Land was first discovered by the *English*, and afterwards frequented by the *Dutch*; and their famous Pilot, *William Barenz*, perished in a Voyage made hither in 1596. Some Maps lately published in *Russia*, say, that this Country is joined to that of the *Sammoieds* by the *Pater-noster* Mountains; and there are some Maps that join it with *Spitzbergen* or *Greenland* on the North. However, all this is very uncertain at least, and I think very improbable. The *Dutch*, who winter'd therein, assert, that this Country produces neither Leaves nor Grass; but Mr. *Hudson*, who visited it in the Summer, says, The high Land was very green and pleasant, on which he saw large Herds of Deer grazing. Farther Discoveries are expected from the Industry of the *Russians*, who have already made great Progress in their Searches on this Side.

John Mayens Island, as the *Dutch* call it, lies to the South-west of *Spitzbergen*; it lies from South-west to North-east; the Extremity of it is in the Latitude of 71 Degrees 23 Minutes. There were formerly abundance of Whales in the Sea which wash the Shore of this Island, but their being removed farther northward, is the Reason that this Island is in a Manner forsaken: There is a Mountain towards the northern Part of it, which extends quite across the Island: It is of a prodigious Height, and absolutely perpendicular, being discernable thirty Miles off, at Sea; *Beerenbergen*, i. e. Bear-mountain, from the prodigious Numbers of those Creatures that have been seen upon it; there are several good Bays, the Names of which I need not set down, because, they are no longer visited. This Coast, though it is allowed that the Land is habitable, and abounds with Stone, Fish, and in all Kind of Deer, is forsaken. The greatest Inconveniences attending the Navigation thereabout, is the vast Quantities of Ice which float on all Sides, but especially towards the East, where, in the Spring, it is absolutely inaccessible.

The many Hardships and Difficulties to which People are exposed in Voyages to these Places, and the many Losses and Misfortunes that happened to such as were employed in the Fisheries upon these Coasts, brought them into Discredit with us, and by Degrees occasioned their being totally deserted, notwithstanding the great Pains that had been taken to promote these Discoveries originally; yet it is very certain, that the Confusions which happened here, in the Time of the Civil War, contributed not a little to check Endeavours of this sort; and one may very safely affirm, that those unhappy Times were very prejudicial to our Navigation, by confining Mens Thoughts and Endeavours to Things of immediate Profit which are soon worn out, and diverting them from Discoveries which, how hard and difficult soever, in the Beginning, commonly turn in the End to the greatest Account. Thus we were brought by Degrees to abandon these Northern Expeditions, as dangerous, useless, and unprofitable, though we had several Advantages over other Nations;

Nations; and from persisting in which the *Dutch* have actually raised one of the most considerable Branches of their Commerce; for such, next to their Herring, the *Greenland* Fishery is esteemed, and very justly too, as shall be fully shewn in its proper Place. This Advantage however may be said to have resulted to us from these Discoveries, that it has given us an indubitable Right to resume and pursue them whenever it shall be judged necessary or expedient; and perhaps there may come a Time when this will be thought an Undertaking worthy of Encouragement.

Cherry Island, before-mentioned, lies in the Latitude of 74 Degrees; the Weather in *June*, *July*, and *August*, is not only warm, but extremely hot, so that, in 1610, the melted Pitch is said to have run down the Ship-sides. In this Island there are both Lead and Coal Mines, and in the Season of the Year a very profitable Fishery might be carried on there; perhaps too, greater Advantages might be found out by leaving People to winter in that Island, which is very well seated for Discoveries. But it may be said, that this can never be attempted, because there is no Reason to imagine that any *English* would be prevailed upon to stay in such a miserable Place. But to this I answer, That two Things ought to be considered; the first is, that *Cherry Island*, in all Probability, cannot be a worse Place than some of the Factories belonging to the *Hudson's Bay* Company; where some People actually reside at no very considerable Expence; and that in the Compass of a Year, we have many condemned in *England* that, either from the Nature or Circumstances of their Crimes, are very justly held to be no fit Objects of Royal Mercy; but if such Persons would make it their Choice to go and winter in this Island, in order to obtain their Pardon, in case they survived, it might turn to the Advantage of their Country. And I do not doubt, if the Profits that might be probably acquired by a regular Voyage thither every Year were clearly stated, there would be People enough found willing to furnish the Expences necessary for recovering this Trade, which in a few Years would become equally beneficial to them, and to their Country in general. I hint this Matter here for the Employment of their Thoughts, who have a truly public Spirit, and would be glad to see any thing attempted that may encourage Industry, promote our Navigation and encrease our Commerce. I shall add but one thing more upon this Head; which is, that so long ago as King *Ælfred*, the Founder of our naval Force, these Seas were visited, and a very profitable Fishery carried on; and therefore I can see no Reason why we should suppose that it is impracticable now; and if not impracticable, why it may not be attempted with reasonable Hopes of Success, by the present Generation: We consider ourselves as much more knowing, and at the same time as much more powerful, than our Ancestors were in those Days, and therefore it ought to be thought scandalous in us, to fall short of them in Industry, which every one must acknowledge to be the Case, when Branches of Commerce which were enjoyed by them are lost to us, and that Loss too absolutely unregarded.

22. We are very far from having any Certainty that *Greenland* is united, on the East, to any other Country whatever: Some have imagined that it was joined to *Nova Zembla*, but the Discoveries made by the *Dutch* in 1670, have disproved this; for they advanced a great way behind the last-mentioned Country, and found nothing but Snow and Ice. In order therefore to give some Account of the Arctic Regions lying next to *Greenland* on this Side, we must have Recourse to the Expeditions made for Discovery from *Japon*. We have, in our former Volume, given some Account of the Land of *Yedzo*, or *Jesso*, which lies to the North of the great Island of *Nippon*, which is the largest of those known to us by the general Name of *Japon*, and from which it is most probable that Word was framed. The *Japonefe* are very bad Sailors, and consequently have not been able to make any great Discoveries on that Side. Our Countryman Mr. *William Saris*, of whom I have given the best Account I was able, in the former Part of this Work, had a Commission from the Government of

Japon to make Discoveries on that Side; but it does not appear that he had any Opportunity of executing this Commission; if he had we should probably have had a better Account of this Country than we have at present, or indeed are ever like to have, in consequence of any Discoveries made from *Japon* by the Natives.

This Commission was granted to Mr. *Saris* in the Year 1613; and about seven Years after, Father *Angelis*, a *Sicilian* Jesuit, actually went thither to plant the Christian Faith, and from him we had the first tolerable Account of this Country. Some other Missionaries followed him, and from their Accounts it appeared, that *Jesso* was neither a very excellent nor a very despicable Country, in some Things very far short, in others rather better, than *Japon*. The Climate they found to be very cold, but withal very wholesome; the People less sprightly, but much honefter, than the *Japonefe*; the Produce of the Place they found not much to be boasted of, but as they came to be better acquainted with it, they were well informed that it was very rich in Silver Mines, and that prodigious Quantities of this precious Metal were yearly transported to *Japon*; notwithstanding which the Traders from this Country brought those People, annually, considerable Quantities of silver Ear-rings, and other Toys; for which they paid a high Price. I mention this Circumstance because some of the *Portuguese* Writers would persuade us, that because silver Rings are brought from *Japon* to *Jesso*, there can be no Silver Mines in the last-mentioned Country; whereas, by comparing the original Authors, from whom they take their Accounts, it is very evident that the Fact is as we state it; neither is there any thing strange in it; for in *Mexico*, where Silver is the principal Commodity, Silver-Toys, and indeed all sorts of wrought Plate, sell very dear.

These Missionaries however deliver it as their Opinion, that the Country of *Jesso* is an Island, which agrees very well with the *Japonefe* Accounts; but then they distinguish better the *Upper* and *Lower Jesso*; the latter they make an Island, the former a Continent, the Northern Parts of which they say are not discovered, that is, they are not known to the *Japonefe*; but, as we shall shew hereafter, they are not only known, but have been conquered by the *Russians*, who have extended their Empire to the Frontiers of that of *Japon*, if we allow the Country of *Jesso* to make a Part of the *Japonefe* Dominions; and that it is really dependent upon the Empire of *Japon*, is no longer to be questioned.

But it is now time to speak of the *Dutch* Discoveries on this Side; and in order to have a clear Notion of these it is requisite to observe, that the *Dutch East India* Company, after they had established themselves in the Island of *Formosa*, and had settled their Commerce in *Japon*, began to think that it would contribute greatly to the Advancement of their Affairs, if they could find a nearer Passage into *Europe* from those Countries, and therefore they determined to try whether a North-west Passage might not be found on that Side, which would have been the same Thing as finding a North-east Passage from *Europe*. In 1643, the Company fitted out from *Batavia* two Sloops for this Discovery; the first was called the *Buskins*, commanded by Capt. *Henry-Cornelius Schaep*; the other, the *Castricoom*, under the Orders of *Martin Heritszoom Van Uriez*. The Instructions that the Commanders received were, that they should sail on the most Northern Point of the Island of *Japon*, and from thence to the Height of 56 Degrees; but the former of these Vessels being separated from the latter in a Storm, and obliged to seek for Shelter in one of the Ports of *Japon*, there was an End of their Expedition, it being seized, and the Crew made Prisoners; but Capt. *Uriez*, in the *Castricoom*, continued his Voyage, and made those Discoveries which will render his Name immortal. In the Latitude of 42 Degrees he discovered Land, and sailed to the Height of 43 Degrees, along a Coast which was tolerably well peopled, and landing several times, was informed by those People, that there were several rich Mines in their Neighbourhood.

As he sailed higher, he found the Country mountainous, covered with very high Trees, and, as the People informed him, abounding with Silver Mines; he called the

the higheft of the Mountains *Pico Antonio*; and tells us farther, That the Country thereabouts was very like that of *England*, that is to fay, a rich Clay, covered with Grafs and Herbs, and at a Distance he faw very wide Downs. There is no fort of Doubt, that this was the East Coaft of the Continent of *Jeffo*. He proceeded from thence through a Gulph, which in the Latitude of 55 Degrees 50 Minutes difcovered itfelf to be a Streight about fourteen Leagues, or fomewhat more than forty of our Miles broad, in the Midft of which was an Ifland, and two vaft Continents on each Side. He called the Ifland *States Land*; the new difcovered Continent, *Company's Land*; and to the Streights he gave his own Name, which they have ever fince borne, and thefe are the famous Streights of *Uriez*; which are fuppofed to divide the Continent of *Asia* from that of *America*; the Land of *Jeffo*, which belongs to *Asia*, lying on the Left-hand, and *Company's Land*, which is fuppofed to be Part of *America*, on the Right.

If this Notion be well founded, then the Country between *California* and the Streights of *Uriez*, comprehends no lefs than 80 Degrees of Longitude, and is confequently one thoufand fix hundred Leagues in Extent. The Account that Capt. *Uriez* gives of *States Ifland* is, that it is full of high Mountains, the Tops of which are covered with Rocks, without Trees or Grafs: He gives us a large Description of the Country on the Left-hand, which is the Land of *Jeffo*; but I do not find that he landed upon the *Company's Land* at all, or made any farther Discoveries about it; we muft therefore confine ourfelves at prefent to this Land of *Jeffo*, with which the *Muscovites* have brought us better acquainted; for they, by travelling from *Siberia*, have difcovered that, in the Latitude of 59 Degrees, there is a Gulph which feparates the Continent of *Great Tartary* from a Peninfula, which they call the Country of *Kamtschatka* which extends from the 42d Degree of Latitude, which is the moft fouthern Part of the Continent of *Jeffo*, to 65 Degrees 30 Minutes, and there is bounded by the Ocean.

This Country is divided from the Peninfula of *Corea* and *Great Tartary*, by a Gulf of its own Name, and from *Company's Land* by the Streights of *Uriez*; fo that we need be in no farther Perplexity about the Land of *Jeffo*, fince it appears plain to be the fouthern Extremity of this vaft Country, of which the *Ruffians* are in a great meafure Mafters, and actually navigate that great Sea which feparates *Asia* from *America*, in which they have difcovered large Iflands, well peopled, and abounding with various rich Commodities.

All thefe Discoveries plainly fhew what vaft Advantage would accrue to the maritime Powers, if a Passage to the North-eaft were practicable; and perhaps, whoever confiders thefe Discoveries attentively, will be apt to think it might be done, more efpecially when it is remembered that the *Dutch*, who were employed in 1670, in endeavouring to find a North-weft Passage, advanced within a very few Degrees of that open Sea which is commonly navigated by the *Ruffians*, and which had infallibly brought them to the Coafts of *Japon* and *China*; fo that it feems equally ftrange that in former Times, when there was no Sort of Knowledge in our Part of *Europe*, of the Vicinity of thefe Countries to the *Ruffian* Dominions, fo many Attempts fhould be made (as will appear hereafter) to the North-eaft, and that none at all fhould be made now, when there is a kind of moral Certainty that fuch a Passage might be difcovered.

The only fatisfactory Reafon that, as I apprehend, can be given is, the *Dutch* are now of Opinion, that the Difcovery of a North-eaft Passage, or indeed of any other Passage to the *Indies*, except that by the *Cape of Good Hope*, would be extremely prejudicial to them, and therefore think no more of it; and as we are generally governed in our Notions of Things by what the reft of the World thinks, we likewife have quitted all Thoughts of finding fuch a Passage; but the Confideration of this Matter belonging properly to another Place, we will fay nothing more of it here, but proceed to the proper Bu-
fines of this Section.

23. That there is fome Country or other between *Cal-*

ifornia and *Japon*, is a Point I believe no reasonable Man ever doubted, though it muft be confefled, that no fuch Country has been ever hitherto clearly difcovered: I fay, clearly, becaufe fome obfcure Hints we have both of Continents and Iflands within the Extent before-mentioned. I have, in fome *Spanifh* Authors, met with an Account of one *Frederick de Gama*, who in paffing from the *Philippines* to *Mexico*, difcovered in a high Latitude a very fine Country, along which he failed for a few Days together, and if I am not miftaken, there are in fome *Spanifh* Charts the Coafts of this Country laid down; but as it is many Years ago fince I faw thefe Charts, I cannot take upon me to fpeak of this Matter with any Degree of Certainty. I muft however obferve, that there is no great Weight in the Objection commonly made to this Suppofition, as if the *Spaniards* muft certainly have difcovered thefe Countries, or fome of them at leaft in their *Acapulco* Ships, and this for two Reafons; firft, becaufe it is certain they really have difcovered feveral Iflands; and next, becaufe for the fake of an expeditious Passage, they fail in too low a Latitude for making any of thefe Discoveries that we expect, fince, I think, it is not probable that any Part of the Country between *Asia* and *America* lies farther to the South than forty-five Degrees, and confequently is not within their Rout from the *Philippines*: but we are not entirely deftitute of Accounts relating to thefe Countries, though it muft be confefled they are not fo diftinct and clear as we could wifh, yet, fuch as they are, the Reader will very probably be glad to fee them, and it is our Bufinefs to give them.

The firft that occurs is from the Account published by Dr. *Cox*, in his *Description of the Province of Carolina*, of which he looks upon himfelf as the Proprietor, in virtue of feveral Grants from the Kings of *England*, the Validity of which I am fure I fhall not difpute; and which takes in all, or the greateft Part, of the *French* Settlements on the *Missiffippi*. The Defign of the Doctor's Book is to fhew the Importance of this Country to the Crown of *Great Britain*, which I think he has unqueftionably made out, and in the fifth Chapter thereof he gives us a very large Account of a Part of that Country now under our Confideration, and therefore we fhall make no Scruple of inserting it here for the Reader's Perufal, who will very probably find many Things therein not eafy to be credited, but which, notwithstanding, deferve to be known and examined, and which certainly ought not to be abfolutely exploded, till by fome kind of pofitive Evidence the Facts he afferts are actually difproved.

“ It will be one great Conveniency of this Country,
“ if ever it comes to be fettled, that there is an eafy
“ Communication therewith and the South-Sea, which
“ lies between *America* and *China*, and that two Ways.
“ By the North Branch of the great yellow River, by
“ the Natives called the River of *Massorites*, which
“ hath a Courfe of five hundred Miles, navigable to its
“ Heads or Springs, and which proceeds from a Ridge
“ of Hills fomewhat North of *New Mexico*, paffable
“ by Horfe, Foot, or Waggon, in lefs than half a Day;
“ on the other Side are Rivers which run into a great
“ Lake that empties itfelf, by another great navigable
“ River, into the South-Sea. The fame may be faid
“ of the River *Mifchaouay*, up which our People have
“ been, but not fo far as the Baron *le Hontain*, who
“ paffed on it above three hundred Miles almoft due
“ Weft, and declares it comes from the fame Ridge
“ of Hills above-mentioned; and that divers Rivers
“ from the other Side foon make a large River, which
“ enters into a vaft Lake, on which inhabit two or three
“ great Nations, much more populous and civilized
“ than other *Indians*. And out of that Lake a great
“ River difembogues into the South-Sea, which is,
“ doubtlefs, the fame with the before-mentioned, the
“ Head of the two Rivers being little diftant from each
“ other.

“ About twelve or fourteen Years fince, I had im-
“ parted unto me a Journal, from a Gentleman ad-
“ mirably well skilled in Geography, efpecially of *Ame-*
“ *rica*; who had made thither divers Voyages from
“ *New*

“ *New England*, and all our *English* Plantations in *America*, and visited most Parts of the Gulph of *Mexico*; where he became acquainted with one Captain *Coxton*, a famous Privateer, who, towards the latter End of the Reign of King *Charles II*, was entertained in his Majesty's Service. But whether he was disabled, or his Genius prompted him to follow his old Trade, having with his Carpenters fitted up a Ship of twenty-six Guns, he sailed to the South-Sea, with a Design to take the Ship which comes annually from the *Manillas*, or *Philippine Islands*, in the *East-Indies*, to *Acapulco*, the chief Port of *Mexico*; which Ship, as he had been well informed, usually made that Part of the Continent that lies between *Japon* and *America*, at a famous Point in 42 Degrees; but when he came to the Head of the Island, or *Peninsula* of *California* (it being too soon, by some Months, for the putting in Execution his intended Design) rumaging the Coast, he discovered a great River in about — Degrees North Latitude, which entered a great Lake near the Mouth, whereof he found a very convenient Island, where he staid two or three Months to refit himself, happening to have a Man aboard who understood the Language of the Country.

“ The Natives finding he was engaged in Expeditions against the *Spaniards*, treated him very kindly, supplying him very chearfully with whatsoever he wanted, and he contracted great Friendship with them: He calls them the Nation *Thoya*. The *Spaniards*, as I find, in divers of their Expeditions, call it *Theyago*, sometimes *Tejago*; they are often at War with the *Spaniards*, who have been always repulsed by them. They bring thirty or forty thousand Men in one Body into the Field. These, and two other neighbouring Nations, not much inferior unto them, are accounted the most sensible and civilized *Indians* in *America*. When the Season came fit for their Expedition, they sailed West by South, and happened to stop, upon some Occasion, at an Island called *Earinda*, or *Carinda*; there were five in all near each other, like the *Canary Islands*, but lay rounder, and were thought, one with another, about fifty or sixty Miles in Compass. The Inhabitants were not shy of them, but supplied them with Provisions, and brought them Gold to barter, for such Commodities of ours as they liked, and in three or four Days, they purchased eighty-six Pound Weight of that Metal. The Natives told them they were sorry they had no more. They taking Care to provide only against a certain Time of the Year, for Persons who come from the Sun-setting, at a particular Season, and bartered divers Commodities with them for Gold.

“ These Traders, or Merchants, must certainly be the Inhabitants of *Japon*, which I gather from a large Relation in the History of that Island, published by the *Dutch*, and translated into our Tongue, and makes the sixth Volume of *Ogleby's* Collections. They therein declare, That they sent from *Batavia* two Ships (as they pretended) to discover a Passage for the North-east Part of *Japon*, round *Tartary*, to *Europe*, though 'tis very probable they had other Views. Those Ships were separated a little East of *Japon*, by a Storm; the *Castricoom* proceeded, and found the Streight entering into the Gulph of *Tartary* or *Jesso*, and searched the Gulph on the West-side to 49 Degrees. The other Ship, the *Bleskins*, having suffered much by the Storm, put into the Port of *Nambo*, near the North-east End of *Japon*, not doubting they should be kindly received, being in League, and having a free Trade with their Empire; but while they were refitting, they were unexpectedly surprized by the *Japoneses*, sent to Court, and very strictly examined, whether they had not been at, or went not to discover, the Gold Islands, as they called them, lying to the East, of which the Emperor is so jealous, that it is capital for any to go thither without his Permission, or to declare to others the Distance and Situation of them; and had not the *Dutch* given uncontrollable Evidence, that they had

“ not been, nor were they going thither, but only upon the forementioned Discovery, they had been all executed.

“ There are, upon the Coast, between *America* and *Japon*, divers very large and safe Harbours, and a very good Climate; the Coast stretching South-west mostly from 40 to — Degrees of North Latitude. The Seas abounding with Fish, and the Land with Fowls and Venison; the Inhabitants are sociable and hospitable. I have a Draught and Journals of all the Coasts from *America*, with those of diverse Harbours, until you are within about one hundred Leagues of the Streight of *Uriez*, which the *Dutch* discovered about sixty or seventy Years since; and which is the Entrance of the Sea or Gulph of *Tartary*, lying one hundred and twenty Leagues North-east from *Namboe*, the most Northerly Haven or Promontory of *Japon*. This Streight, or rather these Streights (there being two made by a long Island) are the Inlets into a great Sea or Bay, into which disembogue a vast River on the West-side of it, between 49 and 50 Degrees of North Latitude; navigable many hundred Miles, by the biggest Ships, and is made by the Conflux of many large Rivers, some of which come from the South-west, as *Chingola*, *Hiluras*, *Ola*, *Sungoro*, and their Fountains near the great Wall of *China*, and run through the Dominions of the Eastern *Tartars*, who are now Masters of *China*. Other Rivers from the North-west, proceed from the Territories of the *Czar* of *Muscovy*, who hath built divers large and well fortified Cities, on the main River of *Tamour*, and several of its Branches, as *Negovim*, *Nepelhou*, *Albazin*, *Argun*, *Nettinskoy*, &c.

“ This River of *Tamour*, or *Amura*, hath a Course from its furthest Fountains above one thousand two hundred Miles, without any Interruption by Cataracts, so frequent in all the other great Rivers in *Muscovy*, as the *Oby*, *Jeneseeg*, or *Jenescsa*, &c. By this River you may trade with the Inhabitants of *Jedso* for Furs, who have great Store, and those very rich; they inhabit all the Coast on both Sides the Mouth of the River, and a considerable Way up it. You may likewise traffic with the *Muscovites* for the same Commodities, who sell them there for a fourth Part of what they yeild in *Moscow*, or *Archangel*; these Parts being above 40 Degrees almost due East from *Moscow*, their capital City, a most prodigious tedious and difficult Journey, as appears by divers large and accurate Journals, which have been many Years published in Print; and by means of the Rivers which come from the South-west, you may correspond with the Eastern *Tartars*, *Chinese*, and the great rich Kingdom of *Tanguth*, all now united under one and the same Emperor, being very civilized Nations, and kind to Strangers. To say nothing of the great and rich *Peninsula* of *Corea*, which is contiguous to one or two Branches of this River, was once a Province of *China*, hath the same Manners and Language, and is now tributary to the present Emperor. This River, and its Branches, are in a good Climate; it never varying above two or three Degrees from a due easterly Course. Three or more Ships may be sent every Year, who may part at the Streights of the *Tartarian Gulph*, or Sea; one for *Jedso* and the River, another for *Japon*, and a third for *North China*, to the great City *Tunxo*, and the Port of *Pekin*, the Capital of that Kingdom, from which it is not above one Day's Journey by Land or Water; and there is not a better Commodity, or of which more Profit may be made, than of the Furs, which are so easily procured, and so soon brought into that imperial City, where, in the Court, and among the *Grande*s, there is a prodigious Consumption of them, and most extravagant Prices given for them, especially those of the better Sort, though even the meanest come to an extraordinary good Market.”

It must be confessed that there are some very strange and singular Passages in this Relation, to which some Objections might be made; but, however, I think it better to pass these by at present, that we may bring in all

all our Observations at once; so as that they may assist and give Light to each other, and render the Subject upon the whole more intelligible. I shall therefore proceed to another very curious and entertaining Relation, published many Years ago, and since revised; and some Remarks added by the ingenious Mr. *Dobbs*, to whom his Country is so much obliged for the Pains he has taken to revive the Concern taken for, and Endeavours to find out, a North-west Passage. This Narrative is very clear in itself, and there is therefore no Sort of Necessity that we should trouble the Reader with any farther Introduction; only it may be right to observe, that it relates also to that Part of the Northern World of which we are now speaking.

The Viceroy of *New Spain* and *Peru*, having Advice from the Court of *Spain*, that the Attempt for the finding a North-west Passage, which had been tried before by *Hudson* and *James*, was again attempted in 1609, by some industrious Navigators from *Boston* in *New England*, Admiral *de Fonte* received Orders from *Spain*, and the Viceroy, to equip four Ships of Force; and being ready to put to Sea the 3d of *April*, 1640, from *Lima*; the Admiral in the Ship *Spiritus*, the Vice-Admiral, *Don Diego Penelosa*, in the *St. Lucia*, *Pedro de Bernarda*, in the *Rossaria*, and *Philip de Ronquillo*, in the *King Philip*, the 7th of *April*, at five in the Evening, he got to *St. Helen*, in 2 Degrees South Latitude, where he took in a Quantity of Bitumen or Tar, by way of Medicine against the Scurvy and Dropsy. The 10th he passed the Equinox at *Cape del Passao*, the 11th *Cape St. Francisco*, in 1 Degree 7 Minutes North Latitude, and anchored at the Mouth of the River *St. Jago*, and took in there several Refreshments. The 16th he sailed from thence to the Port and Town of *Ralco*, three hundred and twenty Leagues West-north-west, Westerly about 11 Degrees 14 Minutes North Latitude. It is a safe Port, covered from the Sea by the Islands *Ampallo* and *Mangreza*, both well inhabited by *Indians*. *Ralco* is but four Miles over Land to the Head of the Lake *Nicaragua*, that falls into the North Sea, in 12 Degrees North Latitude, near the *Corn* or *Pearl Islands*; here being plenty of fine Timber, he bought four Shalops, built expressly for sailing and rowing, about twelve Tons each, and thirty-two Feet in the Keel.

The 26th he sailed from thence to *Saragua*, within the Islands and Sholes of *Chamilly*, in 17 Degrees 31 Minutes North Latitude, four hundred and eighty Leagues North-west by West from *Ralco*. From *Saragua*, and *Compostello*, near this Port, he took in a Master, and six Mariners used to trade on the East-side of *California* for Pearl; which the Natives catch on a Bank in Latitude 29 Degrees, North from the *Baxas St. Juan*, in 24 Degrees North Latitude, twenty Leagues North-north-east from *Cape St. Lucas*, the South-east Point of *California*. The Master the Admiral had hired, with his Vessel and Mariners, informed him that two hundred Leagues North from *Cape St. Lucas*, a Flood from the North had met the South Flood, and he was sure it must be an Island. *Don Diego Penelosa*, undertook with his Ship and four Shallops, to discover whether *California* was an Island or not, along with the Master and his Mariners, they hired at *Saragua*; but Admiral *de Fonte*, with three Ships, sailed from them, within the Isles of *Chamilly*, the 10th of *May*, 1640; and having got the Length of *Cape Abel*, on the West-south-west of *California*, in 26 Degrees North Latitude, one hundred and sixty Leagues North-west by West from the Isles of *Chamilly*, the Wind sprung at South-south-east a steady Gale; that from the 26th of *May*, to the 14th of *June*, he had sailed to the River of *Rays*, in 53 Degrees North Latitude, not having Occasion to lower a top Sail in sailing eight hundred and sixty-six Leagues North-north-west, four hundred and ten Leagues from *Port Abel* to *Cape Blanco*, and four hundred and sixty-six to *Rio los Reys*, and sailed two hundred and sixty Leagues in crooked Channels, amongst the Islands, named the *Archipelago de St. Lazarus*, where the Ship's Boats always sailed a Mile a-head, sounding to see what Water, Sand, and Rocks there were.

The 22d of *June* Admiral *de Fonte* dispatched one of

his Captains to *Pedro de Bernarda*, to sail up a fair River, a gentle Stream, and deep Water; he went first North-north-east, and North-north-west, into a large Lake full of Islands, and one very large *Peninsula*, full of Inhabitants, a friendly honest People in this Lake. He named it *Velasco*, where Captain *Bernarda* left his Ship, nor all up the River was it less than four, five, six, seven, and eight Fathom Water; both the Rivers and Lakes abounding with Salmon, Trouts, and Whale-Pearch, very large ones, some two Foot long; and with three large *Indian* Boats, called *Piraguas*, made of two large Trees, fifty and sixty Foot long, Captain *Bernarda* first sailed from his Ships in the Lake *Velasco*, one hundred and forty Leagues West, and then four hundred thirty-six East-north-east, to 77 Degrees North Latitude. Admiral *de Fonte*, after he had dispatched Captain *Bernarda* on the Discovery of the North and East Part of the *Tartarian* Sea, sailed up a very navigable River, which he named *Rio los Reys*, that ran nearest North-east, but on several Points of the Compass, sixty Leagues at low Water, in a fair navigable Channel, not less than four or five Fathom Water; it flowed in both Rivers near the same Water, in the River *los Reys*, twenty-four Foot, full and change of the Moon, a South-south-east Moon made high Water; it flowed in the River *de Haro* twenty-two Feet and a-half, full and change.

They had two Jesuits with them, who had been on their Mission to 66 Degrees North Latitude, and had made curious Observations. The Admiral *de Fonte* received a Letter from Captain *Bernarda*, dated the 27th of *June*, 1640, that he had left his Ship in the Lake *Velasco*, betwixt the Island *Bernarda*, and the Lake *Conibasset*, a very safe Port; he went down a River from the Lake, three Falls, eighty Leagues, and fell into the *Tartarian* Sea, in 61 Degrees with the Pater Jesuits, and thirty-six Natives, in three of his Boats, and twenty of his *Spanish* Seamen; that the Land trended away North-east; that they should want no Provisions, the Country abounding with Venison of three Sorts, and the Sea and Rivers with excellent Fish (Bread, Salt, Oil, and Brandy, they carried with them); that he should do what was possible. The Admiral, when he received that Letter, was arrived at an *Indian* Town called *Conassset*, on the South-side of the Lake *Belle* (where two Pater Jesuits, on their Mission, had been two Years) a pleasant Place. The Admiral, with his two Ships, entered the Lake the 22d of *June*, an Hour before high Water, and there was no Fall or Cataract, and four or five Fathom Water, and six and seven generally; in the Lake *Belle* there is a little Fall of Water till half Flood, and an Hour and a Quarter before high Water the Flood begins to set gently into the Lake *Belle*. The River is fresh at twenty Leagues Distance from the Mouth or Entrance of the River *los Reys*. The River and Lake abound with Salmon, Salmon-Trouts, Pike, Perch, and Mulletts, and two other Sorts of Fish, peculiar to that River, admirable good; and Lake *Belle* also abounds with all those Sorts of Fish, large and delicate; and Admiral *de Fonte* says, the Mulletts, caught in *los Reys* and Lake *Belle*, are much delicater than are to be found in any other Part of the World.

The first of *July*, 1640, the Admiral sailed (from the Ships in the Lake *Belle*, in a good Port, covered by a fine Island, before the Town *Conassset*) from thence to a River he named *Parmentiers*, after his Comerade Mr. *Parmentiers*, who had exactly marked every thing in and about that River, and passed eight Falls, in all thirty-two Feet, perpendicular from its Source; out of Lake *Belle* it falls into the large Lake he called Lake *de Fonte*, at which Place he arrived the 6th of *July*. This Lake is one hundred and sixty Leagues long, and sixty broad; the Length is East-north-east, and West-south-west, twenty, thirty, and in some Places sixty, Fathom deep. The Lake abounds with excellent Cod and Ling, very large and well fed; there are several very large Islands, and ten small ones; they are covered with shrubby Woods, the Moss grows six or seven Feet long, with which the Moose, a very large Sort of Deer, are fat in the Winter, and other lesser Deer, as fallow, &c. There are abundance of wild Cherries, Strawberries, Hurtle-

Berries, and wild Currants, and also of wild Fowl, Heath-Cocks and Hens, likewise Partridges and Turkeys, and Sea-Fowl in great Plenty. On the South-side of the Lake is a very large, fruitful Island, which had a great many Inhabitants, and very excellent Timber; as Oak, Ash, Elm, and Fig-Trees very large and tall.

The 14th of July, they sailed out of the East-north-east End of the Lake *de Fonte*, and passed a Lake he named *Estricho de Ronquillo*, thirty-four Leagues long, two or three broad, twenty, twenty-six, and twenty-eight Fathom Water: They passed this Streight in ten Hours, having a stout Gale of Wind and whole Ebb. As they sailed more easterly, the Country grew very sensibly worse as it is in the North and South of *America*; from thirty-six to the extreme Parts, North or South, the West differs not only in Fertility, but in Temperature of Air, at least ten Degrees; and it is warmer on the West-side than on the East, as the best *Spanish* Discoverers found it, whose Business it was, as it is noted by *Alvarez Acosto* and *Mariana*. The 17th they came to an *Indian* Town, and the *Indians* told their Interpreter, Mr. *Parmentiers*, that a little way from them lay a great Ship, where there never had been one before; they sailed to them, and found one Man advanced in Years, and a Youth: The Man was the greatest Man in the mechanical Parts of the Mathematics he had ever met with; the Admiral's second Mate was an *Englishman*, an excellent Seaman, as was his Gunner, who had been taken Prisoner in *Campeachy* as well as the Master's Son.

They told him the Ship was of *New England*, from a Town called *Boston*, and the whole Ship's Company came on board the 30th, and the Navigator of the Ship, Capt. *Shapley*, told him his Owner was a fine Gentleman, and Major-General of the finest Colony in *New England*, called the *Massachusetts*, so he received him like a Gentleman, and told him his Commission was to make Prize of any People seeking a North-west or West Passage into the *South-Sea*; but he would look upon them as Merchants, trading with the Natives for Beavers, Otters, and other Furs and Skins; and so for a small Present of Provisions, he had no need of, he gave him his Diamond-Ring, which cost him one thousand two hundred Pieces of Eight, (which the modest Gentleman received with Difficulty) and having given the brave Navigator Capt. *Shapley*, for his fine Charts and Journals, a thousand Pieces of Eight, and the Owner of the Ship, *Seamor Gibbons*, a Quarter-Cask of good *Peruvian* Wine, and the ten Seamen each twenty Pieces of Eight, the 6th of August, with as much Wind as they could fly before, and a Current, they arrived at the first Fall of the River *Parmentiers*; the 11th of August, eighty-six Leagues, and was on the South-side of the Lake *Belle*, on board their Ships; the 16th of August, before the fine Town *Conasset*, where they found all Things well; and the honest Natives of *Conasset* had, in his Absence, treated his People with great Humanity; and Capt. *de Ronquillo* answered their Civility and Justice.

The 26th of August an *Indian* brought a Letter from *Conasset* on the Lake *Belle* from Capt. *Bernarda*, dated the 11th of August, where he sent him word, he was returned from his cold Expedition, and did assure him, there was no Communication out of the *Spanish*, or *Atlantick*, Sea, by *Davis's Streight*, for the Natives had conducted one of his Seamen to the Head of *Davis's Streight*, which terminated in a fresh Lake about thirty Miles in Circumference, in the 80th Degree of North Latitude; and that there were prodigious Mountains North of it; besides, North-west from that Lake the Ice was so fixed from the Shore, to a hundred Fathom Water, for aught he knew, from the Creation; for Mankind knew little of the wonderful Works of God, especially near the North and South Poles: He wrote farther, that he had sailed from *Basset Island* North-east, and East-north-east, and North-east by East, to the 79th Degree of Latitude; and then the Land trended North, and the Ice rested on the Land.

He received afterwards a second Letter from Captain *Bernarda*, dated from *Minbanset*, informing him he made the Port of *Arena* twenty Leagues up the River *del Roje*,

the 26th of August, where he waited his Commands. The Admiral having good Store of salt Provisions of Venison, and Fish, that Capt. *de Ronquillo* had salted by the Admiral's Orders in his Absence, and an hundred Hogsheds of *Indian* Wheat, or Maize, he sailed the 2d of September, 1640, accompanied with many of the honest Natives of *Conasset*; and, on the 5th of September in the Morning, about eight was at Anchor between *Arena* and *Minbanset* in the River of *Reys*; after that he returned home, having found there was no Passage into the *South Sea* by that they call the *North-west Passage*: The Charts will make this much more demonstrable.

"The Style of the foregoing Piece, says Mr. *Dobbs* very justly, is not polite (being wrote like a Man whose Livelihood depended on another Way, but with abundance of Experience, and like a Traveller) yet there are in it so many curious and hitherto unknown, Discoveries, that it was thought worthy a Place in these Memoirs, and it is humbly presumed, it will not be unacceptable to those who have either been in those Parts, or will give themselves the Trouble of reviewing the Charts. By this Abstract of *de Fonte's* Voyage, which has all the Appearance of being authentic, it is plain, that there is a navigable Passage from *Hudson's Bay* to *California*, and though it has not had Justice done to it in the Translation, and probably has not been exactly copied, or printed; yet, making an Allowance for Errors of that Kind, it has throughout the Air of Truth: There may be, probably, some Errors in the Figures relating to the Degrees of Latitude and Leagues in their Course, for the Length of the Lake *de Fonte* is said to be one hundred and sixty Leagues, and the Streight *Ronquillo* thirty-four. Upon his Return from the *Boston* Ship, he is said to have got again to the Mouth of the River *Parmentiers* in five Days, with a stout Gale and brisk Current, which, he says, was eighty Leagues; which plainly ought to have been one hundred and eighty, otherwise, with that stout Gale and Current; it would have been but sixteen Leagues in twenty-four Hours, and the other would be but thirty-six, which was reasonable sailing. As to his saying there was no Passage, although he met the *Boston* Ship, I take his Meaning to be, that either *Bernardo* found no Passage by the North-west of *Davis's Streights*, the Way probably the *Spaniards* expected it, or, that by his passing upon a River to Lake *Belle*, and down another to Lake *de Fonte*, by what he called Sharps or Falls, he apprehended there was no navigable Passage for Ships the Way he went; or he desired to disguise it, to prevent other *Europeans* from attempting it to his Country's Prejudice; and therefore he did not publish his Chart which he refers to in his Letter.

"It is plain that it was an Island below the Lake *Belle*, which divided the River *los Reys* from the River *Parmentiers*, and as the Sea in Lake *de Fonte* was upon a Level with the Sea at the Mouth of *Rio los Reys*, and the Tide flowed up that River into the Lake *Belle*, it must also flow up the River *Parmentiers*, and the Sharps and Falls be observed in that River, were only the Sharps occasioned by the several Ebbs he had in sailing down the River, being five Days in passing to the Sea, so that the great and true Passage was without that Island, which the Admiral missed, by getting among the Islands in the *Archipelago* of *St. Laurence*. It is a Misfortune his Chart was not published, which would have given more Light as to the Lands, Lakes, and Rivers he mentions, now we can only guess in the dark, and may be mistaken.

"However, I shall venture to give my Opinion of their Situation, though I may not judge right. As I apprehend it the *Archipelago* of *St. Lazarus*, and *Rio los Reys*, and Lake *Belle*, and also the Lake of *Velasco*, are no Part of *North America*, but a Country distinct from it; the Passage lying betwixt those Lands and *America*; for in his Journal he says he sailed eight hundred and sixty-six Leagues North-north-west from *Cape Abel*, in *California*, in Latitude 26 Degrees, the last two hundred and sixty of which was in crooked Channels, among Islands, until he got to *Rio los Reys*,

“ *Reys*, in Latitude 53 Degrees; since by all other Accounts the Coast of *America* falls off North-east from *Cape Blanco*. This must have been a Country distinct from *America*; here he found two Rivers, one came from the North, from the Lake *Velasco*, which *Bernarda* failed up, and the other came from the North-east, from the Lake *Belle*, which lay betwixt Latitude 45 and 55 Degrees. Upon what Point the *Parmentiers* ran out of the Lake *Belle* is not mentioned, but at *Rio los Reys* it ran South-west. We may suppose the other ran East, or South-east, and fell into the Sea, which he calls the Lake *de Fonte*, in near the same Latitude, that Lake, or Arm of the Sea, stretching thence East-north-east one hundred and sixty Leagues, if there was any West Variation, as there is now, the North-east End of that Lake might be in Latitude 57 or 58, almost West of *Churchill*; and the Streight *Ronquillo* running still North-east, might end in Latitude 59. In two Days from thence he came to an *Indian* Town, probably about Latitude 60, near which the *Boston* Ship lay; so that it may be imagined the *Boston* Ship had passed into some of the Openings near *Whale Cove*, and got to Latitude 60, or, perhaps, to 59 Degrees, and was trading for Furs, and the Ship might have been afterwards lost or surprized by the *Eskimaux*, upon her return, having but twelve or thirteen Hands aboard, since no Account of this Voyage was ever transmitted from *Boston*. Upon Enquiry, made by Order of Sir *Charles Wager*, whether any one of the Name of *Shapley*, which was the Master's Name, lived at that Time in *Boston*, it appeared from some Writings, that some of that Name then lived in *Boston*, which adds to the Weight of *de Fonte's* Letter, and confirms its being an authentic Journal.”

24. We have now gone compleatly round the Globe, making the North Pole our Centre; and have, so far as the best Discoveries would enable us, given the Reader a Description of the Countries which lie in these cold Climates; this, for any thing I know, is a Work never before performed, or at least not so fully and circumstantially. I must, however, admit there would be no great Merit in doing this, if no Use could be made of it; but this is very far from being the Case; for in the first Place it opens to us the entire Knowledge of the terraqueous Globe; I say the intire Knowledge, because if we were once thoroughly acquainted with the Manner in which the Countries are disposed about the North Pole, we might, from thence, gain tolerable Satisfaction with regard to the antarctic Regions, in respect to which, from actual Discoveries, we know very little. In the next Place, we ought to consider, that hitherto no new Countries have been found without considerable Advantages resulting to those who discovered them; and before we conclude this Section, we shall shew that the Whale-fishing, in these Northern Seas, is an abundant Recompence to such as take the trouble of sailing on them. There is yet a third Consideration, which is the Means of finding a Passage this Way round the Globe, which every body knows would be not only a great, but a gainful, Discovery, more especially to us who lie so conveniently for taking the Advantage of it, and to whom the bleak and barren Islands of the *Orkneys*, would become a kind of *Indies*, if once such a Discovery was made. We can never, however, rationally hope for this, unless the Situation of all the Countries round the Globe, considering the Pole as the Centre of the Northern Hemisphere, be tolerably well known.

What can be done with respect to this, from the Perusal of actual Surveys has been already shewn; we will now therefore endeavour to carry it a little farther, by adding Reason to Experience, and reflecting upon the Lights we have received. It is certain, because it is self-evident to every Reader, that the Countries round the Pole must be disposed in one of these three Manners: First they may be joined together, and also to some of the great Continents already known. Or, 2dly, they may be joined together, and make a distinct Continent. Or, 3dly, they may be separated from each other, and

from all the other Continents. We must allow, that there are Authorities, in favour of each of the three Dispositions, and therefore we will speak of them separately, though very briefly. First then, that they are joined together, and to the known Continents, there are two Matters of Fact alledged in the Nature of Proofs. The first is, that the People of *Groenland*, by which I mean the old Christian Colonies, had a Tradition of a Harald Goat, that travelled into their Country from *Norway*, which, whether true or false, by the Way proves nothing, or at least proves nothing to the purpose. If the Story of the Goat be a Fable, there is an End of it; but if it was Truth, which, however, is very improbable, then it came by Sea, that is, in the Winter-Season upon the Ice; for that *Groenland* is not joined to *Norway*, is as certain as any thing can be. Tradition may probably prove something, where there is no other Evidence; but Tradition against Evidence is Nonsense. The other Point of Fact is, that a Jesuit, who had been in *California*, going afterwards to the *Philippines*, and from thence to *China*, says there he saw a Woman whom he had known in the first of these Countries, who said she was brought thither over Land, except one or two little Streights which she passed in small Vessels; but this does not come up to the Point, since, however small these Streights might be, they most certainly disjoin the Countries of each Side of them.

As to the second Opinion, that these Lands join together, though disjoined from the great Continent, I know nothing that has been said for it, except the Tradition of the *Groenlanders*, about the narrow Streight between their Country and *America*, and of there being great Countries to the East of them, of which they own they know nothing. The third Opinion, though it cannot be fully proved, seems to be very probable, and if it be not consistent with Truth, looks, at least, very like it. It is thought that *Groenland* is disjoined from *America* by *Davis's* Streights, and that it is actually disjoined from *Greenland* we have tolerable Evidence from those who have visited the last mentioned Coast, none of them speaking of any Land on the West. It was formerly thought that *Greenland*, or *Spitzbergen*, and *Nova Zembla* were the same Continent, and that they were separated from *Russia*, or *Tartary*, by the Streights of *Waygatz*; but we are now satisfied it is not so, but that in all probability *Greenland* is an Island, or rather a Cluster of Islands, separated by the Ocean, from the Land of *Yedzo*, as that Country most certainly is from *Companies Land*, by the Streights of *Uriex*; as on the other Hand, this Arctic Continent is thought to be separated from *California*, by the Streights of *Anian*. The Truth of the Matter seems to be, that there are a multitude of Islands of different Sizes, lying all round the North Pole, but how disposed we cannot yet say; and it is upon this Supposition, that the Hopes of finding a North-east, or a North-west, Passage has been built.

What Reasons may be offered in both Cases? What Attempts have been made? And how they have ended? the Reader will hereafter see. At present we will content ourselves with observing, that some very great Men have been of Opinion, that the most probable, the most feasible, and shortest Passage, must be by sailing directly North, and under the very Pole itself. A bold and amazing Proposition at first Sight, and which we have more than once promised the Reader should be fairly examined; for strange and surprizing as it seems, it is not all impossible that it may be true. It has been already observed, there are really sufficient Reasons to persuade us, that the Countries round the Pole, are so many Islands separated from the known Continents, as well as from each other, it will thence appear highly probable that there may be an open Passage immediately and directly under the Pole, because it is plain there can be nothing but Sea there.

It may, indeed, be said, that though there be Sea, there may, for all that, be no Passage; in Proof of which it may be alledged, that the *Dutch*, in 1679, found it impossible to pass for Ice, to the Northward of *Nova Zembla*; and if the Sea be thus frozen, in 79 or 80 Degrees, what

what Reason is there to believe that it is not much more strongly frozen in a higher Latitude? The Reason seems to be clearly this: That freezing does not depend so much upon the Latitude of Places, as upon their Situation, in other respects; as is very plain from hence, that the most intense Cold is felt in some Parts of *Hudson's Bay*, which lies very near in the same Latitude with *London*. Now that under the Pole the Sea should not freeze, some very strong Reasons may be given: First, it is not known that the main Sea ever freezes. Those vast Mountains of floating Ice, that frequently render the Coast of *Greenland* inaccessible, are formed three Ways: First, by the falling of vast Rocks of Ice, from the Mountains, into the Sea. Next by the Tides breaking up the Ice at the Mouths of great Rivers. And, lastly, by the Addition of Snow and fresh Water to the Sea Water, which weakens its Force, and disposes it to freeze. We may also take Notice of what we have before heard of the Frost-Fogs or Vapours arising from the Sea, through the Ice, which are allowed to be warm, and from whence we may, in some Measure, discern the Cause why the Ocean does not freeze.

Secondly, under the Pole itself, for six Months, the Sun is continually above the Horizon, and consequently must have a very great Effect, more especially on the Sea; so that if we consider this Matter attentively, we cannot but be convinced that it is absolutely impossible the Sea should be frozen; on the contrary, there seems to be more probable Grounds to suspect that the Heat may be troublesome. Thirdly, these Reasons are supported, these Conjectures are verified, by daily Experience; for on the Coasts of *Greenland*, in the Latitude of 82 Degrees, the Heat is known to melt Pitch, when great Quantities of Ice are unmelted on the Coast in 69 Degrees. We may, from these Reasons, therefore conclude, not only with Probability, but with Certainty, that during the Summer, at least, there is a clear and open Sea under the Pole, and, if so, the Passage that Way is indisputably the shortest, the easiest, and the most practicable, that has been hitherto thought of. This was long ago observed by the famous Sir *William Monson*, as great a Seaman as this Nation could ever boast, who affirms that the Passage, this Way from *England*, to *China*, does not exceed fifteen hundred Leagues.

But we will now proceed to Matters of Fact, and shew that this not only may be done, but that it actually has been done; as will appear from the following Paper, communicated to the Royal Society, by Mr. *Joseph Moxon*, one of its Members; which therefore we shall transcribe, as a Piece that cannot fail to give the Reader, on this Head, as full Satisfaction as he can desire. Thus then it runs: "Among the many Essays that have been made to find a clear Passage to *Japon*, *China*, &c. the most probable and likely, hath as yet (in my Opinion) been overseen, or, at least, not attempted; and therefore I shall, hereby, communicate my Conception to public Approbation or Censure; it is, that a Passage may very probably be about the North Pole, and the Reasons inducing me to conceive so is: That we have no Certainty, from all the Discoveries that have been made of any Land lying within eight Degrees about the Pole; but on the contrary, I have been credibly informed, by a Steersman of a *Dutch Greenland Ship*, that there is a free and open Sea under the very Pole, and somewhat beyond it; and I, for my own Part, give Credit to his Relation, and do conceive that any sober ingenious Man would do the like, did he know in what an honest Manner, and by what an Accident, I happened to hear it; for thus it was:

"Being about twenty-two Years ago in *Amsterdam*, I went into a public House to drink a Cup of Beer for my Thirst; and sitting by the public Fire, among several People, there happened a Seaman to come in, who seeing a Friend of his there, who he knew went in the *Greenland Voyage*, wondered to see him, because it was not yet Time for the *Greenland Fleet* to come home, and asked him what Accident brought him home so soon? His Friend (who was the Steersman

aforsaid, in a *Greenland Ship* that Summer) told that their Ship went not out to fish as usual, but only to take in the Lading of the whole Fleet, to bring it to an early Market, &c. But, said he, before the Fleet had caught Fish enough to lade us, we, by Order of the *Greenland Company*, sailed unto the North Pole, and came back again. Whereupon I entered into Discourse with him, and seemed to question the Truth of what he said; but he did assure me it was true, and that the Ship was then in *Amsterdam*, and many of the Seamen belonging to her ready to justify the Truth of it; and told me, moreover, that they had sailed two Degrees beyond the Pole. I asked him if they found no Land or Islands about the Pole? He answered no, there was a free and open Sea. I asked him if they did not meet with a great deal of Ice? He told me no, they saw no Ice. I asked him what Weather they had there? He told me fine warm Weather, such as was at *Amsterdam* in the Summer-time, and as hot. I should have asked him more Questions, but that he was engaged in Discourse with his Friend, and I could not, in Modesty, interrupt them longer. But I believe the Steersman spoke Matter of Fact and Truth; for he seemed a plain, honest, and unaffected Person, and one who could have no Design upon me.

"But though I believe this Story, yet methinks I hear many object against it, and are apt to urge three plausible Reasons to prove it false, or, at least, some Particulars of his Relation: And first, That it cannot be warm under the Pole, because that about *Greenland*, and many other Parts less northerly, the Sea is so full of great Bodies of Ice that Ships can hardly sail for it. Secondly, if warm, yet not so warm as at *Amsterdam* in the Summer-time, because the farther northerly, the colder Weather. Thirdly, If they were under the Pole, they could not tell how to come back, but that they might as well go farther as return nearer to home; because the Needle always pointing North, they must therefore lose themselves in the North Pole, where it must respect all Points of the Horizon alike.

"One Answer may serve to the first and second Objection, That it cannot be warm under the North Pole, &c. If we consider the Experience of Travellers and Navigators, we are told, that between the Tropicks, nay, under the Equinoctial, is generally as moderate Weather as here in *England* in Summer-time; why may it not then be as warm under the Pole as here, or at *Amsterdam*, in the Summer-time? The small Height the Sun has there can be no Exception, for then we, having the Sun, in its Summer-Solstice, in lesser Altitude than between the Tropicks, it must needs be colder here; which is contradicted: But one Reason why it is as warm here as between the Tropicks is, because between the Tropicks the Sun remains above twelve Hours of twenty-four above the Horizon, to warm it; when, as here, it remains almost seventeen Hours of twenty-four above the Horizon, and therefore leaves a greater Impression of Heat upon it; and the farther northward we go, the longer it remains above the Horizon, and less under the Horizon every twenty-four Hours, till we come within the Arctic Circle, where the Sun remains for half a Year together; viz. all the Summer above the Horizon, and never sets; and therefore, though his Beams are not so perpendicular, yet they must needs cause a great Degree of Heat upon the Horizon. And if it be argued, that it is so cold about *Greenland*, &c. and the Seas so full of Ice that Ships can hardly sail for it, yet cannot that Argument prove that it is so about the Pole; because the Ice is made about Shores of Land, but never in open Sea, and comes here only by Strength of Currents, or high Winds, which do indeed carry it some small Distance from the Shore; but as this Relator said, there is under the Pole a free and open Sea, &c. and consequently clear of Ice, in Summer-time, at least.

"Besides, Experience tells us, that all Land-breezes are

are colder than those that come from the Sea, and therefore it may be cold about *Greenland*, because of the Land, yet warmer under the Pole while the Sea is open, &c. The third Objection is, That if they were under the Pole they could not tell how to come back, because of the Indifferency the Needle should bear to every Point of the Horizon. I examined not my Relator upon this Argument, though when I was parted from him I was sorry I did not; but it is easy to apprehend how to guide a Ship either forward or backward, by an Observation of the Sun a little before they enter the Pole; for by finding in, or near, what Meridian it is; or upon what Part of the Ship it bears, whether on the Head or Stern, or Star-board or Lar-board; you may measure Time near enough with a Glass, to know several Days after, in, or near, what Meridian the Sun is, at any known or estimate Time, and consequently know how to proceed, or come back with your Ship: Or, if the Moon have North Latitude, you may do the same by the Moon; but if the Pole were traded, in a short time it might be found by Variation of the Needle; for there is doubtless Variation in it, and in all the Meridians about it several Variations.

Thus far it appears there is a free and open Sea in Summer-time (at least) about the North-Pole. But I shall add another Relation of *James Ben*, whose Father lived about five Years ago in *Crown-court* in *Russel-street*, *Covent-garden*, and himself now lives in *Wapping*: This Mr. Ben sailed to *Japon* with the *Dutch*, as a Carpenter of the Ship, and he told me that that Year, viz. 1668, he was newly come home from *Japon*. I asked him how long they were on their Way home from thence? He told me he could not very well tell; because when they sailed from *Japon*, the Captain commanded the Steersman to sail due North, and they did sail so from thence for about four hundred *Dutch* Miles, which is almost twenty-seven Degrees due North. I asked him if they met with no Land or Islands, as I had done before the *Dutch Greenland* Steersman? He told me, No, they saw no Land; but there was a free and open Sea; so far as they sailed no Land appeared. I asked him, why they sailed so far northward? He told me he could not tell, only the Captain commanded it, &c. but I suppose the *East-India* Company commanded the Captain either to make a Discovery of Land to increase Trade, or to satisfy themselves with the Knowledge of another Sea, that when they saw Reason they might expedite their Voyages between *Holland* and those Parts that Way. I was thus inquisitive with him, because ever since I heard the former Relation of the *Greenland* Steersman, I harped on a Passage through, or about, the North-Pole to *Japon*, *China*, &c. And by these two Discoveries it appears very probable there is so, and that it is passable in Summer-time.

It is very strange, that a Paper of this Consequence should not be more considered; more especially, as it is certain, that to this very Time the *Dutch* Men of War, when any are sent with the *Greenland* Fleet, cruise constantly very far to the northward, without meeting either with Obstructions or Inconveniencies from Ice or Cold. And I have been informed by a Gentleman who was Surgeon to one of these Men of War, that in the Latitude of 82 Degrees, the Sea to the North was open, and the Weather very hot in the Month of *June*. I cannot say exactly what Year this was in; but by a Comparison of Circumstances I am led to think, that it might be in 1718 or 1719. There being an open Sea at that Season very plainly shews it to be always open; for it is impossible, if it had been frozen in the Winter, that it should have thawed so soon, or that there should have been no Islands of Ice floating in it, as has been observed from the Latitude of 57 Degrees, or thereabouts, to 80.

The Reader will easily observe, that the Discoveries that have been lately made, as to the true Figure of the Earth, and its being flatted towards the Poles, favour this Opinion and Account for the Sea's being always open.

It may also deserve some Notice, that perhaps there is no Occasion for sailing so high as 90 Degrees; for if a Passage is to be found either to the East or West, and the Sea be open, a Ship might sail either Way, perhaps in the Latitude of 85 Degrees, which would make this shorter and easier, by bringing the Vessels sooner upon known Coasts. While I am upon this Subject I will take the Liberty of observing, that if any Attempts should be made of this kind by us, the most probable Method of doing it would be in concert with the Court of *Russia*, by procuring an Order from the Empress, to the Governors of the frontier Countries towards *Japon*, to give such Assistance or Relief as might be necessary, to any Vessel that arrived upon those Coasts; and it would be requisite that such an Order should be procured, and expedited the Year before the Attempt was made from hence; and that the Commander of the Frigate employed in this Expedition, might carry with him an authentic Copy of that Order, for his own Security and Advantage.

I am very sensible that a Multitude of Objections may be raised against such an Undertaking; but I am very confident they may be very easily answered, and whoever considers that so long ago as 1553, Sir *Hugh Willoughby* discovered the most Northern Part of *Russia*; and though he perished in the Attempt, opened thereby that Trade which has been since of so great Advantage to this Nation, we may very well hope, that at this Distance of Time, and with all the great Advantages that modern Navigators have, farther and more useful Discoveries may be made, with much less Hazard: At least, it is very right to suggest Designs of this Nature to the Public, whether they may, or may not, be thought practicable for the present; because the very mentioning such Things, and thereby creating Discourses about them cannot but be attended with good Effects, because we know that they were the very Means by which former Discoveries were brought about, and we cannot think so meanly of our Countrymen as to suppose that either their Courage, their Judgment, or their Spirit, is inferior to that of their Ancestors, though Accidents and Circumstances may induce some weak People to think or encourage some wicked Men to say so, in order to serve their own Purposes. But perhaps we can never entertain any probable Hopes of Success in this great Affair, until we engage once again in the Whale Fishery; and that we may be encouraged to think seriously of that, we will conclude this Chapter with a clearer and more perfect Representation of this Trade, than to our Knowledge has been hitherto published, which cannot therefore fail of giving the ingenious and inquisitive Reader great Pleasure and Satisfaction.

25. We are to observe then, that it was towards the latter End of the sixteenth Century, that the Whale-fishing, on the Coast of *Spitzbergen*, became considerable, and was entirely in the Hands of the *English*, till the Year 1578. This Commerce was, by a Company, which sent thither annually a few Ships, and they actually excluded the rest of their Countrymen, and endeavoured to exclude Foreigners. In the Year 1613, they sent a Squadron of seven Sail, which found there fifteen *Dutch*, *French*, and *Flemish* Ships, besides *English* Interlopers. And the next Year, the *Dutch* sent eighteen Sail, of which four were Men of War. And, in 1615, the King of *Denmark* sent a Squadron of three Men of War, to assert his exclusive Right, but with such indifferent Success, that he thought fit to give up the Point. In 1617 our Company were more lucky than in any other Year, and actually made one thousand nine hundred Ton of Oil. The *Dutch* made, for many Years after, very indifferent Voyages; and as their great Statesman, M. *de Wit*, well observes, had certainly been beat out of the Trade, if it had not been laid open by the Dissolution of their *Greenland* Company, to which he attributes their having beat the *English*, and almost all other Nations, out of that Trade, which they carry on to a prodigious Advantage. And as the same great Author observes, it is the best Nursery of their boldest and most hardy Sailors. But as we do not affect to deal in general Terms, which never can convey any clear and distinct Notions of any Subject, we shall

shall endeavour to descend to such Particulars, as may set this Matter in the clearest Light possible.

It is agreed by the *Dutch* Authors, who have written on Whale-fishing, that the most fortunate Season they ever had, was in the Year 1697. We will therefore consider the State of this Fishery, for that Year, in order to settle the Profits of it; and will afterwards compare it with Accounts received from *Holland*, of the Fishery for 1744, communicated while this Section was writing, that we may the better judge how things now stand. In 1697 there were one hundred and eighty-nine Vessels, of several Nations, employed in the Fishery on the Coast of *Greenland*; of these the *Dutch* made one hundred and twenty-nine, but seven were lost upon the Coast. The *Hamburgers* had fifty-one, of which they lost four. The *Swedes* had two; the *Danes* four; the *Bremeners* twelve; the *Emdeners* two; and the *Lubeckers* one. The Number of Whales taken that Year amounted to one thousand nine hundred and sixty-eight, which the *Dutch*, and the Ships of other Nations before-mentioned, caught in the following Proportions, viz.

Nations.	No. of Whales.	Casks of Oil.
The <i>Dutch</i>	1255	41344
The <i>Hamburgers</i>	449 $\frac{1}{2}$	16414
The <i>Swedes</i>	113	540
The <i>Danes</i>	52	1710
The <i>Bremeners</i>	96	3790
The <i>Emdeners</i>	2	68
The <i>Lubeckers</i>	$\frac{1}{2}$	17
	<hr/> 1968	<hr/> 63883

The Total Value of the Fishery of 1697.

The Cask of Blubber sold that Year for thirty Florins; the whole Number thereof came to	f. 1916490
The Fins, reckoning those of each Whale at 2000 l. and the Current Price being 50 f. a Quintal; the whole therefore came to	f. 1868000
	<hr/> f. 3784490
In our Money l.	<hr/> 378449

The particular Account of the *Dutch* Fishery stated.

Their 41344 at 30 f. per Cask, came to	f. 1240320
Their 25100 wt. at 50 f. per C. wt. came to	f. 1255000
	<hr/> f. 2495320
In our Money l.	<hr/> 249532

According to a Letter from *Amsterdam*, dated the 26th of July, the Whale-fishery, for the Year 1744, was pretty near over, and the Proportions stood then as follows, viz.

	Whales.
The <i>Dutch</i> had caught	662
The <i>Hamburgers</i>	45
Those from <i>Altena</i>	20
The <i>Bremeners</i>	18
The <i>Emdeners</i>	8
In all	<hr/> 753

I have not been able to procure, hitherto, as clear and distinct an Account of the Whale-fishery, for the two last Years, as for that before given; but I am very well informed, that the Whale-fishery scarce ever answered better than it did in this present Year 1746, more especially to the *Dutch*, who had more Ships, and better Luck with their Ships, than any other Nation. It is worth observing, that the wise Inhabitants of *Holland* have continually maintained and practised this Fishery, as *de Witte* advised them; and have thereby added immense Sums to the Wealth of their People, as well as to the Strength of

their State, considered as a maritime Power. We will reflect a little upon both these Points, that we may be the better satisfied, as to the real Importance of the Whale-fishery. He judged it to be very beneficial to his Country, because of the Ease and Expedition with which it was performed; for in six Day's Time the Ships sailed out of Harbour, and were, actually, if the Season was favourable, engaged in their Fishery. The whole Time it continues, does not exceed four Months; during which a great Number of Vessels are employed, in which abundance of hardy and experienced Seamen are bred, by whom also the whole Business is performed abroad, and, upon their Return, a much greater Number of People find work at home; so that there is no great Reason to doubt, that *de Witte's* Calculation, of twelve thousand Persons maintained by this Trade only, is very agreeable to Truth, and not at all tinctured with Partiality towards his Country. He very justly observes, that what renders this Trade still more valuable, is the Exportation of the greatest Part of its Produce; and if we consider this attentively, and make the necessary Allowances in such kind of Calculations, we shall be able to form to ourselves a tolerable Notion of what the *Dutch* have got by the *Greenland* Fishery, from that Time to this.

It is now fourscore Years since *de Witte* framed his Computation, and we shall certainly run no Hazard of over-valuing the Industry of our Neighbours in this Particular, if we suppose that the Whale-fishing has brought them in, one Year with another, in Whale-Bone and Oil, two Millions of Florins, of which we may also allow that they have exported, at least, one Half; so that they have saved fourscore Millions of Florins in what they have used themselves in these Commodities, which they must otherwise have purchased, and have drawn besides, from other Countries, into their own, as much in ready Money, which amounts to eight Millions Sterling. A prodigious Sum indeed, and which ought to cover us with Shame, considering that we have had, at least, as great Opportunities as they, of making a like Advantage of this Fishery, of which, for many Years past, however, we have not made one Shilling. Whence this arises is very hard to say, and the more so as it is certain we were once the sole Proprietors of the Whale-fishing, which we pointed out as worthy other Peoples Concern, and have since neglected ourselves, though many of our best Writers upon Commerce, have taken Pains to expose the gross Absurdity and inexcusable Negligence of such a Conduct. At present, perhaps, an Opportunity might be gained of reviving this Fishery, if the Government should think fit to erect a Fortress, and open a Port in the *Orkneys*, which might, in many respects, prove very beneficial; but more especially in this, because it would give us, immediately, very great Advantages over the *Dutch*, *Hamburgers*, and all other Nations that at present frequent the *Greenland* Seas, as we might have all kind of Utensils necessary, erected in any of these Islands, which would enable us to make more, and better Oil, than any of our Neighbours, from the same Quantity of Fish; as it would also give us an Opportunity of visiting the Coasts of *Greenland* earlier, and remaining there later, than other People. There is no Doubt that, if any Attempt of this Sort was once made, at the Expence of *English* Merchants, they would be very soon able to raise a prodigious Number of stout and able Seamen in those Parts, as capable and as enterprising as those of any other Nation whatever. It might also prove the Cause of opening to us some other Branches of Commerce hitherto not known, or which have been long disused; and it might prove likewise a Means of renewing that Thirst for Discoveries, for which this Nation was formerly so famous, and to which she certainly stands indebted for the most valuable Branches of her Commerce. These, I mean the *Orkney Islands*, are the Islands, *Sbetland* excepted, the least known, but not the least valuable Part of the *British* Dominions; for besides this *Greenland* Fishery, for the establishing of which there is not in *Europe* a Place so proper, and a considerable Fishery round them, they might be made a general Magazine for such Commodities as sell to Advantage to the North,

North, by which our Trade to several Parts of *Germany*, as well as to *Sweden*, *Denmark*, *Norway*, *Poland*, and *Russia*, might be rendered twice as valuable to us, as it is at present. But it is now Time to close the present

Section, and to proceed to the History of the Attempts made for the Discovery of a North-east and North-west Passage into the Ocean; the latter of which, perhaps, may be discovered before this Volume is concluded.

SECTION II.

The rational and philosophical MOTIVES for seeking a Passage into the SOUTH SEAS, by the North-west, examined and explained; together with the History of the Attempts made with that View, for the Space of one hundred and thirty Years.

Collected from *English*, *Dutch*, and *Danish* Writers.

1. *An Introduction shewing the Nature and Design of this Section, and the Method pursued therein.* 2. *The Importance of a North-west Passage, if it could be found; and the Advantages that would result from thence to our Navigation, which fully justifies the Endeavours of such as have laboured to find this Passage.* 3. *An Account of the Reasons, Arguments, and Presumptions in favour of such a Passage; in which the Strength or Weakness of each Motive is shewn fairly, and in its proper Light.* 4. *The History of the Attempts made for the Discovery of this Passage, by John Cabot, Sir Martin Frobisher, Captain Davis, Mr. Henry Hudson, Mr. James Hall, and Mr. William Baffin, from Anno Domini 1497, to 1615.* 5. *The Expedition of Sir Thomas Button into Hudson's Bay, in 1611, with a succinct Account of his Discoveries.* 6. *The Attempts made for the like Purpose by the Danes; and the unfortunate End of Captain John Monk, one of the ablest Navigators ever bred in Denmark, occasioned by his undertaking and failing in an Expedition for this Purpose.* 7. *The Expedition of Captain Luke Fox, in his Majesty's Pinnace, the Charles, in the Year 1630; with the Reasons which induced several Persons of the first Distinction, and some of the greatest Merchants in this Kingdom, to enter into an Association for the Discovery of the North-west Passage; and the Measures taken by them for carrying this Design into execution.*

AFTER the Discovery of *America*, by *Christopher Columbus*, and the publishing to the World, the Reasons which induced him to look upon this Discovery as a thing practicable; such as were well acquainted with *Cosmography*, and such as were practical Seamen, began to emulate his Success, and to think of raising like Reputations to themselves by Discoveries of the same Nature. Amongst these, *John Cabot*, whom we have often had Occasion to mention, was the first that suggested the Possibility of a Passage to the new found World, by the North-west. His Son, who lived to be a very old Man, was the most expert Mariner of his Time, and died Governor of our *Russia* Company, always maintained this Opinion; which the more it was considered and examined, by Men of the brightest Parts, and greatest Experience, the more it grew into Credit, and the more it was generally believed. This Notion has prevailed to our Times, and if we follow the Opinion of *Cicero*, this alone is a considerable Argument in its Favour; for he observes that Truths founded in Nature, grow stronger in length of Time, and from a Course of Observations; whereas weak and groundless Opinions are soon destroyed, and become quickly out of date. There is, certainly, a great deal of good Sense and sound Reason in this Observation; which, I believe, will be found to have stood, generally speaking, justified by Experience; and, perhaps, sooner or later this may be ranked among the Number of Truths, that ought to give Weight and Authority to this Maxim.

At present it is our Business to exhibit to the Reader as full and clear an Account of this Matter as it is possible; the rather because it is not only a Matter of great Importance in itself, and a Subject of general Enquiry, but also from a late Act of the Legislature, and a great Undertaking founded thereupon, become the Topic of common Discourse, and of almost universal Expectation. In order therefore to discharge our Duty effectually, and to represent the Reason and History of this Matter with the utmost Perspicuity; we shall first of all enquire into the Nature of those Advantages, that may be expected from the Discovery of such a Passage, supposing it to be practicable. We shall next set forth the Reasons that have been assigned in Favour of this Opinion, that such a Passage may be found, by those who have maintained it. And lastly, we shall give a distinct historical Ac-

count of the Attempts that have been made, for the finding such a Passage, and the Consequences with which these Expeditions have been attended. We have, indeed, already had frequent Occasions to touch this Subject, both in our former Volume, and in this; but wherever we have mentioned it, we have referred the Reader for a clearer and more particular Account to this Section; and we shall herein take all imaginable Care to avoid all unnecessary Repetitions, by making the requisite Allowances on those Heads, which have been incidentally examined and explained already.

2. The Reader will perceive, from what has been laid down in the foregoing Section, that if such a Passage could be discovered, it would open a Communication between the North and South Seas, infinitely shorter and easier than the only one that is at present known round *Cape Horn*, or through the Straights of *Magellan*. We have seen, in the History of the Circumnavigators, how very tedious and troublesome that Method of reaching the Coasts of *Mexico* and *California* is, with how many and great Inconveniences it must be always attended, and how far it lies out of our Power; all these Circumstances considered, to make any considerable Use of it; which is the true Reason why the *Spaniards* enjoy, with so little Disturbance, so many fine Countries, and hinder others from discovering many more, the Knowledge of which might be highly advantageous to this Northern Hemisphere.

But if ever a Passage could be this Way found into the South Seas, we might, very probably, reach, in six Weeks, Countries that we cannot now visit in twelve or fifteen Months; and this by an easy and wholesome Navigation, instead of those dangerous and sickly Voyages, that have hitherto rendered the Passage into the *South Seas* a thing so infrequent and ingrateful to *British* Seamen. If such a Passage could be found, it would bring us upon the unknown Coasts of *North America*; which we have many good Reasons to believe are very populous, inhabited by a rich and civilized People, no Strangers to Trade, and with whom we might carry on a very great and beneficial Commerce; for this is, apparently, that Country, concerning which we have had some dark Hints given us by the *Savages* that come to trade at *Hudson's Bay*, mentioned by several of the *French* Writers; from the Information of the *Indians* inhabiting about the Lakes beyond *Canada*; from *Doctor Cox*, in the Account cited from

from him in the former Section, concerning the Advantages that might be drawn from settling his Province of *Carolana*; from various Passages in almost all the *Spanish* Historians, in reference to the Extremities of *North America*, of which they acknowledge themselves to have very indifferent Accounts; and are, perhaps, not much inclined to gratify the rest of the World, even with the best Accounts they have; from the memorable Fragment of the *Spanish* Admiral's Voyage, quoted in the former Section, with Mr. *Dobb's* judicious Remarks, and a multitude of other Passages, which it is needless to enumerate; all of which agree in this, that the Part of *America*, to which this North-west Passage would lead us, is a rich, fertile, and well inhabited Country, which would abundantly reward our Pains taken for the Discovery of it, even supposing this Passage would lead us to no other Country besides.

Yet this is far from being the Case; since it is evident that it would likewise bring us to an Acquaintance with those Countries that lie opposite to *America*, whether Continents or Islands, and that fill up that vast Space between *California* and the Land of *Yedzo*, of which, at present, we have heard so much, and yet know so little. But though we know so little of them from actual Discoveries, yet we may be confident from Reason, and the Consideration of the Climate in which they lie, that these Countries abound with valuable Commodities, and that the Inhabitants living, as they do, in a cold Country, would be very glad to deal with us for Woollen-Goods, &c. and perhaps for Iron Ware, and many other Commodities. If to this it be objected, that in the few Accounts we have of this Country, and these People, it is expressly said, they are well clothed, use large Ships, and have Arms, and various Utensils of Iron, and other Metals, as well as the *Europeans*; which they barter with the Inhabitants of *North America* for Gold and other things; if I say this should be objected, then the plain and easy Answer is, they are a mercantile People; and considering the vast Distance between us and them, there is no doubt that a very great and profitable Trade may be driven between us; and this is more than sufficient to prove the great and general Proposition, that the Discovery of such a Passage would be very profitable to this Nation, though we should be ever so much mistaken as to the Nature of the Commodities in which this Profit may lie. Some Benefit we see results to the *Danes*, by their Commerce with the poor barbarous *Groenlanders*, and can we doubt of bringing things to a better Market among a rich and civilized People? The former, indeed, part with what they have for a Trifle, but then they have not much to part with; the latter may not be so soon over-reached, but they have more to trade for, and consequently more is like to be got by them.

There is still another great Advantage, which would result from the Discovery of a South-west Passage; and was that originally proposed from it, which is, the reaching *Japon*, the Land of *Yedzo*, &c. by a much easier and shorter Rout, than either that by the *Cape of Good Hope*, or round by *Cape Horn*; so that the finding it would give us a much more facile Passage to the *East Indies*, as well as the *South Seas*, and which is more, to those Parts of the *East Indies*, with which we have no Correspondence, and consequently would, in that respect, be absolutely a new Branch of Commerce, probably of much greater Benefit to this Nation, than the whole of our *East India* Trade, as it is now carried on. All these Benefits are so far from being hazardous or uncertain, that at first Sight, and from the bare Inspection of the Globe and Charts of the Northern Hemisphere, they appear certain and indubitable; neither have they hitherto been called in question, by any who have sought to discredit this Passage, who all bend their Endeavours to prove the Discovery impracticable, without insinuating any thing to the Prejudice of the Expectations raised from it, in case it could be discovered and sailed through. We need not, therefore, wonder at all that so much has been written on this Subject, so many Undertakings set on Foot, such a variety of Attempts made on all Sides, and by all means, to come at this North-west Pas-

sage; since, in respect to this Part of *Europe*, it would be a kind of maritime Philosophers Stone; a Discovery every Way equal, if not superior, to that of *Columbus*. I do not mean in regard to the Subject of the Discovery, but in respect to us; and what I would say is, that we should, for our Part, owe as much Obligation to whoever should find this new Passage, as to *Columbus*, who found out the new World; to which it is a Passage, and such a one, as to us would double the Value of that Discovery. So much may suffice as to the first Point we promised to examine, let us now proceed to the second, and shew why this Passage is thought practicable.

3. We have already observed that *Cabot* first projected this Passage, in the Life-time of *Columbus*; and from the same Motive which engaged that illustrious Person in the Discovery of the new World, *viz.* to find a shorter way to the *East-Indies*, than that practised by the *Portuguese*, by the *Cape of Good Hope*; he offered many Arguments to prove this was practicable by the North-west; and since his Time, and from the mighty Improvements that have been made in Navigation, there have been added many more. That we may reduce these within the narrowest Compass possible, without Prejudice to the Subject, we will propose them separately, not in the Order in which they were from Time to Time advanced, but in the Method the most easy, most natural, and best connected in our Power; so that the Reader may very fairly judge of the Merits of the Cause, though perhaps some frivolous or doubtful Evidence may remain unexamined, in order to spare Time and Trouble.

First, It is thought probable there must be a free Circulation of the Waters at the Pole, because if it were otherwise, it would not be easy to conceive how the Equilibrium of Land and Water is maintained, or that Regularity which is observed in the Tides, where the Shores are not covered by Islands, Rocks, or broken Lands. Because if it was otherwise, there must fall out great Changes in the Tides, the nearer we approached the Pole, as is seen in the *Mediterranean* and *Baltic*, which are close Seas, and therefore differ from the Ocean, there being a sensible Tide only in some Parts of the former, and that too not very considerable, and none at all in the latter; whereas in the most Northern Seas, the Tides are high and very regular, which renders it apparent there must be some Passage, or rather Communication with the rest of the Ocean.

Secondly, This Argument becomes more pressing when confined to *Hudson's Bay*, where there are not only Tides, but such irregular Tides in some Places, as seem to indicate the Reception of more Water into that Bay, than comes from *Hudson's Straights*, or any other Passage into it hitherto known. But from the Nature and Height of these Tides, and the Situation of the Places where they are observed, it seems almost indisputable that they come by the West, either through some large and practicable, or through some icy and impassable, Channel; the former is Mr. *Dobb's* Sentiment, and the latter the Opinion of Captain *Christopher Middleton*, a very knowing and ingenious Gentleman, who did not embrace this Notion, however, till he made a Voyage for the Discovery of this Passage, and failed in it.

Thirdly, We may discern the Cogency of this Argument, from what has been actually discovered towards the South Pole, where the Situation of the Straights of *Magellan* agrees perfectly with this Notion, and suggests according to the Analogy of things, a like Communication between the Seas towards the North Pole. We may also observe, that those Straights are through broken Lands and Islands, in a very cold Climate, and, in many other respects, agreeable, as far as hitherto has been discovered, to the Countries lying round the North Pole, more especially under the Latitudes where of late this North-west Passage has been sought for.

Fourthly, It has been generally believed, from the great Difference between the Productions of all kinds, and even between the Animals, in *America*, and the other Parts of the World, that they are absolutely separate; and as to its Southern Extremity, Experience has justified the Conjecture, and so renders the Presumption strong, that

that there is a like Separation on the North, and that this Country is not contiguous to any of the other Continents.

Fifthly, The Situation of the Northern Parts of *America*, so far as they are yet discovered, afford very strong Presumptions in favour of this Opinion. The great Ridge of Mountains beyond the Lakes of *Canada*, have many Rivers running from them into those Lakes, and we may from thence conclude, and the Testimony of the Natives sufficiently confirm it, that there are also Rivers running on the opposite Side, and these must therefore necessarily fall into this West Sea, or Channel, which we seek. Part of this Argument is real and certain, *viz.* that there are such Mountains, and though we cannot affirm as much, in respect to the other, as no *European* has yet reached those Mountains, yet there is nothing in it absurd or improbable, but rather quite the contrary.

Sixthly, We have no Tradition, either on the *Groenland* or *American* Side, of any Communication between them; but quite the contrary: The *Groenlanders* never speak of any civilized Nations near their Country distinct from the *Europeans*; whereas the *Americans* do, and have always persisted in a Story of Persons coming in very large Canoes, or Ships, to the North-west Coast, and trading there with the People, who, according to their Accounts are also more civilized than any other Nation, Natives of *America*. If any Credit be due to this Account then we must conceive that these Traders come from *Japon* (which is very improbable) or from some northern Country hitherto unknown, equally separated from *America* and *Asia*.

Seventhly, It is asserted that this Streight has been passed before and since the Discovery of *America*, and that various Memorials of these Transits are still preserved in authentic Histories. *Gemma Frisius* reports, that it was passed by three Brethren, and thence received the Name of *Fretum Trium Fratrum*; but he does not tell us when or where these Brethren lived, whence they sailed, or whither they returned after performing this Voyage. It is reported by an ancient *Latin* Author, that certain *Indians* being cast on Shore in *Germany*, were presented by a barbarous King, into whose Dominions they came, to *Quintus Metellus Celer*; and it is taken for granted they came through this Passage. It may be questioned whether these *Indians* were any other than *Groenlanders*; and if so, without question, their being cast upon the Coast of *Germany*, proves nothing. About the Year 1160, under the Reign of the Emperor *Frederick Barbarossa*, certain *Indians* also are reported to have been wrecked on the *German* Coast, and of these we may say the same thing. *William of Newberry* has a Story of much the same Nature, only accompanied with some very incredible, not to say ridiculous, Circumstances, of two Green Children, which in the Reign of King *Stephen* came hither from the Land of *St. Martin*, which, by their Description, appears to be *Iceland*: So that take them all together these Stories prove little or nothing. One *Cortereal*, a *Portuguese*, is also said to have passed this Streight, and to have bestowed upon it his Name; but how, when, or where, is not to be enquired, or at least not to be resolved. One *Gomez* is said to have offered the Discovery of this Passage to the Emperor *Charles V.* which must not be understood, as grounded on his own Knowledge, but from a Persuasion of Mind that the finding such a Streight was practicable, in which however upon Trial he failed. Some flying Reports of much the same kind we meet with in many Writers, but though they have, without Cause, been urged as Proofs of such a Passage, yet this by no Means turns against it; nor can it be alledged, that since these Stories are some of them absurd, others dark, and the rest incredible, therefore the North-west Passage they are brought to prove is fabulous. If Truths were to suffer by the bringing of improper or improbable Arguments to support them, some even of greater Consequence than this, of which we are at present speaking, might run no small Risk; but as debasing Gold or Silver does not destroy them, so the Addition of Falshoods, though they may sometimes discredit Truths, cannot change their Nature.

Eighthly, There is one Argument in favour of this Passage, which may be drawn even from those Fables, without being at all tinged with Fiction: It is this, that the general Opinion amongst the Learned in favour of it was strong; which induced them to refer every thing of this Nature to the North-west Streight: In the like manner, the Notion of the Garden of *Hesperides* made way for the Discovery of the *Canaries*; the Rumour of an *Atlantis*, or western World, proved the Means of unfolding *America*; nay, in the present Case, though these Tales have not hitherto helped us to this so much desired Passage to the North-west, yet they may be said to have guided us to the opposite Streight of *Magellan*; for it was upon the Reasons assigned by *Cabot*, in favour of this Way of going round the Globe, that *Magellan* formed his Project to discover a Passage into the same Seas, by sailing southward; which he happily effected at the first Trial, and by doing this, gave some Degree of Evidence that the original Scheme of opening a Way by the North-west, is neither against the Analogy of the Mundane System, nor in its Nature impracticable from the Difficulties to which those employed to find it may be exposed; for though it appears that many have suffered excessively in the Attempts hitherto made for that Purpose, yet no Account of Voyages to the North-west represents the Cold more intolerable, or the Troubles occasioned by the Ice, greater than in going round *Cape Horn*, through the Streights of *le Maire*, or those of *Magellan*. If therefore the Reasons persuading this Passage have (generally speaking) appeared so conclusive to the Learned, as to give Credibility to ill-founded Stories; if they have actually led to the finding a Passage at the opposite Extremity of the Globe, and this Streight be practicable, notwithstanding its being full of Ice, and the Weather rigorous beyond Description, why should we suspect that an Opinion having so many Circumstances in its Favour is notwithstanding absolutely groundless, because it is as yet unsupported by Experience, as if every thing not hitherto performed must be in its Nature impossible, which though Warrant enough for a vulgar Notion, cannot be thought a fit Foundation for a philosophical Principle; yet granting it were, even this Foundation perhaps might be shaken; for if nothing but Experience will prevail, there are some Instances independent of those romantic Tales before-mentioned, which look very strongly that way.

Ninthly, There was, so long ago as *A. D.* 1567, a Person in *Portugal* who affirmed, he had actually sailed through this Streight into *Europe*, and published immediately, on his Return, a Relation of his Voyage, which, had it been false, might have been easily confuted; but instead of that, by the King of *Portugal's* Command, the Book was called in, and very carefully suppressed. The Proof of this Fact, as it is very extraordinary and decisive, is thus set down by the laborious *Purchas*, in the third Part of his *Pilgrims*, Pag. 840; *viz.* "I Thomas Cowles
" of *Bedminster* in the County of *Somerset*, Mariner, do
" acknowledge, that six Years past, at my being at
" *Lisbon*, in the Kingdom of *Portugal*, I did hear one
" *Martin Chacke*, a *Portuguese* of *Lisbon*, read a Book
" of his own making, which he had set out six Years
" before that Time in Print, in the *Portugal* Tongue,
" declaring, That the said *Martin Chacke* had found,
" twelve Years now past, a Way from the *Portugal*
" *Indies*, through a Gulph of the *Newfoundland*, which
" he thought to be in 59 Degrees of the Elevation of
" the North Pole by Means that being in the said
" *Indies* with four other Ships of great Burden, and he
" himself in a small Ship of fourscore Tons, was driven
" from the Company of the other four Ships, with a
" westerly Wind; after which he passed along by a great
" Number of Islands, which were in the Gulph of the said
" *Newfoundland*. And after he over-shot the Gulph, he
" saw no more of any other Island until he fell in with the
" North-west Part of *Ireland*, and from thence he took
" his Course homewards, and by that Means he came to
" *Lisbon*, four or five Weeks before the other four Ships
" of his Company that he was separated from, as
" before-said. And since the same time, I could
" never see any of those Books, because the King com-
" manded

“manded them to be called in, and no more of them to be printed, lest in time it would be to their Hindrance. In Witness whereof I set to my Hand and Mark, the 9th of April, Anno 1579.”

There is no doubt something strange enough in this Story; and one might be tempted to suspect, that either the *English* Seaman had made some Mistake, or that the *Portuguese* Pilot had boasted of more than he had done, if in those Days these kind of Points had not been much more thoroughly understood, as well as more narrowly enquired after than they are at present; so that if there had been any just Grounds for rejecting this Story, we should hardly have found it mentioned by those judicious Writers who seem to lay great Stress upon it; but it so falls out, that I think I am able to join to this another Proof that has been very little taken notice of, and which notwithstanding seems very strongly to corroborate this Report, from which I do not at all doubt that it was derived.

The Fact upon which I depend is this. Captain *James Lancaster*, afterwards Sir *James Lancaster*, commanded the first Fleet sent to the *East Indies* by our Company, which sailed in the Month of *February* 1600, and a very prosperous Voyage he made: While this Gentleman was in the *Indies*, he heard a Report of another Passage into those Parts, which, as I hinted was probably that through which the *Portuguese* Pilot had failed; and this Gentleman, who was a very experienced Mariner in Theory as well as Practice, was entirely persuaded of the Truth of it, as appears from the following remarkable Accident which will do Honour to his Memory, as long as any Records remain of our maritime Affairs. In his Return to *England*, on board the *Dragon*, a very fine large Ship, with a most valuable Cargo, he met with such a Storm off the *Cape of Good Hope*, as tore away his Rudder, and put him in such Danger that he very much doubted the Possibility of his returning home; yet, instead of quitting his Ship in this Distress, he contented himself with writing a short Letter to the Company; which he sent on board the *Hector*, and to this Letter he added the following remarkable Postscript: *The Passage to the East Indies lies in 62 Degrees 30 Minutes by the North-west, on the American Side.* Upon comparing this with the Map prefixed to Mr. *Dobbs's Account of the Countries adjoining to Hudson's Bay*, I find it falls in precisely with an Opening called there by the Name of *Lovegrove*. And it agrees perfectly well with the *Portuguese* Pilot's Account; since he might very well sail through broken Lands and Islands from thence, as he did to *Newfoundland*, or perhaps to *Labrador*, and thence to *Ireland*. I mention all these Facts together because they seem to relate to the same Thing, and to confirm each other. I shall now proceed to another Instance.

Tenthly, Mr. *Michael Lock*, a very intelligent Person, who resided at *Venice* in 1596, obtained there, by a very singular and extraordinary Accident, an Account of this very same Passage from a Man who had himself discovered it on the *American Side*, of which, from his own large Discourse preserved in *Purchas's Pilgrims*, I shall give as short and true an Extract as I am able. In the Month of *April*, in the Year before-mentioned, he met with *Juan de Fuca*, a Native of the Island of *Cephalonia*, then about threescore, who had long served the *Spaniards* in Quality of a Pilot in the *South Seas*, and in this Station was taken in the *St. Anne*, an *Acapulco* Ship coming from the *Philippines*, in *A. D.* 1587, by Capt. *Candish*, and by that Accident lost sixty thousand Ducats. He told Mr. *Lock* that he was Pilot of three small Ships sent by the Viceroy of *Mexico* to fortify the Straights of *Anian*, to prevent the *English* from penetrating that Way into the *South Seas*, which miscarried by the Commander's being guilty of some foul Practices that raised a Mutiny. He was afterwards employed again for the same Purpose, in 1594, with a small Ship and a Pinnace; and having sailed along the Coasts of *New Spain, California*, and, as he expressly affirmed, Part of the Continent beyond, to the Height of 47 Degrees, and finding that the Land trended there North-north-east, with a broad Inlet of the Sea, between 47 and 48 Degrees, he

entered into this Strait, and sailed therein more than twenty Days; and found that Land trended still sometimes North-west and North-east, and North and East, and South-eastward, the Sea growing much broader than at the Entrance, and having in it many Islands small and great, by which he passed. He also took notice, that at the very Entrance of the Strait, there was a great Headland, or Island, in which there was a prodigious large Rock, like a Pillar or Pyramid. He further affirmed, that he landed several times, and saw many of the Inhabitants, who were cloathed in Beast-skins, or Furs; and as to the Country, he described it as exceedingly fruitful, and rich in Gold and Silver, Pearl, and other valuable Commodities, and with every Thing that was to be found in *New Spain*.

He reported farther, that he having entered thus far into the said Strait, and being come into the North Sea, and finding the Passage wide enough every where, and about thirty or forty Leagues wide in the Mouth of the Straights where he entered; he thought he had now well discharged this Office, and done the thing which he was sent to do; and that not being armed to resist the Force of the *Savage* People, he therefore set sail, and returned homewards again, towards *New Spain*, where he arrived at *Acapulco*, *A. D.* 1594, hoping to be rewarded largely of the Viceroy, for the Service done in this Voyage. Also he said, that after his coming to *Mexico*, he was welcomed by the Viceroy, and had great Promises of great Reward; but that having sued there two Years Time, and obtained nothing, the Viceroy told him that he should be rewarded in *Spain* by the King himself, very largely; and desired him therefore to go into *Spain*, which Voyage he performed. He added, that when he was come into *Spain*, he was well received there at the King's Court, in Words after the *Spanish* Manner; but after long Time of Suit there also, he could not get any Reward. And that therefore, at length he stole away out of *Spain*, and came into *Italy* to go home again, and live among his own Kindred and Countrymen in his old Age. He likewise owned, that he thought the Cause of his ill Usage by the *Spaniards* was, because they did understand, very well, that the *English* Nation had now given over all their Voyages for Discovery of the North-west Passage, wherefore they need not fear them any more to come that Way into the *South Sea*, and therefore they needed not his Service for the future.

This old *Greek* Pilot, offered Mr. *Lock* to go over to *England*; and in case Queen *Elizabeth* would have been pleased to make him Compensation for the Losses sustained when taken by Captain *Candish*, in case of Success, he would, in her Majesty's Service, attempt the Discovery of this North-west Passage from *Europe*, which, with a Vessel of forty Tons and a Pinnace, he doubted not to perform in thirty Days. At the Time of his making this Offer, Mr. *Lock* had it not in his Power to bring him over, but he acquainted the Lord Treasurer *Cecil*, Sir *Walter Raleigh*, and Mr. *Richard Hackluit* therewith, who approved his Design, but sent him no Money. At last, in 1602, his own Circumstances being mended, he resolved to bring this Man over, with whom he had all this while kept a constant Correspondence on his proper Expence; but upon his Arrival at *Zant*, to his great Grief and Disappointment, found him dead.

Eleventhly, Yet these Discoveries by Sea are not all that is in our Power to produce on this Subject; we have likewise some Proofs that are no less conclusive, drawn from Discoveries made by Land, of which we have partly spoken in another Place; but which it is absolutely necessary we should again mention here, though in Terms as succinct as it is possible. In the Year 1568 Sir *John Hawkins*, after an Expedition attended with indifferent Success against the *Spaniards*, found himself obliged to set about one hundred of his Crew ashore, about six Leagues West of the River *la Mina*, and about one hundred and forty Leagues West by North of *Cape Florida*; amongst these was *David Ingram*, of *Barking* in *Essex*, who, with some of his Companions, travelled Northwards through many unknown Countries, where they saw vast Riches, as well as precious Stones, as of Gold and Silver.

Silver. In the most Northern Countries, through which they passed, the People were cloathed with Bear-Skins and fine Furs. In the Month of *May* they came into a rich and fertile Country, which is particularly described in his Travels, preserved by *Hackluit*. And in this Country he affirms he saw Elephants, and other strange Beasts, not known in *America*; and after marching, according to his Computation, near two thousand Miles, and passing over several large Rivers, some four, some six, some eight, and some ten Miles over; and one so large, that they were twenty-four Hours in crossing it in a Canoe; they came to *Cape Breton*, where himself, and two of his Companions, embarked aboard a *French Ship*, one Mr. *Champaigne*, to whom one of *Ingram's* Companions, *Richard Brown*, gave a very large Pearl, that he had picked up in this Journey. They landed at *New Haven* in *France*, in 1569, and soon found a Passage to *England*; where, within a Fortnight after their Arrival, they came to their old Captain *Hawkins*, to whom they related this Story, affirming that they had travelled to the North Sea, by which they meant the Sea that washed the Northern Part of *America*, opposite to the Bay of *Mexico*; and they likewise affirmed, that for two Days together they travelled along the Shore of this Sea, and that the Inhabitants gave them to understand, that they were not unacquainted with Ships, drawing the Figure of them upon the Sand, with their Masts, Sails, and Flags.

This Account of *Ingram's* was not digested into writing till several Years after, as appears by his affirming that *Richard Brown* was slain five Years before, in a Ship called the *Elizabeth*, belonging to one Mr. *Cockins* of *London*; and that his other Companion, *Richard Twide*, died three Years before, at the House of Mr. *Sheerwood*, in *Ratcliffe*; but they had all given this Account upon their first Arrival, to Captain *Hawkins*. It cannot be denied that there are some very strange and improbable things in this Relation of *Ingram*; which shew him either a very weak and credulous Man, or one that delighted in using the Privilege of Travellers, of exceeding the Truth. Notwithstanding all this, Mr. *Hackluit* was of Opinion, that his Relation amounted to a strong Proof of a North-west Passage; as to which, however, it does not appear that the Man himself had any Notion, for otherwise he might have pretended, that the River he was twenty-four Hours in passing was it; for so in all probability it really was. I must acknowledge, that upon reading and considering his Narrative, I was once in very great doubt, whether it deserved any Credit at all, or whether it ought to find a Place amongst those Matters of Fact, that deserve to be mentioned as Proofs of the Possibility and Probability of there being a Passage to the *South Seas* by the North-west; but I was at last determined to give it a Place, by meeting accidentally with another Account no less strange and extraordinary, and which the Reader will perceive has such an Agreement therewith, that is not easily to be accounted for, without allowing that there is at least a considerable Mixture of Truth in them both; for that the one should be copied from the other, considering the Persons by whom both Relations were made, is, in my Judgment, absolutely impossible. Besides they seem also to be confirmed, both by the most ancient, and by the more modern *Spanish* Authors, who mention the Northern Extremities of *America*. But it is Time to come to the Matter of Fact.

Twelfthly, The Author of the *French Mercury Galant*, for the Year 1712, gives us the following Relation, viz. "That ten *Frenchmen*, and two *Savages*, set out from *Montreal* in *Canada*, and having continued for some Time in the Country of the *Illinois*, and on the Banks of the River *Mississippi*, they resolved to proceed farther on new Discoveries. They made use of three Canoes of Bark of Trees, to remount the *Mississippi*, and being gone up the same one hundred and fifty Leagues, they were stopped by a Fall, which obliged them to carry their Canoes over Land, and then they embarked again on the said River, and went up the same forty Leagues more, without meeting any People; they spent a Month and a Half in hunting, and conti-

ning their Design of attempting some new Discovery, they met, fifteen Leagues from thence, with a River running to the South-south-west, from whence they conjectured it discharged itself into the South Sea, its Course being opposite and contrary to those which fall into the North Sea. They resolved thereupon to carry their Canoes into it, and in their Way saw Lions, Leopards, and Tygers, which did not offer to attack them. They fell down that River about one hundred and fifty Leagues, and met with a Nation called *Escaaniba*, which possess a Country of two hundred Leagues at least, in which they saw several Forts, Towns, and Villages, whereof the Houses are built of Timber, and Bark of Trees. They have a King who pretends to descend from *Moteczuma*, and who is commonly cloathed with Beasts Skins, which is also the ordinary Cloathing of the Inhabitants.

"They seem, in their Manner, to be under some Rules of Policy. They are Idolaters, and their Idols, which are in their Kings Palace, are frightful, and of a prodigious Size. There are two amongst others, whereof one is the Figure of a Man armed with Lances and Arrows, having one Foot upon the Ground, and the other lifted up, with a Hand on the Figure of a Horse, as if he were going to mount it. They say that this is the Statue of one their Kings, who was a great Conqueror. That Statue holds in its Mouth a large square Carbuncle, which casts a Light in the Night as Fire. The other Figure is a Woman, who was a Queen, setting on a Saddle, upon an Unicorn, having four great Dogs on one Side. These Figures are of massy Gold, but very ill made. They are set on a raised Place, being a Square about thirty Feet, covered with Gold. Between those two Statues is the Way into the King's Apartment; and at the Door of the same stands his Guards, consisting of two hundred Men. The Palace is very large, and is three Stories high. The Walls are eight Feet high, and of massy Gold, cut in square little Bricks, and laid one upon another, fastened with Hooks and Bars of the same Metal. The rest of the Building is of Timber, and covered with the same. Those People have a great Trade for Gold, but our Discoverers could never guess with what Nation, unless it be with the People of *Japon*; for they carry their Gold to so great a Distance, that they told the *French*, that they spent six Months in their Journey to that Nation. Our Adventurers were present at the setting out of one of their Carravans, which consisted of above three hundred Oxen laden with Gold, and guarded by the like Number of Men, armed with Lances and Arrows, and with a kind of Poniard.

"They barter their Gold for Iron, Steel, Lances, &c. They are altogether Strangers to writing, but use a Sort of Bark dressed for that Purpose, on which they mark the Quantity of Gold intrusted to each of the Men aforesaid, for which he must be accountable at his Return. The King is called *Agauzan*, which signifies, in their Language, the great King; and though he is at War with nobody, he keeps a standing Army of one hundred thousand Men. Their Trumpets are of Gold, and strait, and they sound the same, in a disagreeable Manner. Their Drums are large Kettles of Gold, covered with Hart-Skins, and so large, that they must be carried by Oxen. These Troops exercise once a Week in the King's Presence. The Inhabitants are of a brownish Complexion, and look frightful, having a long narrow Head, which they form into that Shape, by pressing the Heads of Children between two pieces of Board. The Women are handsome, and as white as in *Europe*: They have, as well as the Men, large Ears, which they account a great Beauty, and adorn them with Gold Rings. They let their Nails grow as long as they can, and this is, amongst them, a mark of Distinction. The most hairy Men, are looked upon to be the most handsome. Polygamy is in use, and they shew little Concern for the Conduct of their Daughters. They love Rejoicing and Dancing, and are great Eaters. They make a Sort of Wine

“ Wine of Palm-Trees, and have several other Sorts of
 “ Liquors. They smook very much, and have good
 “ Tobacco, which grows in their Country without any
 “ Culture.

“ The Climate is very temperate, and the Inhabitants
 “ live to a great Age, without being troubled with Dis-
 “ eases. The Country affords all sorts of Fruits both of
 “ the *Indies* and of *Europe*. They have Abundance of
 “ *Indian* Wheat, and wild Oats, which are as white
 “ and as good as Rice. They make Bread of both, but
 “ cultivate only the former. They have large Plains,
 “ which afford excellent Pasture for all sorts of Cattle.
 “ Their Rivers are full of Fish, and their Woods abound
 “ with all sorts of Birds, especially Parrots. They have
 “ Monkeys and Animals peculiar to that Country. Their
 “ capital City lies within six Leagues of the River *Missi*,
 “ which signifies the River of Gold. The *French*, upon
 “ taking their Leave of that King, promised to return
 “ in 36 Moons, *i. e.* in three Years, and to bring with them
 “ several Goods from *Canada*, to barter with their Gold,
 “ which they value so little, that the King bid them take
 “ as much as they pleased, which they did, and brought
 “ away each sixty Bars, weighing about two hundred and
 “ forty Pounds. Two of the Adventurers had the Cu-
 “ riosity to go to the Place from whence they bring their
 “ Gold, and informed the others, that the Mines are
 “ within the hollow Parts of the Mountains, from which
 “ the Gold is carried away by Rivers, and is found on
 “ the Banks of them. Those Rivers are almost quite
 “ dried up for four Months in the Year. Most of these
 “ Adventurers returning home, were killed at the Mouth
 “ of the River *St. Laurence*, by an *English* Pirate, and
 “ two of them only escaped, who, after a long Captivity,
 “ during which they had been in several Bays in the *East*
 “ and *West Indies*, and in *China*, at last arrived at *Brest*;
 “ and offered, upon pain of their Lives, if conducted
 “ to the *Mississippi*, easily to find back again from thence
 “ the Way leading to that *New Peru*.”

It would be no very difficult Matter to assemble other Passages of a like Nature from the Works of various Authors, *English*, *French*, and *Spanish*, all concurring in the Report, that there are very great Nations in the most Northern Parts of *America*, and that they trade and have Correspondence with the Inhabitants of some other Country absolutely unknown; but that this seems to be unnecessary after what has been before related. One Thing however I will take the Liberty of hinting to the Reader, because I think it may contribute to give some Light to these Stories of a civilized Nation in *North America*; and it is this, that the *Mexicans* themselves always acknowledged, that they came from the *North*, and were not the original Inhabitants of that Country where the *Spaniards* found them: So that if we suppose the *French* Adventurers above-mentioned spoke Truth, we may very well conclude that it was not the last *Moteczuma*, but a former Prince of that Name these *Indians* spoke of; and that instead of being the *Mexicans* expelled by the *Spaniards*, they may be the original Nation from whom those *Mexicans* were derived that contended with the *Spaniards*. This I do not pretend to lay down as a Thing certain, but as a Thing possible, if not probable, and therefore worthy of future Consideration.

Thirteenthly, The last Argument I shall offer is from the conferring and comparing together those that have gone before; for I think it can hardly be esteemed possible, that Nature, Art and Tradition, should conspire to lead Mankind into Error in this Respect, by affording so many probable Inducements to look upon the finding such a Passage to the North-west as not only probable but practicable. The wisest Philosophers, as well as Cosmographers, have admitted this Proposition, considering only the Reason of the Thing. The most able Seamen have been of that Opinion, after repeated Trials and Experiments; such as *Cabot*, *Davis*, *Hudson*, *Button* and *Baffin*, not to mention others that have been employed in the *Danish* Service. We find the Rumour of such a Passage spread every where in *Italy*, *Spain* and *Portugal*, as well as in *Great Britain*, *Denmark* and *Holland*. In the *East Indies*, and in the *West*, amongst the *Indian* Natives, as well as

European Planters: Whence I conclude, that as no Fiction was ever so generally believed, this will sooner or later be found a Truth, and then the Wonder will be that it was found no sooner. But let us now proceed, from the Reason of the Thing, which I have laboured to make as clear as I could, to an Historical Account of the Expeditions which the Persuasion that there is such a Passage by the North-west has occasioned; in discoursing of which I shall be as concise as it is possible.

4. The first who attempted this Discovery, as has been often said, was the famous *John Cabot*, towards the latter-end of the fifteenth Century, but was prevented from finishing his Discovery by a Mutiny on board his Ship. He constantly retained his Opinion that there was a Passage this Way, and that he should have found it if this Accident had not happened. It was however fifty Years before another Attempt was made, and then Sir *Martin Frobisher*, in 1576, failed with two Barks in search of this Passage. He discovered in the Height of 62 Degrees, on the Coast of *Groenland*, a large Inlet, to which he gave the Name of *Frobisher's Straights*, through which he sailed about sixty Leagues, with main Land on both Sides, and saw some of the Inhabitants. He made a second and a third Voyage, and called the Country he discovered *Meta Incognita*. In 1583 Sir *Humphry Gilbert* sailed to the River of *St. Laurence*, took Possession of that Country which the *French* call *Canada*, and settled our Fishery upon that Coast. In 1585 Capt. *John Davis*, of whom we have given elsewhere a large Account, made an Attempt to find this North-west Passage, and discovered a Part of *Groenland*, to which he gave the Name of the *Land of Desolation*. He sailed afterwards as high as 64 Degrees 15 Minutes, through that which has been since called *Davis's Straights*, and thence to the Latitude of 66 Degrees 40 Minutes. In 1586 he made another Voyage, in which he made farther Discoveries, and returned full of Hopes that a third Voyage would compleat his Design. Accordingly in 1587 he proceeded through *Davis's Straights* to the Height of 72 Degrees 12 Minutes, and found an open Sea to the South-west.

In 1610 Mr. *Henry Hudson*, after he had in vain made Trial of the North-east Passage, attempted a Discovery to the North-west, and made a great Progress therein; passing through the Straights that have since bore his Name into a large open Sea, called *Hudson's Bay*, and would have proceeded further, but was hindered by a Mutiny among his Seamen, who basely deserted him, as we have formerly mentioned. In 1612 *James Hall* and *William Baffin* made a like Attempt, in which the former was killed by a Savage. This Accident did not hinder Mr. *Baffin* from going thither in the Year 1615, who proceeded to the utmost Extremity of that Sea, which communicated with *Davis's Straights*, and found it to be no other than a large Bay, which has been since known by his Name. He went thither again the next Year, and discovered an Inlet, which he called *Sir Thomas Smith's Sound*, in the Latitude of 78 Degrees, but returned to *England* without Success, though he remained firm in his Opinion of a North-west Passage to his Death, which happened in the *East Indies*, yet his Miscarriage discouraged for a long Time any Attempts from hence.

5. Mr. *Henry Button*, (afterwards Sir *Henry*) in the Year 1611, having been encouraged by Prince *Henry* to attempt a more perfect Knowledge of that Sea which had been found by Mr. *Hudson*, went thither accordingly, and proceeded 200 Leagues farther to the South-west, coasting along a great Continent, to which he gave the Name of *New South Wales*, and winter'd at *Port-Nelson*; then sailing cross that Sea, which has since been called *Button's Bay*, he discovered another Country, to which he gave the Name of *New North Wales*, which seems to be only an Island in that great Sea, which opens into the Northern Ocean by the Passages of *Hudson's Straights* and *Davis's Straights*, and of which *Hudson's Bay*, *Button's Bay*, and *Baffin's Bay*, are only Parts, bounded by the Continents of *Groenland* and *North America*. In his wintering at *Port-Nelson*, which is in the Latitude of 57 Degrees 10 Minutes North, he lost the best Part of his Crew through extreme Cold, notwithstanding all the Precautions

tions he could take to prevent it; but it does not appear that he was in any Degree distressed for want of Provisions, since he assures us that besides Deer and other wild Beasts, there was such vast plenty of Partridges, and other Fowls, that they killed upwards of one thousand eight hundred Dozen; and he likewise observes, that the Natives fished in their Seal-Skin Boats, without appearing to be much incommoded by the rigorous Season. He, for Causes elsewhere related (especially the Tides) concluded a North-west Passage certain, and thereby restored the Hopes of it, then fallen very low.

6. The King of *Denmark*, believing that the Vicinity of his Country gave him greater Advantages than any other *European* Power, resolved to perfect these Discoveries, which the *English* had begun; in order to which he caused two Ships and a Pinnace to be fitted out in 1605, under the Command of Captain *John Cunningham*, a Native of *Scotland*; with whom one *Lindenaw*, a *Danish* Nobleman, was joined in Commission; *James Hall*, and *John Knight*, both *Englishmen*, were Pilots. The *Dane* very soon returned, but *Cunningham* proceeded a little Way through *Davis's Straights*, to a Place called *Cunningham's Ford*; from whence he brought away a kind of Stone, which he took to be Silver Ore; out of one hundred weight of which there were extracted twenty-six Ounces of fine Silver. In 1607 another Ship was sent from *Denmark*, of which *James Hall* had the Command; but before they had advanced as high as *Cunningham's Ford*, the *Danish* Seamen mutinied, and forced them to return. His *Danish* Majesty, however, persisted so obstinately in this Design, that he sent for Seamen from *Norway* and *Iceland*, supposing that they were better able to endure Cold than other People; and having fitted out two Ships for Discovery, gave the Command of them to one *Christian Richardson*, a Native of *Holstein*. These People, however, behaved worse than the *Danes* had done, for they mutinied before they saw the Coast of *Greenland*, and so disappointed that Voyage. In 1619 Captain *John Munk* undertook this Voyage, and arrived safely at *Cape Farewell*, in the Latitude of 60 Degrees thirty Minutes, where, though their Tackle was so frozen, and full of Ice, that they could not handle them; yet the next Day was so hot and sultry, that they were forced to work in their Shirts. He gave here Names to several Places in *Hudson's Bay*, but made no great Discoveries, though he was obliged to winter in the Latitude of 63 Degrees 20 Minutes, in a Place which has since retained his Name, on the West-side of the Bay before-mentioned.

The Hardships this Man endured in the long Winter he passed there, are almost incredible. In the Month of *May*, 1620, he found himself alone in a Hut, scarce alive himself, and almost morally certain that all his Mariners were dead: He collected his Spirits, however, as well as he could, crawled out, and found, of all his Crew, no more than two left, and those in almost as weak a Condition as himself; however, they removed the Snow in some Places, and finding fresh Herbs underneath, recovered from the Scurvy by eating them; and when the Season permitted, and they had collected a little Provision, they left their Ship behind them, and ventured to return in their Pinnace, with which, after overcoming great Difficulties, they safely arrived in *Norway*. This Captain *Munk* was not only a great Seaman, but a very ingenious Mathematician; and some Years after revived this Design of finding a North-west Passage, of which he gave so good an Account to several of the *Danish* Nobility, and made it so probable to some of the richest Merchants in *Norway*, that they raised a joint Stock to defray the Expences of his Voyage.

When all things were in a Manner ready, *Munk* himself was taken off by a very odd Accident. The King asked him how he came not to discover the North-west Passage the last Time, upon which he gave him a large Account of his Misfortunes. The King told him that he had destroyed a great many Men already, to which Captain *Munk* made a quick Reply, and provoked the King to strike him over the Stomach with his Cane. This Indignity had such an Effect upon the Man's Spirit, that as soon as he came home, he obstinately refused all

Refreshment, and died in two or three Days. The unfortunate Issue of this Affair so discouraged the *Danes*, that we hear nothing more of their Attempts, though it is certain, that with respect to such Expeditions, they enjoy much greater Advantages than almost any other Nation.

7. As long as the *Greenland* Trade was carried on with Advantage to this Nation, the Endeavours for a Discovery were kept up, and a special Committee was appointed by the Merchants concerned in that Trade, for drawing Instructions to the Commanders of such Vessels as were sent abroad in that Service, and Sir *John Wolstenhome* the younger was appointed their Treasurer. We have a great many Letters and Papers transmitted to this Committee, in the third Part of *Purchas's Pilgrims*, and of these there are some that are very well worth the reading. It appears from them, that *Thomas Marmaduke*, of *Hull*, had sailed as far as the Latitude of 82 Degrees North, which was to the utmost Extent of *Greenland*; but he seems to have kept too near the Shore, which was the Reason that he found himself much incommoded by Ice; whereas if he had kept a little to the Westward, it is allowed that he would have met with an open Sea. But by this Time other Nations began to interfere in the *Greenland* Trade, and the Company found themselves under a Necessity of having recourse to the Crown for Protection and Assistance, as well for defending their Fishery, as for prosecuting their Discoveries; and accordingly they addressed themselves to King *Charles I.* upon both Heads, who very readily granted them all that they desired, particularly a Frigate, called the *Charles*, under the Command of Captain *Luke Fox*; which, being manned and victualled for eighteen Months, sailed in the Spring of the Year 1631, in order to make Discoveries towards the North-west; and, as he tells us himself, this was the sixteenth Voyage that had been undertaken expressly for this Purpose.

He traced *Frobisher*, *Hudson*, *Davis*, *Baffin*, and *Button*, meeting with Whales, much Ice, and foul Weather. He built a Pinnace in River *Nelson*, where he found several Remains left there by Sir *Thomas Button*. He observed abundance of small spruce Fir-Trees on both Sides the River, almost covered with Moss, and other Sorts of Trees, but small. The Valleys had good Grass, Blackberries, Strawberries, Vetches, Venison, &c. but no Natives or Inhabitants to be met with in this Place; tho' in other Parts of the Sea he saw several *Savages*. Captain *James* departing from *England* soon after Captain *Fox*, upon the same Design, they both met, and caressed each other, near *Port Nelson*, in the Month of *Aug.* 1631. *Fox* got home before Winter, and some time afterwards published a large Account of his Voyage, under a pompous Title, which, however, was never much esteemed; and sunk still lower, in the Opinion of Mankind, after Mr. *James's* Voyage was made public, which every body allowed to be an excellent Performance, and to have all the Merit that could be expected from a Work of that kind.

It appears from hence, that there was a surprizing Degree of Vigilance and Steadiness in the Conduct of the mercantile Part of the Nation at that Time. They applied themselves to the Study of Navigation and Commerce, as to Sciences capable of raising their Fame and Reputation, as well as their Fortunes; and this made them jealous of seeing themselves rivalled, or out-done, by any other Nation whatever. The King too had great Knowledge in these Matters, conferred about them with the principal Commanders in his Navy, and the most able Seamen throughout his Kingdom; offering freely whatever Assistance his Prerogative enabled him to give, and encouraging the wealthier Sort of Merchants to continue these Kinds of Expeditions, by his own Example. It was this that became a kind of Law to the Nobility and Courtiers, who, in imitation of the King, interested themselves deeply in Attempts of this Nature, as manifestly appears by the Names given to Roads, Sounds, Bays, Islands, Headlands, Promontories, and Coasts in *Hudson's Bay*, and other Northern Regions, by which the Titles of some noble Families are preserved, which are now extinguished, and their Memories also almost totally forgotten.

SECTION III.

The accurate and admirable VOYAGE of Captain THOMAS JAMES, for the Discovery of a PASSAGE into the SOUTH SEAS, by the North-west; his wintering in Charlton Island, and wonderful Return with his Ship, and most of the Crew, into England.

Extracted from his own Account, and delivered in his own Words.

1. *An Introduction containing the Reasons of this Expedition, and the Motives and Preparations of Captain James, for undertaking this Voyage.* 2. *The Author departs from Bristol, and arrives upon the Coast of Groenland.* 3. *Finds himself and his Crew exposed to great Danger, and prodigious Inconveniencies, by the vast quantities of Ice in those Parts.* 4. *An Account of their landing at several Places, the miserable Barrenness of the Country, and the Sea destitute of Fish.* 5. *They fall into new Perils from the Ice, from which they free themselves by incessant Labours.* 6. *A farther Account of the Country, Coasts, and Seas.* 7. *The Methods taken by Captain James, to encourage and keep up the Spirits of his Seamen, in the Midst of so many Difficulties.* 8. *Their Dangers and Labours still increase, notwithstanding all the Precautions that could be taken to avoid them.* 9. *A Misfortune happens in the weighing of their Anchor, by which several of the ablest Men in the Ship are miserably hurt.* 10. *They meet with Captain Luke Fox, who had been sent out the Year before upon the same Discovery; and after mutual Civilities, part from, and see, each other no more.* 11. *A violent Storm, by which they are in great Danger; from which they are delivered by their own Industry, and the Care of their Commander, with the Blessing of God.* 12. *The Ship run ashore by an Accident, which put them into so great Danger, that they had Thoughts of quitting their Vessel, and making their Escape in their Boat; but afterwards are so lucky as to get the Ship off.* 13. *Another Storm in which they lost their Shallop, and were driven to such distress, that they were forced to think of wintering in those Seas.* 14. *They are miserably incommoded with Fogs, strong Currents, and floating Islands of Ice; by which they are put in the utmost Danger for several Days together.* 15. *The Captain lands upon an Island in order to make Discoveries; to procure Wood, Water, and other Conveniencies, and to search out a proper Place for their wintering in.* 16. *Their House is set up, a Deer taken, and one of their Men lost in seeking for Refreshments.* 17. *An Account of their various Precautions taken to avoid such Accidents for the future; their Distress from the Severity of the Weather; and the Death of their Gunner.* 18. *Captain James inclines to run his Ship aground; the Reasons which induced him to think of this Expedient; and the Accidents which hindered him from putting it in execution.* 19. *They resolved, after mature Deliberation, to sink the Ship, as the surest Means of preserving her; this Resolution executed, and the Difficulties they met with in getting ashore.* 20. *Captain James's Speech to his Crew, in Relation to their Wintering; the Assurances given him by them, of their Fidelity and Obedience, together with the Distribution made of the Men to several Employments.* 21. *Farther Precautions taken for securing themselves in this uncomfortable Country, getting their Boat ashore, and raising a Storehouse for their Provisions.* 22. *A large and very curious Account of their Habitations in this desert Island, and of the Methods taken for the Ease and Refreshments of the Sick.* 23. *Observations on the Cold, Ice, Snows, Spring-Tides, and other things, at the Beginning of the Year 1632.* 24. *The Miseries endured by the whole Crew, from the dismal Effects of the Scurvy; and the great Pains taken by their Chirurgeon to give them all the Relief in his Power.* 25. *The Difficulties that attended the getting of Wood; and various Methods practised to overcome those Difficulties.* 26. *The Captain resolved to dig a Passage through the Ice to the Ship, which, with inexpressible Labour, was effected, and the Vessel found safe and sound.* 27. *The Order in which their Provisions were served to them, while they continued ashore; and the Danger their Sick were in of being starved, for want of a Power of eating.* 28. *The Death of their Carpenter; their Rudder recovered; and the Island named, from their wintering upon it, Charles Town, or Charlton Island.* 29. *The Ship cleared; the Men recover chiefly by the Help of Sallads; the Nature of the Spring in this Country.* 30. *The Ship begins to float; Captain James takes Possession of the Island for King Charles I. and begins to think of his Departure.* 31. *The Captain in Danger of being burnt by a very strange Accident; erects Tombs for his dead Men; the Nature of Freezing in this Country.* 32. *The Manner of the Waters Thawing described; with a View of the Country in the Spring, and other Particulars.* 33. *They labour to leave Charlton Island, but are hindered by the Ice.* 34. *Put to Sea with much Difficulty, and meet with great Tempests, and other Misfortunes.* 35. *Undergo vast Varieties of Hardships, through Storms, Rocks, Ice, &c.* 36. *In much greater Danger than ever; so that not only the Crew, but the Captain himself, began to despair of the Possibility of returning.* 37. *He lays hold, notwithstanding, of the first Opportunity that offered, for prosecuting the intended Discovery.* 38. *Exposed to new Difficulties and Dangers, which engage them, after mature Deliberation, to resolve upon shaping their Course home, which was accordingly done.* 39. *Captain James changes his Sentiments, with respect to the Possibility of finding a North-west Passage; Motives assigned by him, in Support of that Change; and his Reasons for thinking the Passage useless and unprofitable, if it could be discovered.* 40. *His Notions upon this Subject considered and confuted.* 41. *Conclusion of this Voyage, with Observations and Remarks.*

1. **A**S curious and instructive as the History of the Expeditions made for finding a North-west Passage must certainly be esteemed by all competent Judges of a Collection of this kind, yet it is very natural for them to expect to see some Voyage entire, by which they may judge of the Nature of such an Expedi-

tion; the Method of pursuing it; the Discoveries that incidentally fall in; the Difficulties that occur; the Nature of the Climate and Coasts; and other Singularities which render such kind of Pieces equally useful and entertaining. The Foresight of this, and the Desire of complying, as far as possible, with the Expectations of my

my Readers, induced me to think of giving Place to the Voyage of Captain *Thomas James*, undertaken for the Satisfaction of King *Charles I.* at the Expence of the Merchant Adventurers of *Bristol*. And this for various Reasons: First, Because the original Edition of 1633, published by the Author himself, from whence this, with the Omissions only of some obsolete Phrases, and some Verses, not much to the Purpose, is literally taken, is become exceeding scarce, and, indeed, hardly to be met with. Secondly, Because it is very justly looked upon as the very best Work of its kind that ever was published, and this in every respect; the Author being a knowing, careful, and experienced Seaman, one who wrote every thing as it occurred, and framed the History of his Voyage while it was making, and not after his return Home, from loose Papers, or a bare Sea Journal. Thirdly, Because the giving this Voyage will satisfy the Reader in all the Points of Enquiry that he can possibly frame, and this upon the Authority of so judicious and candid a Writer, that the famous Mr. *Robert Boyle* chiefly depended upon the Extracts he made from his Work, in framing one of the most valuable Pieces that he published, I mean his History of Cold. Fourthly, Because it will free us from the Necessity of inserting any more Voyages into these Northern Parts, as containing every thing that is worth reading in the rest of them; digested clearly and plainly, so as to carry Conviction throughout, and leave us no room to question either the Abilities or the Sincerity of its Author. And Fifthly, Because it affords us an Opportunity of exhibiting, at once, the Reasons from which it was for many Years after this believed, that the finding such a Passage was impracticable, and adding thereto the Motives that have induced able and experienced Persons in later Times to conceive, that how formidable soever these Objections may at first Sight appear, they are not absolutely conclusive, but that such a Passage may be still sought for with rational Hopes of Success.

After having given this Account of the Causes of inserting this long Voyage, I shall next present the Reader with an Account from Captain *James's* Preface, which is to be found only in his original Edition; of the Manner in which this Voyage was undertaken, containing many Particulars that are very well worth Notice, and which will not fail to convince the Reader that never any Enterprize of this kind was better concerted, or more Deliberation used in providing for its Success. Captain *James* had been employed, as he tells us, in some Northern Voyages before, whence he came to be thought the fittest Person in the Kingdom, for attempting this so long wished for Discovery; which, however, he was not determined to undertake, till it was signified to him on the Part of the King, that it would be highly satisfactory to his Majesty. After he was once come to a Resolution, he signified to the Merchants of *Bristol*, in whose Service probably he had been formerly employed, both his own Inclination to venture on this Voyage, and the Encouragement he received from his Majesty; upon which they very readily raised such a Sum of Money as was requisite, and deposited it in the Hands of a Treasurer, for carrying it on with the utmost Facility and Expedition.

Captain *James* desired only a single Ship, and that a small one, of the Burden only of seventy Tons. She was built for this Voyage; and it will appear from what follows, that she was as well and strongly built as ever any Vessel of her Size was. The Number of Persons that he desired for the Execution of so difficult and so dangerous a Design, was no more than twenty-two; and the Provisions and other Necessaries that he required, was for 18 Months; and he acknowledges that they were provided for him in the full Proportions he demanded, and that in their several kinds they were as wholesome and as good as he could wish. He had the free Choice of the Men that were to serve under him, but he absolutely refused all Volunteers that had never been at Sea, in which there is nothing strange; but it must be allowed that it was somewhat surprizing, that he should reject also such as had failed in those Seas before; for which he says he wanted not good

Reasons, though it seems they were such as he did not think fit to disclose. The Qualities he required were, that they should be unmarried, approved, able, and healthy Seamen; he likewise took care that they should not have the least Knowledge or Acquaintance with each other; and, instead of entering them all at once, he first fixed upon a Boatswain and his Crew for rigging the Ship, and put them aboard before the rest of the Seamen; then he shipped the common Men, and lastly his Officers; so that all things were ready at once; the Expence kept as much within Bounds as it was possible, and the wisest Precautions taken to prevent Factions, and Mutinies, with which, as we shall see, he was never troubled, notwithstanding all the Miseries and Misfortunes that he and his People endured.

When all things were ready he made a short Journey to *London*, to receive his Majesty's last Commands, and such Letters and Commissions as he judged might be of Service to him; and, upon his Return to *Bristol*, he went directly aboard his Ship, with a Resolution of sailing the first fair Wind. After his Return he drew up the following History of his Voyage, for his Master's Satisfaction; and prefixed to it the following Dedication, which is also not to be met with, entire and correct, in any but the original Edition.

" *Most gracious Sovereign*: That my unskilful self was
 " made Choice of for this Employment, and my Un-
 " dertaking in it encouraged by your gracious Com-
 " mandment, I must ever account of, as the greatest
 " Honour ever yet befall me. Many a Storm, and
 " Rock, and Mist, and Wind, and Tide, and Sea, and
 " Mount of Ice, have I in this Discovery encountered
 " withal; many a Despair and Death had almost over-
 " whelmed me; but still, the Remembrance of the Ac-
 " count I was to give of it, to so gracious a Majesty, put
 " me in Heart again, made me not to give Way to my
 " own Fears, or the Infirmities of Humanity. Your
 " Majesty, in my Employment (like a true Father of
 " your Country) intended the Good of your Subjects,
 " and who is not bound to bless God for your royal
 " Care in it, had it now been my Fortune to have done
 " my Country this Service, as to have brought home the
 " News of this supposed and long-sought for Passage;
 " then should the Merchant have enjoyed the Sweetness
 " of the hoped Profit, and the Subjects have been sen-
 " sible of the Benefit of your Majesty's Royal Intention
 " in it. I have done my Good-will in it, and though
 " I have not brought home the News, yet shall I here di-
 " vulge these Observations, which may (I hope) become
 " some Way beneficial unto my Country. The Account of
 " them I here in all Humility offer unto your most judi-
 " cious Majesty; your gracious Acceptance of what I
 " had done, though I had not done what was expected
 " emboldneth me to do so; and since your Majesty was
 " pleased to signify your Desires of having a brief Ac-
 " count of my Voyage presented unto you, that Word
 " became a Command unto me, to draw this rude Ab-
 " stract of it. Your Majesty will please to consider, that
 " they were rough Elements which I had to do withal,
 " and will, with Favour, vouchsafe to pardon, if a Sea-
 " man's Stile be like what he most converseth with. In
 " the Plainness therefore of well meaning, since your
 " Majesty hath been so gracious to me, as to appoint me
 " your Servant, I am now bound to vow you my Ser-
 " vice, and it shall be my Honour to be commanded
 " it; and I shall account no Danger too great in the
 " going through it. These are the Resolutions of
 " your Majesty's humblest Subject and Servant *Thomas*
 " *James*."

But it is now Time to proceed to the Captain's Narrative, which is delivered mostly in his own Words, because it was found impossible to express his Sense in Words better chosen, or that could bring the Facts he relates into a narrower Compass.

2. The 2d of *May* I took my Leave of the Merchant-Adventurers in this Action, in the City of *Bristol*; and being accompanied by the Reverend Mr. *Palmer*, and several of the Merchants I repaired aboard; where Mr. *Palmer* made a Sermon, exhorting us to continue brotherly

therly Love, and to be bold to profess the Christian Religion, wherever we should come in this our Peregrination. After they had received such Entertainment as I could afford they departed for *Bristol*. This Afternoon I made a Review of all Cloaths, Necessaries, and Victuals. The 3d of *May*, after Prayer, about three in the Afternoon, we sailed down the *Severn* to the westward of *Lundy*, where the Wind opposed us so strongly, that we were obliged to anchor in *Lundy Road*; where we remained till the 8th in the Morning, when we sailed; but were forced to put into *Milford*, where we anchored about Midnight: Here we remained till the 17th, when, in the Morning, with the first fair Wind we proceeded, and doubled *Cape Clear*, off *Ireland*. The 22d we were in Latitude 51 Degrees 26 Minutes, and the *Blasques* bore from us North-east about twelve Leagues off; which *Blasques* is in Latitude 52 Degrees 4 Minutes; here I ordered the Course that should be kept, which was generally West-north-west, as the Wind would permit, which in this Course and Distance is very variable. The 4th of *June* we made the Land of *Groenland*, standing in with it, to have Knowledge of the trending of it: It proved very foul Weather, and next Day, by two in the Morning, we found ourselves encompassed with Ice; and endeavouring to clear ourselves of it we were the more engaged, and struck many fearful Blows against it. At length we made fast to a great Piece, and, with Poles, wrought Day and Night to keep off the Ice; in which Labour we broke all our Poles.

The 6th, about two in the Morning, we were beset with extraordinary Pieces of Ice, that came upon us with great Violence, and doubtless would have crushed us to Pieces if we had not let fall some Sail, which the Ship presently felt. In escaping the Danger we ran against another great Piece, that we doubted whether our Ship had not been flaved to Pieces; but by pumping we found she made no Water. The former Pieces of Ice had crushed our Shallop all to Pieces, wherefore I caused our Long-boat to be had up from betwixt the Decks and put over-board, by the Help whereof we recovered our broken Shallop, and set her upon the Deck, intending to new-build her. All this Day we beat, and were beaten amongst the Ice, it blowing a perfect Storm. In the Evening we were enclosed among great Pieces as high as our Poop, and some of the sharp blue Corners of them reached quite under us. In this Extremity I made the Men let fall, and make what sail they could, and the Ship forced herself through it, though so tossed and beaten as I think never Ship was. When we were clear we tried the Pumps, and found them staunch; upon which we went instantly to Prayer, to praise God for his merciful Delivery of us.

The seventh and eighth Days we endeavoured to double about *Cape Farewell*, being still pestered with much Ice. The 9th we were in the Latitude of 59 Degrees, and we made Account the *Cape Farewell* bore off us due East, and some ten Leagues off. The *Blasques* in *Ireland* is in Latitude 52 Degrees 4 Minutes, and *Cape Farewell* in Latitude 59. The Course is West-north-west, and the Distance about four hundred and ten Leagues: I know very well these Latitudes, Courses, and Distance, do not agree with mathematical Conclusions; but thus we found it by Practice. The Variation of the Compass in Latitude 52 Degrees 30 Minutes, and thirty Leagues to the westward of *Ireland*, is about 3 Degrees to the eastward; in Latitude 57, about three hundred and ten Leagues West-north-west from the *Blasques*, the Compass doth vary nine Degrees to the westward; in Latitude 59 Degrees 15 Minutes, some forty Leagues to the eastward of *Cape Farewell*, the Variation is 14 Degrees 45 Minutes. In this Course I have been observant whether there were any Current that did set to the North-east, as some have written there did, and that as well in calm Weather as otherwise, but I could not perceive any. The Winds here are variable, and the Seas of an unsearchable Depth; we have not seen from *Ireland* hitherto any Whales, or other Fish; the Weather for the most part was foggy.

3. On the 10th all the Morning was very foul, and high Sea, although we had Ice about us, and some Pieces

as high as our Topmast Head. Our Long-boat, which we were forced to tow a-stern, broke away, and put us to some Trouble to recover her. This we did, and brought her into the Ship, though much bruised, and had two Men much hurt. By eight in the Morning we were shot up as high as *Cape Desolation*; for finding the Land to trend away North and by East, we certainly knew it to be the *Cape*: It stands in Latitude 60 Degrees, and the Land from *Cape Farewell* to it trends North-west the Distance about forty Leagues, the Course West half a Point North. The Latitude of the South-end of the Island being 61 Degrees 20 Minutes, some twelve Leagues to the westward of *Cape Desolation*, the Variation 16 Degrees. In this Course we were much beaten with the Ice, many Pieces being higher than our Topmast Head. In our Way we saw many Grampusses amongst the Ice, and the Sea is full of them; the Weather, a stinking Fog, and the Sea very black; which I conceive to be occasioned by the Fog.

The 17th, at Night, we heard the Tract of the Shore, as we thought; but it proved to be the Rutt of a Bank of Ice. It made a hollow and hideous Noise, like an Overfall of Water, which made us to reason among ourselves concerning it, for we were not able to see far, it being dark-night and foggy; we stood off from it till break of Day, then in again; and about four in the Morning we saw the Land above the Fog, which we knew to be the Island of *Resolution*. This Night was so cold that all our Rigging and Sails were frozen. We endeavoured to compass the southern Point of the Island, where runs a quick Tide into the Streight; but the Ebb is as strong as the Flood. The Fog was of such a piercing Nature that it spoiled all our Compasses, and made them flag, and so heavy that they would not traverse; wherefore I would advise any that shall sail this Way, to provide Compasses of *Moscow* Glass, or some other Matter that endures the Moisture of the Weather. As the Fog cleared up we could see the Entrance of the Streight to be full of Ice close wedged together; endeavouring to go forward we were fast enclosed amongst it; and so drove to and again with it, finding no Ground at two hundred and thirty Fathoms, four Leagues from the Shore.

The 20th in the Morning we had got about the southern Point of the Island; and the Wind at West drove both us and the Ice upon the Shore; when we were driven within two Leagues of the Coast, we came among the strongest Whirlings of the Sea that can be conceived. There were great Pieces of Ice aground in forty Fathoms Water, and the Ebb coming out of the broken Grounds of the Island among those Isles of Ice, made such a Destruction that we were carried round sometimes close by the Rocks, and sometimes so close by these high Pieces, that we were afraid they would fall upon us. We made fast two great Pieces of the Ice to our Side, with our Sledges and Grapnels, that drew nine or ten Fathoms; that so they might be on Ground before us, if we were driven on the Shore; but that Design failed us. And now from the Top seeing in among the Rocks, I sent the Boat to see if she could find some Place of Security; but she was no sooner parted but she was inclosed, and driven to trail upon the Ice, or else she had been dashed to Pieces; they ran her over the Ice from Place to Place, and in the mean while, with the whirling of the Ice, the two Pieces broke away from our Sides, and carried away our Kedger and Grapnels: Then we made Signs to the Boat to make all the haste she could to us, which she perceiving, did; the Men being with much Difficulty forced to slide her over many Pieces of Ice. In the mean time we made some sail, and got to that Piece of Ice which had our Grapnel on it, which we recovered.

By this time our Boat was come, and we put a fresh Crew into her, and sent her to fetch our Kedger, which she endeavoured with much Danger of Boat and Men. By this time the Ship was driven so near the Shore that we could see the Rocks under us, and about us, and we were carried by the Whirlings of the Water close by the Points of Rocks, and then round about back again; and all this notwithstanding the Sail we had aboard, and we expected continually when she would be beaten to

Pieces.

Pieces. In this Extremity I made them open more Sail, and so forced her in among the Rocks and broken Grounds, and where there were many large Pieces of Ice aground. We went over many great Pieces of Rocks that had but twelve or thirteen Feet Water on them, and so let fall an Anchor; this Anchor had never been able to wind up the Ship, but that by good Fortune the Ship ran against a great Piece of Ice that was aground: This Shock broke the main Knee of her Beakhead, and a Corner of it tore away four of our main Shrouds, and an Anchor that we had at her Bow; and so stopped her Way that she did wind up to her Anchor.

We saw the sharp Rocks under us, and had but fifteen Feet Water; being also in the Tides Way, where the Ice would drive upon us. Our Boat we could not see, which made us doubt she had been crushed to pieces; in her was the third Part of our Company; but soon after we saw her come about a Point among the Rocks, she had recovered our Kedger, which made us joyful; with all speed we laid out Hawfers to the Rocks, and every one worked to the best of his Strength to warp her out of this dangerous Place to the Rock's Side, where we had three Fathom Water, and were under the Shelter of a great Piece of Ice that was aground, which kept off the straggling Ice that otherwise would have driven upon us. Here we lay very well at the Ebb, but when the Flood came we were assaulted with Pieces of Ice, that every half Hour put us into desperate Distress; we worked continually to keep off the Ice: At full Sea our great Piece of Ice which was our Buckler was afloat, and do what we could got away from us, and left us in imminent Danger from the Ice that drove in upon us; but the Ebb being once made, this great Piece of Ice came again aground, very favourable to us, and sheltered us all the rest of the Ebb. All Night we wrought hard to shift our Cables, Hawfers, and to make them fast aloft on the Rocks, that the Ice might the better pass under them. All Day and Night it snowed hard, and blew a Storm at West, which drove in all the Ice out of the Sea upon us. In working against the Violence of the Ice, the Hook of our Kedger was broken, two Arms of our Grapnels, and two Hawfers, our Shallop being again very much bruised; whereupon we went to work to repair it. This Tide the Harbour was choaked full of Ice, so that it seemed firm and immoveable, but when the Ebb came it moved; some great Pieces came aground, which altered the Course of the other Ice, and put us on the Rocks.

Here, notwithstanding our utmost Endeavours, she settled upon a sharp Rock, about a Yard above the main Mast, and as the Water ebbed away, she hung after her Head, and held to the Offing: We made fast Cables and Hawfers aloft to her Masts, and so to the Rocks, straining them tough with our Tackles; but as the Water ebbed away she was turned over, that we could not stand in her. Having now done to the best of our Understandings, but to little Purpose, we went all upon a Piece of Ice and fell to Prayer, beseeching God to be merciful unto us. It wanted yet an Hour to low Water, and the Tide wanted a Foot and Half to ebb to what it had ebbed the last Tide: We were careful Observers of low Water; and had Marks by Stones and other Things which we had set up, so that we could not be deceived. The Ship was so turned over that the Port-les of the Forecastle was in the Water, and we looked every Minute when she would overset; indeed at one Time the Cables gave way, and she sunk down half a Foot at that Slip; but unexpectedly it began to flow, and sensibly we perceived the Water began to rise apace, and the Ship withal; then was our Sorrow turned to Joy, and we all fell on our Knees, praising God for his Mercy in so miraculous a Deliverance. As soon as she was freed from this Rock, we wrought to get her farther off. All the Flood we were pretty clear from the Ice, but when the Ebb came the Ice came driving again upon us, which drove us to great Extremity: We got as many Pieces between us and the Rocks as we could, but there came a great Piece upon our Quarter, which was above three hundred of my Paces about, but it came aground. Thus came divers great Pieces besides; which was the Oc-

caſion that this Tide the Harbour was quite choaked up so that a Man might go any Way over it from Side to Side.

When it was three Quarters Ebb, those great Pieces that came aground began to break with a most terrible thundering Noise, which put us in great Fear that those about us would break us all to Pieces; but God preserved us. This Morning the Water veered to a lower Ebb than the last Tide it had done by two Feet, whereby we saw God's Mercy appear to us in our late Extremity. That Flood we had some Respite from our Labours, but after full Sea our Hopes ebb'd too. The great Piece that was by us so stoppt the Channel that the Sea came all driving upon us, so that now undoubtedly we thought to have lost our Ship.

To work we went with Axes, Bars of Iron, and any thing proper for such a Purpose, to break the Corners of the Ice, and to make way for it to go from us. It pleased God to give good Success to our Labours, and we got so much of the softer Sort of the Ice betwixt us and the Rocks, that we thought ourselves pretty secure: But at low Water those Pieces that were aground breaking, kept a most thundering Noise about us. This Day I went ashore, and built a great Beacon with Stones upon the highest Place of the Island, and put a Cross upon it, and named this Haven, *The Harbour of Good Providence*.

4. On the 23d in the Morning with the Flood the Ice drove up among the broken Grounds, and with the Ebb drove all out except one great Piece, which coming aground not far from us, settled itself in such a Manner that we much feared it: But there came no more, otherwise we must have expected as great Danger as heretofore. I took the Boat and went ashore upon the Eastern Side, to see if I could find any Place free from Danger, and where, among the Rocks, I descried a likely Place. From the Top of the Hill where I was I could see the Ship. It was now almost low Water: At which Instant the great Piece of Ice broke with a terrible Noise in four Pieces, which made me afraid it had spoiled the Ship, it being full half Mast high. I made what Haste I could to the Boat, and so to the Ship to be satisfied, where I found all well, God be thanked. I instantly sent away the Boat to found the Way to a Cove which I had found, which was a very dangerous Passage for the Boat. At her Return we unmoored the Ship, and with what Speed possible warped away from among this terrible Ice. We were not a Mile from them before they broke all to Pieces, and would surely have made us bear them Company, but that God was more merciful to us.

We got round the Rocks, and so in to this little Cove. Here we made fast to the Rocks, and thought ourselves indifferently safe; which being done, I went ashore again to wander up and down, to see what I could discover: I found it all broken rocky Ground, and not so much as a Tree, Herb, or Grass upon it. Some Ponds of Water there were upon it, which were not yet thawed, and therefore not ready for the Fowl. We did not find in the Snow any Footing of Deer or Bears, but Foxes we saw one or two. We found where the Savages had been, but it appeared to have been long since: They had made five Hearths, and we found a few Fire-brands about them; and we found some Heads and Bones of Foxes about them, with some Whale-bones. I could not conceive to what Purpose they should have come thither, for we could find none or very little Wood on the Shore-side, and no Fish at all, though we endeavoured to take some. But it may be the Season was not yet come. I called this Cove by the Master's Name of my Ship, *Price's Cove*: The Latitude of it is 61 Degrees 24 Minutes. The Fire-brands and Chips, which I spoke of, had been cut with some Hatchet or other Instrument of Iron. From the Top of the Hills we could see the Islands that are on the South Shore, commonly called *Sir Thomas Button's Islands*. They bear South and by East, half a Point Easterly, some fourteen or fifteen Leagues Distance. Upon the Change-Day it flows here at seven o'Clock and a half, and the Tide highest at most three Fathom. The Flood comes from the Eastward, and thither it returns. I have

been observant from the Top of the Hills, and descried the great Pieces of Ice two or three Leagues from the Shore, drive to and against the Flood and Ebb indifferently: Hence I collected that assuredly no Current sets in here, but that it is a mere Tide. Near the Shore the Eddies whirl in twenty Manners when the Ebb is made, which is because it comes out of the broken Ground amongst the Ice, that is, a Ground near the Shore; besides which Reason there are divers Rocks lying under Water, on which you shall have thirty, then twelve, and anon but eight, and then twenty Fathoms; and those Uncertainties occasion such Distractions, I would therefore advise no one to come near those dangerous Shores, for fear he lose his Ship.

This Morning, being the 24th, there sprung up a fresh Gale of Wind at East; and after Prayer we unfastened our Ship, and came to sail steering betwixt great Pieces of Ice that were a-ground in forty Fathoms, and twice as high as our Top-mast-head. We sailed out of this Cove upon the Flood, and had none of these Whirlings of the Waters as we had at our going into it. We endeavoured to gain the North Shore, kept ourselves within a League of the Shore of the Island of *Resolution*, where we had some clear Water to sail through. In the Offing it was all as thick wedged together as possible. By twelve o'Clock we were fast inclosed, and notwithstanding it blew very hard at East, yet we could make no Way through it, but the Ice grated us with that Violence that I verily thought it would have wrenched the Planks from the Ship's Sides. Thus we continued in Terror till the 26th Day, driving to and fro in the Ice, not being able to see an Acre of Sea from Top-mast-head. The 26th was calm sunshiny Weather, and we took the Latitude and Variation, and had Ground, at a hundred and forty Fathom, small white Sand. I caused the Men to lay out some Fishing-Lines, but to no Purpose, for I could not perceive the Bait had been so much as touched. The Nights are very cold, so that our Rigging freezes, and fresh Ponds of Water stand upon the Ice about half an Inch thick.

On the 27th there sprung up a little Gale at South-east, and the Ice did something open. Hereupon we let fall our Fore-sail, and forced the Ship through the Ice. In the Evening the Wind came contrary, at West-north-west, and blew hard, which caused us to fasten to a great Piece, to which we remained moored till the 29th. I am satisfied here is no Current by many Experiments I have made; such as these, by making Marks on the Land, and noting our Drift to and again, with Ebb and Flood, for many Days together, as well in calm Weather as otherwise. By all these Experiments I found that the Tide was no stronger there than that betwixt *England* and *France*. This Morning there sprung up a fine Gale at East, and the Ice opened something, so that we forced the Ship through it with her Fore-sail. By twelve o'Clock we were got into some open Water, with a fine Gale of Wind at East, and so clear Weather that we could see the Island of *Resolution*, the East End bears East-north-east, some twelve Leagues off.

5. From the 29th to the 5th of *July* we sailed continually through the Ice, with variable Winds and Fogs, and sometimes calm. The 5th at Noon we had a good Observation, and were in Latitude 63 Degrees 15 Minutes, and then we saw *Salisbury Island* bearing West-by-north, some seven Leagues off, with much Ice betwixt it and us, to weather which we were driven to stand to the northward. Soon after we saw *Prince Charles's Cape*, and *Mill-Island*; and to North-north-west (and indeed round about us) the Sea most infinitely pester'd and cumber'd with Ice. This grieved me very much; for as I had determined to prosecute the Discovery to the North-westward, I saw it was not possible this Year. We were driven back again with contrary Winds, still closed and pestered with Ice, and with all the Perils and Dangers incident to such Adventurers, so that we thought a thousand times the Ship had been beaten to Pieces. By the 15th of *July* we were got betwixt *Digg's Island* and *Nottingham's Island*, not being able to get more Northward. There, for an Hour or two, we had some open Water.

But before I proceed further, it will not be amiss in

some manner to describe the Streight which begins at the *Island of Resolution*, and ends here at *Digg's Island*. If you go down into the Bay, the Streight is about a hundred and twenty Leagues long, and trends West-north-west and East-south-east. Generally in the Entrance it is about fifteen Leagues broad, and then on the southward Side is a great Bay: About the Midst it is likewise about fifteen Leagues broad, and then the Land opens something wider; so that betwixt *Digg's Island* and *Cape Charles* it is about twenty Leagues broad, betwixt which two stand *Salisbury Island* and *Nottingham Island*. If it be clear Weather, you may see both the South and the North Shores. The Depth in the Middle of the Streight is a hundred and twenty Fathoms, white Sand, a certain Tide runs in it, and no Current. The North Shore is the straightest and the clearest from Ice. Along this North Shore you have many low small Islands, which cannot be seen far from Land, and in many Places the Land appears as if it had small Sounds into it: The main Land on both Sides is indifferent high Land.

Being now convinced of the Impossibility of doing any thing to the North-westward, for the Reasons aforesaid, I gave Orders to the Master of my Ship to steer away West-south-west, to have a Sight of *Mansfield Island*, which the next Day by three o'Clock in the Afternoon we had; having so much dangerous foul Weather among the Ice, we struck more fearful Blows against it than we had ever yet done. This was the first Day that we went to Half-allowance of Bread on Flesh-Days, and I ordered Things as sparingly as I could. Two of our Men likewise complained of Sickness, but soon recovered. In the Evening we came to an Anchor, and sent the Boat ashore to try the Tides: They brought me word whilst the Boat was ashore it flowed about three Feet, as we found by the Ship and by the Ice. The Water at that Time came from the West-south-west; and the highest Tides, so far as they could perceive, had not swelled above two Fathoms. They found that the Savages had been upon it by certain Fires which they left, and Heaps of Stones, Tracts of other Beasts, but Foxes they could not find. The Wind was so contrary, and the Weather so foggy, that we were forced to spend some Powder to recover our Boat again.

6. Next Morning being the 17th, the Wind came favourable, and we weighed the Shore, being something clear of Ice, though very thick all to the Offing. We stood along it South-and-by-west ten Leagues. In the Afternoon the Wind came contrary, and we came again to an Anchor within a Mile of the Shore, for out to Sea was all thick Ice and impassable. I went ashore myself, to be well resolved of the Tide, and found whilst I was ashore that it flowed two Feet, and at that Time the Flood came from Southwest-and-by-west. I doubted it was a Half-Tide, which afterwards I found to be true. I found where the Savages had been upon the Island, but could find little or no Drift-wood on Shore, no Beasts on the Island, or Fishes in the Sea. It flows on the Change-Day about eleven o'Clock. We saw some Fowl on it, one of which we killed, and returned on board. This Island is very low Land, little higher than a Sand-bank; it hath Ponds of fresh Water, but no Grass, and is utterly barren. On the 18th in the Morning the Wind came favourable, we weighed and made sail, for the Ice was all come about us.

We endeavoured to proceed to the Westward, intending to fall in with the Western Land about the Latitude of 63 Degrees; by twelve o'Clock, having been much pestered, we were come to a firm Range of Ice; but it pleased God that the Wind larged, and we stood away to West-south-west. At Noon in Latitude 62 Degrees, by four in the Evening, having escaped dangerous Shocks, we were come as we thought into an open Sea, and joyfully steered away West and West-by-North, though the Joy was soon quell'd, for by ten o'Clock at Night we heard the Rut of the Ice, and it grew a thick Fog, and very dark with it; nevertheless we proceeded, and the nearer we came to it the more hideous Noise it made. On the 19th by three in the Morning we were come to it, and as it cleared a little we could see the Ice as thick as
any

any we had yet seen, these being impassable, and more-over the Wind at North-west. We stood along it hoping to weather it to the Southward, but at last we became so blind with Fog, and so encompassed with Ice, that we could go no farther.

7. On the 20th in the Morning, notwithstanding the Fog, we endeavoured to get to the Westward, our Ship beating all this while dreadfully. In this Wilfulness we continued till the next Day, when, being fast among the Ice, I observed we were in Latitude 60 Degrees 33 Minutes, and then looking what Damage our Ship might have received, we could perceive that below the Plate of Iron which was before her Cut-water she was all bruised and broken, the two Knees she had before to strengthen her spoiled and torn, and many other Defects which we could not by any means come to mend. Notwithstanding all this, and the extraordinary thick Fog, that we could not see a Pistol-shot about us, we proceeded with the Hazard of all till the 27th, which was the first Time we had clear Weather to look about us. The Wind withal came up at South, and the Ice opened something, so that we made some Way through it to the Westward.

In the Evening we were fast again, and could go no further, the Wind veering from the South to the East and blowing a fresh Gale. This occasioned our Grief the more that with a good Wind we could not go forward. Putting therefore a Hawser upon a great Piece of Ice, to keep the Ship close to it, we patiently expected better Fortune. Since we came from *Mansfield Island* our Depth was commonly a hundred, and a hundred and ten Fathoms, ouzy Ground. Now the Water began to shallow, for driving fast to and again in the Ice we had but eighty Fathoms. On the 28th and 29th we were so fast inclosed in the Ice, that notwithstanding we put abroad all the Sail that was at Yards, and it blew a very hard Gale of Wind, the Ship stirred no more than if she had been in a dry Dock. Hereupon we went all boldly out upon the Ice to sport and recreate ourselves, letting her stand still under all her Sails. It was flat extraordinary large Ice, the worst to deal withal that we had yet found. I measured some Pieces, which I found to be one thousand of my Paces long.

This was the first Day that our Men began to murmur, thinking it impossible to get either forwards or backwards. Some were of Opinion that it was all such Ice betwixt us and the Shore: Others, that the Bay was all covered over, and that it was a Doubt whether we could get any Way, or to any Land to winter in. The Nights were long, and every Night it freezed so hard that we could not sail by Night, nor in the thick foggy Weather. I comforted and encouraged them the best I could; and to put away those Thoughts we drank a Health to his Majesty on the Ice, not one Man in the Ship, and she still under all her Sails. I must confess that their Murmuring was not without Reason; wherefore doubting that we should be frozen up in the Sea, I ordered that Fire should be made but once a-Day, and that with but a certain Number of Shides that the Steward should deliver to the Cook by Tale, the better to prolong our Fuel whatsoever should happen.

On the 30th we made some way through the Ice, heaving the Ship with our Shoulders, and with Mauls and Crows of Iron, breaking the Corners of the Ice to make way as we got forwards. The Water shoaled apace, so that I believed it to be some Island. At Noon we observed through the Fog, with the Quadrant upon a Piece of Ice, and were in Latitude 58 Degrees 54 Minutes, our Depth thirty Fathoms. We put out Hooks to try to catch some Fish, but to no Purpose, for there are none in this Bay. On the 31st we laboured as before, and got something forward. At Noon we were in Latitude 58 Degrees 40 Minutes, our Depth twenty-three Fathoms. It was very thick hazy Weather, or else I think we should have seen the Land.

8. On the 1st of *August*, the Wind came up at West which drove us to the Eastward where our Depth increased to 35 Fathom. At Noon, by Observation with the Quadrant on the Ice, we were in Latitude 58 De-

grees 45 Minutes. At 6 o'Clock this Evening we might perceive the Ice to heave and set a little, which was occasioned by a swelling Sea that came from the South-west. This did comfort us very much, hoping shortly we should get out of the Ice. On the 2d it blew hard at South-west, and yet we could not feel the swelling Sea, which did again quench the Hopes we had formerly conceived. On the 3d we saw a little open Water to the North-westward and felt a Sea from thence, which doth assure us that there is an open Sea to the Westward. On the 5th we saw the Sea clear but could by no Means work ourselves to it with our Sails, wherefore about 6 in the Evening we let fall an Anchor in 50 Fathom Water, and stood all with Poles and Oars to fend off the Ice and let it pass to Leeward, and continued this Labour all Night. In the Morning the Wind came up at North-west and we weighed with much Joy, as hoping now to get into an open Sea to the Southward. This by Noon we had done and were in Latitude 58 Degrees 28 Minutes, very free of Ice. The Wind larged upon us, so that we stood away North-west to get us as high Northward as we could, and so come coasting to the Southward. We went to Prayer and to give God Thanks for our Delivery out of the Ice. On the 9th being in Latitude 59 Degrees 40 Minutes, we came again to the Ice which lay very thick to North, since we came out of the Ice our Depth increased to 110, and since decreased again, so that I think we approached towards the Shore. The 10th proved very foggy Weather, the Wind contrary, and the Water shallowing apace, we came to an Anchor in 22 Fathom. On the 11th in the Morning we weighed and made in for the Shore, and about Noon saw the Land our Depth being 16 Fathom in Latitude 59 Degrees 40 Minutes. The Land to the North of us did trend North by East and so made a Point to the Southward, and trending away West by South, which we followed taking it for that Place which was formerly called *Hubbart's Hope*, and so it proved indeed, but it is now hopeless. The Tide set in the Middle of the Bay East and West, as we have often tried by our Lead aground but near the Shore, as they forced by the Land; I am of Opinion, that in the Ocean or large Bays the Tide naturally set East and West, and that this gives little Hope of a Passage. The greatest Depth we had in the Bay was 110 Fathom, and so shoaling as you approach the Land, we coasted round this forementioned little Bay which is 18 Leagues deep in 8 and 6 Fathom, and in the Bottom of it we were two Fathom and a half Water, and saw the firm Land almost round about us. Then we proceeded to the Southward 6 and 7 Fathoms Water, within Sight of the Breach of the Shore keeping the Lead continually going, and in the Night we came to an Anchor.

This Night having little Wind we came to an Anchor with our Kedger, but in weighing of him we lost him, having no more aboard us. The 12th we were in Latitude 58 Degrees 46 Minutes, some two Leagues from the Shore, the Variation is about 17 Degrees. On the 13th in the Afternoon it being something hazy, we saw some Breaches a-head of us, our Depth was 9 and 10 Fathom, and loosing to clear ourselves of them, we suddenly struck upon the Rocks, the Ship being under our two Top-Sails, Fore-Sail and Sprit-Sail with a fresh Gale of Wind. In this dreadful Accident we struck all our Sails amain, and it pleased God to fend two or three good swelling Seas, which heaved us over the Rocks into three Fathom, and presently into three Fathom and an half, where we chop'd to an Anchor and tried the Pumps, but we found she made no Water, tho' she had three such terrible Blows that we thought her Mast would have shivered to Pieces, and that she had been assuredly bulg'd. We hoisted the Boat over-board and double mann'd her to go and found a Way out of this perilous Place, she was no sooner gone but there arose a Fog, so that we were obliged to spend some Powder that she might hear whereabouts we were. The Wind dull'd something, otherwise it had been doubtful whether she could ever have recovered us again. After she had been absent two or three Hours she brought us word that it was all Rocks and Breaches round about us, and that withal, she had found a Way where there was

no less than two Fathom and an half Water, and that afterwards the Water deepened; we presently weighed and followed the Boat, and passed over two Ledges of Rocks on which there were but 14 Feet Water, then it deepened to three, or four, and so to 14 Fathom, then it shoaled again to nine.

It being now dark, we came to an Anchor where we rid all the Night. In the Morning the Wind came contrary, so that we could not go that Way we intended to clear ourselves; and therefore we went to work to fit our Holds, to splice our Cables, and made ready two Shot, and so placed them in the Hold that they might on all Occasions run clear, the Ends of them being fastened to the Main-mast. We also looked to our Anchors and fitted our spare ones. We got out our long Boat from betwixt the Decks, which was very much broken and bruised. The Carpenter went to fit her, for I intended to tow the Shallop a-stern and to have the Boats ready at an Instant, either to lay out Anchors, or to be serviceable to what God should be pleased to try our Faith and Patience with, for in him was our only Trust and Hope.

At Noon, in Latitude 57 Degrees 45 Minutes, we could see the Land from the North-west to the South-east by East, with Rocks and Breaches, and the Rocks that we came over dry above Water, whereby I knew it flows here above two Fathoms at least. At Noon I sent the Boat off to sound to the Eastward, because the Water shallowed when we came to an Anchor. She brought us Word the shallowest Water she had been in was seven Fathom: We intending thereupon to weigh, the Wind came East early, so that we could not stir, but lay here the 14th all Night with a stiff Gale of Wind. On the 15th in the Evening, our Cable rubbed off, by Reason of which perilous and sudden Accident, in which we had not Time to put a Buoy to it, we lost our Anchor, and were driven into four Fathom Water before we could set our Sails. When we had done we stood South-south-east, the Wind being at East, but the Water shallowed to three Fathom Water, then we stood North-north-east, and it deepened by Degrees to 10 Fathom, and because it grew dark they came to an Anchor, and rid there all Night.

9. On the 16th in the Morning, the Wind came up at North, a fresh Gale, and we weighed and made sail; by 9 o'Clock it came to a very Storm, and we turned to and again in 10 Fathom Water. In the Evening the Wind dulled, and we stood South-west to have a Sight of Port Nelson, which Course we stood all Night, by the Stars being in the Latitude 57 Degrees 25 Minutes, the Variation about 17 Degrees. On the 17th in the Morning we stood South, and our Depth decreased to eight Fathom; at Noon we had good Observation, being in Latitude 57 Degrees 15 Minutes, and made Account that we were come six or seven Leagues of the Southern Side of Port Nelson. Here the Appearance of the Water changed, and was of a sandy red Colour: We stood into six Fathoms, and could not see the Land from Top-mast Head; so Night coming on, and it beginning to blow hard at East by South, we stood in again to ten and twelve Fathom, where the Water was again of the usual Colour of the Sea.

On the 18th, as the Wind and Weather favoured us, we stood in again South and came into thick Water, into eight, seven, and six Fathom, and then off again, so it grew foggy Weather, keeping our Lead continually going Night and Day. The 19th being clear sun-shiny Weather, we stood in again into the thick Water into eight Fathom, where we came to an Anchor to try the Tides, for from the Top-mast Heads we could not see the Land; we were at Noon, by good Observation, in Latitude 57 Degrees 20 Minutes, and the Tide set North-west-and-by-west, and South-east-by-east. It ran two Knots and a half in two Glasses; I perceived that there were nothing but Sholes to the Land. In the Afternoon it began to blow, so that we had much ado to get up our Anchor; this done, we stood East-south-east, but the Water shallowed apace, and then we stood East and deepened a little. In the Evening the Wind came up at West, and then we stood East-south-east

into ten and eight, and afterwards South-east as our Depth guided us by our Lead and the Colour of the Water into seven and six Fathom.

On the 20th at six in the Morning we saw the Land; it being very low Land, we stood in to five Fathom to make it the better, and so stood along it. At Noon we were in Latitude 57; we named it the *Principality of South Wales*, and drank a Health, of the best Liquor we had, to his Royal Highness Prince Charles, whom God preserve; we stood along it, and came to a Point where it trends to the Southward, near to which Point there are two small Islands. In the Evening it was calm, and we came to an Anchor; the Tide came as before. There we rid all that Night and the next Day. About nine at Night it was very dark and it blew hard.

We perceived by the Lead that the Ship drove, wherefore bringing the Cable to the Capstang to heave in our Cable, for we thought we had lost our Anchor, the Anchor hitched again, and upon the Chopping of a Sea threw the Men from the Capstang; a small Rope, in the Dark, had gotten foul about the Cable and about the Master's Leg too; but by the Help of God he cleared himself, tho' not without bruising. The two Mates were hurt, the one in the Head, the other in the Arm; one of our lustiest Men was struck on the Breast with the Bar, that he lay sprawling for Life, another had his Head betwixt the Cable, and hardly escaped. The rest were flung where they were much bruised, but our Gunner, an honest and diligent Man, had his Leg taken betwixt the Cable and the Capstang, which wrung off his Foot, and tore the Flesh all off his Leg, and crushed the Bone to Pieces, and bruised his whole Body, in which miserable Manner he remained crying till we had recovered ourselves, and had Strength to clear him. Whilst we were putting him and the rest down to the Chirurgeon, the Ship drove into shallow Water, which put us all in Fear, we being so sorely weakened by the Blows which had hurt eight of our Men. It pleased God that our Anchor held again, and she rid it out all Night. By Midnight the Chirurgeon had taken off the Gunner's Leg at the gartering Place, and dressed the others that were hurt and bruised, after which we comforted each other as well as we could.

On the 22d we weighed and stood a little off into deeper Water, expecting a better Wind, which in the Afternoon favoured us; we stood in again for the Shore and we proceeded along it; it is very shallow about 14 Leagues off and full of Breaches. On the 23d at Noon we were in Latitude 56 Degrees 28 Minutes; in the Evening the Wind came contrary, and we were fain to turn to and again. All this Month the Wind was very variable, and continued not long upon one Point, yet it happened so that we could get but little forward.

10. On the 26th there sprung up a fine Gale at West, but thick Weather nevertheless; we stood in to seven and six Fathom, the Water very thick. At Noon it cleared, and we could see that we were in a little Bay, the Land being almost round about us; we stood out of it, and so along it in Sight till the 27th in the Morning, when we came to higher Land than we had yet seen since we came from *Nottingham Island*; we stood in to it and came to an Anchor in five Fathom; I sent off the Boat well manned and armed, with Order in Writing what they were to do, and a Charge to return again before Sun-set. The Evening came, and no News of our Boat; we shot, and made also Fires, but had no Answer, which much perplexed us, fearing there had some Disaster befallen her through Carelessness, and in her we should lose all, we aboard at present not being able to weigh our Anchor nor sail the Ship.

At last we saw a Fire upon the Shore, which made us the more doubtful, because they did not answer our Shot nor false Fires with the like; we thought it had been the Savages that triumphed in their Conquest; at length they came all safe and well, and excused themselves, that upon their coming on Shore it ebbed so suddenly, that a Bank of Sand was presently dried, so that they could not come away till that was covered again, and with that they pacified me. They reported that there was great Store of Drift-wood on the Shore, and a good

Quantity

Quantity growing on the Land. That they saw the Tracts of Deer and Bears, and store of Fowl, of which they killed some, but no Sign of People. That they passed over two little Rivers, and came to a third, which they could not pass. That it flowed very near three Fathom sometimes, as appears by the Shore. That it was low Water at four o'clock; that the Flood came from the North-west; and that it flowed half Tide, which both they and we had perceived by the Ship. At low Water we had but three Fathoms where we rid.

On the 29th in the Morning we made Account we had driven back again some sixteen or eighteen Leagues, and in the Morning, as it cleared, we saw a Ship to Leeward of us three or four Leagues, so we made sail and bore up with her; she was then at anchor in thirteen Fathom. It was his Majesty's Ship, commanded by Captain Fox; I saluted him according to the Manner of the Sea, and received the like of him; so I stood in to see the Land, and thought to tack about, and keep the Weather of him, and to send my Boat aboard of him; but the Wind shifted, so that for that Time I could not. Yet in the Evening I came to weather of him, who presently weighed, and stood off with me till Midnight, and then we stood in again. In the Morning Captain Fox and his Friends came aboard of me, where I entertained them in the best Manner I could, and with some fresh Meat I had gotten from the Shore. I told him that I had named the Land the *Principality of South Wales*. I shewed him how far I had been to the Eastward, where I had landed, and, in brief, I made known to him all the Dangers of this Coast, as far as I had been. He told me he had been in *Port Nelson*, and had made but a cursory Discovery hitherto; and that he had not landed, nor had many times seen the Land. In the Evening after I had given his Men some Necessaries, with Tobacco, and other things they wanted, he departed aboard his Ship, and the next Morning stood away South-south-west, since which Time I never saw him. The Wind sometimes favouring me, I stood in for the Shore, and so proceeded along. The Month of *August* ended with Snow and Hail; the Weather being as cold as at any Time I have felt in *England*.

11. *September* the 1st we coasted along the Shore in ten Fathom, when it cleared in sight of Land; at length the Water shallowed to six and five, and, as it cleared, we saw it all Breaches to Leeward, so we hulled off North-north-east, but still raised Land; by Night we had much ado to get out of this dangerous Bay. At Midnight the Wind came up at South, and so we took in our Sails, and let the Ship drive to the Northward, into deeper Water. This Day was the first Time the Chirurgeon told me that there were diverse of the Men tainted with Sickness. At Noon we were in Latitude 55 Degrees 12 Minutes.

On the 2d we stood in for the Shore; but as we came into shallow Water it began to shew the Weather threatening a Storm, wherein we were not deceived; for in standing off we had a violent one. By Midnight it broke up, and the 3d in the Morning we stood in for the Shore, and by eleven we saw it; here we found the Land to trend South-south-east, and South, so that we knew that we were at a Cape Land, and named it *Henrietta Maria*, by her Majesty's Name, who had before named our Ship. At Noon we were in Latitude 55 Degrees 5 Minutes, and that is the Height of the Cape. From *Port Nelson* to this Cape the Land trends generally East-south-east, but makes with Points and Bays, which in the Particulars doth alter it, a Point two or three; the Distance is about one hundred and thirty Leagues. The Variation at this Cape, taken by Amplitude, is about 16 Degrees, a most shallow and perilous Coast, in which there is not one Harbour to be found. The 3d Day in the Afternoon, we had a Storm at North, which continued till Midnight with extreme Violence. The 4th in the Morning the Storm being broke up, we stood in again South-west, the Weather being very thick, and we continued sounding. By Noon it cleared, and we saw the Land; here it trended South-east, and the Tides sat

along it with a quick Motion. In the Evening there came a great rolling Sea out of the North-north-east, and at eight o'clock it blew very hard at South-east; and by Reason of the Encounter of the Wind, and this great Sea, the Sea was all in a Breach; and to make up a perfect Tempest, it did so lighten, snow, rain, and blow all the Night long, that I was never in the like. We shipped many Seas, but one more dangerous, which racked us fore and aft; and I verily thought it had sunk the Ship, it struck her with such Violence. The Ship did labour most terribly in this Diffraction of Wind and Waves; and we had much ado to keep all things fast in the Hold, and betwixt Decks.

The 5th in the Morning the Wind shifted South-west, but changed not its Condition; in the Afternoon it changed again to the North-west, with that tearing Violence, that not I, nor any that were then with me, ever saw the Sea in such a Breach. Our Ship was so tormented, and so laboured with taking it in on both Sides, and at both Ends, that we were in most miserable Distress, in this so unknown a Place; at eight o'clock in the Evening the Storm broke up, and we had some Quietness in the Night following, not one having slept a Wink in twenty Hours before. If this Storm had continued Easterly, as it was at first, without God's Goodness we had all perished.

On the 6th the Wind was at South-west, so that we could do no good to the Windward. We spent the Time therefore in trimming our Ship; we brought all our Coals, which for the most part was great Coal, aft, as we also did some other things, and all to lighten her afore. Others picked our Bread, whereof there was much wet; for do what we could we shipped abundance of Water between Decks, which ran into the Hold, and into our Bread-Room; for the Sea so continually over-racked us, that we were like *Jonas* in the Whale's Belly. We overlooked our Tacks and Sheets, with other Riggings of Stress, because that henceforward they were to look for no other but Winter Weather. This Evening our Boatswain, a careful Man, and one that had laboured extremely these two or three Days, was very sick, swooning away three or four Times, insomuch that we thought he would presently have died.

The 7th in the Morning the Wind came up to South-west, and we stood away South-west, under all the Sail that we could make. In this Course we saw an Island, and came close aboard it, and had twenty Fathom Water, which was some Comfort to us; for hitherto we could not come within four or five Leagues to the Shore at that Depth. This Island stands in 54 Degrees 10 Minutes. The Afternoon we stood away South-west, and in the Evening had the shallowing of the Western Shore, in eight, ten, and seven Fathom, but it was so thick, that we could not see the Land. It is about fourteen Leagues between this Island and the Main. The 8th was foggy and calm, which so continued till the 9th in the Morning, the Wind then coming up at South-south-west. In the Evening the Water shallowed to ten and nine Fathoms, wherefore we stood off and on all Night. The 10th we made it, finding it an Island of about eight or nine Leagues long. It stands in Latitude 53 Degrees 5 Minutes, and about fifteen Leagues from the Western Shore. The Part of it that we coasted, trends West-north-west, I named it my Lord *Weston's Island*. We stood still away to the Eastward, it being foggy Weather. In the Afternoon we descried Land to the Eastward of us, which made like three Hills. Towards them we sailed, keeping our Lead still going and very circumspect.

At length we also saw Land to the Southward of us, whereupon we loosed up and made to that by Course, as we had set it in the thick Fog. We came in among such low broken Grounds, Breaches, and Rocks, that we knew not which Way to turn us; but, God be thanked, it was but little Wind, and soon came to an Anchor. Soon after it cleared, at which Time we could see nothing but Sands, Rocks, and Breaches, round about us, that Way only excepted which we came in. I sent presently the Boat to sound among the Sholes and Rocks, that if we

should be put to extremity, we might have some Knowledge which Way to go. This Night proved calm, and fair Weather, and we rid quietly.

12. On the 11th, in the Morning, I went in the Boat ashore myself, and sent the Boat about among broken Grounds, to sound; I found the Land utterly barren, even of that which I thought easily to be found; which was Scurvy-grass, Sorrel, or some Herb or other, to have refreshed our sick People. I could not perceive that the Tide flowed here ordinarily above two Feet. There was much Drift-Wood on the Shore, and some of it drove up very high in the North-side of the Island, where I judged that the Storms were very great at North, in the Winter. Thus I returned aboard, and sent many of our sick Men to another Part of the Island, to see if themselves could fortunately find out any Relief for their Grief. At Noon, by good Observation, we were in Latitude 52 Degrees 45 Minutes. In the Evening our Men returned comfortable, and then we weighed, and stood to the Westward, coming to an Anchor under another Island, in twenty Fathom.

The 12th in the Morning it began to blow hard at South-east, which was partly off the Shore, and the Ship began to drive, it being soft oozy Ground. We heaved in our Anchor thereupon, and failed under two Courses. Whilst most were busy in heaving out the Top-Sails, some, that should have had especial Care of the Ship, ran her ashore upon the Rocks, out of mere Carelessness in looking out and about, or heaving of the Lead, after they had seen Land all Night long, and might even then have seen it, if they had not been blind with Self-conceit, and been enviously opposite in Opinion. The first Blow struck me out of a deep Sleep, and I, running out of my Cabin, thought no other, at first, but I had been wakened to provide myself for another World.

After I had controuled a little Passion, and had checked some bad Council that was given me to revenge myself upon them that had committed this Error, I ordered what should be done to get off these Rocks. First we hauled all our Sails back, but that did no good, but made her beat the harder. Whereupon we struck all our Sails amain, and furled them up close, tearing down our Stern to bring the Cable through the Cabin, to Capstang, and so laid out an Anchor to heave her astern. I ordered all the Water in the Hold to be staved, and set some to the Pumps to pump it out, and intended to do the like with our Beer; others I put to throw out all our Coals, which was soon and readily done. We coiled out our Cables into the Long-boat, all this while the Ship beating so furiously, that we saw some of the Sheathing swim by us. Then we stood, as many as could, to the Capstang, and heaved with such a good Will, that the Cable broke, and we lost our Anchor, but with all Speed therefore we put another. We could not now perceive whether she leaked or no, and that by Reason we were employed in pumping out the Water, which we had bulged in Hold, though we feared she had received her Death's Wound. Therefore we put into the Boat the Carpenter's Tools, a Barrel of Bread, a Barrel of Powder, six Muskets, with some Matches and a Tinder-Box; Fish-Hooks and Lines; Pitch and Oakham; and, to be brief, whatever could be thought on in such an Extremity. All this we sent ashore to prolong a miserable Life for a few Days. We were five Hours thus beating, in which Time she struck an hundred Blows, insomuch that we thought every stroke had been the last that it was possible she could have endured. The Water we could not perceive all this while to flow any thing at all.

At length it pleased God she beat over all the Rocks, though yet we knew not whether she was staunch; whereupon we went to pumping all Hands, till we made the Pumps suck, and then we saw how much Water she made in a Glass. We found her to be very leaky, but we went to Prayer, and gave God Thanks it was no worse; and so fitted all things again, and got further off and came to an Anchor. In the Evening it began to blow very hard at West-south-west, which if it had done whilst we were on the Rocks, we had lost our Ship with-

out any Redemption. With much ado we weighed our Anchor, and let her drive to the Eastward, among the broken Ground and Rocks, the Boat going before founding; at length we came among Breaches, and the Boat made Signs to us that there was no going further among the Rocks, therefore we again came to an Anchor, where we rid all Night, and where our Men, which were tired out with extreme Labour, were indifferent well refreshed. Here I must observe, that when the Wind was at South, it flowed very little, or no Water at all, so that we could not bring our Ship a-ground to look to her, for we pumped almost continually.

13. The 13th at Noon we weighed, and stood to the Westward, but in that Course it was all broken Ground, Sholes, and sunken Rocks; so that we wondered how we came in among them in a thick Fog. Then we shaped our Course to the Northward, and after some Consultations with my Associates, I resolved to get about this Land, and so to go down into the bottom of *Hudson's Bay*, and see if I could discover a Way into the River *Canada*; and if I failed in that, then to winter on the main Land, where there is more Comfort to be expected than among the Rocks or Islands. We stood along the Shore in Sight of many Breaches. When it was Night we stood under our Fore-sail, the Lead still going. At last the Water shallowed upon us to ten Fathom, and it began to blow hard. We tacked about, and it deepened to twelve or fourteen Fathom, but by and by it shallowed again to eight Fathom; then we tacked about again, and suddenly it shallowed to six, and five; so we struck our Sails amain, and came to an Anchor, resolving to ride it for Life and Death. We rid all Night, and thought our Ship would have been torn to Pieces. At Break of Day, the 14th, we were joyful Men when we could look about; we descried an Island some two Leagues off at West and by North, and this was the Shole that lay about it. Here ran a distracted, but yet a very quick, Tide, of which we taking the Opportunity, got up our Anchor, and stood North-west, to clear ourselves of this Shole; in the Afternoon the Wind came up at North-east, and we stood along the Western Shore, in Sight of a multitude of Breaches. In the Evening it began to blow a Storm, and the Sea went very high, and was all in a Breach. Our Shallop, which we now towed at Stern, being moored with two Hawfers, was sunk, with her Keel up. This made our Ship to hull very broad, so that the Sea did continually over-rack us. Yet we endured it, and thought to recover her. All Night the Storm continued with Violence, and with some Rain; in the Morning it was very thick Weather.

The Water shoaled apace, with such an over-grown Sea withal, that a Sail was not to be endured; and what was worse, there was no trusting to an Anchor. Now therefore we began to prepare our selves, how to make a good End of a miserable tormented Life. About Noon, as it cleared up, we saw two Islands under our Lee, whereupon we bore up to them, and seeing an Opening betwixt them, we endeavoured to get into it before Night, for that there was no hope of us if we continued out at Sea that Night, therefore come Life, or come Death, we must run this Hazard. We found it to be a good Sound, where we rid all Night safely, and recovered our Strengths again, which were much impaired with continual Labour; but before we could get into this good Place, our Shallop broke away, being moored with two Hawfers, and we lost her to our great Grief. Thus now we had but the Ship's Boat, and she was all torn and bruised too. This Island was the same that we had formerly coasted the Western Side of, and had named *Lord Weston's Island*. Here we remained till the 19th, all which Time it did nothing but snow and blow extremely, insomuch that we durst not put our Boat overboard.

This Day the Wind shifted North-north-east, and we weighed and stood to the Southward, but by Noon the Wind came up at South, and so we came to an Anchor under another Island; on which I went on Shore, and named it *The Earl of Bristol's Island*. The Carpenter wrought hard in repairing our Boat, whilst I wandered up

up and down in this desert Island. I could not perceive that there had been any Savages on it, and in brief, we could neither find Fish, Fowl, or any Herb upon it; so that I returned comfortless again. The Tides high, about some six Foot, now the Wind is northerly. The Flood comes from the North, and it flows Half Tide; the full Sea this Day was at one o'Clock. Here, seeing the Winds continue so northerly that we could not get about to go into *Hudson's Bay*, we considered again what was best to do, to look out for a wintering Place; some advised me to go for *Port Nelson*, because we were certain that there was a Cove where we might bring in our Ship. I liked not that Counsel, for that is a most dangerous Place, and it might be so long ere we got thither, that we might be debarred by the Ice; moreover, seeing it was so cold here that every Night our Rigging froze, and sometimes in the Morning we shoveled away the Snow, half a Foot thick, off our Decks; and in that Latitude too I thought it far worse than the other Place: I resolved thereupon to stand again to the Southward, there to look for some little Creek, or Cove, for our Ship.

14. On the 21st the Wind came up at North, and we weighed although it was a very thick Fog, and stood away South-west, to clear ourselves of the Shoals, that were on the Point of this Island. This Island is in Latitude 53 Degrees 10 Minutes. When we were clear we steered away South. At Noon the Fog turned into Rain, but very thick Weather, and it thundered all the Afternoon, which made us fear a Storm, yet we ventured to proceed. In the Evening the Wind blew hard, therefore we took in all our Sails, and let her drive to the southward, heaving the Land every Glass. Our Depth, when we took in our Sails, was thirty Fathom, and it increased to forty-five, which was a great Comfort to us in the dark. At Midnight our Depth began suddenly to decrease, and as fast as the Lead could be heaved it shoaled to twenty Fathom, wherefore we hop'd to come to an Anchor, and trimmed our Ship aft, to mount to the Sea, and fitted all Things to ride it out. There was no Need to bid our Men watch now. We rid it out all Night although it blew very hard.

The 22d in the Morning, when we could look about us, we saw an Island under our Lee some Leagues off, all Shoals and Breaches between us and it. At Noon, by the Help of the windward Tide, we attempted to heave up our Anchor, although the Sea went Mountains high; joining all our Strength therefore with our best Skills, God be thanked, we had it up; but before we could set our Sails we were driven into nine Fathoms, endeavouring thereupon to double a Point, to get under the Lee of this Island, the Water shoaled to five Fathoms; but when we were about it, deepened again; and we came to an Anchor in a very good Place, and it was well for us that we did; for the Wind increased to a very Storm; here we rid well all Night, and recovered our Strength again. The last Night, and this Morning it snowed and hailed, and was very cold; nevertheless I took the Boat and went ashore to look for some Creek or Cove to carry in our Ship; for she was very leaky, and the Company became very sickly and weak with much pumping and extreme Labour. This Island, when we came to the Shore, was nothing but Ledges of Rocks and Banks of Sand, and there was a very great Surf on them; nevertheless I made them row through it: And on Shore I got with two more, and made them row off without the Breaches, and come to an Anchor and stay for me. I made what Speed I could to the Top of a Hill, to discover; but could not see what we looked for; and because it began to blow hard I made haste toward the Boat again. I found that it had ebbed so low that the Boat could not, by any Means, come near Shore for me, so that we were forced to wade through the Surf and Breaches to her, in which some got such a Cold that they complained of it to their dying Day.

But now it began to blow hard, so that we could but get little to Windward toward our Ship, for the Wind was shifted since we went ashore; and return to the Shore we could not, by Means of the Surf. We rowed for Life: They in the Ship let out a Buoy by a long Warp,

and by God's Assistance we got to it, and so halled up to the Ship, where we all rejoiced together. This was a Premonition to us to be careful how we sent off the Boat in such Weather. I named this Island *Sir Thomas Roe's Island*; it is full of small Wood, but in other Benefits not very rich, and stands in Latitude 52 Degrees 10 Minutes. At Noon we weighed, seeing an Island that bore South-south-east of us some four Leagues off, which was the highest Land we had yet seen in this Bay; but as we came near, it suddenly shoaled to six, five, and four Fathom; wherefore we struck our Sails amain, and chopped to an Anchor, but it was very foul Ground; and when the Ship was wound up we had but three Fathom Water at her Stern; as it cleared, we could see the Breaches all along under our Lee; holding it not safe therefore to stay long here, we settled every thing, in order for the Ship to fall the right Way. We had up our Anchor, got into deeper Water, and stood up again for *Sir Thomas Roe's Island*, which by Night we brought in the Wind of us, some two Leagues off; which did well shelter us. The Tides run very quick here, and the Times of running Ebb or Flood, very uncertain; their Currents are likewise so distracted that in the Night there is no failing by the Compass, therefore we were forced to seek, every Night, some new Place of Security, to come to an Anchor.

The 24th in the Morning it lowered, and threatened a Storm, which made us, with the windward Tide, weigh, to get near under the Island. It was very foggy Weather, and as we stood to the North-eastward we came to uncertain Depths; at one Cast twenty Fathom, the next seven, then ten, five, eight, and three; and coming to the other Tack, we were worse than we were before. The Currents defeating our Judgments in the thick Fog, when we could see no Land-marks. It pleased God that we got clear of them, and endeavoured to get under the Lee of the Island; which being not able to do, we were obliged to come to an Anchor in thirty-five Fathom some two Leagues off the Shore: All this Afternoon, and indeed all Night too, it snowed, hailed, and was very cold. The 25th we weighed, and thought to get to the eastward; but as we tacked to and again, the Wind shifted so in our Teeth, that it put us within a Quarter of a Mile of the very Shore, where we chopped to an Anchor, and rid it out for Life and Death. Such Miseries as these we endured among the Shoals and broken Grounds, or rather more desperate than I have related, with Snow, Hail, and stormy Weather, and colder than ever I felt in *England* in my Life. Our Sheet-Anchors were down twice or thrice in a Day; which extreme Pains made a great Part of our Company sickly. All this lasted with us until the 30th of this Month *September*, which we thought would have put an End to our Miseries, for now we were driven among Rocks, Shoals, Overfalls, and Breaches round about us, that which way to turn we knew not, but there rid among them in Extremity of Distress.

15. The 1st of *October* was indifferently fair Weather, and with a windward Tide our Boat went to sound a Channel, to help us out of this dangerous Place; the Boat within two Hours returned, and told us she had been a Way where there was not less than ten Fathom; we thereupon weighed, but found it otherwise, and came among many strange Races and Overfalls, upon which there went a very great and breaking Sea; as we proceeded, the Water shoaled to six Fathoms. Well! there was no Remedy, we must go forward, seeing there neither was any riding, and as little Hope to turn any way with a Sail, but that there appeared present Death in it: It pleased God so to direct us that we got through it. The Water sometimes deepened to twenty Fathom, then upon a sudden it shoaled to seven, six, and five Fathoms, so that we struck all our Sails amain, and chopped to an Anchor, where we rid till Midnight for Life and Death, it blowing a merciless Gale of Wind, and the Sea going very lofty, and all in a Breach; the Ground was foul Ground too, insomuch that we doubted our Cable every Minute.

The 2d in the Morning there was little Wind, whereupon,

upon, taking the Opportunity of the Tide, the Boat went forth to found, which returning again in two Hours told us, they had founded about that Shole, and had found a Place of some Safety to ride in, and had been in no less Water than five Fathom. We weighed, and found our Cable galled in two Places; which had soon failed us if the Weather had continued. We stood the same Way that the Boat directed us; but it proved so calm that we came to an Anchor in 18 Fathom, hooked the Boat, and went on Shore on an Island that was on the southward of us; which I named the *Earl of Danby's Island*: From the highest Place in it I could see all broken Grounds and Sholes to the southward, and rather worse, than any thing better, than that which I had been in. I found that the Savages had been upon it, and that it was full of Wood. I made haste to found the Bay, for fear of Sholes and funken Rocks; but found it indifferent good.

Toward the Evening it began to blow hard, wherefore we made towards the Ship; she put forth her Buoy, and a Warp, and we rowing for Life reached her, wore to Leeward of her; but by getting hold of the Warp, we hauled up to her. The Boat we left half full of Water, ourselves being as wet as drowned Rats; and it made us the more rejoice that we had escaped so great Danger; all Night it blowing a most violent Gale of Wind, with Snow and Hail. On the 3d, about Noon, the Wind dulled, and we had up her Anchor, standing farther into the Bay in four Fathom and an half Water; here we came again to an Anchor with our second Anchor, for many of our Men are sick, and the rest so weakened that we can hardly weigh our Sheet-Anchor. I took the Boat and went presently on Shore to see what Comfort I could find: This was the first time that I put Foot on this Island, which was the same that we afterwards wintered upon; I found the Tracks of Deer, and saw some Fowl; but that which rejoiced me most was, that I saw an Opening into the Land, as if it had been a River. To it we made with all Speed, but found it to be barred, and not a Foot Water at full Sea, on the Bay, and yet within a most excellent fine Harbour, having five Fathom Water. In the Evening I returned aboard, bringing little Comfort for our sick Men, more than Hopes.

On the 4th it snowed very hard, yet I got ashore and appointed the Boat to go to another Place (which made like a River) and to found it; in the mean time I went with four more some four or five Miles up into the Country, but could find no Relief for my Sick, but a few Berries only. After we had well wearied ourselves, I returned to the Place I had appointed them to tarry for me; where at my coming I still found her, she having not been where I ordered her, for it had blown such a severe Gale of Wind that she could not row to Windward; thus we returned aboard with no good News. It continued foul Weather with Snow and Hail, and extremely cold till the sixth, when with a favourable Wind I stood in nearer to the Shore and moored the Ship. On the 7th it snowed all Day, so that we were fain to clear it off the Decks with Shovels, and it blew a very hard Storm withal; it continued snowing and very cold Weather, and it froze so that all the Bows of the Ship with her Beak-head were all Ice; about the Cables also was Ice as thick as a Man's Middle; the Bows of the Boat were likewise frozen half a Foot thick, so that we were fain to beat it off. The Sun shined very clear, and we bore the Top-sails out of the Tops which were hard frozen in them into a Lump, so that there they hung a sunning all Day in a very Lump, the Sun not having Power to thaw one Drop of them. After the Boat was fitted we rowed towards the Shore, but could not come near the Place where we were used to land, for it was all thick Water with the Snow that had fell upon the Sands that are dry at low Water; this made it so difficult to row that we could not get through it with four Oars; yet something higher to the Westward we got ashore. Seeing now the Winter to come thus extremely on upon us, and that we had very little Wood, I made them fill the Boat and went aboard, and

sent the Carpenter to cut Wood, others to carry it to the Water-side whilst the Boat brought it on board; for I doubted that we should not be able to go to and again with the Boat. It was miserable cold already aboard the Ship, every Thing froze in the Hold and by the Fire-side; seeing therefore we could no longer make use of our Sails, it raised many Doubts in our Minds that we must stay and winter.

After we had brought as much Wood on board as we could conveniently stow, and enough, as I thought, to have lasted two or three Months, the sick Men desired that some little House or Hovel might be built on Shore, whereby they might be the better sheltered to recover their Healths: I took the Carpenter and others whom I thought fit for such a Purpose, and chusing out a Place, they went immediately to work upon it; in the mean time, I accompanied with some others wandered up and down the Woods to see if we could discover any Signs of Savages, that we might the better provide for our Safeties against them; we found no Appearance that there were any upon this Island nor near it; the Snow by this Time was half Leg high, and through it we returned comfortless to our Companions, who had all this Time wrought upon our House; they on board our Ship took down our Top-sails the mean while; and made great Fires upon the Hearth in the Hatch-way; so that having well thawed them, they folded them up and put them betwixt Decks, that if we had an Occasion they might bring them again to Yard.

16. The 12th we took our Main-sail from the Yard which was hard frozen to it, and carried it on Shore to cover our House withal, having been forced to thaw it by a great Fire; by Night they had covered it, and had almost hedged it about, and the six Builders desired to lie in it ashore that Night, which I condescended unto, having first fitted them with Muskets and other Furniture, and a Charge to keep good Watch all Night: They had on Shore two Buckhounds, a Dog and a Bitch, which I had brought out of *England*, to kill us some Deer, if happily we could find any. By the 13th at Night our House was ready, and our six Builders desired they might travel up into the Country to see what they could discover. On the 14th by Times in the Morning, being fitted with Ammunition and their Order to keep together, but especially to seek out some Creek or Cove for the Ship, they departed. We on board took down our two Top-masts and their Rigging, making Account, if we removed, to make use of our Fore-sail and Misen.

The 15th in the Evening our Hunters returned very weary, and brought with them a small lean Deer in four Quarters, which rejoiced us all, hoping we should have more of them to refresh our sick Men withal; they reported that they had wandered above twenty Miles, and had brought this Deer above twelve Miles, and that they had seen nine or ten more. The last Night they had a very cold Lodging in the Woods, and so it appeared, for they looked almost starved, nor could they recover themselves in three or four Days after; they saw no Sign of Savages nor of any ravenous wild Beasts, nor yet any Hope of Harbour.

The 19th my Lieutenant and five more desired they might try their Fortune in travelling about the Island, but they had far worse Luck than the others, although they endured all Night, and had wandered very far in the Snow, and returned comfortless and miserably disabled with the Cold. But what was worse than all this, they had lost one of their Company, *John Barton*, our Gunner's Mate, who being very weary, merely to save the going about, had attempted to go over a Pond that was a Quarter of a Mile over, where when he was in the very Middle the Ice broke and closed upon him, and we never saw him more. Considering these Disasters, I resolved to fish no more with a golden Hook for fear I should weaken myself more with one Hunting than twenty such dear Deers could do me Good. Being now assured that there were no Savages upon the Island, nor yet about us on the other Islands on the Main, as far as we could discover, and that the cold Season was now in
that

that Extremity that they could not come to us, if there were any, we comforted and refreshed ourselves by sleeping the more securely.

We changed our Island Garrison every Week, for other refreshing we were likely to have none till the Spring. From the 19th to the 20th it snowed and blowed so hard that the Boat could hardly venture on Shore, and but seldom land unless the Men waded in the thick congealed Water, carrying one another; we sensibly perceived withal, how we daily sunk into more Miseries. The Land was all deep covered with Snow, the Cold strengthened and the thick Snow Water increased, and what would become of us, our most merciful God and Preserver knew only. The 29th I observed an Eclipse of the Moon with what Care possible I could, both in the Trial of the Exactness of our Instruments, as also in the Observation. This Month of *October* ended with Snow and bitter cold Weather.

17. On the first of *November*, I cast up Accounts with the Steward concerning Victuals, the third Part of our Time being this Day out. I found him an honest Man; for he gave me an Account every Week what was spent and what was still in the Hold remaining under his Hand. I would take no Excuse for Leakage or other Waste, unless he daily shewed it to me. Every Month I made a new Survey, and every six Months put what he spared by itself, which now was at least a Month's Provision of Bread, and a Fortnight's Pease, Fish, &c. The 3d Day the Boat endeavoured to get on Shore, but could not go through the congealed Water.

On the 4th they found a Place to get on Shore, and so once in two or three Days till the 9th, bringing Beer to our Men on Shore in a Barrel, which would freeze firmly in the House in one Night; other Provisions they had store. The Ice Beer being thawed in a Kettle was not good, and they broke the Ice of the Ponds to come at Water to drink. This Pond Water had a most loathsome Smell with it, so that doubting least it might be infectious I caused a Well to be sunk near the House; there we had very good Water, which tasted, as we flattered ourselves, like Milk. The 10th, having enough Boards for such a Purpose, I set the Carpenter to work to make a Boat which we might carry over the Ice, and make use of her wherever there was Water. At Noon I took the Latitude of this Island by two Quadrants; which I found to be 52 Degrees. I urged the Men to make Traps to catch Foxes; for we daily saw many; some of them were pied black and white, whereby I gathered that there were some black Foxes, whose Skins I told them were of great Value, and I promised that whoever could take one of them should have the Skin for his Reward; hereupon they made divers Traps, and waded in the Snow, which was very deep, to place them in the Woods.

The 12th our House took Fire, but we soon quenched it; we were obliged to keep an extraordinary Fire Night and Day, and this Accident made me order a Watch to look to it continually, since if our House and Cloathing should be burnt we should be in a woeful Condition; I lay ashore till the 17th, all which Time our Miseries increased.

It snowed and froze extremely, at which Time we looking from the Shore towards the Ship, she appeared a Piece of Ice in the Fashion of a Ship, or a Ship resembling a Piece of Ice; the Snow was all frozen about her, and all her Fore-part firm Ice, and so she was on both Sides, also our Cables frozen in the Hawse. I got me aboard, where the long Nights I spent with tormenting Cogitations, and in the Day-Time I could not see any Hopes of saving the Ship. This I was assured of, that it was impossible to endure those Extremities long; every Day the Men must beat the Ice off the Cables, while some within, with the Carpenter's long calking Iron, digged the Ice out of the Hawfers: In which Work the Water would freeze on their Cloaths and Hands, and would so benumb them that they could hardly get into the Ship without being heaved in with a Rope. The 19th, our Gunner who, as you may remember, had his Leg cut off, languished irrecoverably, and now grew very weak, desiring that for the little Time

he had to live, he might drink Sack altogether, which I ordered he should.

The 22d in the Morning he died, an honest and a strong hearted Man. He had a close boarded Cabin in the Gun-room, which was very close indeed, and as many Cloaths on him as was convenient, and a Pan of Coals and a Fire continually in his Cabin, notwithstanding which Warmth, his Plaisters would freeze at his Wound, and his Bottle of Sack at his Head; we committed him, at a good Distance from the Ship, unto the Sea.

18. On the 23d the Ice increased extraordinarily, and the Snow lay in Flakes as it fell, much Ice also drove by us, yet nothing hard all this while. In the Evening, when the Watch was set, a great Piece of Ice came athwart the Hawser, and four more followed after it, the least of them a Quarter of a Mile broad, which in the Dark very much astonished us, thinking it would carry us out of the Harbour upon the Shore's eastern Point, which was full of Rocks. It was newly congealed two Inches thick, and we broke through it, the Cable and Anchor enduring an incredible Stress, some time stopping the whole Ice. We shot off three Muskets, signifying to our Men ashore that we were in Distress; who answered us again, but could not help us. By ten o'Clock it was all passed, nevertheless we watched carefully, and the Weather was warmer than we had felt it any time this Month.

In the Morning by break of Day I sent for our Men aboard, who shut up the House and arrived by ten, being forced to wade through the congealed Water, so that they received the Boat with Difficulty. There drove by the Ship many Pieces of Ice, tho' not so large as the former, but much thicker: One Piece came foul of the Cable and made the Ship drive. As soon as we were clear of it we joined our Strength together, and had up our easternmost Anchor; and now I resolved to bring the Ship aground, which I had delayed for the following Reasons. First, It was all stony Ground, some Stones lying dry three or four Foot above the Water, so that it was to be suspected that it was the like all round. Secondly, It ordinarily flowed but two Foot and a half here, and if she should bed deep in the Sands we could not ever come to dig her out again, for that she would not be dry by four or five Foot. Thirdly, it was a close Sand which might rise with the Surface, or so mount about her, that all our weak Powers could not heave it away the next Spring. Fourthly, We doubted the Tides would not rise so much in the Summer as they did now. Fifthly, We could not bring her out of the Tide's Way, which ran something quick here, and the Ice beside might drive and mount up upon her, and so overset her, and tear her, and carry away her Planks and Iron Work; and also that we should have nothing left to finish our Pinnacle with. Sixthly, If it blew a Storm at North-west or thereabouts, the Water would flow ten Foot and upwards, and that Wind being off the Shore, it would blow away all the Ice, and there would come in an extraordinary great Surf about the Shore to the eastward Point, which was occasioned by a deep Overfall, besides she would beat extremely, and if she were put up by the Sea or that Surf, it was very doubtful that we should never heave her off again; for these Reasons we endured all, still hoping for some fortunate Accident: But now all our Designs we saw Foolishness, and that a great deal of Labour had been spent in vain by us. With the Flood we weighed our westernmost Anchor, perceiving God's Assistance manifestly, because it happened to be fine warm Weather, otherwise we had not been able to work.

The Wind was now South, which blew in upon the Shore, and made the lowest Tides. We brought the Ship into twelve Feet Water, and laid out one Anchor in the Offing, and another in Shore-water, to draw her on Land at Command: Our Hope also was, that some Stones that were to the Westward of us would fend off some of the Ice; we then being about a Mile from the Shore. About ten o'Clock in the dark Night the Ice came driving upon us, and our Anchors came home. She drove some two Cables-length, and the Wind blowing

on the Shore, by two o'Clock she came aground and stopt much Ice, yet she lay well all Night, and we took some Rest.

The 25th the Wind shifted Easterly, and put abundance of Ice on us. When the Flood came we encouraged one another, and drew home our Anchor by main Force, under great Pieces of Ice, our Endeavour being to put the Ship to the Shore: But to our great Discomfort, when the Half-Tide was made, the Ship drove among the Ice to the Eastward, do what we could, and so she would on the Shore of Rocks. As I have said before, these two Days and this Day was very warm Weather, and it rained, which it had not yet but once done since we came hither, otherwise it had been impossible we could have wrought. Withal the Wind shifted also to the South, and at the very Instant blew a hard Puff, which so continued half an Hour. I caused the two Top-sails to be had up from betwixt Decks, and we hoisted them up with two Ropes in all Haste, and we found the Ship ashore when she had not half a Cable's Length to drive on the rocky Sholes. In the Evening we broke way through the Ice, and put an Anchor to Shoreward in five Feet Water, to keep her to the Shore if possible. Here Sir *Hugh Willoughby* came into my Mind, who without doubt was driven out of his Harbour in this Manner, and so starved at Sea. But God was more merciful to us. About nine at Night the Wind came up at North-west, and blew a Storm. This Wind was off the Shore, which blew away all the Ice from about us long before we were afloat. There came in a great rolling Sea withal about the Point, accompanied with a great Surf on the Shore. And now we were left to the Mercy of the Sea on the Ground. By ten she began to roll in her Deck, and soon after began to beat against the Ground. We stood at the Capstang as many as could, others at the Pumps, for we thought that every fifth or sixth Blow would have flaved her to Pieces. We heaved to the uttermost of our Strength to keep her as near the Ground as we could.

By reason of this Wind it flowed very much Water, and we drew her up so high that it was doubtful if ever we got her off again. She continued thus beating till two o'Clock the next Morning, and then she settled again, whereupon we went to sleep, seeing the next Tide we expected again to be tormented.

19. The 26th in the Morning Tide our Ship did not float. After Prayers I called a Consultation of the Master, my Lieutenant, the Mate's Carpenter and Boatswain, to whom I proposed, that now we were put to our last Shifts, and therefore they should tell me what they thought of it, *viz.* Whether it were not best to carry all our Provisions on Shore; and when the Wind should come Northerly, to draw her further off and sink her? After many Reasonings, they allowed of my Purpose, and so I communicated it to the Company, who all willingly agreed to it; and so we fell to getting up of our Provisions: First, of our Bread, of which we landed this Day two Dryfats, with a Hoghead of Beef, having much ado to get the Boats thro' the congealed Water. In the Evening the Wind came up at North-east and East, and filled the Bay full of Ice.

The 27th the Bay continued full of Ice, which I hoped would so continue and freeze, that we should not be forced to sink our Ship. This Day we could land nothing. The 28th at Break of Day three of our Men went over the Ice unknown to me, and the Wind coming up at West drove the Ice from betwixt us and the Shore, and most part of the Bay also; and yet not so but the Boat could go ashore for any thing. I made the Carpenter fit a Place against all sudden Extremities, for that with the North-west or Northerly Wind I meant to effect our last Project. In the Run of her on the Starboard Side he cut away the Cieling and the Plank to the Sheathing some four or five Inches square, some four Feet high from the Keel of her, that so it might be bored out at an Instant. We brought our Bread which was remaining in the Bread-Room up into the great Cabin, and likewise all our Powder, setting much of our light dry Things betwixt Decks.

The 29th at five in the Morning the Wind came up at West-north-west, and began to blow very hard. It was ordinary for the Wind to shift from the West by the

North round about: So first I ordered the Cooper to go down into the Hold, and look to all our Casks; those that were full to mell in the Bungs of them, and those that were empty to get up, or if they could not be gotten up to flave them; then to coil all our Cables upon our lower Tire, and to lay on our spare Anchors, and any thing that was weighty, to keep it down from rising. By seven o'Clock it blew a Storm at North-west. The Ship was already bedded some two Feet in the Sand; and whilst that was a-flowing she must beat. This I before had in my Consideration, for I thought she was so far driven up that we should never get her off. Yet we had been so ferreted by her last Beating that I resolved to sink her right down, rather than run that Hazard. By nine she began to roll in her Deck with a most extraordinary great Sea, which I found to be occasioned by the forementioned Overfall. And this was the fatal Hour that put us to our Wits-end: Wherefore I went down into the Hold with the Carpenter, and took his Auger and bored a Hole in the Ship and let in the Water. Thus with all Speed we began to cut out other Places to bore through; but every Place was full of Nails. By Ten, notwithstanding the lower Tire was covered with Water, for all which she began so to beat in her Deck more and more, that we could not work nor stand to do any thing in her, nor would she sink so fast as we would have her, but continued beating double Blows, first abaft and then before, that it was wonderful how she could endure a Quarter of an Hour with it.

By Twelve her lower Tire rose, and that did so counterbeat on the Inside, that it bored the Bulk-Heads of the Bread-Room, Powder-Room and Fore-piece, all to Pieces. And when it came betwixt Decks, the Chests fled about, and the Water did flash and fly wonderfully, so that now we expected every Minute when the Ship would open and break to Pieces. At One she beat off her Rudder, and that was gone we knew not which Way. Thus she continued beating till Three, and then the Sea came upon the upper Deck, and soon after she began to settle. In her we were fain to sink the most part of our Bedding and Cloaths, and the Chirurgeon's Chest. Our Men that were on Shore stood looking upon us, almost dead with Cold and Sorrow to see our Miseries and their own; we looked upon them again, and both upon each other with woeful Hearts. Dark Night drew on, and I ordered the Boat to be hawled up, and commanded my loving Companions to go all into her, who expressed their faithful Affection to me, as loth to part from me. I told them that my Meaning was to go ashore with them, and thus lastly I forsook the Ship. We were fourteen poor Souls now in the Boat, and we imagined that we were leaped out of the Frying-pan into the Fire. The Ebb was made, and the Water extraordinary thick with Snow, so that we thought assuredly it would carry us away into the Sea. We thereupon double manned four Oars, appointing four more to sit ready with Oars; and so with the Help of God we got to the Shore, hawling up the Boat after.

One Thing was most strange in this thick Water, that there went a great swelling Sea. Being arrived upon the Land we saluted our Fellows the best we could; at which Time they could not know us, nor we them, by our Habits and Voices, so frozen we were, Faces, Hair and Apparel. And here I mean to take Breath a-while, after all this long and unpleasant Relation of our miserable Endeavours, craving Leave first of all to speak a Word or two in general. The Winds since we came hither have been very variable and inconstant, and till within this Fortnight the Southerly Wind was the coldest. The Reason I conceive to be, that it blew from the main Land, which was all covered with Snow; and the North Winds came out of the great Bay, which hitherto was open; so that we were under a South Bank, that sheltered us so that we were not sensible of it.

20. After we had hawled up the Boat on the 29th of November, we went along the Beach-side in the Dark towards our House, where we made a good Fire, and with it and Bread and Water we comforted ourselves, beginning after that to reason one with another concerning our Ship. I required that every one should speak his Mind freely.

freely. The Carpenter especially was of Opinion, that she was foundered, and would never be serviceable. He alledged, that she had so beaten that it was not possible but that all her Joints were loose and Seams open; and that by Reason it flowed so little Water, and no Creek being near to bring her aground, he could not devise how he might come to mend it; moreover, her Rudder was lost, and he had no Iron-Work to hang on another. Some alledged, that we had heaved her up so high on the Sands that they thought we should never get her off again, and that they were assured she was already docked three Feet; others, that she lay in the Tide's Way, and that the Tides might tear her to Pieces off the Ground. Besides which, two of our Anchors we could not now get from under the Ice, which, when the Ice broke, would break them to Pieces, and then we should have no Anchors to bring us home withal, provided we got off the Ship, and that she proved found also. I comforted them the best I could to this Effect.

"My Masters and faithful Companions, be not dismayed for any of these Disasters, but let us put our whole Trust in God. It is he that giveth and he that taketh away; he throweth down with one Hand, and raiseth up with another. His Will be done. If it be our Fortunes to end our Days here, we are as near Heaven as in *England*, and we are much bound to God Almighty for giving us so large a Time of Repentance, who, as it were, daily calls upon us to prepare our Souls for a better Life in Heaven. I make no doubt but he will be merciful unto us both here on Earth and in his blessed Kingdom. He doth not in the mean time deny that we may use all honest Means to save and prolong our natural Lives; and in my Judgment we are not so far past Hope of returning into our native Country, but that I see a fair Way by which we may effect it. Admit the Ship be foundered, (which God forbid, I hope for the best) yet have those of our own Nation and others, when they have been put to those Extremities, even out of the Wreck of their lost Ship built a Pinnace, and returned to their Friends again. If it be objected that they have happened into better Climates, both for Temperateness of the Air, and for pacific and open Seas, and provided withal of abundance of fresh Victuals, yet there is nothing too hard for courageous Minds, which hitherto you have shewn, and I doubt not will still do to the uttermost of your Power."

They all protested to work to the utmost of their Strength, and that they would refuse nothing that I should order them to do to the utmost Hazard of their Lives. I thanked them all, and to the Carpenter for his cheerful Undertaking I promised to give him so much Plate presently as should be worth 10 *l.* and if so be I went to *England* in the Pinnace, I would give him her freely, and 50 *l.* in Money over and above, and would moreover gratify all them that I should see industrious. Thus we resolved to build us a new Pinnace with the Timber we should get upon the Island, that so in the Spring, if we found the Ship not serviceable we might tear her up, and plank her with the Ship's Planks; and so for this Night we settled ourselves close about the Fire, and took some Rest till Day-light.

The 30th, betimes in the Morning, I caused the Chirurgion to cut off my Hair short, and to shave away all the Hair of my Face, for it was become intolerable, and because it would be frozen so great with Icicles. The like did all the rest, and we fitted ourselves to work. The first Thing we were to do was to get our Cloaths and Provisions ashore, and therefore I divided the Company. The Master and a convenient Company with him were to go aboard and get Things out of the Hold. The Cockswain with his Gang were to go into the Boat, to bring and carry Things ashore. Myself with the rest to carry them half a Mile through the Snow, unto the Place where we intended to build a Store-house. As for the heavier Things, we proposed to lay them on the Beach. In the Afternoon the Wind was at South-south-west, and the Water veered so low an Ebb that we thought we might get something out of the Hold. We launched out our Boat therefore, and with Oars got through the thick congealed Water. It froze extreme hard, and I stood

on the Shore with a troubled Mind, thinking verily that with the Ebb the Boat would be carried into the Sea, and then we were all lost Men: But by God's Assistance they got all safe to the Ship, and made a Fire there to signify their Arrival on board. They fell presently to Work, and got something out of the Hold upon the Decks, but Night coming on, they durst not venture to come on Shore, but lay on the Bed in the great Cabin being almost starved.

21. The 1st of *December* was so cold that I went the same Way over the Ice to the Ship where the Boat had gone Yesterday. This Day we carried upon our Backs in Bundles five hundred of our Fish, and much of our Bedding and Cloaths, which we were fain to dig out of the Ice. The 2d was mild Weather, and some of the Men going over the Ice fell in, and very hardly recovered; so that this Day we could land nothing, neither by Boat nor Back. I put them therefore to make us a Store-house on Shore. In the Evening the Wind came up at West, and the Ice broke and drove out of the Bay. It was very deep and large Ice, that we were afraid it would have spoiled the Ship. The 3d Day there were divers great Pieces of Ice that came athwart the Ship and she stopt them, yet not so as we could go over them. We found a Way for the Boat, but when she was laden she drew four Feet Water, and could not come within a slight Shot of the Shore; the Men therefore must wade through the congealed Water, and carry Things out of the Boat upon their Backs. Every time they waded in the Ice it was most lamentable to behold. In this extreme cold Evening they cut away as much Ice from about the Boat as they could, and picked it with Hand-spikes out of her, and endeavoured to hoist her into the Ship, there being small Hopes that she could go to and again any more: But use what Means they could, she was so heavy that they could not hoist her in, but were forced to leave her in the Tackles by the Ship-side.

The 4th being *Sunday* we rested and performed the Sabbath-Duties of Christians. The 5th and 6th were extreme cold, and we made Bags of our Store-Shirts, and in them we carried our loose Bread over the Ice on Shore upon our Backs: We also digged our Cloaths and new Sails with Hand-spikes of Iron out of the Ice, and carried them ashore, which we dried by a great Fire. The 7th Day was so exceeding cold, that our Noses, Cheeks and Hands, did freeze as white as Paper. The 8th and 9th it was extremely cold, and it snowed much; yet we continued our Labour in carrying and rolling Things on Shore. In the Evening the Water raised the Ice very high, and it broke two Thawghts of our Boat, and broke in the Side of her, but for that Time we could not help it.

The 10th our Carpenter found Timber to make a Keel and a Stern for our Pinnace, the rest wrought about our Provisions until the 13th Day, and that we spent in digging our Boat out of the Ice, which we were fain to do to the very Keel, and dig the Ice out of her, then we got her up; in doing which many of their Noses, Cheeks and Fingers, did freeze. The Cold now encreased most extremely. By the 19th we could get no more Things out of the Hold, but were fain to leave five Barrels of Beef and Pork, all our Beer, and divers other Things, which were all frozen in her. The 21st was so cold that we could not go out of the House. The 23d we went to get our Boat ashore, running her with our Oars, but by ten o' Clock there came such a thick Fog that it was as dark as Night. I made them give over, and we made what Haste we could to the Shore, which we had much ado to find without losing one another. At last we met all at the House, the most miserable and frozen that can be conceived. Upon divers the Cold had raised Blisters as big as Walnuts. This we imagined to come by Reason that they came too hastily to the Fire. Our Well was now frozen up, so that dig as deep as we would, we could come at no Water. Melted Snow-Water is very unwholesome, either to drink or to dress Victuals: It made us so short-breath'd, that we were scarce able to speak.

All our Sack, Vinegar, Oil, and every thing else that was liquid, was now frozen as hard as a Piece of Wood, and we cut it with a Hatchet. Our House was all frozen

on the inside; and it froze hard within a Yard of the Fire-side. When I landed first upon this Island, I found a Spring under a Hill's side, which I then observing, I caused some Trees to be cut, for Marks to know the Place again by. It was about three Fourths of a Mile from our House. I sent three of our Men which had been with me thither. Upon the 24th these wandering through the Snow, at last found the Place, and shoveling away the Snow they made Way to the very Head of it. They found it spring very strongly, and brought me a Can of it, for which I was right joyful. This Spring continued all the Year, and did not freeze, but that we could break the Ice and come to it. We laboured very hard these three or four Days to get Wood to the House, which we found to be very troublesome, through the deep Snow.

22. We then settled our Bedding and Provisions, providing to keep Christmas-Day holy, which we solemnized in the joyfullest Manner we could. So likewise did we *St. John's Day*, upon which we named the Wood we did winter in, in Memory of that honourable Knight, Sir *John Winter*, *Winter's Forest*, and now, instead of a Christmas Tale, I will describe the House that we did live in, with those adjoining. When I first resolved to build a House, I chose the warmest, and convenientest Place, and the nearest the Ship withal. It was among a Tuft of thick Trees, under a South Bank, about a flight Shot from the Sea-side. True it is, that at that Time we could not dig into the Ground to make us a Hole or Cave in the Earth, which had been the best Way, because we found Water digging within two Feet, and therefore that Project failed; it was a white light Sand, so that we could by no Means make up a Mud-Wall.

As for Stones there were none near us; besides we were all now covered with the Snow. We had no Boards for such a Purpose, and therefore we must do the best we could with such Materials as we had about us. The House was square about twenty Feet every Way, as much namely as our main Courfe could well cover. First we drove long Stakes into the Earth, round about which we wattled with Boughs, as thick as might be, beating them down very close. This, our first Work, was six Feet high on both Sides, but at the Ends was almost up to the very Top. There we left two Holes for the Light to come in at, and the same Way the Smoak did vent out also. Moreover I caused, at both Ends, three Rows of Bush Trees to be stuck up, as close together as possible. Then, at a Distance from the House, we cut down Trees, proportioning them into Lengths of six Feet, with which we made a Pile on both Sides, six Feet thick, and six Feet high; but at both Ends ten Feet high, and six Feet thick. We left a little low Door to creep into, and a Portal before that, made with Piles of Wood, that the Wind might not blow into it. We next fastened a rough Tree aloft, over all, upon which we laid our Rafters, and our main Courfe, over them again; which lying thwartways over all, reached down to the very Ground on either Side; and this was the Fabric of the outside of it.

On the inside we made fast our Bonnet Sails round about, then we drove in Stakes, and made us Bedstead Frames, about three Sides of the House, which Bedsteads we doubled one under another, the lowermost being a Foot from the Ground. These we first filled with Boughs, then we laid our spare Sails on that, and then our Bedding and Cloaths. We made a Hearth in the Middle of the House, and on it made our Fire; some Boards we laid round our Hearth to stand upon, that the cold Damp should not strike up into us. With our waste Cloaths we made us Canopies and Curtains, others did the like with our small Sails. Our second House was not more than twenty Feet Distance from this, and made, for the Wattling, much after the same Manner, but it was less, and covered with our fore Courfe. It had no Piles on the South-side, but, in lieu of that, we piled up all our Chests on the inside; and, indeed, the Reflex of the Heat of the Fire against them did make it warmer than the Mansion-House. In this House we dressed our Victuals, and the subordinate Crew did refresh themselves

all Day in it. A third House, which was our Store-house, was twenty-nine Paces off from this, for fear of firing.

This House was only a rough Tree fastened aloft, with Rafters laid from it to the Ground, and covered over with our new suit of Sails. On the Inside we had laid small Trees, and covered them over with Boughs, and so stored up our Bread and Fish in it, about two Feet from the Ground, the better to preserve them; the other things lay more carelessly. Long before Christmas our Mansion-House was covered thick over with Snow, almost to the very Roof of it; and so likewise was our second House, but our Store-house all over, by Reason we made no Fire in it.

Thus we seemed to live in a Heap and a Wilderness of Snow; for out of our Doors we could not go, but upon the Snow, in which we made us Paths Middle deep in some Places, and in one special Place the Length of ten Steps. To do this, we must shovel away the Snow first, and then, by treading, make it something hard under Foot. The Snow, in this Path, was a full Yard thick under us. And this was our best Gallery for our sick Men, and for my own ordinary Walking; and both Houses and Walks we daily accommodated more and more, and made fitter for our Uses. On the 27th we got our Boat ashore, and fetched up some of our Provisions from the Beach-side, into the Store-house, and so by degrees did we with the rest of our Provisions, with Extremity of Cold and Labour, making Way with Shovels through the thick Snow, even from the Sea-side to our Store-house; and thus concluded we the old Year 1631.

23. The first of *January*, 1632, and for the most part all the Month, was extreme cold. The 6th I observed the Latitude with what Exactness I could, it being clear sunshiny Weather, which I found to be 51 Degrees 52 Minutes; this Difference is by Reason that there is a great Refraction. On the 21st I observed the Sun to rise like an Oval along the Horizon; I called three or four to see it, the better to confirm my Judgment; and we all agreed that it was twice as long as it was broad. We plainly perceived withal, that by Degrees, as it got up higher, it also recovered its roundness. The 30th and 31st there appeared, in the Beginning of the Night, more Stars in the Firmament than ever I had before seen, by two Thirds; I could see the Clouds in Cancer full of small Stars. About ten o'clock the Moon rose, and then a Quarter of them were not to be seen. The Wind, for the most Part of this Month, hath been Northerly, and very cold. The warmest of which Time we employed ourselves in fetching Wood, working upon our Pinnacle, and other things. In the Beginning of this Month the Sea was all firmly frozen over, so that we could see no Water any where. I hope it will not seem tedious to the Readers, if I here deliver my Opinion, how this Abundance of Ice comes to be ingendered.

The Land that incircles this great Bay, which lies in a broken irregular Form, making many little Shore-Bays and Guts, full of Islands and dry Sands, is, for the most Part, low and flat, and hath Sholes adjoining to it half a Mile or a Mile, that are dry at low Water. Now you must know that it flows half Tide, that is, from whence the Flood cometh, the Water returneth two Hours before it is high Water, or full Sea. It seldom rains after the Middle of *September*, but then falls Snow, and that Snow will not melt on the Land, or Sands. At low Water, when it snows, the Sands are all covered over, which the half Tide carries twice in four Hours into the great Bay, which is the common Rendezvous of it. Every low Water the Sands are left clear, to gather more to the Increase of it.

Thus it daily gathers together in this Manner, till the latter End of *October*; and by that Time it brings the Sea to that Coldness, that as it snows, the Snow will lie upon the Water in Flakes, without changing Colour; but with the Wind is wrought together, and as the Winter goes forward, it begins to freeze upon the Surface of it, two or three Inches or more in one Night; which being carried with the half Tide, meets with some Obstacle, and

and then it crumples, and so runs upon itself, that in a few Hours it will be five or six Feet thick. The half Tide still flowing, carries it quite away, that by *December* it is grown to an infinite Multiplication of Ice. And thus, by this storing of it up, the Cold gets the Predominancy in the Sea, which also furnishes the Springs and Water in the low flat Lands, that it cools it like itself. This may appear by our Experience; though in all this I freely submit myself to the more Learned.

Our Men found it more mortifying cold to wade through the Water in the Beginning of *June*, when the Sea was full of Ice, than in *December*, when it was increasing; our Well, out of which we had Water in *December*, dried up in *July*; the Ground, at ten Feet deep, was frozen. The Quantity of Ice may very easily be made to appear by mathematical Demonstration; and yet I am not of the Opinion that the Bay freezes all over. For the 21st the Wind blowing a Storm at North, we could perceive the Ice to rise something in the Bay.

24. *February* 1632. The Cold was as extreme this Month as at any Time we had felt it this Year, and many of our Men complained of Infirmities; some of sore Mouths, all the Teeth in their Heads being loose; their Gums swollen with black rotten Flesh, which every Day was to be cut away; the Pain was so great, that they could not eat their ordinary Meat; others complained of Pains in their Heads and their Breasts; some of Weakness in their Backs; others of Aches in their Thighs and Knees; and others of Swellings in their Legs. Thus were two thirds of the Company under the Chirurgion's Hands; and yet, nevertheless, they were forced to work daily, and go abroad to fetch Wood and Timber, notwithstanding most of them had no Shoes to put on. Their Shoes, upon their coming to the Fire out of the Snow, were burnt and scorched upon their Feet, and our Store-shoes were all sunk in the Ship. In this Necessity they made this shift to bind Clouts about their Feet, and endeavoured, by that poor Help, the best they could, to perform their Duties. Our Carpenter likewise by this time fell sick, to our great Discomfort.

I practised some Observations by the rising and setting of the Sun; calculating the Time of his rising and setting, by very true running Glasses. As for our Clock and Watch, notwithstanding we still kept them by the Fire-side in a Chest, wrapped in Cloths, yet were they so frozen, that they could not go. My Observations by these Glasses, I compared with the Stars coming to the Meridian. By this means we found the Sun to rise twenty Minutes before it should; and in the Evening to remain twenty Minutes, or thereabouts, longer than it should; all this by Reason of the Refraction. Since now I have spoken so much of the Cold, I hope it will not be taken ill, if I, in a few Words, make it some Way appear to our Readers.

We made three Differences of the Cold, all according to the Places. In our House, in the Woods, and in the open Air, in our going to the Ship. For the last, it would be sometimes so extreme, that it was almost unendurable; no Cloaths were Proof against it; no Motion could resist it; it would so freeze the Hair on the Eyelids, that we could not see; and I verily believe that it would have stifled a Man in a very few Hours. We daily found, by Experience, that the Cold in the Woods would freeze our Faces, or any Part of our Flesh that was bare, but it was not so mortifying as the other. Our House, on the outside, was covered two third Parts with Snow, and, on the inside, frozen and hung with Icicles. The Cloaths on our Beds would be covered with Hoar-Frost, which in this Habitation was not far from the Fire. The Cook's Tubs, wherein he watered his Meat, standing about a Yard from the Fire, and which he all Day plied with Snow Water; yet in the Night Season, whilst he slept but on watch, they would be firm frozen to the very Bottom. And therefore he was forced to water his Meat in a Brass Kettle, close adjoining to the Fire. And I have many times both seen and felt, by putting my Hand into it, that Side which was next the Fire very warm, and the other Side an Inch frozen.

The Chirurgion, who had hung his Bottles of Sirrups,

and other liquid things, as conveniently as he could, to preserve them, had them all frozen. Our Vinegar, Oil, and Sack, which we had in small Casks in the House, were all firm frozen. It may further, in general, be conceived, that in the Beginning of *June* the Sea was not broken up, and the Ground was yet frozen; and this we found by Experience, in the burying of our Men, in setting up the King's Standard, towards the latter End of *June*, and by our Well; in coming away in the Beginning of *July*, at which Time, upon the Land, for some other Reasons, it was very hot Weather.

25. *March* 1632. The first of this Month, being *St. David's Day*, we kept Holiday, and solemnised it in the Manner of the *ancient Britons*; praying for the Happiness of his Royal Highness, *Charles*, Prince of *Wales*, afterwards *Charles II.* The 15th one of our Men thought he had seen a Deer, whereupon he, with two or three more, desired that they might go to see if they could take it. I gave them leave, but they returned in the Evening so disabled with Cold, which rose up in Blisters under the Soles of their Feet, and upon their Legs, to the bigness of Walnuts, that they could not recover their former State, which was not very well, in a Fortnight after.

The 26th three others also desired to go out to try their Fortunes, but they returned worse disabled, and even almost stifled with the Cold. This Evening the Moon rose in a very long Oval along the Horizon. By the last of this Month the Carpenter had set up seventeen Ground Timbers, and thirty four Staddles, and, poor Man, he proceeded the best he could, though forced to be led to his Labour. In short, all this Month it was very cold, the Wind about the North-west, the Snow as deep as it was all this Winter. But to answer an Objection that might be made; you were in a Wood (some Men may say unto us) and therefore you might make Fire enough to keep you from the Cold. It is true, we were in a Wood, and under a South Bank too, or otherwise we had all starved.

But I must tell you withal, how difficult it was to have Wood in a Wood. And first I will make a Muster of the Tools we had. The Carpenter, in his Chest, had two Axes indeed, but one of them was spoiled in cutting down Wood to pile about our House before Christmas. When we first landed we had but two whole Hatchets; which, in a few Days, broke two Inches below the Sockets. I called for three of the Cooper's Hatchets. The Carpenter's Ax, and the Cooper's best Hatchet I caused to be locked up; the other two Hatchets to be new helved; and the Blades of the two broken Hatchets to be put into a cleft Piece of Wood, and then to be bound about with Rope Yarn, as fast as might be, which was to be repaired every Day; and these were all the cutting Tools we had. Besides, the 6th of *February* the Carpenter had out his best Ax about something, and one of the Company, in his Absence, by his indiscreet handling of it, broke that too two Inches below the Socket; we were henceforward forced to use these Pieces of Tools the best we could. Wherefore I gave Orders that the Carpenter should have one of the Cooper's Hatchets, they that looked for Timber in the Woods to have the other; and they that cut down Wood to burn, were to have the two Pieces; and this was before Christmas.

The three that were appointed to look crooked Timber, stalked and waded sometimes on all fours through the Snow, and where they saw a Tree likely to fit the Mould, they heaved away the Snow, and then saw if it would fit the Mould, and then they must make a Fire to it to thaw it, otherwise it could not be cut; then they cut it down and fit it to the Mould, and then with other Help get it home, a Mile through the Snow. Now, for our firing we could not burn green Wood, it would smoke so intolerably; nay, the Men would rather starve without in the Cold than sit by it; as for the dry Wood, that also was bad enough, for it was full of Turpentine, and would send forth such a thick Smoak that would make abundance of Soot, which would make us all look as if we had been free of the Company of Chimney-Sweepers.

Our Cloaths were quite burnt to Pieces about us, and, for the most part, we were without Shoes. But to

our Fuelers again: They must first, as the former, go up and down in the Snow till they saw a Tree standing, for the Snow covered those that were down-fallen; then they must hack it down with their Pieces of Hatchets, and then others must carry it home through the Snow. The Boys with Cutlasses must cut Boughs for the Carpenter; for every Piece of Timber that he worked, must first be thawed in the Fire, and he must have a Fire by him or he could not work. And this was our continual Labour throughout the forementioned Cold, besides our tending upon the Sick, and other necessary Employments.

26. April 1632. The first of this Month being *Easter-day*, we solemnized it as religiously as God gave us Grace to do. Both this Day, and the two following Holidays were extreme cold; and now sitting all about the Fire, we reasoned and considered together about our Estate; we had five Men, whereof the Carpenter was one, not able to do any thing; the Boatswain and many more were very infirm and of all the rest we had but five that could eat of their ordinary Allowance. The Time and Season of the Year came on apace, and the Cold very little abated. Our Pinnace was in an indifferent forwardness, but the Carpenter grew worse and worse. The Ship, as we then thought, lay all full of solid Ice; which was Weight sufficient to open the Seams of any new and found Vessel, especially one that had lain so long upon the Ground as she had done. In short, after many Disputes and laying open of our miserable and helpless Estates, I resolved upon this Course, that notwithstanding it was more Labour, and the Men weaker and weaker, yet with the first warm Weather we would begin to clear the Ship, that we might have the Time before us to think of some other Course: This being ordered, we looked to those Tools we had to dig the Ice out of her; we had but two Iron Bars on Shore, the rest were sunk in the Ship, and one of them was broken too.

We fell to fitting of those Bars and four broken Shovels that we had, with which we intended, and afterwards we did, to dig the Ice out of her, and to lay the Ice on a Heap upon the larboard Bow, and so sink it down to the Ground, so fast that it should be a Barricado to us when the Ice brake up, which we feared would tear us to Pieces. The 6th was the deepest Snow we had had all this Year, which filled up all our Paths and Ways by which we were used to go to the Woods; this Snow was something moister and greater than any we had had this Year, for formerly it was as dry as Dust and as small Sand, and would drive like Dust with the Wind: The Weather continued with this Extremity till the 15th, at which Time the Spring was harder frozen than it had been all the Year before. I had often observed the Difference betwixt clear Weather and misty refracting Weather, in this manner, from a little Hill which was near adjoining our House; in the clear Weather when the Sun shone with all the Purity of Air, that I could not see a little Island which bore off us South-south-east four Leagues, but if the Weather was misty as aforesaid, then we could often see it from the lowest Place.

This little Island I had seen the last Year when I was on *Danby Island*. The 13th I took the Height of it by an Instrument standing near the Sea-side, which Island I take to be 34 Minutes, the Sun being 28 Degrees high; this shews how great a Refraction here is; yet this may be noted by the Way, that I have seen the Land elevated by Reason of the reflected Air, and nevertheless the Sun hath risen perfect round. The 16th was the most comfortable sunshiny Day that came this Year, and I put some to clear off the Snow in the under Decks of the Ship, and to clean and dry the great Cabin, by making Fire in it, others I put to dig down through the Ice to come by our Anchor that was in Shore-water; which the 17th in the Afternoon we got up and carried aboard. The 18th I put them to dig through the Ice near the Place where we thought our Rudder might be; they digged down and came to Water, but no Hopes of finding it.

We had many Doubts that it might be fanded, or that the Ice might have carried it away already the last Year. Or if we could not recover it by digging before the Ice

broke up and drove, there were little Hopes of it. The 19th we continued minding our Work aboard the Ship, and returned in the Evening to Supper ashore. This Day the Master and two others desired they might lie aboard, which I agreed to; for, indeed, they had lain very commodiously all the Winter, and with sick Bed-fellows, as I myself had done, every one in that kind taking their Fortunes. By lying aboard, they avoided the hearing the miserable Groanings and Lamentations of the sick Men, all Night long, enduring, poor Souls, miserable Torments. By the 24th we had laboured so hard, that we came to the Sight of a Cask, and could likewise perceive that there was some Water in the Hold. This we knew could not be thawed Water, because it froze very hard Night and Day aboard the Ship, and on the Land also. By the 23d in the Evening we came to pierce the fore-mentioned Cask, and found it full of very good Beer, which much rejoiced us all, especially the sick Men, notwithstanding it tasted a little of the bulged Water. By this we thought that the Holes we had cut to sink the Ship were frozen, and that this Water had stood in the Ship all the Winter.

The 24th we went betimes in the Morning to work, but we found that the Water was risen above the Ice where we had left work, above two Foot, for the Wind had blown very hard at North the Night before. In the Morning the Wind came about South, and blew hard, and, although we had little Reason for it, we yet expected a lower Veer of Water. I thereupon put them to work on the outside of the Ship, that we might come to the lower Hole, which we had cut in the Stern-Shoots; with much Labour, by Night, we digged down through the Ice to it, and found it unfrozen, as it had been all the Winter; and, to our great Comforts, we found that on the inside the Water was ebbed within the Hole, and that on the outside it was ebbed a Foot lower. Whereupon I caused a Shot-board to be nailed upon it, and to be made as tight as might be, to try if the Water came in any other Way; to the other two Holes we had digged on the inside, and found them frozen. Now I did this betimes, that if we found the Ship foundered, we might resolve on some Course to save or prolong our Lives, by getting to the Main before the Ice was broken up; as for our Boat it was too little, and bulged besides that.

Our Carpenter was by this Time past Hopes, and therefore little Hope had we of our Pinnace. But which was worst of all, we had not four Men able to travel through the Snow over the Ice, and in this miserable State were we at this present. The 25th we satisfied our longing, for the Wind now coming about Northerly, the Water rose by the Ship's-side, where we had digged down a Foot and more above the Hold, and yet did not rise within Board. This so encouraged us, that we fell lustily to digging, and to heave the Ice out of the Ship. I put the Cook, and some others, to thaw the Pumps, who, by continual pouring of hot Water into them, by the 27th in the Morning had cleared one of them, which we proving, found it delivered Water very sufficiently. Thus we fell to pumping, and having cleared two Feet Water, we left the other to a second Trial, continuing our Work thus in digging the Ice. By the 28th we had cleared our other Pump, which we also found to deliver Water very well. We found likewise that the Water did not rise any thing in the Hold.

The 29th it rained all Day long, a sure Sign to us that Winter was broken up. The 30th we were betimes aboard at Work, which Day, and the 31st, were very cold with Snow and Hail, which pinched our sick Men more than any Time this Year. This Evening being *May Eve*, we returned late from our Work to our House, and made a good Fire, and chose Ladies, and ceremoniously wore their Names in our Caps, endeavouring to revive ourselves by any Means.

27. At our coming from *England* we were stored with all sorts of Sea-provisions; as Beef, Pork, &c. but now, as we had little Hopes of recruiting, our Cook ordered it in this Manner: The Beef which was to serve on *Sunday Night* to Supper, he boiled on *Saturday Night* in a Kettle full of Water, with a Quart of Oatmeal, about

an Hour; then taking the Beef out, he boiled the rest to half the Quantity; and this we called *Pottage*, which we eat with Bread as hot as we could, and after this we had our Ordinary of Fish. *Sunday*, for Dinner we had Pork and Pease, and at Night the former boiled Beef made more Pottage. In this Manner our *Tuesday's* Beef was boiled on the *Monday* Nights, and the *Thursday's* upon *Wednesdays*; and thus all the Week, except *Friday* Night, we had something warm in our Bellies every Supper; and surely this did us a great deal of Good: But soon after *Christmas* many of us fell sick, and had sore Mouths, and could neither eat Beef, Pork, Fish, nor Pottage. Their Diet was only this; they would pound Bread in a Mortar to Meal, then fry it in a Frying-pan with a little Oil, and so eat it. Some would boil Pease to a soft Paste, and feed, as well as they could, upon that; for the most part of the Winter Water was our Drink. In the whole Winter we took not above a Dozen Foxes, many of which would be dead in the Traps two or three Days oftentimes; and then, when the Blood was settled, they would be unwholesome; but if we took one alive, and he had not been long in the Trap, him we boiled and made Broth for the weakest sick Men; the Flesh of them being soft boiled they eat also. Some white Partridges we killed, but not worth mentioning.

We had three Sorts of sick Men; those that could not move, nor turn themselves in their Beds, who must be tended like Infants; others were, as it were crippled with Aches; and others that were something better; most had sore Mouths. You may now ask me, How these infirm Men could work? I will tell you: Our Surgeon, who was a diligent and sweet conditioned Man as ever I saw, would be up betimes in the Morning, and whilst he picked their Teeth, and cut away the Pieces of Flesh from their Gums, they would bathe their Thighs, Knees, and Legs. The Manner of it was thus; there was no Tree, Bud, or Herb but we made Trial of it; and this being first boiled in a Kettle, and then put in a small Tub and Basins, they put it under them, and covered them with Cloths upon it. This so molified the grieved Parts, that though, when they rose out of their Beds, they would be so crippled that they could scarce stand, yet after this was done half an Hour they would be able to go, (and go they must) to wade through the Snow to the Ship, and about other Business; by Night they would be as bad again, and then they must be bathed, anointed, and their Mouths dressed again before they went to Bed; and in this Diet, and in this Manner we went through our Miseries.

I was always afraid that we should be weakest in the Spring, and therefore I reserved a Tun of *Alicant* Wine unto this Time: Of this, by putting seven Parts of Water to one of Wine, we made some weak Beverage, which, by reason that the Wine had been froze and lost its Virtue, was little better than Water. The sicker Sort had a Pint of *Alicant* a Day by itself, and of such poor *Aqua Vitæ* too as we had, they had a Dram allowed them next their Hearts every Morning: And thus we made the best Use of what we had, according to the Seasons. *May* 1632, the 1st, we went aboard by-times, to heave out the Ice; the 2d, it did snow and blow, and was so cold that we were forced to keep house all Day. This unexpected Cold, at this time of the Year, did so vex our sick Men that they grew worse and worse; we could not now take them out of their Beds, but they would swoon, and we had much ado to keep Life in them.

On the 3d, those that were able, went on board betimes, to heave up the Ice; the Snow was now melted in many Places upon the Land, and stood in Patches; and now there came some Cranes and Geese to it. The 4th, while the rest wrought on board, I and the Surgeon went with a Couple of Pieces, to see if we could kill any of those Fowls for our sick Men; but never did I see such Wild Fowl; they would not endure to see any thing move; wherefore we returned in two Hours, not being able to endure any longer stalking through the Snow and the wet Patches. I verily thought my Feet and Legs would have fallen off, they so tormented me with aching. The 6th, *John Wardon*, the Master of my Ship's Chief

Mate, died, whom we buried in the Evening, in the most Christian-like manner, on the Top of a bare Hill of Land, which we called *Brandon-hill*. The Weather continued very cold, it freezing so hard in the Night that it would bear a Man. By the 9th we were come to, and got up, our five Barrels of Beef and Pork, and had found four Butts of Beer and one of Cyder, which God had preserved for us; it had lain under Water all the Winter, yet we could not perceive it was any worse. God make us ever thankful for the great and seasonable Comfort it gave us.

The 10th it snowed, and blew so cold that we could not stir out of the House, yet nevertheless, by Day, the Snow vanished apace on the Land. The 11th we were on board betimes, to heave out Ice. By the 12th at Night we had cleaned out all the Ice out of the Hold, and found likewise our Store Shoes, which had lain soaked in the Water all the Winter, but we dried them by the Fire, and fitted ourselves with them. We struck again our Cables into the Hold; there stood a Butt of Wine also, which had been all the Winter on the Upper-deck, and continued as yet all frozen. We fitted the Ship also, making her ready to sink again when the Ice broke up. We could find no Defect in her, and therefore we hoped that she was staunch; the Carpenter nevertheless argued to the contrary, alledging that now she lay on the Ground, in her Deck the Ice had filled her Defects, and the Ice was the thing that kept out the Water; but when she should come to labour in the Sea, she would certainly open, and indeed we could now see quite through her Seams betwixt Wind and Water; but that which troubled us most was, the Loss of her Rudder, and she now lay in the very Strength of the Tide, which whenever the Ice drove might tear her to Pieces; but we still hoped the best.

28. The 13th, being the *Sabbath-day*, we solemnized it, giving God Thanks for those Hopes and Comforts we daily had. The Weather in the Day-time was pretty warm, but it froze by Night, yet now we could see some Land. The 14th we began a new sort of Work: The Boatwain, and a convenient Number, brought on Shore the rest of our Rigging, which was much spoiled by pecking it out of the Ice, and this they now fell to fitting, I set the Cooper to fit our Cask, although, poor Man, he was very infirm; my Intent being to pass some Cables under the Ship, and so to buoy her up with those Casks, if we could not get her off otherwise; some others I ordered to go and see if they could kill some wild Fowl for our sick Men, who now grew worse and worse; but this is to be remembered, that we had no Shot but what we made of the Aprons of our Guns, and some old Pewter that we had; for the Carpenter's Sheet-Lead we durst not use.

The 15th I manured a little Patch of Ground that was bare of Snow, and sowed it with Pease, hoping to have some shortly to eat; for as yet we could see no green Thing to comfort us. The 18th our Carpenter *William Cole* died; a Man beloved of us all, as much for his innate Goodness, as for the present Necessity we had of a Man of his Quality: He had endured a long Sickness with Patience, and made a very godly End. In the Evening we buried him by Mr. *Wardon*, accompanied with as many as could go, for three more of our principal Men lay then expecting a good Hour. And now were we in the most miserable State that we were in all the Voyage. Before this extreme Weakness, he had brought the Pinnace to that pass, that she was ready to be bolted, &c. and to be joined to receive the Planks; so that we were not so discouraged by his Death, but that we hoped, ourselves, to finish her, if the Ship proved unserviceable. This Pinnace was twenty-seven Feet by the Keel; she had seventeen Ground-Timbers, thirty-four principal Staddles, and eight short Staddles: He had contrived her with a round Stern, to save Labour, and indeed she was a well-proportioned Vessel; her Burden was twelve or fourteen Tons.

In the Evening the Master of our Ship, after the Burial, returned aboard, and, looking about him, discovered some Part of our Gunner under the Gun-Room Ports. This Man we had committed to the Sea at a good Distance

tance from the Ship, and in deep Water, near six Months before. The 19th, in the Morning, I sent Men to dig him out. He was fast in the Ice, his Head downwards, and his Heels upwards, for he had but one Leg; and the Plaister was yet at the Wound. In the Afternoon they had digged him clear out, and he was as free from Noisomness, as when we first committed him to the Sea. This Alteration had the Ice, and Water, and Time only wrought on him, that his Flesh would slip up and down, upon his Bones, like a Glove on a Man's Hand. In the Evening we buried him by the others. This Day one *George Ugganes*, who could handle a Tool best of us all, had pretty well repaired our Boat, and so ended this mournful Week. The Snow was by this time pretty well wasted in the Wood; and we having a high Tree on the highest Place of the Island, which was called our Watch-Tree, from the Top of it might see into the Sea, but found no Appearance of breaking up yet.

The 20th, being *Whitsunday*, we sadly solemnized it, and had some Taste of the Wild-fowl, but not worth the writing. The 21st was the warmest sunshiny Day that came this Year. I sent two a-fowling; and myself, the Master, Chirurgion, and one more, with our Pieces and Dogs. We went into the Woods to see what we could find; we wandered from the House eight Miles, and searched with all Diligence, but returned comfortless; not an Herb or Leaf eatable could we find. Our Fowlers had as bad Success. In the Woods we found the Snow partly melted away, so that it was passable. The Snow does not melt away here with the Sun or Rain, and so make Land-Floods, as in *England*, but is exhaled by the Sun, and sucked full of Holes like the Honey-combs; so that the Sand whereon it lies will not be wetted. The like Observations we also made, that let it rain ever so much you shall see no Land-Floods after it. The 22d we went aboard the Ship, and found she had made so much Water that it was risen above the Ballast, which made us doubt again of her Soundness. We fell to pumping, and pumped her quite dry. And now by Day sometimes we have such hot Glooms that we cannot endure the Sun, and yet in the Night it freezes very hard. This Unnaturalness of the Season tormented our Men that they grew worse and worse daily.

The 23d our Boatswain, a careful Man, having been long sick, which he had heartily resisted, was taken with such a Pain in one of his Thighs, that we thought he would have died presently. He kept his Bed in great Extremity. And it was a Maxim among us, that if any one kept his Bed he could rise no more. This made every Man to strive to keep up for Life.

The 24th was very warm Sunshine, and the Ice consumed by the Shore-side, and cracked all over the Bay with dreadful Noise. About three in the Afternoon we could perceive the Ice with the Ebb to drive by the Ship, whereupon I sent two with all Speed to the Master, with Order to beat out the Hole and to sink the Ship, as likewise to look for the Rudder betwixt the Ice. This he presently performed; and a happy Fellow, one *David Hammon* pecking betwixt the Ice, struck upon it, and it came up with his Lance, who crying that he had found it, the rest came and got it upon the Ice, and so into the Ship. In the mean time the little Drift which the Ice had began to rise and mount into high Heaps against the shore Shores and Rocks, and likewise against the Heap of Ice which we had put for a Barricado to our Ship, but with little Harm to us; yet we were forced to cut away twenty Fathom of Cable which was frozen in the Ice. After an Hour the Ice settled again, not having any Vent outwards. This was a joyful Day to us all, and we gave God Thanks for the Hopes we had of it.

The 25th was a fine warm Day, and with the Ebb the Ice drove against the Ship and struck her soundly. The 26th I took the Chirurgion with me, and went again to the Wood, and to that Bay where last Year we had lost our Man *John Barton*, but we could find no Sign of him. The 28th it was pretty clear betwixt the Ship and the Shore, and I hoped the Ice would no more oppress us; wherefore I caused the lower Holes to be firmly stopped,

the Water then remaining three Feet above the Ballast. The 29th being Prince *Charles's* Birth-day, we kept Holiday, and displayed his Majesty's Colours both on Land and aboard, and named our Habitation *Charles-Town*, by Contraction *Charlton*, and the Island *Charlton Island*.

The 30th we launched our Boat, and had Intercourse sometimes between the Ship and the Shore by Boat, which was new to us. The last Day of this Month we found some Vetches to appear out of the Ground, which I made our Men pick up and boil for our Sick. This Day we made an end of fitting all our Rigging and Sails, and it being a very hot Day we dried our Fish in the Sun, and aired all our other Provisions. There was not a Man of us at present able to eat of our salt Provisions but myself and the Master. It may be remembered that all this Winter we had not been troubled with any Rheums nor Phlegmatic Diseases. All this Month the Wind was variable, but for the most part Northerly.

29. *June* 1682. The first four Days snowed and hailed, and blew very hard, and it was so cold that the Ponds of Water froze over, and the Water in our Cans was frozen even in the very House. Our Cloaths also that had been washed and hung out to dry did not thaw. All Day the 5th it continued blowing very hard on the broad Side of the Ship, which made her swag and wallow in her Dock, notwithstanding she was sunk, which shook her very much. The Ice withal drove against her, and gave her many fearful Blows. I resolved to endeavour to hang the Rudder, and when God sent us Water, notwithstanding the abundance of Ice that was yet about us, to heave her further off. In the Afternoon we under-run our small Cable to our Anchor, which lay a-stern in deep Water, and so with some Difficulty got up our Anchor. This Cable had lain slack under Foot, and under the Ice all Winter, and we could never have a clear Slatcli from Ice to have it up before now. We found it not a Jot the worse. I put some to make Coal-rakes, that they might go into the Water and rake a Hole in the Sand to let down our Rudder. The 6th we went about to hang it; and our young lustiest Men took it by Turns to go into the Water and to rake away the Sand, but they were not able to endure the Cold half a Quarter of an Hour, it was so mortifying; and use what Comforts we could, it would make them swoon and die away. We brought it to the Stern-Post, but then we were forced to give it over, being able to work at it no longer. Then we plugged the upper Holes aboard, and fell to pumping the Water out of her again.

The 7th we wrought about our Rudder, but were again forced to give over, and so put our Cables over board with Messengers unto them, the Anchor lying to that Pass that we might keep her right in the Dock when we had brought her light. By the 8th at Night we had pumped all the Water out of her, so that at high Water she would float in her Dock, tho' she were still docked in the Sand almost four Feet. This made us consider what was to be done. I resolved to heave out all the Ballast; for the Bottom of her being so soaked all the Winter, I hoped was so heavy that it would bear her. If we could not get her off that Way, I then thought to cut her down to the lower Deck, and take out her Masts, and so with our Casks to buoy her off. The 9th betimes in the Morning we fell to work, we hoisted out our Beer and Cyder, and made a Raft of it, fastening it to our Shore-Anchor. The Beer and Cyder sunk presently to the Ground, which was nothing strange to us, for any Wood or Pipe-staves that had laid under the Ice all the Winter would also sink down as soon as ever it was hove over board.

This Day we heaved out ten Ton of Ballast; and here I am to remember God's Goodness towards us, in sending those forementioned green Vetches; for now our feeble sick Men, that could not for their Lives stir these two or three Months, could endure the Air, and walk about the House. Our other sick Men gathered Strength also: And it was wonderful to see how soon they were recovered. We use them in this manner twice a Day; we went to gather the

the Herb or Leaf of those Vetches as they first appeared out of the Ground, and then we washed and boiled them, and so with Oil and Vinegar that had been frozen we eat them. It was an excellent Sustenance and refreshing; the most part of us eat nothing else. We likewise bruised them, and took the Juice of them and mixed it with our Drink: We also eat them raw with our Bread.

The 11th was very warm Weather, and we hung our Rudder. The Tides now very much deceived us, for a Northerly Wind would very little raise the Water. This made us doubt of getting off our Ship. The 13th I resolved to know the Latitude of this Place; so having examined the Instruments and practised about it this Fortnight, I found it to be 52 Degrees 3 Minutes. The 14th we had heaved out all the Ballast, and carried all our Yards and every thing else on Shore, so that we now had the Ship as light as possible it could be.

The 15th we did little but exercise ourselves. By this Time our Men that were most feeble grew strong and run about, the Flesh of their Gums being settled again, and their Teeth fastened so that they eat Beef with their Vetches. This Day I went to our Watch-Tree, but the Sea, for any thing I could perceive, was still firm frozen, and the Bay full of Ice, having no Way to vent it.

The 16th was wondrous hot, with some Thunder and Lightning, so that our Men went into the Ponds ashore to swim and cool themselves, yet the Water was very cool still. Here had lately appeared divers sorts of Flies, as Butter-flies, Butchers-flies, Horse-flies, and such an infinite Number of blood-thirsty Musketoës, that we were more tormented with them than ever we were with the hot Weather. Those I think lie dead in the old rotten Wood all the Winter, and in Summer they revive again. Here are likewise infinite numbers of Ants and Frogs in the Ponds upon the Land, but we durst not eat of them: They looked speckled like Toads. By this Time there were neither Bears, Foxes, nor Fowl to be seen.

30. The 17th the Wind came Northerly, and we, expecting a high Tide, in the Morning betimes put out our small Cable astern out at the Gun-Room Port, but the Morning-Tide we had not Water by a Foot. In the Evening I had laid Marks by Stones, &c. and thought that the Water flowed apace: Making Signs therefore for the Boat to come ashore, I took all that were able to do any thing with me aboard; and at high Water, although she wanted something to rise clear out of the Dock, yet we heaved with such Good-will, that we heaved her through the Sand into a Foot and an half deeper Water, and further we durst not bring her; for the Ice was all thick about us. After we had moved her we all went to Prayers, and gave God Thanks that he had given us our Ship again. The 18th we were up betimes, the Cooper and some with him to bring fresh Water, myself with others to gather Stones at low Water, which we piling up at low Water, the Cockswain and his Gang fetched them aboard, where the Master with the rest stowed them to the Offing, by which means we could the better come and stop the two upper Holes firmly: After which we fitted other convenient Places to make others to sink her, if Occasion were.

The 19th we were all up betimes to work as afore specified. These two Days our Ship did not float, and it was a very happy Hour which we got her off, for we never had such a high Tide all the Time we were here. In the Evening we went up to our Watch-Tree; and this was the first Time I could see open Water any way except that little by the Shore-side where we were. This put us in some Comfort that the Sea would shortly break up, which we knew must be so to the Northward, seeing that Way we were certain there were about two hundred Leagues of Sea. The 20th we laboured as formerly, the Wind at North-north-west. The Tide rose so high that our Ship floated, and we drew her off into a Foot and half deeper Water. Thus we did it by little and little, for the Ice was still wonderfully thick round about us.

The 22d there drove much Ice about us and within us, and brought home our Stern-Anchor at high Water.

Notwithstanding all the Ice we heaved our Ship further off, that so she might lye afloat at low Water. The next low Water we founded all about the Ship, and found it very sound Ground. We discovered Stones three Feet high above the Ground, and two of them within a Ship's-breadth of the Ship, whereby did more manifestly appear God's Mercy to us; for if when we found her on Shore she had struck one Blow against those Stones, it had bulged her. Many such Dangers were there in this Bay, which we now first perceived. In the Evening we towed off the Ship into the Place where she rode the last Year, and there moored her, steering the Ship Night and Day, Flood and Ebb, among the dispersed Ice that came athwart us.

The 23d we laboured in fetching the Provisions on board, which to do we were forced to wade to carry it to the Boat a full Bow-shot, and all by reason the Wind was Southerly. This Morning I took an Observation of the Moon's coming to the South, by a Meridian Line of a hundred and twenty Yards long, which I had rectified many Weeks beforehand.

The 24th I took another Observation of the Moon's coming to the Meridian. I had formerly cut down a very high Tree and made a Cross of it: To it I now fastened uppermost the King and Queen's Pictures drawn to the Life, and doubly wrapped in Lead, and so close that no Weather could hurt them. Betwixt both these I affixed his Majesty's Royal Title, *viz.* Charles the first, King of England, Scotland, France and Ireland, as also of Newfoundland, and of these Territories, and to the Westward as far as Nova Albion, and to the Northward to the Latitude of 80 Degrees, &c. On the Outside of the Lead I fastened a Shilling and a Sixpence of his Majesty's Coin; under that we fastened the King's Arms fairly cut in Lead, and under that the Arms of the City of Bristol: And this being Midsummer-day, we raised it on the Top of the Bar-hill, where we had buried our dead Fellows, by this Ceremony taking Possession of these Territories for his Majesty's Use. The Wind continuing Southerly, and blowing hard, put all the Ice upon us, so that the Ship now rode among it in such apparent Danger, that I thought verily we should have lost her.

We laboured Flood and Ebb with Poles and Oars to heave away and part the Ice, but it was God that protected and preserved us; for it was past any Man's Understanding how the Ship could endure it, or we by our Labour save her. In the Night the Wind shifted to the Westward, and blew the Ice from us, which gave us some Rest.

31. The 25th in the Morning the Boatswain with a convenient Crew began to rig the Ship, the rest fetching our Provision on board. About ten o'Clock when it was something dark, I took a Launce in my Hand, and one with me with a Musket, and went to our Watch-Tree to make a Fire on the most eminent Place of the Island, to see if it would be answered. Such Fires I have formerly made to have Knowledge if there were any Savages on the Main or the Islands about us. Had there been any, my Purpose was to have gone to them to get Intelligence of Christians, or some Ocean Seas thereabouts. When I was come to the Tree I laid down my Launce, and so did my Consort his Musket, whilst I climbed up to the Top of the Tree. I ordered him to put Fire to some low Tree thereabouts. He unadvisedly put Fire to some Trees that were to Windward, so that they and all the rest too, by reason it had been very hot Weather, being dry, took Fire like Flax and Hemp; and the Wind blowing towards me, I made haste down the Tree; but before I was half-way down the Fire took on the Bottom of it, and blazed so fiercely upward that I was forced to leap off the Tree and down a steep Hill, and in short with much ado escaped Burning. The Moss on the Ground was as dry as Flax, and it run most strangely, like a Train along the Earth. The Musket and Launce were both burnt. My Consort at last came to me, and was joyful to see me, for he thought verily I had been burnt: And thus we went homeward together, leaving the Fire encreasing and burning most furiously.

I slept but little all Night after, and at Break of Day ordered all our Powder and Beef to be carried aboard

this Day. I went to the Hills to look to the Fire, where I saw it still burn both to Westward and Northward, leaving one upon the Hills to watch it. I came home immediately, and made them take down our new Suit of Sails, and carry them to the Sea-side, ready to be cast in if Occasion were, and to make haste to take down our Houses. About Noon the Wind shifted Northward, and our Centinel came running home, bringing us Word that the Fire followed him at his Heels, like a train of Powder. There was no Occasion to bid us pull down, and carry all to the Sea-side. The Fire came towards us with a most terrible rattling Noise, bearing a full Mile in Breadth; and by that Time we had uncovered our Houses, and going to carry away our last things, the Fire was come to our Town, and seized it, and, in a Trice, burnt it down to the Ground. We lost nothing of any Value, for we had brought all into a Place of Security. Our Dogs, in this Condition, would sit down on their Tails, and howl, and then run into the Sea, and there stay. The Wind shifted easterly, and the Fire ranged to the Westward, seeking what it might devour. This Night we lay together aboard the Ship, and gave God Thanks, who had been thus merciful unto us.

The 27th, 28th, and 29th, we wrought hard in fetching our things aboard, as likewise our Water, which we sawed off with the Ebb, and sent it to the Ship, with the Flood; we were forced to go about the Eastern Point for Drift-wood, for the Tools were all so spent, that we could cut none. Therefore about three Days before I had caused our Pinnacle to be sawed to pieces, and with that we stowed our Cask, intending to burn it at Low-water; and such other times as we could not work in carrying things aboard, I employed in fetching Stones; and we built three Tombs over our three dead Companions, filling them with Sand, in a decent and handsome Manner. The least Tomb had two Tons of Stones about it. The 30th we earnestly continued our Labour, and brought our Sails to Yard; and by eleven o'Clock at Night had made a pretty Ship, meaning to have finished our Business with the Week and Month, that we might the better solemnize the Sabbath ashore, and so take leave of our wintering Island.

The Wind had been variable a great while, and the Bay so clear of Ice, that we could not see a Piece of it, for it was all gone to the Northward. Hoping that it may give Content to some Readers, I will relate the Manner of the breaking of it up. It is first to be noted, that it did not freeze naturally above six Feet, the rest is, by Accident; such is that Ice, that you may see here six Fathom thick; this we had manifest Proof of, by digging the Ice out of the Ship, and by digging to our Anchors before the Ice broke up.

32. In May, when the Heat increaseth, it thaws first on the Shore by the Shore-side, which when it hath done round about, then the Courses of the Tides, as well by the Ebb and Flood, as by their rising and falling, do so shake the main Ice, that it cracks and breaks it. Thus, when it hath got room for Motion, then runs one Piece of it upon another, and so bruises and grinds itself against the Sholes and Rocks, that a Ship may run through it. Besides this, much of it is thrust upon the Sholes, where it is consumed by the Heat of the Sun. The Season of this Climate is most unnatural; for in the Day-time it will be extreme hot, nay intolerable, by Reason it is a sandy Country. In the Night again it will freeze an Inch thick in the Ponds, and in the Tubs about, and in our Houses; and all this towards the latter End of June. The Musketoos, upon our coming away, were insupportable. We tore an old Flag in Pieces, and made us Bags of it to put our Heads in, but it was no Fortification against them; they would find ways and means to sting us, that our Faces were swollen out in Pimples, which would so itch and smart, that we must needs rub and scar them; and these Flies, indeed, were more tormenting to us, than all the Cold we had endured before.

July 1632. The 1st of this Month we were up betimes, and I caused our Ship to be adorned the best we could. Our Flag in the Poop, and the King's Colours in the Main-Top. I had provided a short Account of all the

Passages of our Voyage to this Day. I likewise wrote in what State we were in at present, and how I intended to prosecute this Discovery, both to the Westward and to the Southward, about this Island. This brief Discourse I had concluded, with a Request to any noble minded Traveller that should take it down, or come to the Notice of it; that if we should perish in the Action, then to make our Endeavours known to our Sovereign Lord the King. And thus, with our Arms, Drums, and Colours, Cook and Kettle, we went ashore, and first we marched up to our eminent Cross, adjoining to which we had buried our dead Fellows. There we read Morning Prayers, and then walked up and down till Dinner-time. After Dinner we walked up to the highest Hills, to see which way the Fire had wasted; we descried that it had consumed to the Westward sixteen Miles at least, and the whole Breadth of the Island. Near our Cross and Dead it could not come, by reason it was a bare Sand. After Evening Prayer I happened to walk along the Beach-side, where I found an Herb resembling Scurry-Grass; I had some gathered, which we boiled with our Meat to Supper.

It was most excellent good, and far better than our Vetches. After Supper we went to seek for more of it, which we carried off to the Quantity of two Bushels, which did afterwards much refresh us; and now the Sun was set, and the Boat came ashore for us; whereupon we assembled ourselves together, and went up to take the last View of our Dead, and to look to their Tombs, and other things. So fastening my Brief, which was securely wrapped up in Lead to the Cross, we presently took Boat and departed, and never put Foot more on that Island. This Island, and all the rest, as likewise the Main, is a light white Sand, covered over with a white Moss, and full of Shrubs and low Bushes, excepting some bare Hills and other Patches: In these bare Places the Sand will drive with the Wind like Dust. It is very full of Trees, as Spruce and Juniper, but the biggest Tree I saw was but a Foot and a Half Diameter.

At our first coming hither we saw some Deer, and killed one, but never any since; Foxes all the Winter we saw many, and killed some Dozens of them; but they went all away in May; Bears we saw a few, but killed none; we saw some other little Beasts. In May there came some Fowl, as Ducks and Geese, of which we killed very few; white Partridges we saw, but in small Quantities, nor had we any Shot to shoot at them. Fish we could never see any in the Sea, nor no Bones of Fish on the Shore-side, excepting a few Cockle-Shells, and yet nothing in them neither.

33. Sunday being the 2d of July, 1632, we were up betimes, about stowing and fitting our Ship, and weighing our Anchors; which, when the last was a Trip, we went to Prayers, beseeching God to continue his Mercy to us, and rendering him Thanks for having thus restored us. Our Ship we found no Defect in. We had abundance of such Provisions as we brought out of England, and we were in indifferent Health, and gathered Strength daily. This being done, we weighed and came cheerfully to sail. The Wind at North-west, bad to get away, wherefore we stood over to *Danby Island*, to take in more Wood, and there to be ready to take the Opportunity of a fair Wind. I went ashore with the Boat, for some of the Company had told me they had seen some Stakes the last Year driven into the Ground, where we came ashore, whilst some gathered Wood. I went to the Place, where I found two Stakes drove into the Ground a Foot and a-half, and Fire-brands, where a Fire had been made by them. I pulled up the Stakes, which were about the thickness of my Arm, and they had been cut sharp at the Ends with a Hatchet, or some other good Iron Tool, and driven in as it were with the Head of it. They were distant about a Stones-throw from the Waterside. I could not conceive to what purpose they should be there set, unless it were for some Mark for Boats. This augmented my Desire to speak with the *Savages*, for, without doubt, they could have given us Notice of some Christians with whom they had Commerce.

About four in the Evening I returned with a Boat's Lading

Lading of Wood, and the Wind something favouring, we weighed with our Lead, seeking out a Channel amongst those dangerous Sholes. In the Evening the Wind opposing itself, we came to Anchor betwixt *Charlton Island*, and that Island we named the last Year, in memory of that honourable Gentleman Mr. *Thomas Cary*, one of the Bed-chamber to the King, *Cary's Island*, where we rid all Night. On the 3d, at Break of Day, we weighed, with a bare Wind, and, founding up and down for a Channel, we were many times in five and four Fathom Water. The Wind larging upon us, we stood away West by Noon; we saw all the Ice Southward of us, endeavouring therefore to compass about the Western Point of *Charlton Island*, and so to seek to the Southward, we found it all Sholes, Rocks, and Breaches. By four in the Afternoon we saw the Western Land, but all full of Ice; whereupon, as the Wind favoured us, we stood along it in Sight to the Northward.

The fourth was calm, but so very thick and foggy withal, that we could not see a Pistol-Shot about us; we knew not which Way to turn us. Now to avoid telling the same thing twenty times, we were continually till the 22d so pestered and tormented with Ice, that it would seem incredible to relate it; sometimes we were so blinded with Fog, that we could not see about us; and we did so strike against the Ice, that the Fore-part of the Ship would crack again, and make our Cook and others to run up all amazed, and think the Ship had been beaten all to Pieces. Indeed we did hourly strike such unavoidable Blows, that we left the Hatches open, and twenty times in a Day the Men would run down into the Hold to see if she were bulged. Sometimes when we had made her fast in the Night to a great Piece of Ice, we should have such violent Storms, that our fastning would break, and then the Storm would beat us from Piece to Piece most dreadfully; other times we should be fast inclosed among great Ice as high as our Poop: This was made, as I have formerly said, by one Piece running upon another, which made it draw eight or ten Fathom Water; besides which the Lowermost would rise from underneath, and strike us under the Bulge with Pieces of five, six, nay of eight Tons, that many times we have pumped clear Water for an Hour together, before we could make the Pump suck. Among these several and hourly Dangers, I overheard the Men murmur, and say, That they were happy that I had buried, and that if they had a thousand Pounds they would give it, so they lay fairly by them; for we, say they, are destined to starve upon a piece of Ice. I was forced to suffer all this with Patience, and to comfort them again, when I had them in a better Humour.

34. The 22d, having been vexed with a Storm all Night, and this Morning with a thick Fog, we drove in thirteen Fathom Water. About Noon it cleared, and we saw the Land, and at that Instant had a good Observation, whereby we knew it to be the Cape *Henrietta Maria*. I made the Master stand in with it, and in the mean Time we fitted a Cross, and fastened the King's Arms, and the Arms of the City of *Bristol* to it. We came to an Anchor within a Mile of the Shore, in six Fathom Water, so we hoisted out our Boat, and took our Arms and our Dogs, and went ashore. Upon the most eminent Place we erected the Cross; and then seeking about we soon saw some Deer, and by and by more and more. We stole to them with the best Skill we had, and then put our Dogs on them, but the Deer ran clear away from them at Pleasure. We tired the Dogs, and wearied ourselves, but to no purpose, neither could we come to shoot at them. I saw, in all, about a Dozen old and young, very goodly Beasts. We took half a Dozen young Geese on the Pools, by wading into them; and so returned to our Boat, vexed that we had found a Place where there were Refreshments, and we could get none of them. Whereas we had kept our Dogs with a great deal of Inconvenience aboard the Ship all the Winter, and had pardoned them many Misdemeanours (for they would steal our Meat out of the sleeping Tubs) in Hopes they might hereafter do us some Service; and see-

ing they now did not, and that there were no Hopes they could hereafter, I caused them to be left ashore. They were a Dog and a Bitch, Buck Dogs, of a very good Breed. The Dog had a Collar about his Neck, which, perhaps, hereafter may come to Light.

I saw no Sign of any *Savages*, nor could we find any Herbs, or other Refreshments here. In the Evening, being returned aboard, and the Wind blowing fair at South, I caused the Master to weigh, and come to Sail, and to lose no Time, for we hoped for an open Sea to the North-west. This Cape has a very Shole Point that lies off it, which we endeavoured to compass. Sailing therefore upon shattered Ice, we came to very shole Water, four and five Fathom deep, and could not avoid it. At length, standing North, the Water deepened, but we came withal among great Pieces of Ice, which by reason of some open Water there were a pretty Sea. These hard Pieces of Ice made a most dreadful Noise. It proved a fair Moonshine Night, otherwise it had gone ill with us. We turned among this Ice, staying the Ship, sometimes within her Length of great Pieces as bad as Rocks; but by Reason we were often forced to bear up, we let fall an Anchor, and stood all on the Decks to watch the Ice, sheering off the Ship to and again to avoid it. Thus having Poles and Oars to fend it, we could not keep ourselves so clear, but many Pieces came foul of us. We broke two of our great Poles with it, which were made to be handled by four Men, besides some other Damage. At Break of Day we weighed and fought all ways to clear ourselves of Ice, but it was impossible. I conceive it impertinent to relate every particular Day's Passage, since they were much alike to us. Our Endeavours were sometimes with our Sails, giving and receiving five hundred dreadful Blows in a Day.

Sometimes we stopped at an Anchor, when we could get a little open Water, and so suffer the Ice to drive to Leeward. Other times we should be enclosed among it, and then it would so break and rise, and leap up under us, that we expected every Hour to be beaten to Pieces. Besides we had such Storms in the dark Nights, as would break our Moorings we had made fast to some pieces of Ice, for Security in the Night Season; and then we were beat most dangerously from Piece to Piece till Day-light, that we could see to make her fast again. I forbear to speak of the Fogs which we had daily, which froze our Rigging Day and Night; besides all which, we should come into most uncertain Depths, sometimes twenty Fathom, next Cast ten, next fifteen, then nine, rocky foul Ground; the great deep Ice withal, driving on these uncertain Depths, did so distract the Tides, and deceive us so much in our Account, that by the 30th we were driven back so far to the Eastward, and to the Southward of the Cape, that at five o'Clock in the Evening it bore North-west of us some three Leagues off, contrary to our Expectations.

With all these Mischiefs, our Ship now became very leaky, that we pumped every half Watch. Here I called a Consultation, and after considering all our Experience, we were of Opinion that it was impossible to get to the Northward, or to the Eastward, by Reason of the Ice; wherefore I resolved upon this Course; when the Wind blew South, it would blow the Ice off the South Shore, then we would seek to get to the Westward, betwixt it and the Shore. I must confess that this was a desperate Resolution, for all the Coast we knew to be shole and foul Ground, all Rocks and Stones; so that if the Wind should shift to the Northward, there would be, without God's Mercies, little Hopes of us. But here we must not stay, the Nights grew long, the Cold so increased, that betwixt the Pieces of Ice the Sea would be frozen. I caused the Ship to be fitted, and Places again prepared to sink her a second Time, if so be, we were put to Extremities. We presently put our Project in Execution (the Wind being at South) and got about the Sholes of the Cape, standing then into the Shoreward, to get betwixt it and the Ice. We came into four Fathom Water (very foul rocky Ground) thinking to come to an Anchor all Night, and let the Ice drive to Leeward. But still there was so much Ice betwixt us

and

and the Shore, that we were forced to bear up against it into deeper Water, and to let the Ship drive among it; the Wind increasing we endured a most dangerous dark Night of it.

In the Morning we fell to work to get the Ship again out of the Ice into some clear Water, which we saw West by South of us. Some of our Company went out upon the Ice to heave her with their Shoulders, whilst others stood aboard with their Poles; the rest stood to fill and spill the Sail. By nine in the Morning we had got into some clear Water, and stood West and by South into four Fathom Water, foul Ground; but being not able to weather some Rands of Ice which drove, we were forced to stand off again, and when the Evening grew dark to come to an Anchor. About Midnight there came a great Piece of Ice (which we could not avoid) athwart of our Cable, and made her drive and drag her Anchor: This drove her into shoal Water, it being very rocky and foul Ground: We brought the Cable to Capstang, and heaved with such a Courage that we heaved home our Anchor from under it. Thus we endeavoured the best we could to keep ourselves in eight or ten Fathom Water. It then pleased God that the Wind blew along the Shore, otherwise it had gone far worse with us.

35. *August 1632.* The 1st of this Month, at break of Day, when we could see all about us, we were forced to struggle again with the Ice, and to get in nearer to the Shore, by reason the Wind was opposite, to come to an Anchor; we let the Ice drive to leeward, hoping there was a clearing Sea to the westward: The Ice drove very thick upon us, and one Piece came foul of us, which touched our Sprit-sail Yard, and made the Ship drive; but we soon cleared ourselves of it. Then we weighed, and stood in nearer to the Shore; but the Water shoaled, and there were so many thick Rands of Ice betwixt us and the Shore that there was no coming to an Anchor, so we turned betwixt the Ice, many Pieces of it being aground in shoal Water, and few Pieces distant one from the other a Cable's Length: This Day we saw two Sea Mawes on the Ice. The 2d in the Morning we were glad at break of Day, having most dangerously turned among the Ice, and endured many a Blow; we stood in again to the shoreward, to see if we could get some clear Water; for to the northward it was all impassable Ice: We stood into five and four Fathom, but still all impassable with Ice, so we stood off again into deeper Water; and in the Evening we were inclosed with extraordinary great Pieces; it was a very thick Fog withal, so that we made fast the Ship to a great flat Piece and went to sleep, after our extreme Pains-taking.

The 3d, 4th, and 5th we were inclosed among very great Ice, and it blew such a Storm of Wind that we, endeavouring to get forward to the westward, struck such heavy Blows that made all the fore-part of the Ship crack again; then we gave over working, and let her alone among it, but then the Ice would break and rise under us, and that endangered us as bad as the former. Our Ship made now above a Ton of Water every Watch, which we pumped out before our other Labour. God e merciful unto us among all these Dangers.

The 5th at Noon we were in Latitude 55 Degrees, the Cape bearing off us South-east by East, twelve Leagues off, and this all we have got since the 22d of July; all Night it blew a violent Gale of Wind at West-north-west, and about Midnight our Hawser (by which we made fast to a Piece of Ice) broke, and we lost four Fathom of it. We beat all Night most fearfully, being tossed from Piece to Piece, because in the Dark we durst not venture our Men to go on the Ice, for fear of losing them. All the 6th the Storm continued, and drove us again quite with the Ice almost to the Cape. The 7th was the most comfortable Day we had since we came out of our Wintering-place. The Wind came up fair at East, and we got, although with our former Inconveniences and Dangers, nearer the Shore, and into some open Water, making good way to the Westward. Add to this that our Leak now stopped of

its own Accord, so that we pumped but little. We sailed all Night, keeping good Watch on the Fore-castle, bearing up from one and loosing from another. Thus we did the 8th also; but then the Wind shifting to the North-west, it drove the Ice on the Shore, and we came to an Anchor in eight Fathom Water. The main Ice we had some two Miles to windward of us; but the Set of the Tide kept it off from us. At Noon we were in Latitude 55 Degrees 34 Minutes. In the Evening a Range of Ice drove upon us, which made us weigh, and stand in nearer the Shore into six Fathom, and there come to an Anchor. The Wind increasing about Midnight, the Ship drove, and was quickly in five Fathom Water, wherefore we let fall our Sheet Anchor, and both held her; but what troubled us was, we expected every Minute that the main Ice would come upon us, then there would be no Hope but to run on Shore.

The 9th in the Morning we weighed our second Anchor, the Ice being within less than a Mile of us. About eight in the Morning a Point of it came foul of us, which we prevented by weighing, and came to Anchor in three Fathoms and a Half Water. The Wind continued North-north-west, which was in on the Shore. This Morning I caused all our empty Casks to be filled with Water, and the Ship to be left unpumped, and the Place looked to that we had prepared to sink her, for we were at present in as apparent Danger as any time this Voyage, and to our great Grief it was all full of foul rocky Ground. The Danger of this was, if we made fast to a Piece of Ice that drew deep Water, then as soon as it came to Ground on the Rocks it would break all to Pieces and betray us to our Destruction. About Noon there came foul of us the Point of a Range of Ice, which we resolved to endure the Extremity of with an Anchor, thinking to ride and break through it, we now perceiving some open Water beyond it; thrusting therefore, and fending with our Poles, at last a great Piece of Ice came athwart our Hawser, and there was a brisk Sea among it: The Ship now fell upon it so violently that I expected every Blow she would beat out her Bows; at length she drove with it so that I thought the Cable had been broke; we brought it to Capstang to heave it in, but found that our Sheet Anchor was broke in the Middle of the Shank. We presently set our Sails thereupon, endeavouring that Way to edge in amongst the Ice off of this dangerous Shore. It pleased God to favour our Labour so, that by eight in the Evening we got off into seven Fathoms Water, and a dark Night coming on we made fast to the biggest Piece we could find. It blew all Night, but at Midnight the Wind came up at North, which was more on the Shore than before.

By break of Day, on the 10th, we were driven into four Fathom very foul Ground, so that the Lead fell off the Rocks three or four Foot, we set our Sails and used our utmost Endeavours to edge off. Some of us went upon the Ice to haul her, others stood with Poles to thrust by Night. At Night we got off to eight Fathoms, and made fast to the biggest Piece we could find. If any Man should ask, Why we kept so near the Shore in this continual Danger? I answer, because in the Offing, the Ice was so extraordinary thick that we could make no Way through it; besides, when we were in that great thick Ice, and the Wind came up fair at South, or South-east, or East, we could not get out of it; therefore we chose to run this Adventure, and so prevent and overcome all Dangers with God's Assistance, and our extreme Labour.

36. The 11th in the Morning was a thick Fog, yet there sprung up a Gale of Wind at East, and we made in for the Shore. From the 11th to the 14th the Wind continued fair, and we made all the Sail we could Night and Day as the Ice would suffer us; we had the Shore in sight by Day on one Side, and the Ice within two Miles on the other; and we sailed among dispersed Pieces loosing from one, and bearing up for another. The 14th at Noon we were in Latitude 57 Degrees 55 Minutes. In the Evening we were embayed in Ice, and stood South-east to clear ourselves of it, but could not; but seeing from the Topmast-head clear Water over it, we put up to it.

But

But there arose a very thick Fog, and Night came on withal, that we were forced to fasten to a Piece of Ice expecting Day, and better Weather.

The 15th in the Morning, although the Fog was very thick, we would endeavour to get out of the Ice, and stood away West; but within two Hours the Water shoaled from forty to twenty-five Fathoms; whereby we knew that we had the Shoaling of the western Shore. Then we shaped our Course to the northward; the Fog continued so thick, that we could not see a Pistol-shot about us. We had not stood this Way two Hours, but we heard a Rut of Ice ahead of us, which made the most hideous Noise of any I had heard this Voyage. We hauled our Tacks aboard, and stood to the westward in this Day-darkness; hearing it sometimes, and seeing it sometimes, which was very large, deep, and high Ice above the Water; we weathered it all except some few Pieces, and got into open Water. About Sun-set there came a sudden Gust at North-north-west, and before we could handle our Sails it was with us, and put us into some Trouble; it dallied with us, by Gusts, till nine o'Clock; and then it fell into a most violent Storm. We considered where we might have the clearest Drift, and so took in all, and let her drive her Head to the shoreward. Before Midnight the Water shoaled on us unto fifteen Fathoms.

Then we turned her Head to the eastward, and set our main Course low-set, but as much as she could bear. The Water deepened but little, and we knew that we were on those rocky Sholes which we struck on the last Year; God be merciful unto us. Here was the first great breaking Sea we had this Year. The 16th, in the Morning, we were driven to a great Rand of Ice; to avoid which we set our Force and Course too, and stood to the shoreward in fifteen Fathom Water, and then about again. We stood in a Mile to the Ice, but there was a great swelling Sea in it, that it was not durable; so we stood out again. About three in the Afternoon the Storm broke up, and blew fair at North-west, which produced Good for us, for we had not Drift for four Hours, besides, it was but five Leagues betwixt the Sholes and the Ice: We set all our Sails, and endeavoured to weather the Ice, but in the Evening we were still pestered with it. By Midnight we knew not which Way to turn, nor what to do; so we took in all our Sails, and let her drive among it. The Ice beat us on every Side, for there went among it a very great full Sea. The 17th in the Morning, when we could see about us, we were in the Midst of it; but in the last Storm it was all broken to Pieces, as big as a Boat of three or four Ton, which gave us many a heavy Blow in the dark Night. If this Storm had taken us among it, it had broken us all to Pieces without God's miraculous Preservation. We made sail, and endeavoured to clear ourselves of it to the northward, which, by eight in the Morning, we had done; we then went to Prayer, and gave God hearty Thanks, that had delivered us out of it; for we were hourly, for the Space of six Weeks, as it were in the Jaws of Death; yea, never had any; that I have heard of, been for such a Space in such long Nights upon a foul Shore, tormented with Ice, as we have been.

At Noon we were in 58 Degrees 20 Minutes. Now, as touching the Dissolution of the Ice, we found that this Storm had torn and shattered this Rand of Ice which was on the Outside, although it must have a long time to work into the main Body of it. I have in *July*, and in the Beginning of *August*, taken some of the Ice into the Ship and cut it square, two Foot, and put it into the Boat where the Sun shone with a very strong Reflection about it, and notwithstanding the Warmth of the Ship, for we kept a good Fire, and all our Breathings and Motion, it would not melt in eight or ten Days. It was our Practice, when we should be two Days together fast to a Piece of Ice, to set Marks to it, to see how it consumed, but it yielded us small Hope of dissolving; we could not in that time perceive any Diminution by the sinking of it, or otherwise; nevertheless, I think that it is ruined by Storms, or consumed by Heat some Years, or else the Bay would be choked up; but I confess these Secrets of Nature are past my Comprehension. Being out

of it (but we yet saw it from off the Decks to the Eastward) I ordered the Master to steer away North and by East, keeping the Shoalings of the western Shore. The 18th at Noon we were in Latitude 53 Degrees 36 Minutes.

37. The 19th we continued our Course betwixt the North-north-east, and the North and by East, and by Noon were in Latitude 61 Degrees 7 Minutes, some twelve Leagues off the Shore: I ordered the Master to shape his Course North-east, to look into that Place betwixt *Cary's Swans-nest* and *Ne plus ultra*. The 20th we were in Latitude 61 Degrees 45 Minutes. This Day we saw some few Seals about the Ship. The 21st the Water shoaled so that it was concluded we were near Land; but about Noon the Wind came up at North-east, directly opposite; we loofed as near as we could, and as it larged we came to stand East, and East and by North. The 22d we fell with the Land to the Westward of *Cary's Swans-nest*, where we had forty Fathoms three Leagues off. We stood in within a League of the Shore into eighteen Fathoms, and seeing the Land to the Southward of us, we compassed about it, it being *Cary's Swans-nest*, which is in the Latitude of 52 Degrees. All the 23d we sailed North-east, and, for the most part, in Sight of Land.

The 24th at Noon, by Judgment, we were in Latitude 69 Degrees 30 Minutes, having sailed a North-east Course: All this Day was a very thick Fog, which about one o'Clock cleared a little, so that I expected to see the Land; some of our Men, better sighted, spied it about two Leagues off. I knew it could be none other than *Nottingham Island*, though it was something contrary to the Expectation of our best Mariners: We stood in to make it, it was the North-end of it, and it bore off us due East; I was soon assured of it, and I ordered the Master to shape his Course North-west and by North. Both he and others were unwilling, but without much ado submitted themselves: It was very foul, thick Weather. The Reasons of my Resolution were these: The Time of the Year was far spent, and the Winter came upon us, therefore I would make the shortest Way betwixt the Lands already discovered. If I found an open Sea, I had my Desire, and then I intended to proceed to the utmost of our Power.

If I met with Land, I should then finish the Discovery, it being not above fifteen Leagues from Land to Land, and not above ten Leagues from *Nottingham Island* to the Main of the North Shore, we made what sail we could, it blowing a very stiff Gale of Wind till eight in the Evening; then it began to blow fiercely, and we took in our Topsails, and stood under our two Courses and Bonnets; at nine it blew a violent Storm at South-south-east, so that we took in our Forefail, and let her drive North-west. All Night it continued an extraordinary Storm; that we heaved the Lead every half Watch; but the Ship drove so fast that she would be past the Lead before there were two Fathoms of Line out, all the Night being exceeding cold withal. The 25th the Storm continued, and so perplexed us, that there were but few that could sleep or eat for twenty-four Hours. About six in the Afternoon the Storm began to abate, yet there blew a fresh Gale of Wind between the South and South-west; we stood West-north-west, and made a North-west Way; when suddenly the Sea became very smooth. We reasoned thereupon among ourselves, What might be the Cause of it? We all thought it to be a Leeward Tide, nothing doubting what we afterwards encountered; the Ship had a very quick Way in the smooth Water.

38. The 26th by two in the Morning we were suddenly got among the Ice, and it pleased God that the Moon at that Instant gave us so much Light that we could see a little about us. We would have stayed the Ship, but it was so thick to the Windward, and so near us that we durst not. We then bore up in this unexpected Accident, and I verily believe did not escape striking the Length of a Foot against the Ice, as hard as Rocks, two or three times, as the Ship now having Way after twelve Leagues a Watch. Then we stood close by the Wind to the Eastward, expecting Day that we might see about

us. We could from Top-mast Head see the Ice from the North-north-west, the North-west, and so round about by the South to the East; and some there was to the Leeward of us. It was all flat sound Ice, and the Sea as smooth as a Wall amongst it. This struck us all into a Damp, whereupon I called a Consultation of my Associates, namely, *Arthur Price*, Master; *William Clements*, Lieutenant; *John Whittered*, Master's Mate; *Nathaniel Bilson*, Chirurgeon; and *John Palmer*, Boat-swain; requiring them to advise and counsel me how to prosecute our Business to Effect. These went all together and reasoned amongst themselves, and then brought me their Opinions in Writing under their own Hands, *viz.* Our Advice is, that you repair homeward from this present 26th, and that for these Reasons:

First, That the Nights are long, and so extreme cold withal that we can hardly handle our Sails and Rigging. Secondly, The Season is now subject to stormy and gusty Weather, as witness the present, it having continued a Storm ever since the 24th, and yet doth continue no Weather to discover in. Thirdly, We doubt whether *Hudson's Straights* be so clear of Ice that it may be passable in convenient Time, Winter coming on apace, before we are frozen up, seeing the Ice lies here all over the Sea. Fourthly, We must have fair Weather to pass the Streight, for which we may stay a long Time, if we neglect the first Opportunity. Fifthly, Our Ship is so very leaky that in foul Weather we are forced to pump every Glass, which is great Labour. Moreover, we know her to be so bruised with Rocks and Blows of the Ice that she is no more to be adventured among it, but in saving our Lives homewards. Besides all this our Men grow very weak and sickly with extreme Labour. Sixthly, The Season of the Year is so far spent that we can expect no other Weather than we have had both lately and at present; that is to say, Snow and Fog freezing our Rigging, and making every thing so slippery that a Man can scarce stand, and all this with the Wind Southerly, which if it should come to the Northward then we are to expect far worse. Seventhly and lastly, That the Ice lies all in thick Rands and Ranges in the very Way we should go, as you and all Men here may see; and therefore we conclude as aforesaid, that there is no Possibility of proceeding further: Wherefore we now counsel you to return homeward, hoping that God will give us a favourable Passage to return to our native Country, if we take Time and not tempt him too far by our Wilfulness.

Indeed most of these Difficulties were in view, and I could not reasonably oppose them, nor any Reason could I give for proceeding further; wherefore with a sorrowful Heart, God knows, I consented that the Helm should be borne up and a Course shaped for *England*, hoping that his Majesty would graciously consider our Endeavours, and pardon our Return. And although we have not discovered populous Kingdoms, and taken special Notice of their Magnificence, Power, Policy, &c. brought Samples home of their Riches and Commodities, pried into Mysteries of their Trade and Traffic, nor made any great Fight against the Enemies of God and our Nation; yet I hoped that our Willingness in those desert Parts may be acceptable to our Readers.

When we bore up Helm we were in Latitude 65 Degrees 30 Minutes, at West-north-west and by North from *Nottingham-Island*. Some were of Opinion that we were farther to the Northward; but by reason it was my Judgment, I chose to set down the lesser Distance. The 27th the Wind came up at North-west, with which we could not have gone on with our Design. That Wind made no great swelling Sea. By Noon we were athwart of *Cape Charles*, so that we went in between that Cape and *Mill-Islands*. The last Night it snowed very much, and was very cold, so that all our Rigging and Sails were frozen, and all the Land covered with Snow. And here it will not be amiss to consider the Reasons of it: When I was upon *Charles-Island* (our Wintering-place) and in *June* when the Snow was clearest off the Ground, I have in the Nights, and some of them following the hottest Days, observed whether there fell any Dew or no, but I could never perceive any, and from Moss and

Sand little I thought was to be expected. Now of what was exhaled from the snowy Ice and cold Sea could there probably be returned but the like again? Generally we continued on our Course blinded with Fog and dirty Weather, and that intermixed with Snow and Frost among dispersed Pieces of Ice, many of them higher than our Top-mast Head. With great variety of Windfalls we were driven within three Leagues of both Shores; so that the last of this Month we were in the Narrow of the Streight, which is about fifteen Leagues over; the South Shore was much pestered with Ice.

September 1632. The 1st and 2d we endeavoured to get on our Way. The 3d in the Evening, as the Weather cleared up, we saw the South-End of the *Island Resolution*. These three Days and Nights had been extreme cold with Fog and Frost, insomuch that our Men in the Evening could hardly take in our Top and Sprit-sails. We have sailed through much mountainous Ice, far higher than the Top-mast Head, but this Day we sailed by the highest I ever yet saw, which is incredible indeed to be related. Now as the Wind comes Easterly, we feel another Sea out of the Ocean, and the Ship labours with another Motion than she hath done with any that we ever observed to come out of the Westward. From the 3d to the 8th we had variety of Winds, and were got clear out of the Straights, but were now come into such a tumbling Sea, the Weather dirty and windy, and by Intervals calm again, that the Ship did so labour and roll that we thought verily she would have rolled her Masts by the Board. This made her so leaky that we were forced to pump every Glass; nay, her Seams so opened aloft that we lay all wet in her.

39. This was the last Day we saw any Ice. The Wind now favouring us we made all the Haste we could homeward, by the Way having endeavoured, observed, and experimented some Things in this our unfortunate Voyage. I perfected my Observations, which being afterwards commanded to publish, I here most submissively offer unto the judicious Reader. What hath been long ago fabled by some *Portuguese* that should have come this Way out of the South Sea, the mere Shadows of whose mistaken Relation have come to us, I leave to be confuted by their own Vanity; these Hopes have stirred up from Time to Time the more active Spirits of this our Kingdom to research that merely imagined Passage. For my part I give no Credit to them at all, and as little to the vicious and abusive Wits of later *Portuguese* and *Spaniards*, who never speak of any Difficulties, as Shole-Water, Ice, nor Sight of Land, but as if they had been brought home in a Dream or Engine; and indeed their Discourses are found absurd; and the Maps by which some of them have practised to deceive the World mere Falsities, making Sea where there is known to be main Land, and Land where there is nothing but Sea.

Most certain it is, that by the Industry of our own Nation those northern Parts of *America* have been discovered to the Latitude of 80 Degrees or upwards; and it hath been so curiously done, the Labours of several Men being joined together, that the main Land may be seen and searched; and they have brought this supposed Passage to this Pass, that it must be to the North of 66 Degrees of Latitude, a cold Climate, pestered with Ice and other Inconveniencies, and where the *Spaniards* Dispositions and their weak Ships can hardly endure it: And withal it is known, that the Entrance of *Hudson's Straights* is but fifteen Leagues broad, and in the Middle not so much; and between *Salisbury Island* and the Main it is but eight Leagues. Then proceeding to the Northward toward the forementioned Latitude, it is but fifteen Leagues from Main to Main. This in Length is about a hundred and forty Leagues, as will more plainly appear by the Map, and infinitely pestered with Ice until *August*, and some Years not passable then; and I believe the Streight is never clear of Ice entirely. Now it is most probable there is no Passage for the following Reasons; First, There is a constant Tide, Flood and Ebb, setting in to *Hudson's Straights*, the Flood still coming from the Eastward, which, as it proceeds, correspondent to the Distance, it alters his Time of full Sea. This also entering into Bays and broken Ground, it becomes disturbed, and oversets with Half-Tides.

Tides. Secondly, Here are no small Fishes, as Cod, &c. and very few great ones, which are rarely to be seen, nor are there any Bones of Whales, Sea-Horses, or other great Fish to be found on the Shore, nor any Drift-Wood.

Thirdly, we find the Ice in the Latitude 65 Degrees 30 Minutes, to be lying all over the Sea in Rands, and I am most certain that the Sholes, and Shole Bays, are the Mother of it. Had there been any Ocean beyond, it would have been broke all to Pieces, for so we found it coming through the Streight into the Sea, to the Eastward. Fourthly, The Ice seeks its Way to the Eastward, and so drives out at *Hudson's Streight*; which I have often observed upon the Island of *Resolution*, and driving among the Ice in the Streight. Admit there were a Passage, yet it is known that it is narrow for one hundred and forty Leagues, and infinitely pestered with Ice, as every one has found who has gone that Way; comparing therefore some Observations taken at *Bantam*, *Gilolo*, and *Firando*, in *Japon*; and the Distance between *Japon* and the Western Part of *California*; with the Observations taken at *Charlton Island*, referring all to the Meridian of *London*; and then the Distance betwixt the Meridians of *Cape Charles*, and the Western Part of *California*, will be found to be about five hundred Leagues, in Latitude 66 Degrees, where yet the Meridians incline very much together. To this may be added, that near about *Cape Charles* the Variation is 29 Degrees to the West, which is a probable Argument that there is much Land to the Westward, and that this Streight must be very long, and that you have no Time to pass it, but in *August* and *September*; when the Nights are so long, and the Weather so cold, that it will not be bearable. Add to this, that neither can any great Ships, which are fit for carrying of Merchandize, endure the Ice, and other Inconveniencies, without extraordinary Danger.

Moreover, one thousand Leagues is sooner sailed to the Southward, and about the *Cape de Bona Speranza*, where the Winds are constant, and that with Safety, than one hundred in these Seas, where you must daily run the Hazard of losing Ship and Lives. Add hereunto that Comfort for the Sick, or Refreshment for your Men, here is none to be had in these Quarters. Towards the latter End of *August*, and in *September*, the Weather grows tempestuous, and the Winds incline to be Westerly, that there will be but small Hopes of performing your Voyage this Way. But let us, by way of Imagination, enlarge this Streight in this Latitude, and free it of Ice. Yet what Advantage in speedy Performance will be got by this Passage, if the Winds be withal considered, to *Japon*, *China*, and the Northern Parts of *Asia*? It may be the nearer Cut, but in Navigations the farthest Way about is well known, in fewer Days, to be performed, yea with lesser Pains, and more Safety of Ship and Goods. Again to the *East-Indies*, and other Parts, where we have the greatest Commerce and Employment of Shipping, the other Way is as near.

What Benefit of Trade might have been obtained in those Northern Parts of *Asia*, I will not presume to speak of? Holding that there is a great Difference betwixt those Parts, and the Northern Parts of *America*, whereas I am sure that there is none in any Place where I have been in all this Voyage.

40. "Before we proceed to the Account our Author gives us of his return home, it will be requisite to consider the Force of his Arguments against the Probability of finding any such Passage; because, if they were as conclusive as he imagined, they must absolutely prove that all future Attempts of this kind, are weak and rash in themselves, and will appear absolutely absurd and ridiculous in their Consequences. In this respect, however, we differ from him. And though we are very far from pretending, That Captain *James's* Temper might be so far sowered by Disappointment, as to mistake things difficult for things impracticable; yet we may have leave to say, that the want of Success in his Voyage, had some Influence on his Judgment; because it is very evident that he now treated as light and idle Fables, these *Portu-*

guese Relations, which he had formerly considered as carrying a great degree of Evidence; for otherwise one can hardly account for his taking up the Opinion of a North-west Passage, and that so strongly, as to offer his own Service for the Discovery of that Passage. Let us next then consider the Reasons by which he refutes the *Portuguese* Relations.

"He says, First, that they proceed from their Vanity; next, that they are inconsistent with Experience; and, Lastly, that their Maps and Charts are false and groundless, and therefore not to be trusted. With respect to the first, if what the *Portuguese* delivered, had been the pure Effects of a vain-glorious and boasting Temper, their Government would not have suppressed such Relations, but rather have taken Pains to discover their Falshood, which had been no difficult Task, and would have effectually answered their Purpose; for at this Time there was no Nation in the World so much concerned in Point of Interest, to discredit the Belief of a North-west Passage, as the *Portuguese*. If, therefore, the Pilot before-mentioned, published, as perhaps he did, an Account of his Passage through this Streight, out of Vanity; the Court need only have shewn that the Fact was false, as, if it had been so, was in their Power, and it had done their Business; whereas the calling in, and suppressing his Book, was a kind of Proof, that what he said was true. As to the Inconsistency of such Accounts, because they do not mention any Hardships sustained in the Voyage, or Troubles that they met with from Ice and Snow; we should be able to speak of them more clearly, if we had those Accounts, or if we were sure that Captain *James* had himself perused them at large any more than we.

"But supposing the thing as he states it, perhaps we shall not find any good Cause to conclude that they talked idly, and as if they came in an Engine, because they mentioned no such Difficulties. It is very possible, That Voyages between the same Places may be performed at very different times, and under very different Circumstances: As for Instance, the *Spaniards* sail from *Acapulco* to *Manilla*, in thirteen Weeks; but from *Manilla* to *Acapulco*, is commonly a Voyage of thirty Weeks; in sailing to *Cape Breton*, in the Summer Months, able Seamen steer one Course, but when they go later in the Year, they steer another; and by this Management they generally avoid any Difficulties in either Season.

"We do not know at what Season of the Year the *Portuguese* Pilot made his Voyage through the North-west Streight, but we know that he sailed in a pretty high Latitude; and as he tells us, had a fair Wind through the whole Passage; if so, there is nothing improbable in supposing that he reached the Streight in the same Time, that the *Spaniards* make the same Transit from the *West* to the *East Indies*, and then there is nothing strange in his reaching *Newfoundland* in sixteen Weeks, which will account for his arriving at *Lisbon* a Month sooner than the Fleet that came home by the *Cape of Good Hope*; and if he came through the North-west Streight in the Month of *August*, which is also very probable, he might not be much incommoded by the Ice.

"Besides, we know that Captain *Candishe* made the Tour of the Globe, in much less Time than any other Circumnavigator; and we find some Voyages round *Cape Horn*, much more easy and fortunate than others; so that if this *Portuguese* Pilot was remarkably lucky, the thing is very possible, and there is no Ground at all for denying the Fact, because hitherto no other Man has met with the same Success. As to false Charts and Maps, we are far from denying the Fact, but we know another Reason has been given for this, directly opposite to, and yet no less probable than, that assigned by Captain *James*, viz. that by these false Representations they may conceal this Passage from the Knowledge of Strangers, and discourage them from looking for it. This last Reason may be supported by Facts, because it is apparently against their Interest

“ to have such a Passage discovered, and because we
 “ have authentic Proofs that the *Spaniards* have actually
 “ taken all the Precautions in their Power, to guard
 “ against the *English* coming, by this North-west Passage,
 “ into the South Seas.

“ As to what he says of the Coasts being examined as
 “ far as the Latitude of 66 Degrees, and that all the
 “ Coasts of *America* had been searched, as far as 80 De-
 “ grees, by *Englishmen*, is only in Part agreeable to Fact;
 “ some great Navigators having, indeed, failed so far,
 “ and reported that they had examined the Coasts, but
 “ it has been since found that they had not done this, at
 “ least, very accurately; and that it was very possible,
 “ and very probable too, that the Streight lay to the
 “ Southward of 66 Degrees; neither is this a Matter yet
 “ cleared up, for other Sea Officers who have been sent
 “ upon this Expedition, have fallen into Captain *James's*
 “ Sentiments, and upon their Return have reported the
 “ Coasts thoroughly searched, and no Streight to be met
 “ with.

“ The thing, indeed, is natural enough; for when a
 “ Man has attempted the Discovery of this Passage, and
 “ failed, why should he not endeavour to console him-
 “ self, by pretending to have discovered that all former
 “ Hopes were in vain, and that in reality there is no such
 “ Passage to be found? By this he secures a Reversion of
 “ Fame, and exchanges one kind of Reputation for
 “ another; if he cannot be transmitted to Posterity as a
 “ fortunate Man, he may, at least, transmit the Me-
 “ mory of his Prudence, by which an Error long receiv-
 “ ed was detected. But if we should ever resolve to be
 “ satisfied, at all Events, of the Truth of the Fact, not-
 “ withstanding Disappointments at Sea, it must be by
 “ fixing Colonies upon *Hudson's Bay*, and offering a
 “ large Reward to any that should have Boldness enough
 “ to traverse the Countries behind the great Lakes, and
 “ bring us an Account of them, which would effec-
 “ tually clear up all our Doubts and Difficulties; which
 “ till this be done, or the Passage discovered by Sea,
 “ must remain still, and prove, as fatiguing to Poste-
 “ rity, as they have been to past and present Ages.

“ But let us now proceed to the rest of his Argu-
 “ ments. As to the Regularity of the Tides in *Hudson's*
 “ Bay, subsequent Discoveries shew plainly, that not
 “ only no Argument can be drawn from them against a
 “ Passage, but quite the contrary; for *Hudson's Streight*,
 “ at the Entrance, is only thirteen to fourteen Leagues
 “ wide, from the South-side to *Resolution Isle*; and a
 “ small Channel, some Leagues wide, to the Northward
 “ of that Island, in which is no great Current; it runs
 “ in the Entrance about five or six Miles an Hour, and
 “ rises about eighteen Feet at Spring-Tide. At *Cape*
 “ *Charles*, in the Middle of the Streight, it is about
 “ fifteen Leagues wide, and has there lost nigh half its
 “ Force. At *Cape Diggs*, the West End of the Streight,
 “ it is about twenty Leagues wide, and is still more
 “ diminished in its Height and Current; and when it
 “ enters the Bay at *Cary's Swans Nest*, it rises but six
 “ Feet. Now it is very reasonable it should be diminish-
 “ ed so; when it is considered what Space it has to fill
 “ in its Course so far, for there is a great Bay or Inlet
 “ on the South-west-side, within *Button's Isle*, and se-
 “ veral others betwixt *Cape Charles* and *Cape Diggs*, and
 “ great Inlets on the North-side; and the Streight be-
 “ ing one hundred and forty Leagues in Length before
 “ it reaches the Bay, it requires a great Current even to
 “ fill the Streight; when to these is added the Space it
 “ has to fill in the great Bays and Inlets above *Mill Isles*,
 “ by *Cape Comfort*, and *Westland's Portland*, it may be
 “ easily conceived to be almost spent, before it passes
 “ *Mansell's Isle* and *Cary's Swans Nest*.

“ How then is it possible that a Tide or Current, run-
 “ ning through so narrow a Passage, only five or six
 “ Miles an Hour, which is not above thirty Miles each
 “ Tide, should raise a high Tide, not only for one hun-
 “ dred and forty Leagues, besides all the Bays and In-
 “ lets on each Side the Streight, and above *Mill Isles*, but
 “ also fill a great Inland Sea, above eight hundred Miles
 “ long, and five hundred broad; and after it is expand-

“ ed in the Bay, and the Current lost, should be able
 “ to raise a Tide on the West and North-west Side of the
 “ Bay, from twelve to sixteen Feet, nay sometimes to
 “ twenty-two Feet? And if *Norton* and *Scroggs* are to
 “ be believed, even to five Fathom, and Occasion such
 “ rapid Currents, as at *Brook Cobham*, *Marble Island*,
 “ *Wager River*, &c. so as to run there from four to six
 “ and seven Miles an Hour, if only filled from *Hudson's*
 “ Streight; when at the same Time the Tide flowing
 “ through *Davis's Streights*, which are above forty
 “ Leagues wide up into *Baffin's Bay*, in Latitude seventy
 “ eight Degrees, does not there exceed five or six Feet
 “ any where. Since therefore no other inland Sea has any
 “ sensible Tide, and even the Tide in the South End of
 “ *Hudson's Bay*, does not rise above four Feet without a
 “ strong Wind at North; how can these high and rapid
 “ Tides beat the North-west Side, without a Communi-
 “ cation with some other Ocean than that which flows
 “ through *Hudson's Streight*? When it is also known
 “ that a North and North-west Wind raises a higher
 “ Tide on the West-side of the Bay at neap Tides, than
 “ an Easterly or South-west Wind does at Spring-Tides,
 “ which blows from our Ocean; does not that almost
 “ amount to a Demonstration, without further corobora-
 “ ting Proofs? And yet of these there want not many, as
 “ the Reader will see as we proceed in answering his
 “ Reasons.

“ His second Objection is, that no Fish, more especi-
 “ ally Whales, are to be met with in these Seas, or
 “ Drift-wood; whence he infers they have no Commu-
 “ nication with the Ocean Westward. This Objection
 “ is very just in itself, and well founded, neither can it
 “ be denied that it proves very strongly, that no such
 “ Passage was to be expected near *Charlton Island*; but
 “ when this is admitted and allowed as a negative Ar-
 “ gument, it follows that the contrary, *viz.* the seeing
 “ Fish, more especially large ones of the Whale kind, is
 “ an Indication of such an Opening, Passage or Streight,
 “ and a Proof that there is a Communication between
 “ the two Oceans in this Bay. But we know from all
 “ the later Voyages into this Bay, that on the North-
 “ west there are abundance of Whales, though it is true
 “ there are none in other Parts of the Bay; whence, ac-
 “ cording to Captain *James's* Method of Reasoning, it is
 “ plain such a Passage there is; and as from about sixty
 “ Degrees to that Inlet, which Captain *Middleton* called
 “ lately *Wager River*, those great Fish abound most, it
 “ is very rational, on the Principles laid down by both
 “ these great Seamen, to conclude that this Passage is
 “ somewhere thereabouts. Thus it plainly appears,
 “ that when duly weighed, this Objection extends no
 “ farther than to the Seas and Country about *Charlton*
 “ *Island*; and as it affords a Proof there is no Passage there,
 “ it also affords a Presumption that such a Passage there is
 “ on the North-west Side of the Bay; where, for many
 “ other Reasons, it was most likely to expect it.

“ His next Motive for concluding no Passage, is the
 “ Quantity of Ice, and its driving Eastward. But, in re-
 “ spect to this, granting him all he lays down, it proves
 “ nothing. For as to the vast Quantities of Ice formed
 “ in that Part of the Bay, where he navigated, no doubt,
 “ as he observes, it proceeded from Shore-water, and
 “ there is as little Doubt that this Ice passes out at the
 “ Streights; but this signifies but little, since the very
 “ same thing happens in regard to *Magellan's Streights*
 “ into the South Seas, where no stronger Signs are to be
 “ met with than here. I must, upon this Occasion, ob-
 “ serve, that if *Magellan's Streights* had not been disco-
 “ vered at once, there might have been as many, and as
 “ strong, Reasons given, why no such Passage should have
 “ been expected at the South Pole, as our Author, or any
 “ other Man, could alledge against this Passage by the
 “ North-west; which ought certainly to afford us a Cau-
 “ tion against too hasty Conclusions upon this Subject, let
 “ them be grounded on any Reasons or Authority what-
 “ ever. For though human Reason is sufficient to give
 “ us a just Sense of the Wisdom of the Creator, in dis-
 “ posing all Parts of the terraqueous Globe, yet we know
 “ by Experience, that Reason is not always capable of
 “ penetrating

penetrating the Disposition of the different Parts of the Globe, independent of Discoveries which frequently owe as much to Accident as to Reason: In regard to Authority, *Americus Vespucius*, who had the best Genius for Theory of any Man of his Time, and gave his Name to the new discovered Continent, not because he first found it, but because he first laid it down handsomely in a Map, and was mistaken in reference to the Southern Passage; therefore though we may allow Capt. *James* to be as great a Man, in doing which perhaps we pay him no great Compliment; yet this will give no great Sanction to his Authority; for he may as well be mistaken in the North, as the famous *Florentin* in the South: Besides, Disappointment gives a Bias to most Mens Opinion, and, Why may we not suppose something of this in both Cases? The Passage from the *North Seas* into the *South*, by the *Streights* before mentioned, and the Coast to the Northward in the same Latitudes, resembling, in all Respects, that to the Southward, being low broken Islands before a bold rocky Shore, suggests very naturally, that there is some such Passage there.

But after laying down these Reasons, Capt. *James* very plainly discovers how much they have operated upon his own Mind, and to how great a Degree he is satisfied no North-west Passage is to be found; he attacks the very Expediency of finding it, and seems to think it an Argument there is no such Passage, because he has wrought himself into a Notion that it would be of no great Consequence, if there was such a Passage. Why be it so: But there was no sort of Occasion for making his perilous Voyage into *Hudson's Bay*, to know this; he might have said all that he has said against the Expediency of enquiring any farther after the North-west Passage, without stirring from *Bristol*. It is therefore manifest, that his failing in his hoped-for Discovery changed his Mind, and induced him to see Things in a different Light, than he did before; because otherwise, those very Arguments which he urges at last against making any future Attempts on this Side were as strong, to have dissuaded his going. If before he went he never thought of, or regarded, these Arguments, he did not sufficiently weigh and examine the Nature of the Expedition in which he risked his Life, and on which he set his Reputation at Stake. But if he had (which is certainly much more probable) taken Pains to examine all these Reasons; then his very going, his wintering, and the Constancy he shewed in aiming at the Prosecution of the Discovery afterwards, visibly demonstrate those Reasons made no Impression on him then; if they had, he would have staid at home, and never have given the King, or the *Bristol* Adventurers, such Encouragement as was requisite for the fitting him out for that Voyage; but this we must own would be not much to the Purpose, if the Reasons he gives us were absolutely conclusive; for whether he bethought himself of them first or last, makes nothing for or against the Reasons themselves; but it so falls out that when maturely considered, they will be found to have very little or no Weight at all. As to the Narrowness, or Inconvenience, of the Streight, if there be one, that is mere Matter of Conjecture, so is the Length of it; the Hardships of the Voyage are now known to be very inconsiderable; and as to its being no shorter Rout to the *East-Indies* than by the *Cape of Good Hope*, no body ever said that it was. He acknowledges it is much nearer to the *South Seas*, to *Terra Borealis Incognita*, to *Japon* and *China*, which is all that is desired, and more than sufficient to recommend it.

It is clear enough, from the Whole of Capt. *James's* Account that he had a very indifferent Opinion of his Expedition, and considered it in no other Light than as tending to satisfy the *English* Nation, that it was to no sort of Purpose to venture any more Vessels into those Seas, and upon those Coasts, upon that or any other Design; for it is plain that he thought a more barren, a more inhospitable, and more worthless, Part of the World was not to be found; yet Ex-

perience has since shewn us, that as wild and waste as the Countries about *Hudson's Bay* were and are, yet they have been found to deserve both Notice and Keeping; and I dare say, have produced this Nation full as much, if not more, than the Colony of *Canada*; strictly and distinctly considered, ever did to the *French*; which is a Proof that no Man's Authority ought to be regarded where it tends to discourage a Nation from extending its Navigations or Discoveries. It is not intended by this, to lessen the Reputation of Capt. *James*, or that Esteem which his Work has very justly procured him from the very best Judges. There is no doubt, that he did what he could, and much more than most other Men could have done; and there is as little Reason to doubt, that he spoke what he thought, and what he spoke was upon good Grounds; but notwithstanding this, we see he was mistaken, and mistaken in many Respects. He doubtless conceived, that a more perilous Navigation could not be, and that it would be a very difficult Thing to send Ships into this Bay constantly without losing them; yet this is a Thing now so common, that there is nothing of Wonder in it; he apprehended that there must be always an infinite Difficulty in sailing amongst Mists and Ice, but we see from Capt. *Middleton's* Letters, that there is now very little in this, and that the Seamen and Officers used to the *Hudson's Bay* Trade, have so far overcome all Inconveniencies, that taking it with every Circumstance, there is, perhaps, no Navigation now used, so safe as this; and from the Account he has given us of his Wintering, we may very fairly infer, that he never so much as suspected that an *English* Factory would be settled in a higher Latitude than *Charlton Island*, and yet the Factory of *Fort Churchill* has subsisted for many Years. There is one Passage in his Voyage which shews his very great Sagacity; for by pulling up some Stakes in a desert Island, and perceiving they were cut by a sharp Instrument, he judged that the Savages must have had some Communication with Christians, in which he judged very right; but it was near half a Century after, before this Riddle could be explained, or any body could guess, that these Savages had those Hatchets from the *French*.

But to return to the North-west Passage. The Experience we have of these Countries has convinced us of many things, that to Captain *James*, without doubt, after his Return from this Expedition, would have appeared absurd and incredible. As for Instance, that the Continent West and North-west from *Charlton Island*, is inhabited by several Nations, and that the most Northern of these Nations are the best clad and the most civilized. Amongst these there is a Nation, distinguished by the Name of the *Mosemleek Indians*, who are not only a very rational People themselves, but who constantly affirm, and there is no Reason to suspect that they affirm a Falshood, there are large Towns, and a civilized People, to the North-west of them, who trade upon a large salt Lake, in Vessels twenty times as big as their Canoes; and what Nations may live beyond these, is, indeed, to us uncertain; but this is very certain, that if there be a North-west Passage they must inhabit the Coasts of it; and there never yet was a Country found inhabited, but it was found also that those Inhabitants might be traded with to Advantage. But this is not all, the opposite Coast must, very probably, be inhabited too, and it is very likely that the Streight that falls into the *South Seas*, may be under a Climate, milder, in many respects, than *Charlton Island* in the Summer. Upon the whole, therefore, all the Difficulties and Discouragements, which, from too strong a Sense of his own Disappointment, Captain *James* has conjured up, sink to nothing, when duly considered and compared with the Circumstances that later Discoveries have brought to light; so that there seems to be no Reason his Conjectures should have any Weight to deter us from prosecuting Attempts on this Side, even though they should still continue to prove, in several Instances, as they have hitherto done, abortive.

“ These Reflections may, to some Readers, appear long, but I hope to very few they will appear useless or unentertaining; for I will freely confess, that if I had not intended these Reflections, I would not have inserted this Voyage, though in all respects the best of its kind that ever was written. But the Excellency of *Ramusio's* Collection, is allowed to consist in his Remarks; and without Remarks, this Voyage, as well written as it is, might do a great deal of Mischief. Nay, I am persuaded did do a great deal of Mischief; for from the Time of his Return in 1632, to 1667, there never was any Voyage made into these Parts, nor probably ever would have been made, but for the Sagacity of Mr. *Montague*, our Embassador in *France*, afterwards Duke of *Montague*, and Father to the present Duke, both eminent Friends to the Commerce of this Nation. He it was that furnished us with the first Lights that revived our Correspondence to *Hudson's Bay*, to which Captain *Guillam* was sent in 1668, and we have been possessed of the Trade thither ever since. A Trade granted to private Persons, by a Charter in Trust for the public Benefit, which was to arise from their Endeavours to find a North-west Passage; which public Advantage they have neglected in the very same Proportion they have been studious after their own; a thing so very common with Companies, that they might certainly be acquitted, if Custom could be esteemed a just Excuse. Yet from their settling a Trade in these Parts, it has been found extremely advantageous, as drawing to their Factories *Indians* from very distant Countries, who bring them very rich Furs, but who declared also that a much larger Trade might be carried on, provided their Factories were more in Number, and fixed more conveniently; nay, they have brought down and sold, at some of the Settlements, Copper Oar, so very rich, that by barely beating it between two Stones, it has been reduced into Metal. But neither what they saw, nor what they heard, could tempt them to alter their Manner of proceeding; they judged, and no Question judged right, that as they were circumstanced, the Method they are in was the most beneficial that could be, and that by extending their Commerce they must open it, and so render it less beneficial.

“ All this was natural enough, and I do not repeat it here (for I know that I have touched it often before) out of any Spirit of Malice or Ill-will; for I really wish the *Hudson's Bay* as well as I do any Company; but only as it makes for my Purpose; which is to shew that notwithstanding Capt. *James* was a very honest Man, a very experienced Seaman, and one who very probably had no private Views; yet, in his Conclusions from this his perilous Expedition, he was absolutely wrong, and by his Authority gave Credit to many Falshoods, of which these Instances may suffice:

1. He thought the Hardships in navigating these Seas, and wintering on these Coasts, were invincible; but we know the contrary.
2. He judged the Country so barren as to furnish no Subsistence, and the Inhabitants so poor as to have nothing worth seeking; in both which Experience shews he was mistaken.
3. He firmly believed, that if any Streight was discovered more to the North than about the Place he wintered, it would be impassable, and its Coasts uninhabited; but we are satisfied this is groundless, from the many Openings discovered along the *Welcome*; and their being all in the Neighbourhood of very friendly and tractable *Indian* Nations.
4. He was clearly satisfied, that from what he had seen and discovered in his Voyage, there no longer remained any Hopes of finding such a North-west Passage through *Hudson's Bay*. But here too his Art failed him; for even Capt. *Middleton*, who I think his Equal as a Mariner, thought it highly probable, till very lately.
5. He does not appear, from what he has written, to have had any distinct Notion of what Part of the World he was in, or how the Countries lay round about him; but to the present Navigators all this is very clear and certain; we know that from *Canada* to *New Mexico*,

“ and probably even to *California*, is all one Continent, the West-side of which only remains undiscovered; and we further know, that all that has been hitherto found, agrees exactly with, and is every way conformable to, the Notions that have been entertained of such a North-west Passage, and even with all the traditional, and other kind of Accounts, that we have received of it. But having now made this Piece as useful as we can, without curtailing or interpolating it; let us return to Captain *James's* Conclusion; and having attended him through his long and dangerous Voyage, his cold and comfortless wintering, his difficult and wonderful Passage homewards, let us see him safe ashore, and so take our leaves.”

41. The 22d of *October* we arrived in the Road of *Bristol*, having been hindered and crossed with much contrary and tempestuous Winds and Weather. The Ship being brought into Harbour, and haled on dry Ground, to look to her, it was there found, that all her cut Water were torn and beaten away, together with fourteen Feet of her Keel; much of her Sheathing cut away, her Bows broken and bruised, and much Timber cracked aboard, and under the Starboard bulged; sharp Rocks had cut through the Sheathing, the Plank, and an Inch and an Half into a Timber that it met withal. Many other Defects there were besides; so that it was miraculous how this Vessel could bring us home again. Being all arrived we went to Church, and gave God Thanks for his Preservation of us amidst so many Dangers. I very well know that what I have here hastily written, will never discourage any noble Spirit, that is minded to bring this so long-tried Action to absolute Effect; and it is likely withal, that there be some who have a better Understanding, and a surer Way of prosecuting it than myself have, to whose Designs I wish a happy Success.

And if they do but make a Review of what hath been done, and give more celestial Observations, hydrographical Descriptions, or exacter Practice in Navigation, it will be a most commendable Labour; for although I have spent some Years of my ripest Age, in procuring Intelligence from foreign Nations, and have travelled with diverse honourable and learned Personages of this Kingdom, for their Instructions; have bought up whatever I could find in Print or Manuscript, and what Maps or Papers soever conducive to this Business, that possibly I could procure; and have served voluntary besides, and spent some time in rendering a Relation since my coming home, and expended withal, of my own Money, in my afore said Endeavours, and in furnishing extraordinary Necessaries, above 200 *l.* in ready Money; yet I repent not, but take a great deal of Comfort and Joy, that I am able to give an Account, in some reasonable Way, of those Parts of the World, which heretofore I was not so well satisfied in.

Thus ends this Voyage, which, as I have hinted before, has been several times abridged, and more than once reprinted at large, but never, that I know of, complete, and as it stands in the original Edition of 1633; which is the Reason this Book has been so much valued. I have seen many Copies that concluded with Professor *Gellibrand's* Observations astronomical; but I never met with more than one Copy that had the Address to the University of *Cambridge*; which, though printed in a different Character, and in such a Manner as if it were a Piece by itself, yet is thus mentioned in the Title Page of this Book: *An Advice concerning the Philosophy of these late Discoveries*, by W. W. though the Discourse itself is subscribed X. Z. Who was the Author of it I cannot say; but whoever he was, it is plain that he had the Correction of Captain *James's* Work, and was himself, for those times, a Person of surprizing Knowledge and Freedom of Thought; and therefore I judged the preserving this little Piece, by reprinting it, would be highly agreeable to all true Lovers of Learning; and therefore it is here subjoined.

To the venerable ARTISTS, and younger STUDENTS in Divinity, in the famous University of *Cambridge*.

“ You Nobly-witted, and Ingeniously-studied, Academians,

demians, whose Excellency, in all kind of Learning, all foreign Universities do admire, and none attain unto. I here present you a Voyage to *Cholcos*, though not the *Golden Fleece* with it. The Search I mean, but not the finding, of that so much talked of, so often fought for, *North-west Passage*, and nearer Way into the *South Sea*. That wherein so much Time and Treasure hath been expended, so many brave Spirits employed, and yet none discovered. Perchance there is no such Passage to be found; and that the Spaniards, by the Gullery of their false Sea Cards, and the Fable of an old Greek Pilot, have but diverted our English and Dutch Seamen from the Golden Indies. This Plot of theirs has taken for these many Years, and it appears to be but a Plot; for that themselves never made use of this Passage. For mine own Part, I suppose that the *Philosopher's Stone* is in the *North-west Passage*. My Argument for it is, that there is so much Philosophy in the Way to it.

So much and such Variety, and that so various (I think) from what is received in the Schools, that it were well worth the Disquisition of an University (and I wish you the first Honour of it) either to find out how these Observations may be reduced to Aristotle's Philosophy, or whether they need any other Enquiry, and ought to be examined by some other Rules than Aristotle hath yet lit upon. This is my Purpose of inscribing it unto you. Of this one thing am I confident, That you are all so rational and ingenuous, as to prefer Truth before Authority; *Amicus Plato, amicus Aristoteles, but magis amica veritas*. Your Sciences then being liberal, your Studies I know have so far passed into your Manners, that your Minds are so too; and that such as have already profited beyond the Credulity required in a young Learner, and are themselves prompted to be Masters of the Arts, though they still reverence their old Greek Tutor, yet they will not suffer that of Pythagoras's School, so to domineer in Aristotle's, as to let an *ipse dixit* go away with it; much less allow it the Authority of a Mayor's Hammer, with one Knack to silence all Arguments.

Upon this Confidence, I, with all due Respects, here prefer two Propositions unto your discussing. The first this, *Whether these Rules of Aristotle's Philosophy be to be allowed so universal, that they hold all the World over*. The second this, *Whether they ought to be so magisterial as to prescribe against all other Examinations*. The first of these I shall but problematically propound unto you; but in the second, I hope a Man of my cloathing may be allowed the Freedom of being something more earnest.

But that I may not come with Prejudice to the making of these Motions, or be thought upon some Ignorance or Ambition to speak against the incomparable Aristotle, I shall desire all my fellow Academians to allow me so much Discretion, as to know, That he that shall in your Hearings, oppose your Aristotle, does like the Ship here spoken of, run against a Rock, endanger his own Bulge, and the staving of his Vessel. No, I so far honour the old Aristotle, that I will allow him to be Master and Moderator of the Schools; and that there is the same Respect due to him in the Schools, which, by Reason of long Custom, is due to one of the King's Ships in the narrow Seas. That in Acknowledgment of Sovereignty, every other Name ought to strike Sail to him. Aristotle (it must be confessed) hath made all Learning behold to him. No Man hath learned to confute him, but by him, and unless he hath plowed with his Heifer. He had the most incomparable Wit, and was the most logical and demonstrative Deliverer of himself, of all the Sons of Nature. One who best of all deserved to be called her principal Secretary: One who not only adorns a Library, but makes it *Qui habet Aristotelem, habet Bibliothecam*, is truer of him than of the great Comparer. This is my Opinion of him, and I wish him more studied.

'Tis not therefore the Name, or the Authority, of the great Aristotle, that my Propositions meddle with-

al; but whether his Propositions, gathered out of this Part of the World alone, could, like a royal Pass, or a Commission, carry a Man all the World over.

It must be confessed, that in respect to the Equinoctial, and the Latitude that Aristotle lived in, he was but a Northern Man, and it was his own Rule, that *nihil agit extra Sphaeram activitatis suae*, so then it would be put to Voices to consider, whether he that knew but those Northern Parts, and the Mediterranean Sea, could possibly make such Collections by what was there to be learned, as should be infallible in the Southern Hemisphere, and the two Indies. Plainly, those that are conversant in the Navigations and Books of Voyages into those Parts, have found so many Contrarieties to observe, that it was rather tedious than difficult to fill up a Note-Book with them.

The Ancients we know (as if they had measured the World by the Yard-Wand) restrained the Limits of Temperature and Habitation by the five Zones, without Consideration of any interloping or concurring Causes, which Experience hath now found out to have quite altered their Observations. I add, that a good Leisure and Diligence might observe how, in a contrary Part of the World, there be found clean contrary Causes and Effects unto these in this Part of the World. The South Wind there brings Cold, and Winter; and the North is the rainy Wind. How will the Thunder and Wind be made to agree with Aristotle's Distinction of a Meteor? In some Places of the Mountains Andes, by Peru, it thunders ever. The East Indies have their Monsoons, and their Steady Winds, constant for six Months together, and Who shall assign their Causes? Then the Doctrines of the Tides, nothing so uncertain which ebb and flow in some Places different, and in others contrary to the Moon and her Motions. This (as I remember) is Aristotle's Distinction of a Meteor; that it is an imperfect mixed Body generated out of an infirm and inconstant Concretion of Elements, which therefore cannot be durable. Now the Monsoons are both constant in their Continuance this Year; and in their Return next Year, most constantly keeping their Seasons half Year one Way and half another Way, for all Ages nothing more constant and durable, and therefore nothing like Aristotle's Meteor. And so for the Thunder upon the Andes; it is first perpetual; and secondly, not caused by a dry Exhalation (as Aristotle wills); but hanging over such Hills as are covered with Snow, and a perpetual Winter; witness the Thunder on the Alps also; yea, and that in the Middle of the Sea, five hundred Leagues from Shore, or any thing that is dry; nay, it frequently both snows and thunders upon the Andes at the same Instant; and in dry Places, that are hard by, scarce ever thundering.

But not to pass the Line for it: You see in this little Book how Charlton Island, which is no more northerly than your Cambridge, yet is so unsufferably cold that it is not habitable, and that there encounter so many different (at least so seeming) Occurrences of Nature, as were well worthy the Disquisition of a Philosopher. I could (in my small Reading) instance in many other Particulars, which I had rather should be found out by some industrious Searchers after Nature in the modern Relations of our Discoverers, than in this my short Proposition. 'Tis not to be doubted but that the careful reading of our Books of Voyages would more illustrate the History of Nature, and more conduce to the Improvement of Philosophy than any Thing that hath been lately thought upon. These Navigations have in part fulfilled that of the Prophet: *Many shall pass to and fro, and Knowledge shall be increased*. This I suppose might be observed from this Study, That the great and infinite Creator hath so disposed and varied every thing, that it is impossible for Man's Reason and Observation to conclude him; and therefore though the vulgar and received Philosophy may give a Man a general Hint all the World over; yet no universal and unfailing Certainty.

This brings me to my second Proposition: That seeing God will not have his Works (no more than his Kingdom)

dom) to come by Observation, *Whether then ought any Human Dictates to be so magisterial as to prescribe against all other Imagination?*

"No Human Study more conduces to the setting forth of *God's* Glory, than the Contemplation of his great Works in *Philosophy*; for though a smattering Knowledge in *second Causes* works the Mind towards Atheism, yet a higher Speculation of them brings it about again to Religion. No Man I believe will think it fit for us to have a Pope in *Philosophy*, one that no body shall presume to censure; but all be bound to advance his Decretals above the holy Scripture. This is the Scandal that myself and divers good Men take at the undue Authority in some Heats pinned upon the *Stagerite*.

"I am sorry that the *Israelites* Dotage upon *Solomon's* *Philosophy*, should have caused the zealous *Hezekiah* to call in and suppress those invaluable *Physicks*, for fear, I suppose, lest their Credit should have as much derogated from the Authority of the holy Scriptures, as the brazen Serpent (which he destroyed about the same time) had done from Religion; none will believe that *Solomon's* *Philosophy* was contrary to the Scriptures, seeing the Scriptures commend *Solomon* for them. It was not *Hezekiah's* Fear therefore (or not only) lest there might have been a Competition between them, but a Neglect of one of them: He was zealous, lest the Scripture might have any Writing set upon by it, though not against it.

"Can Divines then be blamed for speaking, when they hear *Aristotle's* *Philosophy* to be solely magnified, and the Study of the Scripture *Philosophy* disrespected; or, that when 'tis confessed that such a Thing is true in Divinity, and yet the moderating the Point determine for *Philosophy*? Nay, to hear it called absurd and ridiculous to have Scripture urged at all in Point of *Philosophy*? No doubt there is *but whatsoever is false in Divinity is also false in Nature*, how much Shew of Truth soever it passes within *Philosophy*: *Philosophy* hath taken its Turn in the Schools, and the holy Texts, by the Schoolmen, have even been submitted unto *Aristotle's*; yea, to the great Corruption of Theology, as the Complaint is, hath this Man been so far advanced, that *Contra est Philosophus, & contra est Apostolus*, have familiarly passed up and down for equal Oppositions; so that it hath been a measuring Cast oftentimes, betwixt the Prophet and the Peripatetic; and by foul Play hath the Measure been made to stand the harder at the Peripatetic, for that the Prophet hath been forced to comply with him by a wrested Interpretation. Thus had St. Paul need give his Caveat unto Theology as well as unto Theologues; Beware lest any Man spoil you through *Philosophy*.

"All this were to no Purpose, unless the Text of God were excellent in this Kind, and embellished here and there with most admirable *Philosophy*; what incomparable rare Footsteps of it have we in the Books of *Genesis*, *Job*, and the *Psalms*? How noble a Study then were it, and how worthy the Leisure of some excellently learned Men to bestow some Time upon it? *Valesius* the Physician hath, in his *Sacra Philosophia*, done something in this Kind, who yet might have done better here and there for the Honour of the Scriptures. I am not so sottish, to believe that every Particular is to be drawn out of the Scriptures; 'tis none of my Dotage that; or that God, in Scripture, did intend every where the Accurateness of *Philosophy*, or stand to be so curious in Definitions and Discussions;

nor that nothing should be determined on till a Text confirmed it. But this perchance might profitably be thought upon; that where the Scriptures have any thing of this Kind, it should more reverently be esteemed; Collections out of scattered Places (as is done out of *Aristotle's*) made; these compared, and their Resultances observed. This surely would amount to more than is yet thought of; and in God's Name let Scholars be so bold with *Aristotle* as to examine him upon good Assurance by what is *Truth's Touchstone*: Received *Philosophy* is a most necessary Handmaid to the Scriptures; but let her not be set above her Lady; nor no Competition be made betwixt them.

"Something else remains to be thought of. That seeing the same God who gave *Aristotle* these good Parts, hath, in like Manner, raised up many excellent Spirits more; whether it were not injurious to what is done, and a Discouragement to what might be done, to have the Inventions, or Observations, of those excellent Wits, and great Industries, so abashed with *Aristotle's* Authority, that they can have no Credit in the World; for that his Dictates have pre-occupied all good Opinion? Let it not then be thought unequal to examine the first Cogitations of the old *Philosophy*, by the second Thoughts of our more modern Artists; for that the same Improvement may by this means accrue unto the *Physicks*, that hath advanced our *Geography*, our *Mathematics*, and our *Mechanics*; and let it not be thought so insolent to refuse *Aristotle's* Authority singly, where his Reason is not so concluding. Seeing other Men have taken the Boldness to do that before in several Kinds; some have perfected, and others controlled his *Ethics*, by the Scriptures, as *Scultetus Wallæus*, and some others. *Justin Martyr*, surnamed the Philosopher, hath purposely written *contra Dogmata Aristotelis*. *Basson* and *Gassendus* (two brave Men) have newly written point-blank against him, nor have they taken away all Liberty from those that are to follow them.

"And thus, with renewing my former Protestation for mine own Respect to *Aristotle*, I conclude my two Propositions; which I desire may receive a favourable Construction from all ingenuous, incapricious Scholars; I mean them out of Good-will to promote Learning; to encourage and countenance future Undertakings; and, in such a Case, a little too much saying may be thought not to have exceeded an honest Rhetorication; for I would not be thought too earnest in it. The Hint, for all this, I took from this Book, which in mine own, and some better, Judgments, is (to say no more) as well done, and enriched with as sure and useful Observations, as any in this kind. I was desired by the able Author, and some other Friends, to overlook the written Copy of it, and to amend the English here and there, in which I did not despair of doing something: For that in my younger Time, I had a little acquainted myself with the Language of the Sea, that which put me in the Head to inscribe it unto your Names (most excellent learned Academicians) was, for that the Place of this wintering was within a Minute or two of the Height of our Cambridge: Which my Prayer to God is, that your Studies may make famous.

"Yours,

"X. Z."

SECTION IV.

The late ATTEMPTS made for the DISCOVERY of a PASSAGE to the SOUTH SEAS, from Hudson's Bay; more particularly that of Captain CHRISTOPHER MIDDLETON, Commander of his Majesty's Sloop the Furnace.

Interpersed with original Papers.

1. *The Reasons why there have not hitherto been any great Discoveries made from Hudson's Bay, notwithstanding our Settlements in, and Trade thereto.*
2. *Captain Christopher Middleton's accurate and curious Account of the strange Effects of Cold; the Nature of Animals, and manner of living on the Coasts of Hudson's Bay.*
3. *Mr. Middleton enters into a Correspondence with Arthur Dobbs, Esq; for the Discovery of a North-west Passage.*
4. *Reasons assigned by him, to shew the Probability of finding such a Passage, which actually produced this Voyage.*
5. *An Account of the Undertaking, and of the Impediments thrown in the Way, to hinder Captain Middleton's going, or meeting with Success, in Case of attempting this Discovery.*
6. *Captain Middleton's Journal of his Voyage for Discovery, from his Departure to his Return.*
7. *The Point of Fact as to the Streight, by him called Wager River, more clearly stated, with Copies of original and amended Declarations.*
8. *An Account of Mr. Dobbs's Exceptions taken to the Relation given by Captain Middleton of his Discoveries, and Opinion grounded on them, that there is no Streight, or that it is not practicable.*
9. *Mr. Dobbs's Reasons why the River Wager ought rather to be considered as a Streight; Captain Middleton's Answer, and Replies, to them.*
10. *Captain Middleton's positive Proofs that this Opening is a fresh Water River, and not a Streight, communicating with any Ocean or Sea, except Hudson's Bay; with Refutations of those Proofs.*
11. *An Account of a late Act of Parliament, for encouraging the Discovery of a North-west Passage.*

IN the two foregoing Sections, we have given the Reader as full and as fair an Account as it was in our Power, of the Motives which induced the most knowing and able Persons, in the last Century, to suppose that a Passage might be found, through *Hudson's Bay*, into the *South Seas*; and how this Notion, after prevailing long, and being generally entertained, grew into Discredit, by the Miscarriage of Captain *James*, and by the Account he gave of the Nature and Causes of his Disappointment. We have also touched upon the Foundation of the *Hudson's Bay Company*; but having considered that Point more largely in another Place, we thought there was no Necessity for dwelling upon it here. In this Section we propose to speak of the late Expeditions made that Way, and particularly of Captain *Christopher Middleton's*, which has afforded Occasion to the Legislature to pass a Law for encouraging Attempts for this Discovery, which sooner or later there is great Reason to hope will be attended with Success.

One would have imagined, that after the Company was established, for carrying on the Trade to *Hudson's Bay*, with a View to the finding a North-west Passage, continual Attempts would have been made for that purpose, agreeable to the Petition upon which that Charter was granted, and to the Preamble of the Charter itself, which has been so often mentioned; but so far has this been from the Practice of the Company, that they have taken all Methods possible to prevent the Notion of a Passage being found that Way from reviving in the World, by preventing their Captains from publishing their Journals; and as by their Charter they have an exclusive Trade, if they do nothing in this Matter, it is impossible any body else should. There was, indeed, one Captain *Barlow* employed for this Purpose about twenty Years ago, but he was never heard of more; and whether he made the Passage, and never returned, or whether he was lost as the Company's Servants report, in the Latitude of 63 Degrees, is what we can give no Account of, at least with any Degree of Certainty. The Reader will hereafter find some Account of another Attempt, made by Mr. *John Scroggs*, which, though not attended with Success, was far from giving any Discouragement to future Endeavours of the same kind. But what gave Occasion to the last Attempts, was the Informations received from Captain *Middleton* before-mentioned.

This Gentleman had been for many Years in the Service of the *Hudson's Bay Company*, which gave him an Opportunity of making all the Enquiries necessary, and acquiring all the Lights possible, to direct him in an Affair of this Nature; and of his Capacity and Knowledge

in this respect, the Reader will find an ample Testimony in the following Extract of a Relation delivered by him, to the worthy Sir *Hans Sloane*, then President of the Royal Society; from whom he received the Prize Medal, which, by the Will of the late Sir *Godfrey Copley*, is annually bestowed by the said Society. A Relation equally curious in itself, and extremely suited to our Purpose; as it very fully shews how much better we are now qualified for making Discoveries in those frozen Climates, than in the Days of Captain *James*; and how far the Difficulties, which that Gentleman looked upon as insupportable, are in the present Age overcome. But this Paper has so much Merit, that it really needs no farther Introduction.

2. It is observed that the Hares, Rabbits, Foxes, Partridges, in September, and the beginning of October, changed their native Colours to a Snowy-white, and that for six Months in the severest Part of the Winter. I never saw any but what were white, except some Foxes of a different Sort, which were grizzled, and some half red half white.

That Lakes and standing Waters, which are not above ten or twelve Feet deep, are frozen to the Ground in Winter, and the Fish therein all perish.

Yet in Rivers near the Sea, and Lakes of a greater Depth than ten or twelve Feet, Fish are caught all the Winter, by cutting Holes through the Ice down to the Water, and therein putting Lines and Hooks. But if they are to be taken with Nets, they cut several Holes in a strait Line, the Length of the Net, and pass the Net with a Stick fastened to the Head-line from Hole to Hole, till it reaches the utmost Extent; and what Fish come to these Holes for Air, are thereby entangled in the Net; and these Fish, as soon as brought into the open Air, are instantly frozen as stiff as a Stock-fish. The Seamen likewise freshen their salt Provisions, by cutting a large Hole through the Ice in the Stream, or Tide of the River; which they do at the Beginning of the Winter, and keep it open all that Season. In this Hole they put their Salt-meat, and the Minute it is immersed under Water, it becomes pliable and soft, though before its Immersion it was hard frozen.

Beef, Pork, Mutton, and Venison, that are killed at the Beginning of the Winter, are preserved by the Frost for six or seven Months, entirely free from Putrefaction, and prove tolerable good eating; so likewise Geese, Partridges, and other Fowl, that are killed at the same time, and kept with their Feathers on, and Guts in, require no other Preservation but the Frost, to make them good wholesome eating, as long as the Winter continues. All kind of Fish are preserved in the like Manner.

In large Lakes and Rivers the Ice is sometimes broken by imprisoned Vapours, and the Rocks, Trees, Joists, and Rafters of our Buildings, are burst, with a Noise not less terrible than the firing off a great many Guns together. The Rocks which are split by the Frost, are heaved up in great Heaps, leaving large Cavities behind, which I take to be caused by imprisoned watery Vapours that require more room when frozen, than they occupy in their fluid State. Neither do I think it unaccountable, that the Frost should be able to tear up Rocks and Trees, and split the Beams of our Houses, when I consider the great Force and Elasticity thereof. If Beer or Water is left in Mugs, Cans, Bottles, nay, in Copper Pots, though they were put by our Bed-sides in a severe Night, they were surely split to Pieces before Morning, not being able to withstand the expansive Force of the inclosed Ice.

The Air is filled with innumerable Particles of Ice, very sharp and angular, and plainly perceptible to the naked Eye. I have several times tried this Winter, to make Observations of some celestial Bodies, particularly the Emerfions of the Satellites of *Jupiter*, with reflecting and refracting Telescopes; but the Metals and Glasses, by that Time I could fix them to the Object, were covered a quarter of an Inch thick with Ice, and thereby the Object rendered indistinct; so that it is not without great Difficulties that any Observations can be taken.

Bottles of Strong-Beer, Brandy, strong Brine, Spirits of Wine, set out in the open Air for three or four Hours, freeze to solid Ice. I have tried to get the Sun's Refraction here, to every Degree above the Horizon, with *Elton's* Quadrant, but to no Purpose, for the Spirits freeze almost as soon as brought into open Air.

The Frost is never out of the Ground, how deep we cannot be certain. We have dug down ten or twelve Feet, and found the Earth hard frozen in the two Summer Months; and what Moisture we find five or six Feet down, is white like Ice. The Waters, or Rivers, near the Sea, where the Current of the Tides flow strong, do not freeze above nine or ten Feet deep.

All the Water we use for Cooking, Brewing, &c. is melted Snow and Ice. No Spring is yet found free from freezing, though dug never so deep down. All Waters on Land are frozen fast by the Beginning of *October*, and continue so till the Middle of *May*.

The Walls of the House we live in are of Stone, two Feet thick; the Windows very small, with thick wooden Shutters, which are close shut eighteen Hours every Day in Winter.

There are Cellars under the House, wherein we put our Wines, Brandy, Strong-Beer, Butter, Cheese, &c. Four large Fires are made in great Stoves, built on purpose; every Day, as soon as the Wood is burnt down to a Coal, the Tops of the Chimnies are close stopt with an Iron Cover. This keeps the Heat within the House (though at the same Time the Smoak makes our Heads ach, and is very offensive and unwholesome.) Notwithstanding which, in four or five Hours after the Fire is out, the inside of the Walls of our House and Bed-Places will be two or three Inches thick with Ice, which is every Morning cut away with a Hatchet. Three or four times a Day we make Iron-Shot, of twenty-four Pounds weight, red hot, and hang them up in the Windows of our Apartments. I have a good Fire in my Room the major Part of the twenty-four Hours; yet all this will not preserve my Beer, Wine, Ink, &c. from freezing.

For our Winter-Dress we make use of three Pair of Socks, of coarse Blanketting, or Duffel for the Feet, with a Pair of Deer-Skin Shoes over them; two Pair of thick *English* Stockings, and a Pair of Cloth Stockings upon them; Breeches lined with Flannel; two or three *English* Jackets, and a Furr Coat, or rather Gown, over them; a large Beaver Cap, double, to come over the Face and Shoulders, and a Cloth of Blanketting under the Chin; with Yarn Gloves, and a large Pair of Beaver Mittens, hanging down from the Shoulder before, to put our Hands in, which reach up as high as our Elbows. Yet notwithstanding this warm Cloathing, almost every Day, some of the Men that stir abroad, if any Wind blows from the Northward, are dreadfully frozen. Some have their

Arms, Hands, and Face, blistered and frozen in a terrible Manner, the Skin coming off soon after they enter the warm House, and some have lost their Toes. Now their lying indoors for the Cure of these frozen Parts, brings on the Scurvy in a very lamentable Manner: Many have died of it, and few are free from that Distemper. I have procured them all the Help I could, from the Diet this Country affords in Winter; such as fresh Fish, Partridges, Broths, &c. and the Doctors have used their utmost Skill in vain; for I find nothing will prevent that Distemper from being mortal, but Exercise and stirring abroad.

Coronæ and *Parbelia*, commonly called *Halos* and *Mock-Suns*, appear frequently about the Sun and Moon here. They are seen once or twice a Week about the Sun, and once or twice a Month about the Moon, for four or five Months in the Winter; several *Coronæ* of different Diameters appearing at the same Time.

I have seen five or six Parallel *Coronæ* concentric with the Sun, several times in the Winter, being for the most Part very bright, and always attended with *Parbelia* or *Mock-Suns*. The *Parbelia* are always accompanied with *Coronæ*, if the Weather is clear, and continue for several Days together, from the Sun's rising to his setting. These Rings are of various Colours, and about 40 or 50 Degrees in Diameter.

The frequent Appearance of these *Phænomena*, in this frozen Clime, seems to confirm *Descartes's* Hypothesis, who supposes them to proceed from Ice suspended in the Air.

The *Aurora Borealis* is much oftner seen here than in *England*; seldom a Night passes in the Winter free from its Appearance; they shine with a surprizing Brightness, extinguishing all the Stars and Planets, and covering the whole Hemisphere. Their tremulous Motion from all Parts; their Beauty and Lustre are much the same as in the Northern Parts of *Scotland*, *Denmark*, &c.

The dreadful long Winters here, may almost be compared to the Polar Parts, where the Absence of the Sun continues for six Months; the Air being perpetually chilled and frozen by the Northerly Winds in Winter, and the cold Fogs and Mists obstructing the Sun's Beams in the short Summer we have here; for notwithstanding the Snow and Ice is then dissolved in the Lowlands and Plains, yet the Mountains are perpetually covered with Snow, and incredible large Bodies of Ice, continue in the adjacent Seas. If the Wind blows from the Southern Parts, the Air is tolerably warm, but insufferable cold when it comes from the Northward; and it seldom blows any otherwise, than between the North-east and the North-west, except in the two Summer Months, when we have for the major part light Gales, between the East and the North, and Calms. The Northerly Winds being so extremely cold, is owing to the Neighbourhood of high Mountains, whose Tops are perpetually covered with Snow, which exceedingly chills the Air passing over them. The Fogs and Mists that are brought here from the Polar Parts in Winter, appear visible to the naked Eye, in Icicles innumerable, as small as fine Hairs or Threads, and pointed as sharp as Needles. These Icicles lodge in our Cloaths, and if our Faces or Hands are uncovered, they presently raise Blisters as white as a Linnen Cloth, and as hard as Horn: Yet if we immediately turn our Backs to the Weather, and can bear our Hand out of the Mitten, and with it rub the blistered Part for a small Time, we sometimes bring the Skin to its former State, if not, we make the best of our Way to a Fire, and get warm Water, wherewith we bathe it, and thereby dissipate the Humours raised by the frozen Air, otherwise the Skin would be off in a short Time, with much hot ferous watery Matter, coming from under it along with the Skin; and this happens to some almost every time they go abroad, for five or six Months in the Winter; so extreme cold is the Air when the Wind blows any thing strong.

Now I have observed, that when it has been extreme hard Frost, by the Thermometer, and little or no Wind that Day, the Cold has not near so sensibly affected us, as when the Thermometer has shewed much less freezing, having a brisk Gale of Northerly Wind at the same Time. This Difference, perhaps, may be occasioned by those

those sharp-pointed Ificles before-mentioned, striking more forcibly on a windy Day than in calm Weather, thereby penetrating the naked Skin, or Parts but thinly covered, and cause an acute Sensation of Pain or Cold. And the same Reason, I think, will hold good in other Places; for should the Wind blow Northerly any thing hard for many Days together, in *England*, the Ificles that would be brought from the Polar Parts, by the Continuance of such a Wind, though imperceptible to the naked Eye, would more sensibly affect the naked Skin, or Parts but lightly covered, than when the Thermometer has shewn a greater degree of freezing, and there has been little or no Wind at the same Time.

It is not a little surprizing to many, that such extreme Cold should be felt in these Parts of *America*, more than in Places of the same Latitude, on the Coast of *Norway*; but the Difference I take to be occasioned by the Winds blowing constantly here, for seven Months in the twelve, between the North-east and North-west, and passing over a large Tract of Land, and exceeding high Mountains, &c. as before-mentioned. Whereas at *Drontheim* in *Norway*, as I observed some Years ago in wintering there, the Wind all the Winter comes from the North and North-north-west, and crosses a great Part of the Ocean, clear of those large Bodies of Ice we find here perpetually. At this Place we have constantly, every Year, nine Months Frost and Snow, and unsufferable Cold, from *October* to the Beginning of *May*. In the long Winter, as Air becomes less ponderous towards the polar Parts, and nearer to an Equilibrium, as it happens about one Day in a Week, we then have Calms and light Airs all round about the Compass continuing sometimes four and twenty Hours, and then back to its own Place again, in the same Manner as it happens every Night in the *West Indies*, near some of the Islands.

The Snow that falls here is as white and small as Dust, but never any Hail except at the Beginning and End of Winter: Almost every Full and Change of the Moon, very hard Gales from the North.

The constant Trade-Winds in these northern Parts, I think undoubtedly proceed from the same Principle which our learned Dr. *Haley* conceives to be the Cause of the Trade-Winds near the Equator; and their Variation. "Wind, says he, is most properly defined to be the "Stream or Current of the Air, and where such Current "is perpetual and fixed in its Course, it is necessary that "it proceed from a permanent and unintermitting Cause, "capable of producing a like constant Effect, and agree- "able to the known Properties of Air and Water, and "the Laws of Motion of fluid Bodies. Such an one is, "I conceive, the Action of the Sun's Beams upon Air "and Water, as he passes every Day over the Oceans, "considered together with the Nature of the Soil, and "Situation of the adjoining Continents: I say therefore, "first, that according to the Law of Statics; the Air "which is less rarefied and less ponderous, must have a "Motion towards those Parts thereof which are more "rarefied, and less ponderous, to bring it to an Equi- "brium," &c.

Now that the cold dense Air, by reason of its greater Gravity, continually passes from the solar Parts to the Equator, where Air is more rarefied, to preserve an Equilibrium, or Balance of the Atmosphere, I think is very evident from the Wind in those frozen Regions blowing from the North and North-west, from the Beginning of *October* until *May*; for we find that when the Sun, at the beginning of *June*, has warmed those Countries to the Northward, then the South-east, East, and variable Winds continue till *October* again; and I do not doubt but the Trade-Winds and hard Gales may be found in the Southern polar Parts, to blow towards the Equator when the Sun is in the Northern Signs, from the same Principle.

The Limit of these Winds from the polar Parts towards the Equator, is seldom known to reach beyond the 30th Degree of Latitude; and the nearer they approach to that Limit the shorter is the Continuance of these Winds. In *New England* it blows from the North near

four Months, in the Winter; at *Canada*, about five Months; at the *Danes Settlements* in *Streight Davis*, in the 63d Degree of Latitude, near seven Months; on the Coast of *Norway*, in 64 Degrees, not above five Months and a Half, by reason of blowing over a great Part of the Ocean, as was before mentioned; for these northerly Winds continue a longer, or shorter Space of Time, according to the Air's being more or less rarefied, which may very probably be altered several Degrees, by the Nature of the Soil, and the Situation of the adjoining Continents.

The vast Bodies of Ice we meet with in our Passage from *England* to *Hudson's Bay*, are very surprizing; not only as to the Number, but Magnitude. It is in truth unaccountable how they are formed of so great a Bulk, some of them being immersed a hundred Fathoms or more under the Surface of the Ocean, a fifth or sixth Part above, and three or four Miles in Circumference: Some hundreds of these we sometimes meet in our Voyage here, all in Sight at once if the Weather is clear; some of them are frequently seen on the Coasts and Banks of *Newfoundland* and *New England*, though much diminished.

When I have been becalmed in *Hudson's Streights*, for three or four Tides together, I have taken my Boat and lain close to the Sides of one of them, founded, and found a hundred Fathoms Water all round it. The Tide floweth here above four Fathoms, and I have observed upon a Body of Ice, the Tide to rise and fall that Difference; which was a Certainty of its being a-ground: Likewise, in a Harbour in the Island of *Resolution*, where I continued four Days, three of these Islands of Ice (as we call them) came a-ground; I founded along by the Sides of one of them quite round it, and found thirty-two Fathoms Water, and the Height above the Surface but ten Yards, another was twenty-eight Fathoms under, and the perpendicular Height but nine Yards above the Water.

I can in no other manner account for the Aggregation of such large Bodies of Ice; but that along the Coasts of *Streight Davis*, both Sides of *Baffin's Bay*, *Hudson's Streights*, *Anticosti* or *Labradore*, the Land is very high and bold, and a hundred Fathom and more close to the Shore. These Shores have many Inlets or Firths, the Cavities of which are full of Ice and Snow by the almost perpetual Winter there, and frozen to the Ground, increasing for four, five, or seven Years, till a kind of Deluge, or Land-flood, which commonly happens in that Space of Time throughout those Parts, breaks them loose and launches them into the Streights or Ocean, where they are driven about by the variable Winds and Currents, in the Months of *June*, *July*, and *August*, rather increasing than diminishing in Bulk, being surrounded (except in four or five Points of the Compass) with smaller Ice for many hundred Leagues; and Land covered all the Year with Snow, the Weather being extreme cold for the most Part in those Summer Months. The smaller Ice that almost fills the Streights and Bays, and covers many Leagues out into the Ocean along the Coast, is from four to ten Fathoms thick; and chills the Air to that Degree that there is a constant Increase to the large Isles, by the Sea's washing against them, and the perpetual wet Fogs like small Rain, freezing as they settle upon the Ice; and their being so deeply immersed under Water, and such a small Part above, prevents the Wind's having much Power to move them; for though it blows from the North-west Quarter near nine Months in twelve, and consequently those Isles are driven towards a warmer Climate, yet the progressive Motion is so slow, that it must take up many Years before they can get five or six hundred Leagues to the Southward: I am of Opinion, some hundred Years are required; for they cannot, I think, dissolve, before they come between the 50th and 40th Degrees of Latitude; where the Heat of the Sun consuming the Upper-parts, they lighten, and waste in Time; yet there is a perpetual Supply from the Northern Parts, which will so continue as long as it pleases the Author of all Beings to keep Things in their present State.

Observations of the Longitude, Latitude, and the Declination of the Magnetic-Needle at Prince of Wales's Fort, Churchill River.

	Hou.	Min.	Sec.
Having observed the apparent Time of an Emerfion of Jupiter's first Satellite at Fort Churchill, on Saturday the 20th of March laſt, 1741-2, at - - - - -	11	55	50
I find the ſame Emerfion happened at London, by Mr. Pound's Tables compared with ſome Emerfions actually obſerved in England, near the ſame Time, at - - - - -	18	15	10
Whence the horary Difference of Meridians, between Fort Churchill and London, comes out - - - - -	06	19	20
Which converted into Degrees of the Equator, gives for the Diſtance of the ſame Meridians - - - - -	94	50	00

Wherefore, ſince the Time at London was later in Denomination than that at Churchill, it follows that, according to this Obſervation, Churchill is 94 Degrees 50 Minutes in Longitude Weſt of London.

I took ſeveral other Obſervations, which agreed one with another to leſs than a Minute; but this I looked upon as the moſt diſtinct and beſt.

The Obſervation was made with a good fifteen Foot refracting Teſcope and a two Foot Reſlector of Gregory's Kind, having a good Watch of Mr. Graham's that I could depend upon; for I have frequent Opportunities of diſcovering how much its Variation amounted to, and conſtantly found its daily Deviation or Error to be fifteen Seconds too ſlow; by which Means it was as uſeful to me, for all Purpoſes, as if it had gone moſt conſtantly true, without any Change. This Watch I kept in my Pock in the Day, and in Bed in the Night, to preſerve it from the Severity of the Weather; for I obſerved that all other Watches were ſpoiled by the extreme Cold.

I have found, from repeated Obſervations, a Method of obtaining the true Time of the Day at Sea, by taking eight or ten Altitudes of the Sun or Stars, when near the prime Verticle, by Mr. Smith's or Mr. Hadley's Quadrant, which I have practiſed theſe three or four Years paſt, and never found, from the Calculations, that they differed one from another above ten or fifteen Seconds of Time. This Certainty of true Time at Sea, is of greater Uſe, in the Practice of Navigation, than may appear at firſt Sight; for you not only thereby get the Variation of the Compaſs, without the Help of Altitudes, but likewise the Variation of the Needle from the true Meridian every time the Sun or Star is ſeen to tranſit the ſame. Alſo, having the true Time of Day or Night, you may be ſure of the Meridian Altitude of the Sun or Star, if you get a Sight fifteen or twenty Minutes before or after it paſſes the Meridian; and the Latitude may be obtained to leſs than five Minutes; with ſeveral other Uſes in aſtronomical Obſervations, as the Refraction of the Atmosphere; and ſo allow for it by getting the Sun's apparent Riſing and Setting, which any-body is capable of doing; and from thence you will have the Refraction.

If we had ſuch a Teſcope contrived as Mr. Smith recommends to be uſed on Shipboard at Sea, now we can have an exact Knowledge of the true Time of the Day or Night, from the above Inſtruments, and a good Watch, we ſhould probably be able to obſerve the Eclipses of the firſt Satellite of Jupiter, or any other Phænomenon of the like Kind, and thereby find the Diſtance of Meridians or Longitude at Sea.

The Variation of the Magnetic-Needle, or Sea Compaſs, obſerved by me at Churchill in 1725 (as in N^o 393 of the *Philosophical Transactions*, for the Months of March and April, 1746) was at that Time North 21 Degrees weſterly; and this Winter I have carefully obſerved it, and find it no more than 17 Degrees; ſo that it has differed about one Degree in four Years; for in 1738 I obſerved it here, and found its Declination 18 Degrees weſterly. I have carefully obſerved, and

made proper Allowance for the Sun's Declination and Refraction, and find the Latitude here to be 58 Degrees 36 Minutes North; but in moſt Parts of the World where the Latitudes are fixed by Seamen, they are, for the moſt Part, falſely laid down, for want of having regard to the Variation of the Sun's Declination, which computed at a diſtant Meridian, when the Sun is near the Equator, may make a great Error in the Sun's riſing and ſetting, *Azimuths*, &c."

3. We cannot, after the Peruſal of this ingenious Diſcourſe, full of ſo much curious Matter, and containing ſuch pregnant Proofs of the Author's perfect Acquaintance with his Subject, doubt, that ſuch a Perſon ſhould be received with all the Marks of Eſteem and Confidence poſſible; by one who had formed a Deſign of reviving this ſo long neglected Diſcovery, by an Attempt through *Hudſon's Bay*. The Gentleman who had then, and ſtill has, this Matter at Heart, was *Arthur Dobbs* Eſq; a Man born to revive the old heroic Spirit, of turning all our Endeavours to the Service of the Public. This had led him to obſerve, that the ſureſt and moſt effectual Means of improving our naval Force, and extending our Navigation (things that have hitherto gone, and, indeed, muſt always go together) was to open ſome new Branches of Commerce, to which, as we ſhould thereby have a better Title, ſo by getting the Start of other Nations, we might be able to manage to greater Advantage.

He ſaw, likewise, that with whatever Expence this might be attended to the Public, it would not only repay the ſame abundantly, but would alſo be, at the Bottom, much leſs chargeable than in Appearance; for there is in this reſpect, ſuch a Difference between public and private Expence, as deſerves to be thoroughly examined; becauſe the comprehending of it is a thing of much greater Conſequence, than can, at firſt Sight, be eaſily conceived. For if private Men embark in any Undertaking which demands the Diſburſement of large Sums of Money, they can do it only with a View of Profit to themſelves; and conſequently if they are either miſtaken in their Deſign, or miſcarry in the Execution of it, they are real Sufferers in proportion to the Loſs with which ſuch an Attempt is attended; but the Caſe is very far from being the ſame, when Undertakings of the like Kind are managed by the Public; for then the Money diſburſed falls into the Hands of Individuals, and conſequently though the Attempt may be diſappointed, yet the real Loſs is little or nothing; becauſe thoſe who furniſh the public Expences receive the Money that is thus ſpent, and it is no more than a different kind of Circulation, which, in the End, comes to very near the ſame thing, as if the original Undertaking had coſt little or nothing.

On the other Hand, the Views of private Perſons tend to their particular Advantage; and though this turns to the general Good of the Society, yet this is in a very ſmall Proportion in Compariſon of what may be expected, and, indeed, muſt neceſſarily follow from Undertakings of ſuch a public Nature, when attended with Succeſs. An Inſtance will make this plain. The *Hudſon's Bay* Company has now ſubſiſted near fourſcore Years, within which ſpace of Time the Proprietors have been very large Gainers, but the Advantage to the Public has been very far from being great. They have exported our Manufactures, but in very ſmall Quantities; their Profit, upon ſuch Exportations, has been very conſiderable; but the Gain to the Public would have been much greater, if thoſe Exportations had been larger, though the Balance, in favour of the Company, would then have been leſs. They employ but a few Ships, and a ſmall Number of Seamen; their Factories are few and thin, all which may answer their Purpoſes very well; but 'tis plain they do not answer the national Purpoſe of enlarging our Navigation, and encreaſing our Seamen.

Yet this is not all; we ought to conſider the wide Difference between the Advantages accruing to the Public from the Trade of the Company, and the Advantages that would have accrued if a North-weſt Paſſage had been ſearched for and found; for if ever this ſhould be brought about, it is very clear, that for a great Part of this Time the Nation has loſt all that might have been acquired

acquired thereby. It may be answered that this is founded upon a Supposition only, to which I answer, that it is founded upon the same Supposition with their Charter; and therefore it was their Duty to look for it, which they have not done. But let us now see what Hopes Captain Middleton gave Mr. Dobbs of the finding such a Passage; and these we shall give in this Gentleman's own Words, which are as follow.

4. "In his Letter to me of October the 18th, 1739, he says I was this Year at *Churchill* Factory, where Mr. Norton is Governor; he was along with *Scroggs* in the Year 1722, and remembers very well, that when they came to an Anchor in the *Welcome*, near the Latitude of 65 Degrees, they had twelve Fathom at high Water, and but seven Fathom at low Water; and he seems confident, from a View that he took from a Promontary ashore, that there must be a clear Passage. The Land is very high, and falls off to the Southward of the West. This Year some of the Natives, who came down to treat at *Churchill*, and had never been before at any of our *English* Settlements, informed him that they frequently traded with *Europeans*, on the West Side of *America*, near the Latitude of *Churchill*, by their Account, which seems to confirm the two Seas must meet. I remain, &c. *Christopher Middleton*.

"In another of his Letters of the 21st of January, 1737, he says, That the Company think it their Interest, rather to prevent than forward new Discoveries in that Part of the World; and for that Reason they won't suffer any of our Journals to be made public. All the Intimation I am able to give is, that the Tides rise more with a North and a North-west Wind, at neap Tides, than ever the Spring-Tides do at *Churchill* or *Albany*, with a Southerly or Easterly Wind; and as there is little or no Tide between *Mansfield* and *Cary's Swans Nest*, nor any in the North, or North-west of *Mill Isles*, in that Bay, it must come from the *Welcome*, which cannot be far from some Western Ocean. Also in Mr. *John Scroggs's* Journal of 1722, he mentions, that in Latitude 64 Degrees 50 Minutes, the Tide ebbed five Fathoms, but gives no Account which way, or from whence, the Tide came, and they all agree that a great many Whales are seen in the *Welcome*. Whereas I don't remember to have seen any in other Parts of *Hudson's Bay*, and I have been in all Parts of it except the *Welcome*; all which are favourable Circumstances. I shall be glad, at all times, to contribute what I can to your Information, and beg you will believe me to be, Sir, &c. *Christopher Middleton*.

"In another of his Letters of November the 5th, 1737, he mentions the Company's having sent out two Sloops (at my Solicitation) upon the Discovery; they prosecuted their Voyage no farther than Latitude 62 Degrees 15 Minutes North, and returned without making any new or useful Discovery; so far as I can learn, they found a great many Islands, abundance of black Whales, but no very great Tides, the highest about two Fathoms, the Flood coming from the Northward.

"In his Extract from *Scroggs's* Journal, of the *Welcome*, he also says, that he had two Northern Indians aboard, who had been entertained in the Factory all the foregoing Winter, upon the Account of his Discovery; they gave us Information of a rich Copper Mine that lay near the Surface of the Earth, and said they could direct the Sloop or Ship to lay her Side to it, where she might land very soon. We had several Pieces of Copper brought to *Churchill*, and made it evident there is a Mine somewhere in that Country. These Indians sketched out the Lands with Charcoal, upon a Skin of Parchment, before they left the Factory, and as far as they went they found it agree very well.

"He afterwards says, when they returned, which was in a Month's Time, or thereabouts, I examined the Officers and Men; several had been my Scholars, in the Winter, to learn Navigation. They told me they

"saw nothing at those times they were ashore to hinder their going farther; for when they were eight or ten Miles from *Whale-bone Point*, which bore East-north-east from them, they saw an open Sea, and the Land stretched away to the Southward of the West. This they said to *Scroggs's* Face, as soon as they were got aboard our Ship at *Churchill*; though while they were under his Command they dissembled it, and said what he pleased to have them. From this, and all other Accounts, it appears there must be a Passage for the Tides, from the Western Ocean."

We need not at all wonder, that upon having such Lights as these, Mr. Dobbs resolved to proceed, and to make use of all his Interest at the Admiralty Board, to procure such Assistance, and such Encouragement, to Captain Middleton, as should appear requisite for carrying this Design into Execution. It is very evident that there was nothing precipitate, rash, or hasty, in this whole Proceeding; but Mr. Dobbs acted with all the Caution and Discretion, that in a Matter of so great Importance to the Public, and of so great Consequence to his own Character, it became him to do. He had advanced as far in this Enquiry, as it was possible for a Man to do, without going to *Hudson's Bay* in Person; and his Acquaintance with Captain Middleton seemed sufficient to supply that Defect; for he was allowed to be an excellent Seaman, and therefore a very proper Judge of the Probability, or Improbability, of such a Passage; he had considered that Point of his own Accord, and as we have seen before, had collected Reasons sufficient to determine him to believe it probable. He had been, not once, but twenty times, at *Hudson's Bay*, and consequently appeared one of the fittest Men living, to be intrusted with the Direction of this Discovery. Mr. Dobbs, therefore, acted with Wisdom and Prudence, as well as Honour and Gratitude, in recommending him to the Admiralty, as the most proper Person to be employed in an Expedition for the discovering a North-west Passage. All these Facts I have related as they appear to me, and with the Impartiality becoming an Historian. I have no personal Knowledge of either of these Gentlemen, and I never sought it, that I might not fall under any Prejudices, or Prepossessions. I report all things as fairly as I can, and if there be any Errors or Mistakes, they must proceed, not from any Fault in my Will, but in my Understanding. And with this I thought it necessary to acquaint the Reader, as well as that I am not at all a Party in this Dispute; and that my only Motive to meddle therewith, is for his Service.

5. It was natural for Mr. Dobbs to expect this Expedition should meet with some Checks and Discouragements, from those who were most capable of promoting it, I mean the *Hudson's Bay* Company; but it is certain that he did not expect near so much Trouble in this Affair, as he met with. Speaking of it after the Return of Captain Middleton, he throws all the Passages relating to this Matter together; and having first observed that this was an Undertaking the Company was by their Charter bound to promote, goes on in the following Manner:

"This, says he, they have not only neglected to do, but have concealed the Knowledge or Presumptions they had of it as much as possible; and have not only chicaned when applied to, but have actually, by Letter from their Governor, refused to look for it, when applied to upon that Account; and have also discouraged the Attempts of others, not only by concealing the Navigation into those Seas, by obliging their Captains, under a Penalty, not to make or publish any Charts or Journals of those Seas and Coasts, or Voyages thither, but also by putting all the Difficulties they durst, upon the King's Ships lately sent upon the Discovery; having claimed, and taken from Captain Middleton, an Indian Boy, whom he had brought to England, and having learned the *English* Tongue, would have proved a good Interpreter; and made his Clerk a Governor of one of their Factories, to induce him to leave him, and also sent away their Ships a Month earlier than usual, to lie in the *Orkneys*, lest he should have gotten any of the Sailors, who had been accustomed to, and acquainted with, the Navigation;

“ but even went farther, to tempt the Captain to quit
 “ the King’s Service, and not to attempt the Discovery;
 “ and offered him 5000 *l.* either to return into their Ser-
 “ vice, or look for it in *Davis’s Streight*, or *Baffin’s Bay*,
 “ and not to look for it in *Hudson’s Bay*, or at the *Welcome*.
 “ Alledging it would cost the Company so much to sup-
 “ port their Right against the Crown; and as he had
 “ been their Friend, and knew all their Concerns, it
 “ would be better to give him that Sum; than to give it
 “ to the Lawyers.

“ When they found him Proof against their Bribery,
 “ they then thought to distress him another Way, by
 “ writing to their Governor at *Churchill*, which was the
 “ most convenient Harbour for the King’s Ships to
 “ winter in, and was nearest to the Passage, not to re-
 “ ceive him into their Port. And afterwards, when the
 “ Company was applied to by the Lords of the Admi-
 “ ralty, to allow him to winter there, if it was necessary
 “ for him, and to give him what Assistance they could,
 “ in supplying his Wants, which they would thankfully
 “ repay the Company in *London*; after deliberating
 “ some Time upon an Answer, they wrote to the Lords
 “ of the Admiralty, that they had sent such a Letter as
 “ their Lordships desired, to their Governor at *Churchill*,
 “ and dispatched it by Post to their Ships at the *Orkneys*.
 “ This being no way satisfactory to Captain *Middleton*,
 “ who had been informed of their Letter to the Governor
 “ not to admit him, he applied for a Duplicate, to car-
 “ ry it with him, in case the other should miscarry, there
 “ being no settled Post to the *Orkneys*; upon which
 “ they gave him a Duplicate sealed up, and, upon Ap-
 “ plication, a Copy of it, to know what it contained,
 “ which was in these Words:

Hudson’s Bay House, London, May 15, 1741.

Mr. *James Isham*, and Council, at *Prince of Wales’s*
Fort, Churchill River.

GENTLEMEN,

“ Notwithstanding our Orders to you, if Captain
 “ *Middleton* (who is sent abroad in the Government’s Ser-
 “ vice, to discover a Passage North-west) should, by in-
 “ evitable Necessity, be brought into real Distress, and
 “ Danger of his Life, and Loss of his Ship; in such Case
 “ you are then to give him the best Assistance and Relief
 “ you can. We remain,

“ Your loving Friends,

“ *Bibye Lake*, Governor,
 “ *William Ederton*,
 “ *J. Winter*,
 “ *Atwell Lake*,
 “ *John Anthony Merle*,
 “ *John Merry*.

“ Upon so extraordinary a Discovery of the Inclina-
 “ tions of the Company, to baffle the Attempt of find-
 “ ing out the Passage, and to discourage Captain *Middle-*
 “ *ton* from prosecuting the Discovery; the Lords of the
 “ Admiralty thought it necessary to apply to the Lords
 “ of the Regency, that the Secretary of State might, by
 “ their Orders, write to the Company, to require that
 “ Assistance which they refused to the Admiralty, which
 “ was sent, and upon that the Company gave a Letter to
 “ the Captain, in a more humane and friendly Stile; but
 “ in Consequence of their Offer, it is plain that he stifled
 “ and disguised the Discovery of the Passage. By this it
 “ is evident that the Company believe there is a Passage,
 “ which they want to conceal; for otherwise it had been
 “ their Interest to have had the Attempt made, and if not
 “ found, there would have been an End put to the pro-
 “ secuting it any farther; and they might probably have
 “ enjoyed their Trade to the Bay, without its being co-
 “ veted or enquired into.”

When all Difficulties were overcome, and things so
 disposed that nothing was wanting to Captain *Middleton’s*
 pursuing his Voyage, but his Instructions from the Ad-

miralty, with respect to the Measures he was to pursue in
 his intended Discovery; these were very soon procured,
 and appear to have been drawn up with great Circum-
 spection, and the most perfect Knowledge of the Subject
 to which they relate, as the Reader cannot but allow,
 after the serious Perusal of them.

These Instructions ran thus: “ Whereas we have, in
 “ Obedience to his Majesty’s Commands, ordered the
 “ *Furnace Sloop*, whereof you are Commander, to be
 “ fitted out, in a proper Manner, to proceed on a Voy-
 “ age towards *Hudson’s Streight*, in order to attempt a
 “ Discovery of a Passage, that Way, into the Western
 “ *American Ocean*; and have appointed the *Discovery*
 “ *Pink*, *William Moor*, Master (who is hereby required,
 “ and directed to follow, your Orders) to attend you on
 “ the Service: You are hereby required and directed, so
 “ soon as the said Sloop and *Pink* are ready for the Sea,
 “ to fall down to the *Nore*; and when they have been
 “ paid what is due to their Companies, to proceed to
 “ *Leith*, and deliver the inclosed Packet to Captain *Hol-*
 “ *born*, Commander of his Majesty’s Ship the *Dolphin*;
 “ containing Orders for the said Captain to proceed, in
 “ Company with you, as far as the Islands of *Orkney*, for
 “ your better Security against the Privateers of the Ene-
 “ my, said to be cruising thereabout.

“ You are accordingly to proceed with the said Ship
 “ *Dolphin*, as far as the aforesaid Islands, and then to
 “ make the best of your Way with the Sloop and *Pink*,
 “ under your Command, towards *Hudson’s Streight*; and,
 “ after passing the same, to proceed to *Cary’s Swans Nest*,
 “ and then steer North-westerly, so as to fall in with the
 “ North-west Land, at *Sir Thomas Roe’s Welcome*, or *ne*
 “ *ultra*, near the Latitude of 65 Degrees North.

“ You are there to make the best Observations you
 “ can, of the Height, Direction, and Course of the
 “ Tides, bearing of the Lands, Depth and Soundings of
 “ the Sea and Sholes, with the Variations of the Needle.

“ When you come up with *Whalebone Point*, in 65
 “ Degrees, you are to try the best Passage in doubling
 “ that Land, whether to Westward or Eastward, in case
 “ it be an Island; and on which Side soever you meet
 “ the Tide and Flood, to direct your Course, so as to
 “ meet the Tide, whether North-westerly or South-
 “ westerly.

“ If after, in doubling that Cape, you find either a
 “ Streight or an open Sea, you are to keep on your
 “ Course, till meeting the Tide of Flood; and if it be
 “ so wide as to lose Sight of Land, then keep to the
 “ Larboard or *American Shore*, steering South-westerly,
 “ so as to take the Bearings of the Lands and Sound-
 “ ings, and observe whether there are any Inlets, Bays,
 “ or Rivers, to shelter the Ships in, in case bad Wea-
 “ ther, or contrary Winds, oblige you to take Harbour;
 “ and there make the best Plans you can of such Har-
 “ bours, and the Charts of the Coast.

“ You must make no stay any where, whilst Wind
 “ and Weather permits (except for making Observa-
 “ tions for your Safety in your return) until you get to
 “ the Southward of 60 Degrees North; and then, if you
 “ continue to find an open Sea, make more careful Ob-
 “ servations of the *American Coast* or Islands, and of
 “ the Head-lands, Bays, and Rivers, until you make
 “ the Latitude of 50 Degrees, or any more Southerly
 “ Latitude, in case you find it convenient to winter on
 “ the Western Side of *America*. But if you should find
 “ it more convenient to come into the Bay to winter, or
 “ can make your Passage home in Time, after making
 “ a Discovery of the Passage to the Western *American*
 “ *Ocean* (which is more eligible) in order to prosecute
 “ the Discovery to Advantage next Season; then you
 “ need proceed no farther Southerly than 50 or 60 De-
 “ grees Latitude, and make all proper Observations of
 “ the Tides, Bays, Head-lands, Sholes, and Rocks, on
 “ both Sides, if the Passage be narrow, on which ever
 “ Side the Wind and Weather permits you; with the
 “ Variation, or any other curious Observations you can
 “ make.

“ If you find any Inhabitants upon the Coast, or any
 “ populous Nation to the Southward, you are to endea-
 “ your,

" your, by all proper Means, to cultivate a Friendship
" and Alliance with them; presenting them with such
" Trifles as they value, and shewing them all possible
" Civility and Respect; but to take Caution, if
" they be numerous, not to let yourself be surpris'd;
" but to be constantly on your Guard against any
" Accidents.

" If you find it proper to winter on the other Side of
" the Passage, get to a warm Climate, not more
" northerly than 42 Degrees, in some safe Harbour that
" may be of Use in a future Settlement, and rather
" make an Island, if there be a good Harbour, which
" would be safer than on the Continent for an Infant
" Settlement.

" If your Place of wintering is within a proper Distance
" to be supplied by the Natives on the Continent, take
" proper Seeds of Fruit-Trees, Plants, Grain, and Pulse,
" and sow them in the Spring; or in case you find any
" civilized Nation who want such Kinds, you may pre-
" sent some to them, and make them sensible of their
" Use and Manner of Culture.

" In Places where you meet with Inhabitants, make
" Purchases with their Consent, and take Possession of
" convenient Situations in the Country, in the Name of
" his Majesty of Great Britain.

" But when there are no Inhabitants, you must take
" Possession by setting up proper Inscriptions as First
" Discoverers and Possessors.

" If in your Passage you meet with any Ships trading
" to the western Countries eastward of Japon, or any
" Japonese Ships, and you apprehend any Danger from
" them, either from their Force or Number, you are to
" proceed no farther in the Discovery, but are imme-
" diately to return, that Ships of sufficient Force may be
" sent out the next Season to begin a Trade, or to make
" a Settlement without any Apprehension of Disturbance
" from any powerful Nation on that Side, lest any Ac-
" cident should prevent your Return, and discourage any
" farther Attempts to be made for the future. If you
" should arrive at California without any Apprehension
" of Danger, and chuse to winter in 42 Degrees (where
" Caxton is said to have found a civilized Nation and a
" good Harbour) or more southerly, then endeavour to
" meet Capt. Anson in the Month of December, before
" the Arrival of the Manilla Ship at the Cape St. Lucas,
" the southern Cape of California, and leave a Copy of
" your Journal with him, lest any Accident should
" happen to you upon your Return, and so the Discovery
" be lost, and it might prevent Ships being sent out to
" your Relief in case of Shipwreck.

" But forasmuch as in an Undertaking of this Nature,
" several Emergencies may arise not to be foreseen, and
" therefore not so particularly to be provided for by In-
" structions before-hand, you are in such Case to pro-
" ceed as upon Advice with your Officers you shall
" judge may be most advantageous to the Service on
" which you are employed.

" When you return home, you are to proceed into
" the River Thames, and send our Secretary an Account
" of your Arrival, and Proceedings, for our Inform-
" ation. Given under our Hands the 20th of May,
" 1741.

" Charles Wager,
" Thomas Frankland.
" Glenorchy.

" To Capt. Middleton, Commander of His Majesty's Sloop
" the Furnace, Deptford.

" By Command of their Lordships.

" Thomas Corbett.

" By the Commissioners for executing the Office of Lord
" High Admiral of Great Britain and Ireland, &c.

" You are hereby directed, during the Course of your
" intended Voyage, not to give any Disturbance or Mo-
" lestation to any of the Ships or Sloops employed in the
" Service of the Hudson's Bay Company; but to give
" them all Protection and Assistance that lies in your

" Power, whenever any Opportunity offers of your be-
" ing serviceable to them. Given under our Hands the
" 29th Day of May, 1741.

" Charles Wager,
" Vere Beauclerk,
" Glenorchy.

" By Command of their Lordships.

" Thomas Corbett."

We may plainly see from these Instructions, that no-
thing was wanting on the Part of the Admiralty to fur-
ther this important Discovery, but that however Captain
Middleton was left sufficiently at his Liberty, as indeed it
was very reasonable he should, to prosecute whatever Me-
thods his own Circumstances and the Situation of Things
should suggest to him for the Furtherance of the Design
when he came to be engaged in the Execution of it, and
which it was impossible to foresee and provide for before
that time. It is plain also, that all due Care was taken of
the Hudson's Bay Company, in that they had not the least
Reason to complain that this Expedition made by the
King's Ships, within the Limits of their Charter, could
in any Degree turn to their Prejudice. But it is now time
to see what Effects a Scheme executed with so much
Judgment and Deliberation produced, and this will be
best seen from an Extract of the Captain's own Journal
which we shall give the Reader; and shall then furnish
him with some other Lights, in order to shew why
the want of Success in this Undertaking did not entirely
destroy all Thoughts of finding such a Passage as Captain
Middleton sought-for through Hudson's Bay.

An Abstract of Captain Christopher Middleton's
Journal.

6. I sailed from Churchill the 1st Day of July, and con-
tinued sailing with a fair Wind till the 3d, when we saw
an Island, the two Extremities bearing North by East,
and East by North, lying in the Latitude of 63 Degrees
North, and Longitude from Churchill 3 Degrees 40 Minutes
East; which I took to be the same which Fox named
Brook Cobham. On the 5th Day I saw a Head-Land on
the North-side of the Welcome, bearing North-west by
North, seven or eight Leagues distant, in the Latitude
of 83 Degrees 20 Minutes, and Longitude from Churchill
4 Degrees. Here I tried the Tides several times, and
found close in with the Land the Tide to run two Miles
an Hour from the North by East, which I took to be the
Flood; and by the Slacks, from several Trials, I found
that a West, or West by North Moon, made high Water,
having a Full Moon that Day. On the 8th Day I saw
the North-side of the Welcome, with much Ice in Shore:
I tried the Tide, and found it set East north-east, two
Fathoms. On the 9th, continuing my Course, and sail-
ing through much Ice, I was obliged at length to grapple
to a large Piece, the Tender did the same, to keep off
from Shore, the Wind blowing us right upon it: I tried
the Tide frequently, and could discover neither Flood
nor Ebb by my Current-Log: Here we were fast jammed
up in Ice, being totally surrounded for many Miles, and
the Wind setting it right upon us: It was all Ice for ten
Leagues to windward, and we were in great Danger of
being forced ashore; but it happily falling calm after we
had lain in this Condition two or three Days, the Pieces
of Ice separated, or made small Openings; we being then
within two Miles of the Shore, and with no small Diffi-
culty hauled the Ship from one Place to another, till we
got amongst what we call Sailing Ice, that is, where there
are such Intervals of Water as a Ship, by several Traverfes,
may get forward towards the intended Course. In this
Manner we continued till we saw a fair Cape or Head-
land to the northward of the Whalebone Point, in the
Latitude of 65 Degrees 10 Minutes; Longitude from
Churchill 8 Degrees 54 Minutes East; and this I named,
after my worthy Friend, Cape Dobbs.

I had very good Soundings between the two Shores of
the Welcome, having forty-six, forty-eight, and forty-nine
Fathoms Water. At the same time that I saw Cape Dobbs
I saw a fair Opening bearing North by West, which, ac-
cording

ording to my Instructions, I stood in for, among the failing Ice; it was just Flood when we entered it, the Tide running strong; which, by Observations afterwards I found to run five or six Miles an Hour. I run over some Rocks on the North-side of it very luckily, being just high Water, and anchored in about thirty-four Fathoms; but so soon as the Tide of Ebb was made, it ran so strong, and such Quantities and Bodies of Ice came down upon us, that we were obliged to steer the Ship all the time, and keep all Hands upon their Guard with Ice-poles, to shove off the Ice; notwithstanding which we brought our Anchor home, and taking hold again, one of the Arms of the Anchor was broke off.

The next Day I sent my Lieutenant in the Boat, to seek out some securer Place for the Ships, it being impossible to keep afloat where we were. Some *Uskimay* Savages came off to us; I used them civilly, made them Presents, and dismissed them. As soon as I got the Ships secured, I employed all my Officers and Boats, having myself no little Share in the Labour, in trying the Tides, and discovering the Course and Nature of this Opening; and after repeated Trials, for three Weeks successively, I found the Flood constantly to come from the Eastward; and that it was a large River we had got into, but so full of Ice there was no steering the Vessel with any Probability of Safety, while the Ice was driving up and down with the strong Tides.

Here I lay not a little impatient to get out, went several times in my Boat towards the Mouth of the River, and from a Hill that over-looked Part of the *Welcome*, saw that Place full of Ice, so that I found there was no Time lost by our being in Security; however, I sent my Lieutenant and Master, in the eight-oared Boat, to look out for a Harbour near the Entrance of the River, but they found none; and it was no small Miracle they got on Board again, for they were so jammed up with Ice, which driving the strong Tides, would inevitably have stove the Boat to Pieces, and all must have perished, had it not been for an Opening in a large Piece of Ice, into which they got the Boat, and with it drove out of the River's Mouth; but when the Tides slackened, the Ice opened as usual, and they rowed over to the North Shore, so got in with the Flood. I several Times sent the *Indians* ashore to see if they knew any thing of the Land, but they were quite ignorant of it. In this vexatious Condition I continued three Weeks, resolving to get out the first Opportunity the River was any thing clear of Ice, and make what Discoveries I could by meeting the Flood-tide. This River, of which by frequent Tryals of the Lands, Soundings, Tides, &c. I was able to take a Draught, I named the *River Wager*, after the Right Honourable Sir *Charles Wager*.

On the 3d of *August* the River, for the first Time, was a little clear of Ice; and accordingly, in Pursuance of our Discovery, on the 5th by Noon I got into the Latitude 66 Degrees 14 Minutes; we had then got into a new Streight, much pestered with Ice, and on the North-side of which we saw a Cape or Head-land bearing North; we had deep Water, and very strong Tides within four or five Leagues of it; I named this Head-land *Cape Hope*, as it gave us all great Joy, and Hopes of its being the extreme North Part of *America*. Seeing little or no Land to the Northward of it, we turned or worked round it the same Night, and got five or six Leagues to the North by West, before we could perceive any otherwise than a fair Opening; but about Noon the 6th Day, having got into the Latitude of 66 Degrees 40 Minutes, found we were embayed, and, by two in the Afternoon, could not go above three Leagues further; and having tried the Tides all the Forenoon every two Hours 'till two o'Clock in the Afternoon, found neither Ebb nor Flood, yet deep Waters. From this it was concluded, that we had overshoot the Streight on the North-east Shore, from whence the Flood came; and as there was no Proceeding above three or four Leagues further, it was agreed upon by all, to turn back and search narrowly for a Streight or Opening, near where we found the strong Tides.

On the 7th, after we were confirmed the Flood came in at the North-east from the East by South, I went on

Shore in the Boat, and found it flowed fifteen Feet three Days after the Full, and a West by South Moon made high Water. I travelled twelve or fifteen Miles, from Hill to Hill, in Land, 'till I came to a very high Mountain, from whence I saw a Streight or Opening the Flood came in at, and, the Mountain I stood on being pretty near the Middle of this Streight, I could see both Ends of it, the Whole being about eighteen or twenty Leagues long, and six or seven broad, and very high Land on both Sides; but it was all frozen fast from Side to Side, and no Appearance of its clearing this Year, and near the 67th Degree of Latitude, and no anchoring the Ships, being very deep Water close to the Shore, and much large Ice driving with the Ebb and Flood, and but little Room if thick Weather should happen, which we continually expected in those Parts, it was agreed upon in Council to make the best of our Way out of this dangerous narrow Streight, and to make Observations between the 64th and 62d Degrees of Latitude. The frozen Streight I take to run towards which *Bylot* named *Cape Comfort*, and the Bay where *Fox* had named a Place *Lord Weston's Portland*; it is in the Latitude of 66 Degrees 40 Minutes, and 12 Degrees 49 Minutes East from *Churchill*.

Pursuant to this Resolution we bore away, and tried the Tides on the other Side the *Welcome*, founding and observing close in Shore, but met with little Encouragement. On the 11th of *August* I once more saw the Island of *Brook Cobham*, and continued trying the Tides; and still finding the Flood come from the Eastward, and by coasting along the *Welcome* was certain of its being the main Land, though there are several small Islands and deep Bays, and saw several black Whales of the right Whalebone Kind, I worked off and on by *Brook Cobham*, sent the Northern *Indians* on Shore upon the Island, who, at their Return, gave me to understand, it was not far from their Country, and desired I would let them go Home, being tired of the Sea. I kept them with Assurances that I would act according to my Promise, and finding no Probability of a Passage, in two or three Days after I gave them a small Boat, well fitted with Sails and Oars, the Use of which they had been taught, and loaded it with Fire-arms, Powder, Shot, Hatches, and every thing desirable to them; they took their Leave of me, and I sent another Boat for Water, which accompanied them on Shore, the Southern *Indian* being with them.

The Southern *Indian*, who was Linguist for the Northern ones, returned with the Boat; being used to the *English* Customs at the Factory, and desirous of seeing *England*, being a willing handy Man, I brought him with me; and the same Evening, which was the 15th of *August*, I bore away for *England*, thinking to have tried the Tide at *Cary's Swans Nest*, but could not fetch it. On the 20th I saw *Mansells Isle*, on the 21st *Cape Diggs* was in Sight; on the 26th made *Cape Resolution*, and arrived at *Carriston*, in *Pomona*, one of the Islands of *Orkney*. Most of my Men being so very much afflicted with the Scurvy, and otherwise sick and distempered, that I was obliged to leave Part of them behind me, and only wait to impress Hands to carry the Ship safe to *London*.

This Account appeared very clear and very satisfactory, even to Mr. *Dobbs* for some Time; but upon re-considering the Motives which induced him to believe there was such a Passage, the Accounts given him by Captain *Middleton* formerly, and what he delivered upon this Subject in his Journal, he began to suspect that Things were not so clear as they seemed to be, but that somewhere or other there was a Mistake; yet without charging Captain *Middleton* with any Breach of Duty, or so much as suspecting a Design in him to conceal any Part of his Discovery.

7. By Degrees, however, the Scene began to change. Mr. *Dobbs* came into an Opinion, that the Opening to which Captain *Middleton* had given the Name of the *River Wager*, was, in Reality, the Streight he was sent to discover. He suggested this to that Gentleman, who adhered to his former Opinion, that it was a River and no Streight, that it was fresh Water and not salt, and that the Whales which were seen in it, came through the frozen Streight

Streight from the Eastward. But while Mr. *Dobbs* and Captain *Middleton* were disputing this Matter in Letters, a new Affair broke out, which made a great Noise; for some of the Officers who had served under Captain *Middleton* declared positively, that in their Judgment there was a Passage, and that the Captain's Journal was calculated to conceal it. This produced a long Controversy, attended with many personal Reflections on both Sides, into which it is not my Business, nor have I any Inclination, to enter; but shall content myself with giving the Reader what I take to be the most material Part of Mr. *Dobbs's* Charge, as it shews upon what Grounds he believed the River *Wager* to be a Streight, and the Methods which, in his Opinion, Captain *Middleton* had taken to conceal its being thought so; and this I shall give in Mr. *Dobbs's* own Words, that I may not seem prepossessed in Favour of one Side, or prejudiced against the other.

8. "In Captain *Middleton's* going out, says Mr. *Dobbs*, he saw much Ice from Latitude 63 Degrees 35 Minutes to *Cape Dobbs*, as well as to *Deer Sound* in *Wager River*, and in the Streight and Bay near *Cape Hope* this Year; but none was seen in the *Welcome* by *Button*, *Fox*, and *Scroggs*, the several Years they were there at the same Season, though *Button* and *Scroggs* were as high up as *Whalebone Point*, in Latitude 65 Degrees, and *Fox* saw as far from Latitude 64 Degrees 10 Minutes, without seeing any Ice in the Sea, or Snow upon the Land, but saw great Numbers of small Fish leaping, as well as many Whales near *Brook Cobham*. Captain *Middleton* had, during his whole Voyage out from *Churchill* and back again to *Brook Cobham*, very fine Weather, without any Storm, or Frost, or Snow, the Winds for the most Part blowing from the Eastern Quarter, so that he had no Pretence upon his Return to avoid searching the West-side of the *Welcome*. It was these Easterly Winds that Year which carried so much Ice into the *Welcome* from the South-east as well as from the Bay and Streight near *Cape Hope*, all which was forced by the rapid Tide into *Wager River*; and it appears from the Journal, that it was these Winds which caused so great a Quantity of Ice in the River as far as *Deer Sound*, and not from the breaking out of the Ice above in a Fresh-water River as he gave out; and he would have made the Flowing-in of the Tide so far from the South-eastward, to have been a Confirmation of it; whereas, by what he has mentioned in his Journal, it is by all Circumstances a Salt-water Streight or Passage; for the Increase of its Wideness from seven Miles at its Entrance to eight Leagues, and of its Depth from fourteen to eighty Fathoms, the Boldness, Height, and Craggedness of the Coast, without Tree or Shrub, and without any Snow or Ice in the Valleys or Hills, are all Symptoms of its being a Salt-water Passage; but the Number of Whales and other Fish seen above in the Streight, at least twenty Leagues up the River, when none were seen below, or in the *Welcome* or Streight, and Bay above *Cape Hope*, is a Demonstration they did not come under the Ice into *Wager River* from the Eastward, and there being none ever seen in the Bay or Streights of *Hudson*, but by broken Lands on the North-west Coast, it is next to a Certainty that they came from the *Western Ocean* to that Place; for it is contrary to Reason and Fact, to suppose that Whales and other Sea-fish should go up a Fresh-water River, as he affirms it to be; but it was very natural for the Whales to be there, if they come in from the *Western Ocean*, which was not so liable to be frozen as an Inland Bay, for they would push their Way through the Streights and broken Lands, until they were prevented by the Ice, which the Easterly Winds drove into the Streight from the *Welcome* along with the Flood; and this was jammed in among the Islands in the Passage, and appeared to be firm Ice, as it also appeared from the Hills to be so below them to the Mouth of the River.

"This also easily accounts for the Number of Whales seen from *Whalebone Point* to *Brook Cobham*, and even to *Whalecove*, in Latitude 62 Degrees 30 Minutes, where many are caught by the *Eskimaux Indians*, when none

"are seen in the other Parts of the Bay, or in the Streights; for if there be a Communication between the *Western Ocean* and the Bay in this Place, the Presumption is, that it is not by one Passage, but that it may be all a broken Land, interspersed with Islands, as the Islands of *Terra del Fuego* are at the Streights of *Magellan*, which is almost a parallel Instance; and therefore this Streight of *Wager* may not be the only Inlet into the Bay, but from *Whalecove* unto that River may be all broken Lands, with several Sounds among the Islands which are mentioned by *Scroggs* and *Fox*, and cannot be controverted from this Journal; so that the Whales might get to that Part of the Bay sooner, as there was no Ice there to obstruct their Passage, when there was much Ice in the *Welcome* and East Entrance of *Wager Streight*, which prevented these Whales getting any farther than *Deer Sound*. This, I think, makes it highly probable, that there is a better and easier Passage Southward of *Cape Dobbs* betwixt that and *Whalecove*, in Latitude 62 Degrees 30 Minutes, where there is no Ice to obstruct the Passage from the Middle of *June* to *October*; and if the Trade was once opened, this might be discovered by any Ships who would go there to fish for Whales, or would trade with the Natives for Fin or Oil, who might follow them into Inlets, through which they come into the Bay; and this may be done without wintering in the Bay; for they may return any Time in *September* or *October*, safe from any Obstruction from the Ice."

The only seeming Objection to this, and which gave a Hand to Captain *Middleton* to represent *Wager Streight* as a Fresh-water River was, the Tide flowing into it from the Eastward, when if it had been a Streight, he imagined he might have met a Tide of Flood from the Westward, and therefore represented it as if the Ice was but breaking up in the River after he had entered it. But since this is a Streight, and not an immediate Communication with the *Western Ocean*, he could not expect to meet the Western Tide 'till he had got half Way through the Streight; for each Tide flows up its own End of the Streight, and meet in the Middle. This is not only founded upon Reason, but upon Fact, in the only parallel Instance we know, that is, in the *Magellanic Streight*; though, by Appearance, this Streight is a greater and bolder Streight than the other.

The Tide at the North-east Entrance of *Magellan Streight* flows from the Eastward, and rises four Fathoms before it comes to the first Narrow, which is but half a League wide, and from thirty to thirty-five Fathom deep; after a League or two it increases to six or seven Leagues wide, to the second, where it is about a League wide, and thirty Fathom deep. Within the second Narrow it increaseth again to five or six Leagues wide, and the Tide still flows from the Eastward, and rises about ten Feet. In the middle Channel, about thirty Leagues within the Streight, it is two hundred Fathom, and the Channel but three Leagues wide, and from thence to the Middle of the Streight it lessens to two Leagues wide, and about a hundred Fathom deep, and the Tide still flows from the Eastward for above fifty Leagues. As they come near the Middle of the Streight, the Current of the Tide is not above an Hour at each Tide, and the Tide rises nine Feet. Near *Cape Quad*, beyond the Middle of the Streight, it is but two Leagues wide, and for about thirteen Leagues farther it is rather less, sometimes not four Miles wide, from whence it gradually widens to the West Entrance, where it is five Leagues wide: So that *Wager Streight* is much larger so far as they were in it, which was about thirty Leagues; it being by the Account, as mentioned in the Journal, six or seven Leagues wide, and eighty Fathom deep; which, if there be no other, is a noble Passage. But there is a great Probability of there being a better and safer Passage to the Southward of *Whalebone Point*, by which the Whales get into that Part of the Bay.

Thus, says Mr. *Dobbs*, from the former Accounts, and what has been divulged by Captain *Middleton* in his Journal, there seems to be strong Presumptions of a Passage. But after shewing what he has concealed, and falsified in his Journal,

nal, and his whole Conduct from his going to *Churchill*, until his Return to *England*, and even since his Return, it will appear plainly that he intended to serve the Company at the Public Expence, and contrived every Thing so as to stifle the Discovery, and to prevent others from undertaking it for the future, so as to secure the Favour of the Company, and the Reward he said they promised him before he began the Voyage.

As to his Declarations and Conduct during the Voyage, it appears by undeniable Evidence, that he declared, in Presence of some of his Officers, to the Company's Governor at *Churchill*, that he should be able to make that Voyage, and none on board him should know whether there was a Passage or not, and he would be a better Friend to the Company than ever.

The Lieutenant finding one of the Men at the Factory, who very well understood the Northern *Indian* Language, and would have been of great Use upon the Discovery, offered to take him with him at his own Risque, saying, he would answer it when he came back, it being for the Good of the Service they were upon; but the Captain would not allow of it, for fear of disobliging the Company. The Captain in going Northward from *Churchill*, never once went ashore, nor sent his Boat to look out for any Inlet, or try the Tide, having only once tried the Current at Sea in Latitude 63 Degrees 20 Minutes, where he found a very rapid Tide, although he found much Ice to the Northward, and had Time enough before he entered the Ice, to try all the Coast, but stood off to the Eastward, until he passed *Cape Dobbs*, and though he then found an Opening North-westward, he only went in with a View to shelter his Ships, but not to look out for a Passage; and therefore, when he went in, got to the North-east Side out of the Tide instead of out of the South-west Side, where he ought to have gone, if he had pushed for a Passage; and though he lay there three Weeks, he never but once went cross to the Western Shore, and that only one Day or two before he quitted the River, pretending he could not do it for the Ice; and even this he does not mention in his Journal, although he found there an excellent Cove for sheltering his Ships. He once pretended to cross the Streight from *Deer Sound*, where he had no Ice to prevent him; but after going two Leagues he returned and said, it was too far, and he had tasted the Water, which was fresh, asking the Boat-men if it was not so, which they contradicted, saying only, it was not very salt. When the Lieutenant went up to *Deer Sound*, he discovered from a Mountain an Opening South-westward, upon the other Shore, ten Leagues distant betwixt a high and low Headland, and also observed the Ice there, when it was a Quarter Flood at *Wager River*, move down the River against that Tide. Upon his mentioning this to the Captain, he was laughed at, who asked him, From whence that Tide could come? and no farther Enquiry was made into it.

Afterwards, when from the Numbers of Whales, and Breadth and Depth of the River, it was given out among the Ship's Company, that they believed it was a Streight and no River, he rated several of them for pretending to say so against his Opinion, saying, his Clerk was a double-tongued Rascal; that he would cane the Lieutenant, broomstick the Master, and lash any others who should concern themselves about the Voyage, and threatened that if any kept private Journals, he would break up their Boxes, and take them from them; and though he allowed his Clerk to take the Bearings of the Land, and Prospects in other Parts of the Voyage, yet, when in the *Wager River* and at the *Welcome*, he forbid him from taking any. This happened when the Lieutenant and Master were down the River to look out for a Cove for the Ships, when they should sail out of the River. When they returned, he, imagining that Rumour would turn out to his Prejudice, in case no farther Enquiry was made about its being a Streight or River, said they might go up and try the Tide, and see if there was any other Way out into the *Welcome*, which was into the Bay, not into the *Western Ocean*; but by his Warrant limitted them to go to *Deer Sound*, or thereabouts, which was only where he had been himself before, and ordered

them to come back with the utmost Dispatch the Nature of the Service would allow. This was the 28th of July. When they were gone he said, he supposed the Lieutenant would bring back some romantic Account of a Streight or a Passage, but for his Part he would not take the Ships a Foot farther; and accordingly before their Return unmoored, and was preparing to warp out of the Cove, which he did the Morning after they returned. The Lieutenant, upon his Return, gave the following Report under his Hand, viz. July 27, 1742, I was ordered with the Master to take the six-oared Boat, and to go up *Savage Sound* as high as *Deer Sound*, and try the Tides. I found that, the Flood there comes from the River *Wager*. It flowed there ten Feet Water.

We then sailed from *Deer Sound* from the high bluff Land on the West-side of the River *Wager*. The Course from the Islands off the North-side of *Deer Sound* is North-West, and North-West by North. By Compass Variation allowed West by North. We founded all the Way over, and had no Ground with a Line of sixty-eight Fathom to the high bluff Land. We then ran up a Branch of the main River, and founded and found fifty Fathom one third, over that Branch; there were several Islands in it founded about a League off an Island on the North Side, and found thirty Fathom Water, in running between the Islands and the supposed Main, which was on the West-side of that Branch; the Freshes suddenly turned against us, the Boat altering the Land very much before, founded, and had no Ground at sixty-eight Fathom; as we run up it we founded near a small Island, and had twenty nine Fathom. We steered West North-west, between the Islands and the West Land, by Compass (West by South) there being several Islands in the *Fair Way*, and no Ground in the Middle of the Channel at sixty eight Fathom. We went about fifteen Leagues above *Deer Sound*, and saw a Fresh or Run of Water coming against us; and the Wind being fair, I was afraid of staying any longer, for fear of hindring the Ships from going to Sea; there is a great Probability of an Opening on the West-side, by the coming in of the Whales; but I could not go higher up to try it, for the above-mentioned Reasons.

We went to the Top of a high mountainous Land, from whence we saw a great Run or Fall of Water between the West Land and the Islands. It was very narrow, and, seemingly, not a Mile broad; and at the same Time saw a fair Channel or Streight to the Northwards of the Islands, with Land on both Sides, as high as the *Cape of Good Hope*, running away to the Westward, with many bluff Points and broken Lands; in coming down we saw several very large black Whales, playing about the Boat and ashore.

August 1.
1742.

John Rankin.

This being a strong Proof of an open Channel or Streight going to the Southward of a West, the Captain thought it too flagrant, and therefore there being some little Variation between his Account and the Master's, made them cook up the following Report between them, which both were to sign; which being not so particular, did not appear so strong for the Passage. It run in these Words:

Pursuant to an Order from Captain *Christopher Middleton*, Commander of his Majesty's Ship the *Furnace*, bearing date the 27th of July, 1742, We whose Names are hereunto subscribed, took the *Furnace's* Six-oared Boat, and went from *Savage Sound*, where his Majesty's Ships, *Furnace* and *Discovery*, then lay; and on the 28th, at one in the Morning, arrived at *Deer Sound*, where we tried the Tide, and found the Flood came into that Place from the River *Wager*, and rose at that Time ten Feet. At six o'Clock the same Morning we left *Deer Sound* (where we put the two Northern *Indians* ashore to kill some Deer) and sailed for a high bluff Land, on the North-west Side of the River *Wager*. Our Course from the Islands on the North Side of *Deer Sound*, to the high bluff Land, was North-west

west by North, by Compass. We sounded frequently, and had no Ground with a Line of sixty-eight Fathom, all the Way over. When we were a-breadth of the high bluff Land, we steered West-north-west keeping the Mid-Channel, and still found no Ground at sixty-eight Fathom, excepting some Islands that lay in the fair Way, about one third over the River, and thirty Fathom within a League of one of them. This Course we kept until we got about fifteen Leagues from *Deer Sound*; but finding the Tide or Fresh against us, and the Wind coming fair, we were afraid of staying any longer, for fear of hindring the Ships from going to Sea. However, we came to a Grapnel with the Boat, and went up a high mountainous Land, where we had a fair View of the River, from whence we saw a great Run or Fall of Water, between the supposed main Land, and the aforesaid Island, very narrow seemingly, not a Mile broad, about a League from where the Boat lay. But to the Northward we discovered a large Collection of Waters, in which were many Islands, and high mountainous Lands on both Sides of it; the West-side of it having many bluff Points and broken Lands. In our Return towards the Ships, and not far from *Deer Sound*, we saw several large black Whales, of the Whale-bone kind, some of which came very near the Boat; so that upon the whole, we think there may be some other Passage into the Sea, from the River *Wager*, besides that which his Majesty's Ships, *Furnace* and *Discovery*, came in at; and imagine there is a great Probability of an Opening or Inlet into the Sea, somewhere on the East-side thereof, though we cannot fix the Place. Given under our Hands this 1st Day of *August*, 1742.

John Rankin.
Robert Wilson.

It may be easily seen with what View the Report was altered, the most material Points being changed; for when they got beyond the North-west Bluff, instead of saying that the Current or fresh Water suddenly turned against them; it is here said, being against them, the first being a Tide, the other a Stream. Again, instead of mentioning a fair Channel or Streight over the Islands, running between the high Lands to the Westward, it is here altered to a large Collection of Water to the Northward, in which were several Islands with high Land on each Side of it; the West-side having bluff Points and broken Lands, without determining the Course of the Streight to the Westward. And instead of saying there was a great Probability of an Opening on the West-side, by the coming in of the Whales, it is here altered to, Upon the whole, we think there may be some other Passage into the Sea, from the River *Wager*, besides that which his Majesty's Ships came in at, without determining it to the Westward, as in the other; but on the contrary, to make it seem otherwise, they say, and imagine, there is a great Probability of an Opening or Inlet into the Sea, somewhere on the East-side thereof, though we cannot fix the Place. This Change seems wholly calculated with a View to leave it undetermined, that the Captain might have it in his Power to say, that the Opening was to the Northward or Eastward, from *Baffin's Bay*, and pretend that the Whales came from thence. But both the Lieutenant and Master have since confirmed that the Streight beyond the Islands, was four or five Leagues wide, free from Ice, and its Course ran West South-west; and the Master having seen further than the Lieutenant, from the Top of a Mountain, where he killed two Deer, was for going further; but the Lieutenant, his Provisions being spent, and he having exceeded his Orders by fifteen Leagues at least (for he computed it twenty Leagues, but the Captain would not allow it to be so far) and had also out-staid his Time, he was afraid he should be put in Arrest, if he proceeded farther, and durst not proceed. However, he took a Bottle of Water filled there at the Shore, and two Bottles filled further down the Streight Eastward. And the Captain, when he came aboard, owned that the Bottle of Water, taken up at the Western End of the Streight, near the Current or Fall of Water, was the saltest, which

the Master said was as salt as any he had tasted in those Seas, which was also confirmed by others who had tasted it aboard. The Lieutenant is now convinced that it was a Tide or Ripling, which came from the West South-west, which stopped the Way of the Boat, and made them come to a Grapnel, and that it was the Tide of Flood; for it was then flowing Water, and flowed six Feet when he was ashore. But the Captain, under pretence it was brackish, would not pursue the Discovery of that South-Western Streight or Passage, but immediately warped out of the Cove; and on the 4th of *August*, the best Month in the Year to perfect the Discovery, he sailed out of the River to make the Discovery North-eastward, the quite contrary Course he should have taken, according to his Instructions. Nor did he call a Council to warrant him for quitting the Discovery; though on all Emergencies, or where it was likely to turn out to Advantage in promoting the Discovery, he was directed to call one, and act for the best of the Service he went upon; but quitted the Passage without Advice, by his own Authority and Pleasure; pretending all the while he was in the Passage, to regret that he could not get out off the River for the Ice in it and the *Welcome*, in order to prosecute the Discovery. After this, in order to have an Excuse, and to pretend that he had followed his Instructions, which was to proceed, without loss of Time, to *Whalebone Point*, and there to endeavour to meet the Tide of Flood, on either Side of that Point he found the best Passage, in case it were an Island, whether the Flood came from the North-west or South-west; and if he found, after doubling the Cape, either a Streight or open Sea, to pursue his Course, still meeting the Tide of Flood; though this limited him to meet the Tide, if it came from any Part to the Westward, yet he finding the Tide did not meet him, but followed him into *Wager River*; and having taken no Pains to know how the Flood was at the West End of the Streight, beyond *Deer Sound*, despising the Lieutenant's first Report, which mentioned a Tide from the West South-west meeting them; thought if he could find a Tide, or have a Probability to account for a Tide's coming from the North Eastwards into *Wager River*, he might then say he followed his Instructions in meeting the Tide, although it came from the North-east; and accordingly, without allowing any Boat to go ashore to try the Tide, until he himself landed at *Frigid*, at what he calls the *Frozen Streight*, he, in his Journal from his own Observations of the Current, always affirms the Tide of Flood came from the North-east, by *Cape Hope* or *Wager River*; and affirms, that at *Cape Frigid* a West-by-south Moon made high Water, and that it flowed from the South Eastward, through a frozen Streight, from four to seven Leagues wide; and accordingly he has laid it down so in his new Chart, since his Return, and pointed all the Darts in it; shewing the Course of the Flood through the *Frozen Streight*, up into *Wager River*, and as far as *Brook Cobham*, along the *Welcome*, where he pretends the South Eastern Tide meets it.

9. Now I shall plainly make it appear from Reason, and from the Observations of experienced Men aboard him, his own Officers, and from his Caution in preventing any aboard him from knowing the Time, Current, and Height of the Tide, by his making his Observations only aboard, and regulating and minuting them down only in his Log-Book and Journal, only as he thought proper; that there was no such Tide from the North-east, and that he must have known that there is no such Tide; but endeavoured to conceal the true Tide from his People aboard. I shall also shew that the Tide of Flood came the contrary Way from the South Westward, near *Brook Cobham*, and so went up Part of *Wager River*. I shall also shew there was no such *Frozen Streight* as he has laid down in his Chart, but the whole is falsely laid down, and the only Streight there was round the Island he stood upon, which was but three Leagues wide, and full of smaller Islands, which Streight went round the Island from North by the East, and came out again by the South and West, between the Island he was on, and the low Beach of *Cape Hope*;

Hope; so that to make out the Point, that he had so far followed his Instructions in meeting the Tide of Flood, he has manifestly and falsely imposed upon the Public in his Chart, by making a Streight and Tide where there was none.

To shew that he has given a false Account of this Tide and frozen Streight I must observe, That when he sent down the Lieutenant and Master to look out for a Cove at the Mouth of *Wager River*, they were inclosed in the Ice, and drew up the Boat upon a large Piece of Ice, which was carried by the Tide of Ebb to the South-eastward, close by the Shore, about *Cape Dobbs*; and when the Tide slack'd they rowed over with the Flood to the North Shore, to get into the Eddy out of the Current, and next Day went up the River. Again, When the Ship sailed up the River they were becalmed, and were afraid of being forced up again by the Return of the Flood; upon which they towed with their Boats ahead, and plied with the Ship's Oars with all their Force to the North-eastward to get out of the way of the Tide of Flood; but if the Flood had come from the North-east, they would have been just in the way of the Tide of Flood, and to have avoided it they ought to have steered their Course South-east, to *Cape Dobbs*; so that both the Accounts tally, that the Flood came from the South-west round *Cape Dobbs*. At half an Hour after two, on the 6th of *August*, he ordered the Lieutenant ashore at the low Beach, to try the Tide, being then four Miles from the Shore; at three he made the Signal for him to come on aboard before he got to the Shore; but he was so near as to report, That the Tide had fallen two Feet; so that he seemed to repent his having sent him to try the Tide, lest he should find a contrary Tide to what he gave out. Tho' the Lieutenant, when he got aboard, told him it was ebbing Water, and that the Ebb went to the South-westward, yet he minuted it down in his Log-Book, and printed it so in his *Defence*, that it was flowing Water, and the Flood came from Eastward; but in his *Journal* he says, it had ebb'd two Feet, and the Flood came from the Eastward.

The Captain's Clerk, Gunner, and Carpenter, went ashore at *Cape Frigid* the 8th of *August*, about ten in the Morning; and after going fifteen Miles into the Country returned to the Boat about seven at Night, when he found it was low Water, and rose fifteen Feet, which being three Days and a half after the Full Moon, a West-south-west Moon made low Water, and consequently a North-north-west Moon made high Water; and having ascertained that a West by North Moon made high Water in *Wager River*, the Tide at *Cape Frigid* being five Points later, could not raise that Tide; for the Tide, the further it flows, is always the later in flowing; and therefore the Tide in *Wager River*, being at least three Hours sooner than at *Cape Frigid*, it could not possibly be caused by any Tide from thence, nor could the Tide near *Brook Cobham*, where a West Moon made high Water, be caused from that Tide for the same Reason, it being above four Hours sooner than the Tide at *Cape Frigid*.

It appears also, that there was no Tide or Current in the Bay above *Cape Hope*; and the Gunner, who was ashore with the Captain, went with the Carpenter two or three Miles farther than the Captain and Clerk, even to the very Shore of what he called the *Frozen Streight*, and consequently knew it better than the Captain. He says it was an Island they were upon, and the Streight was only an Arm of the Sea that surrounded the Island, and detached it from the low Beach; that it was not above three Leagues wide on the East side, and full of Islands; that the Ice was frozen fast from Side to Side; so that it is impossible so great a Quantity of Water could pass through that Passage if it had a Communication with *Hudson's Streights* by *Cape Comfort*, as would fill so large a Bay as that above *Cape Hope* (the Streight from *Cape Hope* to *Wager River*) all that River for thirty or forty Leagues, which was from four to twelve Leagues wide, and the whole Coast of the *Welcome* to *Brook Cobham* above sixty Leagues, and that from a Streight which was but three Leagues wide, and had many Islands in it; so that the Streight, exclusive of the Islands, was not

probably four Miles wide. Besides, had so much Water flowed from that Streight, as he has laid down in his Chart, it must have caused a very rapid Current in the Bay above *Cape Hope*, it being in the direct Course of the Tide. The Captain of the *Discovery* also, in his Answer allows, that the Opening of the Streight he saw, which was betwixt *Cape Frigid* and the *Low Beach* was not above three Miles wide, and no such Tide flowed there as in *Wager River*, although it was so narrow in that Place.

This also accounts for that Arm of the Sea's being frozen which surrounded the Island, because there was no Tide or Current there to break it up. It also appears from the Lieutenant who was left on board to command when the Captain went ashore, that, at eleven o'Clock, after the Captain left the Ship, a strong Current forced him to northward, which must have been the Flood, as it was not high Water until one o'Clock. And it appears also the same from the Men who were left with the Boat; for upon the Captain's Return to the Boat he asked them which way the Flood set, and they said to the Northward; which he contradicted, and said, they were mistaken, for it could not be so. So that from all these Facts, as well as from Reason, it appears, that the Tide of Flood came from the South-westward to that Place and the River *Wager*; and that the Tide and Streight which he has laid down in his Chart, and published in his Journal, is false, and an Imposition upon the Public, and only calculated to serve his Purpose of concealing the Passage, by endeavouring to make out that no Tide came from the Westward, but all through *Hudson's Streight* and *Baffin's Bay*; and that *Wager* was a fresh Water River, and that the Whales seen there came all in through that frozen Streight from *Baffin's Bay* or *Cumberland's Inlet*, he having allowed that none came in through *Hudson's Streight*, or round *Cary's Swans Nest*.

But as a further Confirmation of this South-western Tide, and that it came from the western Ocean, it appears that, after the Captain had neglected looking into the Bays and Inlets in the West side of the *Welcome*, from *Cape Dobbs* to *Marble Island* (although it had been ordered in Council) in these Words, "It was agreed upon " to make the best of our Way out of this cold, dangerous " and narrow Streight, and to make further Observations " between the Latitude of 64 and 62 Degrees on the " North-side of the *Welcome*, having seen large Openings, " broken Land, and Islands, with strong Tides; but " had not an Opportunity of trying from whence the " Flood came, in our Passage hither. Given under our " Hands this 7th of *August*, 1742.

" *Chr. Middleton.*

" *J. Rankin.*

" *Rob. Wilson.*

" *Geo. Axx.*

" *J. Hodgton.*

" *W. Moor*, Master of the *Discovery*."

When he came to *Marble Island*, which he called *Brook Cobham*, having called another Island so upon his going northward, the same *Fox* had called so before, on the 12th, at three in the Morning, he sent the Lieutenant ashore to try the Tide, and to look out for a Place of Safety, to water the Ships before they returned to *England*. The Island was seven Leagues long and three over in the broadest Place. It lay East by South, and West by North, the true bearing Variation allowed, and about three Leagues from what they called the *Western Main*. The Lieutenant on the South-side found an excellent Cove safe from all Winds, with a small Island lying cross the Entrance: He sounded without and within the Cove, and found two and a half Fathom in the Entrance at low Water, and deep and safe lying within it; whilst he was sounding, taking a Draught of the Cove, and upon the Island taking a View of an Opening, he observed on the West Main the *Indians* killed a Deer and a white Bear; and about eight at Night, as they were taking off the Bear-Skin, a strong Tide of Flood came from the North-west by the Compass, and had almost carried the Bear away; which proves that the Tide of Flood came from the Westward. This I shall give

give in his own Words, as he minuted it down at *Marble Island* at the same Time it happened, annexed to the rough Draught he made of the Cove, viz.

This is the Cove upon *Brook Cobham* or *Marble Island*; it was almost dark; my Men were taking the Skin off the Bear they had killed in the Water.

The Tide came suddenly from West-north-west, round the North-west-end of the Island, upon us, and flowed so fast that we had almost lost the Bear; we were forced to throw it into the Boat, our Men up to the Middle in Water, by the sudden Flowing of the Tide; as all the Men can prove.

I am very certain that there is a great Probability of a Passage or Streight leading to some Western Ocean, from the above Reason; for I did observe an Opening to the Westward of *Marble Island*, and desired I might go there: But he told me it did not signify much to go thither; but if I had a Mind to go to *Marble Island* for Water, I might. So I did not come near the Opening I perceived to the Westward; it was almost calm all the Day we lay there.

August 12,
1742.

John Rankin.

After the Lieutenant returned aboard, the Master was sent ashore; upon his Return, he told him, the Tides rose there very high, and wanted to go ashore again, to observe them, which he refused, under Pretence he had staid too long ashore before. It appears from the Journal, that by the Marks on the Shore, it sometimes rose there twenty-two Feet.

It is allowed also, that a North-westerly Wind, at *Churchill*, always raised the Tides higher at Neap Tides, than a South-easterly Wind did at Spring Tides.

The two Northern *Indians*, who were aboard Captain *Middleton*, were very intelligent Men; and the other *Indian* being a very bad Interpreter for them, Mr. *Thompson* the Surgeon, who could speak some of the Southern *Indian* Tongue, was endeavouring to learn their Language, and to teach them *English*; and was making out a Vocabulary of their Language, which the Captain observing, threatened to use him ill, or crop him, in case he had any Correspondence with them; so that he was obliged to meet them in private; and for that Reason could not know so much from them, as he otherwise would; but from the best Account he could get from them, they told him, that the Copper Mine, which they generally went to once in two Years, was not far from the Coast where they were, between Latitude 62 Degrees and 64 Degrees; that it was upon an Arm of the Sea, the Water being salt; that they were five Days in passing it in their Canoes; that it was so deep, that if they cut a Deer's Skin into Thongs, it would not reach the Bottom; that the Streight went towards the Sun almost at Noon, and that there were many large black Fish in it, spouting up Water. *Lovegrove*, one of the Factory Men at *Churchill*, who had been often at *Whalecove*, in Latitude 62 Degrees 30 Minutes, in the Company's Sloop, trading for Whale-Fin with the Natives, also told them, that the Coast there was all a broken Land and Islands; and that upon his going upon one of these Islands, he saw an open Sea Westward of it. *Wilson* also, who has been Master of the Sloop which goes to *Whalecove*, for several Years, told, at *Churchill*, that he had the Curiosity to pass in through those Islands, near the *Whalecove*, and found the Opening enlarge itself South-west, and became so wide, that he could see no Land on either Side. Yet though the Captain might have known this, and much more, which he had from *Norton* and *Scroggs's* Crew, as well as Accounts from the *Indians* before this Voyage to the same Purpose, he never once made an Essay to land upon the Western Coast, or to look out for a Western Tide or Inlet.

What was still as unpardonable as neglecting the Discovery, was his putting the two Northern *Indians* ashore, at *Marble Island*, against their Inclinations, when they were desirous to come to *England*, in a very bad Boat he got at *Churchill*, which they did not know how to manage in an Island three Leagues from the supposed

Main; the *Eskimaux Indians*, their Enemies living upon that Coast, and some hundred Miles distance from their own Country, infomuch that one of them, who was about forty Years old, when he parted with Mr. *Thompson* the Surgeon, with Tears, told him, he did not know what would become of them. He told them, he was very much concerned at it, but since it was the Captain's Pleasure, it must be complied with.

The Captain gave them some Provisions, Ammunition, Hatchets, and Toys; but leaving them in a desolate Island, with a bad Boat among their Enemies, at so great a Distance from their own Country, was unpardonable; when by a Day or two sailing to the Southward, he could have landed them in a Country they knew, where they had no Enemies to be afraid of. The Excuse he made for not bringing them to *England* was, That upon his Return his Friends might be out of the Admiralty, and as he had no Orders to take them home, they would be left a Charge upon him; and when they learned to speak *English*, they would be talking of the Copper Mine and Passage, and would put the Public to the Expence of sending out more Ships in quest of it. And this, no doubt, was the true Reason for that Piece of Cruelty; for he thought if they came to *England*, he should not be able to conceal the Passage.

It is, however, to be observed, that Captain *Middleton*, being an excellent Seaman, has very vigorously defended himself against all these Objections and Imputations; and has offered many plausible Arguments to destroy the most weighty of those Reasons alledged by Mr. *Dobbs*, to prove, that what he calls a River, ought to be accounted a Streight. Thus, in answer to what Mr. *Dobbs* says of its increasing in Breadth and Depth the farther they advanced, Captain *Middleton* observes, that this happens frequently in Rivers, more especially on the *Swedish* and *Norwegian* Coasts; where, though they are narrow, and have no great Depth at their Entrance, perhaps, but ten or twelve Fathoms, yet they afterwards grow wider, and discover no Ground with Lines of two or three hundred Fathoms.

All this may be, and yet this Inlet may be a Streight and not a River; for though there may be Rivers with these Properties, yet Experience shews us that they belong also to Streights; and though the Argument, urged by Mr. *Dobbs*, must be allowed not to be conclusive, if what the Captain says be true, yet it still has great Weight, taking it in Conjunction with the other Reasons offered; because if it is a Streight, we should naturally expect to find things so; and therefore their being found so, still argues this to be a Streight, till some positive Reason can be shewn that it is not so. In short, what Mr. *Dobbs* says amounts to no more than that probably it may be a Streight; and what the Captain answers, allowing it to be true, proves no more than that possibly it may be a River; not that it is so.

As to the Height of the neighbouring Lands, the Captain says, that the Lands about the *Swedish* and *Norwegian* Rivers, are as high as any he saw about the River *Wager*. But allowing this also, it is not at all conclusive. If the Lands had been low, it would have been very improbable that this should be a Streight; but as it is on all Hands allowed that they are high, it is very probable it may be so; the Proof makes one Way as strong as the other, but then it depends entirely on the Strength of the Captain's Memory; and it would have been stronger in his Favour, if he had mentioned the particular Rivers, on the Banks of which he had seen as high Lands, as he owns to be on this.

As to the want of Trees and Shrubs, Captain *Middleton* says, that all who have travelled the Country between the Latitude 58 and 66 Degrees 30 Minutes by Land, agree, that higher than 61 Degrees they saw neither Tree nor Shrub, but only Moss, even among fresh Rivers and Lakes. This again is only a general Assertion, and does not at all prove that it is not a Streight; perhaps, however, Trees and Shrubs might be shewn to grow on the Banks of Rivers in a more Northerly Latitude, at least some Travellers tell us so; but the thing is not very material either Way; but if there had

been Trees or Shrubs, they would have been esteemed Proofs of its being a River; and therefore, among the Arguments of its not being so, there was no Impropriety in mentioning the Want of Trees and Shrubs on all the Lands near it.

As to the black Whales, Seals, and Sea-Horses, seen at twenty Leagues above the Entrance, the Captain gives a very large Return. He says it does not appear, from any Journals, Reports, or Answers, that one Whale was seen higher than *Deer Sound*, which is but fifteen Leagues up; whereas the Westward is above thirty Leagues; or that one Sea-Horse or Seal was seen in any Part of the River; but that several were seen just without the Mouth of the River, in the *Welcome*, is attested by the Log-Book, and by the Affidavits of *Towns*, *Van So-beric*, and *Grant*; and Captain *Middleton* has traded for Whalebone in all Parts of the Bay and Streights where the *Eskimaux* frequent, which could not be if the Whales, from whence they get it, were not killed there; because in ten or twelve Days after they are dead, the Bone all drops from their Mouths; all which amounts, together, to almost a Demonstration, that the Whales, both in the Bay, and *Wager River*, come from the North-east; which is also somewhat confirmed from the great Number of *Indian Store Houses*, of Oil, Fin, and Blubber, not above eight Leagues upon the North-east Coast of the River; whereas their proper Habitations are on the Main, on the other Side the River. Moreover if these Whales come out of any Sea from the Westward, they would have been seen in plenty the higher they had gone up, which was not so. However, Conclusions drawn from Whales being seen in any Place, are, at the best, but very precarious.

In Reply to this, it is necessary to take Notice of a Fact which seems directly opposite to the Account given in Captain *Middleton's* Answer. Mr. *Rankin*, in his Report, has the following Passage: "We went above fifteen Leagues above *Deer Sound*, and saw a Fresh or Run of Water coming against us; and the Wind being fair, I was afraid of staying any longer, for fear of hindering the Ships from going to Sea. There is a great Probability of an Opening on the West Side, by the coming in of the Whales; but I could not go higher up to try it, for the above-mentioned Reasons." In the amended Report this Passage is entirely left out; for as to what is said therein, I mean in the amended Report, signed by *Rankin* and *Wilson*, of their seeing large black Whales in their Return from the Ships, not far from *Deer Sound*; this is also contained in the original Report, wherein Mr. *Rankin* says, *In coming down we saw several very large black Whales playing about the Boat, and ashore*; so that nothing can be plainer, than that the Meaning of *Rankin*, was to distinguish between those Whales, the Sight of which induced him to believe there was an Opening to the West, and the black Whales that he saw in returning to the Ships. And why the former Whales were left out in the amended Report, is a Matter that deserves Consideration; but it is very plain, that as it stood in the original Report, it is irreconcilable to the Captain's Answer; and therefore he was in the right to guard against it, by saying, *However, Conclusions drawn from Whales being seen in any Place, are at the best but very precarious*. It may be so; but it is very evident that Mr. *Rankin* concluded from thence, that there was an Opening to the West; and those who incline to believe him, will conclude so still, though, as the Captain says, that Conclusion be but precarious. And yet their other Conclusion of their coming in from their *Frozen Strait* must be allowed to be altogether as precarious.

As to the last Reason assigned by Mr. *Dobbs*, viz. from broken Lands North-westwards, and a vast Collection of Waters, full of Islands on the South-west-side, this Answer is given by Captain *Middleton*, viz. It is most likely that these watery Places, seen at a Distance, are the same Sort of Lakes of melted Snow from the Mountains, as were every where seen from the Eminences they ascended in that Country, to over-spread the Vallies; but be that as it will, there was no coming nigh them for the Rapidity of the Water-falls, that hindered the Boat from

going higher up then she did, and the immense Quantities of Ice along the South-west Shore.

This Answer is plainly conjectural, and Captain *Middleton* only offers a Supposition to refute what others had affirmed to be a Fact; for Mr. *Dobbs* tells us, that when the Lieutenant and another Person were examined before the Lords of the Admiralty, they positively affirmed that they had seen a fair open Channel, with Lands on each Side, as high as the *Cape of Good Hope*. It likewise appears, that the Lieutenant was pressed to go up this Channel; and the Reason he gave for not complying with this Request, was, that he had already exceeded his Orders in extent of Time, and of the Discovery, which he had prosecuted farther than he was directed to do; and therefore declined what was proposed from an Apprehension of being punished upon his Return, if he had complied with it.

10. But we are now to come to those Arguments, which have been produced by Captain *Middleton* in the Affirmative, and in Proof of his Assertion that this is no Strait, but a Fresh-water River. In the first Place, he says, that he conceives it can have no Communication with the Sea Westward, because the Tide of Flood comes in at its Mouth Eastward. To this Mr. *Dobbs* replies, that it was to be considered as a Strait, like the *Magellan*, and therefore he was not to look for the contrary Tide, till they were in the Middle of the Strait. In Confirmation of this, Mr. *Dobbs* farther observes, the Tide at the North-east Entrance of *Magellan Strait* flows from the Eastward, and rises four Fathom before it comes to the first Narrow, which is but half a League wide, and from thirty to thirty-five Fathom deep; after a League or two it increases to six or seven Leagues wide to the second Narrow, where it is about a League wide, and thirty Fathom deep; within the second Narrow it increases again to five or six Leagues wide, and the Tide still flows from the Eastward, and rises about ten Feet. In the Middle Channel, about thirty Leagues within the Strait, it is two hundred Fathom, and the Channel but three Leagues wide; and from thence to the Middle of the Strait, it is lessened to two Leagues wide, and about one hundred Fathom deep, and the Tide still flows from the Eastwards for above fifty Leagues. As they come near the Middle of the Strait, the Current of the Tide is not above half an Hour at each Tide, and the Tide rises nine Feet near *Cape Quad*; beyond the Middle of the Strait it is but two Leagues wide, and for about thirteen Leagues farther it is rather less; sometimes not four Miles wide; from whence it gradually widens to the West Entrance, where it is five Leagues wide, so that *Wager Strait* is much larger; for so far as they were in it, which was about thirty Leagues, it being by the Account as mentioned in the Journal six or seven Leagues wide, and eighty Fathom deep; which if there be no other, is a noble Passage; but there is a great Probability of there being a better and safer Passage to the Southward of *Whalebone Point*, by which the Whales get into that Part of the Bay.

The second Reason offered by Captain *Middleton* is, because of the gradual Declension in the rising of the Tides, which flowed eighteen Feet at the Entrance, but thirteen at *Deer Sound*; and the highest the Boat could go for Water-falls, was no more than five or six Feet. But whoever considers what is before replied to the Argument, drawn from the Tides coming in from the Eastward, will very easily see, that allowing all the Captain says to be true, this is very far from being conclusive; since it appears to agree well enough with what happens in the Strait of *Magellan*; and, besides all this, Mr. *Dobbs* says, that in the Captain's Journal, the Tide at *Savage Sound* is said to have rose but twelve Feet six Inches, instead of fifteen, and at the same Time it rose ten Feet in *Deer Sound*. He likewise says, that when they were behind the *West Bluff*, they did not stay a Tide, and could only conjecture how much it flowed; nor did they observe in their Report, whether the Eastern or Western Current was Ebb or Flood; though upon Recollection, the Lieutenant was positive it was the Tide of Flood from the Westward, which brought the Boat to a Grap-

a Grapnel, it having flowed six Feet immediately after he anchored the Boat.

The third Reason assigned seems the strongest of all; for the Captain therein asserts, that the Water was found to be so fresh in the Mid-Channel, above *Deer Sound*, that the Men freely drank it, along-side the Boat, instead of Beer; and the higher they went they found it the fresher. But it has been before observed, that the Lieutenant, in his Expedition, filled a Bottle of Water at the Shore, and two Bottles farther down to the Eastward; and that the Captain, when he came aboard, owned, that the Water, taken up at the West-end, near the Fall of Water, was the saltest; and the Master said, that it was as salt as any he tasted in those Seas, which was confirmed by all those who tasted it aboard. It is also affirmed, that when the Captain caused the Water to be taken up, which he says was fresh, the Crew did not come entirely into his Opinion, but only said that it was not very salt.

The Captain urges next, that no Whales were seen there; but at the Entrance of the River, and at *Deer Sound*; this being an Argument that they came not from any Sea to the westward, but entered by some Inlet from the North-east. We have already taken notice, that the Lieutenant contradicts this in his original Report, by asserting positively that the Whales came from the West.

And Mr. *Dobbs*, in answer to this very Argument of Capt. *Middleton's*, expresses himself thus: "The next Falstiy he would have imposed upon me was, That the Whales came in certainly at the East Entrance of *Wager River*, for he saw several in the *Welcome* and *Cape Dobbs*, before they came in and after they went out, which none of them saw but himself. And the Journal expressly says, when they came up with the Ice, "Hitherto have been seen no Whales, except one white Whale as big as a Grampus, and five or six Seals: And both Log-Book and Journal are entirely silent about any when they came out, until they came near *Brook Cobham*. When I taxed the Captain with this, all he could say was, he heard one or two blow; yet in the Log-Book which he has printed, he says he heard two or three blow in that Watch, though nothing of it is entered in the Original large Log-Book, nor was any seen by any other Person on board the *Furnace*; nor did Capt. *More*, in the *Discovery*, see any, though two on board him took upon them to swear, they saw or heard two or three blow."

Another Reason made use of by Capt. *Middleton* is, because Travellers which have gone from *Churchill* by Land, as high as the *Arctic Circle*, affirm, that they met with neither salt Water, River, nor Sea, in any Part of their Journey. This Argument would also be very conclusive if the Fact was absolutely certain; but if it was, it is not easy to conceive why Capt. *Middleton*, by his Letters to Mr. *Dobbs*, written before the undertaking of this last Expedition, should give him any Hopes of Success in such an Undertaking; for had he known and considered the Force of this Argument at that Time, in its full Extent, he must have seen that it proved any such Passage as he went in Search of, if not impossible, at least impracticable, and therefore not worth the seeking. When the Reader reflects upon the Observations made in the very last Article upon the Conduct and Sentiments of Capt. *James*, after his Return from *Charlton Island*, he will probably see good Grounds to believe, that Disappointment operates very powerfully upon some Mens Understandings, and engages them to treat as Vulgar Errors what themselves formerly esteemed undoubted Truths, either from an Over-weening Fondness for their own Abilities, or from an envious Desire to put that out of the Thoughts of others, which by Accident was put out of their own Power.

It was however natural enough for Mr. *Dobbs*, after examining this Matter attentively, to wish that all the Doubts about it might be removed by a subsequent Expe-

dition, and one would have thought that this Scheme must have been also satisfactory to Captain *Christopher Middleton* and the *Hudson's Bay Company*; because being so firmly persuaded as they seem to be, that no such Passage can ever be found from *Hudson's Bay* into the *West Ocean*, they should have been willing to have had this Truth, as they esteem it, so fairly and fully made out as to leave no Grounds, or, if possible, no Colour, of Suspicion about it, as this would have entirely justified that Gentleman's Conduct, and have saved the Company all future Trouble.

But it does not appear that this actually was the Case; on the contrary, such Objections were started, and so many Difficulties suggested, as quite overthrew all Hopes of obtaining such Assistance from the Admiralty as they had before; but the Spirit of the Nation being awakened, the Opinion of there being such a Passage gaining Ground, and the Desire of finding it increasing daily, produced an Application to Parliament in 1744, when, after mature Deliberation, a Law passed upon that Subject, in Consequence of which another Expedition has been set on foot.

The Preamble of this Act takes Notice, that as the discovering another West Passage through *Hudson's Streight* to the Western *American Ocean*, would be of great Benefit and Advantage to this Kingdom, and that it would be of great Encouragement to the Adventurers to attempt the same, if a public Reward was given to such Persons as should make a perfect Discovery of the said Passage, it is therefore Enacted, that if any Ships or Vessels belonging to his Majesty's Subjects shall find out, and sail through any Passage by Sea, between *Hudson's Bay* and the *Western Ocean of America*, the Owners of such Ships or Vessels shall be intitled to receive as a Reward for such Discovery, the Sum of *Twenty Thousand Pounds*. The following Persons are, by the said Act, appointed Commissioners for examining the Claims that may be made under it; viz. the Lord Chancellor, the Lord President of the Council, the Lord Privy-Seal, the Lord Steward of his Majesty's Household, the Lord Chamberlain, the first Commissioner of the Treasury, the first Commissioner of the Admiralty, the principal Secretaries of State, the Speaker of the House of Commons, the Chancellor of the Exchequer, the first Commissioner for Trade and Plantations, the Treasurer of his Majesty's Navy, and the Admirals of the Red, White, and Blue Squadrons for the Time being; and these Commissioners are empowered to examine the Claimants Witneffes upon Oath; and the Certificate of the Majority of them (of which the first Commissioner of the Admiralty shall be one) under their Hands and Seals given, shall intitle the Person or Persons, having such Certificate, to receive of the Lord High Treasurer, or Commissioners of the Treasury, the said Sum of *Twenty Thousand Pounds*, after the said Discovery shall be completed, and the Certificate thereof produced as aforesaid. As a farther Encouragement, and to promote the executing of, and finding out, such Passage, It is further Enacted, That all Persons, Subjects of his Majesty, residing in any Place where the said Adventurers may come, in the Prosecution of this Discovery, shall give the said Adventurers all Assistance; and Persons, Subjects, as aforesaid, shall no Way obstruct, molest, or refuse the said Adventurers reasonable Succour in any Distress they may fall into in the prosecuting this Discovery. A Proviso is added, that nothing in this Act shall extend to prejudice the Estate, Rights or Privileges of the Governor and Company of Adventurers of *England*, trading into *Hudson's Bay*.

Such is the History of the Design for penetrating into the *Western Ocean*, by a Passage to the North-west; such have been the Steps taken for putting it in Execution; such the Disappointments with which Expeditions of this Sort have been attended; and such, finally, the Provision made by the Legislature, that whoever shall be at the Expence and Hazard of this Discovery for the public Service, shall receive a public Reward.

SECTION V.

A succinct Account of the Grounds upon which a NORTH-EAST PASSAGE into the Sea of Japon has been expected and sought for. The Attempts of the English and Dutch on that Side, with the Reasons why all Thoughts of a Passage that Way have been for many Years given up.

Collected from *Dutch* as well as *English* Authors.

1. *A View of the Advantages proposed from the Discovery of a North-east Passage, and of the principal Reasons which have induced skilful Geographers, and able Seamen, to believe that such a Passage might be found.*
2. *The Attempts made by Sir Hugh Willoughby, Captain Stephen Burroughs, Captain Arthur Pett, and Captain Charles Jackman, for the Discovery of that Passage, without Effect.*
3. *An Account of three Voyages made by the famous Dutch Pilot, William Barentz, for that Purpose, and with no better Success; the Reasons that induced Barentz to die in the Perswasion that such a Passage might still be found; and the Motives upon which the Hopes of discovering this Passage were revived, after all Thoughts of it had, for a long Time, been laid aside.*
4. *A short Account of Captain Wood's Voyage, in Search of that Passage, by the Direction of King Charles II. and his Mis-carriage.*
5. *The Reasons published by him, after his Disappointment, to prove the finding such a Passage impossible, or at least impracticable.*
6. *The Discoveries made by the Russians in their Asiatic Dominions, and more particularly their late important Discovery, that there is a very easy Passage that Way to North America.*
7. *The Conclusion of this Subject, with some free Thoughts thereupon, tending to prove, that if we are disappointed in all Attempts of finding either a North-west or North-east Passage, it will amount to a Demonstration that there is a clear Passage by the North, in or near the Pole.*

1. **T**HE Advantages proposed by the Discovery of a Passage to the North-east, may be reduced to three. The first is, That it would save a great deal of Time; for, whereas we are now obliged to go round by the Cape of *Good Hope*, or, which is still a longer Navigation, by the Streights of *Magellan*, we might then pass by the Coast of *Muscovy*, and *Great Tartary*, into the Sea of *Japon*, in little more than three Months. The second turns on the Wholesomeness of the Voyage, which, according to the Methods now in Use, consumes abundance of Seamen; but by this means would become as healthy as any Navigation can be, and be performed with very little Hazard. In the third Place, there is good Reason to hope that it would change the very Nature of the *East India* Trade, by bringing the Balance over to the Side of *Europe*; whereas in the Way we now carry it on, it is morally certain, that if the *West Indies* had not been discovered, the *East India* Trade must have eat up and destroyed us, I mean the People of *Europe* in general; for whatever there may be gained by us, or by the *Dutch*, it is an uncontroverted Point, that immense Sums in Silver are annually sent from *Europe* to balance the Accounts of our Traders with those in the *East Indies*; but if a Passage should be found to this Country by the North-east, we might then hope to gain as much by cloathing the Inhabitants of the Northern Countries as would balance our Commerce with those in other Parts. We are next to examine the Reasons why such a Passage has been expected and sought for; and this may be likewise reduced under three Heads. The First is grounded on the Disposition of the terraqueous Globe, which seems to require a perfect Circulation of that great Body of Water which is intermixed with the Earth; and as we find this Conjecture verified towards the South Pole, it makes the Argument so much the stronger with respect to the North. The Second arises from Observation, which affords Variety of Instances, in Confirmation of the same Notion. We will mention one or two: All the Wood that is thrown on the Coasts of *Greenland*, *Nova Zembla*, *Lapland*, and other Northern Countries is worm-eaten; which is a Proof that this Wood came from a warmer Climate; since it is certain that Ships are not worm-eaten in the Northern Seas. There is likewise a Kind of *Molucca* Bean thrown almost by every Tide upon the Northern Coasts, which is with great Probability believed to be the

Product of the Eastern Climes; and, what still more strongly corroborates this Manner of Reasoning, some *Dutch* Seamen, who were shipwrecked at *Corea*, observed a Harpoon in the Head of a Whale cast upon that Coast, which must therefore have come thither from the Northern Seas. Lastly, there are some Facts which, if they could be depended upon, would put this Matter out of Dispute, since they relate to Ships which have actually passed this Way, or at least have discovered an open Sea through which they might have passed; but as this cannot be verified by proper Vouchers, they ought to be considered only as Reports, and as such I lay no great Strefs upon them.

2. The first who attempted the actual Discovery of such a Passage to the North-east, was Sir *Hugh Willoughby*, in 1553. He advanced as far as 72 Degrees North Latitude; but finding himself blocked up by the Ice, he retired, as well as he could, into the Mouth of the River *Arzina*, in *Lapland*; where he and all his Company were frozen to Death, and were the next Year found in that Condition. This did not discourage Captain *Stephen Burroughs*, afterwards Comptroller of the Navy, in the Reign of Queen *Elizabeth*, from pursuing this Discovery; on which he failed in 1556, and having doubled the *North Cape*, entered the Streights of *Weygatz*, between the South of *Nova Zembla*, and the Country of the *Samoeds*, believing the Gulph, on the East of that Streight, to be a free and open Sea, in which Opinion he returned to *England*. This occasioned a third Voyage, by the Direction of that glorious Queen, who, in 1580, sent Captain *Arthur Pett*, and Captain *Charles Jackman*, to perfect this Discovery. They entered the Streight, but found themselves so embarrassed among the Ice, that after long struggling, with much Difficulty, they got out again, and resolved to return home; but meeting with very bad Weather, they were separated, and Captain *Pett* was never heard of afterwards, which gave a Check to all farther Thoughts of searching for a North-east Passage, by our Countrymen.

3. But the *Dutch*, who were extremely sensible of the Benefits that might result from such a Discovery, and being withal very emulous of the *English* Glory, resolved to try what might be done in this Respect; and with this View they sent the famous *William Barentz* thither, in 1594, who passed the Streights of *Weygatz*, and having examined

examined the Gulph into which they open, abandoned the Design, after having observed that the Water was fresh, which had not been taken notice of before. He thought, however, that something might still be done, though not that Way, and therefore undertook a second and a third Voyage to *Nova Zembla*, in Hopes of succeeding better. In 1596, which was his last Voyage, he and his Crew wintered in that Country, in the Latitude of 78 Degrees. After having lost their Vessel, they got off the next Spring in their two Shallops, designing for *Cola* in *Lapland*, where they safely arrived; but *Barentz* died in the Passage. He remained to the last Moment in the Sentiments he entertained after his first Voyage, and declared if he had lived, he would have made another Voyage, from a thorough Persuasion, that notwithstanding all he had suffered, there was a free and open Sea between *Nova Zembla* and *Greenland*.

The best Accounts we have of this Undertaking, and of the Extremities of *Norway*, *Lapland*, *Nova Zembla*, *Weygatz*, the Mouth of the River *Oby*, the Coast of *Tartary* at the Mouth of that River, and of the *White Sea*, are in the Works of the famous *Linschooten*, who made this Voyage at the same time with *Barentz*. Our great Navigator *Henry Hudson* had some Thoughts of discovering the Passage, and actually made a Voyage for that Purpose in 1610; but the Fate of *Barentz*, and the unpromising Appearance of the Frozen Coasts, obliged him to abandon very soon so troublesome an Expedition. In 1653 the King of *Denmark* fitted out three Ships for the finding the North-east Passage, and directed the making an exact Chart of their Discoveries: These Ships passed the Streights of *Weygatz*, and in the Bay beyond them found some of the Inhabitants of *Nova Zembla* in their Canoes; which were the most brutal and intolerable Savages that were ever seen: Their Garments were made of the Skins of Penguins, Pelicans, and other large Birds, with their Feathers on: They lived upon raw Fish, and had the utmost Abhorrence of more civilized Nations; which was not by any Means to be softened by Presents or kind Usage. This made the *Danes* soon weary of so inhospitable a Coast, and so put an End to the Expedition, which brought such a Discredit on the North-east Passage as prevented any farther Attempts for near twenty Years. At last, after the *Royal Society* was founded here, by which Means Subjects of this sort came to be more known and more freely examined, the Hopes of finding a North-east Passage was again renewed, and several Papers were written, to shew both the Utility of such a Passage, and that the finding of it was practicable.

The first that revived, at least with any Degree of Vigour, the Notion of discovering a Passage to the North-east, after that Scheme had lain so long under Discredit, was a Company of Merchants in *Holland*, who fitted out a Ship for the Discovery; which, upon its Return, brought an Account, That they had sailed to the Height of between 70 and 80 Degrees, and had discovered a fair open Sea, without any Ice to the Eastward of *Nova Zembla*, which seemed so plain and so perfect a Proof of the Probability of a safe Navigation on that Side, that the Merchants concerned in that Undertaking applied to the States for a Charter, that might secure to them the Advantages that might result from this new-found Passage. But the *East India* Company having Notice of this Application, and foreseeing how far it might affect their Trade, instantly petitioned the States on their Side, setting forth the great Services they had done the Republic, the Nature of the Charters which had been granted to them, and the Consequences that must attend the bestowing on this new Company, the Privileges that they demanded. The States had Regard to their Representations, and refused the Charter applied for. The Merchants, upon this, applied to the King of *Denmark*, and having obtained his Licence, an Expedition was made for Discovery; but by reason of a Mutiny on board the Ship, it came to nothing. A large Account of all these Transactions was printed in the *Memoirs* of our *Royal Society*, in the Year 1675, but without any Date; one, however, I have with much Difficulty recovered, which is the Voyage wherein the *Dutch* Merchants were successful, and which I find was in 1670.

The same Person that gave me this Date acquainted me, that at the Time this Application was made to the States, it was asserted that there was no Difficulty in sailing North about *Greenland*; that several *Dutch* Ships had actually done it, and that the Merchants being required to verify this Fact, they desired that the Journals of the *Greenland* Squadron in 1655, might be produced; in seven of which there was Notice taken of a Ship, which that Year had sailed as high as the Latitude of 89, within one Degree of the Pole; and three Journals of that Ship being produced, they all agreed as to an Observation taken by the Master, *August* the 1st, 1655, in 88 Degrees 56 Minutes; and it was farther set forth in those Journals, that the Sea was entirely clear of Ice, and was a hollow rowling Sea, like that of the *Bay of Biscay*.

4. Soon after the publishing the Accounts before-mentioned in the *Philosophical Transactions*, Capt. *John Wood*, an experienced Seaman, who had accompanied Sir *John Narborough* in his Voyage through the Streights of *Magellan*, offered his Service to attempt the Discovery of the North-east Passage; which was accepted, and the eight following Persons, viz. *Thomas Duke of York*, Lord *Berkley*, Sir *Joseph Williamson*, Sir *John Bankes*, Mr. *Samuel Peeps*, Capt. *Herbert*, Mr. *Duvey*, and Mr. *Hoopgood*, at their own proper Charge, bought a Pink called the *Prosperous*, of the Burden of one hundred and twenty Tons, fitted her to Sea, with Men, Ammunition, Provision, and Merchandize, which was such as was reasonably proposed to vend on the Coast of *Tartaria*, or at *Japon*, if a Passage had been found. The Command of this Vessel was given to Captain *William Flawes*, and a new Ship of the King's called the *Speedwell*, manned and victualled at the King's Expence, was given to Captain *Wood*, who had the Conduct of the Expedition.

They sailed from the Buoy at the *Nore*, *May* the 28th, 1676, but the Voyage was very unfortunate; for the *Speedwell* was shipwrecked on the Coast of *Nova Zembla*, and Captain *Wood*, and his People, returned aboard the *Prosperous*, which put an End to all Thoughts of Expeditions of this Nature; for Captain *Wood*, like other disappointed Commanders, changed his Opinion upon his Return, and undertook to prove that it was impossible to find any Passage to the North-east. There is nothing very remarkable, either in his Journal, or in that of Captain *Flawes*; but his Relation of his Shipwreck, of the Country of *Nova Zembla*, and his Reasons for changing his Sentiments, are, in themselves, very curious, and therefore deserve the Reader's Notice.

5. "After giving both these Journals, says he, meaning his own, and that of Captain *Flawes*, I intend to shew my Conceptions of the said Voyage, and a true Relation of our Miscarriage, with some Observations made in the said Voyage. The first was, the following the Opinion of *William Barentz*, that was to steer directly North-east from the *North Cape*, and so fall in the Middle-way, between *Greenland* and *Nova Zembla*; so having made the Land to the Westward of the *North Cape*, the 19th Day of *June*, I steered away North-east by Compass, which was not so much by the true Course, because of the Variation that is there Westerly; and the 22d Day at Noon we saw the main Body of Ice, being in the Latitude 76 Degrees, and about sixty Leagues to the Eastward of *Greenland*. At the first seeing of Ice, I did imagine it had been the Ice that joined to *Greenland*, and that if I went more Easterly there might be a free Sea; so I ran close by the Ice, it lying away East-south-east, and West-north-west; and every League or less that we ran, we met with a Cape of Ice; so when we were about that we could see no Ice to the Northward; so standing in North-east sometimes two Glasses, that is one Hour, we could see more Ice ahead, and then we were forced to go out the same Way we came in, and thus I continued coasting the Ice, sometimes in Hopes of a clear Sea, and then again disheartened by seeing more Ice, till at last I had no Hopes at all; which was when I saw the Land of *Nova Zembla* and the Ice join to it. So here the Opinion of *William Barentz* was confuted, and the rest of the *Dutch* Relations, which

“ certainly are all forged, abusive, Pamphlets, as also the
“ Relations of our own Countrymen.

“ But certainly if Men did really consider the many
“ inevitable Dangers and Mischiefs that come upon the
“ broaching of such Untruths, they would never do it ;
“ for I do now verily believe, that if there be no Land
“ to the Northward of the Latitude of 80 Degrees, that
“ the Sea that is there is all frozen, and always continueth
“ so ; for I, that could get no farther than 76 Degrees,
“ found it so frozen without Intermission, and some of
“ the Ice that we saw, that was on the main Body, if it
“ had been conveyed 10 Degrees more Southward,
“ would have taken some Centuries of Years to thaw it ;
“ for the loose Ice that lay about the Edges of the main
“ Body, was not more than a Foot thick, in some Pieces,
“ above the Superficies of the Water, and the rest of the
“ Cake that was sunk, was more than 18 Feet below ;
“ so I conclude that those vast Mountains that were on the
“ main Body, were all ashore, as of Necessity they must
“ if they hold the same Proportion ; and considering the
“ Shallowness of the Water, which I found all along the
“ Ice, which in the Mid-way, between the two Lands,
“ I found to be no more than ten Fathom, was doubt-
“ less a Sign that to the Northward is Land, and that
“ the main Body of Ice, that lyeth clustered about the
“ Shore, may be twenty Leagues or more ; and that
“ *Nova Zembla* and *Greenland* are the same Continent ;
“ for if there had been any Passage, there would have
“ been some Current, which I could never, or very hard-
“ ly, find to be any ; and the little there was run East-
“ south-east along the Ice, which is nothing else but a
“ small Tide, which rises some eight Feet. Thus the
“ Ice having been an Obstacle in our Way, as also the
“ Cause of my coming so far to the Eastward, which, be-
“ fore I never intended, I will come to the Misfortune
“ that happened to us in the Loss of our Ship, which was
“ thus : Being long amongst the Ice, the 29th Day of
“ *June*, in the Morning, we had like to have been in-
“ closed in it ; it proving likewise foggy Weather, I
“ stood out to the Southward, thinking to lie there till
“ fairer Weather, or to spend some Time to the South-
“ ward, and then come to the Ice again, to see if there
“ might be any Alteration in it, as to its Removal,
“ either to the East, West, North, or South ; but all
“ this Day it proved foggy dirty Weather, the Wind
“ being at West, so we lay South-south-west with the
“ Stern, and by our Judgment and Reckoning, the West-
“ ermost Land of *Nova Zembla* bore from us East-south-
“ east, that was four Points under our Lee-Bow ; but
“ such was our Misfortune, that it proved not so ; for
“ about ten o’Clock, Captain *Flawes*, being upon our
“ Weather Quarter, fired a Gun, and bore to me, and
“ called out that there was Ice ahead ; then I looked
“ out ahead, saw something white just under the Bow,
“ which presently I perceived to be a Breach and no Ice ;
“ now if I had staid with the Ship, Captain *Flawes* be-
“ ing to the Windward, I should have been aboard of
“ him, and then certainly we had been both lost ; so I
“ was forced to bear up with Hope that I might get
“ clear of it ; but the Ship being a great while wearing
“ struck on the Rock, her Head lying to Seaward, which
“ if it had not, but that the Broad-side had been to the
“ Sea, we had all perished, without God’s great Mercy.

“ Captain *Flawes*, in the mean Time (being a shorter
“ Ship) wore round, and came close under our Stern,
“ and with great Providence escaped and stood off to
“ Sea ; here we lay beating on the Rock in a most cruel
“ Manner, for the Space of three or four Hours, using
“ all possible Means to save her, but all in vain ; for it
“ blew so hard, that it was impossible to carry out an
“ Anchor, capable of doing us any Service ; though
“ we had an Opportunity to carry out a small Anchor,
“ and Warp to haul another out by, which signified but
“ little ; the Ship all this while lay, and at the End of
“ four or five Hours we saw Land close under our Stern,
“ to the great Amazement of us all, which before
“ we could not see for foggy Weather ; so I commanded
“ the Men to get out our Boat before our Mast came by
“ the Board ; which was done. I sent the Boatswain

“ toward the Shore in the Pinnace, to see if there was
“ any Possibility of landing, which I much feared, be-
“ cause the Sea ran so high. In half an Hour he returned
“ with this Answer : That it was impossible to save a
“ Man the Sea ran so high ; and the Snow being in high
“ Cliffs on Shore it was inaccessible, which was but bad
“ Tidings ; so then it was high time to think on the
“ Safety of our Souls, and we all went together to
“ Prayers, to beseech God to have Mercy on us ; for here
“ nothing but inevitable Ruin appeared before our Eyes.
“ After Prayers were done it proved a little clearer
“ Weather, and I, looking over the Stern, saw a small
“ Beach directly with the Stern of the Ship, where I thought
“ there might be some Possibility of landing ; so I sent the
“ Pinnace again with some Men, to be landed ; but they
“ durst not venture on Shore : so I sent the Longboat
“ with some twenty Men, to land, who attempted it,
“ and got safe on Shore ; so they in the Pinnace seeing
“ that followed them and their Men likewise, and both
“ returned on board again. Now the Men on the Shore
“ sent to me to desire some Fire-arms and Ammunition ;
“ for there were many Bears on Shore : So I caused to
“ be put into the Pinnace two Barrels of Powder that we
“ had saved dry, before the Ship was bulged, and some
“ small Arms and Provisions, with my own Papers and
“ Money ; but as she put off from the Ship-side a Sea
“ overfet her, so that all was lost, with the Life of one
“ Man, by Name *John Bosman*, being Cooper’s Mate,
“ and several others, taken up for dead. The Longboat
“ being then on Shore to land more Men ; and they
“ hearing us call from a-board (when, as then, we could
“ not see the Shore) they came on board, and saved the
“ Men ; but the Pinnace was all broken to Pieces, which
“ was no small Grief to us ; so the Lugboat being on
“ board, and the Sea running prodigious high, the
“ Boatswain, and some others, would compel me and the
“ Lieutenant to leave the Ship ; saying, It was impossible
“ for the Boat to live any longer in that Sea ; and that
“ they had rather be drowned than I ; but desiring me
“ when I came ashore (if it was possible) to send the
“ Boat again for them ; so I being half way on Shore,
“ the Ship overfet, so I made all the haste possible to
“ land the Men I had in the Boat ; and, having landed
“ them, I went off to the Ship again, to save those poor
“ Men that had been so kind to me ; and, with great
“ Hazard, I got with the Boat to the Quarter of the
“ Ship, and they came down the Ladder into the Boat,
“ only one Man who was left for dead, which was one
“ that had been cast away in the Pinnace, whose Name
“ was *Alexander Frazer*, a very pretty Sailor ; so I re-
“ turned to the Shore, and got safe to Land, though
“ very wet and cold ; so we hauled up the Boat on
“ Shore, and went up the Land about a Flight-
“ Shot, where our Men were making a Fire, and a
“ Tent with Canvas and Oars, which we had saved
“ for that Purpose ; so we lay all that Night very cold,
“ wet, and weary.

“ The next Morning, the Man that was left on board
“ recovered, and got unto the Mizen-top, for that Mast
“ was left standing when we came away, the others we
“ had cut all down. The Ship laboured, and beat vio-
“ lently, but it blew so hard, and the Sea ran so high,
“ that it was impossible to save him ; so the Weather
“ continuing blowing, with extreme Fogs, and with
“ Frost and Snow, and all the ill-compacted Weather
“ that could be imagined together ; we built more Tents
“ to preserve ourselves, and the Ship breaking in
“ Pieces came all ashore to the same Place where
“ we landed, which served for Shelter and Firing ; be-
“ sides, there came to us some Hogsheads of Flower,
“ good Store, which was no small Comfort in our great
“ Extremity ; and we lay betwixt Hope and Despair,
“ hoping for fair Weather, that Capt. *Flawes* might find
“ us, which was impossible that ever he should, if it
“ continued foggy ; some despairing of his being safe ;
“ but that he might be lost as well as me.

“ But supposing we were never to see him again, I was
“ resolved to try the utmost to save as many as I could
“ in the Longboat ; in order thereunto we raised her two
“ Feet

“ Feet higher, and laid a Deck upon her, to keep the
 “ Sea out as much as possible; and with this Boat and
 “ thirty Men (for she would carry no more) I intended
 “ to row and sail to *Russia*; but the Crew, being not satisf-
 “ fied who should be the Men, began to be very
 “ unruly in their Minds and Behaviour, every one
 “ having as much Reason to save himself as another,
 “ some holding Consultation to save the Boat, and all
 “ to run the like Fortune; but here Brandy was our
 “ best Friend, for it kept them always foxed; so that in
 “ all their Designs I could prevent them. Some were of
 “ the Mind to go by Land; but that I knew was impos-
 “ sible for any Man; neither had we Provisions or
 “ Ammunition to defend ourselves from the wild Beasts;
 “ and if it had been passable, that is, any going on
 “ the Ground for Bogs, they would have met with
 “ Rivers, that they knew not whither to go; so there
 “ being no Probability of going by Land, nor for any
 “ to attempt going by Boat with forty Men, leaving the
 “ rest to be destroyed, I will submit to the Consideration
 “ of any, whether we were not in a very miserable Condi-
 “ tion, without the Intervention of divine Providence. To
 “ write my Thoughts I had at that time, to save as ma-
 “ ny Men as I could, it is not pertinent at all to the Dis-
 “ course, since it cannot but be tragical.

“ The Weather continued still very bad, with Fogs
 “ Snow, Rain, and Frost, till the ninth Day of our be-
 “ ing on Shore, which was the 8th Day of *July*, when,
 “ in the Morning it cleared up; and to our great Joy
 “ one of the Sailors cried out, *A Sail*; which proved
 “ Capt. *Flawes*, as reasonably may be imagined; so we
 “ set Fire to our Town, that he might see where we
 “ were, which he presently saw, so came, and sent his
 “ Boat to us; but before I went off I wrote a brief Re-
 “ lation of the Intention of the Voyage, with the Ac-
 “ cidents that had befallen us, and put it into a Glass
 “ Bottle, and left it in the Fortification I had there built.
 “ So by twelve o’Clock we all got safe on board, but left
 “ all on Shore that we had saved from the Ship, for we
 “ much feared it should prove foggy Weather again.
 “ Now I intend to give a brief Description of the Land,
 “ and the Observations I made there.

“ *Nova Zembla* is so called by the *Russians*, which
 “ signifies *New Land*, in their Language. To prove either
 “ that it is an Island, or whether it joineth to the Continent
 “ of *Tartaria*, would be a very hard Task, nor is it cer-
 “ tainly known to any; for by Circumstances I think it
 “ impossible to prove; and by Experience, the Search
 “ thereof is so impossible that it will hardly be tried;
 “ but let it be either, I think the Matter is not much,
 “ since it is the most miserable Country that lieth on the
 “ Foundation of the Earth; a Country, most part of it
 “ covered perpetually with Snow; and that which is bare,
 “ is not to be walked on, being like Bogs; upon
 “ whose Superficies grows a Kind of Moss which
 “ beareth a small blue-and-yellow Flower; and this is
 “ all the Product of the Earth of this Country. Under
 “ the Superficies of the Earth, about two Feet deep, after
 “ we had dug so low, we came to a firm Body of Ice;
 “ which, as I think, was never heard of before; so
 “ those Men that did imagine, if they were forced to
 “ winter to the Northward, to dig Caves in the Earth
 “ to preserve themselves from Cold, would find here
 “ but very bad Lodging. The Snow lieth here contrary
 “ to what it doth in any other Country; for in all other
 “ Climates the Snow melteth soonest away near the Sea-
 “ side, but here in some Places it rises as high as either
 “ of the Forelands in *Kent*.

“ The Sea has washed underneath the Snow a prodigi-
 “ ous way, and the Snow from the Western Sea, upon
 “ the high Ridge, over-hanging, is most fearful to be-
 “ hold, and up from the Water-side, upon the first
 “ Ridge of Hills, the Snow was melted, till you came
 “ to the next Ridge, which are mountainous, and they
 “ all the way up are covered with Snow, which I believe
 “ hath lain there ever since the Creation; but after we
 “ had ascended this, which in some Places was almost
 “ perpendicular, we came to the Top of all the Moun-
 “ tains, as we supposed, for we could not see far, for we
 “ could hardly see one or the other, the Fog was so thick,

“ and remained so all the Time we were in the Country;
 “ but on the Top of the Hills we found it bare from
 “ Snow, and indifferent good walking. The Beasts that I
 “ found in the Country were only Bears. I continued on the
 “ Top of those Hills some two Hours, and went as far as
 “ was convenient, that we might find the Way back again.
 “ Here I found the Track of many large Deer; also we
 “ found an Horn or Branches of Deer. Besides Deer, there
 “ are abundance of large white Bears, and some Foxes,
 “ and a little Creature much like a Coney, but not so big
 “ as a Rat; and some few little Birds like Larks; and
 “ these are all the Beasts or Fowls we found in the Coun-
 “ try. Every quarter of a Mile there runneth down from
 “ the Hills, into the Sea, a small Rivulet of very good
 “ Water, which is melted from Snow. Upon the Hills
 “ we found abundance of Slate-Stone, which made it
 “ good walking; but at the Sea-side, where the Rivulet
 “ came down, we found very good black Marble, with
 “ white Veins in it.

“ The Point where we lost our Ship I called *Speedill*;
 “ the high Hills I called *King Charles’s Snow Hills*; and
 “ the next Point to the Southward, which is the Wester-
 “ most Point of *Nova Zembla*, I named *James’s Fore-*
 “ *land*, and the Point to the Northward, *York Point*.
 “ *Speedill* lieth in the Latitude of 74 Degrees 30 Mi-
 “ nutes North, and in the Longitude, East from the Ci-
 “ ty of *London*, 63 Degrees; the Variation of the Com-
 “ pass is 13 Degrees West, and it is full Sea at the South-
 “ west Moon. The Tide riseth eight Feet, and setteth
 “ directly upon the Shore, which is a certain Sign that
 “ there is no Passage to the Northward. The Sea
 “ Water, about the Ice and Land, is very salt, and
 “ much saltier than any I ever tasted, and a great deal
 “ heavier, and I may certainly say, the clearest in the
 “ World; for I could see the Ground very plain in
 “ eighty Fathom, which is four hundred and eighty Feet,
 “ there being few Steeples so high as that was deep,
 “ and I could see the Shells at the Bottom very plain.”

Upon this Account, and these Reflections, I have only
 a few of these Observations to make. In the first Place,
 it is owned by Captain *Wood*, that he did not sail so high
 as the *Dutch* did by 4 Degrees; in this he says he was
 hindered by Ice, and no doubt he might be so; but his
 Conclusions from thence, that it is impossible to proceed
 higher that Way, and that the Accounts we have of those
 who have proceeded farther, are to be regarded as ficti-
 tious, is very wild and extravagant; for that it is pos-
 sible to sail to the South of *Greenland* is notorious, and
 that there may be a Channel between this broken Land
 and *Nova Zembla*, is more than probable; but that this
 Channel may be very difficult to find, may be free from
 Ice but for a small Part of the Year, and that in some
 hard Winters it may not be free at all, is very possible.

In the next Place, I must take notice, that notwith-
 standing we see it laid down, that searching higher than
 sixty-four Degrees on the North-west-side is to no pur-
 pose; because if a Passage could be found in a higher
 Latitude, it would be impracticable on the Score of Ice
 and Cold, yet we see that a Passage has been sought
 on the North-east-side; and as a Company of *Dutch* Mer-
 chants affirm, without any Reason for affirming it if it
 was not true, that such a Passage has been found into a
 Sea free from Ice; his shews that Opinions ought not
 to be too hastily taken up, which limit the Intelligence
 and Power of Mankind; and that we should not be over-
 ready to listen to such Doctrines in Geography or Navi-
 gation, as are evidently dictated by Disappointment.

My last Observation is, that on the North-east, as well
 as on the North-west, there appear to be broken Lands,
 which, if we consider the Nature of things, seem to indi-
 cate a Passage; and that such a Passage on either Side is
 worth seeking, by the Inhabitants in the Northern Part of
 the World, will appear plainly to any Man who considers
 the Nearness of that Passage, in Comparison of the
 Streight of *Magellan*; and therefore we need not at all
 wonder, that from Time to Time new Attempts are
 made, notwithstanding repeated Disappointments. I must
 confess, that with respect to us, a North-west Passage de-
 serves the Preference, because of our Possessions in *Hud-*
son’s Bay, which would enable us the better to secure it;
 and

and therefore I confess it appears to me highly reasonable, that if a Reward of 20000 *l.* shall be found, not to produce the desired Effect, it should be enlarged to 100000 *l.* for this plain Reason, that the Benefit of this Passage, when found, would result to the Public; and the Reward for finding it, however large, as it would be paid to our own Subjects, ought not to be esteemed either a Burden or a Loss to the Public.

6. The Situation of the Dominions of *Russia* is so favourable for Discoveries on this Side, that it may be justly wondered we have not long ago had a clear and certain Relation from the Subjects of that Empire, in Reference to their Commerce with the Nations inhabiting the Northern Parts of *Asia*; but partly from our Want of Correspondence formerly with the *Russian* Court, partly from the great Ignorance of the People inhabiting the Northern Provinces of that Empire, and partly from the frequent Revolutions to which their Government has been always subject; so it has fallen out, that till within this last Century we have never had any considerable Informations from thence; and even now we are very far from having such clear and distinct Accounts, as are necessary to resolve this great Question, whether there is, or is not, a Passage to the North-east?

Thus much, however, is pretty clear, that the Straights of *Weygatz*, as they were called, do not open into the Sea of *Tartary*, or the *Northern Ocean*, but into a Gulph which is bounded on the North-east by a high mountainous Country, by which it is joined to the Continent; neither have we any absolute or positive Account, that the Sea, to the North of *Nova Zembla*, is navigable or free from Ice. But in the Reign of *Peter the Great*, and since his Time, vast Discoveries have been made to the Eastward, and through that Sea, into which Ships must necessarily come, if a North-east Passage could be found. The River *Lena* falls into the *Northern Ocean* very near, if not under, the *Polar Circle*; and from thence the Continent extends two hundred Leagues to the Mouth of the River *Kebuma*, all which is subject to the *Russians*.

Beyond this River lies the Country of the *Tychaltski*, a very barbarous and warlike People, who possess a Country one hundred and twenty Leagues in Extent, from West to East, and is the utmost Bounds of *Asia* on that Side. This Country, which reaches as far North as 66 Degrees, is also the Extremity of that great Peninsula, to which the *Russians* have given the Name of *Kamschatka*; the West-side of which is, in a good Measure, under their Power, and some Settlements they have on the East. The Southern Extremity of this Peninsula, is that Country so well known to the World, by the Name of the Land of *Jedzo*, directly over against *Japon*; so that this great Peninsula has the Ocean on the North and on the East, the Sea of *Japon* on the South, a Gulph of its own Name, which divides it from *Corea*, *Chinese Tartary*, and the Dominions of *Russia*, to the West; it extends from the Latitude of 39 to 66 Degrees, and contains 15 Degrees of Longitude, or thereabouts.

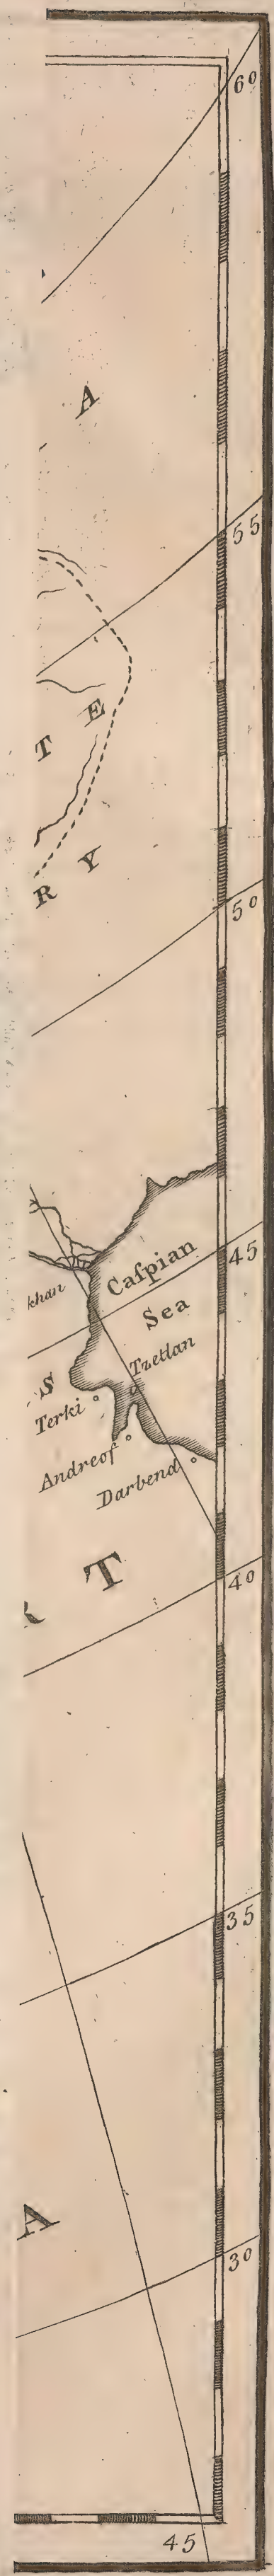

On the East-side of this Country lies a very large Island, called *Puchochotki*, extending from the Latitude of 59 to 63 Degrees; the Inhabitants of which are tributary to the *Russians*. To the South of this lies another large Island, from 51 to 55 Degrees; the Inhabitants of which are a very warlike People, hitherto unsubdued, and with whom the *Russians* trade for Castors, and other rich Furs. It is from this Island that one Mr. *Stoller*, a famous Botanist, sailed last Year upon Discoveries, and is said to have found but a very short Passage to the Coasts of *North America*. The Reader will easily apprehend this, if he pleaseth to consider what we have heretofore delivered, of the Situation of the Countries on this Side, from the Frontiers of the *Russian* Dominions, to *California*; for, without doubt, in the Accounts we have from *Peterburgh* of this Matter, they can mean no more by *North America*, than that Mr. *Stoller* had discovered Islands to the Eastward of those with which the *Russians* were hitherto acquainted; but whether these belong strictly to *America* or not, is a Question, that, till we are better acquainted with the Nature of this Discovery, cannot be resolved. The Reason I have mentioned it is, because it affords a clear and certain Proof, that if we could pass to

the North-east of *Nova Zembla*, we should find a short and easy Way to *Japon* and *China*; notwithstanding all that has been before asserted by Captain *Wood*, who, from his own Account, appears not to have failed far enough to the North, to be able to contradict, with any tolerable degree of Assurance, the Truth of what was asserted by the *Dutch* Navigators, upon the Faith of actual Discoveries; for he was shipwrecked in the Latitude of 74 Degrees, and they past to the North of *Nova Zembla*, in the Latitude of 80 Degrees; and if they could have perfected that Discovery, there is no doubt but that, by this Time, all the Trade of *China* and *Japon* had been carried on that Way; for it appears clearly, from the *Russian* Accounts, that those *Dutch* Navigators were actually advanced into that Part of the *Northern Ocean*, which washes the Coast of *Kamschatka*, and consequently had no great Impediments to hinder them in their Passage to *Japon*, and from thence to *China*.

7. We will conclude this Section, with observing, that from the Nature of the Tides in *Hudson's Bay*, on the Coast of *Greenland*, and in other Parts of the North Seas, it is apparent that some Way or other they have a Communication with the Ocean, for otherwise it is simply impossible they should rise so high as they do; and therefore if after all our Endeavours no Passage should be found to the North-west or North-east, we may rest satisfied, that this Communication is from the North; and that by passing round *Spitzbergen* or *Greenland*, we might enter what is called the *Tartarian Sea*, or that Part of the Ocean which washes the Northern and Eastern Extremities of *Asia*. This might always have been discovered by dint of reasoning, since the Figure of the Globe, and the Disposition of the several Parts of it, have been tolerably known; but in Proportion as the true Figure of the Earth has been found out, by the Skill and Labour of Mathematicians; and as their Accounts of this Matter have been justified by Experiments, this has grown clearer and clearer; so that at present there can remain few or no Doubts about it, in the Minds of those who are competent Judges of the Subject.

It seems therefore to be a Point of the greatest Importance to make the best and speediest Use of the several Lights we have received that is possible, in order to obtain a Share, at least, in the vast Advantages that must necessarily accrue from the being able to extend our Navigation through any of these Passages. We have certainly, in this Respect, as great or greater Opportunities than any of our Neighbours; and there seems to be, at present, such a Spirit in the trading Part of our People, as would dispose them to be at any Expence that should be necessary to carry Attempts of this Nature into Execution. There is, likewise, another Motive to excite our Industry in this Respect, which is the Incertainty of our being able to secure any Advantages we might desire from a Trade through *Russia*, which we are told, of late, is become more and more precarious. But if we could once perfect this Design, of penetrating into the East by a new Passage, we should not only be less dependent upon the Courtesy of that Government, but likewise have it in our Power to make it more dependent upon us, in case we should be able to fix a considerable Settlement on any Island in those Parts.

There is no doubt but abundance of Objections may be raised to a Scheme of this Nature, which at present would be very difficult to answer, because we must proceed on both Sides, merely upon Supposition; but if the Discovery was once made, the Case would be altered, and the Advantages flowing from it would encourage us to take such Measures, as by the Help of our great maritime Power, which can never be better employed than in supporting the Commerce of the Nation, might secure to us the Trade of these *New Indies*. If any thing delivered in this Performance, either now or at any Distance of Time, shall fortunately lead to promote or facilitate such a Discovery, it would fully answer the Ends of its Author; and if not, he must be content with the Satisfaction of having offered all that occurred to him upon a Subject, which he thought might be improved to the Benefit of his Country.

CHAPTER II.

Comprehending such VOYAGES and TRAVELS, as relate to the Northern Parts of *Europe*, and such of the Countries adjacent, as are subject to any of the *European Powers*.

SECTION I.

A VOYAGE to the NORTH, containing an Account of the SEA COASTS and MINES of Norway, the Danish, Swedish, and Muscovite Laplands; Borandia, Siberia, Samojedia, Zembla, and Iceland; with some very curious Remarks on the Norwegians, Laplanders, Russians, Poles, Circassians, Cossacks, and other Nations.

Extracted from the Journal of a Gentleman employed by the North-Sea Company at *Copenhagen*; and from the Memoirs of a *French Gentleman*, who, after serving many Years in the Armies of *Russia*, was at last banished into *Siberia*.

1. *Introduction to this Section; an Account of the Author; the Occasion of his Voyage; his Arrival in Norway; and Observations made by him on the Country; its Produce and Inhabitants.* 2. *His Arrival at Berghen; Journey from thence to the Copper and Silver Mines; with other curious and entertaining Particulars.* 3. *He prosecutes his Voyage from Drontheim; the Practice of the Laplanders in selling Winds; and the Nature of that Imposture detected.* 4. *He is driven by a Storm on the Coast of Danish Lapland; an Account of that Country; its Produce and Inhabitants; their great Poverty, and their Willingness to exercise Hospitality so far as is in their Power.* 5. *The Author's Journey, from the Danish to the Muscovite Lapland; a Description of the Sledges, Reindeer, and other Singularities of those Parts.* 6. *The Prosecution of this Subject; an Account of the Kilops, the most brutal and savage of any of the Lapland Nations; and the Author's Arrival at Kola, the Capital of the Muscovite Lapland.* 7. *His Departure from Kola, and his Adventures in his Return; with a Description of the Manner in which the Laplanders travel in their Snow-Shoes.* 8. *A Description of the Coasts of Borandia; the Manner of his first Interview with the People of that Country; the Motives which induced him to think of making a Journey from thence by Land, to Siberia.* 9. *The Manner in which he and his Companions travelled to Vitzora; their Reception by a Russian Governor; Trade with him for Furs; and obtain his Leave and Assistance for continuing their intended Journey.* 10. *They proceed from thence to Petzora, trade by the Way, and are kindly treated by the Inhabitants.* 11. *The Author enters Siberia; Description of that Country; Manner in which those People live, who are exiled; his Conference with a French Gentleman banished thither, who made him a Present of his Memoirs.* 12. *An Account from those Memoirs, of the Manners, Customs, and Vices of the Russians; their Religion, Contempt for Learning, and Obstinacy in adhering to their own Sentiments.* 13. *The secret History of a Russian Princess, who, by a malicious Contrivance, was hindered from espousing the Czar Alexis, Father to the late Peter I. and other Particulars.* 14. *Of the Dignity of the Patriarchs of Russia; the strange Superstition of the People; the Manner of their punishing Heretics, and other things worthy of Notice.* 15. *Of the Circassians and Cossacks; of the Laws of Russia; of the Russian Letters; Manner of writing; and a Character of the then reigning Emperor.* 16. *The Rise and Progress of the Russian Empire; the History of John Basilowitz; and a remarkable Story of the English Ambassador, Sir Jerom Bowes, with other Events during his Reign.* 17. *The Derivation of the Word Czar; the Style of the Russian Emperor; and an Account of his Family and Court.* 18. *Of the Czar's Revenues; the Empress's Court; and the Manner in which Ladies of Quality travel in that Country.* 19. *Of the Nature of the Punishments in Russia; Manner of inflicting them; with various other Particulars.* 20. *Some Account of the Poles; the strange Diseases to which they are subject; and a Comparison between the Polish and Russian Language.* 21. *The State of the Russian Empire at that time; the principal Favourites and Ministers; with some very curious and remarkable Passages relating to the Politics of that Court.* 22. *Of the Commodities and Trade of Russia; and of the Methods used by the Dutch to recommend their own Wares, and prejudice those of the English.* 23. *A large Description of Siberia; the Manners of the Inhabitants, and those who live amongst them; with an Account of the Produce of that Country.* 24. *This Subject continued; and a Description of the Fruits, strange Beasts, Birds, &c.* 25. *A short Account of Tartary, and some of its Inhabitants, particularly the Calmucs, &c.* 26. *The History of the Author's Travels resumed; his Arrival at Papinogorod; and his Journey thence into Samojeda; Description of that Country, and its Inhabitants.* 27. *He prosecutes his Travels to Zembla; Account of that Country, its Inhabitants, and the Fishery upon its Coasts.* 28. *This Subject farther prosecuted;*

cuted; the Fierceness of the Bears; strange Birds there, and other Circumstances. 29. Of the Author's Arrival in Greenland; an Account of the Herring Fishery, and his Voyage thence to Iceland. 30. A Description of that Island, and its Inhabitants, with various other Particulars. 31. The Author's safe Return to Copenhagen; the Rarities presented to the King of Denmark; and his Majesty's Satisfaction with the Account given him of this Voyage. 32. The Author's Remarks, on the erroneous Accounts formerly published of the Countries through which he travelled. 33. Some farther Observations upon the Facts delivered in this Section.

HE following Voyage, though written just a Century ago, has, notwithstanding, a great Variety of Circumstances, which ought effectually to recommend it: As for Instance, it relates to Countries that have been very little visited since; and therefore what is written about them here may be considered as new, though penned at such a Distance. The Author appears plainly to have been a Man of great Curiosity; one great End of his Travelling being to inform himself; to which his principal Motive was the Desire he had of informing others. He was remarkably fortunate in the Opportunities that offered themselves for this Purpose; and he was no less diligent and assiduous in improving these Opportunities to the utmost. The Accounts he gives us are equally candid and circumstantial; he shews much Willingness to acquaint us with what he saw, and with his Notions upon every Subject; he has added to his own Performance, that of another Person; who had the same Occasions to make himself acquainted with the interior of the Country, that he had to examine the Sea-Coast; he tells us very fairly how he came by these Memoirs; so that we have all the Reason in the World to be satisfied with his Conduct, and to think ourselves obliged for the Care and Circumspection he has used. There is no doubt, that many things will occur in the Perusal of this Section, which critical Readers may see just Cause to dislike; but we cannot expect that Men, who, like our Author, are driven all the World over for a Subsistence, should have the same Qualifications with those who spend all their Days at Ease, and in the quiet Pursuit of Learning, in a regular Method. We must take Mankind as they are, and judge of their Writings according to their Capacities; making such Allowances as are reasonable, and as we should expect if we were in their Places. These Travels follow very naturally, and may serve as a proper Supplement, in many respects, to what is laid down in the former Chapter; and having thus shewn the Nature of this Performance, and why we give it a Place here, let us proceed next in the Words of our Author:

About the Year 1647, *Frederic the III^d. King of Denmark*, being desirous to advance and increase the Trade of his Kingdom, established two Companies of Merchants at *Copenhagen*, his capital City; the one was an *Iceland Company*, and the other was a Company of Traders to the North. The latter, having observed that the Trade to *Norway* was very beneficial, obliged all that were concerned in that Company to sign a Petition to his *Danish Majesty*, in *February 1653*, representing that a great Profit would arise to his Subjects, by encouraging that Trade more, and enabling them to enlarge it, by making further Discoveries to the North, whence several rich Merchandizes might be imported. His Majesty listened to their Request, granted it, and allowed them to extend their Commerce as far Northward as they should think fit; upon which they fitted out several Ships, to make a Voyage to *Norway* and the North. It happened I was at *Copenhagen* when one of the Northern Fleets was outward bound; and understanding the King had commanded the Undertakers of this Enterprize to make all possible Discoveries of the Countries to which they came, and to bring back the most rare Curiosities that they could find, I took a Fancy to the Voyage; one of the Company being my Friend, I went to him, desired him to recommend me to his Partners, as a Person qualified to go Surgeon of one of the Ships. It was not difficult for him to succeed in procuring that Employment; the Company entertained me, and I entered into their Service.

All our Merchandize, Provisions, and Necessaries, be-

ing aboard, we embarked in the Beginning of *April*, 1670, weighed Anchor, and set sail with two Ships in our Company, and fair Wind and Weather, from the Port of *Copenhagen*. We had a fresh Gale at South-east, till we arrived at *Kat-Gat*, a Streight which divides the *German Ocean* from the *Baltic Sea*. It is a very dangerous Passage, full of Rocks, and is forty Leagues in Length, from *Elsenore* to *Schagerhort*. When we came over against *Mailstrand*, a little City and Sea Port about thirty Leagues from *Copenhagen*, the Wind turned Northward, drove us back ten Leagues, and forced us to make some Port on the Coast. The first we came at we put into, and that was *Schalot*, a Creek; where we cast Anchor, and rode safe under the Castle, which looked rather like a heap of Ruins, than a Place that was inhabited: 'Tis famous only for its Promontory; well known to Mariners who use the *Baltic*. We staid there near three Days; on the fourth, an Hour before Sun-rising, the Wind shifted again to the East, so we weighed Anchor to proceed on our Voyage. We had not been at Sea above four Hours before the Wind varied to the North-east, and blew so stiff a Gale, that we were obliged to leave the Coast of *Gottenburgh*, on which Shore we were then, and to steer directly over to that of *Jutland*. The Sands being frequent and shallow in those Parts, we were obliged to be almost always casting our Lead. As we sailed along this Coast, a Gust of Wind drove us to a Place where there were but three Fathom and a half Water; and we should certainly have run aground, had not our Pilot, who was a very dextrous Seaman, immediately tacked; when, getting the Advantage of the Wind, in half an Hour we founded, and had fifteen Fathom Water.

By the Help of a side Wind, we held on our Way for near two Leagues from the Sands; here we found ourselves in an Eddy, where we were as steady as if we had been at an Anchor. We presently furled all our Sails except the Top-Mast, endeavouring to keep ourselves out of it; but all our Endeavours would have been in vain, had not the Wind varied a Point or two to the South-east. We then loosed our Sails, got through it, the Wind blowing fresh, and sailed towards the Coast of *Babus*; we continued our Course several Days and Nights; and about eight o'Clock one Morning discovered the Promontory of *Christian Sand*, in *Norway*. The Village that gives Name to the Mountain is small, the Port, however, is commodious. We did not stay long there, for the next Day we arrived at *Christiana*, or *Oslo*, the capital City of one of the five Governments of that Kingdom. As soon as we were got into Port, we went ashore to deliver our Letters to the Company's Agents; who received us with Joy, for the good News we brought them, of the King's giving Encouragement to the *Norway Company*, to make their Discoveries, and enlarge their Trade in the North. One of these Agents hearing I was a Stranger, and had been recommended to his Principals, by one of their Society, and not the least considerable Merchant among them, was very civil to me, shewed me all that was worth seeing, and told me all that was worth knowing, relating to the Place at which we arrived. He also commanded a Servant of his, who spoke *French* tolerably well, to go with me into the Country three or four Leagues, that I might see more of it. Early next Morning we took Horse, and rode to *Wistby*, a large Village, nine Miles from *Christiana*, which stands between two Mountains; the Houses are very low, and of Wood, without Iron-work or Windows. There is a sort of Lattice on the Top of the Houses, to admit the Light, and they are all covered with Turf.

The Reader is desired to take notice, that this is not *Wistby*,

Wisby, the Capital City of *Gothland*, where the Marine Laws were made, which are so famous. The *Norwegian* Peasants are simple, and very hospitable: They are all Fishermen; their only Trade is in Herrings, Cod, Stock-fish, and other Fish fresh salted or dried: They are Slaves to the Nobility. The *Norwegian* Women are very handsome, though they are red-haired; they love Strangers, and are good Housewives: They spin, and make Cloth for their Families; they look after the Cattle, of which there are great Numbers of all Kinds, as in *France*. There is also Plenty of Game in this Country; as Elks, Stags, Roe-bucks, Boars, Goats, Rabbits, Hares; all Sorts of wild Fowl, Otters, Linxes, and wild Cats of divers Colours. All *Norway* is a mountainous Country, and consequently Bread-Corn will not grow there in any Quantity; but the Inhabitants are abundantly supplied from other Parts, by their Commerce, and what they want of Corn-Ground, is made up in Pastures and Woods. As we were returning towards *Christiana*, we met a Gentleman of the Neighbourhood, followed by two Servants and some Dogs, going a Hunting: He knew the Man that was with me, and asked him if he would divert himself with an Elk-Chace, bidding him ask the same Question of me. We had Time enough upon our Hands, so we readily accepted his Proposal. After we had rid about a Mile we met his Huntsman, some other of his Servants, and ten or twelve Boors, who led us three Miles further, to a Wood full of Bushes; when we came to the Entrance of it we alighted, and gave our Horses to one of his Domestics.

The Chace had been prepared the Day before by the Gentleman's Vassals, or rather Subjects; for the Nobility of *Norway* are Sovereigns under the King, in their own Territories. We were scarce forty Yards within the Wood, before we perceived an Elk running towards us; but before we could fire a Piece he dropped. I asked of my Guide and Interpreter, how the Beast came to fall down dead in that manner? He answered, It was the Nature of that Animal to be taken thus with a kind of Falling-Sickness, which often seized him in the Beginning of the Chace. I did not stand to reflect whether his Fears might not contribute to his Distemper. I seemed to doubt the Truth of it, and thought it to be an Accident which did not often happen; my Guide assured me to the contrary, adding, that from this Disease they were called *Elks*, or miserable Creatures. The Beast is as big as a great Horse, his Body like a Stag's, but larger and longer; his Legs are long, his Feet broad and cloven, his Antlers great, hairy, and broad, like a Fallow-Deer's, but not so well furnished with Horns as a Stag. Had he not dropped as he did, I believe it would have been hard for us to have brought him down, as I perceived soon after when we had rouzed another, which we chased above two Hours before we could catch him; and we had never caught him had he not dropped down dead, as the other did. He killed three of the Gentleman's best Dogs with his Fore-feet; the Gentleman was extremely sorry for the Loss of them, and would hunt no more. He sent to a Farm of his a Mile off for a Cart, to carry the Game we had caught to his Castle; we accompanied him thither at his Request: It was built like the rest in that Country, after an odd manner; stood four Miles from *Wisby*, and he treated us there very splendidly.

My Guide telling the Lord of the Castle that I was a *Frenchman*, employed by the *Norway* Company at *Copenhagen*, he made me a Present of the two hinder Left-legs of the two Elks we had killed, or rather seen die of themselves; giving me to understand it was no small Favour, those Legs being an infallible Cure of the Falling-Sickness. I replied by my Interpreter, I wondered, since the Foot of an Elk had so much Virtue in it, why the Animal that carried it always about with him, did not cure himself. The Gentleman reflecting on what I had said, laughed out aloud, and told me I was in the right; for that he had given it to several Persons afflicted with the same Disease, and it did not cure them; wherefore he had a long time suspected that the pretended Virtue of the Elk's Foot was a vulgar Mistake; of which, he said, he did no more doubt than that the eating of the Flesh of the Beast infected People with their Distemper. He gave me many

Instances of the bad Effects eating Elks Flesh had on Human Bodies. I answered, the Nails of these unhappy Persons would be a more sovereign Cure in an Epilepsy, than those of an Elk.

The Gentleman obliged us to lodge with him that Night; and early the next Morning, after we had made a good Breakfast, we took our Leaves of him and returned to *Christiana*, where we staid four or five Days; and having received further Orders and Directions from the Company's Agents there, embarked, weighed Anchor, and made the best of our Way for *Bergben*. We had a fresh Gale at North-east till we arrived at *Strafanger*, where we were on a sudden becalmed; and having nothing else to employ ourselves about, we fell all to fishing; there is abundance of all Sorts of Fish on the Coasts of *Norway*; we got such Store by our Fishing that we were forced to keep *Lent* a long while after, being unwilling to throw the Fish overboard: The Calm lasted five Days. On the 6th, towards Evening, it blew up a brisk Gale South-east, by which in a few Days we reached the Port whither we were bound to unload the Merchandize we had taken in for that Place.

2. We anchored in the Port of *Bergben*, one of the finest in *Europe*; and when our Cargo was unladen, I went to see the City, which is as large as *Abbeville*; it is divided into the high and low Town; the one built on Rocks, the other on the Sea-Shore. It is full of Merchants, and was formerly an Archbishopric, which was abolished upon the Reformation of Religion in the King of *Denmark's* Territories. The Episcopal Palace was given to the *Hanse-Towns*, the principal of which are *Hamburg*, *Lubeck*, and *Bremen*, for the antient Merchants to live in; and the greatest Part of the Houses were turned into Warehouses, from whence they are called *Cloisters*, and the Merchants *Monks*, though they do not wear a Cowl, nor observe the Rules of any Order. This Place, in the Popish Times, belonged to a Convent adjoining to the Episcopal Palace; and when it was granted to the Merchants, trading to and from the *Hanse-Towns*, the King obliged them to keep up the Form of a religious House so far, that no-body should marry who lived in it.

He that will have a Wife must leave the Cloister, and live elsewhere; however, he may deal and correspond with his Brethren, whose principal Trade is in Herrings, Cod, and Stock-fish, Commodities that go off in great Quantities, in *Muscovy*, *Sweden*, *Poland*, *Denmark*, *Germany*, *Holland*, and other Parts of *Europe*. As soon as we had discharged the Cargo we had to deliver at *Bergben*, we set sail for *Drontheim* with a South-westerly Wind; we were to unlade above half our Lading there; it was consigned to the Surveyor of the Copper and Silver Mines, for the Use of the Workmen and Miners whom he employed in that Service, and consisted in a Supply of Bread and Beer. We were scarce half way thither when the Wind blew so stiff, that in fifteen or sixteen Hours we found ourselves over-against *Stora*, where it ceased on a sudden, and the Storm was followed by a Calm, the most uneasy Thing in the World to Mariners. We were obliged to return to our former Diversions, and so spend the Time, that we could not tell how to pass away better, in fishing. We took such a prodigious Quantity of Klip Fish, that we were forced to salt and barrel a great Part of them up; and they were very serviceable to us in the Course of our Voyage. Klip Fish are a Sort of Cod, bigger than those of *Newfoundland*; they never leave the Rocks, lying always upon or under them, from whence they are called *Klip Fish* in *Germany*, which signifies *Rock Fish*.

The Calm held several Days, and then the Wind blew a fresh Gale West-south-west, which was fair for us, and in three Days we arrived at *Drontheim*. When we came ashore we delivered our Letters to the Surveyor-General of the Mines. By these Letters the Surveyor was ordered to unlade our Ships as fast as possible, that we might pursue our Voyage. He told us he could not go to work until the Officers who were to receive the Provisions came back from the Mines, whither they were gone about those Works: We pressed him to hasten our Discharge, and he

he offered to send a Messenger on purpose to fetch an Officer to unlade us. I desired Leave of our Master to accompany the Messenger, which having obtained, the next Day by times in the Morning the Surveyor's Man and I mounted on Horseback, and departed for the Mines. When we came to *Steckby* we were obliged to put up, the Night coming on, and we had a long Wood to go through, wherein were Boars, Wolves, and Linxes, in great Numbers, very dangerous for Passengers to encounter.

The Road was so rocky, that we could reach no farther in a whole Day, though that Town was scarce eighteen Miles from *Drontheim*. The next Morning, before Sun-rise, we left *Steckby*, and proceeded towards the Mines, where we arrived just as it was Night, and lodged at the Forges; we were entertained by the People who had the Charge of the Mines, according to the Custom of the Country, with Tobacco, Beer, and Brandy.

Our Host believed we would not think ourselves welcome unless we were made drunk, and therefore plied us so fast with Bumpers that there was no avoiding a Debauch. I met with an Officer there who spoke *French*, having waited upon a *Norwegian* Gentleman in *France*. I told him that I came out of Curiosity to see the Mines, and I begged him to let me enter them; he promised I should do it on the Morrow; and after two Hours drinking and talking, he permitted me to go to bed. The next Day as soon as it was light, the Messenger that came with me to the Mines posted for *Drontheim* with one of the Officers who were to receive the Provisions we brought for the Mines. I was left at the House of a Master-Miner, who went to *Drontheim* the next Day, and I was glad of the Opportunity of his Company, by which Means I had a whole Day to spare to visit the Mines and Miners. When I rose I went to the Officer that spoke *French*, and he had provided a Breakfast for me and the Master Miner, my Landlord, whom he desired to shew me the Way down into the Mines, that I might see them work. When we had breakfasted, and it is observable that the *Norwegians* are much given to Drinking and Good-cheer, we went fifty or sixty Paces from the Forges, which are on a high Mountain; there we came to the Mouth of one of the Mines; over which was erected a Machine like a Crane, turned by two Men in two great Wheels, to draw up Pieces of the Mine, as Masons draw Free-stones out of the Quarries near *Paris*, or Pot-ter's their Clay, in many Places in *France*. The Master-Miner and I were put into a wooden Tub, and our Hands into Iron Bands fastened to it: Thus we descended into the Mine above fifty Fathom deep.

When we got to the Bottom of it, it looked like *Pluto's* Kingdom; there was nothing to be seen allround but frightful Caverns, flaming Fire, and Creatures more like Devils than Men: They were clothed with black leathern Jackets, each having a Camail, such as our Priests in *France* wear in Winter; a Piece of patched Leather about the Head of each Miner, a little above the Nose, and hangs down to his Breast like a Muffler; they have all Aprons of the same. The Miners are constantly and differently employed; some use the Chissel, some the Hatchet, to knock out the Copper Stones; others look after the Veins of Copper, or sound, to try if they can discover any Water-place, which sometimes is hid in the Bowels of the Earth, and breaking forth on a sudden drowns them all that don't take care. The Master-Miner who descended with me into the Mine, perceiving I was afraid, and that I was taken with a cold Fit, rung a Bell; which was to give Notice to the People above, that they should draw us up again; accordingly we got up with the same Ease that we went down. I was very glad to breathe the serene Air, free from the unwholsome Damps of these subterranean Dwellings. I had seen enough to satisfy my Curiosity, and could I with Safety have staid longer, there was little more to be seen.

We went to the Officer's House, who could discourse with me in my own Language, and were entertained very handsomely and generously by him; his travelling having rendered him more polite than his Brethren at the Mines; after Dinner he ordered Horses to be got ready, to ride

to the Silver Mines. The Officer, the Master-Miner, and myself, went thither; where we waited on the Surveyor of the Works, who made us heartily welcome, presented each of us with a great Glass full of Brandy, drank off one of the same Size to shew us the Way, and then gave us the second Course in the *Norwegian* Collation, Beer and Tobacco. When we had smoaked and drank as much as the Surveyor thought fit, he conducted us to the Forges, a Mile off his House; at which, as in the Copper Mines, there are several Workmen always employed. Some break the Stones, others wash them, others melt and refine the Ore, and others coin the Money for the King of *Denmark*. These Mines turn both very well to account, and are not the least Part of his *Danish* Majesty's Revenue. From the Forges we went to the Mine that was next to it; 'twas on a high Mountain; the Master Miner and I were let down, as at his own Mine, and I saw nothing there which I had not seen before in that of Copper. These Miners are clothed like the others; and their Work and Habitations seemed much the same. They, both the one and the other, leave off working in the Mines in the Winter; Spring, Summer, and Autumn, being the only Time of their Business. They work in the Spring and Fall three Hours in the Forenoon, and three after Dinner; in the Summer, four Hours in the Morning, and five after Dinner; the rest of their Time they spend in Mirth and Feasting. They delight much in dancing, and have their Hautboys, Violins, and other Instruments, for that Purpose.

When I returned to the Copper Forges, I found the People at their Sports, and was not a little pleased to see the Variety of their Humours and Pastimes. For three Months, in the dead of the Winter, they don't work at all; nevertheless they receive their full Pay, at the rate of a Crown a Day. Having seen all that was to be seen at the Silver Mines, the Surveyor took us home with him, gave us such another Collation as we had before, and a good Supper after it. When we had all of us sufficiently refreshed ourselves, we went to Bed; and the next Morning the Master-Miner and I took our leaves of the Surveyor, who had provided a plentiful Breakfast against we got up; and rode from his House to the Copper Mines, where I thanked the Officer, that spoke *French*, for his Civilities; and the Master-Miner, and myself, set out for *Drontheim*. Night overtook us by the Time we were got eight Miles from the Mines, which put us on a Necessity of taking up our Quarters at a Boor's House, in the next Village we came to. The Peasant knew my Companion, and thought himself highly honoured in such a Guest: He therefore did his utmost to treat us to our liking.

He provided two Pheasants, and a Hare he had lately killed, for our Supper; that Game being free for the Boors in those Parts, they are seldom unfurnished with it. Before we sat down he brought us his Tobacco, Beer, and Brandy, made of Malt Spirits. After Supper we all of us fell to smoaking like Dragons, and drank Brandy and Beer almost all Night, which was the most beastly one I ever saw in my Life; but 'tis the Custom of the Country; and both the Gentry and People, by Conversation and Merriment, mean only Lewdness and Debauchery. The Peasant perceiving the Master-Miner was quite drunk, was so rejoiced at it, that he soon became in as bad a Condition himself. We had all now had our Dose, and some clean Straw was brought and spread in the Middle of the Chamber, to serve us instead of Beds. We lay down together and slept till Morning. The Sun was up before the Master-Miner and the Boor waked. I ordered, as well as I could, our Horses to be got ready; resolving, if possible, to get to *Drontheim* that Day. I made the Boor's Sons guess at my meaning by Signs. Our Horses were saddled, and then I waked my Companion and his Host. They were no sooner up, than we must again fall to eating and drinking; that Work done we mounted on Horseback, took our Leaves of the Peasant, and made the best of our Way to *Drontheim*; where we arrived before it was dark.

3. Two Days after I thus returned to *Drontheim*, all our Cargo was unladen, and we had taken aboard the

Provisions the Surveyor General of the Mines was to furnish us with; the Wind setting fair we embarked, and a few Hours after set sail to continue our Voyage to the North. The Wind held fair several Days, till we were under the Arctic Polar Circle, where we were becalmed on the Coast; some of our Crew were so superstitious, as to give Credit to the common Tradition, that the Inhabitants of the Country, under that Circle, as well as those that dwell on the Coasts of *Finland*, are Wind Merchants, and can raise and sell a Gale when they please: Certain it is they are almost all of them Wizards, and, as Children of the Prince of the Air, pretend to dispose of the Winds as their proper Merchandize. We were impatient of lying on that Coast, and that Impatience put us upon trying any Means, however improbable to succeed, rather than stay there any longer. The Captain of our Ship was for trading with the Wizards; accordingly he sent his Long-boat ashore with his Mate, to traffic with these Traders, and purchase a Wind of them, the Commodity we stood most in need on at that Time. Though I believed nothing of the Matter, I had the Curiosity to accompany him. We landed at the first Village we came to, applied ourselves to the chief Necromancer, told him what we wanted, and asked if he could furnish us with a Wind that would last till we arrived at *Mourmanskincre*. The Mate could speak enough of his Language to understand him, and to be understood. The Conjuror gravely replied, No; his Power extended no farther than the Promontory of *Rouxella*. We had a great Way thither, and if we reached so far, we thought we might easily make the North Cape; so the Mate desired him to go aboard with us, and drive a Bargain with our Captain. The Wizard consented to the Proposal, took three of his Comrades with him, leapt into a small Fisher-Boat, and went aboard our Ship.

Our Captain and he soon agreed upon the Price; he was to give him ten Kronen, about five or six and thirty Shillings in *English* Money, and a Pound of Tobacco; for which the Wizard was to furnish a fair Wind as far as *Rouxella*. When the Bargain was made, and the Money paid, the Wizard tied a Woollen Rag to the Corner of our Foremast; 'twas about half a Yard long and a Nail broad; it had three Knots; and this was all our Captain had for his ten Kronen. When the Necromancer had done this Feat, he returned in his Boat to the Village with his Companions. The Captain of our Ship, according to the Instructions he had received from the Conjuror, untied the first Knot in the Rag, and immediately the Wind struck up West-south-west a brisk Gale, and drove us, and the other Ship in our Company, thirty Leagues beyond *Maelstrom*, without giving our Captain any Occasion to untie the second Knot; and this Accident confirmed our Crew in their diabolical Superstition. This *Maelstrom* is the greatest Eddy or Whirlpool in the *Norwegian* Sea; in which many Vessels that approached too near it have perished. For this Reason, such as are acquainted with those Coasts, keep out to Sea eight or ten Leagues to avoid it, and the Rocks that lie off *Ostaford*, opposite to *Maelstrom*. There are several such Eddies, five, six, and seven Leagues from the Shore; and this Danger obliges all Pilots to keep far out to Sea.

The Wind beginning to shift a little, and inclining to the North, our Captain untied the second Knot, which kept it in its old Corner, till we made the Promontory of *Rouxella*. When we had passed it, the Needle of our Compass turned back half an Inch, by which some fancied that there was Loadstone in the Mountain; and had not we had a very dextrous Pilot, we should certainly have lost our Course. Knowing that the other Ships in our Company were in the same Trouble as ourselves, our Pilot shut up his Compass, and hung out a Flag on his Foremast Top, as a Signal for the other Ships to follow us; he was very well acquainted with the Coasts and Course, having often piloted the *Dutch* Ships trading that Way; in which he had no other Helps than his Sea Charts. We were two Days and two Nights in this dangerous Condition, having nothing to depend on but the Pilot's Experience. On the third Day, being far

distant from the Mountains of *Rouxella*, the Needle of our Compass pointed again to its Object; from whence we concluded that we drew near the North Cape; where the Wind failing us, our Captain untied the third Knot, at which there arose a North-north-east Wind, so furious, that we thought the Heavens would fall down upon us; and that God would justly punish us with Destruction, for dealing with infernal Artists, and not trusting to his Providence; we could bear no sail during the Tempest; our Ship drove at the Mercy of the Winds and Waves, which tost us so violently, that we expected every Minute to go to the Bottom.

The Reader will, doubtless, wonder at these strange and extraordinary Passages, in regard to the Witchcraft of these Northern People; and therefore it is necessary to inform him, that their Witchcraft, like most other sorts of Witchcraft, is downright Fraud and Imposture. They have in these Countries many deep Caverns, and subterraneous Grottoes; by their Observations in which, they are able to judge of the Variation of Winds for several Days to come; and they take care to start so many Difficulties in making their Bargains, that they are sure never to come to a Conclusion till the Signs appear, by which they are morally certain that those Winds will blow which they pretend to sell. In the present Case it is evident, that the pretended Conjuror made a very prudent Observation before he made his Bargain with the Captain; which was, that his Power extended only to a certain Cape; but the Truth of the Matter was, that he very well knew, by Experience, that Cape was the Limit of his Observations, and that he should risque his Credit if he presumed to exceed his Bounds. The People in *Iceland* are the most famous of any for carrying on this Trade of felling of Winds; and they sell them with less Limitation, because living in an Island, they are more able to judge of the Variation of Winds in all the Seas round about them; and therefore it is from the Accounts given by sensible People who have lived in that Island, and who have taken Pains to enquire into this Matter, that we are able to give so good an Account of it. This Sort of Knowledge is kept in the Hands of a few People, who thereby awe their Neighbours, and cheat Foreigners. All this may be very naturally expected in a barbarous Country, where Learning and Religion are at a very low Ebb; and I believe it will be generally found, that in Proportion as People are little acquainted with the Word and Works of God, they are most apt to pretend to converse with the Devil; and this seems to be confirmed by the declining of such Notions, wherever the Lights of Reason and the Gospel prevail.

4. Though we were not above ten or twelve Leagues from the Coast of the *Danish* Lapland, yet we did not imagine the Storm would throw us upon it; we feared the Winds so much, we did not think of Land; and when we thought ourselves secure from the Rocks, we were almost driven upon one, by a sudden Blast thirty Leagues above the Cape, and four from Shore; every Man fell upon his Knees, and begged Pardon of God, believing we should, at that very Instant, be dashed to pieces; I confess I never was so afraid in my Life, and I believe all the Crew was in as great Consternation as myself; when by good Luck, or rather through divine Mercy, the extraordinary Force and Agitation of the Waves prevented our striking, and drove us a Musket Shot from the Rock. Our Ship having received no Damage, only by a little slight Touch on the Skirt of the Rock, sprung a Leak a little above the Keel, and two or three Planks were somewhat bulged in the Bottom of the Ship's Hold; the Water entered, and we were obliged to pump incessantly. On the fourth Day the Wind fell; however we could not heartily rejoice for our Safety, having lost Sight of our Friends in the other Vessels, who, we feared, were at the Bottom by this Time. Notwithstanding we continued our Course with a favourable Gale; we had several Feet Water in our Hold, and had much ado to live. The Wind was pretty fair, wherefore we resolved to make the first Port, to stop our Leaks and refit.

But the Coasts of the Sea, all over the North, are so full of Rocks, that the Ports and Creeks are inaccessible; and we were forced to sail on two Days longer, before we could find any Place for our Purpose; the next Morning we arrived on the Coast of *Wardbus*, the chief Town of the Government of *Danish Lapland*; where the King of *Denmark* has a Castle garrisoned by two Companies of Soldiers. Here is also a Collector to receive the Duties imposed on Foreigners trading to, or from, *Archangel*, on the *White Sea*; this Officer suffered us to pass without examining us, believing, by our Colours and the Guns we gave him to salute the Castle, that our Ship was a *Dane*. We then sailed to *Varanger*, and cast Anchor half a League from the Town. We presently put our Long-boat by our Ship's Side, to carry some of the Crew ashore; no body aboard had any Knowledge of the Place, which seemed to us to be very wild; wherefore our Captain took eight Men well armed with him, and resolved to see whether there was any Conveniencies for us there to refit, or any Trade to be driven with the Inhabitants. In less than half an Hour we arrived at *Varanger*, a populous Town, and a convenient Port; but so little frequented, that the Inhabitants were amazed to see us. Whether their Astonishment proceeded from the Sight of Men armed, or of Men less barbarous than themselves, I shall not pretend to determine.

But our Captain addressed himself to those who seemed to have most Authority among them; demanding if they would permit us to enter their Port, and assist us to refit our Ship, and were disposed to trade with us. They gave him little Encouragement for Traffic; but understanding we were Merchants, who were going to catch *Walrus*, they offered us their Assistance to refit our Ship, which we thankfully received. Having observed the Commodiousness of the Harbour, we returned to our Ship, weighed Anchor, and entered the Port; where we discharged our Ballast, which was only Sand, to serve for Counterpoise to some bundles of Tobacco, and Bales of Cloth, which were the Cargo we were to trade with. When the Ship was unladen, we secured the Goods in a House near the Shore, that was locked up; and the Captain and Supercargo ordered a Watch to be set over it. To gain the Good-will of the Inhabitants of the Country, who, as I have said, were *Laplanders*, subject to the King of *Denmark*, we gave them some Rolls of Tobacco, a more grateful Present to them than Gold. To retaliate our Kindness, they treated us with the best they had, some dry Fish, that serves instead of Bread; some Venison, not very extraordinary, being the Flesh of Rain-Deer, an Animal that is often to be met with in *Lapland*, *Borandia*, *Samojedia* and *Siberia*. They brought us Bear's Flesh, and the Flesh of other wild Beasts which we had no Knowledge of; also fresh Fish, boiled without Salt; the Sauce to this Dish, is either the Oil of other Fish, or a sour Drink; which is one of the best of Liquors in their Opinion. We could none of us bear them Company at this Repast; their Ragouts were not to our liking, so we sent for Provisions from aboard, and endeavoured to be as merry as we could in such a Place, and among such Barbarians. Salt-Beef and Bisket was our choicest Dish; we offered some of it to the *Laplanders*, but when they had tasted it, our Food seemed as unfavoury to them, as theirs did to us.

Our Beer was more acceptable; they drank of it freely, and were pleased with the Brandy we gave them; yet their own sour Drink they had more Gouft to, than either our Brandy or Beer. It consists of an Infusion of Juniper Berries, and of a Grain like Lentils, the Name of which I have forgot: It grows there in abundance, as Juniper Trees do. I never saw any thing so like that Grain as Lentils; and our Botanists have made no mention of it in any of our Discoveries; they make Brandy with the same Grain; it has the like Effect as ours that is drawn off of Grapes; and their common Drink is as strong as our common Wine, and serves for the same Uses.

Those *Laplanders* are *Lutherans*, and have Priests to instruct them; they are said, however, to deal still with the Devil; almost all of them are Wizards, and so superstitious, that if they meet a Beast in the Way, whose Ap-

pearance is reckoned ominous, they return home, and do not stir out all that Day; and when they go a fishing, if they have but one Fish in the first Draught, they take it for an ill Augury, pack up their Nets, and leave Work for that Time. Both Men and Women are low of Stature, yet strong and active: Their Faces broad and flat; they are flat nosed; their Complexions swarthy, like the rest of the People in the North; their Eyes are like a Hog's, and their Eyelids are almost all like those that are bleary-eyed. They are stupid, brutal, and lascivious, especially the Women, who prostitute themselves to all Comers, if they can do it unknown to their Husbands. The Womens Cloaths are made either of coarse Cloth or Rain-Deer Skins, with the Hair outward; their Stockings are of the same; their Shoes of Fish Skins, the Scales hanging on them; they have no Straps, and resemble somewhat the wooden Shoes worn by the Poor in *France*. Their Coifs are like the *Norwegian* Womens; their Hair is twisted up in two Rolls, one hangs down on one Shoulder, and the other on t'other. They wear a Cornet Coif on their Heads, made of coarse Canvas; all their Linnen is of the same Fineness; some of them wear a Sort of Ruff eight Fingers broad, which they tie behind as the Gypsies do in other Countries.

As for the Men they are cloathed in Rain-Deer Skins, the Hair outwards; their Coats are short, and come down but half way to their Thighs, like a Waistcoat; their Breeches and Stockings are of the same, the Hair always outwards. On these they wear a Sort of Boots, made of Fish Skin, which though rough and coarse, are stitched so neatly, that the Seams are not to be seen. Some of them wear no Boots at all, but Stockings, like the Women; their Bonnets are round like a Seaman's Cap; they are always made of Rain-Deer Skins, the Hair still outwards, and edged with a Band of a Fox's Skin, some white, some grey. These *Laplanders* Lodgings are like those of the Boors about *Christiana*.

They have no Light but what enters by a Hole at the Top of the Hut. They don't make use of Beds to lie on, any more than the other *Laplanders*, the *Borandians*, *Samojedians*, *Siberians*, *Zemblians*, *Islanders*, or the rest of the Northern Nations. The whole Family of a *Danish Laplander*, Master, Mistress, Children, Men and Maids, lie down altogether very familiarly, on Bear-Skins spread in the Middle of the Room; and when they rise in the Morning the Bear-Skins are taken up, and laid by till they are wanted again at Night. In each House there is a great black Cat, which is highly valued by them; the *Laplanders* talk to it as if it was a reasonable Creature; every Night they go out of their Huts with it, to consult it alone; and it will follow like a Dog, either in Fishing or Hunting. Though this Animal looks like a Cat in Appearance, yet if I had a little more Superstition, I should have believed it to have been a familiar Spirit.

5. We unloaded our Ship the next Day after our Arrival at *Varanger*; the Inhabitants helped us to haul her ashore, that we might refit her; the Captain found her much more damaged than he expected, and desired the *Laplanders* to provide him Timber proper for the Carpenters use; they readily answered his Request, and went to a neighbouring Mountain to fell some for him. Our Supercargo, as he found the Ship would be some time refitting, thought it would not be improper to take a Journey into the Country, to try there whether any Trade could be had; to this Purpose he picked out myself and two more of the Ship's Company, to accompany him. Early the next Morning, being the 12th of *May*, we set out for our Journey, taking with us some Tobacco and Cloth to trade with; and Bisket, and salt-Beef, and Pork, to eat. We desired three of the Inhabitants of *Varanger* to go along with us, as well to shew us the Way, as to help to carry our Goods and Provisions to the next Village. The *Laplanders* were willing enough to serve us; so we followed them through the Woods, and Mountains, and Valleys, without meeting any living Creature, till towards four o'Clock in the Afternoon, when we perceived two white Bears of an excessive bigness, coming, as we Strangers thought, to devour us.

Our

Our Guides perceiving the Terror we were in, bid us not be afraid, for we need only have our Arms ready to defend ourselves, in case they approached too near us; which we did, cocking and priming our Pieces, and hacking our Flints. Whether or no the Bears were frightened at the Fire we struck out of the Flints, or with the Smell of the Powder, I shall not undertake to decide; but they presently fled away from us so fast, that in a Moment they were out of Sight. An Hour before Night, as we descended a Mountain, we espied a Dozen Houses at the Foot of it; they were at a great Distance one from another. Somewhat farther off we saw a Herd of Beasts like Stags, which our Guides told us were Rain-Deer. When we came to the Village, the *Laplanders* that travelled with us conducted us to a Hut, where, being very weary, we were glad to rest ourselves, for we had a long Journey in very bad Way, with Luggage on our Backs, that incumbered and tired us. We gave a Piece of a Roll of Tobacco to our Host, who received it with Joy, assuring us he had not had so valuable a Present in nine Months before; to make us Amends he brought out his Brandy Bottle, some Rain-Deers Flesh dressed without salting, and some dried Fish; which we gave to our Guides, and supped ourselves with the Victuals we brought with us; when we had made an End of our Supper we went to our Repose, and lay down on Bears-Skins, after the Country Fashion. When we rose in the Morning, we asked our Host if he had nothing to barter with us for Cloth and Tobacco; he replied he had some Wolf, Fox, and white Squirrel Skins, and his Neighbours had some of the same Commodities, and would gladly truck with us. We bid him, by our Interpreters, bring out his Skins; and if he had any Cloaths made of Rain-Deer Skins, we would deal with him for four Suits, which we wanted to keep us warm; accordingly, he brought forth his Merchandize, and we bought it of him, paying him Part in Tobacco, and Part in Cloth. We trucked also with his Neighbours, as long as they had any thing to offer us worthy our buying; and when we had drained that Market, we prayed the Host to lend us some Rain-Deers, to carry us farther up the Country; and he was very willing to help us to the utmost of his Power.

The Tobacco we gave him having gained his Friendship intirely, he took down a Horn that hung up in his Cottage, went out and blew it to call the Rain-Deer to him. Immediately fourteen or fifteen of those Animals came running towards the Hut: He put six of them to six Sledges, each Sledge made somewhat like a Gondola; it was placed on four Posts joined together by other cross Posts nailed to them, and this was fastened to two Posts two Feet longer than the Sledge that run on the Ground. We put our Merchandize in one Sledge, each of us had one for himself, and the other we assigned to one of our Guides, who understood the Language of the *Muscovite Laplander*, and that of the *Kilops*; him we took with us; the other two Inhabitants of *Varanger* we dismissed, having paid them in Tobacco for their Trouble. We put on our *Lapland* Cloaths, and lay down each of us in his Sledge covered with a Bear-Skin; at the Back of the Sledge there were two Girts made of Rain-Deer Skin Leather, in which we thrust our Arms up to the Shoulders, to keep ourselves steady; and we had each a Stick with a strong Ferrel to it, to support the Sledge if it should be likely to overturn by Stumps of Trees, or Stones lying in the Way. When we were ready to set out, our Host muttered some Words in the Ear of the Rain-Deer; I enquired afterwards of our Guide, what he meant by it. He said, it was to tell them whither they should carry us; so silly are these barbarous Wretches.

Custom had made that muttering so familiar to the Beasts that drew us, that when our Host had gone to all six, they ran away with us so swiftly, that we thought we were drawn by so many Devils; they continued their Pace over Hills and Dales, without keeping the beaten Road all Day long, till seven o'Clock in the Evening, when they brought us to a large Village situate between two Mountains, near a great Lake; here they stopped short at the fourth House in the Place, which though large

was very ordinary and clownish. They beat the Ground with their Feet; and the Man hearing a Noise, came forth with his Servants, to take us out of the Sledges, and unharnessed our Cattle, and one of them brought out a little Juniper Can, full of Brandy, of which he gave each of us a Brimmer, out of a Bowl made also of Juniper Wood. This was to put us in heart; for our Guide had informed him that we were afraid of our Lives, being drawn away so swiftly by these Animals in Sledges, which was a Way of Travelling we were not used to. The Horns of these Beasts, both Male and Female, are somewhat higher than the Stags, but more crooked, hairy, and not so well furnished with Sprouts as a Stag's are; they are of the same Colour as Stags, and not much bigger; their Feet are cloven like theirs, but as big as Hoofs of Oxen: They live upon Moss, which grows every where in those Parts: The Females yield Milk like Cows; the *Laplanders* make Butter and Cheese of it, and both are very good. Their Harness is a Collar of Rain-Deer Leather, by which they are fastened to the two Shafts of the Sledge, not much unlike our Horses to a Coach; thus they draw it with incredible Speed directly to the Place whither you are to go, without being guided by him who rides in it.

6. When we got out of our Sledges, we were conducted by our Host into his Hut, which, like the rest of the Cottages in the Place, was very little, low, and covered with the Bark of Trees, the Light entering in at a Hole at the Top of it, as we have elsewhere observed. These *Laplanders* were cloathed in a manner little differing from those of *Varanger*; their Apparel was of the same Make and Materials, but longer; their Coats were of Rain-Deer Skins, the Hair turned outwards. The Women were dressed in Garments of the same Skin, their Hair twisted as the Womens of *Varanger*; on their Heads they wore a high Bonnet instead of a Coif, which was made of the same Skins with their Cloaths, and the Hair still outwards.

We gave our Host an End of Tobacco about two Inches long, with which he was mightily pleased, and thanked us heartily for it: We gave an End not quite so long to each of the Inhabitants of the Place, to make them our Friends, and to secure us the better against any Attempts of these *Barbarians*, who were more brutal than those we last deal with. We supped on the Provisions we brought with us, and our Guides eat some of our Hosts salt Fish, and fresh Rain-Deer Venison. We asked him how many Leagues we had come that Day? he answered, about thirty, and that we were in the Territories of *Mourmanfkeimore*. The Inhabitants talked a Language quite different from those at *Varanger*; but our Guide had been often in the Country, and understood them, and was understood by them. After Supper we lay down on Bear-Skins to take our Rest, as we had done the Night before, having first bartered away our *Lapland* Habits with our Host for others that were longer, and a Parcel of Tobacco for a hundred grey Squirrels, a Fur very much esteemed in *Denmark*, and other Parts of *Europe*. The next Day, being the 14th of May, we told our Host, by our Interpreter, that we desired him to provide Sledges to go farther into the Country; this he did accordingly. The other Inhabitants of the Village came to help us forward in our Journey, bringing Brandy with them to drink to us at parting. They put six Rain-Deer to six Sledges, in one of them we stowed our Merchandize and Provisions; and our Host having performed the Ceremony of muttering in the Ears of the Beasts, we were drawn along with the same Swiftness as before. We came to no Place that was inhabited till about three o'Clock in the Afternoon, and then we arrived at a Village, wherein were eight Cottages, built on a high Mountain by a Woodside, where our Cattle stopped; by which we guessed that there were some Inhabitants; but seeing no-body come to us, we baited our Rain-Deer with Moss, which grew there plentifully, and refreshed ourselves with salt Beef and Bisket; our Interpreter regaled himself upon some Rain-Deer, Venison, and dried Fish: All of us making merry with the Brandy we had given us in the last Village. We staid in this Place near an Hour

then our Guide, who understood the Way of making Rain-Deers go as well as the other *Laplanders* did, endeavoured to get them forward; but he had much-ado to effect it.

This Place being their usual Stage, he was forced to perform several mysterious and ridiculous Ceremonies; he went alone into the Wood, and coming out again, muttered some Words in the Ears of these Animals, which whether they understood or not, had little Effect upon them, for they did not stir. He did so four or five times, and then he began to proceed, though not so swiftly as before. We asked him the Reason why we saw no body in the Village? He replied, 'twas a very common thing in that Country; these Dwellings belong to the *Kilops*, a Nation of *Laplanders* more wild than the others; who often change their Habitations; fly from Strangers, and subsist only by what they get by hunting. Continuing our Journey, we descended the Mountain; about nine o'Clock we spied four *Kilops* not far off, returning from hunting, in Sledges drawn by Rain-Deer; to avoid us they turned aside out of our Way, and took another. In less than half an Hour we entered a long Wood, in which we heard terrible howlings and cryings, but saw nothing; when we got through the Wood, we had another Mountain to descend, at the Bottom of which we perceived there was a Village; our Cattle carried us to it, and stopped and beat the Ground at what Cottage they pleased. Our usual Present of Tobacco, purchased us our usual Welcome of the Master of the House; we made a good Supper on our Provisions, as our Guide did on his, and down we lay, according to Custom, to take our rest on Bear Skins; which, though homely, was a welcome Repose to our wearied Limbs, sufficiently jogged in the Sledges.

In the Morning we rose as early as the Host, and demanded of our Interpreter how many Leagues we had travelled the Day before? He replied, at least, forty. But he must be out, either in his reckoning, or the Leagues must not be so long as they are generally calculated to be; for forty of their Leagues make one hundred and sixty of those between *Paris* and *Lyons*; each *Lapland* League being as long as a *German*: Let a Man be ever so well mounted, he cannot ride on Horse-back above five a Day. Our Guide also informed us that we were in the *Muscovite Lapland*; we bid him ask the Inhabitants of the Village, whom we had presented with Tobacco, and been treated by them with Brandy, whether they had any Commodities to truck with us for Tobacco and Cloth? We had some Rolls of the former left, and most of our Bales of the latter. Tobacco being by much the better Commodity, the *Laplanders* replied, they had some Furs, we asked to see them, and they brought them out to shew us: They were white Fox Skins, black and grey Fox Skins, grey Squirrels, and Sables, though not of so fine a Colour as those of *Borandia*, *Samojedia*, and *Siberia*. These Merchandizes were what we wanted, so we soon struck a Bargain, and paid the Inhabitants in Cloth and Tobacco. When our Market was over, we fell to drinking with them; they were not quite so brutal as the other *Laplanders* we had dealt with, but they were very rude and indecent in Conversation, doing things before us that Decency will not permit me to name. It growing late, and we designing to proceed yet further, to dispose of the few Rolls of Tobacco we had left; we prayed our Host, by our Interpreter, to furnish us with Sledges and fresh Rain-Deer.

He harnessed and prepared as many as we had Occasion for; we mounted our Sledges and departed at one o'Clock; we ran with our former Speed, through different and unbeaten Paths, till six, without meeting with one Habitation; half an Hour after we were descending a Hill, we spied two Huts under a Rock, a little out of the Way; our Guide told us that two *Kilops* lived there, who, as soon as they saw us, fled with their Wives and Families. We travelled two Hours longer, and came to no House, or any thing like a dwelling Place; till at last we discovered a great Village on the Side of a Hill, and on the Banks of a River; here we arrived at

eleven o'Clock at Night, and went to the Cottage for a Lodging, whither our Cattle were pleased to conduct us. It happened to be in the Middle of the Village; the Master of the House received us very kindly, made a Fire in the Middle of his Hut, gave us Brandy, dried Fish, and Rain-Deer-Venison salted, at which we were a little surprized, having not met with any in our Travels hitherto, who made use of Salt as these did; he also gave us Milk and Salt-Butter, very good, and it would have been better, had we had any Bread to eat with it; but we had consumed our Store, and should have been very much put to it, had we not met with so good Entertainment here. Our Guide would not taste a bit of Salt-Meat, so he was obliged to live on the fresh Venison he brought with him. Having supped plentifully, we lay down on Bear Skins, and slept till Morning; we rose early the next Day, took our Leave of our Host, and there being no trading in that Village, passed the River to proceed to *Kola*, on the other Side of that Stream, which is as big as the *Seine*.

We came to another Village, and went to the most likely House to hire Sledges and Rain-Deer, to carry us to *Kola*, for we could get none in the Place where we lodged; here we furnished ourselves, and about Noon arrived at *Kola*, a little City, or rather a great Town; built among Mountains, on the Side of a River, near ten Leagues from the North Sea. To the East of it are large Forests and Desarts; *Mourmanskeimore* to the West, and prodigious high Mountains to the South. The Houses are very low, built of Wood, and handsomely covered with Fish-bones: On the Top of them the Light enters in at a Hole, as in other Places in *Lapland*. There is but one Street in it, and that no fine one. The Inhabitants, like the other *Muscovites*, are severe, suspicious, and so jealous, that they lock up their Wives, that Strangers may not see them. Our Host took all our Cloth off our Hands, for which he gave us, in Exchange, two Lynx-Skins, spotted like a Leopard's, three Dozen of white Fox-Skins, half a Dozen of *Wyetfras*, an Animal which somewhat resembles a Badger, but its Hair is longer and rougher; his Colour is a blackish red, and his Tail like a Fox's; we had also some Ermines of him. There were some Ells of Cloth above what we were to give him, for which he obliged himself to supply us with Provisions for our Journey back to *Varanger*, and to help us to Sledges, as far as the River we lately passed; he treated us as well as he could, and we supped, and slept as we had done elsewhere.

7. The next Morning, as we were preparing to depart, our Host, having provided Bisket, Ginger, Bread, and Rain-Deer-Venison salted and dried, as also a Barrel of Brandy, to serve us in our Return; before we had quite packed up our Furs in Bales, his Neighbours understanding we had still a few Rolls of Tobacco left, came to ask if we would truck them for more Skins? We replied, with all our Hearts; so they fetched them, being a Dozen of Ermines, two white Foxes Skins, and four Lynxes, not so good as those we had of our Host. The Bargain made, we took their Furs, and gave them the residue of our Cargo of Tobacco, except seven or eight Rolls, which we reserved for our own Use, and to pay for the Hire of our Rain-Deer and Sledges in our Way back. Tobacco is more necessary than Money, to those who travel in that wild and unfrequented Country; the *Laplanders* valuing an End of Tobacco as long as ones Finger, more than a Crown Piece. The Kings of *Denmark* and *Sweden*, and the *Czar* of *Muscovy*, have laid several Taxes upon it; and there are Officers settled in their frontier Towns, to collect their Imposts upon it. When we had done our Business, according to the Custom of the Place, we must drink with our Chapman; our Entertainment every where was Brandy, and it held till two o'Clock in the Afternoon. We then intreated our Host to get the Sledges, we had hired of him, ready; which he did in one Minute. We stored our Merchandize in one of them, got into the other ourselves, drank a full Glass at parting with our Dealers, bid them adieu, and set out for the Village on the other Side of the River we passed

passed the Day before. Our Rain-Deer, to our Apprehension, ran faster than any we had hired in our Journey to *Kola*.

We arrived at the first Village by seven o' Clock; we passed the River and came to the second; where we put up at our old Landlord's, who received us with Joy, hoping that we had still an End of Tobacco left, to give him for the Hire of some Rain-Deer and Sledges. He presently gave each of us a Cup of Brandy, for they toils it off there as we do Beer in the South; and asked us if we would have the Rain-Deer put to the Sledges? We replied, we had rather rest ourselves till Morning, for there was no Village besides in some scores of Miles from this. He filled out another Cup, which when we had drank, he offered to take us with him to the Funeral of one of his Neighbours, who had been dead about four Hours. We were very glad of the Opportunity of seeing their Ceremonies on this Occasion, hearing much talk of them. We accompanied him to the House of the Deceased; we saw his Corpse taken from the Bear-Skins, on which it lay, and removed by six of his most intimate Friends, into a wooden Coffin, being first wrapped in Linnen, his Face and Hands only bare. In one Hand they put a Purse with Money in it, to pay the Fee of the Porter at Paradise Gate, and in the other a Pafs, signed by a Priest, to be given to *St. Peter*, as a Certificate that he was a good Christian, and ought to be admitted into Heaven. They also put into his Coffin a Barrel of Brandy, some dried Fish, and Rain-Deer-Venison, to serve him to eat and drink on the Road, having a long Journey to take. They then lighted some Fir-Tree Roots, piled up to a convenient Distance from the Coffin, wept and howled plentifully, making strange Gestures, and turning themselves in a thousand different Postures, to shew the Extravagance of their real and affected Sorrow. When this Noise and Gesticulation was over, they marched round the Corpse several times in Procession, asking the dead Man why he died? if he was angry with his Wife? if he wanted any thing? if he was hungry or a-dry? if he had lost his Game at hunting? or had bad Luck at fishing? or had not Cloaths to his Mind? Then they fell a howling again, and stamping like so many Madmen. One of their Priests, who assisted at the Solemnity, every now and then sprinkled some Holy-water on the Corpse; the same did the Mourners. I forgot to inform the Reader, that having an extraordinary Veneration for *St. Nicholas*, they, as well as the *Muscovites*, are *Nicholatians* by Religion, and always place the Image of that Saint near the Bodies of their Dead, instead of a Crucifix. This Saint is not the same for whom we celebrate a Festival in *France*; but *Nicholas*, one of the seven Deacons, mentioned in the *Acts of the Apostles*. His Image is dressed up by them in a Pilgrim's Habit, in a long Robe, with a Camail hanging down over his Shoulders, a broad Girdle about his Middle, and a Staff in his Hand.

The Noise they made having almost deafened us, and being weary with looking on their barbarous Rites, we left the Cottage of the Defunct, to go to our Host's, where we found only our Hostess at Home. She had made a Sally out of the Place to which her Husband had confined her, on our Arrival; as soon as she saw us, supposing he was with us, she would have retired to her Corner; but our Guide and Interpreter, giving her to understand the good Man was at the Funeral, and would not come home presently, she stayed and viewed us all round, one after another, looked very kindly on us, drew her Seat near us, and shewed us a Bonnet of her own embroidering, done very curiously with Tinsel Threads. The Work of all the *Muscovite Laplanders*, is to make Cloaths for themselves, their Husbands, and their Children. The Edges of them are all embroidered with Tinsel Thread. They draw them between their Teeth, as fine as the Wire-drawers do their Gold and Silver Threads with their drawing Iron. They work with a good Grace. They are handsome, well shaped, and good humoured, and, if they did not very well know how jealous their Husbands are of them, and fear their Resentments, they would willingly prostitute themselves to Strangers; for which Reason they

are shut up when any come among them. While our Host was busied about the Funeral, we pulled out some of our Provisions, and gave our Landlady some of every Sort to taste. She liked all, but especially the Gingerbread; she drank two or three Glasses of Brandy, and then withdrew to the Place of Confinement, fearing her Husband might surprize her with us, which would have raised his Jealousy to such a Degree, that he certainly would have used her very indifferently. When our Landlord came home, he obliged us to take a Cup or two more with him, to smoak a Pipe, and sup together; for us he brought forth the Victuals he had in the House, which he thought would be most grateful to our Taste, as Salt-Butter, which we eat with Bread; our Guide would not touch it, and for him the Man of the House got some Bear's Flesh, which he broiled on the Coals, and some dried Fish.

All the Cottages in this Village were like the others we had observed elsewhere, built of Wood, and covered with Turf; but they were handsomer and better set off than any we had seen in the Country; being both within and without adorned with Works of Fish-bones, curiously inlaid. We made as good a Supper as we could, and, according to Custom, lay down with the Family on Bear's Skins; our Landlady only was missing, and she was to do Penance by herself in a Corner, till we were gone. In the Morning early, on the 18th of *May*, our Host provided our Rain-Deer and Sledges. We stowed our Bales, seated ourselves, and away went our Rain-Deer, running as fast as those we hired at *Kola*. In two Hours they carried us six Leagues, where, passing between two Hills, we spied a *Laplander* going a Hunting; he came up towards us, sliding on the Snow, which, in that Country, does not melt till Midsummer, as fast as we rid in our Sledges; his Skates were made of the Bark of a certain Tree; they were seven Feet and a half long, only four Fingers broad, and flat at Bottom; he was dressed like the other *Laplanders*, in a Garment made of Rain-Deer-Skin, with the Hair outwards; his Cap, his Gloves, his Coat, his Breeches, and Boots, were embroidered with Tinsel; he had a Girt of Rain-Deer-Skin about his Waist, a Dart in one Hand, and a Bow in the other, a large Quiver hanging at his Back, and a black Cat followed him. He kept Company with us about half a League; we parted at the Foot of the next Mountain; we descended it, and he struck off another Way. We continued our Rout three Days, stopping at the same Places where we lay in our Journey outwards; and, meeting with no new Adventures, our Entertainment, our way of Travelling, and every thing was the same as before.

About nine o'Clock at Night, on the 21st of *May*, we arrived safe at *Varanger*, having received many Services, and no Wrong, throughout the whole Country of *Danish Lapland*; for though the Inhabitants are poor and ignorant, they are, however, faithful, and given to no Manner of Theft or Fraud. Their Honesty is their greatest, if not their only, Virtue. They are so dextrous in throwing a Dart, that they will put a Crown Piece, thirty Paces off, and strike through it; as for the Bow, they are so skilful, that they will shoot their Game in what Part they please. They don't much care to go to the Wars; and whenever the Kings of *Sweden* and *Denmark*, or the *Czar of Muscovy*, have Occasion for Soldiers, for fear of being forced to serve, they leave their Dwellings, and fly to the Woods. They have plenty of Fowl, as Geese, Ducks, Pullets, and other Sorts. They feed them not with Juniper Berries, but with another Grain, of which they make their Drink; and when that is scarce, or for Variety, they give them Fish to eat. The greatest Part of the wild Beasts in *Lapland* are white, as Bears, Wolves, Foxes, and Hares; and even their Crows are so white, that they may be compared to the Swan, having nothing black about them, but their Bills and Feet.

The Fish they dry to eat instead of Bread, is very broad, and two or three Ells long, without Bones, and, excepting the Fat, has a very good Taste; it is firm and substantial, and they call it *Raff*. As for other Fish they

eat boiled, they have all Sorts among them. Their Utensils, within Doors, are made of Copper or Wood; and though they eat no Salt, and in general hate it, yet they boil all their Meat in Sea-Water, if they are near enough to get it conveniently. They have a kind of Dogs a Foot long, and four Inches high; their Hair is an Inch long, of a yellowish white Colour, rough, and standing up like a Hog's Bristles. They have curled Tails, strait Ears like a Wolf; Head and Snout like a Rat; are very fit to catch Mice, which they watch like our Cats; and when they have caught them, eat them; for this Reason the *Laplanders* value them at an high Rate, though they are very ugly. There is also a Sort of wild Bird in *Lapland* of a grey pearl Colour, as big as a Sheep; his Head is like a Cat's, his Eyes red and sparkling, his Claws and Beak like an Eagle's, with which he will take up Hares, and other small Game.

8. Our Captain began to caulk the Ship the same Day we returned to the Port. In two or three Days after, it was in a Condition to put to Sea, and we loaded our Ballast. In the mean Time we treated the Inhabitants with Tobacco and Brandy, to keep them in good Humour; for our Crew fancied, that if we did not bribe them to be our Friends, they might, in revenge, raise contrary Winds by their Conjurations. They were very good to us in the Opinion of our Mariners; for five Days after, being the 26th of *May*, there sprung up a Wind the most favourable for us in the Compass, to carry us out of the little Sea of *Varanger*; wherefore we weighed anchor, and sailed at seven o'Clock in the Morning. The Wind shifting afterwards from one Quarter to another, we were obliged to cast Anchor under the Shore, over against the Island of *Wardbus*. The Captain of the Castle spying us, and knowing who we were, came to us in a Shallop; when he was aboard we entertained him as well as we could, and he returned to the Castle very well satisfied with his Reception. The next Day the Wind settling to a Point, we kept out to Sea, and held our Course North-north-east, with all our Sails loose. In three Days Sail we were got into a Climate where was no Night; we never lost Sight of the Sun there, it always setting on one Side or the other of us, before us, or behind us.

On the last Day of *May* we spied the Mountains called *Spitzbergen*; at which Time a North Wind blew so violently, that we could not keep to Sea, and were forced to leave them to the North-north-west, and steer our Course East-south-east, endeavouring to make the Shore, that we might lie under it, and be sheltered from the Weather. We continued our Course three Days longer, very much incommoded by the Ice; which being broken, and tossed by the Tempest, beat against our Ship's Stern and Sides, so furiously, that we expected every Minute to founder. On the 4th of *June* we spied some high Mountains to the East; we steered that Way to make them, and shelter ourselves under a Promontory; but the Wind blowing fresher and fresher, and still North, we were obliged to tack about towards the Coasts of *Borandia*. We arrived at a Bay, and entered it in a few Hours. The Haven was very commodious; we lay there safe from all Weather, in twelve or thirteen Fathom Water. We had scarce cast Anchor before we spied two Ships in the Bay, about a Musket Shot of us. We perceived they were two of our Company, from whom we were separated, in the Storm that drove us into *Varanger*. We were extremely glad to meet with them, fired three Guns, and hung out our Flag in the Stern, as a Signal of our Arrival. They rejoiced as much to see us safe; for we reciprocally believed, that they and we were gone to the Bottom. They answered our Guns by twice as many, hung out all their Flags and Pendants. We did the like, wishing for an Opportunity to throw out our Long-boat and go aboard; but the Wind blew so stiff we durst not attempt it till four and twenty Hours after. They were as impatient as we, to know how we escaped in the Storm, in which we were separated from them; and as soon as the Wind slackened, a Boat came off from each of them to board us. We embraced one another with extraordi-

nary Affection and Joy, as People that had found Friends whom they thought had been buried in the Deep.

They told us how the Storm drove them on the Coast of *Juborskt*, near an Island, where they could not anchor because of the Rocks, which they discovered by sounding. They had scarce three Fathom Water, and were forced to tack about immediately, for fear of running upon them. By the Favour of a Point of Wind North-north-east, they continued their Course, keeping to Sea as well as they could, though with much Difficulty. In three Days time they reached the Bay, where we met them, and anchored under the Promontories of *Borandia*, eight or nine Leagues from the Island called *Kildomovia*. We told them, in our Turn, what Perils we had run, and that we were forced to enter the Sea of *Varanger*, and to anchor there to refit our Ship, or we should not have been able to have performed our Voyage. We informed them also of our Supercargo's and my Journey into, and through, all *Lapland*, both *Danish*, *Swedish*, and *Muscovite*; and of our Traffic and Adventures. The Account we gave them of our Trade, encouraged them to go ashore, and try if they could find any body there to trade with them. We held a Council, and resolved, that a Captain, a Supercargo, two Accountants, who understood both the Language of the *North* and the *Russian*; twenty Seamen out of all our Crews, and myself, well armed, should land, taking with us several Days Provisions.

Pursuant to this Resolution two Long-boats were got ready, we went into them, and sailed to Shore; where we landed and ascended a Hill, to see if we could discover any Habitations; but seeing none, we marched to a neighbouring Mountain, half a League from thence; where we spied five or six Persons, at two or three Leagues Distance, among Bushes of Thorns and Briars; they came towards us till they perceived us advancing, then they turned their Backs, and fled away so fast, that we lost Sight of them in an Instant. However, we followed their Tracks so diligently, imagining it would lead us to some Village, that in two Hours March, as we descended a Mountain, we saw some Huts in the Vale below, and advanced towards them, and saw thirty or forty Men, armed with Darts and Arrows, prepared to receive and give us Battle; for the Inhabitants seeing us come in so strong a Body, took us for Enemies. We halted a while, and consulted what we had best to do, whether we should retreat to our Ships, or attack them. They were wild and bold, and nothing was to be got by defeating them, which inclined us to retire; but one of our Accountants offered to go up to them by himself, and let them know that we were Friends and Merchants who came to trade with them, if they had any Commodity to truck with us for ours. All the Company approved of this Proposal.

He approached nearer to them, carrying two Rolls of Tobacco, and a little Barrel of Brandy; when he was so near that he might hear what they said, one of them, who seemed to be their Captain, asked him, in the *Muscovite* Language, who we were, and what we would have? The Man replied, we were Merchants and Friends, and desired nothing but their Friendship, and to trade with them, if they had any thing to sell us that was for our Purpose. They immediately abated of their Fury, seemed very well disposed to deal with us, and made Signs to the Man to come up to them. He returned the Signal to us, and we joined Companies, to our mutual Satisfaction. When we came near them, I was amazed to see them much shorter than the *Laplanders*; their Eyes were little, the white of them inclined to a reddish Yellow; their Faces flat and broad; their Heads great; their Noses flat; their Legs thick, and their Complexion swarthy; their Cloaths were a Jerkin that reached down to their Knees, a strait Pair of Breeches, a Cap and Stockings, all of white Bear-Skin, the Hair turned outwards; their Shoes were made of the Bark of Trees. Their Huts were all built and covered with Fish-Bones, very low and oval; their Light entering only at the Door, which was made like the Mouth of an Oven.

They

They subsist by hunting and fishing, eat all their Meat roasted, without Salt, and use undried Fish instead of Bread; they drink Water after they have infused some Juniper Berries in it, without boiling or any other Preparation; they put the Berries and the Water into a Tub together, and let it stand till the Berries rot there, which gives the Water an agreeable Taste, at least in a Country where there is nothing better to be got. The *Borandian* Women are as ugly as the Men; they are dressed alike, and go as well as them a fishing and hunting. They have no Notion of Religion, and live like Beasts. We bartered away all the Tobacco and Brandy we brought with us, for Fox-Skins, Wolf-Skins, and a few Ermines; they had a great many more Skins of all Sorts, and would fain have trucked with us for Brandy and Tobacco. We told them we had enough of both Commodities on board; if they would go with us we would be sure to give them all possible Satisfaction. They agreed to it, took up their Skins, and carried them to the Shore, where they stood admiring our Ships. We made a Signal to them to send us off Boats to fetch our Chapmen; each Ship sent us two. I went in one of them, with the Supercargo, the Accountant that treated with the *Borandians*, the *Borandians* with whom he first treated, and another of them, who understood the *Muscovite* Language, having been in *Muscovy*; the other *Borandians* stood on the Sea-shore. When they came on board, our Captain understanding what sort of Persons they were, how wild and brutal; to tame them a little, and render them serviceable to us, gave each of them an End of Tobacco about an Inch long, which they took with Joy; he also filled out a Brimmer of Brandy to each; and I never saw so many of the *Borandians* so much transported as they were at this Entertainment.

They brought some Furs with them, which we bought for Tobacco and Brandy. We demanded of them if there was any Conveniency of travelling in their Country to trade with the Inhabitants. They told us there was; but that we must expect nothing but Furs. We replied that was the Commodity we wanted. They answered, we might have what we would of that Kind, for Tobacco, Brandy, and Money; and, if we pleased, might trade as far as *Siberia*, whither they would conduct us. We hired them to be our Guides forwards and backwards, and to furnish us with what Conveniences the Country afforded in our Journey, for two Rolls of Tobacco and two Quarts of Brandy, promising them further Rewards in case the Trade turned to Account, and they assisted us in it. They said that we must pay for our Rain-Deer and Sledges, and as for other Things, they would take care to provide what we should think necessary. Our Captain made the Bargain with them, gave them another Brimmer of Brandy and sent them ashore, to prepare what was proper for our Journey. They got Things ready in an Instant, and made such a Report of our Kindness to them aboard, and our Generosity, that their Countrymen were very much our Friends; two Boats Crew went ashore, and our Supercargo with them, to truck with the other *Borandians*, Brandy and Tobacco for Furs. They were unwilling at first to come on board our Ships; but afterwards, when we were better acquainted, they came freely, if they had any Opportunity. We bought their Furs of them, treated them with Brandy; and in return they invited us by several Signs to their Habitations.

9. In seven or eight Hours we had provided ourselves for our Journey, and our two *Borandians* had brought down six Sledges, drawn by six Rain-Deer, to the Water-side. We asked them why they did not bring more? They answered, there were no more to be had in those Parts. Observing that these Rain-Deer were larger than the Rain-Deer of *Lapland*, we demanded if they were also stronger? They replied, Yes; and that one of their Rain-Deer would draw two Men, whereas those of *Lapland* could draw but one. There was Convenience in the *Borandian* Sledges for two Men to sit. Upon this our Captain called a Council of all the Officers, and it was agreed, That our Supercargo, the two Accountants that could speak the *Russian* Language, myself, and a Seaman out of each Ship, should go with the two *Borandians*, to

trade. One of the Sledges we loaded with Tobacco, Brandy, Gold, Silver, and Copper, to the Value of three or four thousand Pounds. Our Supercargo and myself rode together in one of these Sledges; one Accountant and a *Borandian* in another; the other Accountant and the other *Borandian* in a third; two Seamen in the fourth, the other Seaman in the fifth; and he riding by himself we stowed some Barrels of Brandy and Tobacco in his Sledge; the sixth carried our Provisions and other Merchandize. We sat one at one End of the Sledge and the other at the other, facing each other. The Rain-Deer ran away with us as fast as those of *Lapland*. In eight Hours time they drew us twenty Leagues over Hills and Dales, through Woods and Valleys; and we met no-body in our Way. At the Village we baited our Rain-Deer with Moss, and ourselves with Bisket and Beef; our *Borandians* eat dried Fish dipped in Fish-oil, for they would not touch our salt Meat, and did not love our Bisket. They drank at a neighbouring Fountain, and then cheered themselves with a Glass of Brandy; we did the like: And being refreshed mounted our Sledges, set our Rain-Deer a going, and travelled three Hours longer; when we perceived a large Village at the Foot of a Mountain. The Huts were better built, and closer together, and thither we hasted to take up our Lodging that Night: We were obliged to divide our Company, for one Cottage would not hold us all. We met with the same Reception from our Hosts as we had in *Lapland*; we gratified them with an End of Tobacco and a Cup of Brandy. Our Guides took Care of our Rain-Deer, and we lay down to rest on Bear-Skins: I distinguish one Part of the Day from the other by Day and Night, though really there was no Night at all; but I do it to make myself the better understood by the Reader. We slept six or seven Hours, then rose to see if we could trade with the Inhabitants of the Village: Our Guides informed them what our Business was there, and that we would barter our Commodities for theirs. They presently produced some Wolf-Skins, white Fox-Skins, two dozen of Ermines, three hundred grey Squirrels, and seven Pair of Sables. They did not care to deal for Tobacco so much as the *Laplanders* did, nor as the *Borandians* dwelling on the Coasts; they were not such good Fellows; Hunting was their only Diversion and Employment. In the Summer they eat their Meat fresh boiled, or broiled on the Coals: in Winter they eat it dried, providing enough in Summer to last them the whole Season; their manner of drying it is thus: They cut it out in Pieces, spread it on the Tops of their Houses, and leave it in the Sun. Their Huts are flat at Top, covered with Branches of Trees and Turf; they are very low, having no Place but the Door for the Light to enter at; the Doors of their Huts are like the Mouth of an Oven. These *Borandians*, as our Guides told us, change their Dwellings from time to time, like the *Kilops*; they, like Beasts, live without any Knowledge of Religion; they are stupid and ugly; their Shoes are made of the Bark of a Tree; their Stockings, Breeches, Caps, Coats, which come down below the Calf of their Legs, and are tied round their Waist with a Girdle four Inches broad, are all of white Bear-Skin, the Hair outward.

One cannot distinguish the Women from the Men but by their Hair, which is twisted, and hangs down on their Shoulders; they are as dextrous at hunting as the Men, and only carry a Stick, sharp at one End, in their Hands; it is of a tough Wood, and serves them for a defensive Weapon; the Strings of their Bows are made only of the Paring of a Tree; they hang a Quiver at their Backs, and a Stone that will cut like a Razor at their Girdles. We bought the Furs the Inhabitants had to sell for Money and Copper, and ordered our Rain-Deer to be put to the Sledges, mounted them, and having drank each a good Glass of Brandy, which may be called *Liquor of Life*, in the North, we proceeded on our Journey. We ran eight or nine Hours before we came to any Habitation: At last our Guides spied three or four Huts, and turned our Rain-Deer up to them. We found no-body in them; however, thither we went and refreshed ourselves on our own Provisions, while our Cattle baited on the Moss, which grew there

there in abundance. We rested three Hours, and then mounted again, to proceed on our Journey : We went fifteen Hours before we came to any Dwelling, or saw any human Creature ; when we had been so long on our way we espied three Hunters riding before us : We overtook them under a Hill. One of them was dressed in a long Robe, after the *Muscovite* Fashion, tied round his Waist with a Girdle four Inches broad. It was all Bear-Skin, Hair outwards, and as white as Snow, the Edges black as a Coal. His Cap was like a Seaman's, made of black Fox-Skin. His Breeches and Stockings were of Rain-Deer-Skin. His Shoes of Fish-Skin, somewhat like those we saw at *Varanger*. The two others were dressed as we were ; their Robes were of white Bear-Skin, the Hair outwards. They had each a dozen of Furs at their Backs, Bear-Skins, Wolf-Skins, and white Fox-Skins, some Ermines, and very fine Sables ; the Bears Tails hanging still to the Skin. The first of them carried only a dozen of white Crows and seven Sables hanging at his Girdles. When we came up near enough, one of our Guides stopt to talk with him. He lighted out of his Sledge, and the other went into it. While our Accountant rode with him, we admired to see our *Borandian* leave us, and this Man supply his room. Our Supercargo could not tell what to make of it. The Hunter travelled with us for above an Hour, and we had as bad Luck as before in this uninhabited Country. We met with neither House nor Man. At last we drew near the Brow of a high Mountain. We perceived the Sea at a Distance, and at the Foot of the Mountain several Houses built close together, which looked like a little Town. Thither our Rain-Deer carried us. We alighted to repose our wearied Limbs at that Man's Door who had taken our Guide's Place in one of our Sledges. We found he was a Man of Authority in the Place by Office, and desired of the Inhabitants to serve us as his Friends.

The Name of the Village was *Vitzora* ; the People that belonged to it, as soon as they saw that Person in our Company, ran to help us out of the Sledges, and to unharness our Rain-Deer. He bartered all his Skins with us for Tobacco and Brandy, except his Bear-Skins, which we did not care to buy, and his Sables, which he would not sell ; indeed, he durst not. The Great Duke of *Muscovy*, in whose Territories we were, and whom his Subjects call *Czar*, reserves that Commodity for himself. Those who sell it without Licence from him, in any Part of his Dominions, are severely punished. He appoints certain Officers to take those Furs of such as have them. Those Officers have Ware-houses in several Places of his Empire, and only they trade in that Merchandize. If any one else sells a Sable-Skin, it is by Stealth and in secret, and those that buy it must be careful how it is seen ; for if the Officers we have mentioned, or the Governors of Places that Strangers go through, find any Sable-Skin, or Skins among their Goods which were not bought of the proper Officer, all their Merchandize will be seized, and condemned. Having dealt with the *Borandian* Gentleman, if any of that Country deserve the Name, for all the Furs he had by him that were to be sold, he sent two of his Servants about the Village to tell the Inhabitants, That if they would bring us their Skins to his House, they might have Brandy and Tobacco for them, as their Master had already had for his. The *Borandians* of *Vitzora* were glad to hear of so good a Market ; they brought us all their Furs immediately, and we gave them Tobacco and Brandy in Exchange for them. We bought in this Place fifteen hundred Skins of all sorts ; and our Cargo being too great for a Sledge, we desired our Landlord to do us the Favour to lend us a Bark, which he had, and some of his Servants to go in it with one of our Seamen, who was a good Sailor, and one we could trust to carry our Goods a-ship-board. Our Ship, it is true, lay above an hundred Leagues off ; but the Sailor and the *Borandian's* Servants, who were used to the Coasts, could easily manage that small Vessel, and convey our Merchandize to our Companions on the Coast of *Borandia*. The Gentleman agreed to lend us the Bark at such a Price, and his Servants to help our Sailor.

We paid him in Tobacco and Brandy, as current as ready Cash at *Vitzora*.

The Bark was built in the Form of a Gondola, broad in the Middle, and sharp at each End. It was all of Wood. There was in it no Iron or Nails. It had a Fir-Tree Mast in the Middle, and a square Piece of coarse Cloth, the Thread of it wove of the Rind of a Tree, tied to the Mast to serve for a Sail. The Cordage was of the same Make as the Sail. The two Anchors were of Wood, and very heavy. The Cables that held them were made also of Ropes of the same kind as the other Cordage. He lent us two of his Servants to assist our Sailor : And when they were about to put to Sea, he shewed them privately thirty Pair of Sable-Skins, which we bought with Ready Money, clapped them aboard, and sent them away. We were glad we had got them so ; for otherwise he would not have sold them to us ; the Bark being ready to sail was a fair Temptation ; and seeing there was no Likelihood of the Officers searching, he let us have them. The Vessel was now put off immediately, and there was no Officer near to examine it. It was a dangerous Risk, had there been any Searchers at hand, for himself would have been corporally punished, and he and all his Family sent Slaves into *Siberia*. Our Seaman and the two *Borandians* set sail with our Merchandize ; and our Supercargo and Accountants fell to drinking with the *Borandian* Gentleman. While they were making a Debauch, I went about the Town with our other two Seamen. I was pleased with its Situation between two Mountains, each of them almost a League high. All the Houses were built and covered with Fish Bones very artificially ; the Crannies were every where stopped up with Moss as fast as a Ship new caulked ; and above all, Turf was laid handsomely in some Places that were most exposed to the Wind, which had no Passage into the Houses, except at the Doors, which were like Ovens Mouths, as in other Places in *Borandia*. At the Top of the Houses where were Lattices or Windows for the Light to enter, I saw abundance of Women and Children at work, some making Fishing Nets of the Rind of Trees ; others were making of Sails, which looked like fine Mats ; others using their Hatchets ; others Knives. Their Needles were of Fish Bones. All of them are ugly, dwarfish, flat-nosed and swarthy.

10. When we returned to our Lodgings, we consulted with our Supercargo and Accountants, what we had best to do ; our Commodities were not half disposed of, and we were in a Country that was full of Furs ; the farther we went, the Plenty was the greater, and consequently the Markets the more encouraging. We had a great deal of Cash, and our Commissions being as large as our Captains, who were to go whither they thought fit, for the Service of the Company ; we resolved to proceed as long as we found the Trade to be good. We sent our Guides back with the Rain-Deer, and Letters to our Captains, to acquaint them with our Intentions, and give them an Account of our Success. We then hired a Bark to carry us to *Petzora*, the Capital City of a Principality of the same Name, on the North Coast of the *Muscovite* Sea. Our Landlord got us a small Vessel and two Men. We embarked on board it with our Cargo, and by the help of an Easterly Wind, coasted along Shore till we arrived at *Petzora*. We got there in fifteen Hours.

The City is not very big, it is situated on the Coast, and gives Name to the Sea as well as the Province about it. We went to wait on the Governor at the Castle. He assumes that Title, tho' in reality he is no more than a Collector of Customs. Indeed all the *Czar's* Governors are such sort of Persons, for there are few Noblemen or Gentlemen in *Muscovy*. They are all uncivil and jealous ; Qualities that are incompatible with Nobility. This Governor was a *Muscovite* ; he was dress'd after the Fashion of his Country, in a Robe of Violet-coloured Cloth, with a Mixture of Red. He gave us some excellent Methaglin, which went down very pleasantly, and was as racy as Sack ; after that we had Brandy and Gingerbread, the common Collation in *Muscovy*. Knowing he had

had the Charge of the Czar's Sables, we asked him if he would sell us some? He answered, he would, enquiring how many we wanted? We answer'd, all he had, if he would let us have them a Pennyworth. He then carried us to the Warehouse, where there were five Zimmers, each Zimmer fifty Pair; among which there were two Zimmers of the finest I ever saw, as black as Jet; for which we paid him five hundred Ducats; and we had the other three Zimmers for eight hundred Crowns, or four hundred Ducats. We bought all the Skins he had; they were sealed with the Czar's Arms. After we had paid him his Money, he would treat us again at the Castle.

He ordered two Boats presently to get some fresh Fish for us; he killed a young Rain-Deer, and roasted some Wild-fowl that his Servants had brought in. We had a noble Entertainment of Fish, and Fowl, and young Rain-Deer Venison, which is good Meat; we drank Brandy and Metheglin eight Hours together; and the Fumes had got up into my Head sooner, had I not every now and then eat a *Muscovite* Bisket, the best Bread in the World. The Governor and his Guests at last began to be top-heavy; and we all lay down to rest on white Bear-Skins, for he had no Beds to lodge us in. We slept six or seven Hours, and then rose. Our Host presented each at our Uprising with a Brimmer of Brandy.

We then went about the Town to try if there was any Trade to be driven with the Inhabitants. The Governor ordered one of his Under-Officers to accompany us; and we bought of several People two thousand grey Squirrels, four Dozen of Ermines, five hundred Fox-Skins, the greatest Part of them as white as Snow, six score of white Wolf-Skins, two hundred Martens of a greyish Colour. All of them cost four hundred Ducats. We obliged them to take half in Copper, because it incumbered us, and half in Cash. We went back to the Castle, whither we sent our Merchandize, and where we packed it up in Bales. The packing Cloth was made of the same sort of Stuff as the Sails of the Bark sent to the Ships. Our Goods being thus taken care of, we resolved that one of our Accountants should return with them to our Ships. To that end we entreated our Host the Governor to furnish us with a Bark, which he did; and we hired three *Borandians* to assist the Accountant in his Voyage; the Governor passing his Word for them that they should be trusty and do us no wrong. For the Hire of the Bark and the *Borandians* Wages, we paid him ten Ducats more, and presented the *Borandians* with some Ends of Tobacco. The Governor engaged to satisfy them farther for their Trouble when they came back.

Our Accountant embarking, set sail, the Wind East-south-east, and we fell to drinking again with our Host the Governor. The Gentleman who had entertained us at *Vitzora*, accompanied us to *Petzora*, and drank so hard, that I could not imagine where he found Stowage for so much Brandy and Metheglin as he swallowed. We continued rippling four Hours together, and then lay down, according to Custom, on Bear-Skins to repose ourselves. As soon as we awoke, our Supercargo desired the Governor of *Petzora* to hire us some Rain-Deer, to carry us into *Siberia*, a Province which some Geographers place in *Europe*, and others in *Asia*. He furnished us with seven Rain-Deer and seven Sledges; one for our Supercargo, one for our other Accountant, one for myself, two for our two Seamen, one for our Guide, and the other to load our Tobacco and Brandy. The Provisions he supplied us with, were to last till we arrived at *Papinowgorod*, another City in the Province of *Petzora*, on the the Borders of *Siberia*. Our Factor took what Money he had left with him; and the seven Rain-Deer being put to the seven Sledges, the Governor ordered another to be got ready for one of his Domestics, whom he commanded to wait upon us seven Leagues of our way to a Village, where we were to change our Rain-Deer, and give them to the Governor's Servant to carry back. For all which he was to have four Ducats. He would not let us go till we had drank five or six Glasses of Brandy at parting.

We gave both him and our Host of *Vitzora* hearty Thanks for their kind Entertainment, and then got into

our Sledges. The Ways were very difficult to pass. We had no beaten Road, and were four Hours before we could see any living Creature; at last we met four white Bears, of an excessive Bigness; they crossed our Way, and seeing us, fled into a Wood. Two Hours after we came to a Village, consisting of seven or eight Cottages; there was no body in them, the Inhabitants being all gone a Hunting. We alighted out of our Sledges to bait a little on the Provisions we brought with us. While we were eating, five or six Men, with their Wives and Children, returned from hunting, which it seems had been very lucky to them, for they brought in with them six Bear-Skins, four Wolf-Skins, a couple of Ermines, and eight Sables. The People of the Place were surprized to see us there, and would have fled from us, had not the Governor of *Petzora*'s Servant assured them we were Friends and Merchants, bound for *Papinowgorod*. When they understood we were Traders, they came up to us, and viewed us narrowly. They wondered to see so many Strangers in a Place so unfrequented. They were astonished at our Way of Dress, our Looks and Shape, as also at our Language, so different from theirs, and so unintelligible to them; however, we dealt with them, by the Assistance of our Interpreter; we bought all the Skins that they dared to sell us; and they lent us Rain-Deer and Sledges, to carry us as far as the Mouth of the River *Papinowgorod*.

11. When we parted from them, we left the Course of the River *Petzora*, and proceeded to that of *Papinowgorod*, the Ways were almost unpassable, yet, with much Difficulty and Fatigue, our Rain-Deer drew us over Mountains and Valleys, through Woods and Forests, for three Hours before we met with Man, Woman, or Habitation. When we had travelled so long, and approached near a thick Wood, we espied five Men in white Bear-Skin Robes, after the *Muscovite* Fashion; each of them had a Fuzee on his Shoulder, a Pouch on one Side, and a Knife and Sheath on the other, like the *Borandian* Huntsmen. They seemed to make up towards us, for which Reason our Guide, who understood the Management of Rain-Deer, immediately stopped them; and by that Time the five Men were advanced so near us, that we could hear them; one of them perceiving that we were Strangers, bid us Good-morrow in the *German* Language, wishing they were as free as we were. Our Supercargo, who was a Native of the *Lower Saxony*, hearing him talk his own Tongue, asked him what Countryman he was? The Man answered him to his Satisfaction; and, entering into a longer Conversation, they recollected things in their Minds, by which they understood that they had formerly been intimately acquainted. Our Supercargo alighted out of his Sledge, embraced him, and demanded how he came there? The Man replied, he was one of those whom the Grand King, or Czar, had lately banished for hunting Sables.

This is a Crime that is punished with Banishment, and that in *Muscovy* is equivalent to the Gallies in *France*. Some are banished for ten Years, some for six, some for three, some for more, and some for less; after which they have their Liberty to go where they please. The more I looked on one of the five Men, the more I thought I had seen him before, and alighted out of my Sledge to satisfy my Curiosity. As soon as I was on the Ground, the Man who remembered me better than I did him, ran to me and embraced me; sighing, asked me, in the *French* Tongue, whence I came, and whither I went? I was somewhat surprized at it, because I could not yet call to mind who he was; his Habit had strangely altered him; his Beard was long, and his Head bald; besides, he was so fallen away, he was nothing but Skin and Bones. Seeing I could not recollect where I had known him, he told me his Name, and that he had drank very often with me at *Stockholm*. I then remembered that, indeed, he was the Man to whom I had been very much obliged, for the many Civilities I had received from him in *Sweden*: He was a Gentleman by Birth, a *Lorrainer*, and was Lieutenant-Colonel of a Regiment of *Muscovite* Horse. He would fain have persuaded me to go with him to *Moscow*, promising to procure me an

honourable and profitable Place, in the Service of the Czar, but I did not think fit to accept of his Proposal.

The fine Appearance he made at that Time, the Respect that every one paid him, as well on Account of his Estate, for he was rich; as for the Place he enjoyed, and the Character he bore, of a Man of Courage and Honour, and the miserable Condition I now saw him in, made me sigh; when I embraced him again with extraordinary Affection and Tendernefs, asking him what was the Occasion of his Disgrace? He answered, the Czar suspected he had not been so zealous in his Service as he might have been, and for that Reason only banished him to *Siberia* for three Years; that he was to endure Miseries which are not to be expressed, besides the Dangers to which all banished Persons are exposed in hunting wild Beasts for their Subsistence; as likewise Hunger, and the Rigour of the Season, which they were forced to suffer, and none durst relieve them. He said they were almost every Day attacked by wild Beasts, which they met in Herds, seeking for Pasture; and that they had often much ado to defend themselves: And further, if they did not each of them catch such a Number of Sables, as they were condemned to furnish the Czar's Officers with, they were each of them lashed with a Whip made of Leathern Thongs, thick and hard, on their naked Backs, and sometimes all over their whole Bodies, till they were all in a gore Blood.

Our Supercargo's Acquaintance told him the same Story, so did the other three, who spoke the *German* and *French* Tongues tolerably well. One of them had been Receiver-General of the Czar's Revenues, in one of his Provinces; the second had been a Major General, and the third a Man of Note. They all deplored their Misfortune, assuring us, that when the Time of their Banishment was out, they would get far enough from the Czar's Power. We were extremely touched with the Relation of their miserable Condition. We set down on the Moss, took out the best Provision we had, and desired them to take Part of it. We offered them our Help to make their Escapes, but they told us it was impracticable; for that they were known to all the Governors of the Forts and Places through which they and we must necessarily pass: And in case they should be taken, all our, and their, Lives must pay for their Attempt to get off. That Death would certainly be our Punishment, and theirs; and the most cruel Death, which boundless Power, and northern Barbarity, could inflict. This increased our Concern for those poor unfortunate Gentlemen; we all wept heartily at the sad Sight of what they suffered, and the Idea of what they were still to suffer.

We could not think of parting presently with Persons in their disconsolate State. We had seen them when Fortune smiled on them, at least some of them; we had been their Friends, and we thought it had been cruel to leave them, without endeavouring to render a Day or two, of the dismal Time they were to pass, pleasant to them; the Society of such as they had formerly had a Friendship for, would contribute towards easing them a little of the Load of Grief that hung at their Hearts. We told them what we wished, and that we were loth to part so soon; our Trade was not in so much haste, considering the two large Parcels of Goods we had already sent to our Vessels, as to hinder us spending a Day or two with Men in their Circumstances, whom we equally loved and esteemed. The meeting them in such a Place, and in so sad a Condition, had something romantic in it; and as much as we were Merchants, we had more of Heroes than to fly from our Friends in Adversity, without taking a few Days to condole with them, and endeavour to alleviate their Sorrows.

Besides these Considerations, I had another. My Design, in the Beginning of my Voyage, was more to make Observations on the North Parts of the World, than to reap any Benefit by it. I had formerly made more beneficial Voyages to the *Indies* and *Africa*, than any thing I could propose to myself by Travelling into the North. But having seen these two Parts of the World, I had a Curiosity to visit that in which I was

now trading, and to inform myself of the Manners and Customs of a People less known to us than the *Indians* in the East and West, though they are at a greater Distance from us. I knew the Gentleman of *Lorrain* to be a sensible Man, who had lived a long Time in *Muscovy*, under the State of the Empire, and the Court of the Czar, as well as any Man; and intending to communicate my own Observations to the World, I thought I could not better secure the Reader's Satisfaction, than by giving him his, which would make my Account of the North complete; wherefore I resolved to stay a Day or two with him, and his poor Brethren in Adversity, and learn of him what he could inform me of, as to the more noted and more populous Part of *Muscovy*; the City of *Moscow*, and the Czar's Court. Our Business obliged us to keep as near the Coast as possible; and the Countries that lay near the Sea came within my own Knowledge; but the Inland Provinces were out of our Way, and we had no Pretence to visit them; my Companions travelling for Profit, and not for Pleasure. Our unhappy Friends rejoiced mightily at our offering to spend some Hours with them.

To encourage us, they told us they had built themselves five little Huts in the Wood, which they came out of, where each of them retired when he chose to be alone; that there was room enough to entertain us all; and if we would be so kind as to go thither with them, they should be infinitely obliged to us. They knew our Business, and we should not lose our Time; all the Skins they had were at our Service, except the Sables, which they were forced to reserve for the Czar; but they were little to be valued, in respect to the Joy they should have in our Company. They said, the very Remembrance of the happy Hours they spent with us, in their profound Solitude, would make many future Months glide on the more sweetly. Our Supercargo and I consented to stay with them, out of respect, as the rest of our Company did out of Hopes of Profit, hearing them offer to give us their Furs. The banished Men told us we must travel some scores of Leagues before we could meet with a Market for our Commodities. We readily agreed to the Proposals they made us. When we had refreshed ourselves on our own Provisions, we ordered our Guide to unharness the Rain-Deer, and convey our Goods into the Huts the Gentlemen had built to defend them from the Weather. Their Necessity made them ingenious, and nothing could be better contrived, either for Pleasure or Convenience, in so wretched a Place.

They were built of Fir, higher than any we had seen in our Travels; there were two or three Rooms in each of them, and Lattices to let in the Light at the Side. They were each shaded by a Tuft of Trees, and paved with broad Fish-bones, so artificially, that they looked as if the Floors were inlaid with Ivory. They had digged a Trench round them, and palisaded the Circumference of the Ground, on which they were built, with strong Posts, which were joined together with cross Sticks of strong Wood, and on the Top were Spikes of Fish-bones. By this means, when the Gate, that was the Entrance into it, was shut, they were safe against the Insults of wild Beasts, and as secure as in a fortified Place. They had all Sorts of hunting and fishing Tackle, Store of Metheglin, Bisket, and salted Rain-Deer-Venison. The *Lorrainer* was a temperate Man, but the others loved drinking; so they and my Companions fell to it. I always abhorred the Debauches we were forced to make in the North, and was very glad I had an Excuse to avoid tippling now.

My Friend and I withdrew to converse together, and the Company perceiving we were old Acquaintance, permitted us to do so. We retired into his Hut, and left the rest with the *Saxon* in his; where they drank away Sorrow at that Time; and after six or seven Hours spent over Brandy and Tobacco, they all lay down on Bear-Skins to take their Rest. The *Lorrainer* and I, in the mean Time, entered into a Discourse on his own Adventures. He told me how he intended to return home, after his Time of Exile was expired, and how I might hear of him

in *France*. Our Conversation was tender and pleasant; it ran partly on our former Acquaintance, and partly on the Wildness of the Country, and the Barbarity of the Inhabitants; upon which I took occasion to desire him to communicate to me the Observations he had made of the Court, Country, and Customs of *Muscovy*; telling him I intended to publish my Voyage to the North; and wanted only some Account of the inland Provinces, to render it, in some Measure, perfect.

He replied, he was loth to spend any of the little Time we had to be together, on so general a Subject: But if I thought his Reflections and Remarks would be of any Use to me, he would give me the Memoirs he had collected when he came first into *Muscovy*, for his private Satisfaction. He could not recommend them to me as things that did not require to be carefully digested and methodized: But he assured me the Observations were as just and entertaining as any he had been able to make since, in fifteen or sixteen Years Residence in that Country.

He then went to a Chest he had in a Corner of an inner Room, and took out about twenty Sheets of Paper, containing the Substance of what I insert in the following Pages, relating to the Manners and Policy of the *Russians*; as also the Account I give of *Siberia*, which I took entirely from his Memoirs. I would fain have excused myself, and not accepted his Present, believing he could finish his Work, and make it useful to the Public, with more Success than I could: But he obliged me to take the Memoirs, saying, The things in it were now so common to him, that he needed no Remembrances; and his Sufferings had given him such a Disgust to the Country, that he should never more have any Curiosity concerning it, or desire to let the World know any thing of it. And as to these Memoirs, though probably they might be of Service to me, they could not be so to him: In a Word, he obliged me to take them with me, and I resolved to add them to my own, when I returned to *France*, and should put the Journal of my Voyage into order for the Press. I have not published above half the Observations the *Lorrain* Gentleman gave me: However, they are the most useful and diverting of them, and what I doubt not the Reader will be pleased with. The Person that made them being a Person of good Sense, and very curious in his Reflections on Places and Persons; he mingled several Passages of the *Muscovite* History with his Memoirs, which he took from their own Books; for he understood their Language as well as the Natives; spoke it and wrote it as well as their best Scholars; who, indeed, are not the most learned or elegant Persons in *Europe*: For Learning is held in Contempt by almost all the *Russians*; their Clergy being as brutal and illiterate as their Laity. When my Friend and I had tired ourselves with talking, we lay down as usual, on Bear-Skins, and slept sound till the next Morning.

We rose early, and at the Desire of the five banished Gentlemen, took each of us, our Guide excepted, a Fuzee in our Hands, which they lent us; and we went with them into the Woods, to their Walks, to see if their Game were caught in the Snares we had laid for them. We killed among us ten or twelve white Foxes, and half a Dozen grey Martens; we met with none of the larger Game; and both the Gentlemen and we were loth to spend any more Time about it, for we intended to proceed on our Journey when we had dined; so we returned to their Huts, brought forth our Provisions, the same did our Hosts, and refreshed ourselves, as well as could be expected in so wretched a Place. After we had drank plentifully, the Gentleman forced us to take seven Bear-Skins, ten white Fox-Skins, two Pair of Ermines, and eight Wolf-Skins; they would not have any Money for them, and it was with Difficulty that we could persuade them to accept of some Brandy, Tobacco, and Cloth, to the Value of their Furs. We were so grateful to them for their Civilities to us, that we took care our Commodities should be rather worth more than less than theirs. Having eat and drank sufficiently, we took our Leaves of them, embracing them heartily, and wished

them Patience to endure their Sufferings, and a happy Deliverance out of them, and saluting them all round, wept reciprocally at parting. Our Rain-Deer and Sledges being got ready we mounted, and bid them all adieu; the like did the Gentlemen to us. Our Rain-Deer, at our Guide's Signal, ran away with us; and the unfortunate Exiles went to their Huts.

12. The Territories of the Czar or Emperor of *Russia* are so little known, that we have few Descriptions of them worth reading, which proceeds from the little Commerce there is between his Dominions and other Parts of *Europe*, and indeed between some of his Provinces with the rest; his Country is the largest in *Europe*, besides what he possesses in *Asia*, but most of it is thinly peopled; and being uninhabited in many Places, it is consequently unfrequented. By this Means Travellers never give themselves the Trouble of going far beyond the Coast, or the Province of *Moscow*; and the Czar's Subjects are so illiterate they can give no Account of Things, for they are so ignorant that they know as little of their own Country as those that were never in it. I found very few Observations on the geographical Part of *Muscovy* among my Friend's Papers; but several Remarks on the Customs and Religion of the *Muscovites*, with which I believe the Reader will be diverted; for they were made by one who had more Opportunities of informing himself than ever any other Man had before him.

Every body that travels into *Muscovy*, with a Design to satisfy their Curiosity, about the Manners and Polity, Ecclesiastical and Civil, of the *Muscovites*, will meet with many Difficulties that they will hardly have Patience to surmount: The People of *Russia* are naturally jealous, and mistrustful; they have no Knowledge of the World, and but very little in any kind of Affairs either Spiritual or Temporal; wherefore they suspect all that make any Enquiries into the State of their Government or Religion, and yet know not why or for what. Printing was brought into *Muscovy* in the Year 1560, and the Czar then reigning erected a College for teaching Grammar, and the *Latin* Tongue; but it came to nothing in a few Years. The Priests, the most ignorant, illiterate Creatures that ever assumed that Office, ruined it, for fear it might in Time ruin them: These Priests are only Laics of good Lives and Conversation, who are for that Reason chosen into the Priesthood. The Occasion of the *Muscovites* embracing the Christian Religion, was from the Prayers of a Priest of *Chioff*, who praying to Almighty God for the Duke, who was dangerously ill, his Prayers were heard, and that Prince miraculously recovered to his Health. Their Liturgy is taken from that of the *Greeks* in the *Sclavonian* Language, the Knowledge of which is as rare among them as that of the *Latin* among the Roman Catholics. They imitate the *Greeks* in the Manner of building their Churches.

They have Pictures in them, and formerly had Images richly adorned with Jewels, and other costly Ornaments; but this is not suffered now, all Sorts of Sculptures being forbidden; and they looked upon the Worship rendered them by the Papists to be Idolatry. They don't kneel at their Prayers, but prostrate themselves on the Ground. On the Eve of certain Feasts celebrated among them, they spend the whole Night at Church in their Devotions. They often throw themselves on the Floor, sign themselves with the Sign of the Cross, and beat their Heads against the Ground. Amidst the several Parts of their Services, there are Intervals in which they discourse of their temporal Affairs. The Emperor seldom misses assisting at the Public Worship; he is generally attended by the whole Court: He dispatches Business at Church, and if any of the Courtiers are not present he severely reprimands them.

On *Whitsunday* their Churches are filled with Maple Boughs, which the *Russians* mistake for Sycamore. Whenever they prostrate themselves, they verily believe the Holy Ghost descends on those Boughs, as Manna fell on the Leaves of Oak in the Desert. Musical Instruments are not used in Churches; the last Patriarch abolished that Custom. Their Prayers, which are performed three

Hours

Hours after Sun-rising, are called *Obedni*; those that are made after Sun-setting are called *Vackerny*; and those an Hour after Midnight, *Zaoutrinys*.

Their *Obedni*, or Morning Prayer is: *Have Mercy upon me, O Lord, according to thy loving Kindness, and blot out my Transgression, according to thy Greatness, and Multitude of thy Bounties.*

Their *Vackerny*, or Evening Prayer is: *O Lord! bear my Prayer when I call upon thee, and let my Cry come unto thee.*

Their *Zaoutrinys*, or Prayer an Hour after Midnight is: *We put our Trust in Christ, our Saviour; and all our Hope is in him.*

They repeat the *Miserere*, which they call *Hospody Pomelee*, a hundred times over, and the Priest who can repeat it ofteneft in a Breath is reckoned the best Man; five or six of them will read aloud together; one a Chapter, the other a Psalm, the third a Prayer, and the rest so many other different Things, with Noise and Confusion inexpressible. Every Priest is called *Pope*, or Father; as *Pope John*, or *Pope Peter*; every Bishop is stiled a *Metropolitan*, and the Chief-Priest, *Proto-Pope*: the Parish-Priests are commonly cloathed in red Vestments, some wear green and others blue, according to their several Fancies; the Form of their Garments is distinguished from that of Laymen, by two little Pieces of Stuff sewed on each Breast.

They wear a red Leather Cap on their bald Pates, and that is all the Difference between their Dress and the Laity; the Hair of their Heads and Beards is never shaved, only the Crown of their Heads, which is always shorn; they must have Wives, but, according to the Apostle St. Paul's Rule, no Priest is allowed to have any more than one during his whole Life: Thus their Priesthood depends on their Wives, and when they die it ceases; for which Reason they marry young, that they may have a Benefice early, and use their Wives better than other Men. Their Wives Garments are distinguished like the Husbands, by two little Pieces of Stuff sewed on each Breast. Their Manner of Baptism is much like that of the Roman Catholics, except that they always dip the Children they baptize quite under the Water. The Custom of buying Foreigners, on Purpose to oblige them to turn Christians, which was very much practised by them formerly, is now out of Use. When any Man, either Protestant or Papist, renounces his own Religion to embrace the *Russian*, he must renounce his first Baptism, his Father and Mother; and spit three times over his Shoulder. Some antient Inhabitants of the Country have observed, that of two hundred *English*, *Scotch*, and *Dutch*, who have made Profession of the *Russian* Religion, hardly one died a natural Death.
